This course examines the determinants and consequences of human behavior in formal organizations. Specific focus is on the individual, interpersonal, and group processes which underlie all the human dynamics.
Corequisite(s): 3304 or 3404.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3334 - Managing Human Resources (3 credits)
Examines the strategies, policies, and practices associated with effectively managing human resources. Designed to provide future managers with tools and techniques to acquire, develop, reward, and retain employees within the legal and social context of todays organizations. Emphasizes how managing human resources can contribute to organizational effectiveness in a variety of industrial and organizational settings.
Prerequisite(s): MGT 3304 or MGT 3404
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3344 - Employee & Labor Relations Law, Bargaining, and Dispute Resolution (3 credits)
Historical, legal, social, and economic forces that shape employment relationships in the U.S. Labor and employment laws and how they apply in specific cases. Anticipate and respond to a union organizing campaign. Employment contract bargaining and dispute resolution in union and nonunion settings. Compare U.S. private sector, public sector, and international employee and labor relations laws and institutions. Debate contemporary employee relations' events and issues using critical thinking and ethical reasoning.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3404 - Principles of Management (3 credits)
Management concepts, theories, and practices for the effective and successful operation of modern organizations. Four functions of management and the activities involved in each function. Importance of ethical management practices in the effective operation of global business organizations, including entrepreneurial ventures. Individuals and group behaviors in the workplace, as well as methods to improve workplace performance.Duplicates some material in MGT 3304. Course credit will not be awarded for both MGT 3304 and MGT 3404.
Prerequisite(s): MGT 1104 or MGT 1064
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3414 - Talent and Organizational Development (3 credits)
Talent development systems and their strategic support of organizational learning, performance management process, a high-performing workforce, and organizational success. Foundational elements of talent development, including performance management process equity in evaluation and interviews. Emerging talent and organizational development trends and technologies. Talent development and performance management analytics to identify organizational talent capacity to meet current and future workplace needs. Organizational and talent development learning plans within talent-centered cultures in diverse organizational contexts. Emerging issues in learning, performance management, and talent development. Client projects, guest speakers from the field, and contemporary case studies.
Prerequisite(s): MGT 3304 or MGT 3404
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3424 - Strategic Talent Planning, Acquisition, and Analytics (3 credits)
Strategic talent planning, acquisition, and analytics within organizations. Alignment of talent planning and acquisition strategies with legal and social contexts, organizational goals, equity, and firm performance. Identification and analysis of key human capital data to inform talent acquisition decisions. Impact of talent planning decisions on acquisition and selection decisions, job design, internal workforce mobility, retention and succession planning for immediate and long-term outcomes. Emerging trends impacting field of human resources and specific to these topics.
Prerequisite(s): MGT 3304 or MGT 3404
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3444 - Multicultural Diversity in Organizations (3 credits)
Evaluates the impact of multicultural diversity on the employees work experience and on organizational processes/ performance. Students analyze and discuss theories and practices related to the business case for diversity, exploring the processes through which multicultural diversity (both domestic and international) affects the organization and its stakeholders. Topics include multicultural diversity theories, legislation, interpersonal and international differences, cultural intelligence, and organizational practices. Pre: Junior Standing. (3H,3C)
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3604 - Managerial Analytics (3 credits)
Digital tools to analyze managerial data ranging from productivity data to large scale, organizational databases. Three themes: (1) analyzing and improving productivity using digital tools; (2) applying exploratory data tools; (3) improving organizational collaboration, analysis, and knowledge sharing using relational databases.
Corequisite(s): 3304 or 3404.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3614 - Strategy and Competition Analytics (3 credits)
Develops concepts and techniques for analyzing and formulating strategy in a variety of business environments. Focuses on research, data, and analysis related to the key players in the environment from both a competitive and cooperative perspective. Basic frameworks for analysis include mapping the objectives and constraints of the players, and modeling the pattern of interaction among the players. Provides an in-depth exposure to the theory and tools of strategy analysis and practice in their management consulting application.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3754 - Management Internships and Career Development (3 credits)
Guided experience in work environments and job search. Through unpaid internships, students have the opportunity to view the inner workings of businesses first hand while working on organizationally meaningful assignments. Class activities prepare students for conducting effective job searches.
Prerequisite(s): MGT 3304 or MGT 3404
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

MGT 3804 - Topics for Cadet Global Leadership Studies (3 credits)
Analyzes historic and current leadership challenges using specific military campaigns for context. Covers national and military objectives and various instruments of national power in relation to national security. Travel to relevant country and battlefields for experiential learning. May be repeated with different content for a maximum of six (6) credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

MGT 3874 - The European Business Environment (3 credits)
Political, legal, economic, socio-cultural, technological and environmental issues and policies affecting the operation and strategies of foreign companies in Europe. Business operations inside and outside the European Union. Impact of EU policies and the EU legal framework on business strategies and policies of non-EU companies. Business strategy for the European market, marketing and human resources management in Europe, and corporate governance and control in Europe. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3874, PSCI 3874

MGT 3935 - Advanced Professional Development for Cadets (2 credits)
3935: Cadets in this learn about the mentor-protege relationship; resolving team conflicts; diversity in the workplace; standards of business conduct, dining etiquette; and maintaining a healthy lifestyle. A physical fitness laboratory compliments the lecture. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 3936 - Advanced Professional Development for Cadets (2 credits)
3936: Cadets in the class learn about business challenges from panels of experts in various career fields, business problem solving, speaking before a business audience, business writing, preparing for an internship and participation in a leadership conference. A physical fitness laboratory complements the lecture. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 3945 - Cadet Organizational Leadership (1 credit)
Prepares junior class cadets for responsibilities as senior sergeants. Builds on the previous years knowledge of small unit leadership. Introduces cadets to decision making, writing decision papers/executive summaries, project management, public speaking, and refinement of their personal leadership philosophy. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 1 Crd)

MGT 3946 - Cadet Organizational Leadership (1 credit)
Prepares junior calss cadets for the role of responsibility they will assume as senior leaders in the Corps. Continues focus on organizational leadership and introduces cadets to command and a commanders responsibilities. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 1 Crd)

MGT 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 3974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 4064 - Developing Entrepreneurial Ventures (3 credits)
Takes a cross-functional perspective on identifying and evaluating entrepreneurial opportunities, developing new ventures, and pursuing new venture strategies to compete in the marketplace. Explores business potentials of new venture ideas, examines new ventures feasibility, and develops business planning tools for the venture. Pre: Senior Standing.
Prerequisite(s): MGT 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4084 - Management Consulting (3 credits)
Hands-on application of accounting, finance, marketing, management, information technology, and project management to actual business clients through on-site consultation with start-up and existing businesses and non-profits. Through classroom instruction, instructor coaching, and experiential studies, students will use the skills they have learned over several semesters to explore the field of management consulting. For the Management major with senior standing in the Management Consulting Option.
Prerequisite(s): MGT 3304 or MGT 3404 and MGT 3614
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4094 - Startup: Commercialization of Innovation (3 credits)
Work in interdisciplinary teams in an experiential environment replicating modern innovation environments. Engage in real world innovation commercialization opportunities. Individual experiences and projects involving actual inventions, innovations, technologies, intellectual property (e.g. patents) and market opportunities. Integrate design thinking, scientists, entrepreneurs, advisors and other potential collaborators. Create a representation of a plan for a minimum viable product for an innovative product or service based on customer and market feedback.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGE 4094, IDS 4094

MGT 4314 - International Management (3 credits)
The course is designed to provide the student with familiarity concerning the unique problems, characteristics, and demands that face multinational managers and the international business community. Junior standing required.
Prerequisite(s): MGT 2314 or HTM 2314
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4324 - Business and Professional Ethics (3 credits)
An inquiry into the fundamental norms of conduct in business and other professions and their justification in relation to the most important ethical theories. Special attention will be given to moral problems such as the ethics of hiring and firing, bribery, and professional responsibility to society.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 4324

MGT 4334 - Ethical Leadership and Corporate Social Responsibility (3 credits)
Focus on the leadership role of managers in promoting ethics and corporate social responsibility in business today. Consideration of the overall role of business in society and specific business-society issues such as equity and identity at work, environmental pollution, consumer and employee concerns, corporate-community relations, and the activities of multinational corporations. Issues examined through conceptual frameworks of business ethics, corporate social responsibility, and leadership (especially servant leadership). Emphasis placed on students articulating analysis of such issues through written and oral communication.
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4344 - Productivity and Quality Leadership (3 credits)
This course provides an introduction to leadership in the context of productivity and quality improvement. It focuses on understanding the concepts and skills associated with contemporary management strategies and systems. This course requires active student involvement and emphasizes participative leadership skills, data collection, qualitative problem solving, and communication processes. For Management majors only. Senior standing required.
Prerequisite(s): MGT 3304 or MGT 3404 and MGT 3324 and MGT 3604 and BIT 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4354 - Leadership: Advances in Skills and Concepts (3 credits)
This cornerstone course provides cutting-edge experiences, skills, and knowledge in leadership for students in the leadership minor. Within an historical context that balances military, political, and business perspectives, four types of leadership will be examined: self-leadership, dyadic leadership, team leadership, and enterprise leadership. Special emphasis will be placed on the specific skills, such as computer literacy and project management, required for leaders to succeed in modern, technologically oriented organizations. Pre: Senior standing.
Prerequisite(s): MGT 2354 or MGT 3304 or MGT 3404
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4394 - Strategic Management (3 credits)
Senior-level capstone course to formulate and implement strategies to create and sustain competitive advantage. Emphasis on developing pragmatic and action-oriented general management skills that integrate across functional areas of the organization. Utilize various tools, concepts, and analytical framework to define and analyze strategic problems. Revisits business principles and practices covered in basic business courses. Pre: Senior standing.
Prerequisite(s): (MGT 3304 or MGT 3404) and (MKTG 3104 or MKTG 3104H) and FIN 3104 and BIT 3414
Corequisite(s): FIN 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4414 - Strategic Compensation, Benefits, and Rewards (3 credits)
Strategic perspective on how decisions about employee compensation, benefits, and rewards help firms to implement business strategy and achieve competitive advantage. Basic compensation tools and analytic techniques used to design an internally aligned and externally competitive pay system in organizations. Individual and group level performance-based rewards that drive performance and achieve business objectives. Strategic choice of employee benefits aligned with organizational goals. Compensation-related laws and analysis of compensation data to ensure equity and legal compliance.
Prerequisite(s): MGT 3334 or MGT 3344 or MGT 3424
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4854 - Analytics in Action (3 credits)
Problem-solving framework and analytic techniques for solving messy, unstructured, high-impact, real-world organizational/societal problems within an interdisciplinary, intercultural, experiential learning context. Definition of problem scope, objectives, need for change, ethical concerns, and diversity and inclusion issues; identification of stakeholders and their values; evaluation of decision tradeoffs; problem decomposition and hypothesis formulation; project planning and administration; data versus user requirements, ethical and inclusive decision making, data collection, preparation, and analysis; team roles and management; professional communication of insights, policy and action recommendations.
Corequisite(s): BDS 2005, CMDA 2014
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIT 4854

MGT 4935 - Cadet Citizen Leader Practicum (2 credits)
4935:Students in the class learn practical strategies for leading teams to plan execute a project; project writing; applied dining etiquette; being a mentor to others, leadership through service learning and living a healthy lifestyle. A physical fitness laboratory compliments the lecture. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 4936 - Cadet Citizen Leader Practicum (2 credits)
4936: Students in the class begin the process of transition from college to their intended career. Topics include conduct of effective meetings, salary and benefits negotiation, obtaining post-graduation professional development, serving as a mentor, and developing a plan for the first six months in a new job. A physical fitness laboratory compliments the lecture. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 4944 - Leading in Your Profession (1 credit)
Examines the skills and knowledge necessary to succeed in a responsible role of leadership when beginning ones career. It is a capstone course that draws on the leadership training and experience cadets have accumulated during their first three years in the Corps of Cadets. Senior standing in the Corps of Cadets required. Course may be taken twice for credit. The pre-requisite requirement is such that a student must take the pre-requisite twice before enrolling in this course.
Prerequisite(s): MGT 2944
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 2 credit hours

MGT 4945 - Executive Leadership for Cadets (1 credit)
Examines executive level leadership. It explores executive decision making, constraint theory and problem solving in both the military and civilian career fields. Senior standing in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 1 Crd)

MGT 4946 - Executive Leadership for Cadets (1 credit)
Prepares senior class cadets for the transition from college to career professional. Explores life planning, personal finance, taking charge in a new organization, cross- generational communication, and developing subordinate relationships. Senior standing in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 1 Crd)

MGT 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 4994H - Undergraduate Research (1-19 credits)
Honors section
Instructional Contact Hours: Variable credit course

Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07) is fulfilled by completing MGT 4334.		
Subtotal		37
Total Credits		**125**

1 Policy 91: Pamplin students in a business degree program must complete eight business courses (ACIS 1504 Introduction to Business Analytics and Business Intelligence, MATH 1524 Business Calculus, ACIS 2115 Principles of Accounting - ACIS 2116 Principles of Accounting, BIT 2405 Introduction to Business Statistics, Analytics, and Modeling - BIT 2406 Introduction to Business Statistics, Analytics, and Modeling, and ECON 2005 Principles of Economics - ECON 2006 Principles of Economics) with a grade of C- or higher by 72 attempted credit hours (or 90 attempted credit hours for students with more than 18 transfer credits). Students who have not met the requirements will be notified upon reaching 72 (or 90) credit hours that they must complete the missing course(s) in the next term(s) of enrollment. Failure to do so may result in the student's dismissal from the business degree program. This policy is strictly enforced.

2 Graduation requirement: Students must achieve a grade of C- or higher in select business courses (ACIS 1504 Introduction to Business Analytics and Business Intelligence, MATH 1524 Business Calculus, ACIS 2115 Principles of Accounting - ACIS 2116 Principles of Accounting, BIT 2405 Introduction to Business Statistics, Analytics, and Modeling - BIT 2406 Introduction to Business Statistics, Analytics, and Modeling, ECON 2005 Principles of Economics - ECON 2006 Principles of Economics, MGT 1104 Foundations of Business, HTM 2314 Introduction to International Business or MGT 2314 Introduction to International Business, MGT 3404 Principles of Management, MKTG 3104 Marketing Management, FIN 3104 Introduction to Finance, FIN 3054 Legal and Ethical Environment of Business, BIT 3414 Operations and Supply Chain Management, and MGT 4394 Strategic Management).

3 COMM 2004 Public Speaking is required for Entrepreneurship, Innovation, & Technology majors who did not take COMM 1015 Communication Skills - COMM 1016 Communication Skills. If ENGL 1105 First-Year Writing - ENGL 1106 First-Year Writing are taken, COMM 2004 Public Speaking Public Speaking will satisfy the Pathway 1A: Advanced Discourse requirement. If COMM 1015 Communication Skills - COMM 1016 Communication Skills are taken, students may use MGT 4334 Ethical Leadership and Corporate Social Responsibility to satisfy the 1A requirement.

4 Business Information Technology (BIT) and Cybersecurity Management and Analytics (CMA) majors who are double majoring in Entrepreneurship, Innovation, & Technology may substitute BIT 4484 Project Management for MGT 2114 Principles of Project Management.

Overall and In-Major GPA: Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

EIT Electives

Code	Title	Credits
ENGE 2094	Create!: Ideation & Innovation #	3
MGT 3074	Social Entrepreneurship (if not taken to satisfy major requirement) #	3
MGT 3084	Digital Entrepreneurship, Innovation, and Product Development (if not taken to satisfy major requirement) #	3
MGT 3094	Global Entrepreneurship (if not taken to satisfy major requirement) #	3
MGT 3164	#	3
MGT 3954	Study Abroad (only satisfies major requirement when the topic is "Entrepreneurship") #	1-19
or MGT 4954	Study Abroad	
ENGE/IDS/MGT 4094	Startup: Commercialization of Innovation #	3
MGT 4964	Field Study (only satisfies major requirement when the topic is "Entrepreneurship") #	1-19

Policy 91

University policy requires a student to make satisfactory academic progress towards a degree in order to remain enrolled at the institution (see footnote 1). Students are responsible for reading and understanding Policy 91 in accordance with Pamplin policies http://pampl.in/policy91 (https://pamplin.vt.edu/undergraduate-programs/advising/academic-policies.html)

Graduation Requirements

General Information

A total of **125 credit hours** is required for graduation. Any exceptions to this curriculum must be approved by the student's department head and Associate Dean for Pamplin Undergraduate Programs.

Pre-Requisites

Students are responsible for ensuring they have met necessary pre-requisites for all courses. Please refer to Undergraduate Catalog or academic advisor.

Transferring Courses

Requirements and procedures for transferring courses are available http://pampl.in/transfercreditsteps (http://pampl.in/transfercreditsteps/)

Overall and In-Major GPA

Students must have an overall GPA of 2.0 or higher and an in-major GPA of 2.0 or higher to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

Foreign Language Requirement

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully

complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement may not count towards the minimum credit hours required for graduation. Please refer to Undergraduate Catalog for details.

Roadmap

First Year

Fall Semester		**Credits**

Students who have not met the requirements will be notified upon reaching 72 (or 90) credit hours that they must complete the missing course(s) in the next term(s) of enrollment. Failure to do so may result in the student's dismissal from the business degree program. This policy is strictly enforced.

2 Graduation requirement: Students must achieve a grade of C- or higher in select business courses (ACIS 1504 Introduction to Business Analytics and Business Intelligence, MATH 1524 Business Calculus, ACIS 2115 Principles of Accounting - ACIS 2116 Principles of Accounting, BIT 2405 Introduction to Business Statistics, Analytics, and Modeling - BIT 2406 Introduction to Business Statistics, Analytics, and Modeling, ECON 2005 Principles of Economics - ECON 2006 Principles of Economics, MGT 1104 Foundations of Business, HTM 2314 Introduction to International Business or MGT 2314 Introduction to International Business, MGT 3404 Principles of Management, MKTG 3104 Marketing Management, FIN 3104 Introduction to Finance, FIN 3054 Legal and Ethical Environment of Business, BIT 3414 Operations and Supply Chain Management, and MGT 4394 Strategic Management).

3 COMM 2004 Public Speaking is required for Entrepreneurship, Innovation, & Technology majors who did not take COMM 1015 Communication Skills - COMM 1016 Communication Skills. If ENGL 1105 First-Year Writing - ENGL 1106 First-Year Writing are taken, COMM 2004 Public Speaking will satisfy the Pathway 1A: Advanced Discourse requirement. If COMM 1015 Communication Skills - COMM 1016 Communication Skills are taken, students may use MGT 4334 Ethical Leadership and Corporate Social Responsibility to satisfy the 1A requirement.

[4] Business Information Technology (BIT) and Cybersecurity Management and Analytics (CMA) majors who are double majoring in Entrepreneurship, Innovation, & Technology may substitute BIT 4484 Project Management for MGT 2114 Principles of Project Management.

[#] Overall and In-Major GPA: Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

Policy 91

University policy requires a student to make satisfactory academic progress towards a degree in order to remain enrolled at the institution (see footnote 1). Students are responsible for reading and understanding Policy 91 in accordance with Pamplin policies http://pampl.in/policy91 (http://pampl.in/policy91/).

Graduation Requirements

General Information

A total of **125 credit hours** is required for graduation. Any exceptions to this curriculum must be approved by the student's department head and Associate Dean for Pamplin Undergraduate Programs.

Pre-requisites

Students are responsible for ensuring they have met necessary pre-requisites for all courses. Please refer to the Undergraduate Catalog or academic advisor.

Transferring Courses

Requirements and procedures for transferring courses are available http://pampl.in/transfercreditsteps (http://pampl.in/transfercreditsteps/).

Overall and In-Major GPA

Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

Foreign Language Requirement

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement may not count towards the minimum credit hours required for graduation. Please refer to the Undergraduate Catalog for details.

1 Policy 91: Pamplin students in a business degree program must complete eight business courses (ACIS 1504 Introduction to Business Analytics and Business Intelligence, MATH 1524 Business Calculus, ACIS 2115 Principles of Accounting - ACIS 2116 Principles of Accounting, BIT 2405 Introduction to Business Statistics, Analytics, and Modeling - BIT 2406 Introduction to Business Statistics, Analytics, and Modeling, and ECON 2005 Principles of Economics - ECON 2006 Principles of Economics) with a grade of C- or higher by 72 attempted credit hours (or 90 attempted credit hours for students with more than 18 transfer credits). Students who have not met the requirements will be notified upon reaching 72 (or 90) credit hours that they must complete the missing course(s) in the next term(s) of enrollment. Failure to do so may result in the student's dismissal from the business degree program. This policy is strictly enforced.

2 Graduation requirement: Students must achieve a grade of C- or higher in select business courses (ACIS 1504 Introduction to Business Analytics and Business Intelligence, MATH 1524 Business Calculus, ACIS 2115 Principles of Accounting - ACIS 2116 Principles of Accounting, BIT 2405 Introduction to Business Statistics, Analytics, and Modeling - BIT 2406 Introduction to Business Statistics, Analytics, and Modeling, ECON 2005 Principles of Economics - ECON 2006 Principles of Economics, MGT 1104 Foundations of Business, HTM 2314 Introduction to International Business or MGT 2314 Introduction to International Business, MGT 3404 Principles of Management, MKTG 3104 Marketing Management, FIN 3104 Introduction to Finance, FIN 3054 Legal and Ethical Environment of Business, BIT 3414 Operations and Supply Chain Management, and MGT 4394 Strategic Management).

3 COMM 2004 Public Speaking is required for Management Consulting & Analytics majors who did not take COMM 1015 Communication Skills-COMM 1016 Communication Skills. If ENGL 1105 First-Year Writing - ENGL 1106 First-Year Writing are taken, COMM 2004 Public Speaking is required.

4 Business Information Technology (BIT) and Cybersecurity Management and Analytics (CMA) majors who are double majoring in Management Consulting & Analytics (MCA) may substitute BIT 4484 Project Management for MGT 2114 Principles of Project Management.

Overall and In-Major GPA: Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

If COMM 1015 Communication Skills - COMM 1016 Communication Skills are taken, students may use MGT 4334 Ethical Leadership and Corporate Social Responsibility to satisfy the 1A requirement.

[4] Business Information Technology (BIT) and Cybersecurity Management and Analytics (CMA) majors who are double majoring in Management may substitute BIT 4484 Project Management for MGT 2114 Principles of Project Management.

Overall and In-Major GPA: Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

Policy 91

University policy requires a student to make satisfactory academic progress towards a degree in order to remain enrolled at the institution (see footnote 1). Students are responsible for reading and understanding Policy 91 in accordance with Pamplin policies http://pampl.in/policy91 (http://pampl.in/policy91/)

Graduation Requirements

General Information

A total of **125 credit hours** is required for graduation. Any exceptions to this curriculum must be approved by the student's department head and Associate Dean for Pamplin Undergraduate Programs.

Pre-Requisites

Students are responsible for ensuring they have met necessary pre-requisites for all courses. Please refer to the Undergraduate Catalog or academic advisor.

Transferring Courses

Requirements and procedures for transferring courses are available http://pampl.in/transfercreditsteps (http://pampl.in/transfercreditsteps/)

Overall and In-Major GPA

Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

Foreign Language Requirement

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement may not count towards the minimum credit hours required for graduation . Please refer to the Undergraduate Catalog for details.

MGT 4984	Special Study	1-19

Any additional management courses (including those listed as MGT Electives) can be taken as free electives once major requirements are satisfied.

Marketing

Our Website (http://www.marketing.pamplin.vt.edu)

Overview

Marketing grows out of the concept of exchange between buyers and sellers. Driven by the needs and wants of the consumer, marketing managers develop new products, assign effective price levels, create promotional strategies, and develop the best distribution plans to guarantee that products reach the final consumer. Marketing also plays a crucial role in managing the efficient flow of goods and services from businesses to businesses. And managing marketing is growing even more exciting as technology and the internet enable managers to stay in closer contact with their customers and better manage this relationship. Marketing by manufacturing firms is well-known. Service industries such as banking and health care, however, are increasingly relying on marketing to improve service quality and delivery. Non-profit organizations, such as Habitat for Humanity and the American Red Cross, also use marketing to deliver social goods and services. All of these organizations benefit when they are able to use marketing concepts and tools to better understand their clients and design unique offerings that can meet their clients' needs.

The undergraduate program in marketing management is designed to offer the student a broad business education with an emphasis on professional training for development of marketing strategies and managing marketing operations. Virginia Tech Marketing graduates pursue a range of careers. They take jobs in marketing management, sales, advertising, retailing, and consulting positions in companies small and large. The curriculum is designed to provide core skills in marketing and to support this broad range of potential career interests.

In addition to the undergraduate program, the faculty in marketing management offer a master's and a doctoral degree for those students interested in more technical positions, such as marketing research; more rapid promotion with certain employers; or positions in higher education.

The department participates in the Cooperative Education Program in which qualified students may alternate semesters of study with semesters of professional employment.

The Marketing Department currently offers three degree options: Marketing- no concentration, Marketing- Sales concentration, and Marketing- Digital Marketing Strategy Concentration. In addition to the major, Marketing offers minors in Professional Sales and Digital Marketing Strategy to non-Marketing majors within the College of Business only.

The Professional Sales concentration and minor provide students with the knowledge and skills necessary to successfully enter the field of professional sales. Students will learn the necessary knowledge and skills needed to compete successfully in the respective field.

The Digital Marketing Strategy Concentration and minor provides students with the knowledge and skills to enter Marketing and related fields with technical experience in Digital Product delivery and developing, analyzing, and enhancing firms' products on the web, mobile, and social networks.

- Marketing Management Major (p. 748)
- Marketing Management Major with Digital Marketing Strategy Option (p. 751)
- Marketing Management Major with Professional Sales Option (p. 755)

Department Head: Rajesh Bagchi

Visiting Assistant Professor: R. Crabbe

Emeritus Faculty: N. Klein, J. E. Littlefield, M. M. Bird, and J. E. Keith
Professor of Practice: B. Collins
Associate Professor of Practice: Donna Wertalik
Advanced Instructor: T. Reilly
Instructor: C. Swayne
Adjunct: J. Hsu
Advising: Pamplin College of Business, Undergraduate Programs Advising Center is located at 1046 Pamplin Hall. Students may schedule appointments by calling (540) 231-6602.

Undergraduate Course Descriptions (MKTG)

MKTG 2104 - Careers in Marketing (1 credit)
Provide students with an early start on understanding the many career options within the marketing major. In-depth focus in developing an online professional branded website and career map. Enhance and broaden the understanding of customer's needs, while gaining the sense of ownership over the product and/or service to meet customer's needs through communication of marketing strategy. Serves as a foundational course in preparing students for career success in the Marketing field. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

MKTG 2954 - Business Study Abroad (1-19 credits)
This course provides students with an international business experience. It is only offered as part of a program outside of the United States. Students will learn from the structured educational experience developed by the faculty leader. This course is intended for students who want to develop marketing-related free electives. Pre: Instructors consent and the completion of 24 semester hours with a minimum GPA of 3.0 or departmental consent.
Instructional Contact Hours: Variable credit course

MKTG 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 2964H - Field Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

MKTG 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 2994 - Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 3104 - Marketing Management (3 credits)
Study of the marketing process from a macro and management viewpoint. The macro viewpoint includes the role of marketing in society. The management viewpoint includes the product, distribution, promotional, and pricing decisions. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 3104H - Marketing Management (3 credits)
Study of the marketing process from a macro and management viewpoint. The macro viewpoint includes the role of marketing in society. The management viewpoint includes the product, distribution, promotional, and pricing decisions. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 3134 - Personal Well-being and Professional Success (3 credits)
In-depth study of the science of well-being and stress management for business and business professionals from multi-disciplinary perspective (Positive Psychology, Consumer Research, Behavioral Economics, Neuroscience, Sociology). Includes relevance of well-being data in marketing and business contexts. Application of well-being and stress management strategies to overcome wellbeing barriers, ensure work-life balance and create positive work environments. Exploration of policy implications of well-being data.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 3164 - Introduction to Digital Marketing Strategy (3 credits)
Study of the principles of digital marketing and its applications. Integration of digital strategies with overall business and traditional marketing plans. Emphasis given to critical digital knowledge in inbound marketing, identifying and creating buyer personas, email marketing, search engine optimization, planning and executing digital content marketing calendars, social media marketing, web analytics and digital compliance legislation and regulations, and their ramifications.
Corequisite(s): 3104 or 3104H.
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 3504 - Advertising (3 credits)
Survey of advertising principles and its applications. The course covers advertising history, the impact of advertising on society, and ethical and regulatory issues. The process of creating and placing advertising is explored including advertising objectives, budgeting, media planning and mix, creative objectives and strategy, copy execution and production, and copy testing. Junior standing required.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 4054 - Sales Technology (3 credits)
Course focus is on the integration of technology and data analytics to advance sales. Study of how technology is leveraged in the social sales process which includes how to successfully utilize technology in social selling situations. Emphasis given to Customer Relationship Management (CRM) strategies, benefits, operations, and application across the customer life cycle. Students demonstrate proficiency in CRM technology, through experiential learning by earning Salesforce, Hubspot and Smartfox badges.
Prerequisite(s): MKTG 3104
Corequisite(s): MKTG 4554
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4114 - Introduction to AI in Marketing (3 credits)
Study Artificial Intelligence (AI) and machine learning concepts, myths vs. facts, and barriers associated with AI. Explore the need and uses of AI in marketing and sales. Includes strategies for firms to identify AI opportunities, and the pitfalls and barriers associated with AI implementation. Consider how to implement AI, measure AI success, and gain competitive advantage through AI. Analyze the consumer, firm, and societal impacts of AI from marketing and ethics perspectives, and suggest corrective strategies for firms. Pre: Junior standing.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4144 - Business and Marketing Strategies for the Process Industries (3 credits)
Business strategies and industrial marketing concepts, and their application in the chemical, pharmaceutical and related process industries. The course is designed for engineers and other students planning a career in the process industries. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CHE 4144

MKTG 4154 - Marketing Research (3 credits)
This course is a study of the scientific process of problem solving in a marketing context. It includes concepts of problem definition, hypotheses generation, questionnaire development, research design, implementation, analysis, and interpretation of statistical findings. Junior standing required.
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and (BIT 2405 or (STAT 3005 and STAT 3006) or STAT 3604 or (STAT 3615 and STAT 3616) or STAT 4604) and BIT 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4164 - Social Media and Content Marketing (3 credits)
Study of social media channels and content creation processes and strategies. Integration of inbound marketing methodologies with social and digital media marketing. Emphasis given to content marketing distribution strategies, influencer marketing, social media advertising, and key content marketing tools including blogs, vlogs, and podcasts, as well as employee advocacy programs and social media and crisis management plans for organizations.
Prerequisite(s): MKTG 3164
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4174 - Analytics & Metrics for Digital Marketing Strategy (3 credits)
Study of the assessment of digital marketing analytics and metrics and their applications. Optimization of digital marketing results across all digital marketing strategies and tactics. Emphasis given to digital marketing measurement models, data-driven decision making including application of the decision-making framework, predictive analytics and data visualizations, website analytics, organic search analytics, social media metrics, email marketing metrics, as well as paid, owned and earned media analytics.
Prerequisite(s): MKTG 3164
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4204 - Consumer Behavior (3 credits)
An integrated analysis of individual and environmental influences on consumer decision making, purchase, and consumption behaviors with strong emphasis on implications for developing, executing, and assessing marketing strategy. Junior standing required.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4204H - Consumer Behavior (3 credits)
An integrated analysis of individual and environmental influences on consumer decision making, purchase, and consumption behaviors with strong emphasis on implications for developing, executing, and assessing marketing strategy. Junior standing required. Honors section
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4254 - Product and Price Management (3 credits)
Emphasis on strategic branding and product planning within the context of marketing management. Analysis of economic, financial, legal, and marketing principles to make effective pricing decisions. Examination of relationships between product and price management. Junior standing.
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and MKTG 4154 and (MKTG 4204 or MKTG 4204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4264 - Analytics for Marketing (3 credits)
Integrates conceptual and quantitative aspects of marketing. Provides concentrated emphasis on the role of analytical and computer models to enhance marketing decision making. Emphasis on managerial decision making in key areas, including segmentation and targeting, positioning, forecasting, new product design, forecasting and pricing. Role of consumer perceptions and behaviors on decision making. Hands-on experience with model building and using analytical tools.
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and MKTG 4154 and (MKTG 4204 or MKTG 4204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4304 - Marketing Communications (3 credits)
Theory and application of an organizations marketing communications function. Includes traditional and digital channels. Development of a marketing communications plan, situation analysis, setting communication goals, creating message strategy, implementing the strategy using promotional mix variables, planning traditional and social media, and determining the communication budget. Junior standing.
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and (MKTG 4204 or MKTG 4204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4354 - Marketing Channels and Logistics (3 credits)
Management of the firms distribution function. Study of the structure, functions, interactions, and activities of marketing channels. Analysis and development of integrated physical distribution and logistics systems for the firm. Junior standing required.
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and (BIT 2405 or (STAT 3005 and STAT 3006) or STAT 3604 or (STAT 3615 and STAT 3616) or STAT 4604) and BIT 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4404 - Field Practicum in Marketing (3 credits)
Application of marketing concepts and theories to a specific business concept. On-site performance of marketing activities and a written analysis of the firms marketing strategy and execution. Junior Standing
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4454 - Sales Force Management (3 credits)
Integration of behavioral research to provide an understanding of the role of the salesperson within the sales organization and in relation to the buyers. Personal selling examines the dyadic interaction between buyer and seller. Managing the sales force covers planning, organizing, directing, and controlling the activities of the sales personnel. Junior standing required.
Prerequisite(s): MKTG 4554 and (MKTG 3104 or MKTG 3104H) and MKTG 4204
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4554 - Principles of Professional Selling (3 credits)
Learn about the management of relationships between buyers and sellers to effectively build partnerships, including the importance of understanding buyer behavior to facilitate the sales process. Explore the concepts of prospecting for customers, planning for the sales call, presentation skills, as well as the formal negotiation process and how these areas relate to adaptive selling. Address common sales management issues including how to manage cross-functional teams and their time and territories, as well as explore the ethical and legal issues that often arise throughout the sales process. Discuss the various career paths and opportunities within sales.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4604 - Retail Management (3 credits)
Analysis of managerial problems in retailing establishments, including traditional and online formats. Focus is on operational problems, retail and e-retail store organization, location analysis, buying, selling, sales promotion, and merchandise handling. Junior standing required.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4644 - Marketing, Society and the Public Interest (3 credits)
The impact of marketing on society from a multi- disciplinary and multi-stakeholder perspective. Marketings role in solving societal problems is explored. Topics include at-risk market segments, controversial products and practices, and issues of social justice.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4704 - International Marketing (3 credits)
Assessing international markets, comparing marketing systems; management of international marketing operations; focusing on distribution, promotional, and pricing problems faced by firms engaging in world trade. Junior standing required.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4734 - Real Estate Marketing (3 credits)
This course extends the fundamental concepts of marketing into the study and practice of real estate. The course is concerned with the topics of demographic analysis, market information systems, market research, and marketing strategy of residential and commercial real estate, with particular emphasis on the important area of real estate personal selling. Junior standing required.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4754 - Strategic Marketing (3 credits)
An integrative course in marketing policy and strategy, employing comprehensive case problems in the formulation of marketing action programs and business policy. Senior standing required. Any one of the following Marketing prerequisites--4304, 4354, 4554--may be taken concurrently with 4754.
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and MKTG 4154 and (MKTG 4204 or MKTG 4204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4754H - Stategic Marketing (3 credits)
An integrative course in marketing policy and strategy, employing comprehensive case problems in the formulation of marketing action programs and business policy. Senior standing required. Any one of the following Marketing prerequisites - 4304, 4354, 4554 - may be taken concurrently with 4754H
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and MKTG 4154 and (MKTG 4204 or MKTG 4204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4774 - Advanced Professional Selling (3 credits)
Advanced theory and practice of professional selling with primary focus on the professional sales process, analysis of associated strategic and ethical issues, and acquisition of critical skills required of successful salespeople. Builds on foundation created in Buyer/Seller Relationship (MKTG 4554) to expand knowledge and skills of students considering career in professional sales.
Prerequisite(s): MKTG 4554 and MKTG 4204 and (MKTG 3104 or MKTG 3104H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 4964H - Field Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

MKTG 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 4994H - Honors Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Total Credits		**125**

[1] Policy 91: Pamplin students in a business degree program must complete eight business courses (ACIS 1504 Introduction to Business Analytics and Business Intelligence, MATH 1524 Business Calculus, ACIS 2115 Principles of Accounting - ACIS 2116 Principles of Accounting, BIT 2405 Introduction to Business Statistics, Analytics, and Modeling - BIT 2406 Introduction to Business Statistics, Analytics, and Modeling, and ECON 2005 Principles of Economics - ECON 2006 Principles of Economics) with a grade of C- or higher by 72 attempted credit hours (or 90 attempted credit hours for students with more than 18 transfer credits). Students who have not met the requirements will be notified upon reaching 72 (or 90) credit hours that they must complete the missing course(s) in the next term(s) of enrollment. Failure to do so may result in the student's dismissal from the business degree program. This policy is strictly enforced.

[2] Graduation requirement: Students must achieve a grade of C- or higher in select business courses (ACIS 1504 Introduction to Business Analytics and Business Intelligence, MATH 1524 Business Calculus, ACIS 2115 Principles of Accounting - ACIS 2116 Principles of Accounting, BIT 2405 Introduction to Business Statistics, Analytics, and Modeling - BIT 2406 Introduction to Business Statistics, Analytics, and Modeling, ECON 2005 Principles of Economics - ECON 2006 Principles of Economics, MGT 1104 Foundations of Business, HTM 2314 Introduction to International Business or MGT 2314 Introduction to International Business, MGT 3404 Principles of Management, MKTG 3104 Marketing Management, FIN 3104 Introduction to Finance, FIN 3054 Legal and Ethical Environment of Business, BIT 3414 Operations and Supply Chain Management, and MGT 4394 Strategic Management).

[3] Critical Analysis of Identity & Equity in the U.S. may be double-counted with another course (major, option, pathway, or free elective) that is designated as pathway 7. If this pathway is already met, students must take a free elective to meet the 125-credit hour requirement.

[#] Overall and In-Major GPA: Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

Policy 91

University policy requires a student to make satisfactory academic progress towards a degree in order to remain enrolled at the institution (see footnote 1). Students are responsible for reading and understanding

Policy 91 in accordance with Pamplin policies http://pampl.in/policy91 (http://pampl.in/policy91/)

Graduation Requirements

General Information

A total of **125 credit hours** is required for graduation. Any exceptions to this curriculum must be approved by the student's department head and Associate Dean for Pamplin Undergraduate Programs.

Pre-requisites

Students are responsible for ensuring they have met necessary pre-requisites for all courses. Please refer to the Undergraduate Catalog or academic advisor.

Transferring Courses

Requirements and procedures for transferring courses are available http://pampl.in/transfercreditsteps.

Overall and In-Major GPA

Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

Foreign Language Requirement

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement may not count towards the minimum credit hours required for graduation. Please refer to the Undergraduate Catalog for details.

Roadmap

First Year		
Fall Semester		**Credits**
ACIS 1504	Introduction to Business Analytics and Business Intelligence [1,2]	3

MKTG 4974	Independent Study #	3
MKTG 4994	Undergraduate Research #	1-19

1 **Policy 91**: Pamplin students in a business degree program must complete eight business courses (ACIS 1504 Introduction to Business Analytics and Business Intelligence, MATH 1524 Business Calculus, ACIS 2115 Principles of Accounting-ACIS 2116 Principles of Accounting, BIT 2405 Introduction to Business Statistics, Analytics, and Modeling-BIT 2406 Introduction to Business Statistics, Analytics, and Modeling, and ECON 2005 Principles of Economics-ECON 2006 Principles of Economics) with a grade of C- or higher by 72 attempted credit hours (or 90 attempted credit hours for students with more than 18 transfer credits). Students who have not met the requirements will be notified upon reaching 72 (or 90) credit hours that they must complete the missing course(s) in the next term(s) of enrollment. Failure to do so may result in the student's dismissal from the business degree program. This policy is strictly enforced.

2 **Graduation Requirement**: Students must achieve a **grade of C- or higher in select business courses** (ACIS 1504 Introduction to Business Analytics and Business Intelligence, MATH 1524 Business Calculus, ACIS 2115 Principles of Accounting-ACIS 2116 Principles of Accounting, BIT 2405 Introduction to Business Statistics, Analytics, and Modeling-BIT 2406 Introduction to Business Statistics, Analytics, and Modeling, ECON 2005 Principles of Economics-ECON 2006 Principles of Economics, MGT 1104 Foundations of Business, HTM 2314 Introduction to International Business/MGT 2314 Introduction to International Business, MGT 3404 Principles of Management, MKTG 3104 Marketing Management, FIN 3104 Introduction to Finance, FIN 3054 Legal and Ethical Environment of Business, BIT 3414 Operations and Supply Chain Management, and MGT 4394 Strategic Management).

3 **Pre-requisites:** Students are responsible for ensuring they have met necessary pre-requisites for all courses. Please refer to the Undergraduate Catalog or academic advisor.

4 **Overall and In-Major GPA:** Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in- major GPA are noted.

5 Critical Analysis of Identity & Equity in the U.S. may be double-counted with another course (major, option, pathway, or free elective) that is designated as pathway 7. If this pathway is already met, students must take a free elective to meet the 125-credit hour requirement.

Policy 91

University policy requires a student to make satisfactory academic progress towards a degree in order to remain enrolled at the institution (see footnote 1). Students are responsible for reading and understanding Policy 91 in accordance with Pamplin policies http://pampl.in/policy91 (http://pampl.in/policy91/)

Graduation Requirements

General Information

A total of **125 credit hours** is required for graduation. Any exceptions to this curriculum must be approved by the student's department head and Associate Dean for Pamplin Undergraduate Programs.

Pre-Requisites

Students are responsible for ensuring they have met necessary pre-requisites for all courses. Please refer to the Undergraduate Catalog or academic advisor.

Transferring Courses

Requirements and procedures for transferring courses are available http://pampl.in/transfercreditsteps (http://pampl.in/transfercreditsteps/)

Overall and In-Major GPA

Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

Foreign Language Requirement

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement may not count towards the minimum credit hours required for graduation. Please refer to Undergraduate Catalog for details.

Roadmap

First Year		
Fall Semester		**Credits**

1 Policy 91: Pamplin students in a business degree program must complete eight business courses (ACIS 1504 Introduction to Business Analytics and Business Intelligence, MATH 1524 Business Calculus, ACIS 2115 Principles of Accounting - ACIS 2116 Principles of Accounting, BIT 2405 Introduction to Business Statistics, Analytics, and Modeling - BIT 2406 Introduction to Business Statistics, Analytics, and Modeling, and ECON 2005 Principles of Economics - ECON 2006 Principles of Economics) with a grade of C- or higher by 72 attempted credit hours (or 90 attempted credit hours for students with more than 18 transfer credits). Students who have not met the requirements will be notified upon reaching 72 (or 90) credit hours that they must complete the missing course(s) in the next term(s) of enrollment. Failure to do so may result in the student's dismissal from the business degree program. This policy is strictly enforced.

2 Graduation requirement: Students must achieve a grade of C- or higher in select business courses (ACIS 1504 Introduction to Business Analytics and Business Intelligence, MATH 1524 Business Calculus, ACIS 2115 Principles of Accounting - ACIS 2116 Principles of Accounting, BIT 2405 Introduction to Business Statistics, Analytics, and Modeling - BIT 2406 Introduction to Business Statistics, Analytics, and Modeling, ECON 2005 Principles of Economics - ECON 2006 Principles of Economics, MGT 1104 Foundations of Business, HTM 2314 Introduction to International Business or MGT 2314 Introduction to International Business, MGT 3404 Principles of Management, MKTG 3104 Marketing Management, FIN 3104 Introduction to Finance, FIN 3054 Legal and Ethical Environment of Business, BIT 3414 Operations and Supply Chain Management, and MGT 4394 Strategic Management).

3 Critical Analysis of Identity & Equity in the U.S. may be double-counted with another course (major, option, pathway, or free elective) that is designated as pathway 7. If this pathway is already met, students must take a free elective to meet the 125-credit hour requirement.

Overall and In-Major GPA: Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

Policy 91

University policy requires a student to make satisfactory academic progress towards a degree in order to remain enrolled at the institution (see footnote 1). Students are responsible for reading and understanding Policy 91 in accordance with Pamplin policies http://pampl.in/policy91 (http://pampl.in/policy91/)

Graduation Requirements

General Information

A total of **125 credit hours** is required for graduation. Any exceptions to this curriculum must be approved by the student's department head and Associate Dean for Pamplin Undergraduate Programs.

Pre-requisites

Students are responsible for ensuring they have met necessary pre-requisites for all courses. Please refer to the Undergraduate Catalog or academic advisor.

Transferring Courses

Requirements and procedures for transferring courses are available http://pampl.in/transfercreditsteps (http://pampl.in/transfercreditsteps/)

Overall and In-Major GPA

Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

Foreign Language Requirement

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement may not count towards the minimum credit hours required for graduation. Please refer to the Undergraduate Catalog for details.

Real Estate

Our Website (http://www.realestate.vt.edu)

Overview

The B.S. degree in the Blackwood Program in Real Estate is a comprehensive, interdisciplinary academic program that draws classes from five colleges. The major offers real estate courses that integrate the material students learn in disciplinary courses such as finance, law, and property management through practical experiences within the academic program. The integration occurs though a university-industry partnership where real estate professionals are actively involved in students' education through guest lectures, mentoring experiences, and by providing internship opportunities.

In addition to learning about the broad field of real estate and the entire development process, students are encouraged to find their niche in the field. Students develop an area of expertise by adding a second major, completing a minor, or creating an area of concentration with the approval of their academic advisor. Graduates of the Blackwood Program in Real Estate are prepared to enter the Real Estate industry upon graduation and make immediate professional contributions.

Plan of Study

Note: Graduation requires a total of 120 semester credit hours. Requirements are subject to change; prospective students should contact their academic advisor prior to initiating their programs of study.

Remarks

Restricted Electives - Restricted electives are courses comprised from a focused area of study in the Real Estate profession. This is accomplished by completing a second major or minor. Students are expected to work with a Real Estate Academic Advisor to ensure the completion of restricted electives.

- Real Estate for Commercial Properties Major (p. 760)
- Real Estate for Residential Properties Major (p. 763)

Willis Blackwood Real Estate Director: Kevin J. Boyle
Associate Professor: D. Bieri
Collegiate Assistant Professor: J. Robert
Collegiate Associate Professor, William and Mary Alice Park Junior Faculty Fellow: S. Clements
Assistant Professor of Practice: H. Casey, J. Everett, M. Walsh
Instructor: M. McMahon

Undergraduate Course Descriptions (REAL)

REAL 1004 - Discovering Real Estate (2 credits)
First year experience for the Program in Real Estate. Academic planning, career exploration, and resources for academic success. Leadership, team building, communication and problem solving in the real estate industry. Role of ethics in the profession. Introduction to peer and professional mentors.
Instructional Contact Hours: (2 Lec, 2 Crd)

REAL 1014 - Careers in Real Estate (1 credit)
Provides an overview of multiple facets of the industry and highlights potential real estate careers. Examines academic training and specific skills needed to integrate knowledge from different real estate disciplines Provides an understanding of ethical leadership and pathways to achieve professional success through utilizing professional skills. Pre: First year or sophomore standing.
Corequisite(s): 2004 or UAP 2004.
Instructional Contact Hours: (1 Lec, 1 Crd)

REAL 1024 - Real Estate: The REAL Deal! (3 credits)
Explore the dynamic world of real estate with a multifaceted understanding of the field. Delve into the history of real estate and compare the fundamentals of real estate across real estate product types. Investigate zoning and design a spatial real estate zoning plan. Differentiate strategies for financial success in real estate, while examining the influence of government on the industry. Engage in discussions that use real estate to solve complex social problems while analyzing issues of identity and equity. Debate diverse outcomes and potential future developments within the ever-evolving landscape of real estate.
Pathway Concept Area(s): 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 2004 - Principles of Real Estate (3 credits)
Introduction to real estate, including markets, land use planning and zoning, development, finance, construction, sales, marketing, management and property valuation. Examines the key actors and processes in each of these areas. Explores major public policies impacting real estate
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 2004

REAL 2024 - Principles of Real Estate Sales (1 credit)
Preparation for the Virginia Salesperson License Exam. Residential real estate sales, mortgages and deeds of trust, types of mortgages, liens, real property management, land use controls, deed restrictions, real estate laws, mandated disclosure, property tax and Real Estate Board Regulations. Pass/Fail only.
Prerequisite(s): REAL 2004 or UAP 2004
Instructional Contact Hours: (1 Lec, 1 Crd)

REAL 2034 - Real Estate Data Analysis (3 credits)
Overview of statistical analysis for use in the real estate market. Introduction of statistical tools and skills needed to draw conclusions from the data. Understanding data, coding and preparing the data, probability and inference, and special topics in inference including insights to inform ethical management and investment decisions.
Prerequisite(s): (UAP 2004 and REAL 1014) or (UAP 2004 and FIN 2164) or (REAL 2004 and REAL 1014) or (REAL 2004 and FIN 2164) or CEE 2834
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 2044 - Professional Development in Real Estate (3 credits)
Professionalism in the real estate industry including professional demeanor, interpersonal and intrapersonal skills, lifelong learning and ethics. Exposure to topics related to personal and professional development such as mentoring, networking, leadership, influencing, negotiating, personal improvement, and utilizing technology in a professional manner.
Prerequisite(s): (REAL 2004 or UAP 2004) and (REAL 1014 or FIN 2164)
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

REAL 3024 - Applied Real Estate Development (3 credits)
Evaluate zoning and entitlements to understand the feasibility of a real estate development. Recognize the process, stakeholders, and challenges associated with developing diverse types of real estate. Use due diligence research to construct a conceptual site plan. Assess constraints and requirements to select appropriate building design elements. Recognize and implement principles of sustainability in real estate development projects. Describe fundamental principles of the construction phase of development using industry-standard terminology.
Prerequisite(s): (REAL 2004 or UAP 2004) and (REAL 2034 or BIT 2405) and (ECON 2005 or AAEC 1005)
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 3034 - Real Estate Market Analysis (3 credits)
Identification of real estate market areas and reconciling market supply and demand for investments and developments. Applications of market analyses to product types such as residential, retail, office, industrial, hotels and resorts, and mixed-use real estate projects.
Prerequisite(s): (REAL 2004 or UAP 2004) and (REAL 2034 or BIT 2405) and (ECON 2005 or AAEC 1005)
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 3044 - Financing Real Estate Projects (3 credits)
Methods and tools for analyzing financial performance of real estate from initial investment to disposition. Sources and uses of both debt and equity capital. Utilizing proformas to assess risks and feasibility. Budgeting for stabilized properties.
Prerequisite(s): (REAL 2004 or UAP 2004) and (REAL 2034 or BIT 2405) and (ECON 2005 or AAEC 1005)
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

REAL 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

REAL 4024 - Sustainable Real Estate Development (3 credits)
Discuss principles of sustainability related to real estate development. Explore industry recognized sustainable rating systems for buildings and infrastructure. Practice project management strategies for scheduling and cost estimating a successful construction project. Identify key building systems and discuss the process for building renovation and construction. Determine the redevelopment potential of an existing site or building. Relate redevelopment principles to sustainable development. Evaluate the advantages and disadvantages of redevelopment projects based on existing conditions. Recognize the long-term economic, environmental, and social impacts of project decision making.
Prerequisite(s): REAL 3024
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 4034 - Real Estate Analytical Methods (1 credit)
Analytical approaches to contemporary topics and issues in real estate decision making. Content varies. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

REAL 4044 - Applied Real Estate Investments (3 credits)
Advanced concepts and practices in real estate investing with topics including but not limited to advanced real estate financial modeling, investment risk and return analyses, securitization, sources of funding, portfolio management, and risk management strategies.
Prerequisite(s): REAL 3024 and REAL 3034 and (REAL 3044 or FIN 4154)
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 4054 - Real Estate Investment Analysis (1 credit)
Analyze supply and demand to predict and model future real estate cash flows. Evaluate real estate investments using financial ratios and conduct financial risk sensitivity analysis to inform a real estate development decision. Generate formal real estate developmental reports. Participate in external real estate case competitions to further comprehension of a real estate analysis and report drafting. Restricted to REAL majors.
Corequisite(s): 3034 or 3044. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

REAL 4064 - Real Estate Appraisal (3 credits)
Application of economic principles to the valuation and appraisal of property including statistical analysis. Cost approach, sales comparison approach and income capitalization approach to conducting appraisal. Appraisal report for evaluating rural property, commercial, residential and transitional. Ethical and professional requirements. Pre: Senior standing.
Prerequisite(s): REAL 3044 or FIN 4154
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 4074 - Residential Real Estate Studio (3 credits)
Course provides mock, real-world learning in a student-led environment. Design, analyze site and financial feasibility, formulate construction plans, and execute leasing and sale of a residential real estate project. Select a project in consultation with faculty and industry advisors. Work on all elements of the life cycle of a residential real estate project from preliminary design through sale of the developed project.
Prerequisite(s): REAL 3024 and (REAL 3034 or MKTG 4734) and (REAL 3044 or FIN 4154)
Instructional Contact Hours: (1 Lec, 3 Lab, 3 Crd)

REAL 4075 - Commercial Real Estate Studio (3 credits)
Couse provides mock, real-world learning in a student-led, team environment. Teams utilize knowledge from prerequisite courses. Teams undertake year-long projects where they design, analyze site and financial feasibility, formulate construction plans, and execute leasing and sale of complex commercial real estate developments. Teams select projects in consultation with faculty and industry advisors. Work focuses on life cycle of real estate projects from design through sale of development. 4075: topics covered include team building, site/project selection, due diligence, initial site design and market analysis. 4076: topics covered include final site design, financing, construction, leasing and property management, and sale. For majors only, senior standing. Design/Lab Studio.
Prerequisite(s): REAL 3024 and REAL 3034
Instructional Contact Hours: (1 Lec, 2 Lab, 3 Crd)

REAL 4076 - Commercial Real Estate Studio (3 credits)
Couse provides mock, real-world learning in a student-led, team environment. Teams utilize knowledge from prerequisite courses. Teams undertake year-long projects where they design, analyze site and financial feasibility, formulate construction plans, and execute leasing and sale of complex commercial real estate developments. Teams select projects in consultation with faculty and industry advisors. Work focuses on life cycle of real estate projects from design through sale of development. 4075: topics covered include team building, site/project selection, due diligence, initial site design and market analysis. 4076: topics covered include final site design, financing, construction, leasing and property management, and sale. For majors only, senior standing. Design/Lab Studio.
Prerequisite(s): (REAL 3044 or FIN 4154) and REAL 4075
Instructional Contact Hours: (1 Lec, 2 Lab, 3 Crd)

REAL 4754 - Real Estate Law (3 credits)
Fundamentals of law as it applies to real estate ownership. Rules, rights, and duties of owners of real estate. Elements of contract law and legal documents, including acquisition and disposal of property, leases, and agreements with third-party service providers. Implications for real estate taxation. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

REAL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

REAL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Subtotal		40
Total Credits		**120**

1. Graduation requirement: Students must achieve a grade of C- or higher in REAL 3024 Applied Real Estate Development, REAL 3034 Real Estate Market Analysis, REAL 3044 Financing Real Estate Projects, and REAL 4075 Commercial Real Estate Studio.
2. COMM 2004 Public Speaking is only required if students do not take COMM 1015 Communication Skills and COMM 1016 Communication Skills for Pathways Concept 1F.
3. BIT 2405 Introduction to Business Statistics, Analytics, and Modeling substitutes for REAL 2034 Real Estate Data Analysis.
4. REAL 4075 Commercial Real Estate Studio and REAL 4076 Commercial Real Estate Studio must be taken in sequence; Fall/Spring of the same academic year or Spring/Fall of the same calendar year.
5. Concept 7 must be satisfied if a course is not selected that double counts for Concepts 2 and 7.
6. Students must have a restricted elective plan of study approved by their real estate advisor by fall of their third year. It must consist of a declared double major or minor related to a focused area of study related to commercial real estate. Students who are double majors may substitute courses from their other major for restricted electives if the courses are not real estate requirements in the BS Real Estate Degree Core Requirements or Real Estate for Commercial Properties Major Requirements.

Overall and In-Major GPA: Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

Policy 91

University policy requires a student to make satisfactory academic progress towards a degree in order to remain enrolled at the institution. Students in the real estate degree program with 30 or more credit hours must enroll in at least one REAL course per semester. Failure to do so may result in the student's dismissal from the real estate degree program. This policy is strictly enforced.

Graduation Requirements

General Information

A total of **120 credit hours** is required for graduation. Any exceptions to this curriculum must be approved by the student's department head and Associate Dean for Pamplin Undergraduate Programs.

Pre-requisites

Students are responsible for ensuring they have met necessary pre-requisites for all courses. Please refer to the Undergraduate Catalog or academic advisor.

Transferring Courses

Requirements and procedures for transferring courses are available http://pampl.in/transfercreditsteps (http://pampl.in/transfercreditsteps/).

Overall and In-Major GPA

Students must have an overall GPA of 2.0 and an in-major GPA of 2.0 to graduate. Courses used to calculate the in-major GPA are noted with a # footnote.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement may not count towards the minimum credit hours required for graduation. Please refer to the Undergraduate Catalog for details.

College of Engineering

Our Website (http://www.eng.vt.edu)

Mission, Vision, and Values

Mission: Anchored by our land-grant identity and the university's motto Ut Prosim (That I May Serve), the College of Engineering educates and inspires students to be critical thinkers, innovators, and leaders. We create new knowledge, technologies, and sustainable solutions that address complex social and technical challenges.

Vision: The Virginia Tech College of Engineering will be the college of choice for aspiring engineers because of our innovative, dynamic, and integrated approach to education, research, and service. Our students and alumni will be sought globally for their talent, creativity, and work ethic. The impact of our transdisciplinary research will advance the boundaries of engineering knowledge and practice. Our solutions will make a difference in the Commonwealth and the world.

The Mission and Vision are informed by five Core Values:

- Inclusiveness: Our community supports equity and fosters respect for every individual, enabling collaboration and collegiality to permeate our classrooms, research facilities, and offices, and to extend to the broader university community. We recognize the importance of allowing every voice to be heard in a spirit of mutual respect.
- Excellence: We are committed to excellence through continuous improvement in our teaching, research, service and day-to-day operations.
- Integrity: Ethics, honesty and transparency are the foundation of all that we do. We believe in honor, discipline and a commitment to do the right thing.
- Perseverance: We are tenacious and believe in the value of hard work. Through resilience, teamwork and a supportive community, we become stronger and more agile, enabling us to adapt to future challenges and opportunities.
- Stewardship: As citizens, innovators, and leaders, we serve our communities, both local and global. We seek to be environmental stewards, believing that engineering for sustainability is critical for the future health of our world and its inhabitants.

College of Engineering at-a-Glance

Virginia Tech engineering students are among the best and brightest in the nation. During their time at the college, they engage with world-class faculty and participate in hands-on learning experiences that span course instruction, student design teams, internship opportunities, and study abroad programs. They learn to work across and outside disciplines to solve the world's most complex problems, as part of a collaborative culture that has flourished at Virginia Tech.

The College of Engineering offers accredited programs leading to Bachelor of Science degrees in the following areas:

- **Aerospace Engineering** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Aerospace and Similarly Named Engineering Programs.
- **Biological Systems Engineering** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Biological and Similarly Named Engineering Programs.
- **Biomedical Engineering** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Bioengineering and Biomedical and Similarly Named Engineering Programs.

- **Building Construction** which is accredited by the American Council for Construction Education, https://www.acce-hq.org (http://www.acee-hq.org/).
- **Chemical Engineering** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Chemical, Biochemical, Biomolecular and Similarly Named Engineering Programs.
- **Civil Engineering** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Civil and Similarly Named Engineering Programs.
- **Computer Engineering** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Electrical, Computer, Communications, Telecommunication(s) and Similarly Named Engineering Programs.
- **Construction Engineering and Management** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Construction and Similarly Named Engineering Programs and is also accredited by the Applied and Natural Science Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Construction and Similarly Named Engineering Programs.
- **Computer Science** which is accredited by the Computing Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Computer Science and Similarly Named Engineering Programs.
- **Electrical Engineering** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Electrical, Computer, Communications, Telecommunication(s) and Similarly Named Engineering Programs.
- **Industrial and Systems Engineering** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Industrial and Similarly Named Engineering Programs.
- **Materials Science and Engineering** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Materials, Metallurgical, Ceramics and Similarly Named Engineering Programs.
- **Mechanical Engineering** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Mechanical and Similarly Named Engineering Programs.
- **Mining Engineering** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Mining and Similarly Named Engineering Programs.
- **Ocean Engineering** which is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Ocean and Similarly Named Engineering Programs.

Experiential Learning

The Virginia Tech College of Engineering fosters opportunities for hands-on learning, interdisciplinary collaboration, and exploration of emerging and innovative subject areas.

The Ware Lab is one of the first spaces on Virginia Tech's campus dedicated to the development of an undergraduate engineering build space. Prior to the founding of the Ware Lab, the university's design teams meet in multiple spaces spread across campus in various academic buildings. Thanks to the generosity and vision of Ware, multidisciplinary teams can interact in a common space. The lab removes boundaries that often separate engineering professions. In real-world practice, engineers from different disciplines will work together. Students who work in the lab are highly recruited by top-tier companies who frequent the lab looking for the well-rounded, globally minded engineers who have had hands on experiences. Further information can be found: https://eng.vt.edu/academics/warelab.html.

The Advanced Engineering Design Lab (AEDL) provides additional space for engineering teams that focus on aerospace and rocketry projects. Further information can be found: https://eng.vt.edu/academics/aerospace-engineering-design-lab.html.

Students can participate in Undergraduate Research and Independent Research. Undergraduate Research offers students the opportunity to work closely with a faculty member in a research lab environment or performing directed work toward a research goal. Undergraduate Research can serve as valuable preparation for graduate study. Independent Study provides students an opportunity to pursue unique, self-directed study under the supervision of a faculty member. Further information can be found at: https://eng.vt.edu/academics/undergraduate-students/resources-support/undergraduate-research-independent-study.html

The College of Engineering has several options for students to have a global experience. Some notable opportunities include the Rising Sophomore Abroad Program (RSAP) which provides a 2-week abroad along with a 3-credit course (ENGE 1644); international internship experiences with SPTS International, Rolls-Royce, and GoinGlobal; and department specific study abroad programs that allow students to continue progress toward degree while taking courses at a non-U.S. university. Additional information can be found at: https://eng.vt.edu/academics/international-programs.html.

Approximately 75% of college of engineering students participate in a co-op or internship allowing them to experience professional work prior to completing their degree. One of the primary ways that students find these opportunities is the Engineering EXPO, a career fair organized by the Student Engineering Council (SEC) that is typically held early in the Fall semester each year. Engineering EXPO is one of the largest student-run career fairs in the nation and hosts hundreds of companies offering full-time employment or internship and co-op opportunities. Additional information on Engineering EXPO can be found at: https://www.sec.vt.edu/expo.html.

Many undergraduate engineering programs culminate in a capstone senior design course sequence in which student teams work under the supervision of a faculty advisor to complete a client-driven design project. Such projects replicate aspects of professional problem-solving experience, providing a transitional learning experience to help

students prepare for a professional career. The college also offers an Interdisciplinary Capstone Course (ENGE 4735-4736) that brings together students from different majors to work on design projects that require multiple fields of expertise.

Undergraduate Scholarships

In the 2022-2023 academic year, over three million dollars in scholarship funds were awarded to undergraduate students in the College of Engineering. Scholarships are available at two levels: departmental & college. The scholarship opportunities are varied. Some require a minimum GPA for eligibility while others require a demonstration of financial need per the FAFSA. Some others have specific eligibility criteria such as in-state residency, participation in the Corps of Cadets, etc., however, the College of Engineering uses a single application process for all scholarships. More information about the types of scholarships awarded can be found at https://eng.vt.edu/academics/undergraduate-students/resources-support/scholarships-financial/scholarships-for-current-students.html.

Admission to Major

All students admitted to the College of Engineering as First Time in College (FTIC) students with an intent to pursue an engineering or computer science major are placed in the Department of Engineering Education and are designated as General Engineering majors. General Engineering provides an innovative learning environment that embraces a hands-on, minds-on approach, which leverages the latest advances in educational technologies to fully engage students in the learning experience. The first-year course sequence integrates professional and technical skills to give students tools for tackling the grand challenges of the 21st century. The program introduces students to the wide range of engineering majors in the College of Engineering so that students are able to make informed decisions about their educational pathways. Further information on General Engineering can be found in the overview (https://catalog.vt.edu/undergraduate/college-engineering/engineering-education/#text) for the Department of Engineering Education in the undergraduate catalog.

While in the General Engineering program, students will complete the courses required to matriculate to a degree-granting engineering or computer science program. Further information on the process to enter a degree-granting engineering or computer science program is available at: https://eng.vt.edu/academics/undergraduate-students/resources-support/change-of-major/restricted.html.

Students admitted to the College of Engineering as FTIC students with an intent to pursue the Building Construction major are directly admitted to that major.

All students admitted to the College of Engineering as transfer students will be directly admitted to the major indicated on their application. Transfer applications are competitive and prospective transfer students are strongly encouraged to consult the Admissions Transfer Roadmaps posted by the university to prepare themselves for success in their intended major. (https://vt.edu/admissions/transfer/roadmaps.html)

Students wishing to transfer into an engineering major or change majors from another college or degree program within the university must meet current standards set by the college for each engineering program. All major changes are processed by the Director of Enrollment Management in the Academic Affairs office.

The college has a guaranteed admission agreement with the Virginia Community College System. VCCS students who complete the transferable Associate Degree in engineering with a minimum 3.2 overall grade-point-average are guaranteed admission to the College of Engineering. Not all Virginia Community Colleges offer engineering courses. Please review Guaranteed Admission Agreement (posted at https://www.vt.edu/admissions/transfer/vccs.html) for specific information on this agreement.

Engineering Technology credits are not accepted for transfer by the College of Engineering.

Required Academic Progress and Graduation Requirements

The University requires a student to maintain a 2.0 or higher overall GPA to remain in Good Academic Standing.

Additionally, departments have minimum requirements for graduation, which include the attainment of at least a 2.0 Grade Point Average (averaging "C" grades or better), both overall and in-major. Some departments may have additional requirements or specifications concerning the acceptability of C- or lower grades for in-major courses. Students are expected to sustain progress towards completion of their degree requirements, consulting with their academic advisor regularly.

Failure to meet the criteria for satisfactory progress towards degree (University Policy 91) can result in suspension from the major. Individual departments establish the criteria for their majors which are listed for each program in the undergraduate catalog.

Although pass/fail courses may be authorized for those who maintain a GPA above 2.0, students should recognize future disadvantages when transferring to other departments or applying for admission to other professional or graduate colleges. Engineering students are expected to take all major department courses on a grade basis.

The College of Engineering will accept advanced ROTC credit as free elective credit towards graduation. Some departments in engineering may allow the use of selected ROTC courses to meet technical elective requirements. Consult specific departments in the College of Engineering for information.

Additional academic policies may apply. Students should also be aware of the requirements listed in the Academic Policies section of the undergraduate catalog.

Degree Requirements

The graduation requirements in effect during the academic year of admission to Virginia Tech apply. Requirements for graduation are listed in the undergraduate catalog. Students must satisfactorily complete all requirements and university obligations for degree completion. The university reserves the right to modify requirements in a degree program.

- Aerospace Engineering Major (p. 777)
- Applied Electromagnetics Major (p. 855)
- Automotive Engineering Major (p. 923)
- Biological Systems Engineering Major (p. 791)
- Biomedical Engineering Major (p. 798)
- Building Construction Major (p. 805)
- Chemical Engineering Major (p. 812)
- Chip-Scale Integration Major (p. 858)

- Civil Engineering Major (p. 822)
- Computer Engineering Major (p. 861)
- Computer Science Major (p. 833)
- Construction Engineering and Management Major (p. 951)
- Construction Safety Leadership Major (https://catalog.vt.edu/undergraduate/college-engineering/construction-engineering-management/construction-safety-leadership-bs/)
- Controls, Robotics & Autonomy Major (p. 866)
- Controls, Robotics & Autonomy Major (p. 864)
- Data-Centric Computing Major (p. 837)
- Ecological Engineering Major (https://catalog.vt.edu/undergraduate/college-engineering/biological-systems-engineering/ecological-engineering/)
- Electrical Engineering Major (p. 869)
- Energy & Power Electronic Systems Major (p. 872)
- Environmental Engineering Major (https://catalog.vt.edu/undergraduate/college-engineering/civil-environmental-engineering/environmental-engineering-bs/)
- Industrial and Systems Engineering Major (p. 896)
- Machine Learning Major (p. 874)
- Materials Science and Engineering Major (p. 905)
- Materials Science and Engineering Major with Nuclear Materials Option (p. 908)
- Mechanical Engineering Major (p. 925)
- Micro/Nanosystems Major (p. 877)
- Mining Engineering Major (p. 937)
- Networking & Cybersecurity Major (p. 880)
- Ocean Engineering Major (p. 783)
- Robotics and Mechatronics Major (p. 931)
- Secure Computing Major (p. 841)
- Software Systems Major (p. 882)
- Wireless Communications and Signal Processing Major (p. 885)

Dean: Julia Ross
Associate Dean for Academic Affairs: Keith Thompson
Associate Dean for Administration and Chief of Staff: Edward L. Nelson
Associate Dean for Information Technology: Glenda R. Scales
Associate Dean for Graduate and Professional Studies: Holly Matusovich
Assistant Dean Advancement: Jeremy Weaver

Engineering – Non Major Specific Courses

Overview

The following courses are applicable to study in several departments and do not carry departmental designations. Several of the undergraduate courses listed below were developed specifically for students in both engineering and non-engineering majors with the objective of broadening the base of knowledge in cross-disciplinary areas with some background within a technology driven focus. Some of these courses were created for students living in the College of Engineering's Living Learning Communities of Hypatia and Galileo, and are restricted to those students. Others were created as part of the academic, professional and personal support services provided for engineering students. Most students will use these courses to satisfy free electives in their programs. Engineering students also may find these courses of value in broadening their perspectives regarding their fields of study and may wish to use them as free electives in their programs.

Undergraduate Course Descriptions (ENGR)

ENGR 1014 - Engineering Research Seminar (1 credit)
Discussion of current research topics in the College of Engineering by Virginia Tech Faculty. (1C, 1H)
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGR 1034 - First Year Hypatia Seminar (2 credits)
Success strategies that are designed for first-year female engineering students who are residents of the Hypatia learning community are presented. Students are provided information on study skills; resources and academic support for Virginia Tech students; gender issues in engineering; service learning; leadership; technology; and the College of Engineerings departments/majors.
Instructional Contact Hours: (2 Lec, 2 Crd)

ENGR 1054 - First Year Galileo Seminar (2 credits)
Success strategies that are designed for first-year male engineering students who are residents of the Galileo learning community are presented. Students are provided information on study skills; resources and academic support for Virginia Tech students; gender issues in engineering; service learning; leadership; technology; and the College of Engineerings department/majors. (2H, 2C)
Instructional Contact Hours: (2 Lec, 2 Crd)

ENGR 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 2004A - Engineering International Activity (0 credits)
Engineering International Education course reflects academic effort in study abroad settings as defined by the college. No degree applicable credit awarded. Enrollment in this course does not apply toward the definition of full time status. 0 Credits.
Instructional Contact Hours: (0 Crd)

ENGR 2004E - Engineering Experiential Learning (0 credits)
Engineering Experiential course reflects college defined experiential learning experiences for undergraduates. No degree applicable credit is awarded. Enrollment in this course does not apply toward the definition of full time status.
Instructional Contact Hours: (0 Crd)

ENGR 2004R - Engineering Undergraduate Exploratory Activity (0 credits)
Engineering Undergraduate Exploratory Activity course is an undergraduate research experience as defined by the college. No degree applicable credit is awarded. Enrollment in this course will not apply toward the definition of full time status. 0 Credits.
Instructional Contact Hours: (0 Crd)

ENGR 2004S - Engineering Service Learning (0 credits)
Engineering Service Learning course reflects academic effort in service learning settings as defined by the college. No degree applicable credit is awarded. Enrollment in this course will not apply toward the definition of full time status. 0 Credits.
Instructional Contact Hours: (0 Crd)

ENGR 2044 - Second-Year Galileo and Hypatia Seminar (1 credit)
Second-Year Galileo and Hypatia seminar for student leaders. Success strategies designed for second-year engineering students who are participants of the Galileo and Hypatia Living-Learning Community; topics include communication skills, critical thinking skills, diversity, leadership, networking with peers and future employers, and goals associated with academic and professional success.
Prerequisite(s): ENGR 1034 or ENGR 1054
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGR 2164 - Introduction to Scieneering (1 credit)
Seminar-based course providing a survey of current interdisciplinary science and engineering research problems; introduction interdisciplinary thinking and communication; issues related to interdisciplinary research teams.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: COS 2164

ENGR 2464 - Engineering Fundamentals for Scientists (2 credits)
Introduction to the engineering profession and basic engineering skills for students pursuing science majors. Fundamentals of graphing, technical communication, ethics, the design process, project management, and problem solving as applicable to engineering. Partially duplicates ENGE 1024. May not be used for credit towards any degree from the College of Engineering.
Prerequisite(s): ENGR 2164 or COS 2164
Instructional Contact Hours: (2 Lec, 2 Crd)

ENGR 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 2984G - Special Study (1-19 credits)
Pathway Concept Area(s): 7 Identity & Equity in U.S.
Instructional Contact Hours: Variable credit course

ENGR 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 3044 - Third-Year Galileo and Hypatia Seminar (1 credit)
Success strategies designed for third year engineering students who are participants of the Galileo and Hypatia Living-Learning Community; topics include critical thinking skills, diversity, leadership, networking with peers and future employers, and goals associated with academic and professional success.
Prerequisite(s): ENGR 2044
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGR 3124 - Introduction to Green Engineering (3 credits)
Introduction to green engineering and global environmental issues. Impacts of human and engineering activities on the environment, and techniques that can be utilized to minimize adverse environmental impacts with emphasis on environmentally conscious design and manufacturing.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGR 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 4064 - Scieneering Capstone (3 credits)
A capstone experience centered around an open-ended, faculty-advised senior project involving the design of a process, material, or technique for solving an interdisciplinary problem. Pre: Enrollment in Interdisciplinary Engineering and Science Minor.
Prerequisite(s): ENGR 2464 or BIOL 2124
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: COS 4064

ENGR 4134 - Environmental Life Cycle Assessment (3 credits)
Quantification of the environmental impacts for products, processes, and systems across all engineering disciplines. A detailed look at life cycle phases and formal and informal Life Cycle Assessment (LCA) methodologies including ISO standards, stream-lined LCA, green building ratings systems, carbon footprints, and other environmental ratings systems.
Prerequisite(s): ENGR 3124
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGR 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 4994H - Undergraduate Research (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

Aerospace and Ocean Engineering

Our Website (http://www.aoe.vt.edu)

Overview

The Kevin T. Crofton Department of Aerospace and Ocean Engineering offers a Bachelor of Science degree in aerospace and ocean engineering. Students may major in either aerospace engineering or ocean engineering. These majors share many course requirements, because the two curricula cover a broad range of common interests and offer a wide range of technical electives. Students may double major—aerospace with ocean engineering or ocean with aerospace engineering. The Department also offers a minor in naval engineering, which is open to non-AOE students.

The department's curricula are vehicle oriented, with an emphasis on propulsion, aero/hydrodynamics, stability and control, vehicle performance, vehicle structures, and energy and the environment. A year-long capstone design experience in the senior year uses the group design process to both better simulate the way design is done in the real world and promote the benefits of collaborative learning.

AOE graduates have been highly successful in the aerospace and ocean fields. About 15% of our graduates continue their studies in graduate school, while most of the rest find excellent employment opportunities in the aerospace and related industries and in the shipbuilding, naval engineering, and ship design fields. Some also choose to go into related fields such as automotive engineering, structural engineering, environmental engineering, as well as into professions such as law or medicine.

AOE is home to a number of unique facilities, including Stability, Open-Jet, Boundary-Layer, Low Speed, Transonic, Supersonic, and Hypersonic

Wind Tunnels; the Advanced Propulsion and Power Laboratory (APPL), Space@VT building, the Kentland Experimental Aerial Systems Laboratory (KEAS), the Hydro-Elasticity Laboratory, Hydrodynamics Laboratory, Marine Robotics Laboratory, the Newport News Shipbuilding (NNS) / Aerospace and Ocean Engineering (AOE) Teaching and Research Laboratory, and the Advanced Engineering Design Lab (AEDL).

The department encourages students to seek internships and to participate in the Cooperative Education Program, which gives qualified students valuable industrial experience while working toward their engineering degrees. The department's required design courses often include multidisciplinary projects.

The department also offers programs of study leading to M. Engr., M.S., and Ph.D. degrees.

Program Educational Objectives

The educational objective of our *undergraduate program* is to produce aerospace and ocean engineering graduates who, within five years of completing the BS degree, will be successful in a variety of professional careers, including those outside of traditional aerospace and ocean engineering fields, as evidenced by one or more of the following achievements:

- Creating value by applying the appropriate aerospace and ocean engineering tools to engineering analysis or design of vehicles and systems which operate in the atmosphere, space, and the ocean
- Pursuing professional development via graduate study and/or continuing education in aerospace or ocean engineering or related areas
- Advancing professionally in positions of increasing leadership and/or responsibility within their chosen career field
- Communicating effectively using written, oral, and visual media adapted to different audiences and stakeholders
- Working effectively in multidisciplinary team environments composed of members with varying organizational backgrounds, positions, and geographic locations
- Serving the profession, community, and society, as exemplified in our motto Ut Prosim (That I May Serve)

Student Outcomes

As a result of their completion of the undergraduate program curriculum in Aerospace Engineering or Ocean Engineering, students will attain the following outcomes:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. An ability to communicate effectively with a range of audiences
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Accreditation

The undergraduate Aerospace and Ocean Engineering programs are accredited by the Engineering Accreditation Commission of ABET:

- **Aerospace Engineering** is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org, under the commission's General Criteria and the Program Criteria for Aerospace and Similarly Named Engineering Programs.
- **Ocean Engineering** is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org, under the commission's General Criteria and the Program Criteria for Ocean and Similarly Named Engineering Programs.

Pathways General Education

AOE undergraduate students must meet all Pathways requirements and only certain "free" electives and courses designated as "P/F Only" may be taken on a Pass/Fail basis. Lists of approved electives including technical, math, Liberal Education, and other electives are available on the department's web page: http://www.aoe.vt.edu/undergrad/undergrad-advising/index-undergrad-advising.html.

- Aerospace Engineering Major (p. 777)
- Ocean Engineering Major (p. 783)

Head and Fred D. Durham Professor: E.M. Atkins
Assistant Head for Academic Affairs: G.D. Seidel
Assistant Head for Laboratory Facilities: M.K. Philen
Assistant Head for Graduate Studies: O. Coutier-Delgosha
Alumni Distinguished Professor: W.J. Devenport
Kevin Crofton Professor: W.J. Devenport and M.L. Psiaki
NAVSEA Chair Professor: A.J. Brown
Norris and Laura Mitchell Professor: R. K. Kapania
Rolls-Royce Commonwealth Professor of Marine Propulsion: E.G. Paterson
Professor of Practice: P. Artis
Professors: E.M. Atkins, S. Brizzolara, A.J. Brown, R.A. Canfield, O. Coutier-Delgosha, W.J. Devenport, M. Farhood, R.K. Kapania, K.T. Lowe, E.G. Paterson, M.K. Philen, M.L. Psiaki, S.D. Ross, C.J. Roy, G.D. Seidel, C. Sultan, and C.A. Woolsey
Collegiate Professors: B. Davoudi and K.A. Shinpaugh
Associate Professors: W.N. Alexander, S. England, Y. Fu, C.M. Gilbert, J. Jaworski, L. Massa, K.G. Wang, and G. Young
Assistant Professors: B. Denby, R. Fitzgerald, S. Jaiswal, M. Joerger, L. Joseph, C. Neary, M. Priyadarshini, and S. Saha
Adjunct Professors: S. Choi, W. Grossman, L. Ma, W. Oberkampf, M. Patil, J. Pitt, and H. Xiao
Research Professors: E. Aguirre, G. Bo Byun, A. Borgoltz, N. Intaratep, S. P. Kenyon, and J. Song.
Professors Emeritus: E.M. Cliff, W.C. Durham, B. Grossman, E.R. Johnson, J.F. Marchman, W.L. Neu, J. Schetz, R.L. Simpson, and R. Walters
Faculty Affiliates: P. Acar, S. Bailey, R. Batra, J. Gilbert, E. Jacques, K. Kochersberger, A. L'Afflitto, J. Meadows, W. Ng, W. Scales, M.K. Spakovsky, D. Stilwell, and, L. Watson

E-mail: aoe-undergrad-advising-g@vt.edu

Undergraduate Course Descriptions (AOE)

AOE 2024 - Thin-Walled Structures (3 credits)
Basic structural elements of stringer-stiffened thin-walled structures, forces, moments, stresses, and deformation of segmented bars/beams, flexure stress and deflection of beams principal plane, plane of bending and plane of loading for beams with asymmetric cross sections, stresses, and twist due to torsion, shear flow and shear center in open and closed stiffened thin-walled structures, stiffened multicell beams, materials properties and selection.
Prerequisite(s): (ESM 2104 and ESM 2204) or ESM 2114 and (MATH 2224 or MATH 2224H or MATH 2204 or MATH 2204H or MATH 2406H)
Corequisite(s): MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 2054 - Electronics for Aerospace and Ocean Engineers (3 credits)
Electrical circuits. Discrete passive and active electrical components. Phasors and impedence. AC power analysis. Digital electronics. Electronics for autonomous and piloted aerospace and ocean systems. Electronics for vehicle navigation, guidance, and control. Instrumentation and data acquisition systems.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 2074 - Computational Methods (2 credits)
Solving engineering problems using numerical methods and software, truncation and round-off error, root finding, linear and polynomial regression, interpolation, splines, numerical integration, numerical differentiation, solution of linear simultaneous equations. A grade of C- or better is required in the prerequisite.
Prerequisite(s): (ENGE 1216 or ENGE 1434 or ENGE 1414) and (CS 1044 or CS 1064 or CS 1114)
Instructional Contact Hours: (1.5 Lec, 1.5 Lab, 2 Crd)

AOE 2104 - Introduction to Aerospace Engineering and Aircraft Performance (3 credits)
Overview of aerospace engineering from a design perspective; introductory aerodynamics, lift, drag, and the standard atmosphere; aircraft performance, stability, and control; propulsion; structures; rocket and spacecraft trajectories and orbits.
Prerequisite(s): PHYS 2305
Corequisite(s): ESM 2104 or ESM 2114.
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 2114 - Fundamentals of Flight Training AOE (3 credits)
Foundational course to prepare students with knowledge of basic aeronautics to take the Federal Aviation Administration Knowledge Exam, a requirement for the award of a private pilots license. Explores airplane systems and functions, flight operations, weather, aeronautical navigation, communications, human factors, and federal aviation regulations.
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 2204 - Introduction to Ocean Engineering (3 credits)
Introduction to the design of ocean vehicles and offshore structures. Buoyancy. Hull geometry, body plan drawing, coefficients of form. Hydrostatic calculations. Intact and damaged stability of ocean vehicles and offshore structures. Large angle stability. Stability criteria for design and related rules and regulations. Marine economics.
Prerequisite(s): PHYS 2305
Corequisite(s): MATH 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 2664 - Exploration of the Space Environment (3 credits)
This introductory course covers a broad range of scientific, engineering, and societal aspects associated with the exploration and technological exploitation of space. Topics covered include: science of the space environment, space weather hazards and societal impacts, orbital mechanics and rocket propulsion, spacecraft subsystems, applications of space-based technologies.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 2164

AOE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 3014 - Fluid Dynamics for Aerospace and Ocean Engineers (3 credits)
Fundamentals of fluids: stress, statics, viscosity, laminar and turbulent flow. Conservation of mass and momentum. Vorticity, circulation, and lift. Navier-Stokes equations. Ideal flow in two dimensions, streamlines, stream function, velocity potential, superposition. Thin airfoil theory. Physics of laminar and turbulent boundary layers and of transition. Boundary layer equations and basic tools for boundary layer calculation. Collaborative problem solving.
Prerequisite(s): (AOE 2104 or AOE 2204) and (MATH 2214 or MATH 2214H or MATH 2406H) and ESM 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3034 - System Dynamics and Control (3 credits)
Free and forced response of first, second, and higher order linear, time-invariant (LTI) systems in frequency and time domains. Modeling of low-order mechanical systems. Transmission and absorption of vibrations. Transient and steady state performance specifications. Introduction to closed-loop control using proportional-integral-derivative (PID) feedback. Closed-loop stability analysis using root locus method.
Prerequisite(s): ESM 2304 and (MATH 2214 or MATH 2214H or MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3044 - Boundary Layer and Heat Transfer (3 credits)
Concepts of viscous flows and physical properties equations of laminar motion with heat and mass transfer; exact and approximate solutions; finite-difference methods; transition to turbulence; analysis in turbulent flows. Conduction and convective heat transfer.
Prerequisite(s): AOE 3014 and (AOE 3164 or AOE 3264 or ME 2134 or ME 3134) and MATH 4564
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3054 - Experimental Methods (3 credits)
Fundamental terminology of experimental work and testing in aerospace and ocean engineering. Flow quantities, displacement, and strain measurements of simple structures in both static and dynamic settings. Analog and digital instrumentation. Data acquisition systems and appropriate software. Through teamwork design, prepare, and conduct an experiment, and document its results and findings. Ethics of technical reporting, through proper external source citation and honestly describing procedures and reporting data. Statistical concepts.
Prerequisite(s): AOE 2024 and AOE 2054 and AOE 3014 and AOE 3034
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 3114 - Aerodynamics & Compressibility (3 credits)
Inviscid aerodynamics. Wings and wing theory for low speed flight. How and when compressibility becomes important. Integral form of the conservation equations and thermodynamics. One-dimensional steady compressible flow, nozzle flows. Compressible flow with heat addition. Oblique shock waves and Prandtl-Meyer expansions. Supersonic airfoils. Aerodynamics at subsonic and transonic speeds.
Prerequisite(s): AOE 3014
Corequisite(s): AOE 3164
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3124 - Aerospace Structures (3 credits)
Inertia loads on aerospace structures, introduction to 3D elasticity including strain-displacement relations, stress-strain relations, stress transformation, and equations of equilibrium, plane stress and plane strain elasticity, stress concentration factors, aerospace materials and failure criteria, margins of safety analysis, plate bending, structural stability.
Prerequisite(s): AOE 2024 or AOE 3024
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3134 - Air Vehicle Dynamics (3 credits)
Nonlinear kinematic and dynamic equations of aircraft motion; estimation of stability derivatives from aircraft geometry; determination of steady motions; linearization; longitudinal and lateral-directional small perturbation equations; static and dynamic stability of equilibrium flight.
Prerequisite(s): AOE 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3144 - Space Vehicle Dynamics (3 credits)
Attitude representations and equations of rotational motion for rigid and multibody spacecraft; attitude determination; linearization and stability analysis of steady motions; effect of the gravity gradient; torque thrusters and momentum exchange devices.
Prerequisite(s): AOE 3034 and AOE 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3154 - Astromechanics (3 credits)
This course teaches the application of Newtons Laws to the dynamics of spaceflight. Topics include the two-body problem equations of motion, Keplers Laws, classical orbital elements, energy and time-of-flight relations, orbit specification and determination, orbital maneuvering and orbit transfers, patched conic approximations, and relative motion.
Prerequisite(s): ESM 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3164 - Aerothermodynamics and Propulsion Systems (3 credits)
The fundamental principles of aerothermodynamics applied to aerospace propulsion system performance analysis and design. Foundations of thermodynamics, heat transfer, compressible fluid mechanics, and combustion. Applications of principles to air-breathing and rocket engines.
Prerequisite(s): AOE 3014
Corequisite(s): AOE 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3214 - Ocean Wave Mechanics (3 credits)
Introduction to theory of wave in deep and shallow water, including wave generation and propagation. Description of wave statistics and spectral representation for realistic ocean conditions. Introduction to ocean acoustics.
Corequisite(s): 3014, MATH 4564
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3224 - Ocean Structures (3 credits)
Overview of surface ship, submarine and offshore structural systems, materials and loadings. Application of beam and plate bending and buckling theories. Frame structural analysis. Fatigue analysis.
Prerequisite(s): AOE 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3234 - Ocean Vehicle Dynamics (3 credits)
Nonlinear kinematic and dynamic equations of rigid vessel motion in water; hydrostatic and hydrodynamic forces in calm water; motion response to regular and irregular waves; single, multiple and coupled motions degrees of freedom; spectral analysis of response of random seas; statistical analysis of extreme motion response; impact of seakeeping criteria on ocean vehicles design; principles of hydroelasticity; principles of maneuvering of surface and underwater vehicles.
Prerequisite(s): AOE 3014 and AOE 3034 and AOE 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3264 - Thermodynamics and Marine Propulsion (3 credits)
Fundamental thermodynamics and power cycles; marine propulsion plants and transmission systems; methods of estimating resistance of ocean vehicles; propulsion devices and their efficiencies; introduction to propeller theory; cavitation.
Prerequisite(s): AOE 2204 and AOE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3354 - Avionics Systems (3 credits)
A systems approach to avionics architecture for both civil and military aircraft. Emphasis on system architecture, accepted development processes, sensors, navigation, and certification. Evolution of communications, data models, and sensors required to support autonomous flight as well as the exposures to physical cyber security threats faced by flight management, navigation, and data interchange systems.
Prerequisite(s): AOE 2054 or ECE 2054
Corequisite(s): AOE 3034 or ME 3534 or ME 4504
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3564 - Principles of Project Design and Management (3 credits)
Fundamental principles of model-based project design. Creation of plans for successful development of complex systems such as air, space, and ocean vehicles. Understanding of engineering project performance including emergent scope, cost, and schedule. Systems thinking and systems engineering methods applied to engineering projects as systems: stakeholders, scope, dependence and teamwork dynamics; cost and schedule tradespace; risk assessment and mitigation strategies; and choices in project architecture and organization. Basics of effective teamwork, team building, leadership, and management. Basic understanding of ethical reasoning and conflict management aspects. Oral presentations for design reviews. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3804 - Special Topics in Aircraft Systems (3 credits)
Advanced undergraduate topics in aircraft systems. Covers technical, environmental, and economic challenges and opportunities in contemporary and future aircraft. Function and integration of propulsion, airborne auxiliary power, navigation, flight controls, cargo, landing gear, cabin systems, fuel, and other subsystems. May be repeated with different content for a maximum of 9 credits.
Prerequisite(s): AOE 2104
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

AOE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 4004 - State-Space Control (3 credits)
Control design and analysis for linear, state-space system models. Properties of linear, time-invariant control systems: Input/output stability, internal stability, controllability, and observability. Performance and robustness measures. State feedback control design methods: pole placement, linear-quadratic control. State observers and output feedback control. Applications to control of mechanical systems including ocean, atmospheric, and space vehicles.
Prerequisite(s): AOE 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4024 - An Introduction to the Finite Element Method (3 credits)
The finite element method is introduced as a numerical method of solving the ordinary and partial differential equations arising in fluid flow, heat transfer, and solid and structural mechanics. The classes of problems considered include those described by the second-order and fourth-order ordinary differential equations and second-order partial differential equations. Both theory and applications of the method to problems in various fields of engineering and applied sciences will be studied.
Prerequisite(s): (CS 3414 or MATH 3414 or AOE 2074 or ESM 2074) or (MATH 2224 or MATH 2224H or MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4734

AOE 4034 - Introduction to Mechanical and Structural Vibrations (3 credits)
Free and forced vibrations of single-degree-of-freedom systems, multi-degree-of-freedom systems, and continuous systems. Natural frequencies and mode shapes. Proportional and nonproportional damping. Response to harmonic, periodic, and nonperiodic excitations. Boundary-value problem for continuous systems. Eigenvalue problem for rods, beams, and plates. Vibration response of system in modal coordinates. Approximate methods including Assumed Modes, the Rayleigh-Ritz method, and Method of Weighted Residuals.
Prerequisite(s): AOE 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4054 - Stability of Structures (3 credits)
Introduction to the methods of static structural stability analysis and their applications. Buckling of columns and frames. Energy method and approximate solutions. Elastic and inelastic behavior. Torsional and lateral buckling. Use of stability as a structural design criterion.
Prerequisite(s): AOE 2024 or AOE 3024 or CEE 3404
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4444

AOE 4064 - Fluid Flows in Nature (3 credits)
Course designed to build upon and broaden a basic traditional engineering knowledge of fluid flows into areas concerning a variety of natural occurrences and phenomena that involve fluid motions in important ways. Drag of sessile systems and motile animals, gliding and soaring, flying and swimming, internal flows in organisms, low Reynolds number flows, fluid-fluid interfaces, unsteady flows in nature and wind engineering.
Prerequisite(s): AOE 3014 or CEE 3304 or ESM 3024 or ME 3404 or ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4065 - Air Vehicle Design (3 credits)
Fundamental principles of innovative air vehicle design. Qualitative and quantitative decision-making tools. Multidisciplinary design teams with emphasis on ethics and professionalism. Project risks and mitigation plans. Oral presentations for design reviews. Written engineering design report. 4065: Proven conceptual design process. Tradeoff studies. Air vehicle weight estimation. Air vehicle concepts feasibility assessment; 4066: Preliminary design tools and processes. Efficient and light-weight air vehicles. Air vehicle design validation.
Prerequisite(s): AOE 2104 and AOE 3054 and AOE 3114 and AOE 3124 and AOE 3134 and AOE 3164
Corequisite(s): AOE 4105
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4066 - Air Vehicle Design (3 credits)
Fundamental principles of innovative air vehicle design. Qualitative and quantitative decision-making tools. Multidisciplinary design teams with emphasis on ethics and professionalism. Project risks and mitigation plans. Oral presentations for design reviews. Written engineering design report. 4065: Proven conceptual design process. Tradeoff studies. Air vehicle weight estimation. Air vehicle concepts feasibility assessment; 4066: Preliminary design tools and processes. Efficient and light-weight air vehicles. Air vehicle design validation.
Prerequisite(s): AOE 4065
Corequisite(s): AOE 4106
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4084 - Engineering Design Optimization (3 credits)
Use of mathematical programming methods for engineering design optimization including linear programming, penalty function methods, and gradient projection methods. Applications to minimum weight design, open-loop optimum control, machine design, and appropriate design problems from other engineering disciplines.
Prerequisite(s): MATH 2224 or MATH 2204 or MATH 2204H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4084

AOE 4105 - Experiments for Aerospace Design (1 credit)
Methods for the planning, implementation, assessment and use of experiments in aerospace design problems. 4105: Experiment design, advanced sensor systems, additive manufacturing, uncertainty, data analysis and reporting. 4106: Application of experiments as an integral component of engineering design. Co: 4066 or 4166 for 4106.
Prerequisite(s): AOE 3054
Corequisite(s): 4065 or 4165 for 4105. 4066 or 4166 for 4106.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

AOE 4106 - Experiments for Aerospace Design (1 credit)
Methods for the planning, implementation, assessment and use of experiments in aerospace design problems. 4105: Experiment design, advanced sensor systems, additive manufacturing, uncertainty, data analysis and reporting. 4106: Application of experiments as an integral component of engineering design. Co: 4066 or 4166 for 4106.
Prerequisite(s): AOE 4105
Corequisite(s): 4065 or 4165 for 4105. 4066 or 4166 for 4106.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

AOE 4114 - Applied Computational Aerodynamics (3 credits)
Development of computational methods for application to wing aerodynamic problems. Incompressible airfoil codes. Panel methods and vortex lattice methods. Finite difference techniques. Transonic and supersonic applications.
Prerequisite(s): AOE 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4124 - Configuration Aerodynamics (3 credits)
Aerodynamic design of flight vehicles, with emphasis on nonlinear flowfields and configuration concepts. Aerodynamic analysis and design for transonic, supersonic, hypersonic flows, and low speed high alpha flight. Includes case studies of classic configurations and aerodynamic design papers.
Prerequisite(s): AOE 3014 and AOE 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4140 - Spacecraft Dynamics and Control (3 credits)
Space missions and the way pointing requirements affect attitude control systems. Rotational kinematics and attitude determination algorithms. Modeling and analysis of the attitude dynamics of space vehicles. Rigid body dynamics, effects of energy dissipation. Gravity gradient, spin, and dual spin stabilization. Rotational maneuvers. Environmental torques. Impacts of attitude stabilization techniques on mission performance.
Prerequisite(s): AOE 3034 and (AOE 4134 or AOE 3154)
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4165 - Space Vehicle Design (3 credits)
Fundamental principles of innovative space vehicle design. Qualitative and quantitative decision-making tools. Multidisciplinary design teams with emphasis on collaboration, ethics, and professionalism. Project risks and mitigation plans. Oral presentations for design reviews. Written engineering design report. 4165: Proven conceptual design process. Parametric analyses. Space vehicle mass estimation. Space vehicle concepts feasibility assessment; 4166: Preliminary design tools and processes. Efficient and light-weight space vehicles. Space vehicle design validation.
Prerequisite(s): AOE 2104 and AOE 3054 and AOE 3114 and AOE 3124 and AOE 3144 and AOE 3154 and AOE 3164
Corequisite(s): AOE 4105
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4166 - Space Vehicle Design (3 credits)
Fundamental principles of innovative space vehicle design. Qualitative and quantitative decision-making tools. Multidisciplinary design teams with emphasis on collaboration, ethics, and professionalism. Project risks and mitigation plans. Oral presentations for design reviews. Written engineering design report. 4165: Proven conceptual design process. Parametric analyses. Space vehicle mass estimation. Space vehicle concepts feasibility assessment; 4166: Preliminary design tools and processes. Efficient and light-weight space vehicles. Space vehicle design validation.
Prerequisite(s): AOE 4165
Corequisite(s): AOE 4106
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4174 - Spacecraft Propulsion (3 credits)
Spacecraft propulsion systems and their applications in orbital, interplanetary, and interstellar flight. Rocket propulsion fundamentals; advanced mission analysis; physics and engineering of chemical rockets, electrical thrusters, and propellantless systems (tethers and sails); spacecraft integration issues.
Prerequisite(s): AOE 3164 or AOE 4234 or ME 4234
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ME 4174

AOE 4205 - Experiments for Ocean Vehicle Design (1 credit)
4205: Facilities, instrumentation, and experiments pertinent to ocean engineering in the field of flow measurements and resistance and propulsion tests of surface and underwater vehicles. Analysis and communication of experimental data through technical report writing. 4206: Assessment of ocean system design through experiments, data analysis, and technical report writing.
Prerequisite(s): AOE 3054
Corequisite(s): AOE 4265
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

AOE 4206 - Experiments for Ocean Vehicle Design (1 credit)
4205: Facilities, instrumentation, and experiments pertinent to ocean engineering in the field of flow measurements and resistance and propulsion tests of surface and underwater vehicles. Analysis and communication of experimental data through technical report writing. 4206: Assessment of ocean system design through experiments, data analysis, and technical report writing.
Prerequisite(s): AOE 3054
Corequisite(s): AOE 4266
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

AOE 4224 - Atmospheric and Ocean Vehicle Model Identification (3 credits)
Atmospheric and ocean vehicle dynamic modeling from experimental data including: experiment design; model structure determination; parameter and state estimation; and data analysis methods. Regression and maximum likelihood approaches. Time and frequency domain formulations. Applications to airplanes, rotorcraft, surface vessels, and undersea vehicles.
Prerequisite(s): AOE 3134 or AOE 3234
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4234 - Aerospace Propulsion Systems (3 credits)
Design principles and performance analysis of atmospheric and space propulsion engines and systems. Application of thermodynamics, compressible fluid flow and combustion fundamentals to the design of gas turbine and rocket engines and components, including inlets, turbomachines, combustors, and nozzles. Matching of propulsion system to vehicle requirements.
Prerequisite(s): AOE 3114 and (AOE 3164 or AOE 3264) or ME 3414 and ME 2134
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ME 4234

AOE 4244 - Naval and Marine Engineering Systems Design (3 credits)
Concepts, theory and methods for the design, integration, and assessment of naval and marine engineering systems considering energy conservation, ship arrangements, system deactivation diagrams, reliability, maintenance, system power, shock and weapons effects, machinery sizing, and system vulnerability. Physics-based mechanical, electrical, thermal, sensor, control, weapon systems, hullform and engine (diesel and gas turbine) models are used to predict total system performance. Linear programming methods and flow-based models are used to optimize systems architecture and size components.
Prerequisite(s): AOE 3264
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4264 - Principles of Naval Engineering (3 credits)
This course studies naval engineering systems and systems engineering processes with particular emphasis on: naval missions; combat system performance including radar; underwater acoustics and sonar; ballistics; weapon propulsion and architecture; weapons effects; ship survivability including underwater explosion and shock waves; surface ship and submarine balance and feasibility analysis; and total ship integration. Senior Standing required.
Prerequisite(s): (MATH 2224 or MATH 2204 or MATH 2204H) and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4265 - Ocean Vehicle Design (3 credits)
Study and application of systems engineering process and ocean engineering principles to the concept exploration, design and development of ocean vehicles including ships, submarines, surface and subsurface autonomous vehicles, boats and yachts. 4265: Emphasis on hullform, power and propulsion, synthesis, balance, metrics and design optimization. 4266: Emphasis on topside/external arrangements, internal arrangements, machinery arrangements, human systems, structural design, and final assessments of intact and damage stability, weights, space, seakeeping, cost, risk, overall balance and feasibility. Most of the work is done in teams.
Prerequisite(s): AOE 2204 and AOE 3214 and AOE 3224 and AOE 3234 and AOE 3264
Corequisite(s): AOE 4205
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4266 - Ocean Vehicle Design (3 credits)
Study and application of systems engineering process and ocean engineering principles to the concept exploration, design and development of ocean vehicles including ships, submarines, surface and subsurface autonomous vehicles, boats and yachts. 4265: Emphasis on hullform, power and propulsion, synthesis, balance, metrics and design optimization. 4266: Emphasis on topside/external arrangements, internal arrangements, machinery arrangements, human systems, structural design, and final assessments of intact and damage stability, weights, space, seakeeping, cost, risk, overall balance and feasibility. Most of the work is done in teams.
Prerequisite(s): AOE 4265
Corequisite(s): AOE 4206
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4274 - Intermediate Ship Structural Analysis (3 credits)
Analysis of plate bending, buckling, and ultimate strength using computational tools and methods. Calculation of elastic buckling of stiffened panels. Eigenvalue methods for buckling and vibration. Incremental plastic collapse; other progressive collapse. Ultimate strength of large structural modules due to combined loads. Introductory level finite element analysis.
Prerequisite(s): AOE 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4324 - Energy Methods for Structures (3 credits)
Work and energy relationships in structures, flexibility and stiffness influence coefficients, Maxwell and Betti-Rayleigh reciprocal theorems, strain energy and complementary strain energy for thin-walled structures, Castigliano's first and second theorems for trusses and frames, unit action and unit displacement states, direct stiffness method, principles of minimum total potential energy and total complementary energy for bars, beams, and plates, Ritz method, finite element method for bars and beams.
Prerequisite(s): AOE 2024 and (AOE 3124 or AOE 3224)
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4334 - Ship Dynamics (3 credits)
Analysis of motions of rigid body vehicles in water, including influence of added mass and buoyancy. Seakeeping motion responses in waves, wave-induced structural loads, random response analysis via spectral analysis, and extreme response analysis. Introduction to hydroelasticity and maneuvering.
Prerequisite(s): AOE 3014 and AOE 3034 and (AOE 3214 or AOE 4214) and MATH 4564
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4344 - Dynamics of High-Speed Marine Craft (3 credits)
Introduction to the dynamics of high-speed craft, including surface effect ships, hydrofoil vessels, semi-displacement monohulls and catamarans, and planing vessels.
Prerequisite(s): AOE 3264
Corequisite(s): 4334 or 3234.
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4365 - Launch Vehicle Design (3 credits)
Fundamental principles of innovative launch vehicle design. Qualitative and quantitative decision-making tools. Multidisciplinary (e.g., propulsion, structures, orbital mechanics, economics, or aerodynamics) design teams with emphasis on ethics and professionalism. Project risks and mitigation plans. Oral presentations for design reviews. Written engineering design report. 4365: Proven conceptual design process. Tradeoff studies. Launch vehicle weight estimation. Launch vehicle concepts feasibility assessment; 4366: Preliminary design tools and processes. Efficient and light-weight launch vehicles. Launch vehicle design validation. Launch vehicle operation.
Prerequisite(s): AOE 2104 and AOE 3054 and AOE 3114 and AOE 3124 and (AOE 3134 or AOE 3144) and AOE 3164
Corequisite(s): AOE 4105
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4366 - Launch Vehicle Design (3 credits)
Fundamental principles of innovative launch vehicle design. Qualitative and quantitative decision-making tools. Multidisciplinary (e.g., propulsion, structures, orbital mechanics, economics, or aerodynamics) design teams with emphasis on ethics and professionalism. Project risks and mitigation plans. Oral presentations for design reviews. Written engineering design report. 4365: Proven conceptual design process. Tradeoff studies. Launch vehicle weight estimation. Launch vehicle concepts feasibility assessment; 4366: Preliminary design tools and processes. Efficient and light-weight launch vehicles. Launch vehicle design validation. Launch vehicle operation.
Prerequisite(s): AOE 4365
Corequisite(s): AOE 4106
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4404 - Applied Numerical Methods (3 credits)
Interpolation and approximation, numerical integration, solution of equations, matrices and eigenvalues, systems of equations, approximate solution of ordinary and partial differential equations. Applications to physical problems. A student can earn credit for at most one of 3414 and MATH 4404.
Prerequisite(s): MATH 4564 and (ESM 2074 or AOE 2074)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MATH 4404

AOE 4414 - Computer Aided Space Mission Analysis (3 credits)
Advanced space mission design, requirements development, and analysis. Analyses of current and future space systems and missions, space platform and payload concepts. Orbital mechanics; coverage; space-to-ground and space-to-space communications; remote sensing; disaggregation; infrastructure; terrain modeling; space vehicle and payload performance constraints, dynamics, and degradation; homogeneous and heterogeneous constellations; launch; the space environment; space mission environmental and economic impact; and mission modeling and simulation for Earth orbit, interplanetary, and CisLunar regimes.
Prerequisite(s): (AOE 2074 or ESM 2074 or ECE 2504) and (AOE 2664 or ECE 2164 or AOE 3154)
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4434 - Introduction to Computational Fluid Dynamics (3 credits)
Euler and Navier-Stokes equations governing the flow of gases and liquids. Mathematical character of partial differential equations. Discretization approaches with a focus on the finite difference method. Explicit and implicit solution techniques and their numerical stability. Introduction to verification, validation, and uncertainty quantification for computational fluid dynamics predictions.
Prerequisite(s): MATH 2214
Corequisite(s): AOE 3044 or ME 3404 or ESM 3016.
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4454 - Spacecraft Position/Navigation/Timing and Orbit Determination (3 credits)
Position/Navigation/Timing (PNT) measurements and optimal batch filter estimation methods for spacecraft with emphasis on orbit determination; GPS position/velocity/time point solutions; linearized state transition matrices; batch least-squares filter Orbit Determination (OD) solutions from a time series of observations; precision and accuracy assessment using covariance and overlap statistics; one-way and two-way radio range and range-rate observations; optical bearings observations; non-Keplerian orbital effects.
Prerequisite(s): AOE 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4464 - Introduction to Global Positioning System (GPS) Theory and Design (4 credits)
Fundamental theory and applications of radio navigation with the Global Positioning System GPS. Satellite orbit theory, GPS signal structure and theory, point positioning with pseudoranges and carrier phases, selective availability, dilution of precision, differential GPS, atmospheric effects on GPS signals.
Prerequisite(s): ECE 3105 or AOE 4134
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: ECE 4164

AOE 4474 - Propellers and Turbines (3 credits)
Theory, numerical methods, and experimental techniques for analysis and design of propellers and turbines. Geometry description and creation of computer models. Analysis of inflow from wakes and atmospheric boundary layers. Performance characteristics including open-water and multi-quadrant operation, scale effects, and standard series data. Theoretical analysis and selection of airfoil and hydrofoil sections. Theory and numerical methods for propellers and turbines, including computational fluid dynamics (CFD) simulation. Design of wake-adapted propellers. Design of wind-turbine rotors in steady wind. Structural analysis of propeller and turbine blades. Wind- and water-tunnel testing for thrust and torque.
Prerequisite(s): AOE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4514 - Nonlinear Dynamics and Chaos (3 credits)
Motion of systems governed by differential equations: stability, geometry, phase planes, bifurcations, Poincare sections, point attractors, limit cycles, chaos and strange attractors, Lyapunov exponents. Forced, nonlinear oscillations: jump phenomena, harmonic resonances, Hopf bifurcations, averaging and multiple-scales analysis. Systems governed by discrete maps: return maps, cobweb plots, period-multiplying bifurcations, intermittency, delay coordinates, fractal dimensions.
Prerequisite(s): (ESM 2304 or PHYS 2504) and (MATH 2214 or MATH 2214H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4114

AOE 4604 - Booster Design, Fabrication, and Operation (3 credits)
Theory, design, operations, and fabrication methodologies employed to manufacture boosters. The rocket equation, solid, liquid, and hybrid propellant systems, combustion chamber design, vehicle structures, telemetry, guidance and navigation, launch operations, and failure modalities.
Prerequisite(s): AOE 2074 and AOE 3124 and AOE 3154 and AOE 3164
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4614 - Aerospace Materials and Modeling Techniques (3 credits)
Aircraft, spacecraft structural and engine materials. Mechanical, thermal properties and chemical stability of metallic materials. Aluminum, iron, nickel and titanium -based alloys. Atomistic structure, elastic properties, elastic anisotropy and microscopic origins. Plasticity, dislocations, and strengthening mechanism. Liquid-solid and solid-state phase transformation in alloys. Facture, creep and fatigue. Oxidation and corrosion. Simulating materials behaviors using molecular dynamics techniques.
Prerequisite(s): CHEM 1035 and PHYS 2305
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4624 - Foundations of Aero and Hydroacoustics (3 credits)
Fundamental background to the field of aero/hydroacoustics. Quantifying sound levels, acoustic intensity, the acoustic wave equation, and linear acoustics. Fluid dynamics, turbulence, and thermodynamics in aeroacoustics. Lighthill's equation, and Curle's equation. Characterization and identification of aeroacoustic sources. Leading and trailing edge noise. Basics of aeroacoustic wind tunnel testing.
Prerequisite(s): AOE 3014 and AOE 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4634 - Wind Turbine Technology and Aerodynamics (3 credits)
Aerodynamics and elastic behavior of a modern wind turbine. Internal and aerodynamic loads of wind turbines. Locating wind turbines with respect to fatigue, annual power and noise productions. Aeroelastic behavior of wind turbine blades. Generators, transformers and power converters used in wind energy. Historical, economic, political, and innovation issues related to wind energy and power grid integration.
Prerequisite(s): AOE 3014 and (AOE 3124 or AOE 3224)
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4654 - Space Weather: The Solar Wind and Magnetosphere (3 credits)
Solar-terrestrial interactions and space weather: the sun, solar wind, and interplanetary magnetic field; space plasma physics and magnetohydrodynamics; Earths magnetosphere and ionosphere; geomagnetic storms and auroral substorms; societal impacts of space weather; planetary magnetospheres; space science instrumentation.
Prerequisite(s): ECE 3105 or AOE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4154

AOE 4674 - Upper Atmosphere/Ionosphere Space Weather (3 credits)
Interaction of Earth's upper atmosphere and space environment with spacecraft: processes that affect atmospheric density relevant to spacecraft orbit decay; basic composition and structure; radiation and radiative transfer; atmospheric energy balance; atmospheric chemistry and ion production/loss mechanisms; fundamental concepts of Solar-terrestrial physics including ionospheric Chapman theory; atmospheric energy/mass transport; ionospheric electrodynamics; ionospheric storms; planetary atmospheres/ionospheres; instrumentation.
Prerequisite(s): AOE 3014 or ECE 3105
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4174

AOE 4804 - Special Topics in Dynamics, Control, and Estimation (3 credits)
Advanced undergraduate topics in dynamics, control, and estimation related to a particular class of aerospace and ocean engineering systems. Sample course topics include navigation and guidance, aircraft flight control, and ocean vessel motion control. May be repeated 2 times with different content for a maximum of 9 credits.
Prerequisite(s): AOE 4004
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

AOE 4814 - Special Topics in Propulsion (3 credits)
Advanced undergraduate topics in propulsion for aerospace and ocean vehicles. Covers technical, environmental, and economic challenges and opportunities in contemporary and future propulsion concepts. Comparative analyses of conventional and advanced propulsion systems and propulsion/vehicle integration concepts based upon first principles. Topics include distributed propulsion, green propulsion and propulsion/airframe integration. May be repeated with different content for a maximum of 6 credits.
Prerequisite(s): AOE 3164 or AOE 3264
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

AOE 4824 - Special Topics in Energy and the Environment (3 credits)
Advanced undergraduate topics in energy and the environment related to aerospace and ocean engineering systems. Sample course topics include renewable energy and energy management.
Prerequisite(s): AOE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4864 - Special Topics in Space Engineering (3 credits)
Advanced undergraduate topics in space engineering. Covers technical, environmental, and economic challenges and opportunities in contemporary and future space systems and space missions. Comparative analyses of current and future space systems and missions, and space platform and payload concepts. Topics may include remote sensing, disaggregation, infrastructure, and mission modeling and simulation. May be repeated with different content for a maximum of 6 credits.
Prerequisite(s): AOE 3154
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

AOE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 1035 & CHEM 1045	General Chemistry and General Chemistry Laboratory	4
PHYS 2305	Foundations of Physics	4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F ; C-)	4
MATH 1226	Calculus of a Single Variable (5F)	4
MATH 2214	Introduction to Differential Equations (5A)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three hours in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216	Foundations of Engineering and Foundations of Engineering (6D)	4
or ENGE 1414	Foundations of Engineering Practice	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathways 7 should be double counted with either Pathways 2, 3, or 6a to avoid taking any additional credit hours. [1]		
Total Credits		**127**

[1] If a Pathways course is taken that does not double-count Pathways 7 with Pathways 2, 3 or 6a, then three more Pathways credits are needed (130 credits total).

Technical Electives

The AOE department requires 15 credits of technical electives, all of which must be taken on an A-F basis. ***Students are required to take a minimum of 9 credits from one of the approved Tracks.*** The remaining credits must be AOE courses not otherwise required for the AE major or from the list of approved technical electives below. Up to 6 of the 15 credits may be non-AOE technical courses from the list of approved technical electives or from the tracks. Courses other than those below may be acceptable as technical electives; however, substitutions must be approved by the AOE department ***before the course is taken***. Students are responsible for the satisfaction of prerequisites required for their chosen technical electives.

Track Technical Electives

The AOE department requires 15 credits of technical electives. Students are required to take a minimum of 9 credits from one of the approved Tracks. Up to 6 of the 15 credits may be non-AOE technical courses selected either from Tracks or from the list of approved non-AOE technical courses. If a track includes a foundational course, the foundational course is required in that track, but it does not necessarily need to be taken first unless it is a prerequisite. Students must meet all pre-requisites and enrollment requirements for their select courses. Per the Graduate School policy, courses at the 5000 level are only available to seniors with a 3.0 or above overall GPA and the instructor's permission.

Foundational Track

The courses in the Foundational Track span the core areas in both Aerospace and Ocean Engineering. Achieving greater depth in analysis and understanding of these materials is very useful in building a strong general background in Aerospace and Ocean Engineering, and the Foundational Track allows students to acquire greater depth across the range of core areas in both aerospace and ocean engineering. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Required		
Select a minimum of 9 credit hours of the following:		9
AOE 3044	Boundary Layer and Heat Transfer	
or AOE 5144	Boundary Layer Theory and Heat Transfer	
AOE 4004	State-Space Control	
AOE/ESM 4084	Engineering Design Optimization	
AOE 4324	Energy Methods for Structures	
Total Credits		**9**

Aero/Hydrodynamics Track

Aero/Hydrodynamics is a core topic area in both Aerospace and Ocean Engineering. Analysis and understanding of Fluid Flows about vehicles is critical to the design of those vehicles. The Aero/Hydrodynamics Track will allow students with a particular interest in those topics to focus their technical electives in that area. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Required		
AOE 3044	Boundary Layer and Heat Transfer	3
or AOE 5144	Boundary Layer Theory and Heat Transfer	
Select a minimum of 6 credit hours of the following:		6
AOE 4064	Fluid Flows in Nature	
AOE 4114	Applied Computational Aerodynamics	
AOE 4124	Configuration Aerodynamics	
AOE 4434	Introduction to Computational Fluid Dynamics	
AOE 4474	Propellers and Turbines	
AOE 4624	Foundations of Aero and Hydroacoustics	
AOE 5104	Advanced Aero and Hydrodynamics	
AOE 5114	High Speed Aerodynamics	
AOE 5144	Boundary Layer Theory and Heat Transfer	
AOE 5154	Data Analysis in Fluid Dynamics	
Total Credits		**9**

Dynamics, Control and Estimation Track

Dynamics, Control and Estimation is a core topic area in both Aerospace and Ocean Engineering. The ability to model and predict the motion of a vehicle, and to modulate that motion through proper control design, is critical to the design of those vehicle systems. The Dynamics, Control and Estimation Track will allow students with a particular interest in those topics to focus their technical electives in that area. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Required		
AOE 4004	State-Space Control	3
Select a minimum of 6 credit hours of the following:		6
AOE 3134	Air Vehicle Dynamics (If not taking as required major course)	
AOE 3144	Space Vehicle Dynamics (If not taking as required major course)	
AOE 3234	Ocean Vehicle Dynamics (If not taking as required major course)	
AOE 4344	Dynamics of High-Speed Marine Craft	
AOE 4454	Spacecraft Position/Navigation/Timing and Orbit Determination	
AOE 4514	Nonlinear Dynamics and Chaos	
AOE 4804	Special Topics in Dynamics, Control, and Estimation	
ECE 3714	Introduction to Control Systems	
ECE 4624	Digital Signal Processing And Filter Design	
ESM 4114	Nonlinear Dynamics and Chaos	
ME 4534	Land Vehicle Dynamics	
AOE 5204	Vehicle Dynamics and Control	
AOE 5234	Orbital Mechanics	
AOE 5334	Advanced Ship Dynamics	
AOE 5734	Convex Optimization	
AOE 5744/ ME 5544/ ECE 5744	Linear Systems Theory	
AOE/ECE 5754/ME 5554	Applied Linear Systems	
AOE 5764/ ME 5564/ ECE 5764	Applied Linear Control	
AOE/ECE 5774/ME 5574	Nonlinear Systems Theory	
Total Credits		**9**

Energy and the Environment Track

Energy and the Environment, a major application area in both Aerospace and Ocean Engineering, focuses on imparting specific skills required to understand the nature, scope, and challenges of environmental impact and the science behind energy and propulsion systems that minimize that impact. The Energy and the Environment Track will allow students with a particular interest in environment impact, energy systems and renewable energy to focus their technical electives in that area. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Select a minimum of 9 credit hours of the following:		9
AOE 4064	Fluid Flows in Nature	
AOE 4474	Propellers and Turbines	
AOE 4624	Foundations of Aero and Hydroacoustics	
AOE 4634	Wind Turbine Technology and Aerodynamics	
AOE 4824	Special Topics in Energy and the Environment	
AOE 5154	Data Analysis in Fluid Dynamics [1]	
ECE 4364	Alternate Energy for Climate Sustainability	
ENGR 3124	Introduction to Green Engineering	
ESM/ME 4194	Sustainable Energy Solutions for a Global Society	
Total Credits		**9**

Naval Engineering Track

Naval Engineering is an application track in both Aerospace and Ocean Engineering. Understanding naval missions, capability requirements and the broad scope of engineering applications to naval missions, and developing particular technical application knowledge in elective courses, will provide students with a unique and valuable skill set. These skills will enable the student to perform research and work in this field. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Required		
AOE 4264	Principles of Naval Engineering	3
or AOE 5324	Principles of Naval Engineering with Applications	
Select a minimum of 6 credit hours of the following:		6
AOE 4244	Naval and Marine Engineering Systems Design	
or AOE 5314	Naval and Marine Engineering Systems Design	
AOE 4274	Intermediate Ship Structural Analysis	
AOE 4344	Dynamics of High-Speed Marine Craft	
AOE 4474	Propellers and Turbines	
AOE 5074	Advanced Ship Structural Analysis	
AOE 5314	Naval and Marine Engineering Systems Design	
AOE 5324	Principles of Naval Engineering with Applications	
AOE 5334	Advanced Ship Dynamics	
ECE 4164	Introduction to Global Positioning System (GPS) Theory and Design	
ECE 4364	Alternate Energy for Climate Sustainability	
Total Credits		**9**

Propulsion Track

The study of Propulsion, a core technology in Aerospace and Ocean Engineering, focuses on learning and applying fundamental knowledge to understand the nature, scope, opportunities and challenges of designing, specifying and integrating propulsion technologies. The Propulsion Track will allow students with a particular interest in the design, and analysis of aircraft, spacecraft or ocean propulsion to focus their technical electives in that area. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Select a minimum of 9 credit hours of the following:		9
AOE 3044	Boundary Layer and Heat Transfer	
AOE 4174	Spacecraft Propulsion	
AOE 4234	Aerospace Propulsion Systems	
AOE 4474	Propellers and Turbines	
AOE 4604	Booster Design, Fabrication, and Operation	
AOE 4624	Foundations of Aero and Hydroacoustics	
AOE 4814	Special Topics in Propulsion	
AOE 5144	Boundary Layer Theory and Heat Transfer	
AOE 5154	Data Analysis in Fluid Dynamics	
AOE 5184	High Speed Propulsion	
Total Credits		**9**

Space Engineering Track

Space Engineering is a core topic area in both Aerospace and Ocean Engineering. Analysis and understanding of the space environment, space payloads, and/or space mission design and operations is critical to the design, analysis, and functioning of those space vehicles and payloads. The Space Engineering Track will allow students with a particular interest in those topics to focus their technical electives in that area. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Select a minimum of 9 credit hours of the following:		9
AOE 2664	Exploration of the Space Environment	
AOE 4174	Spacecraft Propulsion	
AOE 4414	Computer Aided Space Mission Analysis	
AOE 4454	Spacecraft Position/Navigation/Timing and Orbit Determination	
AOE 4604	Booster Design, Fabrication, and Operation	
AOE 4654/ ECE 4154	Space Weather: The Solar Wind and Magnetosphere	
AOE 4674	Upper Atmosphere/Ionosphere Space Weather	
AOE 4864	Special Topics in Space Engineering	
AOE/ECE 5174	Introduction to Plasma Science	
AOE 5184	High Speed Propulsion	
AOE 5234	Orbital Mechanics	
ECE 3104	Introduction to Space Systems and Technologies	
ECE 3154	Space Systems - Design and Validation	
ECE 4164	Introduction to Global Positioning System (GPS) Theory and Design	
ECE 4194	Engineering Principles of Remote Sensing	
PHYS 3655	Introduction to Astrophysics	
PHYS 3656	Introduction to Astrophysics	
Total Credits		**9**

Structures and Materials Track

Structures and Materials is a core topic area in both Aerospace and Ocean Engineering. Analysis and understanding of structural analysis and materials selection for aerospace and ocean vehicles is critical to the design of those vehicles. The Structures and Materials Track will allow students with a particular interest in those topics to focus their technical electives in that area. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Required		
AOE 4324	Energy Methods for Structures	3
Select a minimum of 6 credit hours of the following:		6
AOE 4024/ ESM 4734	An Introduction to the Finite Element Method	
AOE 4034	Introduction to Mechanical and Structural Vibrations	
AOE 4054/ ESM 4444	Stability of Structures	
AOE 4274	Intermediate Ship Structural Analysis	
AOE 4614	Aerospace Materials and Modeling Techniques	
AOE 5024	Vehicle Structures	
AOE 5034/ ESM 5304	Mechanical and Structural Vibrations	
AOE 5074	Advanced Ship Structural Analysis	
ESM/MSE 3054	Mechanical Behavior of Materials	
ESM 4024	Advanced Mechanical Behavior of Materials	
ESM 4044/ CEE 4610	Mechanics of Composite Materials	
ME 4624	Finite Element Practice in Mechanical Design	
MSE 2034	Elements of Materials Engineering	
Total Credits		**9**

Vehicle and System Design Track

Vehicle and System Design is a core discipline in both Aerospace and Ocean Engineering. Its focus is on imparting specific skills required to understand the nature, scope, and challenges of designing innovative vehicles and systems by synthesizing foundational knowledge from other courses. The Vehicle and System Design Track will allow students with a particular interest in design and operation of aircraft, spacecraft, and ocean vehicles to focus their technical electives. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Required		
AOE/ESM 4084	Engineering Design Optimization	3
Select a minimum of 6 credit hours of the following:		6
AOE 3354	Avionics Systems	
AOE 3564	Principles of Project Design and Management	
AOE 3804	Special Topics in Aircraft Systems (HAW)	
AOE 4124	Configuration Aerodynamics	
AOE 4244	Naval and Marine Engineering Systems Design	
or AOE 5314	Naval and Marine Engineering Systems Design	
AOE 4264	Principles of Naval Engineering	
or AOE 5324	Principles of Naval Engineering with Applications	
AOE 4604	Booster Design, Fabrication, and Operation	
AOE 4814	Special Topics in Propulsion	
CEE 5614	Analysis of Air Transportation Systems	
Total Credits		**9**

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The AOE Department fully supports this policy. Specific expectations for satisfactory progress for AE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog: https://www.undergradcatalog.registrar.vt.edu/
- A student must have at least 2.0 overall and in-major GPAs. (The in-major GPA consists of all courses taken under the AOE designation).

Graduation Requirements

Students must pass all required courses and both the in-major and overall GPA must be at least 2.0 for graduation. The in-major GPA consists of all courses taken under the AOE designation. No courses in this program may be taken on a Pass/Fail basis.

Economics Requirement

ECON 2005 Principles of Economics **is required for graduation** and may be taken as one of the two Concept 3 requirements in the Pathways. If a student chooses to satisfy the Concept 3 requirements with courses not including ECON 2005 Principles of Economics, ISE 2014 Engineering Economy may also be used to satisfy this requirement but this requires additional credits.

ESM 2114 Requirement

ESM 2114 Statics & Structures **is required for graduation.** ESM 2104 Statics and ESM 2204 Mechanics of Deformable Bodies may be substituted in place of ESM 2114 Statics & Structures. However, doing so requires that a student take 6 credits instead of the 3 required for ESM 2114 Statics & Structures.

Aerospace Engineering Primary and Ocean Engineering Secondary

AE primary majors with an OE secondary major may substitute (4065-4066 or 4165-4166) for 4265-4266 and 4105-4106 for 4205-4206 in their secondary OE major (substitutions are not permitted for dual degrees).

Course Offerings

Course offerings are subject to change and the availability of sufficient resources.

Acceptable Substitutions

1. MATH 2405H may be substituted for MATH 2114
2. MATH 2405H + MATH 2406H may be substituted for MATH 2114 + MATH 2204 + MATH 2214
3. ESM 2104 + ESM 2204 may be substituted for ESM 2114

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable	4
ENGE 1215	Foundations of Engineering	2
Pathways 2 and/or 7 [1]		3
	Credits	**16**
Spring Semester		
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable	4
PHYS 2305	Foundations of Physics	4
ENGE 1216	Foundations of Engineering	2
Select one of the following programming electives.		3
CS 1044	Introduction to Programming in C	
CS 1064	Introduction to Programming in Python	
CS 1114	Introduction to Software Design	
	Credits	**16**
Second Year		
Fall Semester		
ESM 2114	Statics & Structures	3
MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus	3
AOE 2054	Electronics for Aerospace and Ocean Engineers	3
AOE 2074	Computational Methods	2

AOE 2104	Introduction to Aerospace Engineering and Aircraft Performance	3
	Credits	**17**
Spring Semester		
ESM 2304	Dynamics	3
MATH 2214	Introduction to Differential Equations	3
AOE 2024	Thin-Walled Structures	3
PHYS 2306	Foundations of Physics	4
ECON 2005	Principles of Economics (Pathways 3)	3
	Credits	**16**
Third Year		
Fall Semester		
MATH 4564	Operational Methods for Engineers	3
AOE 3014	Fluid Dynamics for Aerospace and Ocean Engineers	3
AOE 3034	System Dynamics and Control	3
AOE 3124	Aerospace Structures	3
AOE 3154	Astromechanics	3
	Credits	**15**
Spring Semester		
AOE 3114	Aerodynamics & Compressibility	3
AOE 3134 or AOE 3144	Air Vehicle Dynamics or Space Vehicle Dynamics	3
AOE 3164	Aerothermodynamics and Propulsion Systems	3
AOE 3054	Experimental Methods	3
Track Technical Elective		3
	Credits	**15**
Fourth Year		
Fall Semester		
AOE 4105	Experiments for Aerospace Design	1
Vehicle Design Choice		3
Select one of the following	MATH Electives:	3
MATH 4574	Vector and Complex Analysis for Engineers	
MATH 4404	Applied Numerical Methods	
STAT 4705	Probability and Statistics for Engineers	
Track Technical Elective		3
Technical Elective		3
Pathways 6a and/or 7 [1]		3
	Credits	**16**
Spring Semester		
AOE 4106	Experiments for Aerospace Design	1

MATH 1226	Calculus of a Single Variable (5F)	4
MATH 2214	Introduction to Differential Equations (5A)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three hours in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216	Foundations of Engineering and Foundations of Engineering (6D)	4
or ENGE 1414	Foundations of Engineering Practice	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathways 7 should be double counted with either Pathways 2, 3, or 6a to avoid taking any additional credit hours. [1]		
Total Credits		**127**

[1] If a Pathways course is taken that does not double-count Pathways 7 with Pathways 2, 3, or 6a, then three more Pathways credits are needed (130 credits total).

Technical Electives

The AOE department requires 15 credits of technical electives, all of which must be taken on an A/F basis. ***Students are required to take a minimum of 9 credits from one of the approved Tracks.*** The remaining credits must be AOE courses not otherwise required for the AE major or from the list of approved technical electives below. Up to 6 of the 15 credits may be non-AOE technical courses from the list of approved technical electives or from the tracks. Courses other than those below may be acceptable as technical electives; however, substitutions must be approved by the AOE department ***before the course is taken***. Students are responsible for the satisfaction of prerequisites required for their chosen technical electives.

Code	Title	Credits
CEE 4384	Coastal Engineering	3
CEE 4674	Airport Planning and Design	3
CEE 5614	Analysis of Air Transportation Systems	3
CHEM 4615	Physical Chemistry for the Life Sciences	3
CS 1044	Introduction to Programming in C	3

Track Technical Electives

The AOE department requires 15 credits of technical electives. Students are required to take a minimum of 9 credits from one of the approved Tracks. Up to 6 of the 15 credits may be non-AOE technical courses selected either from Tracks or from the list of approved non-AOE technical courses. If a track includes a foundational course, the foundational course is required in that track, but it does not necessarily need to be taken first unless it is a prerequisite. Students must meet all pre-requisites and enrollment requirements for their select courses. Per the Graduate School policy, courses at the 5000 level are only available to seniors with a 3.0 or above overall GPA and the instructor's permission.

Foundational Track

The courses in the Foundational Track span the core areas in both Aerospace and Ocean Engineering. Achieving greater depth in analysis and understanding of these materials is very useful in building a strong general background in Aerospace and Ocean Engineering, and the Foundational Track allows students to acquire greater depth across the range of core areas in both aerospace and ocean engineering. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Required		
Select a minimum of nine credit hours of the following:		9
AOE 3044	Boundary Layer and Heat Transfer	
or AOE 5144	Boundary Layer Theory and Heat Transfer	
AOE 4004	State-Space Control	
AOE/ESM 4084	Engineering Design Optimization	
AOE 4324	Energy Methods for Structures	
Total Credits		**9**

Aero/Hydrodynamics Track

Aero/Hydrodynamics is a core topic area in both Aerospace and Ocean Engineering. Analysis and understanding of Fluid Flows about vehicles is critical to the design of those vehicles. The Aero/Hydrodynamics Track will allow students with a particular interest in those topics to focus their technical electives in that area. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Required		
AOE 3044	Boundary Layer and Heat Transfer	3
or AOE 5144	Boundary Layer Theory and Heat Transfer	
Select a minimum of six credit hours of the following:		6
AOE 4064	Fluid Flows in Nature	
AOE 4114	Applied Computational Aerodynamics	
AOE 4124	Configuration Aerodynamics	
AOE 4434	Introduction to Computational Fluid Dynamics	
AOE 4474	Propellers and Turbines	
AOE 4624	Foundations of Aero and Hydroacoustics	
AOE 5104	Advanced Aero and Hydrodynamics	
AOE 5114	High Speed Aerodynamics	
AOE 5144	Boundary Layer Theory and Heat Transfer	
AOE 5154	Data Analysis in Fluid Dynamics	
Total Credits		**9**

Dynamics, Control and Estimation Track

Dynamics, Control and Estimation is a core topic area in both Aerospace and Ocean Engineering. The ability to model and predict the motion of a vehicle, and to modulate that motion through proper control design, is critical to the design of those vehicle systems. The Dynamics, Control and Estimation Track will allow students with a particular interest in those topics to focus their technical electives in that area. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Required		
AOE 4004	State-Space Control	3
Select a minimum of six credit hours of the following:		6
AOE 3134	Air Vehicle Dynamics (If not taking as required major course)	
AOE 3144	Space Vehicle Dynamics (If not taking as required major course)	
AOE 3234	Ocean Vehicle Dynamics (If not taking as required major course)	
AOE 4344	Dynamics of High-Speed Marine Craft	
AOE 4454	Spacecraft Position/Navigation/Timing and Orbit Determination	
AOE 4514	Nonlinear Dynamics and Chaos	
AOE 4804	Special Topics in Dynamics, Control, and Estimation	
ECE 3714	Introduction to Control Systems	
ECE 4624	Digital Signal Processing And Filter Design	
ESM 4114	Nonlinear Dynamics and Chaos	
ME 4534	Land Vehicle Dynamics	
AOE 5204	Vehicle Dynamics and Control	
AOE 5234	Orbital Mechanics	
AOE 5334	Advanced Ship Dynamics	
AOE 5734	Convex Optimization	
AOE 5744/ ME 5544/ ECE 5744	Linear Systems Theory	
AOE/ECE 5754/ME 5554	Applied Linear Systems	

AOE 5764/ ME 5564/ ECE 5764	Applied Linear Control
AOE/ECE 5774/ME 5574	Nonlinear Systems Theory
Total Credits	**9**

Energy and the Environment Track

Energy and the Environment, a major application area in both Aerospace and Ocean Engineering, focuses on imparting specific skills required to understand the nature, scope, and challenges of environmental impact and the science behind energy and propulsion systems that minimize that impact. The Energy and the Environment Track will allow students with a particular interest in environment impact, energy systems and renewable energy to focus their technical electives in that area. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Select a minimum of nine credit hours of the following:		9
AOE 4064	Fluid Flows in Nature	
AOE 4474	Propellers and Turbines	
AOE 4624	Foundations of Aero and Hydroacoustics	
AOE 4634	Wind Turbine Technology and Aerodynamics	
AOE 4824	Special Topics in Energy and the Environment	
AOE 5154	Data Analysis in Fluid Dynamics	
ECE 4364	Alternate Energy for Climate Sustainability	
ENGR 3124	Introduction to Green Engineering	
ESM/ME 4194	Sustainable Energy Solutions for a Global Society	
Total Credits		**9**

Naval Engineering Track

Naval Engineering is an application track in both Aerospace and Ocean Engineering. Understanding naval missions, capability requirements and the broad scope of engineering applications to naval missions, and developing particular technical application knowledge in elective courses, will provide students with a unique and valuable skill set. These skills will enable the student to perform research and work in this field. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Required		
AOE 4264	Principles of Naval Engineering	3
Select a minimum of six credit hours of the following:		6
AOE 4244	Naval and Marine Engineering Systems Design	
or AOE 5314	Naval and Marine Engineering Systems Design	
AOE 4274	Intermediate Ship Structural Analysis	
AOE 4344	Dynamics of High-Speed Marine Craft	
AOE 4474	Propellers and Turbines	
AOE 5074	Advanced Ship Structural Analysis	
AOE 5334	Advanced Ship Dynamics	
ECE 4164	Introduction to Global Positioning System (GPS) Theory and Design	
ECE 4364	Alternate Energy for Climate Sustainability	
Total Credits		**9**

Propulsion Track

The study of Propulsion, a core technology in Aerospace and Ocean Engineering, focuses on learning and applying fundamental knowledge to understand the nature, scope, opportunities and challenges of designing, specifying and integrating propulsion technologies. The Propulsion Track will allow students with a particular interest in the design, and analysis of aircraft, spacecraft or ocean propulsion to focus their technical electives in that area. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Select a minimum of nine credit hours of the following:		9
AOE 3044	Boundary Layer and Heat Transfer	
or AOE 5144	Boundary Layer Theory and Heat Transfer	
AOE/ME 4174	Spacecraft Propulsion	
AOE/ME 4234	Aerospace Propulsion Systems	
AOE 4474	Propellers and Turbines	
AOE 4604	Booster Design, Fabrication, and Operation	
AOE 4624	Foundations of Aero and Hydroacoustics	
AOE 4814	Special Topics in Propulsion	
AOE 5144	Boundary Layer Theory and Heat Transfer	
AOE 5154	Data Analysis in Fluid Dynamics	
AOE 5184	High Speed Propulsion	
Total Credits		**9**

Space Engineering Track

Space Engineering is a core topic area in both Aerospace and Ocean Engineering. Analysis and understanding of the space environment, space payloads, and/or space mission design and operations is critical to the design, analysis, and functioning of those space vehicles and payloads. The Space Engineering Track will allow students with a particular interest in those topics to focus their technical electives in that area. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Select a minimum of nine credit hours of the following:		9
AOE 2664/ ECE 2164	Exploration of the Space Environment	
AOE/ME 4174	Spacecraft Propulsion	
AOE 4414	Computer Aided Space Mission Analysis	
AOE 4454	Spacecraft Position/Navigation/Timing and Orbit Determination	
AOE 4604	Booster Design, Fabrication, and Operation	
AOE 4654/ ECE 4154	Space Weather: The Solar Wind and Magnetosphere	
AOE 4674	Upper Atmosphere/Ionosphere Space Weather	
AOE 4864	Special Topics in Space Engineering	
AOE/ECE 5174	Introduction to Plasma Science	
AOE 5184	High Speed Propulsion	
AOE 5234	Orbital Mechanics	
ECE 3104	Introduction to Space Systems and Technologies	
ECE 3154	Space Systems - Design and Validation	
ECE 4164	Introduction to Global Positioning System (GPS) Theory and Design	
ECE 4194	Engineering Principles of Remote Sensing	

PHYS 3655	Introduction to Astrophysics	
PHYS 3656	Introduction to Astrophysics	
Total Credits		**9**

Structures and Materials Track

Structures and Materials is a core topic area in both Aerospace and Ocean Engineering. Analysis and understanding of structural analysis and materials selection for aerospace and ocean vehicles is critical to the design of those vehicles. The Structures and Materials Track will allow students with a particular interest in those topics to focus their technical electives in that area. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Required		
AOE 4324	Energy Methods for Structures	3
Select a minimum of six credit hours of the following:		6
AOE 4024/ ESM 4734	An Introduction to the Finite Element Method	
AOE 4034	Introduction to Mechanical and Structural Vibrations	
AOE 4054/ ESM 4444	Stability of Structures	
AOE 4274	Intermediate Ship Structural Analysis	
AOE 4614	Aerospace Materials and Modeling Techniques	
AOE 5024	Vehicle Structures	
AOE 5034/ ESM 5304	Mechanical and Structural Vibrations	
AOE 5074	Advanced Ship Structural Analysis	
ESM/MSE 3054	Mechanical Behavior of Materials	
ESM 4024	Advanced Mechanical Behavior of Materials	
ESM 4044/ CEE 4610	Mechanics of Composite Materials	
ME 4624	Finite Element Practice in Mechanical Design	
MSE 2034	Elements of Materials Engineering	
Total Credits		**9**

Vehicle and System Design Track

Vehicle and System Design is a core discipline in both Aerospace and Ocean Engineering. Its focus is on imparting specific skills required to understand the nature, scope, and challenges of designing innovative vehicles and systems by synthesizing foundational knowledge from other courses. The Vehicle and System Design Track will allow students with a particular interest in design and operation of aircraft, spacecraft, and ocean vehicles to focus their technical electives. This Track is available to all Aerospace and Ocean Engineering majors.

Code	Title	Credits
Required		
AOE/ESM 4084	Engineering Design Optimization	3
Select a minimum of six credit hours of the following:		6
AOE 3354	Avionics Systems	
AOE 3564	Principles of Project Design and Management	
AOE 3804	Special Topics in Aircraft Systems	
AOE 4124	Configuration Aerodynamics	
AOE 4244	Naval and Marine Engineering Systems Design	
or AOE 5314	Naval and Marine Engineering Systems Design	
AOE 4264	Principles of Naval Engineering	
or AOE 5314	Naval and Marine Engineering Systems Design	
or AOE 5324	Principles of Naval Engineering with Applications	
AOE 4604	Booster Design, Fabrication, and Operation	
AOE 4814	Special Topics in Propulsion	
CEE 5614	Analysis of Air Transportation Systems	
Total Credits		**9**

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The AOE Department fully supports this policy. Specific expectations for satisfactory progress for OE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog: https://www.undergradcatalog.registrar.vt.edu/
- A student must have at least 2.0 overall and in-major GPAs. (The in-major GPA consists of all courses taken under the AOE designation).

Graduation Requirements

Students must pass all required courses and both the in-major and overall GPA must be at least 2.0 for graduation. The in-major GPA consists of all courses taken under the AOE designation. No courses in this program may be taken on a Pass/Fail basis.

Economics Requirement

ECON 2005 Principles of Economics **is required for graduation** and may be taken as one of the two Concept 3 requirements in the Pathways. If a student chooses to satisfy the Concept 3 requirements with courses not including ECON 2005 Principles of Economics, ISE 2014 Engineering Economy may also be used to satisfy this requirement but this requires additional credits.

ESM 2114 Requirement

ESM 2114 Statics & Structures **is required for graduation.** ESM 2104 Statics and ESM 2204 Mechanics of Deformable Bodies may be substituted in place of ESM 2114 Statics & Structures. However, doing so requires that a student take 6 credits instead of the 3 required for ESM 2114 Statics & Structures.

Ocean Engineering Primary Majors and Aerospace Engineering Secondary Majors

OE primary majors with an AE secondary major may substitute 4265-4266 for (4065-4066 or 4165-4166) and 4205-4206 for 4105-4106 in their secondary AE major (substitutions are not permitted for dual degrees).

Course Offerings

Course offerings are subject to change and the availability of sufficient resources. Students should confirm course offerings in advance with their department.

Acceptable Substitutions

1. MATH 2405H may be substituted for MATH 2114
2. MATH 2405H + MATH 2406H may be substituted for MATH 2114 + MATH 2204 + MATH 2214
3. ESM 2104 + ESM 2204 may be substituted for ESM 2114

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Biological Systems Engineering

Our Website (http://www.bse.vt.edu)

Overview

Biological Systems Engineering connects biology and engineering to solve complex, critical problems in the areas of sustainability, human health, environmental stewardship, and agriculture. The program is invested in our student's success through our curriculum, dedicated advising, hands-on learning opportunities outside the classroom, supportive faculty and staff, scholarship opportunities, and the community atmosphere. Biological Systems Engineering has relatively small class sizes that promote meaningful student-faculty interaction. Departmental courses include significant "hands-on" components and an emphasis on professional skills such as communication, teamwork, and the creative process of engineering design. The department offers over 14 endowed scholarships to students enrolled in Biological Systems Engineering, and students are also eligible for College of Engineering and other Virginia Tech scholarships.

Our program has 2 major options: Biological Systems Engineering (BSE) and Ecological Engineering (EcoE). Students in each of these specialties are provided with a common foundation of biology and chemistry to expand core skills in math, physics, data science, and engineering design principles. The BSE major has multiple paths that provide flexibility in the areas of biotechnology, pre-health, food, environmental health, and ecological engineering. The EcoE major is a structured degree providing the skills and training to solve pressing societal, ecological, and environmental challenges using a holistic, systems approach and integrating nature-based solutions.

The Bachelor of Science in Biological Systems Engineering is offered through the College of Engineering and is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org), under the commission's General Criteria and the Program Criteria for Biological and Similarly Named Engineering Programs.

Program Educational Objectives and Student Outcomes

The BSE program prepares graduates to accomplish the following **program educational objectives** in their careers within a few years after graduation:

1. Our#graduates will apply their engineering problem solving skillset at the intersection of biology and engineering at scales ranging from molecular to global as engineers, entrepreneurs,#or in roles furthering their education.
2. Our#graduates#will contribute to addressing societal and ecological needs in ethical, inclusive, and holistic approaches through#leadership,#collaboration, teamwork, and effective communication.
3. Our#graduates#will advance professionally within their careers through mentoring and life-long learning to meet their own aspirations, improve their organizations, and contribute to their communities.

Our **student learning outcomes** for each student to develop and achieve through the undergraduate program are listed below:

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

When combined with career-enhancing opportunities such as Cooperative Education, internships, undergraduate research and study abroad, this educational program enables graduates to make meaningful impacts on challenges involving natural resources and biological systems. Graduates are employed in the biotechnology, pharmaceutical, energy, and food industries as well as government agencies, environmental and ecological consulting firms, and non-profit organizations. Graduates also succeed in professional schools such as medicine, dentistry, and veterinary medicine, and as graduate students in a variety of disciplines.

- Biological Systems Engineering Major (p. 791)
- Ecological Engineering Major (https://catalog.vt.edu/undergraduate/college-engineering/biological-systems-engineering/ecological-engineering/)

Department Head: D. R. Edwards
Associate Head for Undergraduate Studies: D. T. Scott
Graduate Program Director: C. W. Hession
H.E. and Elizabeth F. Alphin Professor: Z. M. Easton
Elizabeth and James E Turner Jr Faculty Fellows: L.-A. H. Krometis and C. Zhang
Professors: J. R. Barone, B. L. Benham, Z. M. Easton, D. R. Edwards, W. C. Hession, L.-A. H. Krometis, D.J. Sample, D. T. Scott, J.S. Wayne, and C. Zhang
Associate Professors: J. Arogo Ogejo, F. Batarseh, J. A. Czuba, R. S. Senger, J. E. Shortridge, V. R. Sridhar, T. M. Thompson, and Z. Wang
Assistant Professors: A. Chandel, J. Chen, A. Duraj-Thatte, W. Sun, and R. C. Wright
Academic Advisor: P. Baker

Undergraduate Course Descriptions (AOE)

BSE 1004 - Engineering Biological Systems for the Global Good (1 credit)
Survey of global societal and technological issues that engage biological systems engineers in the areas of health, environment, food and energy. Application of systems-level approaches to meet engineering challenges that intersect with crucial societal issues, including sustainability and equity. Evaluation of key factors that affect the design, communication, and public acceptance of engineered solutions. Analysis of cultural intelligence, with a specific focus on personality and problem solving styles amongst individuals and teams and productive conflict resolution.
Instructional Contact Hours: (1 Lec, 1 Crd)

BSE 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 2004 - Introduction to Biological Systems Engineering (3 credits)
Introduction to the fundamental concepts of Biological Systems Engineering, including statistics and material and energy balances, through applications in protein separation, hydrology, sediment/nutrient transport, and microbial metabolism. Engineering design process. Engineering problem-solving tools and techniques. Resolving ethical dilemmas. Development of oral and written communication skills; introduction to job searching resources; strategies for career development, and the importance of teamwork and ethics in Biological Systems Engineering.
Prerequisite(s): ENGE 1215 or ENGE 1414
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BSE 2304 - Landscape Measurements and Modeling (3 credits)
Introduction to land surveying, computer-aided design, and drafting for land and water resources engineering. Representation of features in two and three dimensions for documentation and visualization of watershed engineering projects. Create plans, cross sections, detail drawings, and three dimensional visualizations using computer-aided design and drafting tools.
Prerequisite(s): MATH 1206 or MATH 1226
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BSE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 3144 - Engineering Analysis for Biological Systems using Numerical Methods (2 credits)
Solving engineering problems related to biological systems using numerical analysis including root finding, numerical integration, differentiation, interpolation and numerical solution of ordinary differential equations. Error analysis and programming with engineering software. Course requirements may be satisfied by taking MATH 2214 prior to or concurrent with course.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (2 Lec, 2 Crd)

BSE 3154 - Thermodynamics of Biological Systems (3 credits)
Description of biological, chemical and mechanical mechanisms of energy storage and conversion to work. Derivation and use of the first and second laws of thermodynamics (energy and entropy) to analyze processes found in biotechnology, ecological engineering, and living systems. Analysis of thermodynamic cycles and their relevance to biological systems. Introduction of Gibbs energy, equilibrium at specified pH, and calorimetry of biological reactions.
Prerequisite(s): CHEM 1036 and PHYS 2305 and (MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 3324 - Small Watershed Hydrology (3 credits)
Precipitation, soil physics, infiltration, evapotranspiration, groundwater hydrology, overland flow, open channel flow, flow routing, hydraulic analysis.
Prerequisite(s): PHYS 2305
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 3334 - Nonpoint Source Pollution Assessment and Control (3 credits)
Erosion prediction and control; transport and fate of sediment, nutrients, and microorganisms; design of nutrient management plans, wetlands, detention facilities and other management practices for rural and urban nonpoint source pollution control.
Prerequisite(s): BSE 3324
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BSE 3504 - Transport Processes in Biological Systems (3 credits)
Introduction to material and energy balances in biological systems. Fundamentals of heat and mass transfer in biological systems. One and two dimensional conduction, convection, and diffusion of thermal energy and mass. Heat and mass transfer rates, steady and unsteady state conduction, convection, diffusion; design of simple heat exchangers. Application of these topics and fluid mechanics to fluid handling, bacterial growth, plant nutrient uptake, enzymatic reactions.
Prerequisite(s): BSE 3154 and ESM 3024 and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 3524 - Unit Operations in Biological Systems Engineering (3 credits)
Description of unit operations for processing biological materials including evaporation, drying, gas-liquid separations, adsorption, membrane separation, and mechanical separation.
Prerequisite(s): BSE 3154 and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 3534 - Bioprocess Engineering (3 credits)
Engineering concepts for biological conversion of raw materials to food, pharmaceuticals, fuels, and chemicals. Metabolic pathways leading to products, enzyme kinetics, cell growth kinetics, and analysis of bioreactors and fermenters.
Prerequisite(s): BSE 3154
Corequisite(s): BIOL 2604, BSE 3504
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 4125 - Comprehensive Design Project (2 credits)
4125: Identify and develop an engineering design project using the team approach; use of literature resources to define project objectives and approach; present project proposal in a professional written and oral manner; engineering ethics, professionalism and contemporary issues. Pre: Completion of 96 hours, overall GPA of 2.0 or better. 4126: Complete a comprehensive design project using the team approach, test approach, test prototype, and prepare and present a professional engineering design report.
Prerequisite(s): BSE 3334 or BSE 3524
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

BSE 4126 - Comprehensive Design Project (3 credits)
4125: Identify and develop an engineering design project using the team approach; use of literature resources to define project objectives and approach; present project proposal in a professional written and oral manner; engineering ethics, professionalism and contemporary issues. Pre: Completion of 96 hours, overall GPA of 2.0 or better. 4126 Complete a comprehensive design project using the team approach, test prototype, and prepare and present a professional engineering design report.
Prerequisite(s): BSE 4125
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

BSE 4204 - Instrumentation for Biological Systems (3 credits)
Introduction to instrumentation and sensors for measurement and control of biological systems. Sensor response dynamics, data acquisition, sensor selection, signal processing and signal conditioning principles. Experimental determination of velocity, pressure, strain, displacement, forces and chemical constituents. Data analysis focused on uncertainty, error and statistical concepts.
Prerequisite(s): PHYS 2306 and ESM 3024
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

BSE 4224 - Field Methods in Hydrology (3 credits)
Site characterization: surveying, channel and floodplain mapping, land use, electronic data acquisition. Techniques for measuring surface and subsurface hydrologic processes: water flow, hydrologic conductivity, precipitation, evaporation. Sampling techniques: surface water, groundwater, and soil pore water sampling. In-situ monitoring: automatic samplers, dataloggers, water quality sondes. Laboratory analyses: good laboratory practices, selection of analytical method, calibration, quality assurance/quality control.
Prerequisite(s): BSE 3324 or FREC 3104 or WATR 3104 or CEE 3314
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BSE 4304 - Introduction to Watershed Modeling (3 credits)
Fundamental modeling principles used to quantifywatershed hydrology, energy budgets,and associated ecosystem functions, such asplant dynamics and biogeochemical processes, at scales ranging from soil poresto watersheds. Code development and model integration to simulate watershed hydrologyandnutrient and sediment transport. Model calibration and performance assessment. Data discovery, acquisition, and processing of data relevant to hydrologic/watershed modeling.
Prerequisite(s): BSE 3334
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BSE 4324 - Applied Fluvial Geomorphology (3 credits)
Introduction to landscape evolution. Influence of geology and climate on stream form and processes. Fundamental river mechanics and sediment transport. Stream surveying and classification. River system response to changes in hydrology and sediment supply. Interactions between ecosystems and fluvial systems. Human impacts on stream systems.
Prerequisite(s): BSE 3324 or CEE 3314 or FREC 3104 or WATR 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 4344 - Geographic Information Systems for Engineers (3 credits)
Conceptual, technical, and operational aspects of geographic information systems as a tool for storage, analysis, and presentation of spatial information. Focus on engineering applications in resource management, site selection, and network analysis. Laboratory work and senior standing required.
Prerequisite(s): BSE 3324 or CEE 3314 or FREC 3104 or WATR 3104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BSE 4394 - Water Supply and Sanitation in Developing Countries (3 credits)
Social, economic and engineering principles of water supply and sanitation in developing countries as affected by climate, cultural and sociological factors, and material and financial resources. Pre: Junior or Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 4524 - Biological Process Plant Design (3 credits)
Engineering principles for design of systems for processing biological materials into primary and secondary products. Delivery, scheduling, storage requirements, economic analysis. Process control and instrumentation of bioprocessing plants.
Prerequisite(s): BSE 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 4534 - Bioprocess Engineering Lab (1 credit)
Unit operations commonly used in processing biological materials, including filtration, heat transfer, ultrafiltration, crystallization, and protein expression by fermentation, purification by chromatography, and characterization by gel electrophoresis.
Prerequisite(s): BSE 3524 and BSE 3534
Instructional Contact Hours: (3 Lab, 1 Crd)

BSE 4544 - Protein Separation Engineering (3 credits)
Concepts, principles and applications of various unit operations used in protein separations. Properties of biological materials, such as cells and proteins, and their influences on process design. Design of processes for protein purification based on the impurities to be eliminated. Concepts and principles of scale-up of unit operations. Case studies in practical protein recovery and purification issues, with a focus on enhanced protein purification by genetic engineering. Protein purification process simulation and optimization using process simulation software.
Prerequisite(s): BSE 3504 or CHE 3144
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CHE 4544

BSE 4554 - Creating the Ecological City (3 credits)
Multidisciplinary, team oriented, problem-solving approaches to creating cities that foster healthy interconnections between human and ecological systems. Analysis of problems from practical and ethical perspectives in the context of the diverse knowledge bases and values of decision-makers. Formation and utilization of integrated design teams to solve complex urban design and planning problems at a variety of scales. Senior standing.
Prerequisite(s): HORT 2134 or FREC 2134
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 4554, HORT 4554, LAR 4554, SPIA 4554

BSE 4564 - Metabolic Engineering (3 credits)
Engineering concepts for analyzing, designing, and modifying metabolic pathways to convert raw materials to food, pharmaceuticals, fuels and chemicals. Cell metabolism, pathway design, bioenergetics, regulatory mechanisms, metabolic modeling, and genetic tools.
Prerequisite(s): BSE 3534 or BCHM 4115 or BIOL 3774
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 4604 - Food Process Engineering (3 credits)
Analysis and design of food processing operations including thermal pasteurization and sterilization, freezing, extrusion, texturization, and mechanical separation.
Prerequisite(s): BSE 3504 and BSE 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Biological Systems Engineering Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
BIOL 2604	General Microbiology	3
BSE 2004	Introduction to Biological Systems Engineering (C-)	3
BSE 3144	Engineering Analysis for Biological Systems using Numerical Methods (C-)	2
BSE 3154	Thermodynamics of Biological Systems (C-)	3
BSE 3504	Transport Processes in Biological Systems (C-)	3
BSE 4125	Comprehensive Design Project (C-)	2
ESM 2104	Statics	3
ESM 3024	Introduction to Fluid Mechanics	3
ISE 2014	Engineering Economy	2
Subtotal		24
Major Requirements		
BIOL 1105	Principles of Biology	3
BIOL 1106	Principles of Biology	3
BSE 4126	Comprehensive Design Project (C-)	3
CHEM 1036	General Chemistry	3

MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus	3
PHYS 2306	Foundations of Physics	4
STAT 3704	Statistics for Engineering Applications	2
Subtotal		24
Restricted Electives		
Select 2 BSE Fundamental Courses		6
Select 1 CHEM Elective		3
Select 3 BSE Electives where 1 course must have a lab component.		9
Select 3 Engineering Topics Electives		9
Select 2 Technical Electives		6
Subtotal		33
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
ISE 3034	Technical Communication for Engineers (1A)	3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six hours in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six hours in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
CHEM 1035 & CHEM 1045	General Chemistry and General Chemistry Laboratory	4
PHYS 2305	Foundations of Physics	4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F ; C-)	4
MATH 1226	Calculus of a Single Variable (5F ;)	4
MATH 2214	Introduction to Differential Equations (5A)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three Arts credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216	Foundations of Engineering and Foundations of Engineering (6D ;)	4
or ENGE 1414	Foundations of Engineering Practice	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathway 7 should be double-counted with either Pathways 2, 3, or 6a to avoid taking additional credit hours.		
Subtotal		47
Total Credits		**128**

BSE Fundamental Elective Sequence

There are 2 fundamental sequences to choose from (6-hours total):

For Watershed Science and Environmental Health: BSE 3324 Small Watershed Hydrology and BSE 3334 Nonpoint Source Pollution Assessment and Control.

For Biotechnology, Food Engineering, and Health Professions: BSE 3524 Unit Operations in Biological Systems Engineering & BSE 3534 Bioprocess Engineering.

Restricted Electives

Biological Systems Engineering (BSE) Electives

(9 credit hours required, where 1 course must have a lab component.)

Code	Title	Credits
BSE 2304	Landscape Measurements and Modeling	3
BSE 4224	Field Methods in Hydrology	3
BSE 4304	Introduction to Watershed Modeling	3
BSE 4324	Applied Fluvial Geomorphology	3
BSE 4344	Geographic Information Systems for Engineers	3
BSE 4524	Biological Process Plant Design	3
BSE 4534	Bioprocess Engineering Lab	1
BSE 4544	Protein Separation Engineering	3
BSE 4564	Metabolic Engineering	3
BSE 4604	Food Process Engineering	3

Chemistry (CHEM) Electives

(3 credit hours required)

Code	Title	Credits
BCHM 2024	Concepts of Biochemistry	3
CHEM 2114	Analytical Chemistry	3
CHEM 2124	Analytical Chemistry Laboratory Techniques and Practice	1
CHEM 2514	Survey of Organic Chemistry	3
CHEM 2535	Organic Chemistry	3
CHEM 2565	Principles of Organic Chemistry	3
CHEM 3615	Physical Chemistry	3
CHEM 4615	Physical Chemistry for the Life Sciences	3
ENSC 4314	Water Quality	3
ENSC 4734	Environmental Soil Chemistry	3
GEOS 4634	Environmental Geochemistry	3

Engineering Topics Electives

(9 credit hours required — students must request to be force-added to major-restricted courses)

Code	Title	Credits
BMES 2104	Introduction to Biomedical Engineering	3
BMES 3124	Introduction to Biomechanics	3
BMES 3134	Introduction to Biomedical Imaging	3
BMES 3144	Biomedical Devices	3
BMES 3154	Biosignal Processing and Classification	3
CEE 3104	Introduction to Environmental Engineering	3
CEE 4104	Water and Wastewater Treatment Design	3
CEE 4114	Fundamentals of Public Health Engineering	3
CEE 4134	Environmental Sustainability - A Systems Approach	3
CEE 4144	Air Resources Engineering	3
CEE 4174	Solid and Hazardous Waste Management	3
CEE 4314	Groundwater Resources	3
CEE 4324	Open Channel Flow	3
CEE 4334	Hydraulic Structures	3
CEE 4344	Water Resources Planning	3
ECE 3054	Electrical Theory	3

ECE 4194	Engineering Principles of Remote Sensing	3
ECE 4364	Alternate Energy for Climate Sustainability	3
ENGR 3124	Introduction to Green Engineering	3
ENGR 4134	Environmental Life Cycle Assessment	3
ESM 2204	Mechanics of Deformable Bodies	3
ESM 2304	Dynamics	3
ESM 3054	Mechanical Behavior of Materials	3
ESM 3064	Mechanical Behavior of Materials Laboratory	1
ESM 4044	Mechanics of Composite Materials	3
ESM 4105	Engineering Analysis of Physiologic Systems	3
ESM 4106	Engineering Analysis of Physiologic Systems	3
ESM 4114	Nonlinear Dynamics and Chaos	3
ESM 4194	Sustainable Energy Solutions for a Global Society	3
ESM 4204	Musculoskeletal Biomechanics	3
FST 4104	Applied Brewing Science and Engineering	3
ISE 2404	Deterministic Operations Research I	3
ISE 3204	Manufacturing Processes	3
ISE 4014	Introduction to Management Systems	3
ISE 4654	Principles of Industrial Hygiene	3
MSE 2034	Elements of Materials Engineering	3
MSE 2054	Fundamentals of Materials Science	3
MSE 3304	Physical Metallurgy	3
MSE 4584	Biomimetic Materials	3
MSE 4604	Composite Materials	3

Technical Electives

(6 credit hours required – students must request to be force-added to major-restricted courses):

- All BIOL 1XXX laboratories and all 2000, 3000, and 4000 level courses, except 3504.
- CHEM 1046 General Chemistry Laboratory and all CHEM 2000, 3000, and 4000 level courses except 4014.
- All MATH 3000 and 4000 level courses except 4044,4625,4626,4644,4664,4754,4964,4974, 4984,4994.
- All 3000, 4000, and 5000 level engineering courses, with no more than 3 credits of undergraduate research and no more than 3 credits of independent study. Technical elective courses cannot double-count for engineering topics elective credit and vice versa.

Code	Title	Credits
AAEC 3314	Environmental Law	3
ALS 3404	Ecological Agriculture: Theory and Practice	3
ALS 4614	Watershed Assessment, Management, and Policy	2
BCHM 3114	Biochemistry for Biotechnology and the Life Sciences	3
BCHM 4115	General Biochemistry	4
BCHM 4116	General Biochemistry	3
BIOL 4164	Environmental Microbiology	3
BMES 4064	Introduction to Medical Physiology	3
BSE 4394	Water Supply and Sanitation in Developing Countries	3
BSE 4554	Creating the Ecological City	3
CS 1044	Introduction to Programming in C	3
CS 1054	Introduction to Programming in Java	3
CS 1064	Introduction to Programming in Python	3
CS 1114	Introduction to Software Design	3
CS 2064	Intermediate Programming in Python	3
CSES 3114	Soils	3
CSES 3124	Soils Laboratory	1
CSES 3614	Soil Physical and Hydrological Properties	3
CSES 4854	Wetland Soils and Mitigation	3
ECE 2164	Exploration of the Space Environment	3
ENSC 3604	Fundamentals of Environmental Science	3
ENSC 3634	Physics of Pollution	3
ENSC 3644	Plant Materials for Environmental Restoration	3
ENSC 4414	Monitoring and Analysis of the Environment	2
ENSC 4764	Bioremediation	3
ENSC 4774	Reclamation of Drastically Disturbed Lands	3
FIW 4324	Genetics of Natural and Mangaged Populations	3
FIW 4614	Fish Ecology	3
FIW 4624	Marine Ecology	3
FREC 4374	Forested Wetlands	3
FREC 4464	Water Resources Policy and Economics	3
FREC 4784	Wetland Hydrology and Biogeochemistry	3
FST 2544	Functional Foods for Health	3
FST 3024	Principles of Sensory Evaluation	3
FST 3114	Wines and Vines	3
FST 3124	Brewing Science and Technology	3
FST 3514	Food Analysis	4
FST 3604	Food Microbiology	4
FST 4504	Food Chemistry	3
GEOG 1514	Introduction to Meteorology	3
GEOG 3104	Environmental Justice, Resources and Development	3
GEOG 3304	Geomorphology	3
GEOG 4354	Introduction to Remote Sensing	3
GEOS 2104	Elements of Geology	3
GEOS 3014	Environmental Geosciences	3
GEOS 3034	Oceanography	3
GEOS 4804	Groundwater Hydrology	3
ISE 4004	Theory of Organization	3
ISE 4304	Global Issues in Industrial Management	3
LAR 3044	Land Analysis and Site Planning	3
MINE 2504	Introduction to Mining Engineering	3
SBIO 2124	Structure and Properties of Sustainable Biomaterials	3
SBIO 2504	Circular Economy Analytics for Sustainable Systems	3
SBIO 3434	Chemistry and Conversion of Sustainable Biomaterials	3
SBIO 3444	Sustainable Biomaterials and Bioenergy	3
SPES 2244	World Crops: Food and Culture	3
SYSB 2024	Fundamentals of Systems Biology	3
SYSB 2034	Mathematical Methods in Systems Biology	3
SYSB 3115	Network Dynamics and Cell Physiology	4
SYSB 3116	Network Dynamics and Cell Physiology	4
UAP 3354	Introduction to Environmental Policy and Planning	3

UAP 4344	Law of Critical Environmental Areas	3
UAP 4374	Land Use and Environment: Planning and Policy	3

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The BSE Department fully supports this policy. Specific expectations for satisfactory progress for BSE majors are as follows:

- Maintain overall and in-major GPAs of at least 2.0 (in-major GPA based on all BSE-prefix courses taken); and,
- Be registered for at least one BSE-prefix course per year

Graduation Requirements

Graduation Requirements:

1. Students must pass all required courses, with a minimum of a C- in all BSE prefix courses.
2. Both the overall and in-major GPA must be at least a 2.0, where in-major GPA is based on all BSE-prefix courses taken.
3. Only free electives and courses only offered on a Pass/Fail basis may be taken as Pass/Fail.

Additional Notes:

1. Students are strongly encouraged to take CHEM 1036 General Chemistry first year Spring semester.
2. Students are encouraged to take BIOL 1105 Principles of Biology and BIOL 1106 Principles of Biology during the first year if their schedule permits.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
2. MATH 2405H Mathematics in a Computational Context and MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra and MATH 2204 Introduction to Multivariable Calculus and MATH 2214 Introduction to Differential Equations

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable (C-)	4
ENGE 1215	Foundations of Engineering (C-)	2
Pathways 2 or 3 or 6A or 7		3
	Credits	**16**
Spring Semester		
CHEM 1036	General Chemistry	3
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable	4
PHYS 2305	Foundations of Physics	4
ENGE 1216	Foundations of Engineering	2
	Credits	**16**
Second Year		
Fall Semester		
BSE 2004	Introduction to Biological Systems Engineering	3
BIOL 1105	Principles of Biology	3
MATH 2204	Introduction to Multivariable Calculus	3
MATH 2114	Introduction to Linear Algebra	3
ESM 2104	Statics	3
ISE 2014	Engineering Economy	2
	Credits	**17**
Spring Semester		
BSE 3144	Engineering Analysis for Biological Systems using Numerical Methods	2
BIOL 1106	Principles of Biology	3
Pathways Core Concept 2, 3, 6a, or 7		3
MATH 2214	Introduction to Differential Equations	3
PHYS 2306	Foundations of Physics	4
	Credits	**15**
Third Year		
Fall Semester		
BSE Fundamental Course or Technical Elective		3
BSE 3154	Thermodynamics of Biological Systems	3
STAT 3704	Statistics for Engineering Applications	2
ESM 3024	Introduction to Fluid Mechanics	3
CHEM Elective		3
Pathways Core Concept 2, 3, 6a, or 7		3
	Credits	**17**
Spring Semester		
BSE Fundamental Course or Technical Elective		3
BSE Fundamental Course		3
BSE 3504	Transport Processes in Biological Systems	3
BIOL 2604	General Microbiology	3
ISE 3034	Technical Communication for Engineers	3
	Credits	**15**
Fourth Year		
Fall Semester		
BSE 4125	Comprehensive Design Project	2
BSE Elective		3
BSE Elective		3
Engineering Topics Elective		3
Engineering Topics Elective		3
Pathways Core Concept 2, 3, 6a, or 7		3
	Credits	**17**
Spring Semester		
BSE 4126	Comprehensive Design Project	3
BSE Elective		3
Engineering Topics Elective		3
Technical Elective		3
Pathways Core Concept 2, 3, 6a, or 7		3
	Credits	**15**
	Total Credits	**128**

Biomedical Engineering & Mechanics

Our Website (http://www.beam.vt.edu)

Overview

In September 2018, the State Council of Higher Education for Virginia approved a new undergraduate degree program in Biomedical Engineering (BME) at Virginia Tech, housed within the Department of Biomedical Engineering and Mechanics (BEAM). Unlike other BME programs, Virginia Tech's program has an extensive foundation in fundamental engineering principles. This approach means students will gain a more comprehensive understanding of broader engineering practice and cross-disciplinary teambuilding. The goal is that graduating engineers can be fully integrated into diverse health care teams in order to better respond to industry needs. Graduates will be primed for placement in such fields as telemedicine, health care, data analytics, personalized medicine, medical robotics, and biomedical device design and regulatory practices, among others.

The foundation in mechanics combined with a total of 21 technical elective credits give students the flexibility to tailor their undergraduate degree within subdisciplines of the vast field of biomedical engineering. Our faculty expertise ranges from biomechanics, biomaterials, biomedical imaging, cardiovascular engineering, neuroengineering, tissue engineering, translational cancer research, and more. Additionally, our curriculum emphasizes active learning strategies and "hands-on" learning experiences to promote engaged learning and development of communication, teamwork, critical thinking, and problem-solving skills. There are also numerous opportunities to participate in design experiences throughout the curriculum, culminating in the senior capstone sequence that includes consideration of design controls and regulatory processes. The BEAM department also offers a Minor in Biomedical Engineering for undergraduate students.

The BEAM department also participates in the Accelerated Undergraduate / Graduate Degree Program, in which students meeting the requirements for the program apply for admission to the Graduate School during their junior year. This program allows students to enroll and "double-count" 12 credit hours of graduate coursework taken during their senior year of their undergraduate program at VT. The graduate program in BME is a joint program between the Virginia Tech College of Engineering and the Wake Forest School of Medicine to form the Virginia Tech-Wake Forest University School of Biomedical Engineering and Sciences (SBES) program. The SBES program is a unique multidisciplinary joint program that bridges the biomedical sciences and BME towards translational, real-world applications, offering MS, PhD and DVM/PhD at the VT campus.

Accreditation, Program Educational Objectives, and Student Learning Outcomes

The Biomedical Engineering program is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Bioengineering and Biomedical and Similarly Named Engineering Programs.

Biomedical Engineering is a multidisciplinary field, using engineering principles and design concepts to advance healthcare treatment and find innovative solutions. We strive to prepare our graduates to succeed in advanced graduate or professional study, industry, and government. Within a few years after graduation, we expect our graduates to productively contribute to improving the human condition. In these activities, our alumni will attain the following **program educational objectives** within a few years following graduation:

- Develop and advance in their professional careers within industry, academia, and/or healthcare.
- Communicate and collaborate effectively across professional and disciplinary boundaries while exhibiting self-awareness of their role within the profession.
- Continually build knowledge and skills to successfully navigate the changing technology and healthcare challenges.
- Embody Ut Prosim through application of their engineering knowledge and experience in ethical service to local, national, and global communities

These program educational objectives are supported by a curriculum that seeks to have its graduates achieve the following **student learning outcomes** by the time they graduate:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

- Biomedical Engineering Major (p. 798)

Department Head: Stefan Duma
Undergraduate BME Program Chair: Sara Arena
N. Waldo Harrison Professor: P. VandeVord
Newport News-Tenneco Professor: T. Dingus
L. Preston Wade Professor: R.M. Queen
Harry C. Wyatt Professor: S.M. Duma
Professors: T. Dingus, S.M. Duma, R. Gourdie, S. LaConte, S.H. McKnight, J. Munson, S. Poelzing, R.M. Queen, and P. VandeVord
Associate Professors: J. Chappell, Z. Doerzaph, Y.W. Lee, M. Perez, S. Rowson, C.D. Untaroiu, E. Vlaisavljevich, and V.M. Wang
Assistant Professors: C. Collins, N. Gurari, A. Han, O. Kim, A Korneva, and M. Roberts
Collegiate Associate Professors: C. Arena and S. Arena
Collegiate Assistant Professors: A. Taylor
Instructors: K. Tate and J. Newton
Professor of Practice: A. Muelenaer and R. Stone
Affiliate Faculty: Over 150 affiliate faculty (https://beam.vt.edu/people/faculty.html)
Academic and Career Advisor: A. Sandridge

Undergraduate Course Descriptions (BMES)

BMES 2004 - Concussion Perspectives: Medical, Scientific and Societal Perspectives (3 credits)
Broad, multidisciplinary description of concussion as it relates to variety of fields including: medicine, psychology, injury biomechanics, technology, equipment design, ethics, and law. Concussion modeling, animal models, diagnosis, neurocognitive testing, and treatment. Testing and instrumentation. Research efforts, credibility and conflicts of interest. Ethical considerations in sports, medicine, and science. Legal implications.
Pathway Concept Area(s): 1A Discourse Advanced, 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 2014 - Biomedical Engineering Professional Practice (1 credit)
Topics selected to foster professional development of the Biomedical Engineering (BME) student, including training for experiential learning opportunities, such as research, internships, co-ops, and design. Overview of BME specialization and research areas, career pathways, and preparation for interactions with industry, including the regulatory approval process associated with medical device development. Emphasis on teamwork, communication, employment opportunities, the development of a professional portfolio, ethical considerations, additive manufacturing, and engineering documentation using real-world examples and a design sprint/challenges.
Instructional Contact Hours: (1 Lec, 1 Crd)

BMES 2024 - ESTEEMED Program Seminar (1 credit)
Professional development seminar series for National Institutes of Health (NIH) Enhancing Science, Technology, EnginEering, and Math Educational Diversity (ESTEEMED) program scholars. Professional development and construction of professional portfolio. Overview of safety and ethical considerations within biomedical engineering research. Development of scientific literature searching and summarizing skills. Communication skill development of written and oral content. Strategies for mentoring relationships. May be repeated 3 times with different content for a maximum of 4 credit hours. Pre: Only available to students in the ESTEEMED program.
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 4 credit hours

BMES 2074 - Computational Methods in Biomedical Engineering (2 credits)
Numerical methods and software applied to biomedical engineering applications. Structured programming and problem solving within programming environment such as MATLAB. Error estimation, root finding, curve fitting, interpolation, solving linear simultaneous equations, numerical differentiation, numerical integration, and numerical solutions to ordinary differential equations.
Prerequisite(s): MATH 1226 and (ENGE 1215 or ENGE 1414)
Corequisite(s): MATH 2114 or MATH 2114H or MATH 2405H
Instructional Contact Hours: (2 Lec, 2 Crd)

BMES 2104 - Introduction to Biomedical Engineering (3 credits)
Identification, exploration, and evaluation of real-world, complex biomedical engineering problems including safety and ethical considerations. Emphasis on critical thinking, problem solving, group skills, and communication related to the field of biomedical engineering. Literature review and experimental design in biomedical engineering research.
Prerequisite(s): (ENGE 1216 or ENGE 1414) and MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 3004 - Helmet Design: Biomechanics to Health & Social Disparities in Sports (3 credits)
Provides a multidisciplinary description of helmet design with applications to all sports. The biomechanical design parameters for helmets are presented in the broader context of health and social disparities. Through reasoning in the social sciences the class investigates how sex and gender roles have shaped sports and their individual helmet design disparities. A critical analysis of equity relative to race and healthcare is analyzed as it pertains to helmets and concussion treatments and outcomes. Demonstrate the interdisciplinary nature of helmet design and how ethical reasoning and social constructs have shaped the industry.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3024 - BME Cell Engineering Laboratory and Design (2 credits)
Principles of cell engineering, experiment design, quantitative alyses. Laboratory notebook keeping, report writing and oral presentation in a team setting. Measurement of biological molecules such as DNA, RNA, and proteins. Assessment of animal cell viability, migration, mechanics and interactions with biomaterials. Identification of cell phenotypes.
Corequisite(s): BIOL 1105, BMES 2104
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

BMES 3034 - Bioinstrumentation Laboratory and Design for Living Systems (2 credits)
Principles of biomedical sensors and their usage for experimental design. Collection of biological signals using analog signal amplifiication and filters, biopotentials, digital acquisition, digital filtering and processing. Analysis of physiological signals on living systems with focus on neural, cadiovascular, respiratory, and muscular systems using a group problem solving approach. Instrumental regulation and safety considerations.
Prerequisite(s): BMES 2104 and ECE 3054
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

BMES 3114 - Needs Identification in Healthcare (3 credits)
Define open-ended problem statements related to healthcare. Immersive clinical observation and transdisciplinary medical technology innovation. Needs exploration and screening, disease state fundamentals, and evaluation of existing solutions. User-centered research planning, contextual inquiry, data documentation, stakeholder and market analysis, and regulatory and reimbursement basics.
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3124 - Introduction to Biomechanics (3 credits)
Basic principles of biomechanics. Basic musculoskeletal anatomy. Application of classical mechanics to biological systems. Emphasis placed on mechanical behavior (stress and strain), structural behavior, motion, and injury tolerance of the human body. Biomechanics of medical devices and implants. Advances in safety equipment used in automotive, military, and sports applications.
Prerequisite(s): BMES 2104 and ESM 2204 and ESM 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3134 - Introduction to Biomedical Imaging (3 credits)
Introduction to major biomedical imaging modalities. Emphasis on X-rays, computerized tomography (CT), magnetic resonance imaging (MRI), positron emission tomography (PET), ultrasound, and optical imaging. Essential physics and imaging equations of the imaging system. Sources of noise and primary artifacts. Patient safety and clinical application.
Prerequisite(s): BMES 2104 and (MATH 2204 or MATH 2204H) and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3144 - Biomedical Devices (3 credits)
Design and uses of biomedical devices for diagnosis and therapy of human and animal diseases. Disease eiologies, progression, risk factors, and epidemiology. Tissue, organ, and systems dysfunction and failure and relevance to life stages (pediatric, adolescent, adult, aged). Useful characteristics of engineered materials for device fabrication, including biocompatibility. Gaps between medical needs and current medical devices.
Prerequisite(s): BMES 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3154 - Biosignal Processing and Classification (3 credits)
Introduction to the concepts and applications of digital signal processing and machine learning on bioinstrumentation signals from physiologic systems. Emphasis on processing techniques for electrocardiogram (ECG), electromyography (EMG), and speech signals. Apply basic machine learning algorithms for diagnostic classification of biosignals.
Prerequisite(s): BMES 2104 and (CS 1044 or CS 1054 or CS 1064 or CS 1114 or ME 2004 or AOE 2074 or ESM 2074 or BSE 3144 or BMES 2074)
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3164 - Fundamentals of Regenerative Medicine and Tissue Engineering (3 credits)
Fundamentals of cell biology, physiology, and engineering of regenerative medicine. Techniques and technologies of regenerative medicine and tissue engineering. Biomaterial selection and manufacturing techniques for regenerative medicine and tissue engineering applications. Overview of genetic and immuno- therapies. Design criteria and process from bench to clinical implementation of tissue engineering solutions. Ethical implications in regenerative medicine.
Prerequisite(s): BMES 4064
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3184 - Problem Solving in BME (3 credits)
Computational and analytical approaches to analyzing biological systems and solving biomedical engineering problems. Problem formulation and exploration of problem-solving techniques to validate computational solutions. Self-directed inquiry and team-based approaches that use reverse engineering, user-in-mind design, and engineering software tools.
Prerequisite(s): BMES 2104 and (ESM 2074 or BMES 2074) and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3224 - Automobile Safety (3 credits)
Provides multidisciplinary analysis of automobile safety around the world. Illustration of the details about the invention of the wheel and how various cultures advanced the wheel into carts for transportation. Design process of seatbelt systems, frontal airbag and side airbag systems. Analysis of vehicle design parameters to optimize restraint systems. Analysis of the design challenges of protecting all occupants including men, women, children, elderly and pregnant occupants. Ethical analysis of the history of laws, media, and societal norms around seatbelt use and current distracted drivers using cell phones.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3844 - Computational Neuroscience and Neural Engineering (3 credits)
Introduction to computational and systems neuroscience. Data analysis and signal processing techniques for neural data. Neural modeling to include mean field models, Hodgkin-Huxley models, integrate and fire models. Neural engineering and brain machine interface (BMI) applications.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NEUR 3844

BMES 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

BMES 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 4015 - BME Senior Design and Project (3 credits)
4015: Apply biomedical engineering principles to the design of an approved project using the team approach. Develop design and communication skills. Integrate ethical, global and social issues in engineering. 4016: Apply biomedical engineering principles to develop solutions for an approved design project using a team approach. Complete a project resulting in prototype medical device, circuit, or system. Refine design and communication. Integrate ethical, global, environmental and social issues in engineering. Pre: Senior standing for 4015.
Prerequisite(s): BMES 3034 and BMES 3184
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BMES 4016 - BME Senior Design and Project (3 credits)
4015: Apply biomedical engineering principles to the design of an approved project using the team approach. Develop design and communication skills. Integrate ethical, global and social issues in engineering. 4016: Apply biomedical engineering principles to develop solutions for an approved design project using a team approach. Complete a project resulting in prototype medical device, circuit, or system. Refine design and communication. Integrate ethical, global, environmental and social issues in engineering. Pre: Senior standing for 4015.
Prerequisite(s): BMES 4015
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BMES 4034 - Wearable Bioinstrumentation (3 credits)
Exploration of science, engineering, and data analytics principles behind wearable technology. Non-invasive measurement and assessment of human physiology and behavior. Data processing and analysis of non-invasive biosignals. Data privacy, protection, and ethical considerations of wearable devices.
Prerequisite(s): (CS 1044 or CS 1054 or CS 1064 or CS 1114 or ME 2004 or AOE 2074 or ESM 2074 or BSE 3144 or BMES 2074) and (STAT 3615 or STAT 3704 or STAT 4604) and (ECE 2054 or ECE 3054)
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 4064 - Introduction to Medical Physiology (3 credits)
An introductory to the principles of medical physiology. Designed primarily for (but not limited to), undergraduate students minoring in biomedical engineering, and other related engineering and physical sciences majors with little or no formal background in biological sciences. Basic principles and concepts of human physiology. Special emphasis on the interactions of human systems biology in their entirety rather than individual genes and pathways. Pre: Junior standing or permission of instructor.
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 4134 - Global, Societal, and Ethical Considerations in Biomedical Engineering (3 credits)
Overview of contemporary technological advances to improving human health. Comparison of healthcare systems, problems, and existing solutions throughout the developed and developing world. Consideration of legal and ethical issues associated with developing and implementing new medical technologies. Recognition and definition of gaps between medical needs and current methods and therapies between developed and developing countries. Conceptually design a novel technology.
Prerequisite(s): BMES 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 4154 - Commercialization of BME Res (3 credits)
Commercialization process applied to translational research. Regulatory aspects of biomedical engineering products and technologies (e.g. devices, diagnostics, drugs, biologics). Intellectual property, technology transfer processes, clinical trial design, commercialization of university research, modeling of development costs (e.g. cash flow and revenue projections). Small business startup approaches.
Prerequisite(s): BMES 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 4234 - Mechanics of Biological Systems (3 credits)
Anatomy and physiology of biological systems such as cells, tissues, and organs. Experimental techniques for determining the mechanical behavior of biological systems. Simplified mechanics-based mathematical models of biological systems. Specific biological systems include cells, tissues, and organs of the musculoskeletal, cardiovascular, integumentary system, and reproductive systems.
Prerequisite(s): ESM 2204 and MATH 2214 and MATH 2114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4234

BMES 4574 - Biomaterials (3 credits)
Materials for biomedical applications. Basic material types and properties, functional uses of materials in medical applications, and tissue response mechanisms. Integrated design issues of multicomponent material design in prosthetic devices for hard and soft tissues, orthopedics , cardiovascular, and drug delivery applications.
Prerequisite(s): MSE 2034 or MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MSE 4574

BMES 4614 - Probability-Based Modeling, Analysis, and Assessment (3 credits)
Uncertainty analysis of engineering data, parameters estimation, probability concepts, random variables, functions of random variables, probability-based performance functions and failure modes, risk and reliability functions, probability of failure and safety index, random sequences and stochastic processes, correlation functions and spectral densities, return period and extreme values, failure rates, performance monitoring and service life prediction.
Prerequisite(s): ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4614

BMES 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 4984A - Special Study (1-19 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: Variable credit course

BMES 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 29844 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Biomedical Engineering Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
BMES 2014	Biomedical Engineering Professional Practice	1
BMES 2074	Computational Methods in Biomedical Engineering	2
BMES 2104	Introduction to Biomedical Engineering	3
BMES 3024	BME Cell Engineering Laboratory and Design	2
BMES 3034	Bioinstrumentation Laboratory and Design for Living Systems	2
BMES 3184	Problem Solving in BME	3
BMES 4015	BME Senior Design and Project	3
BMES 4064	Introduction to Medical Physiology	3
BMES 4134	Global, Societal, and Ethical Considerations in Biomedical Engineering	3
BIOL 1105	Principles of Biology	3
ECE 3054	Electrical Theory	3
ESM 2104	Statics	3
ESM 2204	Mechanics of Deformable Bodies	3
ESM 2304	Dynamics	3
ESM 3234	Fluid Mechanics I-Control Volume Analysis	3
MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus	3
MSE 2034	Elements of Materials Engineering	3
STAT 3615	Biological Statistics	3
or STAT 4604	Statistical Methods for Engineers	
Subtotal		52

Additional Course Requirements		
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
ENGE 3900 Bridge Experience [1]		0
Subtotal		4
Technical Electives		
Select seven Technical Electives		21
Subtotal		21
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
BMES 4016	BME Senior Design and Project (1A)	3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six hours in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six hours in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		3
Pathways Concept 4 - Reasoning in the Natural Sciences		
PHYS 2305	Foundations of Physics	4
PHYS 2306	Foundations of Physics	4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F ; C-)	4
MATH 1226	Calculus of a Single Variable (5F)	4
MATH 2214	Introduction to Differential Equations (5A)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select one Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216	Foundations of Engineering and Foundations of Engineering (6D)	4
or ENGE 1414	Foundations of Engineering Practice	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathways 7 should be double counted with either Pathways 2, 3, or 6a to avoid taking any additional credit hours. [2]		3
Subtotal		47
Total Credits		**124**

[1] Career Bridge Experiences help prepare students for post-graduation life and develop a professional identity. Internships, Co-ops, and Undergraduate Research are examples of possible Career Bridge Experiences. Students must participate in a Career Bridge Experience to complete the BSBME degree. Because some of these experiences are not credit bearing, the ENGE 3900 course is used to track and assess student participation in Career Bridge and to record fulfillment of this degree requirement on the transcript. Students should enroll in ENGE 3900 during the semester (or one of the semesters) that they undertake the Career Bridge Experience. Enrollment in ENGE 3900 requires approval of a Career Bridge Plan. Further information about acceptable Career Bridge Experiences and the process for submitting a Career Bridge Plan are explained in BMES 2014.

[2] A total of 6 hours of Pathways 2 and 6 hours of Pathways 3 courses must be completed. Only selected courses can simultaneously satisfy both Pathways 2/3 & 7 requirements. Use extra care when selecting this course.

Technical Electives

The BME degree requires 21 credits of approved technical electives, of which a minimum of 12 credits must be taken from List A. Please see the below lists for technical elective choices. A 3/4000-level course in another discipline that has significant technical content relevant to the science or application of biomedical engineering can be used as a technical elective only with prior approval.

Approved Technical Elective Lists for BME Undergraduate Students

Note: Below listed technical elective courses have pre- and/or co-requisites, be sure to consult the University Catalog or check with your advisor.

List A of Technical Electives

(minimum of 12 credits from this list)

Code	Title	Credits
BMES 3004	Helmet Design: Biomechanics to Health & Social Disparities in Sports	3
BMES 3114	Needs Identification in Healthcare	3
BMES 3124	Introduction to Biomechanics	3
BMES 3134	Introduction to Biomedical Imaging	3
BMES 3144	Biomedical Devices	3
BMES 3154	Biosignal Processing and Classification	3
BMES 3164	Fundamentals of Regenerative Medicine and Tissue Engineering	3
BMES 3224	Automobile Safety	3
BMES 3844	Computational Neuroscience and Neural Engineering	3
BMES 4034	Wearable Bioinstrumentation	3
BMES 4234	Mechanics of Biological Systems	3
BMES/MSE 4574	Biomaterials	3
BMES 4614	Probability-Based Modeling, Analysis, and Assessment	3
BMES 5024	Biomedical Engineering and Human Disease [3]	3
BMES 5044	Engineering Mathematics [3]	3
BMES 5054	Quantitative Cell Physiology [3]	3
BMES 5064	Quantitative Organ Systems Physiology [3]	3
BMES 5074	Biomedical Research Design [3]	3
BMES 5124	Advanced Musculoskeletal Biomechanics [3]	3
BMES 5164	Advanced Impact Biomechanics [3]	3
BMES 5174	Biomechanics of Crash Injury Prevention [3]	3
BMES 5184	Injury Physiology [3]	3
BMES 5204	Laboratory Techniques in Injury Prevention [3]	4
BMES 5214	Human Physical Capabilities [3]	3
BMES 5234	Advanced Vehicle Safety Systems [3]	3
BMES 5304G	Advanced Biological Transport Phenomena [3]	3
BMES 5304	Biological Transport Phenomena [3]	3
BMES 5305	Biomechanics of the Cardiovascular System [3]	3
BMES 5306	[3]	3

BMES 5314	Introduction to Regenerative Medicine [3]	3
BMES 5434	Polymeric Biomaterials [3]	3
BMES 5514	Digital Signal Processing for Mechanical Measurements [3]	3
BMES 5525	Stochastic Signals and Systems [3]	3
BMES 5534	Advanced Computational Methods and Modeling for Biomedical Applications [3]	3
BMES 5554	Imaging and Computing in Medicine [3]	3
BMES 5574	Advanced Biomaterials [3]	3
BMES 5604	Cancer Detection and Therapeutics [3]	3
BMES 5614	Multiscale Cancer Engineering [3]	3
BMES 5714	Biomedical Microdevices [3]	3
BMES 5724	Biomedical Nanoengineering [3]	3
BMES 5764	Modeling MEMS and NEMS [3]	3
ESM 4105	Engineering Analysis of Physiologic Systems	3
ESM 4106	Engineering Analysis of Physiologic Systems	3
ESM 4204	Musculoskeletal Biomechanics	3
ESM 4224	Biodynamics and Control	3
ESM 4234	Mechanics of Biological Systems	3
ESM 4245	Mechanics of Animal Locomotion	3
ESM 4246	Mechanics of Animal Locomotion	3
ESM 4304	Hemodynamics	3
ESM 5224	Advanced Musculoskeletal Biomechanics [3]	3
ESM 5245G	Mechanics Animal Locomotion [3]	3
ESM 5246G	Mechanics Animal Locomotion [3]	3
ESM 5305	Biomechanics of the Cardiovascular System [3]	3

[3] 5000-level courses are typically restricted based on amount of total credit hours completed, GPA, and available seats after graduate student registration. Please contact the BME academic advisor regarding registering for 5000-level courses.

List B of Technical Electives

Code	Title	Credits
BCHM 3114	Biochemistry for Biotechnology and the Life Sciences	3
BMES 4154	Commercialization of BME Res	3
BMES 5154G	Advanced Commercialization of Biomedical Engineering Research [3]	3
BMVS 4054	Laboratory Animal Management	3
BMVS 4074	Pharmacology	3
CHEM 4554	Drug Chemistry	3
ESM 3054	Mechanical Behavior of Materials	3
ESM 3334	Fluid Mechanics II-Differential Analysis	3
ESM 4024	Advanced Mechanical Behavior of Materials	3
ESM 4044	Mechanics of Composite Materials	3
HNFE 3634	Epidemiologic Concepts of Health and Disease	3
HNFE 3824	Kinesiology	3
MATH 3214	Calculus of Several Variables	3
MATH 4234	Elementary Complex Analysis	3
MATH 4445	Introduction to Numerical Analysis	3
MATH 4446	Introduction to Numerical Analysis	3
MSE 4164	Principles of Materials Corrosion	3
MSE 4304	Metals and Alloys	3
MSE 4584	Biomimetic Materials	3
MSE 4614	Nanomaterials	3
NEUR 3044	Cellular and Molecular Neuroscience	3
PHYS 3324	Modern Physics	4
PHYS 3405	Intermediate Electricity and Magnetism	3
PHYS 3406	Intermediate Electricity and Magnetism	3
PHYS 4455	Introduction to Quantum Mechanics	3
PHYS 4456	Introduction to Quantum Mechanics	3
PHYS 4504	Introduction to Nuclear and Particle Physics	3
PHYS 4574	Nanotechnology	3
PHYS 4614	Optics	3
PHYS 4714	Introduction to Biophysics	3

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The BEAM Department fully supports this policy. Specific expectations for satisfactory progress for Biomedical Engineering majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)
- After having completed 72 credit hours (including transfer, advanced placement, advanced standing, and credit by examination) must have:
  - Maintain an in-major GPA (in-major GPA is calculated using all courses taught under the BMES designator) of 2.0 or better
- Complete a minimum of 12 credits that apply toward the BME degree per academic year (including summer and winter sessions).

Graduation Requirements

Each student must complete at least 124 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. All BMES prefix courses count towards the in-major GPA.

Acceptable Substitutions

1. (MATH 2405H Mathematics in a Computational Context + MATH 2406H Mathematics in a Computational Context) may be substituted for (MATH 2114 Introduction to Linear Algebra+MATH 2204 Introduction to Multivariable Calculus+MATH 2214 Introduction to Differential Equations)
2. BMES 3900 Bridge Experience may be substituted for ENGE 3900 Bridge Experience

Foreign Language Requirements

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable (C-)	4
ENGE 1215	Foundations of Engineering	2
Pathways 2 or 3		3
	Credits	**16**
Spring Semester		
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable	4
MATH 2114	Introduction to Linear Algebra	3
PHYS 2305	Foundations of Physics	4
ENGE 1216	Foundations of Engineering	2
	Credits	**16**
Second Year		
Fall Semester		
BIOL 1105	Principles of Biology	3
BMES 2014	Biomedical Engineering Professional Practice	1
ESM 2104	Statics	3
MATH 2204	Introduction to Multivariable Calculus	3
MATH 2214	Introduction to Differential Equations	3
PHYS 2306	Foundations of Physics	4
	Credits	**17**
Spring Semester		
BMES 2104	Introduction to Biomedical Engineering	3
ECE 3054	Electrical Theory	3
ESM 2304	Dynamics	3
BMES 2074	Computational Methods in Biomedical Engineering	2
MSE 2034	Elements of Materials Engineering	3
	Credits	**14**
Third Year		
Fall Semester		
BMES 3024	BME Cell Engineering Laboratory and Design	2
ESM 3234	Fluid Mechanics I-Control Volume Analysis	3
ESM 2204	Mechanics of Deformable Bodies	3
STAT 3615 or STAT 4604	Biological Statistics or Statistical Methods for Engineers	3
BMES 4064	Introduction to Medical Physiology	3
ENGE 3900 Bridge Experience [1]		0
	Credits	**14**
Spring Semester		
BMES 3034	Bioinstrumentation Laboratory and Design for Living Systems	2
BMES 3184	Problem Solving in BME	3
Technical Elective		3
Technical Elective		3
Pathways 2 or 3		3
	Credits	**14**
Fourth Year		
Fall Semester		
BMES 4015	BME Senior Design and Project	3
BMES 4134	Global, Societal, and Ethical Considerations in Biomedical Engineering	3
Technical Elective		3
Technical Elective		3
Pathways 2 or 3		3
Pathways 6a		3
	Credits	**18**
Spring Semester		
BMES 4016	BME Senior Design and Project	3
Technical Elective		3
Technical Elective		3
Technical Elective		3
Pathways 2/7 or 3/7		3
	Credits	**15**
	Total Credits	**124**

[1] Career Bridge Experiences help prepare students for post-graduation life and develop a professional identity. Internships, Co-ops, and Undergraduate Research are examples of possible Career Bridge Experiences. Students must participate in a Career Bridge Experience to complete the BSBME degree. Because some of these experiences are not credit bearing, the ENGE 3900 course is used to track and assess student participation in Career Bridge and to record fulfillment of this degree requirement on the transcript. Students should enroll in ENGE 3900 during the semester (or one of the semesters) that they undertake the Career Bridge Experience. Enrollment in ENGE 3900 requires approval of a Career Bridge Plan. Further information about acceptable Career Bridge Experiences and the process for submitting a Career Bridge Plan are explained in BMES 2014.

Building Construction

Our Website (http://www.bc.vt.edu)

Overview

The Myers-Lawson School of Construction offers students in the College of Engineering a Bachelor of Science in Building Construction (BC). The curriculum focuses on the business and process of making, managing, assembling, and the performance of buildings, including their operations, finance, energy use, and sustainability. The BC degree options are designed to better equip construction industry professionals with the necessary tools for excellence in all phases of the built environment. The degree incorporates business, management, science, and efficiency at all levels; from planning, finance, design, estimating, procurement, scheduling, construction, and maintaining buildings necessary to the way our world will be built and lived in during the future.

Throughout their studies, students will explore all phases of a building construction project, from initial planning to final execution. Core courses cover construction means and methods, materials, cost estimating and scheduling, new technologies, project delivery, and cost and risk management. They will learn how to manage construction projects, including organization, scheduling, budgeting, and implementation. Integrative elements of leadership, professional and presentation skills, entrepreneurship, and best practice management principles are included to prepare graduates to work effectively as part of a construction team. A capstone course is a requirement for all students, providing a culminating experience to apply the concepts learned.

The BC program is accredited by the American Council for Construction Education (ACCE). Upon completion of the four-year, 122-credit-hour curriculum, students receive a Bachelor of Science in Building Construction.

- Building Construction Major (p. 805)

Head: G. Reichard
Assistant Head: R. Ryan

Graduate Program Director: T. Bulbul

Preston and Catharine White Director: B Kleiner[1]
Beliveau Professor: A.P. McCoy
William E. Jamerson Professor: W.Y. Thabet
Professor: G. Reichard
Associate Professors: A. Akanmu, T. Bulbul, A.R. Pearce[2], Roofigari-Esfahan, X. and L. Zhang
Assistant Professors: P. Agee, N. Gao, A. Shojaei, and R. Zhang
Collegiate Associate Professors: J. Iorio
Assistant Professor of Practice: J. Bluey, L. Lally, M. Oliver, and X. Lv
Adjunct Faculty: C. Bell, R. Clark, W. Thumm
Professors Emeritus: Y. Beliveau
Academic Advisors: G. Kinder, S. Norwood[3]

[2]Alumni Award for Outreach Excellence

[3]Provost's Award for Excellence in Advising

Undergraduate Course Descriptions (BC)

BC 1014 - Building A Strong Foundation for Success (2 credits)
Exploration of career options within the built environment and construction industry. Professional development, digital literacy, which will include creation of media and "personal brand" identity. Exploration of ideas from multiple viewpoints and perspectives. Oral, written, and visual presentation of ideas such as resume development. Introduction to ethical considerations. Reflection on "Self-as-Learner." Critical-Thinking skills as they apply to construction projects. Development of group roles as they apply to construction projects. Identification of universities resources, policies, procedures, academic and social engagement opportunities.
Instructional Contact Hours: (2 Lec, 2 Crd)

BC 1114 - Introduction to Building Construction (3 credits)
Introduction to construction with understanding of different market sectors, specializations, career path opportunities, industry stakeholders, and processes. Comprehension of quality assurance, control, project delivery systems, basic estimating, and scheduling. Application of communication skills to professional settings and use of basic calculations to solve construction math problems.
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 1124 - Construction Documents and Safety (2 credits)
Role of construction drawings and specifications. Interpretation of construction documents and creation of basic project documentation. Health, safety, and environmental hazards encountered in the construction industry. Design Lab Studio (1H, 2L, 2C)
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

BC 1214 - Introduction to Building Construction I (3 credits)
Introduction to construction with an overview of construction drawings and specifications, construction terminology, building codes and building systems, cost estimating and bidding, construction management processes, construction documents, load paths and foundations, construction health and safety, and hands-on experiential learning through lab exercises. Strategic career success factors and introduction to ethical decisions in construction management.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 1224 - Introduction to Building Construction II (3 credits)
Overview of the important areas of contracting and the workings of the construction industry. Application of construction management theory, processes, and terminology including, definable building systems, building code interpretations, the reading and preparing of basic construction drawings and integrating construction details and project specifications to derive safe construction means and methods, equipment section, cost estimates and time schedules.
Prerequisite(s): BC 1214 or BC 1114
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 2004 - Construction Surveying (1 credit)
Surveying in context of the construction process, basic surveying methods, equipment, emerging technologies, topographic surveying, and application to construction layout.
Prerequisite(s): BC 1124
Instructional Contact Hours: (1 Lec, 1 Crd)

BC 2014 - Construction Principles I (3 credits)
Fundamentals of the construction technology and process emphasizing project management/operations, materials and methods. Utilization of industry-specific technology/software applications, techniques and sequences/project loading for the construction of buildings in compliance with Construction Specifications Institute (CSI) Divisions 00-05, 31, 32, 33. Planning, scheduling, materials cost analysis, job-appropriate equipment and labor requirements, masonry applications, concrete and formwork. Site preparation and utilization, use of construction industry-specific software, interpretation of project drawing documents. Integration of project safety and health issues. Quantity surveying for the management of construction resources, according to current principles and industry standards.
Prerequisite(s): BC 1224 or BC 1124
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 2024 - Construction Principles II (3 credits)
Continuation of the fundamentals of construction technology and process emphasizing materials, methods, techniques and sequences for the construction of buildings using Construction Specifications Institute (CSI) Divisions 01, 06-14, 21. Interpretation of construction details relevant to a construction project. Cost impact of building codes and inspections. Development of presentation skills using project-based learning. Planning, scheduling, labor needs, and quantity surveying for the management of construction resources. Development of safety and quality assurance plans, including building systems for fire suppression.
Prerequisite(s): BC 2014
Corequisite(s): BC 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2044 - Construction Materials (3 credits)
Introduction to the life cycle, properties, behaviors, and sustainability impacts of common construction materials including wood, insulation, asphalt, ferrous and nonferrous metals, aggregate, concrete, masonry, glass, and plastics. Theory of materials including material properties; behavior under physical, thermal, and environmental loads; and interfaces between dissimilar materials. Methods and criteria for material comparison and selection for sustainable construction. Preparation of professional written reports as a team and individually; Project management for materials selection/application.
Corequisite(s): BC 2214
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 2064 - Integrated Construction I (3 credits)
Application of construction means, materials and methods related to quantity take-off, cost management, scheduling, resource management, document drawing, building information modeling in support of a selected project. Project cost impact of building code requirements. Emphasis on structural components of selected project.
Prerequisite(s): BC 2014 and BC 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2104 - Building Effective Construction Teams (3 credits)
Introduction to leadership behavior styles and their impact on construction management team performance, including analysis of how ethical behavior and individual strengths support positive relationship-building. Development of management strategies to maximize positive conflict outcomes through trust-building between construction project stakeholders. Identification of the role that implicit bias plays in decision-making within diverse project teams. Development of presentation skills for a construction audience.
Prerequisite(s): BC 1224 or BC 1124
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2114 - Information Technology in Design and Construction (3 credits)
Building delivery and project management improvements through the use of information technology (IT) are explored, including scheduling software, building information modeling (BIM) tools, and virtual design and construction (VDC) simulation software and their corresponding theories and concepts that integrate design and construction. Use BIM/VDC tools for graphical presentations, databases, and spreadsheets.
Prerequisite(s): BC 1224 or CEM 2104 or BC 1124
Corequisite(s): BC 2014
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2134 - Construction Data Analysis (2 credits)
Identification and use of various types and sources of construction market data and the tools for analyzing construction data to support managerial decision making. Different forms of applying mathematics to the construction market for better productivity and processes across the construction industry. Develop insights to inform management and investment decisions. Use of cost-benefit analysis as applied to construction management in determining feasibility of projects.
Prerequisite(s): MATH 1025 or MATH 1225
Instructional Contact Hours: (2 Lec, 2 Crd)

BC 2214 - Why Buildings Stand Up (3 credits)
Overview of fundamental principles explaining why structures remain stable under various loading conditions. Explores different types of structures and applied loads and analyzes both determinate and indeterminately supported structures. Calculation of shear, bending moments, deflections in beams, and buckling. Discussion of ethical impacts on user safety and hazard avoidance, in project design and construction methods, materials, etc. Explores different types of soil composition and their strength properties.
Prerequisite(s): (BC 1224 or BC 1124) and (MATH 1025 or MATH 1225)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2354 - Residential Construction Technologies (3 credits)
Identify and evaluate conventional construction materials, methods, building systems, and products to less-familiar, innovative technological alternatives for a specific residential construction project. Compare innovative technological alternatives with material and cost estimates. Overview of conventional materials, equipment, designs, and processes in residential construction. Investigate recent literature on emerging technologies to determine best practices. Strengthen understanding of the primary building systems in residential construction applications.
Prerequisite(s): BC 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 3014 - Building Physics and Environmental Systems (3 credits)
Theory and analysis methods relative to performance of envelope systems and the design and integration of mechanical and electrical building systems. Topics covered include: envelope systems and performance metrics, conceptual and technical design theory, operational principles, and maintenance issues, all necessary for determining the selection of passive and active environmental control systems within a building including: envelope system, heating, ventilation, air conditioning, lighting, and acoustical systems.
Prerequisite(s): PHYS 2205 and PHYS 2215 or PHYS 2305
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 3064 - Integrated Construction II (3 credits)
Application of construction means, materials and methods as they relate to quantity take-off, cost management, scheduling and resource management, document drawing, building information modeling in support of a selected project. Emphasis on building systems components of selected project.
Prerequisite(s): (BC 2064 or CEM 2104) and (PHYS 2205 and PHYS 2215 or PHYS 2305)
Corequisite(s): BC 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 3114 - Building Systems Technology (3 credits)
Emphasis is placed on the integration and physical installation of passive and active environmental control systems including: heating, ventilation, air conditioning, lighting, acoustics, plumbing, and fundamentals of thermal loads.
Prerequisite(s): BC 2024 and (PHYS 2305 or PHYS 2205 and PHYS 2215) or (CEM 2104 and PHYS 2305)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 3134 - Temporary Structures in Construction (3 credits)
Introduction to temporary structure systems used to support construction operations. Concrete formwork, scaffolding systems, excavation shoring systems, dewatering techniques, and hoisting operations. Assessment of systems, cost, quality, safety, sustainability, and schedule impacts.
Prerequisite(s): (BC 2044 and BC 2024 and BC 2214) or CEE 3684
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CEM 3134

BC 3954 - Study Abroad (1-19 credits)
Study abroad in Spain.
Instructional Contact Hours: Variable credit course

BC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 4024 - Estimating, Production, and Cost Engineering (3 credits)
Interpretation of plans and specifications, preparation of construction estimates, and cost control. Methods analysis, resource requirements, and resource costs in building systems, including system components, and in large-scale civil engineering works such as highways, bridges, and hydraulic structures.
Prerequisite(s): CEE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CEE 4014

BC 4064 - Integrated Construction III (3 credits)
Application of construction means, materials and methods as they relate to quantity take-off, cost management, scheduling and resource management, document drawing, building information modeling in support of a selected project. Emphasis on administrative/general contractor functions (such as project safety, budget development, and permitting) of the selected project.
Prerequisite(s): BC 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4114 - Building Information Modeling in Design and Construction (3 credits)
Introduction to means and methods to enrich the geometric information of a building model with semantic data such as, material, structural and performance values. Concept of interoperability in architecture, engineering and construction industry. Overview of approaches to information modeling such as Standard for the Exchange of Product model data (STEP), Industry Foundation Classes (ifc), Construction Operations Building Information Exchange (COBie) and Green Building XML (gbXML). Key concepts of object-oriented modeling and programming.
Prerequisite(s): BC 2114 or (ENGE 1215 and ENGE 1216)
Corequisite(s): CS 1014
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4124 - Digital Construction & Manufacturing (3 credits)
Explore working principles, design projects, & experiment with construction digital information modeling, computer numerical control (CNC), and computer aided manufacturing (CAM) processes. Fundamentals of digital prototyping. Analysis of the industry tools such as 3D scanners, 3D printers, CNC manufacturing techniques, and others, used to provide familiarity with technologies & provide understanding of their benefits & limitations.
Prerequisite(s): BC 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4164 - Production Planning and Process Design for Construction (3 credits)
The course deals with the planning and design of construction processes. Course topics include production systems, behavior of construction systems and workers, the relationships between subsystems in the construction process, queuing systems, process modeling and simulation. The major emphasis is on production and productivity. Production problems that typically occur in construction systems are discussed. The course also explores recent innovations in construction system design such as lean construction and agile construction.
Prerequisite(s): BC 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4264 - Fundamentals of Construction Management (6 credits)
Practical construction management methods within the built environment. Construction materials, document drawings, management activities, fundamentals of construction scheduling and planning. Quality, quantity, and cost of materials necessary to complete a construction project. Construction information technology tools. Partially duplicates BC 2014 and 2114. Pre: Junior Standing.
Instructional Contact Hours: (6 Lec, 6 Crd)

BC 4314 - Building Performance and Energy Management (3 credits)
Fundamentals of building performance mandates for the built environment. Practical means and methods for evaluating building performance metrics within integrated design including acoustic performance, visual performance, and indoor air quality and management. Specific focus on energy resources consumed by thermal, hygrothermal, lighting, and other environmental building systems. Assessment of building energy consumption and analysis of retrofit scenarios through performance evaluation over the entire building life cycle.
Prerequisite(s): BC 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4324 - Innovation in Residential Construction (3 credits)
Mechanisms of historical and current innovations in the residential construction industry. Theory and application within the realms of innovation, diffusion, technology, adoption, new product development, housing innovation literature, supply chain management, sustainability, information technology, commercialization, and housing policy. Innovation theories and applications to residential construction through the analysis and utilization of data-driven hypotheses typical to the industry.
Prerequisite(s): BC 2354 and BC 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4334 - Sustainable Building Performance Management (3 credits)
Introduction to means and methods for managing the sustainability of buildings and their performance over the life cycle. Best practices for sustainable projects in the areas of planning/development, site design, project management, energy and water conservation and green building assessment tools and methods; Leadership in Energy and Environmental Design (LEED) rating system; economic analysis of green building alternatives; and implementation planning.
Prerequisite(s): BC 3064 and BC 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4364 - Lifecycle BIM for Facility Management (3 credits)
BIM (Building Information Modeling) concepts and tools that are critical for facility operation and maintenance. Identifying, capturing, analyzing, exporting and exchanging facility lifecycle data. Spreadsheet-based and BIM based facility management platforms. Case studies and real-life application for understanding mechanical, electrical, and plumbing systems from an owner or facility manager perspective. Workflow processes for data exchange.
Prerequisite(s): BC 2114 and BC 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4374 - Residential Housing and Land Development (3 credits)
Application of means, methods, and strategies for delivering single and multi-family residential housing in urban and suburban contexts. Project planning, including market analysis to determine highest and best use of an identified property, marketing and sales strategies, site and product design and procurement, infrastructure requirements, zoning and government agency regulations, financial analysis and feasibility study, financing strategies, and delivery control systems. Roles of developer and project team in preparing formal proposals for a housing development to be submitted for financing. Identification and application of interfaces with project stakeholders. Overview of contemporary topics such as green development and affordable housing.
Prerequisite(s): BC 2354 and BC 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4434 - Construction Practice I (3 credits)
Explores advanced business and management practices and applications to vertical construction projects. Topics include scope, planning and scheduling, assemblies estimating, cash flow controls. Creation of work breakdown structure, application of concepts of assemblies estimating and general conditions to interpret insurance and contract requires along with digital construction practices.
Prerequisite(s): BC 3064 and BC 3114 and BC 3134
Corequisite(s): BC 4064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4444 - Construction Practice II (4 credits)
This course explores and applies the business and construction practices related to operation of a construction company to a capstone experience. Construction operation is examined as it relates to construction, financial and personnel management. Project management topics studied in this course are applied in the corequisite lab. This course is formally designated as a writing intensive course. Formal written and edited and oral presentations are presented and critiqued by the BC faculty team, the writing resource center, students and industry professionals.
Prerequisite(s): BC 4434
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BC 4754 - Internship (1-3 credits)
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

BC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Building Construction Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
BC 1114	Introduction to Building Construction	3
BC 2004	Construction Surveying	1
BC 2014	Construction Principles I	3
BC 2024	Construction Principles II	3
BC 2044	Construction Materials	3
BC 2064	Integrated Construction I	3
BC 3064	Integrated Construction II	3
BC 3114	Building Systems Technology	3
BC 4064	Integrated Construction III	3
BC 4434	Construction Practice I	3
BC 4444	Construction Practice II	4
Subtotal		32
Major Requirements		
BC 1124	Construction Documents and Safety	2
BC 2104	Building Effective Construction Teams	3
BC 2114	Information Technology in Design and Construction	3
BC 2134	Construction Data Analysis	2
BC 3134	Temporary Structures in Construction	3
BC 4164	Production Planning and Process Design for Construction	3
CEM 3084	Construction Economy	3
FIN 3054	Legal and Ethical Environment of Business	3
MGT 3304	Management Theory and Leadership Practice	3
Subtotal		25
Elective Courses		
Select 6 credit hours of technical electives.		6
Select 6 credit hours of Business & Management Electives.		6
Select 9 credit hours of Track Core Electives.		9
Subtotal		21
Pathways to General Education		
Pathways Concept 1 - Discourse		
COMM 1015 or ENGL 1105	Communication Skills (1F) First-Year Writing	3
COMM 1016 or ENGL 1106	Communication Skills (1F) First-Year Writing	3
ENGL 3764	Technical Writing (1A)	3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select three credits of Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		3
Select three credits of Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02) that also satisfies Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Pathways Concept 3 - Reasoning in the Social Sciences		
ECON 2005 or AAEC 1005	Principles of Economics Economics of the Food and Fiber System	3
ECON 2006 or AAEC 1006	Principles of Economics Economics of the Food and Fiber System	3
Pathways Concept 4 - Reasoning in the Natural Sciences		
GEOS 1004 & GEOS 1104	Earth Science: Our Past, Present, and Future and Introduction to Earth Sciences Laboratory	4
PHYS 2205 & PHYS 2215	General Physics and General Physics Laboratory	4
Pathways Concept 5 - Quantitative and Computational Thinking		
ACIS 1004	Accounting Foundations (5F)	3
BC 2214	Why Buildings Stand Up (5A)	3
MATH 1025	Elementary Calculus (5F)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits of Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3

Select three credits of Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)	3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States	
Select a course from Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07) that also satisifes #PATHWAY-2. [4]	
Subtotal	44
Total Credits	**122**

Electives

Business and Management Electives

Code	Title	Credits
Select six credits from the following:		
AAEC 3324	Environment and Sustainable Development Economics	3
AAEC 3454	Small Business Management and Entrepreneurship	3
ACIS 2116	Principles of Accounting	3
AS 3215	Air Force Management and Leadership	3
AS 3216	Air Force Management and Leadership	3
CEM 4024	Construction Law and Contract Administration	3
ISE 4004	Theory of Organization	3
MGT 2064	Foundations of Entrepreneurship	3
MGT 2354	Teams, Leadership, and Business: Cultivating Excellence	3
MGT 3064	Cornerstones of Entrepreneurship and Innovation	3
MKTG 3104	Marketing Management	3
MKTG 4734	Real Estate Marketing	3
MN 4005	Leadership and Management/Ethics	3
MN 4006	Leadership and Management/Ethics	3
MS 4005	Military Science IV, Army Reserve Officer Training Corps	4
MS 4006	Military Science IV, Army Reserve Officer Training Corps	4
PM 4684	Leasing Commercial Properties	3
REAL 2004	Principles of Real Estate	3
REAL 4754	Real Estate Law	3

Track Core Electives

Code	Title	Credits
Select one of the four tracks below:		
Emergent Technologies for Construction, Housing and Development		
BC 2354	Residential Construction Technologies	3
BC 4324	Innovation in Residential Construction	3
BC 4374	Residential Housing and Land Development	3
Information Systems in Built Environment		
BC 4114	Building Information Modeling in Design and Construction	3
BC 4124	Digital Construction and Manufacturing	3
BC 4364	Lifecycle BIM for Facility Management	3
Sustainable Building Performance		
BC 3014	Building Physics and Environmental Systems	3
BC 4314	Building Performance and Energy Management	3
BC 4334	Sustainable Building Performance Management	3
Directed Elective		
Students pursuing double majors may use courses from their other major for directed electices to build their own track as long as the courses are not building construction major requirements. Students must have a plan of study signed by the department head or assistant director of student affairs comprised of courses to form a focues area of study for this track.		

Technical Electives

Code	Title	Credits
Select six credits of the following. A minimum of 3 of the credits must be 3000-4000.		
BC Electives		
Any BC 2000-5000 level course or special study that does not fulfill a construction major requirement. This includes BC track courses from outside their designated track selection provising capacity. These courses cannot be double-counted for both track and technical electives.		
BC Variable Credit		
BC 4754	Internship	1-3
BC 4974	Independent Study	1-19
BC 4994	Undergraduate Research	1-19
CEM		
CEM 2714	Construction Safety Systems	3
CEM 2824	Construction Site Analysis	3
CEM 3024	Construction Estimating and Scheduling	3
CEM 3154	Smart Construction	3
CEM 3064	Intro to Lean Construction	3
CEM 3074	Global Design and Construction for Sustainable Development	3
CEM 3164	Construction Health and Safety	3
CEM 3714	Controlling Construction Safety Hazards	3
CEM 4624	Construction Robotics and Automation	3
CEM 4634	Data Analysis and Visualization for Construction and Facilities Management	3
CEM 4714	Construction Safety Culture	3
CEM 4724	Construction Industry Futures: Safety, Health, and Wellness	3
REAL		
REAL 3034	Real Estate Market Analysis	3
REAL 3044	Financing Real Estate Projects	3
Others		
BC 4024	Estimating, Production, and Cost Engineering	3
CS 1014	Introduction to Computational Thinking	3
SBIO 2314	Building Information Modeling for Wood-Based Construction	3
SBIO 3324	Green Building Systems	3
VT Corp of Cadets Academic Offerings		
MGT 3935 & MGT 3936	Advanced Professional Development for Cadets and Advanced Professional Development for Cadets	4
MGT 3945 & MGT 3946	Cadet Organizational Leadership and Cadet Organizational Leadership	2

MGT 4935 & MGT 4936	Cadet Citizen Leader Practicum and Cadet Citizen Leader Practicum	4
MGT 4945 & MGT 4946	Executive Leadership for Cadets and Executive Leadership for Cadets	2

Students enrolled in a minor may use 6 credits of their minor requirements as technical electives with 3 of those being 3000-4000 level.

Satisfactory Progress Toward a Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress toward the completion of their degrees. The Myers-Lawson School of Construction fully supports this policy. Specific expectations for satisfactory progress for BC majors are as follows:

- Each student must meet the minimum university-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog. Overall GPA required to graduate is 2.00.
- All students must be registered in a least one required BC/CEM course each semester unless BC core course requirements are met.
- Students may not repeat any course(s) more than 3 times, including attempts that end in a course withdrawal.

A student who does not meet the requirements will be notified that they have one term of enrollment to rectify any deficiencies. Failure to do so within one term of enrollment will result in the student being required to transfer out of the major.

In-Major GPA

Consists of all courses under the BC and CEM designation.

Graduation Requirements

Students must pass all required courses with an overall GPA of 2.0.

Acceptable Substitutions

1. REAL 2034 Real Estate Data Analysis (3 cr) may be substituted for BC 2134 Construction Data Analysis (2 cr)
2. STAT 2004 Introductory Statistics (3 cr) may be substituted for BC 2134 Construction Data Analysis (2 cr)
3. ESM 2104 Statics (3 cr) may be substituted for BC 2214 (3 cr) but the student is required to have another pathway 5a to fulfill pathway 5 requirement
4. PHYS 2305 Foundations of Physics (4 cr) may be substituted for PHYS 2205 General Physics (3) + PHYS 2215 General Physics Lab (1)
5. MATH 1225 Calculus I (4 cr) may be substituted for MATH 1025 Elementary Calculus (3 cr)
6. ACIS 2115 (3 cr) may be substituted for ACIS 1004 (3 cr) but the student is required to have another pathway 5 (either foundational or advanced) to fulfill pathway 5 requirement.
7. ISE 2014 Engineering Economy (2 cr) may be substituted for CEM 3084 Construction Economy (3 cr) but the student must still have 122 credits to meet graduation requirements

Foreign Language Requirements

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language.College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**
BC 1114	Introduction to Building Construction	3
COMM 1015 or ENGL 1105	Communication Skills or First-Year Writing	3
GEOS 1004	Earth Science: Our Past, Present, and Future	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		3
Pathways Concept 2 - Critical Thinking in the Humanities		3
	Credits	**15**
Spring Semester		
BC 1124	Construction Documents and Safety	2
MATH 1025	Elementary Calculus	3
GEOS 1104	Introduction to Earth Sciences Laboratory	1
COMM 1016 or ENGL 1106	Communication Skills or First-Year Writing	3
ACIS 1004	Accounting Foundations	3
Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02) & 7		3
	Credits	**15**
Second Year		
Fall Semester		
BC 2004	Construction Surveying (New course)	1
BC 2114	Information Technology in Design and Construction	3
BC 2014	Construction Principles I	3
PHYS 2205	General Physics	3
PHYS 2215	General Physics Laboratory	1
ECON 2005 or AAEC 1005	Principles of Economics or Economics of the Food and Fiber System	3
BC 2134	Construction Data Analysis	2
	Credits	**16**
Spring Semester		
BC 2024	Construction Principles II	3
BC 2064	Integrated Construction I	3
BC 2214	Why Buildings Stand Up	3
BC 2104	Building Effective Construction Teams	3
ECON 2006 or AAEC 1006	Principles of Economics or Economics of the Food and Fiber System	3
	Credits	**15**
Third Year		
Fall Semester		
BC 3114	Building Systems Technology	3
BC 3064	Integrated Construction II	3
BC 2044	Construction Materials	3
CEM 3084	Construction Economy	3
FIN 3054	Legal and Ethical Environment of Business	3
	Credits	**15**
Spring Semester		
BC 3134	Temporary Structures in Construction	3
Business & Management Elective		3
ENGL 3764	Technical Writing	3
Track Elective		3
Technical Electives		3
	Credits	**15**
Fourth Year		
Fall Semester		
BC 4064	Integrated Construction III	3
BC 4434	Construction Practice I	3

BC 4164	Production Planning and Process Design for Construction	3
MGT 3304	Management Theory and Leadership Practice	3
Track Elective		3
	Credits	**15**
Spring Semester		
BC 4444	Construction Practice II	4
Business & Management Elective		3
Technical Electives		3
Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)		3
Track Elective		3
	Credits	**16**
	Total Credits	**122**

Chemical Engineering

Our Website (http://www.che.vt.edu)

Overview

Skillful and creative applications of the principles of chemistry, biochemistry, biology, mathematics, and physics are needed to solve the problems now confronting society. Whether these problems involve energy, food, health, materials or environmental quality, the modern chemical engineer is the professional concerned with finding economically and socially acceptable solutions. The program includes specific tracks relating to energy and climate solutions, data analytics in the chemical engineering domain, and human health. The program prepares graduates for employment in a great variety of industries including specialty chemicals, petroleum, pharmaceutics, paper, fibers, plastics, food, electronics, consumer products, and environmental remediation and lays a strong foundation for those who choose to pursue higher education, whether in chemical engineering or other disciplines such as business, medicine, or law. Students may customize their academic program around an industry of interest by judiciously selecting electives. Courses in chemistry, polymers, biotechnology, marketing, and green engineering are common choices.

Accreditation, Program Educational Objectives, and Student Learning Outcomes

The B.S. degree in Chemical Engineering at Virginia Tech is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org), under the commission's General Criteria and the Program Criteria for Chemical, Biochemical, Biomolecular and Similarly Named Engineering Programs.

The **program educational objectives** are that within five years of completing their BS degrees, graduates will be successful in a variety of professional careers, including those outside of traditional chemical engineering fields as evidenced by one or more of the following achievements:

- Sustaining a career as a problem solver in engineering or other fields that require analytical skills.
- Professional advancement in positions of increasing leadership and/or responsibility.
- Attainment of an advanced degree or advanced certification in engineering, science, business, law, medicine, or education.
- Bettering society and promoting diversity, equity, and inclusion through professional or personal service.

The **student learning outcomes** are that upon completion of the BS degree in Chemical Engineering, graduates will have:

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. an ability to communicate effectively with a range of audiences.
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Curriculum

The curriculum has been developed to meet the department goal and the objectives for the graduates. The curriculum is demanding and a GPA of at least 3.0 is recommended for transfer into the program at the sophomore level. An average GPA of at least 2.00 in all CHE courses attempted (except CHE 4144 Business and Marketing Strategies for the Process Industries) is required for continued enrollment in the department. The department has specific grade policies for continuation in the program and for graduation. For further information on these policies, please contact the department.

The chemical engineering curriculum integrates studies in thermodynamics, fluid mechanics, heat transfer, mass transfer, process control, reaction kinetics, plant and process design, verbal and written communications, and reaction kinetics, along with professional ethics and environmental awareness. Throughout this curriculum students learn the fundamentals of chemical processing equipment design and operation. In addition, students gain hands-on experience with the equipment during the summer Unit Operations Laboratory. The experience culminates in participation in either a national senior-level design contest or a design project with a local industrial mentor. The laboratory and the senior design courses are recognized as two of the high points in the undergraduate program. The computer is a necessary tool in all the courses and the same software used in industry is used in the design courses.

In addition to the basic undergraduate program outlined here, more sophisticated and specialized programs leading to the M.S. and Ph.D. in chemical engineering also are offered (see Graduate Catalog (https://catalog.vt.edu/graduate/)).

The department participates in the Cooperative Education Program whereby qualified students may alternate periods of study with periods of professional employment. Students who plan to co-op should

consult with their academic advisor to plan their academic progress appropriately.

Degree Requirements

The following are special Tracks of study that students can pursue through judicious selection of technical and chemical engineering electives. Lists of approved courses for these tracks are available in the Department of Chemical Engineering.

- Climate and Energy Solution
- Computational and Data Sciences
- Healthcare Technologies

As part of **progress toward a degree**, students must maintain an in-major GPA of 2.0 or above (not including CHE 4144 Business and Marketing Strategies for the Process Industries). If the in-major GPA drops below 2.0 at any time, students will be placed on departmental probation. Students cannot remain on departmental probation for more than two consecutive semesters. In the case that a student has not achieved an in major 2.0 or better after two semesters, the student must transfer out of the department, is prohibited from registering for CHE courses for at least one semester and, after that, only with permission of Chemical Engineering department head. All CHE credits (except CHE 4144 Business and Marketing Strategies for the Process Industries) are used to calculate in-major GPA.

For **additional information** about the Chemical Engineering curriculum, please contact Dr. Goldstein.

- Chemical Engineering Major (p. 812)

Head: S.P. Wrenn
Alumni Distinguished Professor and Frank C. Vilbrandt Professor: Y.A. Liu
Robert E. Hord Jr. Professor: P. Rajagopalan
Fred W. Bull Professor: C. Lu
Professors: L.E.K. Achenie, R.M. Davis, W.A. Ducker, A.M. Karim, and E. Kiran
Associate Professors: M Bortner, S. Deshmukh, A.S. Goldstein, S.M. Khatib, S.M. Martin[5], R. Tong, H. Xin, and A.R. Whittington
Assistant Professor: S. Samaji
Professor of Practice: C. McDowell
Adjunct Professors: R. Colberg, E.H. Cwirko, R. Eisinger, C. McDowell, and B. McSheehy
Emeritus Professors: D.F. Cox and S.T. Oyama
Alexander F. Giacco Professor Emeritus: D.G. Baird

1 Award for Excellence in Undergraduate Advising
2 Academy of Teaching Excellence inductee
3 Wine Award recipient
4 Sporn Award recipient
5 Alumni Award for Extension Excellence
6 Alumni Award for Research Excellence
7 Alumni Award for Teaching Excellence
8 Academy of Faculty Service
9 Commonwealth of Virginia Outstanding Faculty Award
10 Diggs Teaching Scholar Awards

Undergraduate Course Descriptions (CHE)

CHE 2004 - Chemical Engineering Sophomore Seminar (1 credit)
Career opportunities and current topics of interest in the Chemical Engineering profession.
Instructional Contact Hours: (1 Lec, 1 Crd)

CHE 2114 - Mass and Energy Balances (3 credits)
Stoichiometric and composition relationships, behavior of gases, vapor pressures, solubility, mass balances, recycling operations, energy balances, first law of thermodynamics, thermophysics, thermochemistry, fuels and combustion, application to chemical operations.
Prerequisite(s): MATH 1226 and (CHEM 1036 or CHEM 1036H or CHEM 1056 or CHEM 1056H)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 2164 - Chemical Engineering Thermodynamics (3 credits)
First and Second Laws, properties of fluids, properties of homogeneous mixtures; phase equilibria, chemical-reaction equilibria. Grade of C- or better required in prerequisite CHE 2114.
Prerequisite(s): CHE 2114 and MATH 2204 and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 3015 - Process Measurement & Control (3 credits)
3015: Common process measurements; applications to theory and practice of automatic control of chemical processes; 3016: Design and laboratory practice underlying the automatic computer control of chemical processes.
Prerequisite(s): MATH 2214 and CHE 3114
Corequisite(s): 3124, (3184 or 3185), (3044 or 3154) for 3015
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 3044 - Heat Transfer (2 credits)
One and two dimensional conduction, convection, and diffusion of thermal energy; heat transfer rates, steady state and unsteady state conduction, convection; design of heat exchangers; forced and free convection boiling and condensation.
Prerequisite(s): CHE 2164 and CHE 3114 and MATH 4564
Instructional Contact Hours: (2 Lec, 2 Crd)

CHE 3114 - Fluid Transport (3 credits)
Fluid statics, surface tension, fluid dynamics, Newtons Law of viscosity, momentum transport, laminar and turbulent flow, velocity profiles, flow in pipes, flow around objects, non-Newtonian fluids, design of piping systems, pumps and mixing.
Prerequisite(s): CHE 2114 and PHYS 2305 and MATH 2204
Corequisite(s): MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 3124 - Chemical Engineering Simulations and Process Modeling (3 credits)
Development of strategies to pose and numerically solve sets of algebraic and differential equations that describe chemical engineering systems and processes. Iterative root finding and optimization approaches to solving non-linear equations, analyze data, and determine best-fit model parameters. Numerical strategies to integrate and differentiate models and data. Approaches to solve ordinary and partial differential equations that describe reaction kinetics, process control, and transport of momentum, heat and mass. Algorithm development, coding, and graphical representation of solutions. (3H,3C)
Prerequisite(s): CHE 2114 and MATH 2214
Corequisite(s): CHE 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 3134 - Separation Processes (3 credits)
Binary separations and multicomponent separations, distillation, batch distillation, extraction, absorption, McCabe-Thiele and Ponchon Savaret methods, short cut methods, design of plate columns, plate and column efficiencies.
Prerequisite(s): CHE 2114 and MATH 2204 and PHYS 2306
Corequisite(s): CHE 2164 2164
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 3144 - Mass Transfer (3 credits)
Multidimensional molecular diffusion and convection of single and multi-component systems; mass transfer rates; steady state, quasi-steady state and transient mass transfer; effect of reactions on mass transfer; convective mass transfer coefficients; design of stage and continuous gas/liquid contractors, membrane, liquid-liquid and liquid-solid separation processes, artificial kidney and drug delivery systems.
Prerequisite(s): CHE 3114 and CHE 2164 and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 3154 - Heat Transfer Analysis (3 credits)
Principles of conduction, convection, and radiation of thermal energy through one or more phases; analytical and numerical methods for modeling multi-dimensional and unsteady-state conduction; analysis of forced and free convection in conduits and around submerged bodies; design of heat exchangers; radiative heat transfer; boiling and condensation.
Prerequisite(s): CHE 2164 and CHE 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 3185 - Chemical Reactor Analysis and Design (2 credits)
Introduction to mathematical frameworks for analysis and modeling of chemical reactions within different reactor configurations. 3185: Reaction equilibria, power-law rate expressions, Arrhenius law, rate constants, analysis of kinetic data, design of single and multiple isothermal reactors. 3186: Reaction mechanisms, multiple reactions, selectivity, non-isothermal reactors, catalytic reactions and design of catalytic reactors.
Prerequisite(s): CHE 2114 and (MATH 2214 or MATH 2214H)
Corequisite(s): CHE 2164, CHE 3114
Instructional Contact Hours: (2 Lec, 2 Crd)

CHE 3186 - Chemical Reactor Analysis and Design (2 credits)
Introduction to mathematical frameworks for analysis and modeling of chemical reactions within different reactor configurations. 3185: Reaction equilibria, power-law rate expressions, Arrhenius law, rate constants, analysis of kinetic data, design of single and multiple isothermal reactors. 3186: Reaction mechanisms, multiple reactions, selectivity, non-isothermal reactors, catalytic reactions and design of catalytic reactors.
Prerequisite(s): CHE 3185 and CHE 3114 and CHE 3144 and (CHE 3044 or CHE 3154)
Instructional Contact Hours: (2 Lec, 2 Crd)

CHE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 4014 - Chemical Engineering Laboratory (4 credits)
Practical experience in the planning of experimentation, gathering of experimental data, interpretation of data, and the preparation of written and oral reports. Use of small-scale processing equipment, automatic control, and data acquisition. Emphasis on teamwork, safety, engineering judgment, and professional behavior. Applications include fluid flow, mixing, filtration, and distillation, process control, heat transfer, mass transfer, and chemical reaction kinetics. Consideration of ethical choices in engineering practice and societal impacts of engineering solutions. In-major GPA of 2.0 or better.
Prerequisite(s): CHE 2164 and CHE 3015 and CHE 3114 and CHE 3124 and CHE 3134 and CHE 3144 and (CHE 3044 or CHE 3154) and CHE 3185 and ENGL 3764
Instructional Contact Hours: (12 Lab, 4 Crd)

CHE 4015 - Chemical Engineering Unit Operations Laboratory (2 credits)
Practical experience in the planning of experimentation, gathering of experimental data, interpretation of data, and the preparation of written and oral reports. Use of small-scale processing equipment, automatic control, and data acquisition. Emphasis on teamwork, safety, engineering judgment, and professional behavior. 4015: Applications include fluid flow, mixing, filtration, distillation, and chemical reaction kinetics. Consideration of ethical choices in engineering practice. 4016: Applications in process control, heat transfer, mass transfer, and catalysis. Consideration of the societal impacts of engineering solutions. In-major GPA of 2.0 or better.
Prerequisite(s): CHE 2164 and CHE 3114 and CHE 3124 and CHE 3134 and (CHE 3184 or CHE 3185) and ENGL 3764
Instructional Contact Hours: (6 Lab, 2 Crd)

CHE 4016 - Chemical Engineering Unit Operations Laboratory (2 credits)
Practical experience in the planning of experimentation, gathering of experimental data, interpretation of data, and the preparation of written and oral reports. Use of small-scale processing equipment, automatic control, and data acquisition. Emphasis on teamwork, safety, engineering judgment, and professional behavior. 4015: Applications include fluid flow, mixing, filtration, distillation, and chemical reaction kinetics. Consideration of ethical choices in engineering practice. 4016: Applications in process control, heat transfer, mass transfer, and catalysis. Consideration of the societal impacts of engineering solutions. In-major GPA of 2.0 or better.
Prerequisite(s): CHE 3015 and (CHE 3044 or CHE 3154) and CHE 3124 and CHE 3134 and CHE 3144 and (CHE 3184 or CHE 3185) and ENGL 3764
Instructional Contact Hours: (6 Lab, 2 Crd)

CHE 4024 - Unit Operations and Scale-Up (1 credit)
Research of a chemical process unit, design of experiments, analysis and interpretation of experimental data, and scale-up of the unit to meet specific objectives. Teamwork, oral communication, and appropriate use of published information. Consideration of safety, and the societal and environmental impacts of an engineering design. Pre: In-major GPA of 2.0 or better is required.
Prerequisite(s): CHE 3015 and CHE 3044 and CHE 3124 and CHE 3134 and CHE 3144 and CHE 3184 and ENGL 3764
Instructional Contact Hours: (1 Lec, 1 Crd)

CHE 4104 - Process Materials (3 credits)
Basics of materials science as it relates to the interest of the chemical engineer. The course emphasizes the three fundamental areas of material science being polymer materials, metallics, and ceramic/inorganic glasses. The general molecular structure property - application behavior of each area will be presented but with a focus when possible on topics related to the field of chemical engineering.
Prerequisite(s): CHE 2164 and (CHEM 2535 or CHEM 2565)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 4114 - Energy and Climate Change Solutions (3 credits)
Fundamentals of energy production technologies, alternative and renewable energy sources, electrochemical energy storage, direct carbon capture technologies, negative emissions technologies, and chemical process that use CO2 as a feedstock. Fundamentals of water purification technologies, the water cycle, and the impact of climate change on water resources and demands. Discussion of carbon and water economics, and how geographical, societal, and environmental factors affect energy and water management policies. Techno-economic analysis of solutions based on chemical technologies, and the communication of those solutions in the context of policy development.
Prerequisite(s): CHE 3144 and CHE 3185
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 4144 - Business and Marketing Strategies for the Process Industries (3 credits)
Business strategies and industrial marketing concepts, and their application in the chemical, pharmaceutical and related process industries. The course is designed for engineers and other students planning a career in the process industries. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MKTG 4144

CHE 4185 - Process and Plant Design (4 credits)
Chemical process synthesis and plant design, economic analysis of alternative processes, process equipment design and specifications, computer-aided process design and simulation, design case studies, application of scientific and engineering knowledge to practical design problems. Grade of C- or better in all CHE prefix courses and in-major GPA of 2.0 or better is required.
Prerequisite(s): CHE 3015 and (CHE 3044 or CHE 3154) and CHE 3124 and CHE 3134 and CHE 3144 and (CHE 3184 or CHE 3185) and ENGL 3764
Instructional Contact Hours: (4 Lec, 4 Crd)

CHE 4186 - Process and Plant Design (4 credits)
Chemical process synthesis and plant design, economic analysis of alternative processes, process equipment design and specifications, computer-aided process design and simulation, design case studies, application of scientific and engineering knowledge to practical design problems. Grade of C- or better in all CHE prefix courses and in major GPA of 2.0 or better is required.
Prerequisite(s): CHE 4185
Instructional Contact Hours: (4 Lec, 4 Crd)

CHE 4214 - Introduction to Polymer Materials (3 credits)
Basics of polymeric materials including description and categorization of macromolecules; characterization; mechanical properties; rubbery, glassy, crystalline, and viscous flow behavior.
Prerequisite(s): CHEM 2536 and CHE 2164
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 4224 - Introduction to Polymer Processing (3 credits)
Basic principles of momentum and heat transfer applied to the analysis of polymer processing operations. Introduction to polymer rheology.
Prerequisite(s): CHE 3144 and (CHE 3044 or CHE 3154)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 4304 - Biological Transport Phenomena (3 credits)
Engineering analysis and predictive modeling of heat and mass transport in biological systems (e.g., tissues, organs, organisms, and biomedical devices). Examination of processes that involve conduction, convection, diffusion, generation/ consumption. Application of analytical and computational methods to solve differential equations that describe unsteady and/or multi-dimensional transport. Topics include oxygen transport, pharmacokinetic analysis, kidney function, blood perfusion, burns, and cryopreservation.
Prerequisite(s): (CHE 3114 and CHE 3044 and CHE 3144) or (ME 3304 and ME 3404)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ME 4344

CHE 4334 - Introduction to Colloidal and Interfacial Science (3 credits)
Properties and behavior of colloidal systems, primarily in liquid environments. Size characterization and description, Brownian motion, interparticle forces, dispersion stability, and experimental techniques for characterizing these systems.
Prerequisite(s): CHEM 3615 or CHE 2164
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 4404 - Machine Learning in Chemical Sciences and Engineering (3 credits)
Development and application of data-driven computational models. Focus on applications in chemical sciences and engineering (e.g., materials discovery, property prediction, anomaly detection, process optimization). Preprocessing, data management and visualization, clustering, classification, and regression algorithms, and common pitfalls and practices in training and evaluation of data-driven models. Pre: 3124
Prerequisite(s): CHE 3124
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 4544 - Protein Separation Engineering (3 credits)
Concepts, principles and applications of various unit operations used in protein separations. Properties of biological materials, such as cells and proteins, and their influences on process design. Design of processes for protein purification based on the impurities to be eliminated. Concepts and principles of scale-up of unit operations. Case studies in practical protein recovery and purification issues, with a focus on enhanced protein purification by genetic engineering. Protein purification process simulation and optimization using process simulation software.
Prerequisite(s): BSE 3504 or CHE 3144
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BSE 4544

CHE 4904 - Project and Report (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 4994H - Undergraduate Research (1-19 credits)
Honors course
Instructional Contact Hours: Variable credit course

Total Credits		**128**

[1] Entry into CHE 4014 Chemical Engineering Laboratory and CHE 4185 Process and Plant Design is restricted to students who have an in-major GPA of 2.0 or better.

[2] Career Bridge Experiences help prepare students for post-graduation life and develop a professional identity. Internships, Co-ops, and Undergraduate Research are examples of possible Career Bridge Experiences. Students must participate in a Career Bridge Experience to complete the BS CHE degree. Because some of these experiences are not credit bearing, the **ENGE 3900** course is used to track and assess student participation in a Career Bridge Experience and to record fulfillment of this degree requirement on the transcript. Students should enroll in ENGE 3900 during the semester (or one of the semesters) that they undertake the Career Bridge Experience. Enrollment in ENGE 3900 requires approval of a Career Bridge Plan. Further information about acceptable Career Bridge Experiences and the process for submitting a Career Bridge Plan are explained in **CHE 2004**.

CHE Electives

A total of 6 hours of CHE elective are required from the following list. If you take more than six hours, the excess hours will count toward Technical Electives. All CHE Electives must be taken A-F. Students are responsible for the satisfaction of prerequisites required for their chosen electives.

Code	Title	Credits
CHE 4104	Process Materials	3
CHE 4114	Energy and Climate Change Solutions	3
CHE 4214	Introduction to Polymer Materials	3
CHE 4224	Introduction to Polymer Processing	3
CHE 4304	Biological Transport Phenomena	3
CHE 4334	Introduction to Colloidal and Interfacial Science	3
CHE 4404	Machine Learning in Chemical Sciences and Engineering	3

Technical Electives

A total of 6 hours of technical electives are required from the following list. All Technical Electives must be taken A-F. No courses may double-count as both CHE elective and technical elective. Students are responsible for the satisfaction of prerequisites required for their chosen electives. If there is a course you are interested in taking and it is not on the approved list, talk to Dr. Goldstein for approval to substitute a course.

[3] **4974** Independent Study and **4994** Undergraduate Research cannot be requested through online course request. Interested students are encouraged to contact potential research mentors, who will initiate the process. Contact Drs Martin and Bortner for more information about ChemE Car and ChemE Cube Teams, respectively.

Tracks in Chemical Engineering

Students who complete 9 credits from any of the following sets of courses will have completed a "Track." While this will not be acknowledged on the student's transcript or diploma, the student is welcome to identify the completion of the Track on their resume/curriculum vitae. Undergraduate research must be in a topic closely related to track and no more than 3 credits of approved research may be applied toward a track. Completion of a track is not required for the BS degree in CHE.

Climate and Energy Solutions Track

Chemical Engineers design and operate many industrial and power plants and can influence the output of CO 2 and other greenhouse gases, as well as other chemicals and materials that can negatively impact the environment. Chemical Engineers can positively impact climate change through process design, selection of appropriate materials, and careful control of process operating conditions, and through the implementation of decarbonization and climate change mitigation strategies. "Climate and Energy Solutions" is a track within the Chemical Engineering major where students will receive additional training in areas such as sustainable and renewable energy production, increased efficiency, decarbonization, green and sustainable materials, planning for low energy and low environmental impacts, and other strategies for mitigating climate change and environmental effects. By judicial selection of courses, students may complete the Green Engineering minor and Climate and Engineering Solutions track.

Code	Title	Credits
CHE 4114	Energy and Climate Change Solutions	3
Select a minimum of 6 credit hours from the following:		
CEE 4134	Environmental Sustainability - A Systems Approach	3
CHE 4994	Undergraduate Research	1-19
CHEM 4514	Green Chemistry	3
CHEM 4624	Materials Chemistry in Energy Sciences	3
ECE 4364	Alternate Energy for Climate Sustainability	3
ENGR 3124	Introduction to Green Engineering	3
ENGR 4134	Environmental Life Cycle Assessment	3
ESM 4194	Sustainable Energy Solutions for a Global Society	3
ME 4154	Industrial Energy Systems	3
ME 4324	Energy Systems: Theory and Applications	3
SBIO 2504	Circular Economy Analytics for Sustainable Systems	3
SBIO 3444	Sustainable Biomaterials and Bioenergy	3
SBIO 3454	Society, Sustainability Biomaterials and Energy	3

Computational and Data Sciences Track

Large-scale numerical simulations and autonomous experimentation have revolutionized many disciplines in science and engineering. To meet the growing workforce demand for tackling massive amounts of data in chemical industries, the “Computational and Data Sciences” track offers a uniquely interdisciplinary set of courses teaching the basic methodologies and applied tools of data analytics with domain-specific examples. The track prepares students for a broad variety of career paths that leverage computation and data for solving urgent societal problems: from energy and biomedical materials design, to advanced manufacturing, to intelligent chemical processes with on-the-fly diagnosis, forecasting, and optimization, to opportunities not yet foreseen.

Code	Title	Credits
CHE 4404	Machine Learning in Chemical Sciences and Engineering	3
Select a minimum of 6 credit hours from the following:		
AOE 4024	An Introduction to the Finite Element Method	3
CHE 4994	Undergraduate Research	1-19
CMDA 4654	Intermediate Data Analytics and Machine Learning	3
CS 4884	Computational Biology and Bioinformatics Capstone	3
MSE 4394	Introduction to Molecular Dynamics Simulation	3

Healthcare Technologies Track

Chemical Engineering principles are central to a broad range of bioengineering solutions to health and medicine problems, including protein and pharmaceutical engineering, tissue engineering, fermentation, wastewater treatment, and the development of novel bioreactors for product synthesis. The “Healthcare Technologies” track will allow students with a particular interest in one or more of these topics to focus their technical electives in that area. By judicial selection of courses, students may complete the Biomedical Engineering minor and Healthcare Technologies track.

Code	Title	Credits
CHE 4304	Biological Transport Phenomena	3
Select a minimum of 6 credit hours from the following:		
BMES 4064	Introduction to Medical Physiology	3
CHE 4544	Protein Separation Engineering	3
CHE 4994	Undergraduate Research	1-19
CHEM 4554	Drug Chemistry	3
CS 4884	Computational Biology and Bioinformatics Capstone	3
ESM 4105	Engineering Analysis of Physiologic Systems	3
MSE 4574	Biomaterials	3

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The CHE Department fully supports this policy. Specific expectations for satisfactory progress for Chemical Engineering majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)
- Students must maintain a minimum in-major GPA of 2.0.
- If in-major GPA drops below 2.0, students will be placed on departmental probation.
- If an in-major GPA of 2.0 or better is not achieved after two semesters of departmental probation, the student is suspended from the department and prohibited from registering for CHE courses for at least one semester.
- Following suspension, permission of the department head is required for registration in CHE-prefix courses.

Graduation Requirements

- Have a minimum in-major GPA of 2.0.
- Complete at least 128 semester credit hours with a minimum overall GPA of 2.0.

In-Major GPA

All CHE-prefix courses except CHE 4144 Business and Marketing Strategies for the Process Industries are used to calculate in-major GPA.

Acceptable Substitutions

1. MATH 2405H (5 cr) may be substituted for MATH 2114 (3 cr)
2. MATH 2405H (5 cr) + MATH 2406H (5 cr) may be substituted for MATH 2114 (3 cr) + MATH 2204 (3 cr) + MATH 2214 (3 cr)
3. CHE 4015 (2 cr) + CHE 4016 (2 cr) may be substituted for CHE 4014 (4 cr)
4. CHEM 1055 (4 cr) may be substituted for CHEM 1035 (3 cr)
5. CHEM 1056 (4 cr) may be substituted for CHEM 1036 (3 cr)
6. CHEM 1065 (1 cr) may be substituted for CHEM 1045 (1 cr)
7. CHEM 1066 (1 cr) may be substituted for CHEM 1046 (1 cr)
8. CHEM 2555 (2 cr) may be substituted for CHEM 2545 (1 cr)

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable	4
ENGE 1215	Foundations of Engineering	2
Elective (Pathways Concept 2, 3, or 7)		3
	Credits	**16**
Spring Semester		
CHEM 1036	General Chemistry	3
CHEM 1046	General Chemistry Laboratory	1
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable	4
PHYS 2305	Foundations of Physics	4
ENGE 1216	Foundations of Engineering	2
	Credits	**17**
Second Year		
Fall Semester		
CHEM 2535 or CHEM 2565	Organic Chemistry or Principles of Organic Chemistry	3
CHEM 2545	Organic Chemistry Laboratory	1
CHE 2114	Mass and Energy Balances (C-)	3
PHYS 2306	Foundations of Physics	4
MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus	3
	Credits	**17**
Spring Semester		
CHEM 2536 or CHEM 2566	Organic Chemistry or Principles of Organic Chemistry	3
CHE 2004	Chemical Engineering Sophomore Seminar	1
CHE 2164	Chemical Engineering Thermodynamics	3
CHE 3134	Separation Processes	3
MATH 2214	Introduction to Differential Equations	3
Elective (Pathways Concept 2, 3, or 7)		3
	Credits	**16**
Third Year		
Fall Semester		
CHE 3114	Fluid Transport	3
CHE 3124	Chemical Engineering Simulations and Process Modeling	3
CHE 3185	Chemical Reactor Analysis and Design	2
ENGL 3764	Technical Writing	3
Elective (Pathways Concept 2, 3, or 7)		3
	Credits	**14**
Spring Semester		
CHEM 3625	Physical Chemistry Laboratory	1
CHE 3015	Process Measurement & Control	3
CHE 3154	Heat Transfer Analysis	3
CHE 3144	Mass Transfer	3
Select one of the following:		3
STAT 4604	Statistical Methods for Engineers	
STAT 4705	Probability and Statistics for Engineers	
	Credits	**13**
Summer Semester		
CHE 4014	Chemical Engineering Laboratory	4
	Credits	**4**
Fourth Year		
Fall Semester		
CHE 3186	Chemical Reactor Analysis and Design	2
CHE 4185	Process and Plant Design	4
ENGE 3900	Bridge Experience	0
Elective (Pathways Concept 2, 3, or 7)		3
CHE Elective		3
Technical Elective		3
	Credits	**15**
Spring Semester		
CHE 4186	Process and Plant Design	4
CHE Elective		3
Technical Elective		3
Elective (Pathways Concept 2, 3, or 7)		3
Elective (Pathways Concept 6a)		3
	Credits	**16**
	Total Credits	**128**

Civil and Environmental Engineering

Our Website (http://www.cee.vt.edu)

Overview

Civil engineers are responsible for designing, constructing, maintaining, operating, and deconstructing society's infrastructure and stewardship of its open spaces. Examples of infrastructure include, but are not limited to, buildings, industrial facilities, bridges, drinking water systems, waste treatment systems, airports, highways, dams, flood control systems, coastal facilities, stormwater management facilities, and overall land development design. Examples of providing stewardship of open spaces include mediating existing pollution in bodies of water (e.g., Chesapeake Bay), mitigation of and resilience to natural and human-made hazards, protecting our coastlines, and mitigation/control of air pollution.

The Charles Edward Via, Jr. Department of Civil and Environmental Engineering offers an undergraduate program that facilitates the development of critical analytical abilities and the necessary fundamental knowledge and skills for entry into the civil engineering profession or graduate studies. This body of knowledge includes the basic principles of science and mathematics and their application to solving human problems. Civil engineering activities interact in many ways with the natural and social environments within which they take place. Accordingly, the civil engineering program strives to create an awareness of the ecological, social, economic, and political context of engineering and attempts to prepare the civil engineer for the necessary interactions with other professions and the public. An effort to instill an understanding of the role of the civil engineer in satisfying societal needs is an integral part of the civil engineering program.

Failure of a civil engineering system can result in loss of life. The Civil Engineering Code of Ethics requires that "Civil Engineers conduct themselves with integrity and professionalism, and above all else protect and advance the health, safety, and welfare of the public through the practice of Civil Engineering." This statement serves as a guiding principle for how the CEE Department approaches the professional preparation of its students for a career in this industry.

Program Educational Objectives and Student Learning Outcomes

Program Educational Objectives (PEOs) are statements that describe the expectations of graduates within 3-5 years after graduation. The CEE faculty, alumni, and employers have worked collaboratively to develop the PEOs of the Civil Engineering undergraduate program.

The **Program Educational Objectives** of the Civil Engineering undergraduate program are that, within a few years of program completion, alumni should:

1. Serve society in the practice of civil engineering or related professions and develop into leaders within their chosen fields.
2. Adhere to state and local rules of professional conduct and uphold the American Society of Civil Engineers Code of Ethics.
3. Apply civil engineering principles in the design, construction, operation, and maintenance of infrastructure and environmental systems, recognizing the complete life cycle, including deconstruction and reuse.
4. Communicate effectively over all mediums, fostering meaningful interactions with other technical disciplines, coworkers, clients, the public, and policymakers.
5. Exhibit proficiency in technical problem-solving.

Student Learning Outcomes are statements that describe what students are expected to know and be able to do at the time of graduation. At graduation, Civil Engineering students will have:

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

The Bachelor of Science program in Civil Engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org (http://www.abet.org/), under the General Criteria and the Program Criteria for Civil and Similarly Named Engineering Programs.

Curriculum

The freshman and sophomore years provide the mathematics, engineering mechanics, and basic science training that serves as the foundation of upper-division courses. During these first two years, students also gain a common technical background in the major. Selection of upper-division courses begins during the second semester of the sophomore year.

The civil engineering profession is broad and is composed of the following sub-disciplines: Construction Engineering and Management, Environmental Engineering, Geotechnical Engineering, Land Development, Materials Engineering, Structural Engineering, Transportation Engineering, and Water Resources Engineering. These sub-disciplines are organized into "Program Areas" that contain faculty with specific expertise in that sub-discipline and that teach and maintain undergraduate and graduate courses particular to that area. The undergraduate program provides unique flexibility to select coursework across the sub-disciples to produce graduates that are broadly trained but also provides depth within a student's area of interest. Further specialization in a particular sub-discipline is available through graduate study. The Civil Engineering program offers two majors: the Civil Engineering Major (p. 822) and the Environmental Engineering Major (https://catalog.vt.edu/undergraduate/college-engineering/civil-environmental-engineering/environmental-engineering-bs/).

Students are progressively exposed to civil engineering design through the curriculum, culminating in a focused design course experience. The projects assigned in design courses are open-ended, incorporate appropriate engineering standards, and require the application of knowledge from earlier courses in the curriculum. Projects not only apply technical knowledge to design appropriate physical facilities, but also include consideration of non-technical constraints that confront real-world projects. These additional considerations include such interdisciplinary issues as economics, environmental impact, and sustainability. Accordingly, teamwork and good professional communication skills are a significant part of each design project course experience.

Classroom instruction in the civil engineering program is reinforced by instructional laboratories in the major areas of civil engineering practice. These laboratory experiences provide training in collecting, analyzing, interpreting, and presenting data.

The department participates in the Cooperative Education and Internship Program in which qualified students may take a semester away from their education to gain valuable professional work experience. The department encourages all students to participate in professional work opportunities prior to graduation.

The contact person for undergraduate Civil and Environmental Engineering majors within the Civil Engineering program is Lauren Varboncoeur, CEE Academic Advisor at (540) 231-0981 or e-mail: lvarboncoeur@vt.edu (laurpv1@vt.edu).

Students earning the Bachelor of Science in Civil Engineering possess the technical skills required to enter practice as civil or environmental engineers in a wide range of organizations. Some students choose to pursue graduate education, leading to the M.Eng., M.S., or Ph.D. in civil engineering. Graduate degree programs are available in all Program Areas. Refer to the Graduate Catalog (https://secure.graduateschool.vt.edu/graduate_catalog/) for more information.

Civil Engineering Program

Admission to a degree program is competitive, with departmental restrictions established each year by the college. Entry into a degree-granting department requires that a student complete all first year required courses and maintain a competitive GPA. Applicants who begin their freshman year in the College of Engineering and earn a minimum 3.0

overall are guaranteed first choice of major. More information is available through the Engineering Education Department: https://eng.vt.edu/academics/undergraduate-students/resources-support/change-of-major.html.

The graduation requirements in effect during the academic year of admission to Virginia Tech apply. Requirements for graduation are listed for the Civil Engineering Major (p. 822) and the Environmental Engineering Major (https://catalog.vt.edu/undergraduate/college-engineering/civil-environmental-engineering/environmental-engineering-bs/). Students must satisfactorily complete all requirements and university obligations for degree completion. The university reserves the right to modify requirements in a degree program.

- Civil Engineering Major (p. 822)

Alumni Relations Manager: K. Lattimer

Undergraduate Course Descriptions (CEE)

CEE 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 2804 - Introduction to Civil and Environmental Engineering (3 credits)
Overview of the specialty areas within the civil engineering profession, professional engineer licensing, and engineering ethics. Includes recognizing contemporary issues in civil engineering, civil engineering work in the surrounding community, and the impact of civil engineering solutions on society. Emphasizes successful personal business practices for civil engineering professionals, to include the fundamentals of effective oral, written, and visual communication skills for the Civil Engineer. Introduction to engineering library resources. For Pathways Advanced Discourse credit, must complete combination of CEE 2804, CEE 3304, CEE 4804
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 2814 - Geomatics (4 credits)
Introduction to data measurement issues in the civil and environmental engineering sub disciplines. Collection techniques, analysis, errors, statistical description and visualization. Spatial measurements such as leveling, distance and angles, mapping and topographic surveys, the Global Positioning System, LiDAR, terrain models, earthwork methods, construction surveying, coordinate systems, and Geographic Information Systems. Non-CEE students are exempt from the CEE 2834 corerequisite.
Prerequisite(s): ENGE 1216 or ENGE 1414
Corequisite(s): CEE 2834
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

CEE 2834 - Civil Engineering Drawings and Virtual Modeling (3 credits)
Introduction to the use of Computer-Aided Drafting, Building Information Modeling and Geographic Information Systems software. Interpretation of civil engineering drawings. Creation of civil engineering plans and two- and three- dimensional visualizations. Professional collaboration tools. Basemap creation. Basic analysis tools utilizing Geographic Information Systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 3014 - Construction Management (3 credits)
Introduction to the fundamental elements involved in managing construction projects. Project lifecycle, delivery methods and contracts, equipment and labor productivity, scheduling, and cost estimating and control. Pre: Junior standing
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3104 - Introduction to Environmental Engineering (3 credits)
Overall view of environmental engineering with emphasis on hazardous waste management, water treatment, wastewater treatment, air pollution and its control, solid waste management, groundwater pollution and environmental regulations.
Prerequisite(s): CHEM 1035 and CHEM 1045 and (MATH 1026 or MATH 1206 or MATH 1206H or MATH 1226 or MATH 2016 or MATH 2024) and (PHYS 2305 or PHYS 2205)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3274 - Introduction to Land Development Design (3 credits)
An introduction to the land development design process including site selection and feasibility, environmental considerations, utility layout, grading, stormwater management and integrating planning with the design of infrastructure to support residential and commercial development.
Prerequisite(s): CEE 2814 and (CEE 2824 or CEE 2834)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3304 - Fluid Mechanics for Civil and Environmental Engineering (4 credits)
Introductory course in fluid mechanics. Includes concepts and measurements of fluid properties; computing hydrostatic and hydrodynamic forces on hydraulic structures; computing fluid pressures, discharges, and velocities; and determining energy losses in pipe flows. Course includes conducting hydraulic laboratory experiments and demonstrations, analyzing and interpreting collected data, and preparing technical laboratory reports. Emphasizes the fundamentals of effective interpersonal, written, and visual communication skills for technical civil engineering reports. Design Lab/Studio. For Pathways Advanced Discourse credit, must complete combination of CEE 2804, CEE 3304, CEE 4804
Prerequisite(s): ESM 2104 and CEE 2804
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3314 - Water Resources Engineering (4 credits)
Open channel flow; hydrology; hydraulic modeling; hydraulic machinery and structures; laboratory experiments and demonstrations. Design Lab/Studio.
Prerequisite(s): CEE 3304
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3404 - Introduction to Structural Engineering (3 credits)
Introduction to structural engineering as an art and science and its fundamental tenets; description of structural systems, structural loads, and load paths; structural models, case studies of successful and unsuccessful structural designs; calculations of forces and deformation for simple determinate structures (trusses, beams and simple frames) and indeterminate structures using virtual work, use of stiffness methods in computer programs.
Prerequisite(s): ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3424 - Reinforced Concrete Structures I (3 credits)
Behavior and design of reinforced concrete members based on ultimate strength. Uncertainty, load and resistance factors. Load paths in framing systems. Beams, columns and slabs in flexure and shear. Deflections and crack control. Design of reinforced concrete members. Columns under axial forces, shear and flexure.
Prerequisite(s): (CEE 3404 or BC 2214) and (CEE 3684 or BC 2044)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3434 - Design of Steel Structures I (4 credits)
Properties and behavior of structural steel. Design of steel members and connections using American Institute of Steel Construction specifications. Consideration of loads, structural safety, and serviceability. Design of members to resist tension, compression, and bending. Design of basic steel connections including tension connections, bearing plates, and base plates. Team-based design project to design a simple steel framed building. Design Lab/Studio.
Prerequisite(s): (CEE 3404 or BC 2214) and (CEE 3684 or ESM 3054 or BC 2044)
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3514 - Introduction to Geotechnical Engineering (4 credits)
Introduction to soil as an engineering material for construction and infrastructure support. Geological processes, soil classification, phase relations, geostatic and applied stresses, permeability, seepage effects, settlement, and strength. Laboratory testing, interpretation, and presentation of results. Application of geotechnical principles to civil and environmental engineering problems. Design Lab/Studio.
Prerequisite(s): ESM 2204 and GEOS 2104
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3604 - Introduction to Transportation Engineering (3 credits)
Planning, design and operation of transportation systems with emphasis in multimodal transportation techniques and unified system engineering theories to analyze large scale transportation problems. Discussion of Intelligent Vehicle Highway Systems (IVHS) and hands on experience in computer models in transportation operations and planning. Interactions between transportation infrastructure and environmental engineering planning. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3684 - Civil Engineering Materials (4 credits)
Fundamental nature and performance of civil infrastructure materials, including metals, portland cement concrete, asphalt concrete, polymers, and wood. Material properties, microstructure, and mechanical behavior. Laboratory experimental procedures and standardized testing, property variability, durability, sustainability and resilience. Design of cementitious and asphalt mixtures, experimental design, non-destructive testing. Design lab/studio.
Prerequisite(s): CHEM 1045 and CHEM 1035 and ESM 2204 and GEOS 2104 and (CEE 2814 or CEM 2824)
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3804 - Computer Applications for Civil and Environmental Engineers (3 credits)
Introduction to computer applications in civil and environmental engineering. Integration of quantitative analysis for design, data management, computer programming and problem solving skills with computer tools and techniques. Topics include systems analysis, numerical methods, optimization, data mining, computer programming and data queries. Analysis and interpretation of a global data set. Pre: Junior Standing.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3814 - Analytical Tools in Civil and Environmental Engineering (3 credits)
Computer programming and data analysis for civil and environmental engineering projects. Acquiring, cleaning and pre-processing data sets. Probability distributions, hypothesis testing, and regression modeling. Time series and frequency analysis. Data visualization.
Prerequisite(s): CEE 3804
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

CEE 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 4014 - Estimating, Production, and Cost Engineering (3 credits)
Interpretation of plans and specifications, preparation of construction estimates, and cost control. Methods analysis, resource requirements, and resource costs in building systems, including system components, and in large-scale civil engineering works such as highways, bridges, and hydraulic structures.
Prerequisite(s): CEE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BC 4024

CEE 4024 - Construction Control Techniques (3 credits)
Techniques used to plan, schedule, and control the Construction Process. Emphasizes manual and computer-based approaches. Focuses on an analytical approach towards the construction process whereby good technical methodologies and solutions are converted to reality through construction practices. A grade of C- or better required in prerequisite.
Prerequisite(s): CEE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4034 - Smart Sustainable Infrastructure (3 credits)
Challenges and barriers to sustainable infrastructure. Effects of a changing planet and society on current infrastructure systems. Technology and data use for engineering. Infrastructure data interpretation. Data-driven engineering solutions.
Prerequisite(s): CEE 3804
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4074 - Construction Engineering: Means and Methods (3 credits)
Construction means, methods, and equipment used to transform a particular design concept into a completed usable structure or facility. Selection and optimization of individual units as well as the systems needed to produce the required work to the required quality on time and on budget.
Prerequisite(s): CEE 3014 or CEM 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4104 - Water and Wastewater Treatment Design (3 credits)
Design of municipal water and wastewater treatment plants. Emphasis on characterization of water and wastewater and physical, chemical, and biological treatment methods. Sludge processing advanced treatment methods and treatment plant hydraulics are considered. A grade of C- or better required in prerequisites.
Prerequisite(s): CEE 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4114 - Fundamentals of Public Health Engineering (3 credits)
Public health engineering principles for protection against biological and chemical health hazards. Emphasis on major communicable diseases that plague mankind, organisms that cause them, routes of transmission, and engineering methods of control. Appropriate control methods for rural areas and developing countries.
Prerequisite(s): CEE 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4134 - Environmental Sustainability - A Systems Approach (3 credits)
Quantitative methods to evaluate environmental sustainability using a sytems approach. Sustainability assessment frameworks, oreintors and indicators, indicators of sustainable development, green-house gas emissions, renewable energy systems, whole-system design, economic systems and input-outpur techniques, system dynamics models, emergence and agent-based models. Class project requiring integration of environmental, economic and social systems using system dynamics and agent-based models. Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4144 - Air Resources Engineering (3 credits)
Effects, regulation, sources, and control of air pollution. Application of engineering calculations and models to estimate emissions, predict pollutant concentrations, and design pollution control equipment. Senior standing required. A grade of C- or better required in prerequisites.
Prerequisite(s): CEE 3104 or ENGR 3124 or GEOS 3114 or ENSC 3634
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4174 - Solid and Hazardous Waste Management (3 credits)
Introduction to the problems, regulations and techniques associated with the management of solid and hazardous waste. Composition, volume and characterization of the wastes. Design of collection and disposal systems, including landfills, solidification/stabilization and incineration. A grade of C- or better required in pre-requisite 3104.
Prerequisite(s): CEE 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4254 - Municipal Engineering (3 credits)
An introduction to the field of municipal engineering. Infrastructure, capital projects, financing, sustainability, disaster planning and response, and plan review for development projects. Senior standing required.
Prerequisite(s): CEE 3274
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4264 - Sustainable Land Development (3 credits)
An introduction to the modern techniques for developing land while maintaining a focus on long-term sustainability. Topics include site layout, stormwater impact, air quality and microclimate, living resources, LEED and EarthCraft development standards. Pre-requisite: Senior Standing required
Prerequisite(s): CEE 3274
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4274 - Land Development Design (3 credits)
Overview of land development projects including construction practices, legal issues, and government policies. Feasibility study, engineering evaluation. Grading and roadway design, layout design of lots, buildings, streets, sewers, and stormwater control. Interactive graphics and automated drafting.
Prerequisite(s): CEE 3274
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4284 - Advanced Land Development Design (3 credits)
Advanced course in land development design focusing on site grading and parking, stormwater management, and erosion control. Reviews project design criteria and applicable municipal and state guidelines. Uses CAD software for design and deliverables. Senior/Graduate standing required.
Prerequisite(s): CEE 3274
Corequisite(s): CEE 4274
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4304 - Hydrology (3 credits)
Precipitation, evaporation, consumptive use, infiltration; stream flow, flood routing; statistical analysis of hydrologic data, flood and drought forecasting, risk analysis, subsurface flow, well hydraulics, introduction to urban drainage design. A grade of C- or better required in pre-requisite.
Prerequisite(s): CEE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4314 - Groundwater Resources (3 credits)
Fundamentals of groundwater hydrology; flow through porous media, both saturated and unsaturated; flow to wells in both confined and unconfined aquifers; seepage of groundwater to canals and field drains; analysis of aquifer test data to quantify flow and storage parameters; contaminants in groundwater, basic introduction to groundwater modeling. A grade of C- or better required in pre-requisite 3304.
Prerequisite(s): CEE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4324 - Open Channel Flow (3 credits)
Mechanics of open channel flow, including uniform flow, gradually varied flow, channel transitions, and unsteady flow.
Prerequisite(s): CEE 3314
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4334 - Hydraulic Structures (3 credits)
Hydraulic analysis and design of engineering structures for water control, including reservoirs, dams, spillways, spilling basins, drainage structures, and hydraulic models.
Prerequisite(s): CEE 3314
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4344 - Water Resources Planning (3 credits)
Analysis of the water resources planning process and the institutional framework for water resources management. Criteria and procedures for evaluating management alternatives are examined, with emphasis on assessment of economic and environmental impacts. Senior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4384 - Coastal Engineering (3 credits)
Basic wave mechanics principles, surf-zone processes, littoral and sediment processes, shoreline features, astronomical tides, coastal hazards, and functional design of coastal structures. Field trips.
Prerequisite(s): CEE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4394 - Urban Water Sustainability (3 credits)
Coupled socio-hydrologic feedback loops and implications for water systems resilience. Urban water transitions theory and the evolution of water systems through time. Water productivity and the soft path for water. Ecosystem services. Urban water system challenges, including climate change, urbanization, equity and environmental justice, and water security. Centralized and distributed drinking water, stormwater, and wastewater treatment systems. Statistical analysis of urban water systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4404 - Intermediate Structural Analysis (3 credits)
Analysis of statically indeterminate 2D and 3D beam, truss and frame structures by the force and displacement methods. Computer implementation of force method. Influence lines and approximate methods of analysis.
Prerequisite(s): CEE 3404
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4454 - Masonry Structural Design (3 credits)
Masonry materials, material testing, material specifications. Structural behavior and design of masonry elements (walls, beams, and columns) and systems used in structures. Construction techniques and the details of masonry construction. Building codes relating to analysis and design of masonry structures.
Prerequisite(s): CEE 3684 and CEE 3424
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4514 - Methods in Geotechnical Engineering (3 credits)
Principles and techniques for characterizing earth materials (soil and rock) for civil engineering projects in various regional environments; with emphasis on the interdisciplinary approach to field exploration and site description through soil mechanics theory, geologic correlations, geophysical methods, in site testing and sampling. A grade of C- or better required in pre-requisite 3514.
Prerequisite(s): CEE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4534 - Earth Pressures and Foundation Structures (3 credits)
Earth pressure theories and their applications to the design of retaining structures, anchors, and excavation bracing. Bearing capacity and settlement of shallow foundations. Types and capacity of deep foundations.
Prerequisite(s): CEE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4544 - Design of Earth Structures (3 credits)
Application of geotechnical engineering principles in the design and construction of earth structures. Subsurface models, shear strength of soil, slope stability, earth fills, earth retention, ground improvement, sustainability considerations, geotechnical reporting. Team-based design project.
Prerequisite(s): CEE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4554 - Natural Disaster Mitigation and Recovery (3 credits)
Causes, mechanics, classifications, and forces associated with tornadoes, hurricanes, floods, earthquakes, and landslides. Resistance evaluation for existing ground, facilities and structures. Hazard-resistant design of new facilities. Risk and reliability assessment and decision analysis. Strategies and designs for natural disaster risk mitigation. Emergency response for protection of life and property and restoration of lifelines. Includes an interdisciplinary team project. Prerequisite: Senior Standing Required
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4564 - Introduction to Coastal and Marine Geotechnics (3 credits)
Geotechnical aspects of coastal and marine engineering. Introduction to the coastal zone as a working environment. In-situ geotechnical methods and complementary techniques for investigation. Survey strategies. Local field trips for demonstrating methods, practice and design. A grade of C- or better is required in prerequisite 3514.
Prerequisite(s): CEE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4604 - Traffic Engineering (3 credits)
Study of traffic and parking characteristics; application of traffic control devices; principles and techniques used to improve the efficiency and safety of traffic flow systems. A grade of C- or better required in pre-requisite 3604.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4610 - Mechanics of Composite Materials (3 credits)
Introduction to the deformation, stress, and strength analysis of continuous-fiber-polymer-matrix laminated composites. Fabrication, micromechanics of stiffness and expansional coefficients, classical lamination theory (CLT). Environmentally induced stresses. Computerized implementation and design
Prerequisite(s): ESM 2204 or AOE 2024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4044

CEE 4614 - Concrete Materials (3 credits)
Fundamental properties of portland cement concretes. Concrete mixture design procedures. Testing of fresh and hardened properties of concrete. Durability and degradation mechanisms. Condition assessments, forensic materials engineering, and repair strategies.
Prerequisite(s): CEE 3684 or BC 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4624 - Planning Transportation Facilities (3 credits)
Transportation planning process; urban and regional studies, surveys, data analysis, model development and testing; transportation management, administration, finance, system evaluation, implementation, and integration.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4634 - Infrastructure Condition Assessment (3 credits)
Infrastructure components and assessment needs; physical and chemical properties of construction materials; deterioration causes, assessment methods, nondestructive evaluation techniques, infrastructure management systems, performance models, service-life-cycle estimates.
Prerequisite(s): CEE 3684
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4654 - Geometric Design of Highways (3 credits)
Functional design of highways; curves, intersections, interchanges, drainage, and other features involved in highway safety and traffic efficiency.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4664 - Pavement Design (3 credits)
Principles underlying methods for the design of various elements of flexible and rigid pavements for highways and airports; climate and traffic effects; pavement management systems. A grade of C- or better required in pre-requisite 3684.
Prerequisite(s): CEE 3684
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4674 - Airport Planning and Design (3 credits)
Airport planning and economic justification, site selection, configuration, development and design of terminal areas, demand forecasting, access, traffic control. A grade of C- or better required in pre-requisite 3604.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4684 - Transportation Safety (3 credits)
Basic principles associated with transportation safety related to humans, vehicles and infrastructure as well as principles of design for safety and practices of empirical evaluation of safety. Principles and practices of accident investigation and injury epidemiology as well as safeguards and control practices. A grade of C- or better required in prerequisite.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4694 - Freight Operations (3 credits)
Introduction to the operation of modal and intermodal freight facilities. Impact of goods movement on the multi-modal transportation system. Role of privately owned and operated goods movement on public sector transportation operations, management, and decision making. Communication of impacts.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4804 - Professional and Legal Issues in Civil Engineering (3 credits)
An overview of civil engineering professional practice, including business etiquette, professional development, leadership, and lifelong learning. Emphasizes the importance of registration for civil engineers. Compares and contrasts common project delivery methods, processes, key players, and management topics for the design and construction industry. Incorporates analyses of legal and ethical aspects of civil engineering practice. Analyzes contemporary issues and public policies that impact the civil engineering profession, and the impacts of civil engineering solutions on society. Emphasizes effective written, oral, and visual professional communication for the civil engineering professional. For Pathways Advanced Discourse credit, must complete combination of CEE 2804, CEE 3304, CEE 4804
Prerequisite(s): CEE 2804
Corequisite(s): CEE 3304
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4814 - Risk and Reliability Analysis in Civil and Environmental Engineering (3 credits)
Risk assessment and reliability analysis as applied to civil engineering applications. Identification and modeling of non-deterministic problems in civil engineering design and decision making. Application of probability and statistics to performance analysis. Development of probabilistic engineering safety assessments.
Prerequisite(s): CEE 3804
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4824 - Introduction to Forensic Engineering (3 credits)
Basic processes in engineering failure investigations: response, data gathering, testing, modeling, and reporting. Origins of natural and man-made disasters, role of building codes and material specifications, standard of care, ethical standards and legal issues as related to forensic engineering.
Prerequisite(s): CEE 3684 and ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4834 - Cyber-Physical and Remote Sensing Methods in Civil Engineering (3 credits)
Cyber-physical systems and remote sensing methods in civil engineering. Electrodynamics and fundamental physical operating principles. Sensing and sensor deployment strategies. Data acquisition and reduction. Signal and image processing techniques. Data interpretation, management, and curation.
Prerequisite(s): CEE 3814 or BSE 3144
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4844 - Building Information Modeling and Integrated Practices (3 credits)
Introduction to Building Information Modeling (BIM). Architectural modeling, custom parametric object creation, virtual structural modeling. Constructability and construction management analysis. Reality capturing technologies. Virtual reality and immersive virtual environments. Contemporary topics and new directions for BIM technologies. Pre: Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Civil Engineering Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
CEE 2834	Civil Engineering Drawings and Virtual Modeling (C-)	3
CEE 2814	Geomatics (C-)	4
CEE 3814	Analytical Tools in Civil and Environmental Engineering	3
Select two CEE Fundamental Electives (with Lab)		8
Select four CEE Fundamental Electives		12
Subtotal		30
Major Requirements		
CHEM 1045	General Chemistry Laboratory (C-)	1
ESM 2104	Statics (C-)	3
ESM 2204	Mechanics of Deformable Bodies (C-)	3
GEOS 2104	Elements of Geology (C-)	3
ISE 2014	Engineering Economy	2
MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus	3
MATH 2214	Introduction to Differential Equations	3
Select three CEE Advanced Electives		9
Select one CEE Advanced Elective (Design Project)		3
Career Bridge Experience [1]		
ENGE 3900	Bridge Experience	0
Technical and Restricted Electives		
Select appropriate electives from the two lists shown.		12
Subtotal		45
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
CEE 2804	Introduction to Civil and Environmental Engineering (1A)	3
CEE 3304	Fluid Mechanics for Civil and Environmental Engineering (1A)	4
CEE 4804	Professional and Legal Issues in Civil Engineering (1A)	3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six hours in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six hours in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
PHYS 2305	Foundations of Physics	4
CHEM 1035	General Chemistry	3
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F)	4
MATH 1226	Calculus of a Single Variable (5F ; C-)	4
CEE 3804	Computer Applications for Civil and Environmental Engineers (5A)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three hours in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216 or ENGE 1414	Foundations of Engineering and Foundations of Engineering (6D ; C-) Foundations of Engineering Practice	4
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathways 7 should be double-counted with either a Pathways 2 or 3 course to avoid taking any additional credit hours.		
Subtotal		53
Total Credits		**128**

CEE Electives

The CEE department requires 12 credits of **Fundamental Electives**, 8 credits of **Fundamental Electives with lab**, 9 credits of **Advanced Electives**, 3 additional credits of **Advanced Electives (Design Project)**, and 12 credits of **Technical** and **Restricted Electives** as follows.

Fundamental and Advanced Electives (32 credits)

Fundamental and Advanced Electives provide adequate breadth across the discipline and depth of knowledge in specialty areas of interest. Interdisciplinary Technical Electives, Independent Study, and Undergraduate Research courses do not satisfy these requirements but may be taken to satisfy the Technical Electives.

Fundamental and Advanced Electives are selected from the list below and must meet the following criteria:

1. Complete *Fundamental courses* in 6 of the 8 specialty areas, at least two of which must have a lab (20 credits). These courses count toward satisfying degree core requirements.
2. Complete one *Advanced course* in 3 of the 6 specialty areas in which *Fundamental courses* were selected in Step 1 (9 credits).
3. Complete one additional *Advanced course* in a specialty area in which *an Advanced course* was selected in Step 2 (3 credits).
4. Within the selections made above, complete at least one *Design Project course*.

Technical and Restricted Electives (12 credits)

Technical Electives include any course selected from the list of Fundamental, Advanced, and Interdisciplinary Technical Electives. Restricted Electives are earned by selecting courses from the approved list of Restricted Electives or selecting courses within an officially declared minor selected from the list of approved minors. Technical and Restricted Electives can be satisfied in one of three ways as follows:

1. Complete 6 credits of Technical Electives and 6 credits of Restricted Electives

2. Complete 9 credits of Technical electives and 3 credits of Restricted Electives
3. Complete 12 credits of Technical Electives

Another option for earning Technical and Restricted Electives allows students to request substitution of up to 6 credits of Restricted Electives for up to 6 credits of Technical Electives. To be considered for the substitution option, students must follow these steps:

1. Meet with an Academic Advisor. Discuss the goals for the substitutions and seek guidance. Students should carefully consider their options and ensure they are making the best choices for their educational and professional development.
2. Develop a Plan of Study. Outline which courses you wish to substitute and how they fit into your overall academic plan.
3. Prepare a Written Proposal. In the narrative, describe the added value of the courses to your degree and career aspirations. Clearly articulate how the courses will help you achieve your professional goals.
4. Verbal Presentation. Orally defend your proposal to the Associate Department Head for Undergraduate Affairs or their designee.

Fundamental, Advanced and Interdisciplinary Technical Electives

Code	Title	Credits
Construction Engineering and Management		
CEE 3014	Construction Management (Fundamental)	3
CEE 4014	Estimating, Production, and Cost Engineering [2]	3
CEE 4024	Construction Control Techniques	3
CEE 4034	Smart Sustainable Infrastructure	3
CEE 4074	Construction Engineering: Means and Methods	3
Structural Engineering and Materials		
CEE 3404	Introduction to Structural Engineering (Fundamental)	3
CEE 3424	Reinforced Concrete Structures I	3
CEE 3434	Design of Steel Structures I [2]	4
CEE 4404	Intermediate Structural Analysis	3
CEE 4454	Masonry Structural Design	3
Environmental Engineering		
CEE 3104	Introduction to Environmental Engineering (Fundamental)	3
CEE 4104	Water and Wastewater Treatment Design [2]	3
CEE 4114	Fundamentals of Public Health Engineering	3
CEE 4134	Environmental Sustainability - A Systems Approach	3
CEE 4144	Air Resources Engineering	3
CEE 4174	Solid and Hazardous Waste Management	3
Materials		
CEE 3684	Civil Engineering Materials (Fundamental with lab)	4
CEE 4610	Mechanics of Composite Materials	3
CEE 4614	Concrete Materials	3
CEE 4634	Infrastructure Condition Assessment	3
CEE 4664	Pavement Design [2]	3
Land Development		
CEE 3274	Introduction to Land Development Design (Fundamental)	3
CEE 4264	Sustainable Land Development	3
CEE 4274	Land Development Design [2]	3
CEE 4284	Advanced Land Development Design	3
Geotechnical Engineering		
CEE 3514	Introduction to Geotechnical Engineering (Fundamental with lab)	4
CEE 4514	Methods in Geotechnical Engineering	3
CEE 4534	Earth Pressures and Foundation Structures	3
CEE 4544	Design of Earth Structures [2]	3
CEE 4564	Introduction to Coastal and Marine Geotechnics	3
Water Resources Engineering		
CEE 3314	Water Resources Engineering (Fundamental with lab)	4
CEE 4304	Hydrology	3
CEE 4314	Groundwater Resources	3
CEE 4324	Open Channel Flow	3
CEE 4334	Hydraulic Structures [2]	3
CEE 4344	Water Resources Planning	3
CEE 4384	Coastal Engineering	3
CEE 4394	Urban Water Sustainability	3
Transportation Engineering		
CEE 3604	Introduction to Transportation Engineering (Fundamental)	3
CEE 4604	Traffic Engineering	3
CEE 4624	Planning Transportation Facilities	3
CEE 4654	Geometric Design of Highways [2]	3
CEE 4674	Airport Planning and Design	3
CEE 4684	Transportation Safety	3
CEE 4694	Freight Operations	3
Interdisciplinary Technical Electives, Independent Study, Undergraduate Research		
CEE 4554	Natural Disaster Mitigation and Recovery	3
CEE 4824	Introduction to Forensic Engineering	3
CEE 4844	Building Information Modeling and Integrated Practices	3
CEE 4834	Cyber-Physical and Remote Sensing Methods in Civil Engineering	3
CEE 4974	Independent Study	1-19
CEE 4994	Undergraduate Research	1-19
5000-Level Advanced Electives		
Students in their senior year with a 3.00 or better GPA may enroll in 5000-level courses satisfying undergraduate degree requirements. See your academic advisor.		

Restricted Electives

Code	Title	Credits
Study Abroad		
CEE 3954	Study Abroad	1-19
Programming		
CS 1044	Introduction to Programming in C	3

[1] Career Bridge Experiences help prepare students for post-graduation life and develop a professional identity. Internships, Co-ops, and Undergraduate Research are examples of possible Career Bridge Experiences. Students must participate in a Career Bridge Experience to complete the BSCE degree. Because some of these experiences are not credit bearing, the ENGE 3900 course is used to track and assess student participation in Career Bridge and to record fulfillment of this degree requirement on the transcript. Students should enroll in ENGE 3900 during the semester (or one of the semesters) that they undertake the Career Bridge Experience. Enrollment in ENGE 3900 requires approval of a Career Bridge Plan.

Further information about acceptable Career Bridge Experiences and the process for submitting a Career Bridge Plan are explained in CEE 2804.

2 Design Project Course

3 Enrollment is on a space-available basis during drop-add.

4 Electives chosen within the minor must include 6 credit hours of non CEE courses that do not satisfy BSCE degree requirements.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The CEE Department fully supports this policy. Specific expectations for satisfactory progress for Civil Engineering majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (undergradcatalog.registrar.vt.edu/ (http://undergradcatalog.registrar.vt.edu/)).
- A 2.0 overall GPA and a 2.0 in-major GPA must be maintained for continued enrollment in CEE. The in-major GPA consists of all courses taken with a CEE designator.
- Upon completion of 64 GPA hours, a student must have satisfactorily completed CEE 2804 Introduction to Civil and Environmental Engineering, CEE 2814 Geomatics, and CEE 2834 Civil Engineering Drawings and Virtual Modeling.
- Be enrolled in at least one 3-credit CEE course each fall and spring semester.

Graduation Requirements

Students must pass all required courses and both the in-major and overall GPA must be at least 2.0 for graduation. The in-major GPA consists of all courses taken under the CEE designation.

C- Policy

A C- or better grade is required in any course that is a prerequisite for a CEE course. The notation (C-) is provided for first and second-year advising purposes only and indicates that those courses are prerequisites for a course with a CEE designator.

Additional Comments

Displayed course offerings are subject to sufficient resources. Courses are taught in the term in which they appear on the roadmap. CEE Fundamentals courses are typically taught each fall and spring term, whereas CEE Advanced courses may not be offered each academic term. Consult the CEE course listing and your departmental advisor for updates.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
2. MATH 2405H Mathematics in a Computational Context + MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra and MATH 2204 Introduction to Multivariable Calculus and MATH 2214 Introduction to Differential Equations
3. ESM 2114 Statics & Structures may be substituted for ESM 2104 Statics
4. ME 3024 Engineering Design and Economics may be substituted for ISE 2014 Engineering Economy
5. ESM 2114 Statics & Structures + AOE 2024 Thin-Walled Structures may be substituted for ESM 2104 Statics and ESM 2204 Mechanics of Deformable Bodies

Foreign Language Requirements

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

•

Roadmap

First Year		
Fall Semester		**Credits**
CHEM 1035	General Chemistry (C-)	3
CHEM 1045	General Chemistry Laboratory (C-)	1
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable (C-)	4
ENGE 1215	Foundations of Engineering	2
Pathways		3
	Credits	**16**
Spring Semester		
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable (C-)	4
PHYS 2305	Foundations of Physics (C-)	4
ENGE 1216	Foundations of Engineering (C-)	2
Pathways		3
	Credits	**16**
Second Year		
Fall Semester		
ESM 2104	Statics (C-)	3
MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus	3
CEE 2834	Civil Engineering Drawings and Virtual Modeling (C-)	3
CEE 2804	Introduction to Civil and Environmental Engineering (C-)	3
	Credits	**15**
Spring Semester		
ESM 2204	Mechanics of Deformable Bodies (C-)	3
GEOS 2104	Elements of Geology (C-)	3
CEE 3804	Computer Applications for Civil and Environmental Engineers (C-)	3
MATH 2214	Introduction to Differential Equations	3
CEE 2814	Geomatics (C-)	4
	Credits	**16**
Third Year		
Fall Semester		
CEE 3304	Fluid Mechanics for Civil and Environmental Engineering	4
ISE 2014	Engineering Economy	2
CEE Fundamental Elective (with Lab)		4
CEE Fundamental Elective		3
Pathways		3
	Credits	**16**
Spring Semester		
CEE 3814	Analytical Tools in Civil and Environmental Engineering	3
CEE Fundamental Elective (with Lab)		4
CEE Fundamental Elective		3

CEE Fundamental Elective		3
CEE 4804	Professional and Legal Issues in Civil Engineering	3
	Credits	**16**
Fourth Year		
Fall Semester		
CEE Fundamental Elective		3
CEE Advanced Elective (Design Project)		3
CEE Advanced Elective		3
Technical Elective		3
Restricted Electives		3
Pathways		3
	Credits	**18**
Spring Semester		
CEE Advanced Elective		3
CEE Advanced Elective		3
Technical Elective		3
Restricted Elective		3
Pathways		3
	Credits	**15**
	Total Credits	**128**

Computer Science

Our Website (http://www.cs.vt.edu)

The Field of Computer Science

In a contemporary world where every educated person must have some knowledge of computing, the Department of Computer Science offers degree programs and courses to meet a variety of needs. The department offers a bachelor of science degree to prepare specialists in the area of computer science itself, a minor in computer science, minors in specialized areas such as cybersecurity and human-computer interaction, and individual courses directed to the needs of non-majors who will be using computers as tools in their chosen careers. The department also offers the M.S., M.Eng., and Ph.D. in computer science (see Graduate Catalog (https://catalog.vt.edu/graduate/)).

Computer science involves far more than just writing computer programs. It is a technically rigorous field that requires a strong background in mathematics. Computer scientists must be good at problem solving. Their work requires the ability to think abstractly and to represent real-world objects and interactions in ways that can be manipulated by a computer. The field of computer science is characterized by rapid change and entrepreneurship, with new opportunities emerging every year to improve life in diverse areas such as education, communication, science, commerce and entertainment.

Accreditation, Program Educational Objectives, and Student Learning Outcomes

The Bachelor of Science degree in Computer Science is accredited by the Computing Accreditation Commission of ABET, www.abet.org (http://www.abet.org), under the commission's General Criteria and the Program Criteria for Computer Science and Similarly Named Engineering Programs.

Part of the accreditation process is a clear statement of program educational objectives and desired student learning outcomes for graduates. The following program educational objectives describe what graduates of the Virginia Tech Computer Science undergraduate program are expected to attain within a few years of graduation. Alumni will have:

- Demonstrated technical expertise by applying computer science knowledge and practice to solve challenging problems, whether in employment, graduate study, or individual pursuits;
- Advanced their skills in communication, teamwork, and professional and ethical behavior;
- Demonstrated leadership in their technical or professional pursuits;
- Engaged in post-graduate learning through graduate studies, professional improvement opportunities, or self-study;
- Served society through professional or personal contribution.

These objectives are supported by a curriculum that seeks to have its graduates achieve the following student learning outcomes upon graduation. Graduates of the program will have an ability to:

1. Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions.
2. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
3. Communicate effectively in a variety of professional contexts.
4. Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
5. Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.
6. Apply computer science theory and software development fundamentals to produce computing-based solutions.

Degree Requirements

Students pursuing the Bachelor of Science Degree in Computer Science choose one of three majors. The Computer Science major is designed to provide a broad computer science background that will prepare a student for a wide variety of professional careers or to continue study at the graduate level. The Secure Computing major offers a more specialized path for students who are especially interested in secure computing and cybersecurity topics. The Data-Centric Computing Major offers a focus on topics in data science, data analytics, and computational aspects of big data computing. All majors include a set of foundational courses in software design and development, algorithms, and computer organization at the freshmen and sophomore level. Students at the junior and senior level select one theoretical course, several elective courses and a capstone course according to their individual interests.

Opportunities for Majors

The department offers computer science majors the opportunity to enhance their education through a variety of curricular and extracurricular activities. Students who meet the requirements for independent study or undergraduate research can pursue research or individualized study under the direction of a faculty member. Through the Honors College, qualified students can work toward earning an Honors Laureate Diploma for their degree. Students may also elect to earn both the bachelor's and master's degrees in an accelerated undergraduate/graduate program. The Cooperative Education Program makes it possible for students to acquire professional experience while pursuing their degree. The department's corporate partnership program hosts large career fairs in both Fall and Spring semesters.

The department sponsors multiple student organizations, including the student chapter of the Association for Computing Machinery (ACM), the Association for Women in Computing (AWC), the CS Community Service organization, and the Programming Team. Additional opportunities for experiential learning and professional development include serving as a teaching assistant or department ambassador, attending a professional development or research conference, participating in study abroad opportunities, and participating in annual research competitions and hackathons. Financial aid is available through numerous college and department endowed scholarships.

Information for Non-Majors

The department offers a Computer Science minor for non-majors seeking a solid general background in computer science. The department also offers minors focused on human-computer interaction and cybersecurity. Please visit the department's undergraduate program website for more information.

Computational Facilities

The Department of Computer Science possesses extensive computational facilities for both instruction and research. There are several undergraduate teaching laboratories and a number of specially equipped research laboratories. These include large parallel computing clusters and numerous compute and file servers for research and instruction in areas such as artificial intelligence, machine learning, digital libraries, software engineering, bioinformatics and networking. The department also operates extensively equipped laboratories for human-computer Interaction, virtual environments and information visualization. Students studying computer science are supported by two department-specific Undergraduate Learning Centers on campus.

- Computer Science Major (p. 833)
- Data-Centric Computing Major (p. 837)
- Secure Computing Major (p. 841)

Head: C. Julien
Associate Department Head for Undergraduate Studies: S. H. Edwards
Associate Department Head for Graduate Studies: E. Tilevich
Associate Department Head for Faculty Development: A. R. Butt
Associate Department Head for Research: T. M. Murali
Thomas L. Phillips Professor: N. Ramakrishnan
Frank J. Maher Professor: D. Bowman
W.C. English Professor: W. Lou
John W. Hancock Professor: D. Nikolopoulos
Professors: O. Balci, A. R. Butt, K. W. Cameron, S. H. Edwards, W. Feng, S. Flammia, E. A. Fox, L. S. Heath, M. Kantarcioglu, B. Knapp, C. T. Lu, R. McMahan, T. M. Murali, C. Noh, C. L. North, A. Onufriev, C. Reddy, C. Ribbens, A. Sandu, C. A. Shaffer, E. Tilevich, D. Yao, and L. Zhang.
Associate Professors: G. Back, D. Bhattacharya, Y. Cao, J. H. Cho, H. Eldardiry, D. Gracanin, M. Hicks, X. Jian, B. Ji, A. Karpatne, K. Luther, D. S. McCrickard, and N. Meng.
Assistant Professors: C. Brown, Y. Chen, T. Chung, B. David-John, P. Gao, M. Gulzar, S. Hasan, T. Hoang, S. Khatri, S. W. Lee, H. Li, A. Mantri, E. Rho, P. Sashittal, J. Sikora, K. Sundararajah, C. Thomas, B. Viswanath, T. Vu, X. Wang, D. Williams, I. Williams, P. Yanardag, Y. Yao, and D. Zhou.
Associate Professors of Practice: M. Ellis and G. Kulczycki
Collegiate Associate Professors: B. Edmison, S. Hamouda, S. Hooshangi, E. Olimpiew, R. Jafari, and M. Seyam.
Collegiate Assistant Professors: M. Cameron, O. Emebo, M. Farghally, V. Garg, T. Mengistu, and S.B. Nizamani.
Advanced Instructors: D. McPherson
Instructors: S. Cao, H. Hillman, A Senger, and P. Sullivan
Professor Emeritus: D. C. S. Allison, J. D. Arthur, R. W. Ehrich, D. G. Kafura, J. A. N. Lee, H. R. Hartson, R. E. Nance, B. Ryder, D. Tatar, and L. T. Watson

Undergraduate Course Descriptions (CS)

CS 1014 - Introduction to Computational Thinking (3 credits)
An exploration of basic ideas of computational thinking focusing on the perspectives, thought processes, and skills that underlie computational approaches to problem formulation and problem solving. Applications of computational tools to investigate complex, large-scale problems in a variety of knowledge domains. Basic introduction to algorithms and a practical programming language. Examination of the societal and ethical implications of computational systems.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 1044 - Introduction to Programming in C (3 credits)
Fundamental concepts underlying software solutions of many problems. Structured data, statement sequencing, logic control, input/output, and functions. The course will be taught using a structured approach to programming. Partially duplicates 1344.
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 1054 - Introduction to Programming in Java (3 credits)
An introduction to object-oriented programming using the Java language. Fundamental concepts underlying programming and software solutions to many problems. Structured data, statement sequencing, logic control, classes, objects, methods, instantiation of classes, sending messages to objects. The impact of computing on issues of diversity and inclusion.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 1064 - Introduction to Programming in Python (3 credits)
Introduction to programming in Python contextualized with scientific and engineering problems. Computational problem-solving skills and software solutions in addition to Python language fundamentals. The basics of control flow with loops and conditionals, state tracing and manipulation, simple and complex types, organization of code using functional and object-oriented coding strategies, and data processing. Create, interpret, and debug programs. Ethically debate important issues in computing culture.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 1114 - Introduction to Software Design (3 credits)
Fundamental concepts of programming from an object-oriented perspective. Basic software engineering principles and programming skills in a programming language that supports the object-oriented paradigm. Simple data types, control structures, array and string data structures, basic algorithms, testing and debugging. A basic model of the computer as an abstract machine. Modeling and problem-solving skills applicable to programming at this level. Partially duplicates 1054, 1124, and 1705.
Corequisite(s): MATH 1225
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

CS 1944 - Computer Science First Year Seminar (1 credit)
An introduction to academic and career planning for computer science majors.
Prerequisite(s): CS 1114 or CS 2064 or ECE 2514
Instructional Contact Hours: (1 Lec, 1 Crd)

CS 2064 - Intermediate Programming in Python (3 credits)
Advanced uses of control flow and data processing, data structures, computational techniques, object-oriented programming, and modern data science pipelines. Creating, interpreting, and debugging complex programs. Problems and projects contextualized for scientists and engineers. Implementation of Python programs in data science and production environments, production of object-oriented solutions to complex problems, and ethical implications of technological change.
Prerequisite(s): CS 1064
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 2104 - Introduction to Problem Solving in Computer Science (3 credits)
This course introduces the student to a broad range of heuristics for solving problems in a range of settings that are relevant to computation. Emphasis on problem-solving techniques that aid programmers and computer scientists. Heuristics for solving problems in the small (classical math and word problems), generating potential solutions to real-life problems encountered in the profession, problem solving through computation, and problem solving in teams.
Prerequisite(s): (MATH 1205 or MATH 1225 or MATH 1526) and (CS 1114 or CS 2064 or ECE 2514)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 2114 - Software Design and Data Structures (3 credits)
A programming-intensive exploration of software design concepts and implementation techniques. Builds on knowledge of fundamental object-oriented programming. Advanced object-oriented software design, ethics in computing, algorithm development and analysis, and classic data structures. Includes a team-based software project.
Prerequisite(s): CS 1114 or CS 2064
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

CS 2144 - Competitive Problem Solving I (3 credits)
Fundamentals of algorithms, data structures, and implementation techniques, taught in a setting that combines collaborative practice with competitive exercise. Students practice to solve problems using a computer, which are judged by automated evaluation software for correctness and efficiency. Practice with data structures including arrays, lists, maps, and trees, as well as algorithmic strategies including recursion, divide-and-conquer, dynamic programming, search and traversal algorithms, graph representations, and computational geometry. Macro- and micro optimization techniques to improve efficiency are emphasized.
Prerequisite(s): CS 1114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 2164 - Foundations of Contemporary Security Environments (3 credits)
Introduction to multiple analytical perspectives on contemporary security environments, including political, legal, ethical, technical, environmental and historical and cultural perspectives relative to the conception, design and implementation of security solutions, practices, and policies. Emphasizes applying and analyzing the effectiveness of diverse procedures, tools and policies used in security and privacy solutions, decision-making, risk management and operational policy to mitigate local, national, international and global threats.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIT 2164, PSCI 2164

CS 2304 - Topics in Programming Systems (1 credit)
Guided self-study in a specific programming system, its syntax and applications. Based on prior knowledge of the programming process and experience in programming with some high-level language. Systems include JavaScript, C++, CUDA, Ruby, SQL, FORTRAN, UNIX, etc. May be taken three times for credit with different system each time. May be taken only twice for CS major or minor credit.
Prerequisite(s): CS 2114
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

CS 2505 - Introduction to Computer Organization (3 credits)
An introduction to the design and operation of digital computers. Works up from the logic gate level to combinational and sequential circuits, information representation, computer arithmetic, arithmetic/logic units, control unit design, basic computer organization, relationships between high level programming languages and instruction set architectures. A grade of C or better is required in CS prerequisite. Corequisites: MATH 2534 or MATH 3034.
Prerequisite(s): CS 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 2506 - Introduction to Computer Organization (3 credits)
An introduction to the design and operation of digital computers. Instruction formats and construction, addressing modes, instruction execution, memory hierarchy operation and performance, pipelining, input/output, and the relationships between high level programming languages and machine language. A grade of C or better is required in CS pre-requisite 2505 and 2114.
Prerequisite(s): (CS 2114 or ECE 3514) and (CS 2505 or ECE 2564) and (MATH 2534 or MATH 3034)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 2984E - Special Study (1-19 credits)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv.
Instructional Contact Hours: Variable credit course

CS 3114 - Data Structures and Algorithms (3 credits)
Advanced data structures and analysis of data structure and algorithm performance. Sorting, searching, hashing, and advanced tree structures and algorithms. File system organization and access methods. Ethical issues in the context of data analysis and software performance. Course projects require advanced problem-solving, design, and implementation skills.
Prerequisite(s): (CS 2114 or ECE 3514) and (CS 2505 or ECE 2564) and (MATH 2534 or MATH 3034)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3214 - Computer Systems (3 credits)
Introduction to computer systems as they are relevant to application programmers today, with emphasis on operating system principles. Operating system design and architectures; processes; threads, synchronization techniques, deadlock; CPU scheduling; system call interfaces, system level I/O and file management; shell programming; separate compilation, loading and linking; inter-process communication (IPC); virtual and physical memory management and garbage collection; network protocols and programming; virtualization; performance analysis and optimization. A grade of C or better is required in CS pre-requisites 2506 and 2114.
Prerequisite(s): (CS 2506 and CS 2114) or (ECE 2564 and ECE 3574)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3274 - Software Reverse Engineering (3 credits)
Theory and practice of software reverse engineering, static and dynamic analysis techniques and tools, reverse engineering of malware, obfuscated binaries, communications and command and control analysis, reverse engineering of non-binary software.
Prerequisite(s): (CS 2114 and CS 2506) or (ECE 2534 and ECE 3514)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3304 - Comparative Languages (3 credits)
This course in programming language constructs emphasizes the run-time behavior of programs. The languages are studied from two points of view: (1) the fundamental elements of languages and their inclusion in commercially available systems; and (2) the differences between implementations of common elements in languages. A grade of C or better required in CS prerequisite 3114.
Prerequisite(s): CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3314 - Programming Language Theory and Practice (3 credits)
Theoretical basis of programming languages, including formal languages, computability theory, type theory, and programming language design. Standard syntax notations. Fundamental programming language features for control flow and data representation. Language implementation strategies. Unsolvable problems in the context of programming languages and computing.
Prerequisite(s): CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3414 - Numerical Methods (3 credits)
Computational methods for numerical solution of non-linear equations, differential equations, approximations, iterations, methods of least squares, and other topics. A grade of C or better required in CS prerequisite 1044 or 1705. A student can earn credit for at most one of 3414 and MATH 4404.
Prerequisite(s): (CS 1044 or CS 1705 or CS 1114 or CS 1124) and MATH 2406H or (CMDA 2005 and CMDA 2006) or (MATH 2214 or MATH 2214H) and (MATH 2204H or MATH 2204)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MATH 3414

CS 3604 - Professionalism in Computing (3 credits)
Studies the ethical, social, and professional concerns of the computer science field. Covers the social impact of the computer, implications and effects of computers on society, and the responsibilities of computer professionals in directing the emerging technology. The topics are studied through case studies of reliable, risk-free technologies, and systems that provide user friendly processes. Specific studies are augmented by an overview of the history of computing, interaction with industrial partners and computing professionals, and attention to the legal and ethical responsibilities of professionals. This is a web-supported course, incorporating writing intensive exercises, making extensive use of active learning technologies. A grade of C or better required in CS prerequisite 3114.
Prerequisite(s): CS 1944 and (CS 2114 or ECE 3514) and (COMM 2004 or COMM 2014)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3634 - Computer Science Foundations for Computational Modeling & Data Analytics (3 credits)
Survey of computer science concepts and tools that enable computational science and data analytics. Data structure design and implementation. Analysis of data structure and algorithm performance. Introduction to high-performance computer architectures and parallel computation. Basic operating systems concepts that influence the performance of large-scale computational modeling and data analytics. Software development and software tools for computational modeling. Not for CS major credit.
Prerequisite(s): CS 2114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 3634

CS 3654 - Introductory Data Analytics and Visualization (3 credits)
Basic principles and techniques in data analytics; methods for the collection of, storing, accessing, and manipulating standard-size and large datasets; data visualization; and identifying sources of bias.
Prerequisite(s): (CS 1114 or CS 1044 or CS 1054 or CS 1064) and (MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005) and (STAT 3006 or STAT 4105 or STAT 4705 or STAT 4714 or CMDA 2006)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 3654, STAT 3654

CS 3704 - Intermediate Software Design and Engineering (3 credits)
Explores the principles of software design in detail, with an emphasis on software engineering aspects. Includes exposure of software lifecycle activities including design, coding, testing, debugging, and maintenance, highlighting how design affects these activities. Peer reviews, designing for software reuse, CASE tools, and writing software to specifications are also covered. A grade of C or better required in CS prerequisite 3114.
Prerequisite(s): CS 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3714 - Mobile Software Development (3 credits)
Technologies and concepts underlying software development for mobile devices (handheld computers). Mobile computing platforms, including architecture, operating system, and programming environment. Software design patterns and structuring for mobile applications. Network-centric mobile software development. Data persistence. Programming for mobile device components such as cameras, recorders, accelerometer, gyroscope and antennas. Location-aware software development. A grade of C or better required in CS prerequisite.
Prerequisite(s): CS 2114 or ECE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3724 - Introduction to Human-Computer Interaction (3 credits)
Survey of human-computer interaction concepts, theory, and practice. Basic components of human-computer interaction. Interdisciplinary underpinnings. Informed and critical evaluation of computer-based technology. User-oriented perspective, rather than system-oriented, with two thrusts: human (cognitive, social) and technological (input/output, interactions styles, devices). Design guidelines, evaluation methods, participatory design, communication between users and system developers. A grade of C or better required in CS prerequisite 2114.
Prerequisite(s): CS 1114 or CS 1044 or CS 1054 or CS 1064
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3744 - Introduction to GUI Programming and Graphics (3 credits)
Design and implementation of object-oriented graphical user interfaces (GUI) and two-dimensional computer graphics systems. Implementation methodologies including callbacks, handlers, event listeners, design patterns, layout managers, and architectural models. Mathematical foundations of computer graphics applied to fundamental algorithms for clipping, scan conversion, affine and convex linear transformations, projections, viewing, structuring, and modeling. A grade of C or better is required in CS pre-requisite 2114.
Prerequisite(s): (CS 2114 or ECE 3514) and (MATH 1114 or MATH 2114) and (MATH 1224 or MATH 2204)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3754 - Cloud Software Development (3 credits)
Fundamentals of cloud software development, including design patterns, application programming interfaces, and underlying middleware technologies. Development of distributed multi-tiered enterprise software applications that run on a server computer and are accessed using a web browser over the Internet on a network-connected computer such as desktop, laptop, or handheld computer (tablet, smartphone, or mobile device. A grade of C or better is required in prerequisite.
Prerequisite(s): CS 2114 or ECE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3824 - Introduction to Computational Biology and Bioinformatics (3 credits)
Introduction to computational biology and bioinformatics (CBB) through hands-on learning experiences. Emphasis on problem solving in CBB. Breadth of topics covering structural bioinformatics; modeling and simulation of biological networks; computational sequence analysis; algorithms for reconstructing phylogenies; computational systems biology; and data mining algorithms. Pre-requisite: Grade of C or better in CS 3114.
Prerequisite(s): CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

CS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 4014 - Algorithms & Society (3 credits)
This course focuses on social perspectives of algorithms and implications to factors such as class, gender, race, ethnicity, geography, and disability status. Students will be guided to think critically about the impacts of computing in society, as well as the role of social values in their design. Topics will focus on computing technologies involved in critical contemporary and global concerns including machine learning, privacy, and the infrastructure that describes the social and technical context for algorithms. Pre: Junior Standing
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 4014

CS 4104 - Data and Algorithm Analysis (3 credits)
Data structures and algorithms from an analytical perspective. Theoretical analysis of algorithm efficiency. Comparing algorithms with respect to space and run-time requirements. Analytical methods for describing theoretical and practical bounds on performance. Constraints affecting problem solvability. A grade of C or better is required in CS prerequisite 3114.
Prerequisite(s): CS 3114 and (MATH 3034 or MATH 3134)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4114 - Introduction to Formal Languages and Automata Theory (3 credits)
The course presents a study of formal languages and the correspondence between language classes and the automata that recognize them. Formal definitions of grammars and acceptors, deterministic and nondeterministic systems, grammar ambiguity, finite state and push-down automata, and normal forms will be discussed.
Prerequisite(s): MATH 3134 or MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4124 - Theory of Computation (3 credits)
Theoretical analysis of the computational process; fundamental concepts such as abstract programs, classes of computational machines and their equivalence, recursive function theory, unsolvable problems, Churchs thesis, Kleenes theorem, program equivalence, and generability, acceptability, decidability will be covered.
Prerequisite(s): MATH 3134 or MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4134 - Quantum Computation and Information Processing (3 credits)
Quantum states and quantum phenomena. Quantum communication concepts such as superdense coding, teleportation, and complexity. Classical and quantum circuits and gate sets for computation. Quantum algorithms and comparison to classical algorithms. Quantum computational complexity theory and complexity classes. Quantum information concepts such as density operators, measurements, and quantum channels. Error correction, the stabilizer formalism, and fault-tolerance. The adiabatic theorem and adiabatic quantum computation. Entanglement and entanglement measures.
Prerequisite(s): MATH 2114 or MATH 2114H
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4144 - Competitive Problem Solving II (3 credits)
Deeper treatment of advanced algorithms, data structures, and implementation techniques, taught in a setting that combines collaborative practice with competitive exercise. Students practice to solve problems using a computer, which are judged by automated evaluation software for correctness and efficiency. Practice with advanced searching and graph algorithms, advanced dynamic programming, linear programming techniques, computational geometry, and numerical algorithms. Problems are drawn from multiple areas in computer science. Macro- and micro optimization techniques to improve efficiency are emphasized.
Prerequisite(s): CS 2114 and CS 2144
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4164 - Future of Security: Integrative Solutions for Complex Security Systems (3 credits)
Identification and analysis of complex, real-world security problems and threats to people, organizations, and nations across multiple domains, roles and future scenarios. Crisis communication, decision making tools, ethical principles and problem-solving methods to respond, assess options, plan, scope, and communicate before, during and after conflicts, disasters and attacks. Use of an experiential learning facility, and participation in a reality-based team simulation of cascading security and disaster events.
Prerequisite(s): PSCI 2164 or BIT 2164 or CS 2164
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIT 4164, PSCI 4164

CS 4204 - Computer Graphics (3 credits)
Hardware and software techniques for the display of graphical information. 2D and 3D geometry and transformations, clipping and windowing, software systems. Interactive graphics, shading, hidden surface elimination, perspective depth. Modeling and realism.
Prerequisite(s): CS 3744
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4214 - Simulation and Modeling (3 credits)
Overview of discrete-event digital computer simulation and modeling. Fundamentals of model development, Monte Carlo simulation, the life cycle of a simulation study, input and output data analysis, world views and time control, random number and variate generation, credibility assessment of simulation results, simulation languages, applications of simulation using the General Purpose Simulation System (GPSS). A grade of C or better required in CS prerequisite 2114.
Prerequisite(s): CS 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4224 - Linux Kernel Programming (3 credits)
Design and internal organization of the Linux operating system kernel. Kernel subsystems, boot process, memory management, process and thread model, scheduling, interrupt and exception handling, virtual file system and the concrete file system, block I/O and I/O scheduler, network stack, and device drivers. Modification of existing kernel code. Design, implementation, test and evaluation of new kernel modules. Kernel and full software stack debugging techniques, and virtualization as an aid for operating system development and debug. Software engineering techniques to analyze, modify and run a large, complex open-source code base.
Prerequisite(s): ECE 3574 or CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4414

CS 4234 - Parallel Computation (3 credits)
Survey of parallel computer architectures, models of parallel computation, and interconnection networks. Parallel algorithm development and analysis. Programming paradigms and languages for parallel computation. Example applications. Performance measurement and evaluation. A grade of C or better required in CS prerequisite 3214.
Prerequisite(s): CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4244 - Internet Software Development (3 credits)
Key technology underlying the World-Wide Web. Web architecture, including client and server design, network protocols, and related standards. Static and dynamic content, caching, state management, fault tolerance, error handling. Programming systems and abstractions, e.g., sockets, remote procedures, Web services, frameworks and component models. Document representations and processing. Security. Entrepreneurial issues and emerging technologies. A grade of C or better required in CS 3214 prerequisite.
Prerequisite(s): CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4254 - Computer Network Architecture and Programming (3 credits)
Introduction to computer network architecture, and methods for programming network services and applications (e.g. DNS, Email and MIME, http, SNMP, multimedia). Wired, wireless, and satellite network architectures. OSI protocol model, with an emphasis on upper layers. Congestion control, quality of service, routing. Internet protocol suite (e.g. IP, TCP, ARP, RARP). Server design (e.g. connectionless, concurrent). Network programming abstractions (e.g. XDR, remote procedure calls, sockets, DCOM). Case studies (e.g. TELNET). A grade of C or better required in CS prerequisite 3214.
Prerequisite(s): CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4264 - Principles of Computer Security (3 credits)
Survey of computer problems and fundamental computer security design principles and models for software systems. Cryptographic models and methods. Modern cyber security techniques for robust computer operating systems, software, web applications, large-scale networks and data protection. Privacy models and techniques. Contemporary computer and network security examples. A grade of C or better is required in prerequisites.
Prerequisite(s): CS 3214 or (ECE 3504 and ECE 3574)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4274 - Secure Computing Capstone (3 credits)
Advanced topics in cybersecurity and secure computing. Threat modeling through identification and analysis of security threats. Reasoning about the efficacy, complexity, cost, and ethical tradeoffs of computer security systems. Team-based approach to solving open-ended computer security problems. Designing, implementing, documenting, and presenting advanced computer systems.
Prerequisite(s): CS 3114 and CS 3214
Corequisite(s): CS 4264
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4284 - Systems & Networking Capstone (3 credits)
Advanced topics in computer systems & networking, e.g. distributed and parallel processing, emerging architectures, novel systems management & networking design, fault- tolerance, and robust and secure data management. Team- based approach to solving open-ended computer systems & networking problems. Designing, implementing and documenting advanced computer/networking systems. A grade of C or better required in CS prerequisites.
Prerequisite(s): CS 3114 and CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4304 - Compiler Design and Implementation (3 credits)
This course includes the theory, the design, and the implementation of a large language translator system. Lexical analysis, syntactic analysis, code generation, and optimization are emphasized. A grade of C or better required in CS prerequisite 3214.
Prerequisite(s): CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4414 - Issues in Scientific Computing (3 credits)
Theory and techniques of modern computational mathematics, computing environments, computational linear algebra, optimization, approximation, parameter identification, finite difference and finite element methods and symbolic computation. Project-oriented course; modeling and analysis of physical systems using state-of-the-art software and packaged subroutines.
Prerequisite(s): (MATH 2214 or MATH 2214H or MATH 2406H or CMDA 2006) and MATH 3214 and (CS 1114 or MATH 1454)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: MATH 4414

CS 4504 - Computer Organization (3 credits)
Overview of the structure, elements and analysis of modern enterprise computers. Performance evaluation of commercial computing. Past and emerging technology trends. Impact of parallelism at multiple levels of computer architecture. Memory and storage. Fundamental computer system descriptions, Amdahls Law, Flynns Taxonomy. A grade of C or better required in prerequisites.
Prerequisite(s): ECE 2500 or CS 3214 or ECE 3504
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4504

CS 4570 - Wireless Networks and Mobile Systems (3 credits)
Multidisciplinary, project-oriented design course that considers aspects of wireless and mobile systems including wireless networks and link protocols, mobile networking including support for the Internet Protocol suite, mobile middleware, and mobile applications. Students complete multiple experiments and design projects.
Prerequisite(s): CS 4254 or ECE 4564
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4570

CS 4604 - Introduction to Data Base Management Systems (3 credits)
Emphasis on introduction of the basic data base models, corresponding logical and physical data structures, comparisons of models, logical data design, and data base usage. Terminology, historical evolution, relationships, implementation, data base personnel, future trends, applications, performance considerations, data integrity. Senior standing required. A grade of C or better required in CS prerequisite 3114.
Prerequisite(s): CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4624 - Multimedia, Hypertext and Information Access (3 credits)
Introduces the architectures, concepts, data, hardware, methods, models, software, standards, structures, technologies, and issues involved with: networked multimedia information and systems, hypertext and hypermedia, networked information videoconferencing, authoring/electronic publishing, and information access. Coverage includes how to capture, represent, link, store, compress, browse, search, retrieve, manipulate, interact with, synchronize, perform, and present: text, drawings, still images, animations, audio, video, and their combinations (including in digital libraries).
Prerequisite(s): CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4634 - Design Of Information (3 credits)
Survey of the higher-order properties that allow data to become information, that is, to inform people. The course focuses on the analysis of user needs, user comprehension and local semantics; the design of information organization; and the design of information display appropriate to use and setting. A grade of C or better is required in CS prerequisites 3114 and 3724.
Prerequisite(s): CS 3114 and CS 3724
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4644 - Creative Computing Studio (3 credits)
Capstone computer science course at the intersection of arts and technology. Intensive immersion in different approaches to digital arts such as game design, interactive art, digital music, and immersive virtual reality. Students work in teams to conduct an end-to-end integrative design project. A grade of C or better is required in prerequisite CS 3724.
Prerequisite(s): CS 3724
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4654 - Intermediate Data Analytics and Machine Learning (3 credits)
A technical analytics course. Covers supervised and unsupervised learning strategies, including regression, generalized linear models, regulations, dimension reduction methods, tree-based methods for classification, and clustering. Upper-level analytical methods shown in practice: e.g., advanced naive Bayes and neural networks.
Prerequisite(s): (STAT 3654 or CMDA 3654 or CS 3654) and (CMDA 2006 or STAT 3104 or STAT 4106 or STAT 4706)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 4654, STAT 4654

CS 4664 - Data-Centric Computing Capstone (3 credits)
Advanced, project-based course on deriving valuable insights from real-world data collected from a variety of sources. Team-based end-to-end projects explore the entire data science workflow: problem statement, formulating the research questions, collecting preparing and cleaning data, alternating between analyzing data and interpreting results, and synthesizing results into a written report and an interactive executable codebase.
Prerequisite(s): CS 3114 and CS 3654 or CMDA 3654 or STAT 3654
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4704 - Software Engineering Capstone (3 credits)
Senior project course integrating software engineering knowledge and skills acquired in previous courses. Team- based approach to problem formulation, requirements engineering, architecture, design, implementation, integration, documentation and delivery of software system that solves a real-world problem. Pre: A grade of C or better in CS 3704.
Prerequisite(s): CS 3704 or CS 3714 or CS 3754
Instructional Contact Hours: (3 Lec, 0 Lab, 3 Crd)

CS 4774 - Human-Computer Interaction Design Experience (3 credits)
Project-based design course in human-computer interaction. Team-based, end-to-end, integrative interface design project drawn from interdisciplinary areas of student expertise, e.g., virtual reality, augmented reality, embodied cognition, visualization, semiotic engineering, game design, personal information management, mobile computing, design tools, educational technology, and digital democracy. Not for CS major credit. Senior standing.
Prerequisite(s): CS 3724 and (HIST 2604 or SOC 2604 or STS 2604) and COMM 2084
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4784 - Human-Computer Interaction Capstone (3 credits)
Advanced, project-based course in Human-Computer Interaction. Team-based, end-to-end, integrative interface design project drawn from area of expertise in the department, e.g., virtual reality, augmented reality, embodied cognition, visualization, semiotic engineering, game design, personal information management, mobile computing, design tools, educational technology, and digital democracy. Pre-requisite: Senior Standing required. A grade of C or better is required in CS pre-requisite 3724 and 3744
Prerequisite(s): CS 3724 and CS 3744
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4804 - Introduction to Artificial Intelligence (3 credits)
Overview of the areas of problem solving, game playing, and computer vision. Search trees and/or graphs, game trees, block world vision, syntactic pattern recognition, object matching, natural language, and robotics. Senior standing required. A grade of C or better required in CS prerequisite 3114.
Prerequisite(s): CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4824 - Machine Learning (3 credits)
Algorithms and principles involved in machine learning; focus on perception problems arising in computer vision, natural language processing and robotics; fundamentals of representing uncertainty, learning from data, supervised learning, ensemble methods, unsupervised learning, structured models, learning theory and reinforcement learning; design and analysis of machine perception systems; design and implementation of a technical project applied to real-world datasets (images, text, robotics). A grade of C- or better in prerequisites.
Prerequisite(s): (ECE 3514 or CS 2114) and (STAT 3704 or STAT 4105 or STAT 4604 or STAT 4705 or STAT 4714 or CMDA 2006)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4424

CS 4884 - Computational Biology and Bioinformatics Capstone (3 credits)
Advanced topics in computational biology and bioinformatics (CBB). Team-based approach to solving open-ended problems in CBB. Projects drawn from areas of expertise in the department, e.g., algorithms for CBB, computational models for biological systems, analysis of structure-function relationships in biomolecules, genomic data analysis and data mining, computational genomics, systems biology. Design, implementation, documentation and presentation of solutions. A grade of C or better required in CS prerequisite 3824.
Prerequisite(s): CS 3824
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4894 - Special Topics in Computer Science (3 credits)
Advanced undergraduate topics in the design, development, use, and impact of computer science solutions or software systems. Topics may include blockchain systems, DevOps, new programming languages, social media software, software as a service, micro-services, and end user programming systems. May be repeated 2 times with different content for a maximum of 9 credits.
Prerequisite(s): CS 2114 and CS 2505
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

CS 4944 - Seminar (1 credit)
Prerequisite(s): CS 3604
Instructional Contact Hours: (1 Lec, 1 Crd)

CS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Computer Science Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
CS 1114	Introduction to Software Design (C)	3
CS 2505	Introduction to Computer Organization (C)	3
CS 2506	Introduction to Computer Organization (C)	3
CS 3214	Computer Systems	3
CS 3604	Professionalism in Computing	3
MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus	3
or CMDA 2005	Integrated Quantitative Sciences	
MATH 2534	Introduction to Discrete Mathematics	3
or MATH 3034	Introduction to Proofs	
Subtotal		24
Major Requirements		
CS 2104	Introduction to Problem Solving in Computer Science (C)	3
CS 3304	Comparative Languages	3
CS Theory Elective		3
CS 4/5XXX Elective [3]		3

CS 4XXX Capstone		3
Subtotal		15
Additional Course Requirements		
CS 1944	Computer Science First Year Seminar	1
CS 2114	Software Design and Data Structures (C)	3
CS 4944	Seminar	1
MATH 3134	Applied Combinatorics and Graph Theory	3
or MATH 3124	Modern Algebra	
Elective Courses		
CS 3/4/5XXX Electives [3]		6
CS Technical Elective [3]		3
Advanced Natural Science Elective		4
Communications Elective		3
Professional Writing Elective		3
Statistics Elective		3
Free Electives		7
Subtotal		37
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
Select three hours in Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A) (use Communications Elective, Professional Writing Elective, or Free Elective)		
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six hours in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six hours in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
Natural Science Elective		4
Natural Science Elective		4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F ; C-)	4
MATH 1226	Calculus of a Single Variable (5F)	4
CS 3114	Data Structures and Algorithms (5A ; C)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216	Foundations of Engineering and Foundations of Engineering (6D)	4
or ENGE 1414	Foundations of Engineering Practice	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathways Concept 7 can be double-counted with another core concept. In this case, additional free elective credits must be taken to maintain a minimum of 123 credits		3
Subtotal		47
Total Credits		**123**

Electives

Note: Some elective courses may include prerequisites not required by this checksheet. It is the student's responsibility to be aware of prerequisites and to ensure that all prerequisites are completed prior to enrolling in the chosen course. Some courses may be restricted to majors other than CS in some semesters. Check the Undergraduate Course Catalog and consult with an academic advisor to confirm your eligibility for specific electives. Actual course offerings are subject to availability of sufficient resources, including faculty availability and student demand.

1. **Natural Science Electives:** Choose 8 credits

Code	Title	Credits
BIOL 1105 & BIOL 1115	Principles of Biology and Principles of Biology Laboratory	4
CHEM 1035 & CHEM 1045	General Chemistry and General Chemistry Laboratory	4
PHYS 2305	Foundations of Physics	4

2. **Advanced Natural Science Elective:** Choose 4 credits

Code	Title	Credits
BIOL 1106 & BIOL 1116	Principles of Biology and Principles of Biology Laboratory	4
CHEM 1036 & CHEM 1046	General Chemistry and General Chemistry Laboratory	4
PHYS 2306	Foundations of Physics	4

3. **Communications Elective.** Students must take one of the following:

Code	Title	Credits
COMM 2004	Public Speaking	3
COMM 2014	Speech Communication	3

Note: COMM 2004 Public Speaking can be used to satisfy Pathways 1A. Students who do not take COMM 2004 Public Speaking as their communications elective will need to satisfy Pathways 1A through a suitable professional writing elective or free elective.

4. **Professional Writing Elective.** Students must take one of the following:

Code	Title	Credits
ENGL 3764	Technical Writing	3
ENGL 3804	Technical Editing and Style	3
ENGL 3814	Creating User Documentation	3
ENGL 3824	Visual Rhetoric and Document Design	3
ENGL 3834	Intercultural Issues in Professional Writing	3
ENGL 3844	Writing and Digital Media	3
ENGL 4824	Science Writing	3

Note: ENGL 3764 Technical Writing can be used to satisfy Pathways 1A. Students who do not take ENGL 3764 Technical Writing as their communications elective will need to satisfy Pathways 1A through a suitable communications elective or free elective.

5. **Statistics Elective.** Students must take one of the following:

Code	Title	Credits
STAT 4705	Probability and Statistics for Engineers	3
STAT 4105	Theoretical Statistics [1]	3
STAT 4714	Probability and Statistics for Electrical Engineers [1]	3

STAT 4604	Statistical Methods for Engineers	3
STAT 3704	Statistics for Engineering Applications [2]	2
CMDA 2006	Integrated Quantitative Sciences [1]	6

Note: Students taking must take an additional 1 free elective credit to meet the total number of credits required for the degree. Students considering a possible change of major to Data-Centric Computing should take one of , , or , since that major uses a more restrictive list of statistics electives.

6. **CS 3/4/5XXXX Electives[3].** Other than the exceptions listed below, any 3-credit CS 3/4/5000-level course not otherwise used to fulfill a Computer Science requirement can be used as a CS 3/4/5XXX elective, including both CS 4974 Independent Study and CS 4994 Undergraduate Research. Additionally, the following cross-listed courses are allowed for CS 3/4/5XXX elective credit.

Code	Title	Credits
BIT 4614	Cybersecurity Management II	3
CMDA 3654	Introductory Data Analytics and Visualization	3
CMDA 4654	Intermediate Data Analytics and Machine Learning	3
ECE 4424	Machine Learning	3
MATH 3414	Numerical Methods	3
MATH 4414	Issues in Scientific Computing	3
PSCI 4164	Future of Security: Integrative Solutions for Complex Security Systems	3
STAT 3654	Introductory Data Analytics and Visualization	3
STAT 4654	Intermediate Data Analytics and Machine Learning	3
STS 4014	Algorithms & Society	3

Exceptions (not allowed to count towards CS 3/4/5XXX electives)

Code	Title	Credits
CS/CMDA 3634	Computer Science Foundations for Computational Modeling & Data Analytics	3
CS 4774	Human-Computer Interaction Design Experience	3
CS 5040	Intermediate Data Structures and Algorithm Analysis	3
CS 5044	Object-Oriented Programming with Java	3
CS 5045	Computation for the Data Sciences	3
CS 5046	Computation for the Data Sciences	3
CS 5644	Machine Learning with Big Data	3
CS 5664	Social Media Analytics	3
CS 5904	Project and Report	1-19
CS 5944	Graduate Seminar	1
CS 5974	Independent Study	1-19
CS 5994	Research and Thesis	1-19

7. **CS 4/5XXXX Elective[3].** Other than the exceptions listed below, any 3-credit CS 4/5000-level course not otherwise used to fulfill a Computer Science requirement can be used as a CS 4/5XXX elective, including both CS 4974 Independent Study and CS 4994 Undergraduate Research Additionally, the following cross-listed courses are also allowed for CS 3/4/5XXX elective.

Code	Title	Credits
BIT 4614	Cybersecurity Management II	3
CMDA 4654	Intermediate Data Analytics and Machine Learning	3
ECE 4424	Machine Learning	3
MATH 4414	Issues in Scientific Computing	3
PSCI 4164	Future of Security: Integrative Solutions for Complex Security Systems	3
STAT 4654	Intermediate Data Analytics and Machine Learning	3
STS 4014	Algorithms & Society	3

Exceptions (not allowed to count towards the CS 4/5XXX electives.

Code	Title	Credits
CS 4774	Human-Computer Interaction Design Experience	3
CS 5040	Intermediate Data Structures and Algorithm Analysis	3
CS 5044	Object-Oriented Programming with Java	3
CS 5045	Computation for the Data Sciences	3
CS 5046	Computation for the Data Sciences	3
CS 5644	Machine Learning with Big Data	3
CS 5664	Social Media Analytics	3
CS 5904	Project and Report	1-19
CS 5944	Graduate Seminar	1
CS 5974	Independent Study	1-19
CS 5994	Research and Thesis	1-19

8. **CS Theory Elective.** Students must take one of the following:

Code	Title	Credits
CS 4104	Data and Algorithm Analysis	3
CS 4114	Introduction to Formal Languages and Automata Theory	3
CS 4124	Theory of Computation	3
CS 4134	Quantum Computation and Information Processing	3
CS 5104	Computability and Formal Languages	3
CS 5114	Theory of Algorithms	3

9. **Capstone Requirement.** Students must complete one 4000-level CS capstone course. Students may choose from the courses listed here, or other 4/5000-level CS courses that have received prior approval as fulfilling the capstone requirement.

Code	Title	Credits
CS 4274	Secure Computing Capstone	3
CS 4284	Systems & Networking Capstone	3
CS 4624	Multimedia, Hypertext and Information Access	3
CS 4634	Design Of Information	3
CS 4644	Creative Computing Studio	3
CS 4664	Data-Centric Computing Capstone	3
CS 4704	Software Engineering Capstone	3
CS 4784	Human-Computer Interaction Capstone	3
CS 4884	Computational Biology and Bioinformatics Capstone	3
ENGE 4735	Interdisciplinary Design Capstone	3
ENGE 4736	Interdisciplinary Design Capstone	3

10. **CS Technical Elective**[3]**.** Computer Science majors must satisfy a 3 credit hour technical elective requirement by taking one of:
    a. Any 3-credit CS 3/4/5000-level course meeting the CS 3/4/5XXX elective requirements under (6) above.
    b. Any approved 3000- or 4000-level course in another discipline that has significant technical content relevant to the science or application of computer science can be used as a technical elective.
        i. Requests to have a non-CS course approved as a technical elective are made by submitting a course syllabus to your CS advisor for review prior to enrolling in the course. This includes non-CS Independent Study (4974) and Undergraduate Research (4994) courses.
        ii. Below is a listing of non-CS courses that are approved as technical electives.
        Some courses may be restricted to majors other than CS in some semesters. Check the Undergraduate Course Catalog and consult with an academic advisor to confirm your eligibility for specific electives. Actual course offerings are subject to availability of sufficient resources, including faculty availability and student demand.

Code	Title	Credits
AOE 4434	Introduction to Computational Fluid Dynamics	3
ART 3704	Topics in Computer Animation	3
BIT 4424	Business Information Visualization and Analytics	3
BIT 4434	Computer Simulation in Business	3
BIT 4444	Web-Based Decision Support Systems	3

[1] **CS Non-Technical Course Requirement.** B.S. in CS students must complete 30 credits of non-technical courses. All courses are approved as non-technical courses except those in the departments of Biological Sciences, Chemistry, Geosciences, Physics, Mathematics, and Statistics, and all departments in the College of Engineering, except for engineering courses satisfying Pathways 7. Also excluded are courses listed as CS technical electives.

[2] **Independent Study/Undergraduate Research.** No more than a total of 6 credits of CS 4974 Independent Study and/or CS 4994 Undergraduate Research may be used to fulfill CS degree requirements. To take Independent Study (CS 2974 Independent Study or CS 4974 Independent Study), a minimum overall and in-major GPA of 2.5 is required. To take CS 4994 Undergraduate Research, a minimum overall GPA of 2.5 and an in-major GPA of 3.0 is required. CS 4974 Independent Study and CS 4994 Undergraduate Research also require completion of CS 3114 Data Structures and Algorithms with a grade of **C** or better.

[3] **Undergraduates Taking Graduate Courses**. Students within 2 semesters of graduating and with a 3.0 or better GPA may enroll in 5000-level courses satisfying undergraduate degree requirements within their department if they have been accepted into the Accelerated Undergraduate/Graduate Program, or by permission of the course instructor and the Department. For students not accepted into the Accelerated Undergraduate/Graduate Program, these courses may not be used on the Plan of Study for a graduate degree.

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The CS Department fully supports this policy. Specific expectations for satisfactory progress for Computer Science majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog: http://www.undergradcatalog.registrar.vt.edu/1920/academic-policies.html#22
- Be registered in at least one 3-credit course **required** in the major during each on-campus semester of the regular academic year.
- Maintain an in-major GPA of 2.0 or better (calculated using all classes with a CS designator).
- Not take any CS course required in the major more than twice, including attempts ending in course withdrawal.
- Not repeat more than 3 CS courses required in the major, including attempts ending in course withdrawal.

Graduation Requirements

To qualify for a B.S. degree in CS, a student must:

1. Complete 123 credit hours
2. Earn a "C" (2.0) or better in CS 1114 Introduction to Software Design, CS 2104 Introduction to Problem Solving in Computer Science, CS 2114 Software Design and Data Structures, CS 2505 Introduction to Computer Organization, CS 2506 Introduction to Computer Organization and CS 3114 Data Structures and Algorithms.
3. Earn a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00 (the in-major GPA is calculated using all classes with a CS designator).

Acceptable Substitutions

1. MATH 2405H may be substituted for MATH 2114
2. MATH 2405H (5 cr) + MATH 2406H (5 cr) may be substituted for MATH 2114 (3 cr) + MATH 2204 (3 cr) + free elective (4 cr)
3. CS 2064 (C) (3 cr) may be substituted for CS 1114 (C) (3 cr)
4. ECE 2514 (C) (3cr) may be substituted for CS 1114 (C) (3cr)
5. ECE 3514 (C) may be substituted for CS 2114 (C)
6. ECE 2564 (C) may be substituted for CS 2505 (C)

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
Select three hours in Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A) (use Communications Elective, Professional Writing Elective, or Free Elective)		
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six hours in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six hours in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
Natural Science Elective		4
Natural Science Elective		4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F ; C-)	4
MATH 1226	Calculus of a Single Variable (5F)	4
CS 3114	Data Structures and Algorithms (5A ; C)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three hours in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216	Foundations of Engineering and Foundations of Engineering (6D)	4
or ENGE 1414	Foundations of Engineering Practice	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathways Concept 7 can be double-counted with another core concept. In this case, additional free elective credits must be taken to maintain a minimum of 123 credits.		3
Subtotal		47
Total Credits		**123**

Additional Requirements and Notes

Double Major Restriction: students pursing a Major in Data-Centric Computing may not double major in the Major in Computational Modeling and Data Analytics or one of the major concentrations/options listed under the Bachelor of Science in Computational Modeling and Data Analytics.

Data-Centric Computing Electives

Note: Some elective courses may include prerequisites not required by this checksheet. It is the student's responsibility to be aware of prerequisites and to ensure that all prerequisites are completed prior to enrolling in the chosen course. Some courses may be restricted to majors other than CS in some semesters. Check the Undergraduate Course Catalog and consult with an academic advisor to confirm your eligibility for specific electives. Actual course offerings are subject to availability of sufficient resources, including faculty availability and student demand.

1. **Natural Science Electives:** Choose 8 credits

Code	Title	Credits
BIOL 1105 & BIOL 1115	Principles of Biology and Principles of Biology Laboratory	4
CHEM 1035 & CHEM 1045	General Chemistry and General Chemistry Laboratory	4
PHYS 2305	Foundations of Physics	4

2. **Advanced Natural Science Elective:** Choose 4 credits

Code	Title	Credits
BIOL 1106 & BIOL 1116	Principles of Biology and Principles of Biology Laboratory	4
CHEM 1036 & CHEM 1046	General Chemistry and General Chemistry Laboratory	4
PHYS 2306	Foundations of Physics	4

3. **Communications Elective.** Students must take one of the following:

Code	Title	Credits
COMM 2004	Public Speaking	3
COMM 2014	Speech Communication	3

Note: COMM 2004 Public Speaking can be used to satisfy Pathways 1A. Students who do not take COMM 2004 Public Speaking as their communications elective will need to satisfy Pathways 1A through a suitable professional writing elective or free elective.

4. **Professional Writing Elective.** Students must take one of the following:

Code	Title	Credits
ENGL 3764	Technical Writing	3
ENGL 3804	Technical Editing and Style	3
ENGL 3814	Creating User Documentation	3
ENGL 3824	Visual Rhetoric and Document Design	3
ENGL 3834	Intercultural Issues in Professional Writing	3
ENGL 3844	Writing and Digital Media	3
ENGL 4824	Science Writing	3

Note: ENGL 3764 Technical Writing can be used to satisfy Pathways 1A. Students who do not take ENGL 3764 Technical Writing as their communications elective will need to satisfy Pathways 1A through a suitable communications elective or free elective.

5. **Statistics Elective.** Students must take one of the following:

Code	Title	Credits
STAT 4705	Probability and Statistics for Engineers	3
STAT 4105	Theoretical Statistics	3
CMDA 2006	Integrated Quantitative Sciences	6

6. **CS 3/4/5XXXX Electives[3].** Other than the exceptions listed below, any 3-credit CS 3/4/5000-level course not otherwise used to fulfill a Computer Science requirement can be used as a CS 3/4/5XXX elective, including both CS 4974 Independent Study and CS 4994 Undergraduate Research. Additionally, the following cross-listed courses are allowed for CS 3/4/5XXX elective credit.

Code	Title	Credits
BIT 4164	Future of Security: Integrative Solutions for Complex Security Systems	3
CMDA 4654	Intermediate Data Analytics and Machine Learning	3
ECE 4424	Machine Learning	3
ECE 4504	Computer Organization	3
ECE 4570	Wireless Networks and Mobile Systems	3
MATH 3414	Numerical Methods	3
MATH 4414	Issues in Scientific Computing	3
PSCI 4164	Future of Security: Integrative Solutions for Complex Security Systems	3
STAT 4654	Intermediate Data Analytics and Machine Learning	3

Exceptions (not allowed to count towards CS 3/4/5XXX electives)

Code	Title	Credits
CS/CMDA 3634	Computer Science Foundations for Computational Modeling & Data Analytics	3
CS 4774	Human-Computer Interaction Design Experience	3
CS 5040	Intermediate Data Structures and Algorithm Analysis	3
CS 5044	Object-Oriented Programming with Java	3
CS 5045	Computation for the Data Sciences	3
CS 5046	Computation for the Data Sciences	3
CS 5644	Machine Learning with Big Data	3
CS 5664	Social Media Analytics	3
CS 5904	Project and Report	1-19
CS 5944	Graduate Seminar	1
CS 5974	Independent Study	1-19
CS 5994	Research and Thesis	1-19

7. **Data-Centric Computing Elective[3].** Students must take four of the following:

Code	Title	Credits
BIT 4604	Data Governance, Privacy and Ethics	3
BIT 4624	Cybersecurity Analytics for Business	3
CMDA/STAT/CS 4654	Intermediate Data Analytics and Machine Learning	3
CS/MATH 3414	Numerical Methods	3
CS 3824	Introduction to Computational Biology and Bioinformatics	3
CS/MATH 4414	Issues in Scientific Computing	3
CS 4604	Introduction to Data Base Management Systems	3
CS 4804	Introduction to Artificial Intelligence	3
CS 4824/ ECE 4424	Machine Learning	3
STAT 3504	Nonparametric Statistics	3
STAT 4214	Methods of Regression Analysis	3
STAT 4444	Applied Bayesian Statistics	3
CS 5054	Programming Models for Big Data	3
CS 5124	Algorithms in Bioinformatics	3
CS 5424	Computational Cell Biology	3
CS 5465		3
CS 5466		3
CS 5474	Finite Difference Methods for Partial Differential Equations	3
CS 5484	Finite Element Methods for Partial Differential Equations	3
CS 5485	Numerical Analysis and Software	3
CS 5486	Numerical Analysis and Software	3
CS 5525	Data Analytics	3
CS 5526	Statistical Learning	3
CS 5614	Database Management Systems	3
CS 5764	Information Visualization	3
CS 5814	Introduction to Deep Learning	3
CS 5854	Computational Systems Biology	3

8. **Data-Centric Computing Capstone Requirement.** Students must complete one 4000-level CS capstone course in the data-centric computing area. Students may choose the course listed here, or other 4/5000-level CS courses that have received prior approval as fulfilling the data-centric computing capstone requirement.

Code	Title	Credits
CS 4624	Multimedia, Hypertext and Information Access	3
CS 4664	Data-Centric Computing Capstone	3
CS 4884	Computational Biology and Bioinformatics Capstone	3

With prior departmental approval, CS 4414 Issues in Scientific Computing or MATH 4414 Issues in Scientific Computing or ENGE 4735 Interdisciplinary Design Capstone or ENGE 4736 Interdisciplinary Design Capstone can fulfill the capstone requirement in semesters where the course includes a significant data-centric computing aspect.

9. **CS Technical Elective[3].** Data-Centric Computing majors must satisfy a 3 credit hour technical elective requirement by taking one of:
   a. Any 3-credit CS 3/4/5000-level course meeting the CS 3/4/5XXX elective requirements under (6) above.
   b. Any Data-Centric Computing Elective listed under (6) above that is not otherwise used to fulfill a Data-Centric Computing requirement.
   c. Any approved 3000- or 4000-level course in another discipline that has significant technical content relevant to the science or application of computer science can be used as a technical elective.
      i. Requests to have a non-CS course approved as a technical elective are made by submitting a course syllabus to your CS advisor for review prior to enrolling in the course.

This includes non-CS Independent Study (4974) and Undergraduate Research (4994) courses.

ii. Below is a listing of non-CS courses that are approved as technical electives.
Some courses may be restricted to majors other than CS in some semesters. Check the Undergraduate Course Catalog and consult with an academic advisor to confirm your eligibility for specific electives. Actual course offerings are subject to availability of sufficient resources, including faculty availability and student demand.

Code	Title	Credits
AOE 4434	Introduction to Computational Fluid Dynamics	3
ART 3704	Topics in Computer Animation	3
BIT 4424	Business Information Visualization and Analytics	3

[1] **CS Non-Technical Course Requirement.** B.S. in CS students must complete 30 credits of non-technical courses. All courses are approved as non-technical courses except those in the departments of Biological Sciences, Chemistry, Geosciences, Physics, Mathematics, and Statistics, and all departments in the College of Engineering, except for engineering courses satisfying Pathways 7. Also excluded are courses listed as CS technical electives.

[2] **Independent Study/Undergraduate Research.** No more than a total of 6 credits of CS 4974 Independent Study and/or CS 4994 Undergraduate Research may be used to fulfill CS degree requirements. To take Independent Study (CS 2974 Independent Study or CS 4974 Independent Study), a minimum overall and in-major GPA of 2.5 is required. To take CS 4994 Undergraduate Research, a minimum overall GPA of 2.5 and an in-major GPA of 3.0 is required. CS 4974 Independent Study and CS 4994 Undergraduate Research also require completion of CS 3114 Data Structures and Algorithms with a grade of **C** or better.

[3] **Undergraduates Taking Graduate Courses**. Students within 2 semesters of graduating and with a 3.0 or better GPA may enroll in 5000-level courses satisfying undergraduate degree requirements within their department if they have been accepted into the Accelerated Undergraduate/Graduate Program, or by permission of the course instructor and the Department. For students not accepted into the Accelerated Undergraduate/Graduate Program, these courses may not be used on the Plan of Study for a graduate degree.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The CS Department fully supports this policy. Specific expectations for satisfactory progress for Computer Science majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (http://www.undergradcatalog.registrar.vt.edu/1920/academic-policies.html#22).
- Be registered in at least one 3-credit course required in the major during each on-campus semester of the regular academic year.
- Maintain an in-major GPA of 2.0 or better (calculated using all classes with a CS designator).
- Not take any CS course required in the major more than twice, including attempts ending in course withdrawal.
- Not repeat more than 3 CS courses required in the major, including attempts ending in course withdrawal.

Graduation Requirements

To qualify for a B.S. degree in CS, a student must:

1. Completed at least 123 credit hours
2. Earn a “C” (2.0) or better in CS 1114 Introduction to Software Design, CS 2114 Software Design and Data Structures, CS 2505 Introduction to Computer Organization, CS 2506 Introduction to Computer Organization and CS 3114 Data Structures and Algorithms.
3. Earn a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00 (the in-major GPA is calculated using all classes with a CS designator).

Acceptable Substitutions

1. MATH 2405H may be substituted for MATH 2114
2. MATH 2405H + MATH 2406H may be substituted for MATH 2114 + MATH 2204 + free elective (4 cr)
3. CS 2064 (C) may be substituted for CS 1114
4. ECE 2514 (C) may be substituted for CS 1114 (C)
5. ECE 3514 (C) may be substituted for CS 2114 (C)
6. ECE 2564 (C) may be substituted for CS 2505 (C)

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
Select three hours in Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A) (use Communications Elective, Professional Writing Elective, or Free Elective)		
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six hours in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six hours in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
Natural Science Elective		4
Natural Science Elective		4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F ; C-)	4
MATH 1226	Calculus of a Single Variable (5F)	4
CS 3114	Data Structures and Algorithms (5A ; C)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three hours in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216	Foundations of Engineering and Foundations of Engineering (6D)	4
or ENGE 1414	Foundations of Engineering Practice	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathways Concept 7 should be double counted with another core concept. In this case, additional free elective credits must be taken to maintain a minimum of 123 credits.		3
Subtotal		47
Total Credits		**123**

Additional Requirements and Notes

Minor Restriction: students pursing a Major in Secure Computing may not minor in Cybersecurity.

Secure Computing Electives

Note: Some elective courses may include prerequisites not required by this checksheet. It is the student's responsibility to be aware of prerequisites and to ensure that all prerequisites are completed prior to enrolling in the chosen course. Some courses may be restricted to majors other than CS in some semesters. Check the Undergraduate Course Catalog and consult with an academic advisor to confirm your eligibility for specific electives. Actual course offerings are subject to availability of sufficient resources, including faculty availability and student demand.

1. **Natural Science Electives:** Choose 8 credits

Code	Title	Credits
BIOL 1105 & BIOL 1115	Principles of Biology and Principles of Biology Laboratory	4
CHEM 1035 & CHEM 1045	General Chemistry and General Chemistry Laboratory	4
PHYS 2305	Foundations of Physics	4

2. **Advanced Natural Science Elective:** Choose 4 credits

Code	Title	Credits
BIOL 1106 & BIOL 1116	Principles of Biology and Principles of Biology Laboratory	4
CHEM 1036 & CHEM 1046	General Chemistry and General Chemistry Laboratory	4
PHYS 2306	Foundations of Physics	4

3. **Communications Elective.** Students must take one of the following:

Code	Title	Credits
COMM 2004	Public Speaking	3
COMM 2014	Speech Communication	3

Note: COMM 2004 Public Speaking can be used to satisfy Pathways 1A. Students who do not take COMM 2004 Public Speaking as their communications elective will need to satisfy Pathways 1A through a suitable professional writing elective or free elective.

4. **Professional Writing Elective.** Students must take one of the following:

Code	Title	Credits
ENGL 3764	Technical Writing	3
ENGL 3804	Technical Editing and Style	3
ENGL 3814	Creating User Documentation	3
ENGL 3824	Visual Rhetoric and Document Design	3
ENGL 3834	Intercultural Issues in Professional Writing	3
ENGL 3844	Writing and Digital Media	3
ENGL 4824	Science Writing	3

Note: ENGL 3764 Technical Writing can be used to satisfy Pathways 1A. Students who do not take ENGL 3764 Technical Writing as their communications elective will need to satisfy Pathways 1A through a suitable communications elective or free elective.

5. **Statistics Elective.** Students must take one of the following:

Code	Title	Credits
STAT 4705	Probability and Statistics for Engineers	3
STAT 4105	Theoretical Statistics	3
STAT 4714	Probability and Statistics for Electrical Engineers	3
STAT 4604	Statistical Methods for Engineers	3
STAT 3704	Statistics for Engineering Applications	2
CMDA 2006	Integrated Quantitative Sciences	6

Note: Students taking STAT 3704 Statistics for Engineering Applications must take an additional 1 free elective credit to meet the

total number of credits required for the degree. Students considering a possible change of major to Data-Centric Computing should take one of STAT 4705 Probability and Statistics for Engineers, STAT 4105 Theoretical Statistics, or CMDA 2006 Integrated Quantitative Sciences, since that major uses a more restrictive list of statistics electives.

6. **CS 3/4/5XXXX Electives[3].** Other than the exceptions listed below, any 3-credit CS 3/4/5000-level course not otherwise used to fulfill a Computer Science requirement can be used as a CS 3/4/5XXX elective, including both and . Additionally, the following cross-listed courses are allowed for CS 3/4/5XXX elective credit.

Code	Title	Credits
AOE 4434	Introduction to Computational Fluid Dynamics	3
ART 3704	Topics in Computer Animation	3
BIT 4424	Business Information Visualization and Analytics	3
BIT 4434	Computer Simulation in Business	3
BIT 4444	Web-Based Decision Support Systems	3
BIT 4514		3
BIT 4544	Artificial Intelligence, Machine Learning, and Deep Learning in BIT	3
BIT 4604	Data Governance, Privacy and Ethics	3
BIT 4614	Cybersecurity Management II	3
BIT 4624	Cybersecurity Analytics for Business	3
CEM 4624	Construction Robotics and Automation	3
CEM 4644	Artificial Intelligence for Design, Construction, and Operations	3
CMDA 3606	Mathematical Modeling: Methods and Tools	3
ECE 3544	Digital Design I	4
ECE 3574	Applied Software Design	3
ECE 4524	Artificial Intelligence and Engineering Applications	4
ECE 4550	Real-Time Systems	3
ECE 4560	Computer and Network Security Fundamentals	3
ECE 4564	Network Application Design	3
ECE 4580	Digital Image Processing	3
ECE 4704	Principles of Robotics Systems	3
ENGE 4735	Interdisciplinary Design Capstone	3
ENGE 4736	Interdisciplinary Design Capstone	3
ENGE 4964	Field Study	3
GEOG/GEOS 4084	Modeling with Geographic Information Systems	3
GEOG 4314	Spatial Analysis in Geographic Information Systems	3
GEOG 4324	Algorithms in Geographic Information Systems	4
MATH 4175	Cryptography	3
MATH 4176	Cryptography	3
MATH 4445	Introduction to Numerical Analysis	3
MATH 4454	Applied Mathematical Modeling	3
ME 4524	Introduction to Robotics and Automation	3
MUS 3064	Digital Sound Manipulation	3
MUS 3065	Computer Music and Multimedia Design	3
MUS 3066	Computer Music and Multimedia Design	3
PHYS 4755	Introduction to Computational Physics	3

Exceptions (not allowed to count towards CS 3/4/5XXX electives)

Code	Title	Credits
ENGL 3764	Technical Writing	3
ENGL 3804	Technical Editing and Style	3
ENGL 3814	Creating User Documentation	3
ENGL 3824	Visual Rhetoric and Document Design	3
ENGL 3834	Intercultural Issues in Professional Writing	3
ENGL 3844	Writing and Digital Media	3
ENGL 4824	Science Writing	3

7. **Secure Computing Elective[3].** Students must take three of the following:

Code	Title	Credits
BIT 4604	Data Governance, Privacy and Ethics	3
BIT 4614	Cybersecurity Management II	3
BIT 4624	Cybersecurity Analytics for Business	3
CS 3274	Software Reverse Engineering	3
CS 3754	Cloud Software Development	3
CS 4254	Computer Network Architecture and Programming	3
ECE 4560	Computer and Network Security Fundamentals	3
FIN 4014	Cyberlaw and Policy	3
MATH 4175	Cryptography	3
MATH 4176	Cryptography	3
CS 5264	Advanced Linux Kernel Programming	3
CS 5580	Cryptographic Engineering	3
CS 5584	Network Security	3
CS 5590	System and Software Security	3
CS 5594	Blockchain Technologies	3

8. **Secure Computing Capstone Requirement.** Students must complete one 4000-level CS capstone course in the secure computing area. Students may choose the course listed here, or other 4/5000-level CS courses that have received prior approval as fulfilling the secure computing capstone requirement.

Code	Title	Credits
CS 4284	Systems & Networking Capstone	3
CS 4274	Secure Computing Capstone	3

With prior departmental approval, ENGE 4735 Interdisciplinary Design Capstone or ENGE 4736 Interdisciplinary Design Capstone can fulfill the capstone requirement in semesters where the course includes a significant software security aspect.

9. **CS Technical Elective[3].** Secure Computing majors must satisfy a 3 credit hour technical elective requirement by taking one of:
   a. Any 3-credit CS 3/4/5000-level course meeting the CS 3/4/5XXX elective requirements under (6) above.
   b. Any Secure Computing Elective listed under (6) above that is not otherwise used to fulfill a Secure Computing requirement.
   c. Any approved 3000- or 4000-level course in another discipline that has significant technical content relevant to the science or application of computer science can be used as a technical elective.

i. Requests to have a non-CS course approved as a technical elective are made by submitting a course syllabus to your CS advisor for review prior to enrolling in the course. This includes non-CS Independent Study (4974) and Undergraduate Research (4994) courses.

ii. Below is a listing of non-CS courses that are approved as technical electives.
Some courses may be restricted to majors other than CS in some semesters. Check the Undergraduate Course Catalog and consult with an academic advisor to confirm your eligibility for specific electives. Actual course offerings are subject to availability of sufficient resources, including faculty availability and student demand.

Code	Title	Credits
AOE 4434	Introduction to Computational Fluid Dynamics	3
ART 3704	Topics in Computer Animation	3
BIT 4424	Business Information Visualization and Analytics	3
BIT 4434	Computer Simulation in Business	3
BIT 4444	Web-Based Decision Support Systems	3
BIT 4514		3
BIT 4544	Artificial Intelligence, Machine Learning, and Deep Learning in BIT	3
BIT 4604	Data Governance, Privacy and Ethics	3
BIT 4614	Cybersecurity Management II	3
BIT 4624	Cybersecurity Analytics for Business	3
CEM 4624	Construction Robotics and Automation	3
CEM 4644	Artificial Intelligence for Design, Construction, and Operations	3
CMDA 3606	Mathematical Modeling: Methods and Tools	3
ECE 3544	Digital Design I	4
ECE 3574	Applied Software Design	3
ECE 4524	Artificial Intelligence and Engineering Applications	4
ECE 4550	Real-Time Systems	3
ECE 4560	Computer and Network Security Fundamentals	3
ECE 4564	Network Application Design	3
ECE 4580	Digital Image Processing	3
ECE 4704	Principles of Robotics Systems	3
ENGE 4735	Interdisciplinary Design Capstone	3
ENGE 4736	Interdisciplinary Design Capstone	3
ENGE 4964	Field Study	3
GEOG/GEOS 4084	Modeling with Geographic Information Systems	3
GEOG 4314	Spatial Analysis in Geographic Information Systems	3
GEOG 4324	Algorithms in Geographic Information Systems	4
MATH 4175	Cryptography	3
MATH 4176	Cryptography	3
MATH 4445	Introduction to Numerical Analysis	3
MATH 4454	Applied Mathematical Modeling	3
ME 4524	Introduction to Robotics and Automation	3
MUS 3064	Digital Sound Manipulation	3
MUS 3065	Computer Music and Multimedia Design	3
MUS 3066	Computer Music and Multimedia Design	3
PHYS 4755	Introduction to Computational Physics	3

[1] **CS Non-Technical Course Requirement.** B.S. in CS students must complete 30 credits of non-technical courses. All courses are approved as non-technical courses except those in the departments of Biological Sciences, Chemistry, Geosciences, Physics, Mathematics, and Statistics, and all departments in the College of Engineering, except for engineering courses satisfying Pathways 7. Also excluded are courses listed as CS technical electives.

[2] **Independent Study/Undergraduate Research.** No more than a total of 6 credits of CS 4974 Independent Study and/or CS 4994 Undergraduate Research may be used to fulfill CS degree requirements. To take Independent Study (CS 2974 Independent Study or CS 4974 Independent Study), a minimum overall and in-major GPA of 2.5 is required. To take Undergraduate Research (CS 4994 Undergraduate Research), a minimum overall GPA of 2.5 and an in-major GPA of 3.0 is required. CS 4974 Independent Study and CS 4994 Undergraduate Research also require completion of CS 3114 Data Structures and Algorithms with a grade of **C** or better.

[3] **Undergraduates Taking Graduate Courses**. Students within 2 semesters of graduating and with a 3.0 or better GPA may enroll in 5000-level courses satisfying undergraduate degree requirements within their department if they have been accepted into the Accelerated Undergraduate/Graduate Program, or by permission of the course instructor and the Department. For students not accepted into the Accelerated Undergraduate/Graduate Program, these courses may not be used on the Plan of Study for a graduate degree.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The CS Department fully supports this policy. Specific expectations for satisfactory progress for Computer Science majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog: http://www.undergradcatalog.registrar.vt.edu/1920/academic-policies.html#22
- Be registered in at least one 3-credit course **required** in the major during each on-campus semester of the regular academic year.
- Maintain an in-major GPA of 2.0 or better (calculated using all classes with a CS designator).
- Not take any CS course required in the major more than twice, including attempts ending in course withdrawal.
- Not repeat more than 3 CS courses required in the major, including attempts ending in course withdrawal.

Graduation Requirements

To qualify for a B.S. degree in CS, a student must:

1. Completed at least 123 credit hours
2. Earn a “C” (2.0) or better in CS 1114 Introduction to Software Design, CS 2114 Software Design and Data Structures, CS 2505 Introduction to Computer Organization, CS 2506 Introduction to Computer Organization and CS 3114 Data Structures and Algorithms.

3. Earn a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00 (the in-major GPA is calculated using all classes with a CS designator).

Acceptable Substitutions

1. MATH 2405H may be substituted for MATH 2114
2. MATH 2405H + MATH 2406H may be substituted for MATH 2114 + MATH 2204 + free elective (4 cr)
3. CS 2064 (C) may be substituted for CS 1114 (C)
4. ECE 2514 (C) may be substituted for CS 1114 (C)
5. ECE 3514 (C) may be substituted for CS 2114 (C)
6. ECE 2564 (C) may be substituted for CS 2505 (C)

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

•

Roadmap

First Year		
Fall Semester		**Credits**
CS 1114	Introduction to Software Design (C)	3
ENGE 1215	Foundations of Engineering	2
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable (C-)	4
Natural Science Elective		4
	Credits	**16**
Spring Semester		
CS 2114	Software Design and Data Structures (C)	3
ENGE 1216	Foundations of Engineering	2
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable	4
Natural Science Elective		4
	Credits	**16**
Second Year		
Fall Semester		
CS 1944	Computer Science First Year Seminar	1
CS/BIT/PSCI 2164	Foundations of Contemporary Security Environments	3
CS 2505	Introduction to Computer Organization (C)	3
MATH 2534 or MATH 3034	Introduction to Discrete Mathematics or Introduction to Proofs	3
Pathways 2, 3, 6a, or 7		3
Pathways 2, 3, 6a, or 7		3
	Credits	**16**
Spring Semester		
CS 2506	Introduction to Computer Organization (C)	3
MATH 2204 or CMDA 2005	Introduction to Multivariable Calculus or Integrated Quantitative Sciences	3
MATH 2114	Introduction to Linear Algebra	3
Communications Elective		3
Advanced Natural Science Elective		4
	Credits	**16**
Third Year		
Fall Semester		
CS 3114	Data Structures and Algorithms (C)	3
MATH 3134	Applied Combinatorics and Graph Theory	3
Secure Computing Elective [3]		3
Professional Writing Elective		3
Pathways 2, 3, 6a, or 7		3
	Credits	**15**
Spring Semester		
CS 3214	Computer Systems	3
CS 3604	Professionalism in Computing	3
Statistics Elective		3
Pathways 2, 3, 6a, or 7		3
Pathways 2, 3, 6a, or 7		3
	Credits	**15**
Fourth Year		
Fall Semester		
CS 3314	Programming Language Theory and Practice	3
CS 4264	Principles of Computer Security	3
CS Technical Elective [3]		3
Secure Computing Elective [3]		3
Free Elective		3
	Credits	**15**
Spring Semester		
CS 4944	Seminar	1
CS 4XXX: Secure Computing Capstone		3
Secure Computing Elective [3]		3
CS 3/4/5XXX Elective [3]		3
Pathways 2, 3, 6a, or 7		3
Free Elective		1
	Credits	**14**
	Total Credits	**123**

Electrical and Computer Engineering

Our Website (http://www.ece.vt.edu)

Overview

The Bradley Department of Electrical and Computer Engineering (ECE) offers bachelor of science degrees in electrical engineering (EE) and computer engineering (CPE). A key competitive advantage offered to undergraduate students in the department is the ability of students to pursue one of twelve different majors. This is possible since the department is one of the largest ECE departments in the U.S. with faculty expertise across the spectrum of electrical and computer engineering.

Traditional electrical and computer engineering programs consist of five basic areas: electricity (e.g. power systems), electronics, electromagnetics, hardware, and software. Graduates today apply their degree in more varied careers from investment banks to NGOs to medical firms. Instead of pushing student onto a single path, the department model allows students to choose the course of study that reflects their personal goals. Students have the flexibility to make conscious choices about what to do next at every stage of their journey.

All students in the department go through a seven-course base curriculum during their second year and then branch into their choice of major. This approach reflects today's reality that the electrical and computer engineers create technology that is transforming modern life – from transportation, agriculture, and manufacturing, to healthcare, education, entertainment, and social interactions. Students pursuing an electrical engineering degree can select a major from Controls, Robotics & Autonomy, Wireless Communications & Signal Processing, Energy & Power Electronic Systems, Micro/Nanosystems, and Applied Electromagnetics. Students pursuing a computer engineering degree can

select a major from Chip-Scale Integration, Machine Learning, Networking & Cybersecurity, Software Systems, or Controls, Robotics & Autonomy. If a student prefers a less focused approach they can still pursue a general electrical engineering major or a general computer engineering major.

In addition to undergraduate degrees, the department also offers M.S., M.Eng., and Ph.D. programs in both EE and CPE. An accelerated undergraduate/graduate (UG/G) program is available for qualified undergraduates.

Electrical engineers (EEs) and computer engineers (CPEs) create important and exciting technologies, systems and applications that make the world a better place for all of us. EEs and CPEs are inventing new ways to generate, distribute and use electric power that are more efficient, more sustainable and friendlier to the environment. For example, wider use of solar energy relies on improved photovoltaic devices, power electronics for energy conversion, and power grids. Some of our most critical global infrastructures, including the Internet, mobile voice and data networks, and the electric power grid are designed by EEs and CPEs. And, EEs and CPEs design sensors and embedded systems to monitor intelligent buildings and transportation systems. Applying innovative technologies to biology and the healthcare industry, EEs and CPEs create techniques for medical imaging, micro-electromechanical systems for medical diagnostics, implantable devices for health monitoring and drug delivery, and information systems to improve healthcare delivery. To meet the challenge of cybersecurity, EEs and CPEs design hardware and software for cryptographic algorithms and develop methods to ensure private communications through the Internet and wireless devices. They design new devices and systems for high-performance computing and networking. They build satellites and instruments to improve communications and enhance our knowledge of space and the Earth. And, EEs and CPEs enhance our leisure time by creating new ways to listen to music, watch movies, play games, communicate with friends, and build social networks.

Students in the Bradley Department of Electrical and Computer Engineering learn from faculty who work at the cutting-edge of engineering research and bring the excitement of their discoveries to the classroom. Engineers want to make things that work. EE and CPE students get hands-on opportunities to build components and systems from the beginning of their studies. In the freshman year, students explore applications of electrical and computer engineering, such as medical imaging and cryptography. In the sophomore year, EE and CPE students use personal, portable equipment and components to build and explore simple digital and analog electronic systems, which become more complex each semester. Laboratories and team projects throughout the curriculum contribute to an enriching hands-on, minds-on learning experience. During their senior year, students participate in a team-based, industry-sponsored design project that spans two semesters in which they solve real-world engineering problems while learning project management and team-building skills.

Electrical engineering and computer engineering are dynamic and fast changing fields that drive innovation and solutions to global challenges. The ECE faculty has created a program of study that provides each graduate with a firm foundation in mathematics, physics, and engineering principles, and with broad experience in different areas of EE and CPE. The program enables our graduates to excel in their EE and CPE majors, while gaining the tools to adapt to the technical changes and career opportunities they will experience in the future. EE and CPE students develop effective communication and teamwork skills and gain knowledge of ethics, all of which are essential to professional success. EE and CPE graduates are prepared to pursue careers in industry and government, advanced graduate work in EE and CPE, and other advanced professional degrees.

ECE seeks to develop tomorrow's engineering and technical leaders and innovators. Students can enhance their undergraduate experience by participating in multidisciplinary team projects, cooperative education and internships, research experiences for undergraduates, study abroad programs, dual degree and minor programs in other fields, and mentoring programs. The Cooperative Education (co-op) and Internship Program is highly recommended, as is participation in professional societies, including the Institute of Electrical and Electronics Engineers (IEEE), Eta Kappa Nu (HKN), and the Association for Computing Machinery (ACM). ECE works with the Ted and Karyn Hume Center for National Security and Technology to develop future leaders for the US government. ECE offers many scholarships for academic excellence, leadership and service, as well as for participation in various special academic programs.

Accreditation, Program Educational Objectives, and Student Outcomes

The BS in **Computer Engineering** degree program is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Electrical, Computer, Communications, Telecommunication(s) and Similarly Named Engineering Programs.

The BS in **Electrical Engineering** degree program is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Electrical, Computer, Communications, Telecommunication(s) and Similarly Named Engineering Programs.

Program Educational Objectives

The electrical and computer engineering programs integrate a strong and broad technical education with experiential learning and engineering professionalism training to provide our graduates the necessary knowledge and skills to solve complex 21st century problems. Within a few years of graduation, graduates from either of these programs will be:

- Advancing knowledge and making significant contributions to a variety of constituencies
- Seeking advanced degrees and life-long learning opportunities to maximize their contributions to society
- Emerging as entrepreneurs, researchers, or innovators in multi-disciplinary domains
- Contributing value to their employers and communities as conscientious and ethical professionals

Student Outcomes

Both the electrical engineering and the computer engineering program seek the same outcomes for students by the time they attain their BS degree. Upon graduation EE and CPE students will have:

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. an ability to communicate effectively with a range of audiences.

4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

- Applied Electromagnetics Major (p. 855)
- Chip-Scale Integration Major (p. 858)
- Computer Engineering Major (p. 861)
- Controls, Robotics & Autonomy Major (p. 864)
- Controls, Robotics & Autonomy Major (p. 866)
- Electrical Engineering Major (p. 869)
- Energy & Power Electronic Systems Major (p. 872)
- Machine Learning Major (p. 874)
- Micro/Nanosystems Major (p. 877)
- Networking & Cybersecurity Major (p. 880)
- Software Systems Major (p. 882)
- Wireless Communications and Signal Processing Major (p. 885)

Head and Roanoke Electric Steel Professor in Engineering: Luke F. Lester
University Distinguished Professor: D. Boroyevich
University Distinguished Professor Emeritus: A. G. Phadke and F. C. Lee
Alumni Distinguished Professor Emeritus: C. W. Bostian
Bradley Distinguished Professor Emeritus of Electromagnetics: G. S. Brown
Thomas Phillips Professor Emeritus: W. L. Stutzman
American Electric Power Professor: Chen-Ching Liu
Clayton Ayre Professor: A. Wang
Hugh P. and Ethel C. Kelly Professor: R. Zhang
Joseph R. Loring Professor in ECE: S. Rahman
Willis G. Worcester Professor in ECE: J. H. Reed
Virginia Microelectronics Consortium Professor: M. Agah
James S. Tucker Professor in ECE: J. S. Lai
Grant A. Dove Professor: Yue (Joseph) Wang
J. Byron Maupin Professor: W. A. Scales

W Martin Johnson Professorship: H. Dhillon
Bradley Distinguished Professor of ECE: Y. T. Hou
Bradley Professor of Cybersecurity: L. DaSilva
Bradley Senior Faculty Fellow: S. M. Bailey, and B. Ravindran

Professor Emeritus: J. R. Armstrong, P. M. Athanas, A. A. Beex, I. M. Besieris, R. P. Broadwater, C. R. Clauer, W. A. Davis, D. A. deWolf, G.D. Earle, F. G. Gray, L. J. Guido, M. T. Jones, C. D. Patterson, T. Pratt, K. Ramu, S. M. Riad, F. W. Stephenson, J. Tront, and H. F. VanLandingham
Associate Professor Emeritus: R. W. Conners and C. E. Nunnally
Professors: A. L. Abbott, P. Ampadu, J. B. H. Baker, R. M. Buehrer, R. Burgos, V. A. Centeno, D. S. Ha, Q. Li, M. S. Hsiao, L. Liu, T. L. Martin, A. Mehrizi-Sani, A. J. Michaels, S. F. Midkiff, L. M. Mili, L. Nazhandali, K. Ngo, M. Orlowski, P. Plassmann, T.-C. Poon, J. M. Ruohoniemi, W. Saad, A. Safaai-Jazi, T. D. Sands, L. Smith, A. Stavrou, D. J. Stilwell, H. Wang, Y. Xu, J. Xuan, Y. Yang, and Y. (Cindy) Yi.
Associate Professors: W. T. Baumann, T. Chantem, J. De La Ree Lopez, D. Dong, S. W. Ellingson, X. Jia, R. Gerdes, M. Hudait, M. Manteghi, J. Paul, J. Walling, R. Williams, C. L. Wyatt, H. Zeng, Y. Zhang, W Zhou, and Y. Zhu
Assistant Professors: J Budhu, C. DiMarino, T. Doan, R. Jia, M. Jin, Z Lin, E. Lind, L. Shao, and W. Xiong.
Collegiate Professors: S. Dunning, C. Jones, and T. Talty,
Collegiate Associate Professors: W J Adams, D P Connors, K. L. Cooper, S. Ransbottom, A Soysal, and N. Tryfona
Collegiate Assistant Professors: A. H. Ball, A. M. Boker, K. Giles, S. Ha, M. Lanzerotti, and R. Raghunathan
Adjunct Professors of Practice: D. M. Sable, E. Meadows, and K. R. Schulz
Assistant Professors of Practice: P. Han
Advanced Instructors: J. Thweatt
Instructors: Tyler Milburn, A. Sarker, and S. Yu

Undergraduate Course Descriptions (ECE)

ECE 1004 - Introduction to ECE Concepts (3 credits)
Introduction to topics that span the field of electrical and computer engineering (ECE). Content presented through the lens of application with accompanying hands-on exercises. Basics of circuits, op-amps, power supplies, computer logic, system decomposition, and coding. Modeling and application of engineering professionalism. Exploration of ECE in society.
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2024 - Circuits and Devices (3 credits)
Analysis and design of passive and active circuits under Direct Current (DC), Alternating Current (AC), and switched excitation. Linear circuit analysis techniques for various circuit topologies. Expressing the transient response of first- and second-order linear circuits using time-domain methods. Calculating the AC steady-state response of linear circuits using phasors and immittances. Characterizing the frequency response of linear circuits. Determining operating point and small signal response of non-linear circuits containing diodes and bipolar transistors. Projects demonstrating circuit design processes adhering to professional practices.
Prerequisite(s): ECE 1004 and (MATH 2114 or MATH 2114H or MATH 2405H)
Corequisite(s): MATH 2214, PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2054 - Applied Electrical Theory (3 credits)
For students in the Mechanical Engineering program or by permission of the ECE Department. Fundamentals of electric circuits; circuit laws and network theorems, operational amplifiers, energy storage elements, response of first and second order systems, AC steady state analysis. Construction, analysis, and characterization of circuits with student-owned Lab-in-a-Box system.
Prerequisite(s): PHYS 2306
Corequisite(s): MATH 2214
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

ECE 2164 - Exploration of the Space Environment (3 credits)
This introductory course covers a broad range of scientific, engineering, and societal aspects associated with the exploration and technological exploitation of space. Topics covered include: science of the space environment; space weather hazards and societal impacts; orbital mechanics and rocket propulsion; spacecraft subsystems; applications of space-based technologies.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 2664

ECE 2214 - Physical Electronics (3 credits)
Fundamentals of electrostatics and magnetostatics, transmission lines, impedance matching networks, electromagnetic (EM) waves, and basic operating principles of diodes and metal-oxide semiconductor field-effect transistors (MOSFETs). Designing MOSFET biasing, and single-ended and differential amplifier circuits. Basic operating principles of complementary metal-oxide semiconductor (CMOS) device and its application as a digital inverter. Electronic circuit design adhering to professional and ethical practices.
Prerequisite(s): ECE 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2274 - Electronic Networks Laboratory I (1 credit)
Principles of operation of electrical and electronic test equipment and applications to measurement of circuit parameters. Transient and steady state response of RLC networks. Applications of laws and theories of circuits. Design, prototyping, and testing of electronic devices and circuits. Must have C- or better in prerequisite.
Prerequisite(s): ECE 2074
Corequisite(s): ECE 2204
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 2514 - Computational Engineering (3 credits)
Software development processes for electrical and computer engineering applications. Modeling, simulation, data analysis, and visualization. Computing abstractions and the use of application programming interfaces. Software design and implementation using a procedural, class-based language. Integrated code development and testing. Team-based development of autonomous system applications reinforcing course topics.
Prerequisite(s): ECE 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2544 - Fundamentals of Digital Systems (3 credits)
Design and analysis of digital systems. Information representations and computer arithmetic. Switch and gate design within digital logic. Combinational logic analysis and synthesis, Hardware Description Languages (HDL), and hierarchical design. Finite-state machines, synchronous sequential logic analysis and design. Hardware specification and documentation. Register transfer level architectures, computer organization, memories, and digital interfacing. Instruction set architecture and assembly language programming. Emphasis on the relationship between software and hardware.
Prerequisite(s): ECE 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2564 - Embedded Systems (3 credits)
Use of microcontroller-based embedded systems as a tool to address digital control and sensing in engineering applications. Modern methodologies for programming microcontrollers including programming under real-time and resource design constraints. Finite-state machine modeling and software implementation. Event-driven programming including polling-based and interrupt-driven input/output. Integration of sensors and actuators, use of standard digital and analog interfaces, and use of hardware peripherals in microcontroller architectures. Design of hardware abstraction layers and software architectures for embedded systems. Integration of hardware peripherals into real-time, software applications. Software toolchains for embedded systems, use of debugger and development and testing methodologies. Professional project management and version control.
Prerequisite(s): ECE 2514 and ECE 2544
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2714 - Signals and Systems (3 credits)
Mathematical methods for the analysis and design of continuous and discrete linear, time-invariant systems. Representation of signals using time-domain and frequency-domain methods and the application of Fourier transforms to linear system design and analysis. Descriptions of systems as signal transformations using block diagrams, differential equations, difference equations, convolution, and transfer functions. Applications to signal filtering, measurement, and control of the physical devices. Formal project documentation adhering to professional practices.
Prerequisite(s): ECE 2024 and (MATH 2214 or MATH 2214H or MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2804 - Integrated Design Project (2 credits)
Design, implementation, testing, and validation of a hardware and software solution to an open-ended engineering problem integrating both analog and digital components. Using industrial-caliber test and measurement equipment including: oscilloscopes, function generators, power supplies, and digital multi-meters. Technical documentation and oral presentation of design process and solution. Overview of the scope of the electrical and computer engineering profession and issues related to its societal impact and ethical considerations.
Prerequisite(s): ECE 2024 and ECE 2514 and ECE 2544
Corequisite(s): ECE 2214 and (ECE 2564 or ECE 2714)
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

ECE 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 2974 - Independent Study (1-19 credits)
A minimum GPA of 2.0 in all ECE courses is required for enrollment.
Instructional Contact Hours: Variable credit course

ECE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 3004 - AC Circuit Analysis (3 credits)
Application of the basic laws and techniques of circuit analysis to AC circuits. Complex numbers and algebra with an emphasis on phasor representation of circuits. Calculation of the frequency response of circuits with R, L, and C components, independent sources, controlled sources, and operational amplifiers. Analysis of AC steady-state circuits and determination of average power. Magnetically coupled circuits. Laplace and Fourier transforms. Representation of circuits by two-port models. C- or better in prerequisites.
Prerequisite(s): ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3054 - Electrical Theory (3 credits)
For students in curricula other than ECE or ME. Fundamentals of electric circuits and electronic devices. Fundamentals of electric circuits: circuit laws and network theorems, operational amplifiers, energy storage elements, response of first (Resistive-Inductive RL, and Resistive Capacitive RC) and second order (Resistive-Inductive-Capacitive RLC) systems, Alternating Current (AC) steady state analysis. Basic electronic devices: Diodes and Transistors.
Prerequisite(s): PHYS 2306
Corequisite(s): MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3074 - AC Circuit Analysis Laboratory (1 credit)
Construction, analysis, and characterization of circuits with student-owned Lab-in-a-Box system. Experiments include: sinusoids and phasors including impedance, admittance, and Kirchhoffs laws; sinusoidal steady- state including node and mesh analysis, Thevenin and Norton equivalent, and op amps; ac power analysis including instantaneous and average power, power factor, and complex power; magnetically coupled circuits including mutual inductance, energy in a coupled circuit, and transformers; frequency response including transfer functions, Bode plots, resonance, and passive and active filters; and two-port circuits. A C- or better is required for all prerequisites.
Prerequisite(s): ECE 2804
Corequisite(s): ECE 3004
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 3104 - Introduction to Space Systems and Technologies (3 credits)
Introduction to technologies and computational tools used in space-based applications, including techniques for exploring the planets and the near-Earth geospace environment. Overview of orbits, spacecraft, control of spacecraft, electromechanical system requirements for space-based applications, and space environment interactions with spacecraft systems. Understanding the space environment and the engineering approaches required to operate it. A C- or better is required in prerequisites.
Prerequisite(s): ECE 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3105 - Electromagnetic Fields (3 credits)
Maxwells equations and their application to engineering problems. ECE 3105: transmission lines, introductory electrostatics, introductory magnetostatics, Faradays Law, properties of uniform plane waves. ECE 3106: electrostatics and magnetostatics, Maxwells Equations, wave propagation in uniform media, the reflection and transmission of plane waves, guided waves, radiation. A C- or better is required in the prerequisites.
Prerequisite(s): ECE 2214 and (MATH 2204 or MATH 2204H or MATH 2406H) and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3106 - Electromagnetic Fields (3 credits)
Maxwells equations and their application to engineering problems. ECE 3105: transmission lines, introductory electrostatics, introductory magnetostatics, Faradays Law, properties of uniform plane waves. ECE 3106: electrostatics and magnetostatics, Maxwells Equations, wave propagation in uniform media, the reflection and transmission of plane waves, guided waves, radiation. A C- or better is required in the prerequisites.
Prerequisite(s): ECE 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3134 - Introduction to Optoelectronics (3 credits)
Fundamental principles of optoelectronics. The concept of photons, spontaneous emission, and simulated emission. Rate equation analysis of light emitting diodes and lasers. Operation principles and device characteristics of photodetectors and solar cells. Advanced topics such as quantum well and emerging materials.
Prerequisite(s): ECE 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3154 - Space Systems - Design and Validation (2 credits)
Introduction to systems and techniques used in electrical engineering design for space-based applications. Students design, fabricate, and test an electronic system following accepted NASA and industry standards, including functional bench-top tests, thermal testing, vibration testing, and long-duration operational testing. Periodic formal reports will document design approaches and test results.
Prerequisite(s): ECE 3105
Corequisite(s): ECE 3104
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

ECE 3174 - Optoelectronics Laboratory (1 credit)
Characterization of optoelectronic devices such as light emitting diodes, semiconductor lasers, and photodetectors. Characterization and analysis of optical interference, wave propogation in optical fibers, and optical diffraction. Construction of simple optical imaging systems using lenses and bulk optics.
Prerequisite(s): ECE 2804
Corequisite(s): ECE 3134
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 3204 - Analog Electronics (3 credits)
Small signal modeling of transistors. Basic architecture and functionality of linear amplifiers including transistor biasing circuits, current sources, differential amplifier, common emitter amplifier, common source amplifier, emitter follower, source follower, common base amplifier, and common gate amplifier. Frequency response of single stage and multistage amplifiers.
Prerequisite(s): ECE 2214 and ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3214 - Semiconductor Device Fundamentals (3 credits)
Fundamental semiconductor device physics associated with intrinsic and doped semiconductor materials, drift-diffusion of charge carriers, and devices with an in-depth coverage of p-n and Schottky diodes, bipolar junction transistors, and metal-oxide semiconductor and junction field effect transistors.
Prerequisite(s): ECE 2214 or MSE 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3254 - Industrial Electronics (3 credits)
Fundamentals of electronics, including basic device principles. Include digital, operational amplifier, and analog analysis for industrial applications and magnetic circuits. For students in the Mechanical Engineering program or by permission of the ECE Department.
Prerequisite(s): ECE 2054
Instructional Contact Hours: (3 Lec, 0 Lab, 3 Crd)

ECE 3274 - Electronic Circuits Laboratory II (1 credit)
Design, build, and test amplifiers and other electronic circuits to meet specifications. Bipolar and field-effect transistors, diodes, integrated circuits such as operational amplifiers, and passive components are used. Gain, bandwidth, input and output impedance, positive and negative feedback, and circuit stability are implemented in the designs. Digital oscilloscopes, ammeters, voltmeters, function generators, and power supplies are used. A grade of C- or better is required in all pre-requisite courses.
Prerequisite(s): ECE 3074
Corequisite(s): ECE 3204
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 3304 - Introduction to Power Systems (3 credits)
Basic concepts of AC systems, single-phase and three-phase networks, electric power generation, transformers, transmission lines, electric machinery and the use of power. Pre-requisite 3004 with C- or better.
Prerequisite(s): ECE 3004
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3354 - Electric Power Engineering Laboratory (1 credit)
Laboratory experiments based on principles of electric power engineering.
Corequisite(s): ECE 3304
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 3504 - Principles of Computer Architecture (3 credits)
Instruction formats and construction. Addressing modes. Memory hierarchy (cache, main memory and secondary memory) operation and performance. Simple pipelines. Basic performance analysis. Simple Operating System (OS) functions, particularly as they relate to hardware. Virtual memory. Computer Input/Output (I/O) concepts, including interrupt and Direct Memory Access (DMA) mechanisms. Intercomputer communication concepts. Processor design.
Prerequisite(s): ECE 2544
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3514 - Data Structures & Algorithms (3 credits)
Introduction of fundamental data structures, algorithms, and abstract data types. Data structures, arrays, linked lists, stacks, queues, and trees. Algorithms for manipulation, sorting, searching. Tree traversals. Implementation of data structures and algorithms in C++ using good design practices.
Prerequisite(s): ECE 2514
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3524 - Introduction to Unix for ECE (2 credits)
Fundamental concepts of operating systems, emphasizing a hands-on introduction to Unix. User interfaces, Unix shell commands, the Unix file system, task management, common system utilities, the Unix programming environment. Students gain experience with system installation and administration.
Prerequisite(s): ECE 2804
Instructional Contact Hours: (2 Lec, 2 Crd)

ECE 3544 - Digital Design I (4 credits)
Design techniques for combinational and sequential logic. Design of digital circuits using standard integrated circuit chips and programmable logic devices. Computer simulation will be used to validate designs. Prototypes will be constructed to demonstrate design functionality.
Prerequisite(s): ECE 2544
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ECE 3564 - Introduction to Computer Networking (3 credits)
Introduction to computer networking featuring the Internet. Internet architecture and layering. Application layer service models and protocols. Transport layer protocols and congestion control. Internet addressing, routing algorithms and protocols. Multiple access and link layer addressing, wireless local area networks (LANs) and cellular networks.
Prerequisite(s): ECE 2544 and ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3574 - Applied Software Design (3 credits)
An introduction to applied software design methods for use in the writing of efficient, reusable, and modular C++ programs. Introduces the use of the following: classes, inheritance, and polymorphism; design patterns; high-level programming techniques using libraries, generics, and containers; widgets, models, and views; software frameworks for embedded systems; and advanced techniques ranging from multi-threading to reflective programming.
Prerequisite(s): ECE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3604 - Introduction to RF and Microwave Engineering (3 credits)
Introduction to circuits, devices, and systems for radio frequency (RF) and microwave applications. Fundamentals of antennas, propagation, small signal and power amplifiers, frequency conversion, and frequency synthesis. Tools and concepts including s-parameters, design impedance matching, dynamic range, noise figure, and link budget.
Prerequisite(s): ECE 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3614 - Introduction to Communication Systems (3 credits)
Analysis and design of communication systems with an emphasis on digital communications based on time and frequency domain analysis. Fourier transform techniques, linear systems, and filtering are reviewed. Power and energy spectral density of communication signals. Sampling and quantization of analog signals. Baseband and binary bandpass digital modulation including line coding, pulse shaping, and both pulse and carrier modulation techniques. Wireless communication system concepts including link budgets and multiple access. Transmitter and receiver design concepts. Signal-to-noise ratio, bit error rate, and their relationship. Analog techniques such as Amplitude Modulation (AM) and Frequency Modulation (FM) radio will be reviewed for conceptual and comparative purposes.
Prerequisite(s): ECE 2714 and STAT 4714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3704 - Continuous and Discrete System Theory (3 credits)
Continuous- and discrete-time system theory. Block diagrams, feedback, and stability theory. Continuous-time stability, differential equations, Laplace-transforms, transfer functions. Discrete-time stability, difference equations, Z-transforms. Transfer functions and frequency response. Sampling of continuous systems and an introduction to control and filter design. Hands-on projects to illustrate and integrate the various continuous- and discrete-time concepts and tools.
Prerequisite(s): ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3714 - Introduction to Control Systems (3 credits)
Introduction to the design of feedback compensation to improve the transient and steady-state performance of systems. Emphasis is on modeling, analysis and analog compensator design for single-input single-output systems. Modeling techniques, root locus analysis and design, the Nyquist criterion, and frequency domain compensation.
Prerequisite(s): ECE 3704
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 3974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 4104 - Microwave and RF Engineering (4 credits)
Passive and active Radio Frequency and microwave components and circuits for wireless communications; transmission-line theory; planar transmission-lines and waveguides; S-parameters; resonators; power dividers and couplers; microwave filters; sources, detectors, and active devices; modern RF & microwave CAD; measurement techniques. C- or better in prerequisites.
Prerequisite(s): ECE 3106 and ECE 3204
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ECE 4114 - Antennas (3 credits)
Antenna fundamentals, analysis and design principles, and a survey of antenna types including: arrays, wire antennas, broadband antennas, and aperture antennas.
Prerequisite(s): ECE 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4124 - Radio Wave Propagation (3 credits)
Behavior of radiated electromagnetic waves in terrestrial, atmosphere, space, and urban environments; path, frequency and antenna selection for practical communication systems; propagation prediction.
Prerequisite(s): ECE 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4134 - Photonics (3 credits)
Fundamental concepts in photonics technology. Basic principles of optical fibers and components such as Bragg gratings, amplifiers, couplers and modulators used in optical communications and sensing. Propagation, dispersion, bandwidth and nonlinear properties of optical signals in optical waveguides and fibers.
Prerequisite(s): ECE 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4144 - Optical Systems (3 credits)
Fundamental concepts in optical information processing. Ray optics. Optical diffraction. Basic principles and applications of optical imaging using wave optics. Properties of Gaussian Beam. Introduction to Fourier optics, optical spatial filtering, 3D image reconstruction and holography.
Prerequisite(s): ECE 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4154 - Space Weather: The Solar Wind and Magnetosphere (3 credits)
Solar-terrestrial interactions and space weather: the sun, solar wind, and interplanetary magnetic field; space plasma physics and magnetohydrodynamics; Earths magnetosphere and ionosphere; geomagnetic storms and auroral substorms; societal impacts of space weather; planetary magnetospheres; space science instrumentation.
Prerequisite(s): ECE 3105 or AOE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4654

ECE 4164 - Introduction to Global Positioning System (GPS) Theory and Design (4 credits)
Fundamental theory and applications of radio navigation with the Global Positioning System GPS. Satellite orbit theory, GPS signal structure and theory, point positioning with pseudoranges and carrier phases, selective availability, dilution of precision, differential GPS, atmospheric effects on GPS signals.
Prerequisite(s): ECE 3105 or AOE 4134
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: AOE 4464

ECE 4174 - Upper Atmosphere/Ionosphere Space Weather (3 credits)
Interaction of Earth's upper atmosphere and space environment with spacecraft: processes that affect atmospheric density relevant to spacecraft orbit decay; basic composition and structure; radiation and radiative transfer; atmospheric energy balance; atmospheric chemistry and ion production/loss mechanisms; fundamental concepts of Solar-terrestrial physics including ionospheric Chapman theory; atmospheric energy/mass transport; ionospheric electrodynamics; ionospheric storms; planetary atmospheres/ionospheres; instrumentation.
Prerequisite(s): AOE 3014 or ECE 3105
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4674

ECE 4184 - Applied Quantum Mechanics for Engineers (3 credits)
Review of classical mechanics, the simple harmonic oscillator. Schrodinger equation, barrier tunneling, resonant tunneling, and quantum wells. Mathematical foundation of quantum mechanics, Dirac notation and representations, observables, eigenstates and diagonalization. Quantum postulates and its application to two-level systems, harmonic oscillators, creation and annihilation operators. Time evolution of a Hamiltonian. Dynamics of spin and two-level atoms. No cloning theorem and the concept of entanglement.
Prerequisite(s): ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4194 - Engineering Principles of Remote Sensing (3 credits)
Physical principles involved in remote sensing of Earths environment and their implementation in engineering systems: fundamentals of electromagnetic wave propagation, scattering by matter, effects of propagation media, passive and active systems, remote sensing platforms, data processing, systems integration, and introductory concepts important for the design and analysis of remote sensing engineering systems.
Prerequisite(s): ECE 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4205 - Electronic Circuit Design (3 credits)
Stability and response of feedback amplifier, wideband amplifiers, operational amplifier characteristics, waveform generators and wave shaping, nonlinear circuit applications, signal generators, and photolithography. Design of analog electronic circuits, circuit simulation, response characterization, and printed circuit construction. C- or better in prerequisites.
Prerequisite(s): ECE 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4206 - Electronic Circuit Design (3 credits)
Stability and response of feedback amplifier, wideband amplifiers, operational amplifier characteristics, waveform generators and wave shaping, nonlinear circuit applications, signal generators, and photolithography. Design of analog electronic circuits, circuit simulation, response characterization, and printed circuit construction. C- or better in prerequisites.
Prerequisite(s): ECE 4205
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4220 - Analog Integrated Circuit Design (3 credits)
Integrated circuit design in silicon bipolar, MOS (Metal-Oxide-Semiconductor), and BiCMOS (Bipolar Complementary Metal-Oxide-Semiconductor) technologies for communications, sensor, instrumentation, data conversion, and power management applications. Models for active devices in bipolar and MOS technologies; transistor-level amplifiers and output stages (amplifier classifications); transistor-level current mirrors and voltage reference generators, transistor-level operational amplifiers; transistor-level feedback circuits; noise and linearity; layout and simulation of analog integrated circuits with modern VLSI CAD (Very Large Scale Integration- Computer Aided Design) software.
Prerequisite(s): ECE 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4224 - Power Electronics (3 credits)
Switching power converter operation and design; modeling of power converters; power components including power semiconductor devices, inductors, and transformers; control of power converters; select power converter topology for applications such as renewable energy, electric transportation, and telecommunications.
Prerequisite(s): ECE 3204 and ECE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4234 - Semiconductor Processing (3 credits)
Manufacturing practices used in silicon integrated circuit fabrication and the underlying scientific basis for these process technologies. Physical models are developed to explain basic fabrication steps, such as substrate growth, thermal oxidation, dopant diffusion, ion implantation, thin film deposition, etching, and lithography. The overall CMOS integrated circuit process flow is described within the context of these physical models.
Prerequisite(s): ECE 2214
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MSE 4234

ECE 4244 - Intermediate Semiconductor Processing Laboratory (3 credits)
Design, layout, fabricate, and characterize microelectronic devices. Analyze test results to verify performance to the predetermined specifications. Required oral and written reports. A C- or higher is required in all pre-requisite courses.
Prerequisite(s): ECE 4234 or MSE 4234
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

ECE 4254 - Principles of Electronics Packaging (3 credits)
Electrical and thermal design of electronics packaging using finite element analysis software. Materials and process selection guidelines for the fabrication of single- and multi-chip electronics packages. Methods for characterization and testing of electronics packages. Failure mechanisms and design for reliability. Hands-on project experience on electronics packaging.
Prerequisite(s): ECE 2214 or ECE 2054 or ECE 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4284 - Power Electronics Laboratory (1 credit)
Design and testing of electronic power processing systems for commercial and aerospace applications.
Corequisite(s): ECE 4224
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 4314 - Electric Energy Distribution Systems (3 credits)
Fundamentals of electric power distribution systems. Load characteristics. Modeling of distribution system components (line segments, voltage regulators, and transformers). Distribution flow analysis. Capacitor placement. Symmetrical components and calculation of fault currents. Protection of distribution feeders. Automation/control technologies to enhance reliability, resilience, and security.
Prerequisite(s): ECE 3004
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4324 - Microgrids (3 credits)
Microgrid: definitions, components, and modes of operation; steady-state analysis and power quality; control modes and hierarchy; renewable resources and their inverter grid-forming and grid-following modes; protection strategies; emerging topics e.g., DC microgrids and datacenters; cybersecurity.
Prerequisite(s): ECE 3004
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4334 - Power System Analysis and Control (3 credits)
Development of methods for power analysis and control. An analysis and design of systems for steady state, transient, and dynamic conditions. Digital solutions emphasized.
Prerequisite(s): ECE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4354 - Power System Protection (3 credits)
Protection of power apparatus and systems. Fuses. Voltage and current transducers. Relays. Coordination of relays. Pilot channels. Grounding practices. Surge phenomena. Insulation coordination.
Prerequisite(s): ECE 4334
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4364 - Alternate Energy Systems (3 credits)
Electric energy from alternative energy sources including solar, wind, hydro, biomass, geothermal and ocean. Characteristics of direct conversion, electromechanical conversion, and storage devices used in alternative energy systems. Power system issues associated with integration of small scale energy sources into the electricity grid.
Prerequisite(s): STAT 3704 or STAT 4604 or STAT 4705 or STAT 4714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4414 - Linux Kernel Programming (3 credits)
Design and internal organization of the Linux operating system kernel. Kernel subsystems, boot process, memory management, process and thread model, scheduling, interrupt and exception handling, virtual file system and the concrete file system, block I/O and I/O scheduler, network stack, and device drivers. Modification of existing kernel code. Design, implementation, test and evaluation of new kernel modules. Kernel and full software stack debugging techniques, and virtualization as an aid for operating system development and debug. Software engineering techniques to analyze, modify and run a large, complex open-source code base.
Prerequisite(s): ECE 3574 or CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4224

ECE 4424 - Machine Learning (3 credits)
Algorithms and principles involved in machine learning; focus on perception problems arising in computer vision, natural language processing and robotics; fundamentals of representing uncertainty, learning from data, supervised learning, ensemble methods, unsupervised learning, structured models, learning theory and reinforcement learning; design and analysis of machine perception systems; design and implementation of a technical project applied to real-world datasets (images, text, robotics). A grade of C- or better in prerequisites.
Prerequisite(s): (ECE 3514 or CS 2114) and (STAT 3704 or STAT 4105 or STAT 4604 or STAT 4705 or STAT 4714 or CMDA 2006)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4824

ECE 4444 - Technological Singularity (3 credits)
True artificial machine intelligence. Societal impact. Historical perspectives. Technological barriers to whole brain emulation. Engineering of superintelligence. Role of consciousness. Cross disciplinary course for students with advanced technical backgrounds, e.g., seniors in engineering, math, physics, biology, or other similar disciplines.
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4454 - Multimedia Signal Processing (3 credits)
Signal processing techniques in multimedia systems: concept and principle of multimedia systems; speech analysis and recognition; audio/image/video compression; scene video analysis & understanding; multimedia applications such as human computer interaction, multimedia communication and multimedia security.
Prerequisite(s): ECE 2704 or (ECE 2714 and ECE 2804)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4504 - Computer Organization (3 credits)
Overview of the structure, elements and analysis of modern enterprise computers. Performance evaluation of commercial computing. Past and emerging technology trends. Impact of parallelism at multiple levels of computer architecture. Memory and storage. Fundamental computer system descriptions, Amdahls Law, Flynns Taxonomy. A grade of C or better required in prerequisites.
Prerequisite(s): ECE 3504 or CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4504

ECE 4514 - Digital Design II (4 credits)
Advanced digital design techniques for developing complex digital circuits. Emphasis on system-level concepts and high-level design representations while meeting design constraints such as performance, power, and area. Methods presented that are appropriate for use with automated synthesis systems. Commercial hardware description language simulation and synthesis tools used for designing a series of increasingly complex digital systems, and implementing those systems using Field Programmable Gate Arrays (FPGAs).
Prerequisite(s): ECE 3544
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ECE 4520 - Digital and Mixed-Signal System Testing and Testable Design (3 credits)
Various topics on testing and testable design for digital and mixed-signal systems are studied: fault modeling, logic and fault simulation, fault modeling, automatic test pattern generation, deterministic ATPG, simulation-based ATPG, delay fault testing, design for testability, built-in-self-test and fault diagnosis.
Prerequisite(s): ECE 2574 and (ECE 3504 or ECE 3544)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4524 - Artificial Intelligence and Engineering Applications (4 credits)
Problem solving methods; problem spaces; search techniques; knowledge representation; programming languages for AI; games; predicate logic; knowledge-based systems; machine learning; planning techniques; reactive systems; artificial neural networks; natural language understanding; computer vision; robotics.
Prerequisite(s): ECE 3514 and STAT 4714
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ECE 4525 - Video Game Design and Engineering (3 credits)
4525: Fundamental concepts in the development and engineering of modern 2-D and 3-D real-time interactive computer video games. Game design and engineering principles, game architecture, game mechanics and interaction, computer graphics, strategy, artificial intelligence (AI), optimization, play testing and fuzzy logic are included. 4526: Advanced concepts in the development and engineering of modern 2-D and 3-D real-time interactive computer video systems. Topics include non-player character (NPC) behavior learning, search and planning, player modeling, procedural content generation, AI-assisted game design.
Prerequisite(s): ECE 3574
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4526 - Video Game Design and Engineering (3 credits)
Prerequisite(s): ECE 4525
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4530 - Hardware-Software Codesign (3 credits)
An introduction to the design of mixed hardware- software systems, focusing on common underlying modeling concepts, the design of hardware-software interfaces, and the trade-offs between hardware and software components. Students will use simulation tools to conduct experiments with mixed hardware- software systems in the area of embedded systems.
Prerequisite(s): (ECE 2534 or ECE 2564) and ECE 3544
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4534 - Embedded System Design (4 credits)
Team-based major design experience. Design and implement embedded computer systems that incorporate appropriate engineering standards to solve complex problems that include multiple realistic constraints. Writing design documents and making oral presentations as part of the design process. C- or better required in prerequisites.
Prerequisite(s): (ECE 2014 and ECE 2534 and ECE 3574) or (ECE 2564 and ECE 2804 and ECE 3574)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ECE 4540 - VLSI Circuit Design (3 credits)
Introduction to the design and layout of Very Large Scale Integrated Circuits (VLSI). Emphasis is placed on digital CMOS circuits. Static and dynamic properties of MOSFET devices, along with integrated circuit fabrication are examined. Computer-aided design tools are used to produce working integrated circuit designs.
Prerequisite(s): ECE 2214 and ECE 2544
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4550 - Real-Time Systems (3 credits)
Theory, algorithmic and protocol concepts, mechanisms, and implementations of real-time computer systems. Introduction to real-time systems, real-time scheduling, real-time synchronization, real-time operating system kernels, and real-time resource management algorithms (e.g., scheduling, synchronization), their implementations in production operating system kernels, experimental studies of those implementations, and real-time application development.
Prerequisite(s): ECE 3574 or CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4554 - Introduction to Computer Vision (3 credits)
Techniques for automated analysis of images and videos. Image formation, detecting features in images, segmenting or grouping image regions and image features, multiple view geometry, object instance and category recognition in images and video processing.
Prerequisite(s): ECE 3574 and (STAT 4705 or STAT 4714)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4560 - Computer and Network Security Fundamentals (3 credits)
This course introduces fundamental security principles and real-world applications of Internet and computer security. Topics covered in the course include legal and privacy issues, risk analysis, attack and intrusion detection concepts, system log analysis, intrusion detection and packet filtering techniques, computer security models, computer forensics, and distributed denial-of-service (DDoS) attacks. Must have C- or better in ECE 4564 or CS 3214.
Prerequisite(s): ECE 3564 or CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4564 - Network Application Design (3 credits)
Application program interface and network transport services including User Datagram Protocol and Transmission Control Protocol from the Internet Protocol suite. Client-server organization and design of synchronous, asynchronous, and multithreaded client and server applications. Design, implementation, and testing techniques to improve robustness and performance. Partially duplicates CS 4254 and credit will not be allowed for both.
Prerequisite(s): ECE 3564 and ECE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4570 - Wireless Networks and Mobile Systems (3 credits)
Multidisciplinary, project-oriented design course that considers aspects of wireless and mobile systems including wireless networks and link protocols, mobile networking including support for the Internet Protocol suite, mobile middleware, and mobile applications. Students complete multiple experiments and design projects.
Prerequisite(s): ECE 4564
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4570

ECE 4574 - Large-Scale Software Development for Engineering Systems (3 credits)
Large-scale software implementations of the hierarchy of engineering analysis, design, and decision evaluation. Computer-aided engineering programs with state-of-the-art computer tools and methods. Operator overloading, dynamic polymorphism, graphical user interfaces, generic programming, dynamic link libraries, and multiple threads.
Prerequisite(s): ECE 3574
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4580 - Digital Image Processing (3 credits)
This course provides an introduction to basic concepts, methodologies and algorithms of digital image processing focusing on the two major problems concerned with digital images: (1) image analysis and object restoration for easier interpretation of images, and (2) image analysis and object recognition. Some advanced image processing techniques (e.g., wavelet and multiresolution processing) will also be studied in this course. The primary goal of this course is to lay a solid foundation for students to study advanced image analysis topics such as computer vision systems, biomedical image analysis, and multimedia processing & retrieval.
Prerequisite(s): ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4584 - Robotics Laboratory (1 credit)
Develop, compile, and test algorithms for serial and mobile robots. Robot forward and inverse kinematics, task planning, velocity kinematics, force rendering, control, haptics, mapping and localization, computer vision and path planning.
Corequisite(s): ME 4524 or ECE 4704
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: ME 4584

ECE 4605 - Radio Engineering (3 credits)
Wireless application circuit design for gain and filter control at radio frequencies to interface the baseband processing systems and the antennas of communication systems. 4605: Design of radio transmitter and receiver circuits using scattering-parameter methods. Circuits include oscillators, radio frequency amplifiers and matching networks, mixers and detectors. 4606: Design of amplitude, frequency, and pulse-modulated communication systems, including modulators, detectors, and the effects of noise. Design basics and guidelines for phase-locked loops and several power amplifier configurations.
Prerequisite(s): ECE 3105 and ECE 3204 and ECE 3614
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4606 - Radio Engineering (3 credits)
Wireless application circuit design for gain and filter control at radio frequencies to interface the baseband processing systems and the antennas of communication systems. 4605: Design of radio transmitter and receiver circuits using scattering-parameter methods. Circuits include oscillators, radio frequency amplifiers and matching networks, mixers and detectors. 4606: Design of amplitude, frequency, and pulse-modulated communication systems, including modulators, detectors, and the effects of noise. Design basics and guidelines for phase-locked loops and several power amplifier configurations.
Prerequisite(s): ECE 4605
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4624 - Digital Signal Processing And Filter Design (3 credits)
Analysis, design, and realization of digital filters. Discrete Fourier Transform algorithms, digital filter design procedures, coefficient quantization. Pre: C or better in 3704
Prerequisite(s): ECE 3704
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4634 - Digital Communications (3 credits)
System and signal level analysis and design for digital communications systems. Review of analog-to-digital conversion and digital baseband communications. Detailed analysis of digital carrier modulation formats including assessment of signal-to-noise ratio, bit error rate, and power and bandwidth efficiency for amplitude-shift keying (ASK), phase-shift keying (PSK), frequency-shift keying (FSK), and Quadrature-Amplitude Modulation (QAM). Matched filter receivers and receiver design, link budgets, and multiple access. Additive-white-noise Gaussian channels. A detailed discussion of random variables will be included to supplement prerequisite material. A C- or better is required in prerequisites.
Prerequisite(s): ECE 3614
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4644 - Satellite Communications (3 credits)
Theory and practice of satellite communications. Orbits and launchers, spacecraft, link budgets, modulation, coding, multiple access techniques, propagation effects, and earth terminals.
Prerequisite(s): ECE 3614
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4664 - Analog and Digital Communications Laboratory (1 credit)
Laboratory experiments which deal with the design and measurement of analog and digital communication systems. Concepts include SNR, Modulation Index, PCM, and spread spectrum.
Prerequisite(s): ECE 3614
Corequisite(s): ECE 4634
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 4675 - Radio Engineering Laboratory (1 credit)
Laboratory techniques for radio frequencies including the design of amplifiers, oscillators, and a single-side-band receiver. Associated measurements will be used.
Prerequisite(s): ECE 3106 and ECE 3204
Corequisite(s): ECE 4605
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 4684 - Network Science (3 credits)
Introduction to modern-day networked technologies such as wireless, social, and economic networks. Analysis of networked technologies using analytical and engineering techniques such as optimization, game/auction theory, graph analysis, and learning as applied to networked technologies. Introduction to the basics of these techniques and their applications in networked systems. Development of a network science for solving practical problems pertaining to various networked systems such as smartphones, Wiki, Facebook, recommendation systems, economic network, or online video/music streaming software.
Prerequisite(s): ECE 2714
Instructional Contact Hours: (3 Crd)

ECE 4704 - Principles of Robotics Systems (3 credits)
Introduction to the design, analysis, control, and operation of robotic mechanisms. Introduction to the use of homogeneous coordinates for kinematics, dynamics, and camera orientation; sensors and actuators, control, task planning, vision, and intelligence. II
Prerequisite(s): ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4805 - Senior Design Project (3 credits)
Industry-like two-semester, team-based major design experience applying knowledge and skills acquired in previous coursework. Design and implement solutions to meet multiple realistic constraints; design to incorporate appropriate engineering standards. A specific, complex engineering design problem is taken from problem definition to product realization and testing. Within the design process, topics include written/oral communication, discourse, ethical reasoning, professional development, project management, and working within a team. 4805: Identify, formulate, and define engineering problem. Generate and select design alternatives. Apply design and analysis methods, from previous courses, to develop, evaluate, and communicate detailed project design. 4806: Implement and refine project design from ECE 4805. Test, analyze, document, and deliver the resulting project outcomes. Pre: 2804 (C-), (12 credit hours of C- or better within their declared disciplinary major) or (9 credit hours of C- or better within their declared disciplinary major and 3 credit hours of C- or better within their secondary focus) for 4805; 4805 (C-) for 4806.
Prerequisite(s): ECE 2214 and ECE 2564 and ECE 2714 and ECE 2804 and (ECE 3004 or ECE 3504) and (ECE 3105 or ECE 3514) and (ECE 3106 or ECE 3134 or ECE 3204 or ECE 3214 or ECE 3304 or ECE 3544 or ECE 3564 or ECE 3574 or ECE 3614 or ECE 3704 or ECE 4205 or ECE 4234 or ECE 4254 or ECE 4424 or ECE 4524 or ECE 4540 or ECE 4580 or ECE 4704)
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4806 - Senior Design Project (3 credits)
Industry-like two-semester, team-based major design experience applying knowledge and skills acquired in previous coursework. Design and implement solutions to meet multiple realistic constraints; design to incorporate appropriate engineering standards. A specific, complex engineering design problem is taken from problem definition to product realization and testing. Within the design process, topics include written/oral communication, discourse, ethical reasoning, professional development, project management, and working within a team. 4805: Identify, formulate, and define engineering problem. Generate and select design alternatives. Apply design and analysis methods, from previous courses, to develop, evaluate, and communicate detailed project design. 4806: Implement and refine project design from ECE 4805. Test, analyze, document, and deliver the resulting project outcomes. Pre: 2804 (C-), (12 credit hours of C- or better within their declared disciplinary major) or (9 credit hours of C- or better within their declared disciplinary major and 3 credit hours of C- or better within their secondary focus) for 4805; 4805 (C-) for 4806.
Prerequisite(s): ECE 4805
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4944 - Cybersecurity Seminar (1 credit)
Theory and practice of cybersecurity problems and solutions for building secure computing hardware, software, and networks. Technical, social and legal aspects of secure systems. Historical and ongoing attacks that spawn real-world responses. Ongoing research in cybersecurity defenses. Senior standing.
Prerequisite(s): ECE 2544 or CS 2505
Instructional Contact Hours: (1 Lec, 1 Crd)

ECE 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 4974 - Independent Study (1-19 credits)
A minimum in-major GPA of 2.0 is required for enrollment.
Instructional Contact Hours: Variable credit course

ECE 4984 - Special Study (1-19 credits)
A minimum in-major GPA of 2.5 is required for enrollment.
Instructional Contact Hours: Variable credit course

ECE 4984A - Special Study (1-19 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: Variable credit course

ECE 4994 - Undergraduate Research (1-19 credits)
A minimum GPA of 2.0 in all ECE courses is required for enrollment.
Instructional Contact Hours: Variable credit course

Applied Electromagnetics Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
ECE 1004	Introduction to ECE Concepts (C)	3
ECE 2024	Circuits and Devices (C)	3
ECE 2544	Fundamentals of Digital Systems (C)	3
ECE 2214	Physical Electronics (C)	3
ECE 2714	Signals and Systems (C)	3
ECE 2804	Integrated Design Project (C)	2
ECE 3004	AC Circuit Analysis (C-)	3
ECE 3074	AC Circuit Analysis Laboratory (C-)	1

ECE 3105	Electromagnetic Fields (C-)	3
Subtotal		24
Major Requirements		
ECE 2514	Computational Engineering (C)	3
ECE 2564	Embedded Systems (C)	3
ECE 3106	Electromagnetic Fields	3
ECE 3104	Introduction to Space Systems and Technologies	3
or ECE 3134	Introduction to Optoelectronics	
or ECE 3604	Introduction to RF and Microwave Engineering	
ECE 3614	Introduction to Communication Systems	3
Subtotal		15
Additional Course Requirements		
MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus	3
STAT 4714	Probability and Statistics for Electrical Engineers	3
Subtotal		9
Elective Courses		
EM Electives		6
Math Elective		3
Secondary Focus Area Electives		9
Free Electives		10
Subtotal		28
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
ECE 4805 & ECE 4806	Senior Design Project and Senior Design Project (1A ; C-)	6
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six hours in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six hours in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
PHYS 2305	Foundations of Physics	4
PHYS 2306	Foundations of Physics	4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F ; C-)	4
MATH 1226	Calculus of a Single Variable (5F)	4
MATH 2214	Introduction to Differential Equations (5A ; C-)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three hours in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216	Foundations of Engineering and Foundations of Engineering (6D)	4
or ENGE 1414	Foundations of Engineering Practice	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
If Pathways 7 is double counted with another course, these credit hours will be free elective.		3
Subtotal		53
Total Credits		**129**

Secondary Focus Requirement

The ECE secondary focus requirement can be completed in one of two ways:

Focus Areas within ECE

The ECE secondary focus requirement consists of 3 ECE courses (9 credits) at the 3xxx level, 4xxx level, or 5xxx level where at least one course (3 credits) is at the 4xxx or 5xxx level. **None of the 3 courses can duplicate a course from the student's major.** All courses used for secondary focus must be taken on an A-F basis. For purposes of satisfying the secondary focus requirements, the sum of the number of hours taken from ECE 4974 Independent Study and ECE 4994 Undergraduate Research cannot exceed 6 credits.

The following courses are also included in the secondary focus:

Code	Title	Credits
AOE 4654	Space Weather: The Solar Wind and Magnetosphere	3
AOE 4674	Upper Atmosphere/Ionosphere Space Weather	3
CS 3214	Computer Systems	3
CS 4224	Linux Kernel Programming	3
CS 4264	Principles of Computer Security	3
CS 4504	Computer Organization	3
CS 4824	Machine Learning	3

The following courses **cannot** be used toward secondary focus:

Code	Title	Credits
ECE 3054	Electrical Theory	3
ECE 3074	AC Circuit Analysis Laboratory	1
ECE 3254	Industrial Electronics	3
ECE 3274	Electronic Circuits Laboratory II	1
ECE 3354	Electric Power Engineering Laboratory	1
ECE 3524	Introduction to Unix for ECE	2
ECE 4944	Cybersecurity Seminar	1

Individualized Secondary Focus

(Must be preapproved by ECE Department)

Electrical and computer engineering has applications across a wide variety of fields, such as medicine, human-computer interaction, finance, and entertainment. People with ECE degrees can be entrepreneurs, patent lawyers, policy makers, and business executives. The individualized secondary focus helps students pursue these interests. This option can be used in place of a pre-defined, in-department secondary focus.

The individualized secondary focus typically is pursued via an already defined university-approved program such as a degree, major, minor, or certificate that the student has declared. Students are encouraged to select courses from these programs, subject to the guidelines below.

1. To begin this process, students must first meet with their academic advisor.
2. The student must complete a brief proposal form describing the expected added value to their major. This includes a narrative about

how these courses support the student's career goals and ability to achieve their professional aspirations. This proposal must be approved by the Director of Undergrad Program or designee.

3. Individualized secondary focus plans must include 3 courses within the following parameters:
   a. None of the courses may duplicate the student's ECE major requirements.
   b. None of the courses can be at the 1xxx level (1xxx courses required for university-approved programs, e.g. minors, can be used for a student's free electives).
   c. A maximum of one course can be at the 2xxx level, and only if it is a requirement of a university approved program, or if the course is a prerequisite to one or more of the other two courses in the individualized secondary focus.
   d. A minimum of one course must be at the 4xxx level.
4. If the set of courses is part of an already defined university program, the student should attach documentation to the proposal form.
5. If the set of three courses are not part of an already defined university-approved program, the student must also obtain written approval from the department that houses the courses.
6. It is the student's responsibility to ensure that the set of courses is available to be taken in a timely manner. The ECE department is not responsible for changes of programs elsewhere in the university.

Electromagentics (EM) Electives

The courses listed below are approved for Applied Electromagnetics elective credit. Students must choose 2 courses to complete the Applied Electromagnetic Major requirements. Actual course offerings will be based on sufficient resources, including faculty availability and student demand. Refer to the University's on-line timetable of classes for specific course availability information. Note: All ECE courses require a C- or better in prerequisite courses. Courses used toward the 6c elective requirement cannot be used as part of the secondary focus.

Code	Title	Credits
ECE 3104	Introduction to Space Systems and Technologies	3
ECE 3134	Introduction to Optoelectronics	3
ECE 3204	Analog Electronics	3
ECE 3604	Introduction to RF and Microwave Engineering	3
ECE 4104	Microwave and RF Engineering	4
ECE 4114	Antennas	3
ECE 4124	Radio Wave Propagation	3
ECE 4134	Photonics	3
ECE 4144	Optical Systems	3
ECE 4154	Space Weather: The Solar Wind and Magnetosphere	3
or AOE 4654	Space Weather: The Solar Wind and Magnetosphere	
ECE 4164	Introduction to Global Positioning System (GPS) Theory and Design	4
ECE 4174	Upper Atmosphere/Ionosphere Space Weather	3
or AOE 4674	Upper Atmosphere/Ionosphere Space Weather	
ECE 4194	Engineering Principles of Remote Sensing	3
ECE 4205	Electronic Circuit Design	3
ECE 4220	Analog Integrated Circuit Design	3
ECE 4605	Radio Engineering	3
ECE 4644	Satellite Communications	3
ECE 4974	Independent Study	1-19
or ECE 4994	Undergraduate Research	

Math Elective

Code	Title	Credits
MATH 2534	Introduction to Discrete Mathematics	3
MATH 3034	Introduction to Proofs	3
MATH 3214	Calculus of Several Variables	3
MATH/CS 3414	Numerical Methods	3
MATH 4445	Introduction to Numerical Analysis	3
MATH 4446	Introduction to Numerical Analysis	3
MATH 4564	Operational Methods for Engineers	3
MATH 4574	Vector and Complex Analysis for Engineers	3

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ECE Department fully supports this policy. Specific expectations for satisfactory progress for BSCPE and BSEE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)
- Upon completing 2 semesters in ECE, students must have satisfactorily completed ECE 2024 Circuits and Devices, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, MATH 2214 Introduction to Differential Equations, and PHYS 2306 Foundations of Physics
- Upon completing 3 semesters in ECE, students must have satisfactorily completed ECE 2804 Integrated Design Project.
- Upon attempting 90 credits, BSCPE and BSEE students must have successfully completed 33 credits of in-major courses and have 2.0 overall and in-major GPAs. (The BSCPE and BSEE in-major GPA includes all ECE courses, including repeats).

Graduation Requirements

Each student must complete at least 129 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In determining the Applied Electromagnetics in-major GPA, all ECE courses plus ENGE 4735 and ENGE 4736, including repeats, are used.

Grade Requirement for Core Courses

Students must earn a C or higher in all ECE core courses: ECE 1004 Introduction to ECE Concepts, ECE 2024 Circuits and Devices, ECE 2214 Physical Electronics, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, ECE 2564 Embedded Systems, ECE 2714 Signals and Systems, and ECE 2804 Integrated Design Project.

Statement of Prerequisites

Pre-requisites for each course are listed. In general, all ECE courses require a C- or better in prerequisite courses. Students must earn a C or higher in all ECE core courses (listed above). There are no hidden prerequisites in this program of study. Prerequisites may change from

what is indicated. Be sure to consult the Timetable of Classes or check with your advisor for the most current requirements.

Acceptable Substitutions

1. MATH 2405H may be substituted for MATH 2114
2. MATH 2405H + MATH 2406H may be substituted for MATH 2114 + MATH 2204 + MATH 2214
3. ENGE 4735 + ENGE 4736 may be substituted for ECE 4805 Senior Design Project + ECE 4806. Students who wish to enroll in ENGE 4735 /ENGE 4736 must successfully complete all prerequisites for ECE 4805 and must be approved by the Director of the ECE Major Design Experience prior to enrolling. These courses will also count in the in-major GPA.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**
ECE 1004	Introduction to ECE Concepts (C)	3
ENGE 1215	Foundations of Engineering	2
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable (C-)	4
Pathways 2 or 3 or 6a		3
	Credits	**15**
Spring Semester		
ENGE 1216	Foundations of Engineering	2
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable	4
MATH 2114	Introduction to Linear Algebra (C-)	3
PHYS 2305	Foundations of Physics	4
	Credits	**16**
Second Year		
Fall Semester		
ECE 2024	Circuits and Devices (C)	3
ECE 2514	Computational Engineering (C)	3
ECE 2544	Fundamentals of Digital Systems (C)	3
MATH 2214	Introduction to Differential Equations (C-)	3
PHYS 2306	Foundations of Physics (C-)	4
	Credits	**16**
Spring Semester		
ECE 2214	Physical Electronics (C)	3
ECE 2564	Embedded Systems (C)	3
ECE 2714	Signals and Systems (C)	3
ECE 2804	Integrated Design Project (C)	2
MATH 2204	Introduction to Multivariable Calculus (C-)	3
Pathways 2 or 3 or 6a		3
	Credits	**17**
Third Year		
Fall Semester		
ECE 3004	AC Circuit Analysis (C-)	3
ECE 3074	AC Circuit Analysis Laboratory (C-)	1
ECE 3105	Electromagnetic Fields (C-)	3
STAT 4714	Probability and Statistics for Electrical Engineers	3
Math Elective		3
Secondary Focus Area		3
	Credits	**16**
Spring Semester		
ECE 3104 or ECE 3134 or ECE 3604	Introduction to Space Systems and Technologies or Introduction to Optoelectronics or Introduction to RF and Microwave Engineering	3
ECE 3106	Electromagnetic Fields	3
Secondary Focus Area		3
Secondary Focus Area		3
Pathways 2 or 3 or 6a		3
Free Elective		3
	Credits	**18**
Fourth Year		
Fall Semester		
ECE 3614	Introduction to Communication Systems	3
ECE 4805	Senior Design Project (C-)	3
EM Elective		3
Pathways 2 or 3 or 6A		3
Free Elective		3
	Credits	**15**
Spring Semester		
ECE 4806	Senior Design Project	3
EM Elective		3

Secondary Focus

The Chip-Scale Integration Major requires 9 credits for a secondary focus area. Students have the flexibility to choose any 3 ECE courses (9 credits) at the 3xxx level or 4xxx level to meet the secondary focus requirements as long as at least one course (3 credits) is at the 4xxx level and the courses do not duplicate major courses. Alternatively, students may seek an approved individualized secondary focus. See the requirements below for more information.

Secondary Focus Requirement

The ECE secondary focus requirement consists of 3 ECE courses (9 credits) at the 3xxx level, 4xxx level, or 5xxx level where at least one course (3 credits) is at the 4xxx or 5xxx level. **None of the 3 courses can duplicate a course from the student's major.** All courses used for secondary focus must be taken on an A-F basis. For purposes of satisfying the secondary focus requirements, the sum of the number of hours taken from ECE 4974 Independent Study and ECE 4994 Undergraduate Research cannot exceed 6 credits.

The following courses are also included in the secondary focus:

Code	Title	Credits
AOE 4654/ ECE 4154	Space Weather: The Solar Wind and Magnetosphere	3
AOE 4674/ ECE 4174	Upper Atmosphere/Ionosphere Space Weather	3
CS 3214	Computer Systems	3
CS 4224/ ECE 4414	Linux Kernel Programming	3
CS 4264	Principles of Computer Security	3
CS/ECE 4504	Computer Organization	3
CS 4824/ ECE 4424	Machine Learning	3

The following courses **cannot** be used toward secondary focus:

Code	Title	Credits
ECE 3054	Electrical Theory	3
ECE 3074	AC Circuit Analysis Laboratory	1
ECE 3254	Industrial Electronics	3
ECE 3274	Electronic Circuits Laboratory II	1
ECE 3354	Electric Power Engineering Laboratory	1
ECE 3524	Introduction to Unix for ECE	2
ECE 4944	Cybersecurity Seminar	1

Individualized Secondary Focus

(Must be preapproved by ECE Department)

Electrical and computer engineering has applications across a wide variety of fields, such as medicine, human-computer interaction, finance, and entertainment. People with ECE degrees can be entrepreneurs, patent lawyers, policy makers, and business executives. The individualized secondary focus helps students pursue these interests. This option can be used in place of a pre-defined, in-department secondary focus.

The individualized secondary focus typically is pursued via an already defined university-approved program such as a degree, major, minor, or certificate that the student has declared. Students are encouraged to select courses from these programs, subject to the guidelines below.

1. To begin this process, students must first meet with their academic advisor.
2. The student must complete a brief proposal form describing the expected added value to their major. This includes a narrative about how these courses support the student's career goals and ability to achieve their professional aspirations. This proposal must be approved by the Director of Undergrad Program or designee.
3. Individualized secondary focus plans must include 3 courses within the following parameters:
   a. None of the courses may duplicate the student's ECE major requirements.
   b. None of the courses can be at the 1xxx level (1xxx courses required for university-approved programs, e.g. minors, can be used for a student's free electives).
   c. A maximum of one course can be at the 2xxx level, and only if it is a requirement of a university approved program, or if the course

is a prerequisite to one or more of the other two courses in the individualized secondary focus.

d. A minimum of one course must be at the 4xxx level.

4. If the set of courses is part of an already defined university program, the student should attach documentation to the proposal form.
5. If the set of three courses are not part of an already defined university-approved program, the student must also obtain written approval from the department that houses the courses.
6. It is the student's responsibility to ensure that the set of courses is available to be taken in a timely manner. The ECE department is not responsible for changes of programs elsewhere in the university.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ECE Department fully supports this policy. Specific expectations for satisfactory progress for BSCPE and BSEE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)
- Upon completing 2 semesters in ECE, students must have satisfactorily completed ECE 2024 Circuits and Devices, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, MATH 2214 Introduction to Differential Equations, and PHYS 2306 Foundations of Physics
- Upon completing 3 semesters in ECE, students must have satisfactorily completed ECE 2804 Integrated Design Project.
- Upon attempting 90 credits, BSCPE and BSEE students must have successfully completed 33 credits of in-major courses and have 2.0 overall and in-major GPAs. (The BSCPE and BSEE in-major GPA includes all ECE courses, including repeats).

Graduation Requirements

Each student must complete at least 128 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In determining the Chip-Scale Integration in-major GPA, all ECE courses, including repeats, are used.

Grade Requirement

Students must earn a C or higher in the following ECE courses: ECE 1004 Introduction to ECE Concepts, ECE 2024 Circuits and Devices, ECE 2214 Physical Electronics, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, ECE 2564 Embedded Systems, ECE 2714 Signals and Systems, ECE 2804 Integrated Design Project.

Statement of Prerequisites

Pre-requisites for each course are listed. In general, all ECE courses require a C- or better in prerequisite courses. Students must earn a C or higher in the ECE courses listed above. There are no hidden prerequisites in this program of study. Prerequisites may change from what is indicated. Be sure to consult the Timetable of Classes or check with your advisor for the most current requirements.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
2. MATH 2405H Mathematics in a Computational Context + MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra + MATH 2204 Introduction to Multivariable Calculus + MATH 2214 Introduction to Differential Equations
3. ENGE 4735 Interdisciplinary Design Capstone + ENGE 4736 Interdisciplinary Design Capstone may be substituted for ECE 4805 Senior Design Project + ECE 4806 Senior Design Project . Students who wish to enroll in ENGE 4735 /ENGE 4736 must successfully complete all prerequisites for ECE 4805 and must be approved by the Director of the ECE Major Design Experience prior to enrolling. These courses will also count in the in-major GPA.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Technical Electives

The courses listed below are approved for CpE design technical elective credit. Students must choose 2 courses to complete the Computer Engineering Major requirements. **Actual course offerings will be based on sufficient resources, including faculty availability and student demand.** Refer to the University's on-line timetable of classes for specific course availability information. Note: All ECE courses require a **C- or better** in prerequisite courses. Courses used toward the 9c technical elective requirement cannot be used as part of the secondary focus.

Code	Title	Credits
ECE 3564	Introduction to Computer Networking	3
ECE 4414 or CS 4224	Linux Kernel Programming Linux Kernel Programming	3

or ECE 4994	Undergraduate Research	

[1] No more than 3 hours total of either ECE 4974 Independent Study or ECE 4994 Undergraduate Research can be counted toward the Computer Engineering Major

Secondary Focus

The Computer Engineering Major requires 9 credits from a single focus area. All 9 credits must be from one ECE focus area from the attached list. At least 3 credits must be at the 4xxx level.

Secondary Focus Requirement

The ECE secondary focus requirement consists of 3 ECE courses (9 credits) at the 3xxx level, 4xxx level, or 5xxx level where at least one course (3 credits) is at the 4xxx or 5xxx level. **None of the 3 courses can duplicate a course from the student's major.** All courses used for secondary focus must be taken on an A-F basis. For purposes of satisfying the secondary focus requirements, the sum of the number of hours taken from ECE 4974 Independent Study and ECE 4994 Undergraduate Research cannot exceed 6 credits.

The following courses are also included in the secondary focus:

Code	Title	Credits
AOE 4654/ ECE 4154	Space Weather: The Solar Wind and Magnetosphere	3
AOE 4674/ ECE 4174	Upper Atmosphere/Ionosphere Space Weather	3
CS 3214	Computer Systems	3
CS 4224/ ECE 4414	Linux Kernel Programming	3
CS 4264	Principles of Computer Security	3
CS/ECE 4504	Computer Organization	3
CS 4824/ ECE 4424	Machine Learning	3

The following courses **cannot** be used toward secondary focus:

Code	Title	Credits
ECE 3054	Electrical Theory	3
ECE 3074	AC Circuit Analysis Laboratory	1
ECE 3254	Industrial Electronics	3
ECE 3274	Electronic Circuits Laboratory II	1
ECE 3354	Electric Power Engineering Laboratory	1
ECE 3524	Introduction to Unix for ECE	2
ECE 4944	Cybersecurity Seminar	1

Individualized Secondary Focus

(Must be preapproved by ECE Department)

Electrical and computer engineering has applications across a wide variety of fields, such as medicine, human-computer interaction, finance, and entertainment. People with ECE degrees can be entrepreneurs, patent lawyers, policy makers, and business executives. The individualized secondary focus helps students pursue these interests. This option can be used in place of a pre-defined, in-department secondary focus.

The individualized secondary focus typically is pursued via an already defined university-approved program such as a degree, major, minor, or certificate that the student has declared. Students are encouraged to select courses from these programs, subject to the guidelines below.

1. To begin this process, students must first meet with their academic advisor.
2. The student must complete a brief proposal form describing the expected added value to their major. This includes a narrative about how these courses support the student's career goals and ability to achieve their professional aspirations. This proposal must be approved by the Director of Undergrad Program or designee.
3. Individualized secondary focus plans must include 3 courses within the following parameters:
   a. None of the courses may duplicate the student's ECE major requirements.
   b. None of the courses can be at the 1xxx level (1xxx courses required for university-approved programs, e.g. minors, can be used for a student's free electives).
   c. A maximum of one course can be at the 2xxx level, and only if it is a requirement of a university approved program, or if the course is a prerequisite to one or more of the other two courses in the individualized secondary focus.
   d. A minimum of one course must be at the 4xxx level.
4. If the set of courses is part of an already defined university program, the student should attach documentation to the proposal form.
5. If the set of three courses are not part of an already defined university-approved program, the student must also obtain written approval from the department that houses the courses.
6. It is the student's responsibility to ensure that the set of courses is available to be taken in a timely manner. The ECE department is not responsible for changes of programs elsewhere in the university.

1.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ECE Department fully supports this policy. Specific expectations for satisfactory progress for BSCPE and BSEE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)

- Upon completing 2 semesters in ECE, students must have satisfactorily completed ECE 2024 Circuits and Devices, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, MATH 2214 Introduction to Differential Equations, and PHYS 2306 Foundations of Physics
- Upon completing 3 semesters in ECE, students must have satisfactorily completed ECE 2804 Integrated Design Project.
- Upon attempting 90 credits, BSCPE and BSEE students must have successfully completed 33 credits of in-major courses and have 2.0 overall and in-major GPAs. (In determining the BSCPE and BSEE in-major GPA, all ECE courses, including repeats, are used).

Graduation Requirements

Graduation Requirements

Each student must complete at least 128 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In determining the Computer Engineering in-major GPA, all ECE courses, including repeats, are used.

Grade Requirement

Students must earn a C or higher in the following ECE courses: ECE 1004 Introduction to ECE Concepts, ECE 2024 Circuits and Devices, ECE 2214 Physical Electronics, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, ECE 2564 Embedded Systems, ECE 2714 Signals and Systems, ECE 2804 Integrated Design Project.

Statement of Prerequisites

Pre-requisites for each course are listed. In general, all ECE courses require a C- or better in prerequisite courses. Students must earn a C or higher in the ECE courses listed above. There are no hidden prerequisites in this program of study. Prerequisites may change form what is indicated. Be sure to consult the Timetable of Classes or check with your advisor for the most current requirements.

Acceptable Substitutions

1. MATH 2405H may be substituted for MATH 2114
2. MATH 2405H + MATH 2406H may be substituted for MATH 2114 + MATH 2204 + MATH 2214
3. ENGE 4735 + ENGE 4736 may be substituted for ECE 4805 + ECE 4806. Students who wish to enroll in ENGE 4735/4736 must successfully complete all prerequisites for ECE 4805 and must be approved by the Director of the ECE Major Design Experience prior to enrolling. These courses will also count in the in-major GPA.
4. Substituting required courses with graduate-level courses. Students in their senior year, with a 3.0 or better GPA, may enroll in 5000-level courses to satisfy undergraduate degree requirements within their department with the permission of the course instructor and the Department Head. Should the student become a graduate student, these courses may not be used on the Plan of Study for a graduate degree.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Math Elective Requirement

Controls, Robotics & Autonomy majors are required to take one math elective course from the following list. Some courses may include prerequisite courses not required for the EE curriculum. It is the student's responsibility to be aware of prerequisites and to ensure that all prerequisites are completed prior to enrolling in the chosen course. Note that courses may be restricted to specific majors during certain semesters.

Enrollment into courses will be based on sufficient resources, including faculty availability and student demand.

Code	Title	Credits

Secondary Focus

The Controls, Robotics & Autonomy (EE) Major requires 9 credits for a secondary focus area. Students have the flexibility to choose any 3 ECE courses (9 credits) at the 3xxx level or 4xxx level to meet the secondary focus requirements as long as at least one course (3 credits) is at the 4xxx level and the courses do not duplicate major courses. Alternatively, students may seek an approved individualized secondary focus. See the requirements below for more information.

Secondary Focus Requirement

The ECE secondary focus requirement consists of 3 ECE courses (9 credits) at the 3xxx level, 4xxx level, or 5xxx level where at least one course (3 credits) is at the 4xxx or 5xxx level. **None of the 3 courses can duplicate a course from the student's major.** All courses used for secondary focus must be taken on an A-F basis. For purposes of satisfying the secondary focus requirements, the sum of the number of hours taken from ECE 4974 Independent Study and ECE 4994 Undergraduate Research cannot exceed 6 credits.

The following courses are also included in the secondary focus:

Code	Title	Credits
AOE 4654	Space Weather: The Solar Wind and Magnetosphere	3
AOE 4674	Upper Atmosphere/Ionosphere Space Weather	3
CS 3214	Computer Systems	3
CS 4224	Linux Kernel Programming	3
CS 4264	Principles of Computer Security	3
CS 4504	Computer Organization	3
CS 4824	Machine Learning	3

The following courses **cannot** be used toward secondary focus:

Code	Title	Credits
ECE 3054	Electrical Theory	3
ECE 3074	AC Circuit Analysis Laboratory	1
ECE 3254	Industrial Electronics	3
ECE 3274	Electronic Circuits Laboratory II	1
ECE 3354	Electric Power Engineering Laboratory	1
ECE 3524	Introduction to Unix for ECE	2
ECE 4944	Cybersecurity Seminar	1

Individualized Secondary Focus

(Must be preapproved by ECE Department)

Electrical and computer engineering has applications across a wide variety of fields, such as medicine, human-computer interaction, finance, and entertainment. People with ECE degrees can be entrepreneurs, patent lawyers, policy makers, and business executives. The individualized secondary focus helps students pursue these interests. This option can be used in place of a pre-defined, in-department secondary focus.

The individualized secondary focus typically is pursued via an already defined university-approved program such as a degree, major, minor, or certificate that the student has declared. Students are encouraged to select courses from these programs, subject to the guidelines below.

1. To begin this process, students must first meet with their academic advisor.
2. The student must complete a brief proposal form describing the expected added value to their major. This includes a narrative about how these courses support the student's career goals and ability to achieve their professional aspirations. This proposal must be approved by the Director of Undergrad Program or designee.
3. Individualized secondary focus plans must include 3 courses within the following parameters:
   a. None of the courses may duplicate the student's ECE major requirements.
   b. None of the courses can be at the 1xxx level (1xxx courses required for university-approved programs, e.g. minors, can be used for a student's free electives).
   c. A maximum of one course can be at the 2xxx level, and only if it is a requirement of a university approved program, or if the course is a prerequisite to one or more of the other two courses in the individualized secondary focus.
   d. A minimum of one course must be at the 4xxx level.
4. If the set of courses is part of an already defined university program, the student should attach documentation to the proposal form.
5. If the set of three courses are not part of an already defined university-approved program, the student must also obtain written approval from the department that houses the courses.
6. It is the student's responsibility to ensure that the set of courses is available to be taken in a timely manner. The ECE department is not responsible for changes of programs elsewhere in the university.

1.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ECE Department fully supports this policy. Specific expectations for satisfactory progress for BSCPE and BSEE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)
- Upon completing 2 semesters in ECE, students must have satisfactorily completed ECE 2024 Circuits and Devices, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, MATH 2214 Introduction to Differential Equations, and PHYS 2306 Foundations of Physics
- Upon completing 3 semesters in ECE, students must have satisfactorily completed ECE 2804 Integrated Design Project.
- Upon attempting 90 credits, BSCPE and BSEE students must have successfully completed 33 credits of in-major courses and have 2.0 overall and in-major GPAs. (The BSCPE and BSEE in-major GPA includes all ECE courses, including repeats).

Graduation Requirements

Each student must complete at least 129 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In determining the Controls, Robotics & Autonomy in-major GPA, all ECE courses, including repeats, are used.

Grade Requirement

Students must earn a C or higher in the following ECE courses: ECE 1004 Introduction to ECE Concepts, ECE 2024 Circuits and Devices, ECE 2214 Physical Electronics, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, ECE 2564 Embedded Systems, ECE 2714 Signals and Systems, ECE 2804 Integrated Design Project.

Statement of Prerequisites

Pre-requisites for each course are listed after the course title. In general, all ECE courses require a C- or better in prerequisite courses. Students must earn a C or higher in the ECE courses listed above. There are no

hidden prerequisites in this program of study. Prerequisites may change from what is indicated. Be sure to consult the Timetable of Classes or check with your advisor for the most current requirements.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
2. MATH 2405H Mathematics in a Computational Context + MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra + MATH 2204 Introduction to Multivariable Calculus + MATH 2214 Introduction to Differential Equations
3. ENGE 4735 Interdisciplinary Design Capstone + ENGE 4736 Interdisciplinary Design Capstone may be substituted for ECE 4805 Senior Design Project + ECE 4806 Senior Design Project. Students who wish to enroll in ENGE 4735/ENGE 4736 must successfully complete all prerequisites for ECE 4805 and must be approved by the Director of the ECE Major Design Experience prior to enrolling. These courses will also count in the in-major GPA.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**
ECE 1004	Introduction to ECE Concepts (C)	3
ENGE 1215	Foundations of Engineering	2
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable (C-)	4
Pathways 2 or 3 or 6A		3
	Credits	**15**
Spring Semester		
ENGE 1216	Foundations of Engineering	2
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable	4
MATH 2114	Introduction to Linear Algebra (C-)	3
PHYS 2305	Foundations of Physics	4
	Credits	**16**
Second Year		
Fall Semester		
ECE 2024	Circuits and Devices (C)	3
ECE 2514	Computational Engineering (C)	3
ECE 2544	Fundamentals of Digital Systems (C)	3

Secondary Focus Requirement

The ECE secondary focus requirement can be completed in one of two ways:

Focus Areas within ECE

The ECE secondary focus requirement consists of 3 ECE courses (9 credits) at the 3xxx level, 4xxx level, or 5xxx level where at least one course (3 credits) is at the 4xxx or 5xxx level. **None of the 3 courses can duplicate a course from the student's major.** All courses used for secondary focus must be taken on an A-F basis. For purposes of satisfying the secondary focus requirements, the sum of the number of hours taken from ECE 4974 Independent Study and ECE 4994 Undergraduate Research cannot exceed 6 credits.

The following courses are also included in the secondary focus:

Code	Title	Credits
AOE 4654	Space Weather: The Solar Wind and Magnetosphere	3
AOE 4674	Upper Atmosphere/Ionosphere Space Weather	3
CS 3214	Computer Systems	3
CS 4224	Linux Kernel Programming	3
CS 4264	Principles of Computer Security	3
CS 4504	Computer Organization	3
CS 4824	Machine Learning	3

The following courses **cannot** be used toward secondary focus:

Code	Title	Credits
ECE 3054	Electrical Theory	3
ECE 3074	AC Circuit Analysis Laboratory	1
ECE 3254	Industrial Electronics	3
ECE 3274	Electronic Circuits Laboratory II	1
ECE 3354	Electric Power Engineering Laboratory	1
ECE 3524	Introduction to Unix for ECE	2
ECE 4944	Cybersecurity Seminar	1

Individualized Secondary Focus

(Must be preapproved by ECE Department)

Electrical and computer engineering has applications across a wide variety of fields, such as medicine, human-computer interaction, finance, and entertainment. People with ECE degrees can be entrepreneurs, patent lawyers, policy makers, and business executives. The individualized secondary focus helps students pursue these interests. This option can be used in place of a pre-defined, in-department secondary focus.

The individualized secondary focus typically is pursued via an already defined university-approved program such as a degree, major, minor, or certificate that the student has declared. Students are encouraged to select courses from these programs, subject to the guidelines below.

1. To begin this process, students must first meet with their academic advisor.
2. The student must complete a brief proposal form describing the expected added value to their major. This includes a narrative about how these courses support the student's career goals and ability to achieve their professional aspirations. This proposal must be approved by the Director of Undergrad Program or designee.
3. Individualized secondary focus plans must include 3 courses within the following parameters:
   a. None of the courses may duplicate the student's ECE major requirements.
   b. None of the courses can be at the 1xxx level (1xxx courses required for university-approved programs, e.g. minors, can be used for a student's free electives).
   c. A maximum of one course can be at the 2xxx level, and only if it is a requirement of a university approved program, or if the course is a prerequisite to one or more of the other two courses in the individualized secondary focus.
   d. A minimum of one course must be at the 4xxx level.
4. If the set of courses is part of an already defined university program, the student should attach documentation to the proposal form.
5. If the set of three courses are not part of an already defined university-approved program, the student must also obtain written approval from the department that houses the courses.
6. It is the student's responsibility to ensure that the set of courses is available to be taken in a timely manner. The ECE department is not responsible for changes of programs elsewhere in the university.

MATH Elective Requirement

Electrical Engineering majors are required to take one math elective course from the following list. Some courses may include prerequisite courses not required for the BSEE curriculum. It is the student's responsibility to be aware of prerequisites and to ensure that all prerequisites are completed prior to enrolling in the chosen course. Note that courses may be restricted to specific majors during certain semesters.

Enrollment into courses will be based on sufficient resources, including faculty availability and student demand.

Code	Title	Credits
MATH 2534	Introduction to Discrete Mathematics	3
MATH 3034	Introduction to Proofs	3
MATH 3214	Calculus of Several Variables	3
MATH/CS 3414	Numerical Methods	3
MATH 4445	Introduction to Numerical Analysis	3
MATH 4446	Introduction to Numerical Analysis	3
MATH 4564	Operational Methods for Engineers	3
MATH 4574	Vector and Complex Analysis for Engineers	3

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ECE Department fully supports this policy. Specific expectations for satisfactory progress for BSCPE and BSEE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)

- Upon completing 2 semesters in ECE, students must have satisfactorily completed ECE 2024 Circuits and Devices, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, MATH 2214 Introduction to Differential Equations, and PHYS 2306 Foundations of Physics
- Upon completing 3 semesters in ECE, students must have satisfactorily completed ECE 2804 Integrated Design Project.
- Upon attempting 90 credits, BSCPE and BSEE students must have successfully completed 33 credits of in-major courses and have 2.0 overall and in-major GPAs. (The BSCPE and BSEE in-major GPA includes all ECE courses, including repeats).

Graduation Requirements

Each student must complete at least 129 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In determining the Electrical Engineering in-major GPA, all ECE courses, including repeats, are used.

Grade Requirement

Students must earn a C or higher in the following ECE courses: ECE 1004 Introduction to ECE Concepts, ECE 2024 Circuits and Devices, ECE 2214 Physical Electronics, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, ECE 2564 Embedded Systems, ECE 2714 Signals and Systems, ECE 2804 Integrated Design Project.

Statement of Prerequisites

Pre-requisites for each course are listed. In general, all ECE courses require a C- or better in prerequisite courses. Students must earn a C or higher in the ECE courses listed above. There are no hidden prerequisites in this program of study. Prerequisites may change from what is indicated. Be sure to consult the Timetable of Classes or check with your advisor for the most current requirements.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
2. MATH 2405H Mathematics in a Computational Context + MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra + MATH 2204 Introduction to Multivariable Calculus + MATH 2214 Introduction to Differential Equations
3. ENGE 4735 Interdisciplinary Design Capstone + ENGE 4736 Interdisciplinary Design Capstone may be substituted for ECE 4805 Senior Design Project + ECE 4806 Senior Design Project. Students who wish to enroll in ENGE 4735/ENGE 4736 must successfully complete all prerequisites for ECE 4805 and must be approved by the Director of the ECE Major Design Experience prior to enrolling. These courses will also count in the in-major GPA.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**

Secondary Focus

The Energy & Power Electronics Major requires 9 credits for a secondary focus area. Students have the flexibility to choose any 3 ECE courses (9 credits) at the 3xxx level or 4xxx level to meet the secondary focus requirements as long as at least one course (3 credits) is at the 4xxx level and the courses do not duplicate major courses. Alternatively, students may seek an approved individualized secondary focus. See the requirements below for more information.

Electives

The ERES major requires 3 hours Math electives from list and 8 hours of free electives. Only free electives may be taken under the P/F grading option. Students are encouraged to use free electives to provide depth in major or secondary focus.

Secondary Focus Requirement

Focus Areas Within ECE

The courses listed below are grouped into suggested ECE focus areas. Students are encouraged to choose 3 courses from a single focus area that is not their chosen major. Students have the flexibility to choose any 3 ECE courses (9 credits) at the 3xxx level or 4xxx level to meet the secondary focus requirement as long as at least one course (3 credits) is at the 4xxx level. **None of the 3 courses can duplicate a course from the student's major. Actual course offerings will be based on sufficient resources, including faculty availability and student demand.** Refer to the University's on-line timetable of classes for specific course availability information and prerequisite. Note: All ECE courses require a **C- or better** in prerequisite courses unless a C or better is noted on the checksheet.

Secondary Focus Requirement

The ECE secondary focus requirement consists of 3 ECE courses (9 credits) at the 3xxx level, 4xxx level, or 5xxx level where at least one course (3 credits) is at the 4xxx or 5xxx level. **None of the 3 courses can duplicate a course from the student's major.** All courses used

for secondary focus must be taken on an A-F basis. For purposes of satisfying the secondary focus requirements, the sum of the number of hours taken from ECE 4974 Independent Study and ECE 4994 Undergraduate Research cannot exceed 6 credits.

The following courses are also included in the secondary focus:

Code	Title	Credits
AOE 4654	Space Weather: The Solar Wind and Magnetosphere	3
AOE 4674	Upper Atmosphere/Ionosphere Space Weather	3
CS 3214	Computer Systems	3
CS 4224	Linux Kernel Programming	3
CS 4264	Principles of Computer Security	3
CS 4504	Computer Organization	3
CS 4824	Machine Learning	3

The following courses **cannot** be used toward secondary focus:

Code	Title	Credits
ECE 3054	Electrical Theory	3
ECE 3074	AC Circuit Analysis Laboratory	1
ECE 3254	Industrial Electronics	3
ECE 3274	Electronic Circuits Laboratory II	1
ECE 3354	Electric Power Engineering Laboratory	1
ECE 3524	Introduction to Unix for ECE	2
ECE 4944	Cybersecurity Seminar	1

Individualized Secondary Focus

(Must be preapproved by ECE Department)

Electrical and computer engineering has applications across a wide variety of fields, such as medicine, human-computer interaction, finance, and entertainment. People with ECE degrees can be entrepreneurs, patent lawyers, policy makers, and business executives. The individualized secondary focus helps students pursue these interests. This option can be used in place of a pre-defined, in-department secondary focus.

The individualized secondary focus typically is pursued via an already defined university-approved program such as a degree, major, minor, or certificate that the student has declared. Students are encouraged to select courses from these programs, subject to the guidelines below.

1. To begin this process, students must first meet with their academic advisor.
2. The student must complete a brief proposal form describing the expected added value to their major. This includes a narrative about how these courses support the student's career goals and ability to achieve their professional aspirations. This proposal must be approved by the Director of Undergrad Program or designee.
3. Individualized secondary focus plans must include 3 courses within the following parameters:
   a. None of the courses may duplicate the student's ECE major requirements.
   b. None of the courses can be at the 1xxx level (1xxx courses required for university-approved programs, e.g. minors, can be used for a student's free electives).
   c. A maximum of one course can be at the 2xxx level, and only if it is a requirement of a university approved program, or if the course is a prerequisite to one or more of the other two courses in the individualized secondary focus.
   d. A minimum of one course must be at the 4xxx level.
4. If the set of courses is part of an already defined university program, the student should attach documentation to the proposal form.
5. If the set of three courses are not part of an already defined university-approved program, the student must also obtain written approval from the department that houses the courses.
6. It is the student's responsibility to ensure that the set of courses is available to be taken in a timely manner. The ECE department is not responsible for changes of programs elsewhere in the university.

MATH Elective Requirement

Energy and Power Electronics Systems majors are required to take one math elective course from the following list. Some courses may include prerequisite courses not required for the EE curriculum. It is the student's responsibility to be aware of prerequisites and to ensure that all prerequisites are completed prior to enrolling in the chosen course. Note that courses may be restricted to specific majors during certain semesters.

Enrollment into courses will be based on sufficient resources, including faculty availability and student demand.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ECE Department fully supports this policy. Specific expectations for satisfactory progress for BSCPE and BSEE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)
- Upon completing 2 semesters in ECE, students must have satisfactorily completed ECE 2024 Circuits and Devices, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, MATH 2214 Introduction to Differential Equations, and PHYS 2306 Foundations of Physics
- Upon completing 3 semesters in ECE, students must have satisfactorily completed ECE 2804 Integrated Design Project.
- Upon attempting 90 credits, BSCPE and BSEE students must have successfully completed 33 credits of in-major courses and have 2.0 overall and in-major GPAs. (The BSCPE and BSEE in-major GPA includes all ECE courses, including repeats).

Graduation Requirements

Each student must complete at least 132 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In determining the Energy & Power Electronics Systems in-major GPA, all ECE courses, including repeats, are used.

Grade Requirement

Students must earn a C or higher in the following ECE courses: ECE 1004 Introduction to ECE Concepts, ECE 2024 Circuits and Devices, ECE 2214 Physical Electronics, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, ECE 2564 Embedded Systems, ECE 2714 Signals and Systems, ECE 2804 Integrated Design Project.

Statement of Prerequisites

Pre-requisites for each course are listed after the course title. In general, all ECE courses require a C- or better in prerequisite courses. Students must earn a C or higher in the ECE courses listed above. There are no hidden prerequisites in this program of study. Prerequisites may change from what is indicated. Be sure to consult the Timetable of Classes or check with your advisor for the most current requirements.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
2. MATH 2405H Mathematics in a Computational Context + MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra + MATH 2204 Introduction to Multivariable Calculus + MATH 2214 Introduction to Differential Equations
3. ENGE 4735 Interdisciplinary Design Capstone + ENGE 4736 Interdisciplinary Design Capstone may be substituted for ECE 4805 Senior Design Project + ECE 4806 Senior Design Project. Students who wish to enroll in ENGE 4735/ENGE 4736 must successfully complete all prerequisites for ECE 4805 and must be approved by the Director of the ECE Major Design Experience prior to enrolling. These courses will also count in the in-major GPA.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

CS 4264	Principles of Computer Security	3
CS/ECE 4504	Computer Organization	3
CS 4824/ ECE 4424	Machine Learning	3

The following courses **cannot** be used toward secondary focus:

Code	Title	Credits
ECE 3054	Electrical Theory	3
ECE 3074	AC Circuit Analysis Laboratory	1
ECE 3254	Industrial Electronics	3
ECE 3274	Electronic Circuits Laboratory II	1
ECE 3354	Electric Power Engineering Laboratory	1
ECE 3524	Introduction to Unix for ECE	2
ECE 4944	Cybersecurity Seminar	1

Individualized Secondary Focus

(Must be preapproved by ECE Department)

Electrical and computer engineering has applications across a wide variety of fields, such as medicine, human-computer interaction, finance, and entertainment. People with ECE degrees can be entrepreneurs, patent lawyers, policy makers, and business executives. The individualized secondary focus helps students pursue these interests. This option can be used in place of a pre-defined, in-department secondary focus.

The individualized secondary focus typically is pursued via an already defined university-approved program such as a degree, major, minor, or certificate that the student has declared. Students are encouraged to select courses from these programs, subject to the guidelines below.

1. To begin this process, students must first meet with their academic advisor.
2. The student must complete a brief proposal form describing the expected added value to their major. This includes a narrative about how these courses support the student's career goals and ability to achieve their professional aspirations. This proposal must be approved by the Director of Undergrad Program or designee.
3. Individualized secondary focus plans must include 3 courses within the following parameters:
   a. None of the courses may duplicate the student's ECE major requirements.
   b. None of the courses can be at the 1xxx level (1xxx courses required for university-approved programs, e.g. minors, can be used for a student's free electives).
   c. A maximum of one course can be at the 2xxx level, and only if it is a requirement of a university approved program, or if the course is a prerequisite to one or more of the other two courses in the individualized secondary focus.
   d. A minimum of one course must be at the 4xxx level.
4. If the set of courses is part of an already defined university program, the student should attach documentation to the proposal form.
5. If the set of three courses are not part of an already defined university-approved program, the student must also obtain written approval from the department that houses the courses.
6. It is the student's responsibility to ensure that the set of courses is available to be taken in a timely manner. The ECE department is not responsible for changes of programs elsewhere in the university.

1.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ECE Department fully supports this policy. Specific expectations for satisfactory progress for BSCPE and BSEE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)
- Upon completing 2 semesters in ECE, students must have satisfactorily completed ECE 2024 Circuits and Devices, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, MATH 2214 Introduction to Differential Equations, and PHYS 2306 Foundations of Physics
- Upon completing 3 semesters in ECE, students must have satisfactorily completed ECE 2804 Integrated Design Project.
- Upon attempting 90 credits, BSCPE and BSEE students must have successfully completed 33 credits of in-major courses and have 2.0 overall and in-major GPAs. (The BSCPE and BSEE in-major GPA includes all ECE courses, including repeats).

Graduation Requirements

Each student must complete at least 128 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In determining the Machine Learning in-major GPA, all ECE courses, including repeats, are used.

Grade Requirement

Students must earn a C or higher in the following ECE courses: ECE 1004 Introduction to ECE Concepts, ECE 2024 Circuits and Devices, ECE 2214 Physical Electronics, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, ECE 2564 Embedded Systems, ECE 2714 Signals and Systems, ECE 2804 Integrated Design Project.

Statement of Prerequisites

Pre-requisites for each course are listed after the course title. In general, all ECE courses require a C- or better in prerequisite courses. Students must earn a C or higher in the ECE courses listed above. There are no hidden prerequisites in this program of study. Prerequisites may change from what is indicated. Be sure to consult the Timetable of Classes or check with your advisor for the most current requirements.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
2. MATH 2405H Mathematics in a Computational Context + MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra + MATH 2204 Introduction to Multivariable Calculus + MATH 2214 Introduction to Differential Equations
3. ENGE 4735 Interdisciplinary Design Capstone + ENGE 4736 Interdisciplinary Design Capstone may be substituted for ECE 4805 Senior Design Project + ECE 4806 Senior Design Project . Students who wish to enroll in ENGE 4735 /ENGE 4736 must successfully complete all prerequisites for ECE 4805 and must be approved by the Director of the ECE Major Design Experience prior to enrolling. These courses will also count in the in-major GPA.
4. Substituting required courses with graduate-level courses. Students in their senior year, with a 3.0 or better GPA, may enroll in 5000-level courses to satisfy undergraduate degree requirements within their department with the permission of the course instructor and the Department Head. Should the student become a graduate student, these courses may not be used on the Plan of Study for a graduate degree.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language.

College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**
ECE 1004	Introduction to ECE Concepts (C)	3
ENGE 1215	Foundations of Engineering	2
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable (C-)	4
Pathways 2 or 3 or 6A		3
	Credits	**15**
Spring Semester		
ENGE 1216	Foundations of Engineering	2
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable	4
MATH 2114	Introduction to Linear Algebra (C-)	3
PHYS 2305	Foundations of Physics	4
	Credits	**16**
Second Year		
Fall Semester		
ECE 2024	Circuits and Devices (C)	3
ECE 2514	Computational Engineering (C)	3
ECE 2544	Fundamentals of Digital Systems (C)	3
MATH 2214	Introduction to Differential Equations (C-)	3
PHYS 2306	Foundations of Physics	4
	Credits	**16**
Spring Semester		
ECE 2214	Physical Electronics (C)	3
ECE 2564	Embedded Systems (C)	3
ECE 2714	Signals and Systems (C)	3
ECE 2804	Integrated Design Project (C)	2
MATH 2204	Introduction to Multivariable Calculus	3
Pathways 2 or 3 or 6A		3
	Credits	**17**
Third Year		
Fall Semester		
ECE 3504	Principles of Computer Architecture (C-)	3
ECE 3514	Data Structures & Algorithms (C-)	3
STAT 4714	Probability and Statistics for Electrical Engineers (C-)	3

MATH 2204	Introduction to Multivariable Calculus	3
STAT 4714	Probability and Statistics for Electrical Engineers	3
Subtotal		9
Elective Courses		
Math Elective		3
Secondary Focus Area Electives		9
Free Electives		9
Subtotal		21
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
ECE 4805 & ECE 4806	Senior Design Project and Senior Design Project (1A)	6

Pathways Concept 2 - Critical Thinking in the Humanities		
Select six hours in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six hours in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
PHYS 2305	Foundations of Physics	4
PHYS 2306	Foundations of Physics	4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F ; C-)	4
MATH 1226	Calculus of a Single Variable (5F)	4
MATH 2214	Introduction to Differential Equations (5A ; C-)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three hours in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216	Foundations of Engineering and Foundations of Engineering (6D ; C-)	4
or ENGE 1414	Foundations of Engineering Practice	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathways 7 should be double counted with either Pathways 2, 3 or 6a to avoid taking any additional credit hours.		3
Subtotal		53
Total Credits		**129**

Electives

The Micro/Nanosystems major requires 3 hours of math electives from list and 9 hours of free electives. Only free electives may be taken under the P/F grading option. Students are encouraged to use free electives to provide depth in their major or secondary focus.

Secondary Focus

The Micro/Nanosystems Major requires 9 credits for a secondary focus area. Students have the flexibility to choose any 3 ECE courses (9 credits) at the 3xxx level or 4xxx level to meet the secondary focus requirements as long as at least one course (3 credits) is at the 4xxx level and the courses do not duplicate major courses. Alternatively, students may seek an approved individualized secondary focus. See the requirements below for more information.

Secondary Focus Requirement

The ECE secondary focus requirement consists of 3 ECE courses (9 credits) at the 3xxx level, 4xxx level, or 5xxx level where at least one course (3 credits) is at the 4xxx or 5xxx level. **None of the 3 courses can duplicate a course from the student's major.** All courses used for secondary focus must be taken on an A-F basis. For purposes of satisfying the secondary focus requirements, the sum of the number of hours taken from ECE 4974 Independent Study and ECE 4994 Undergraduate Research cannot exceed 6 credits.

The following courses are also included in the secondary focus:

Code	Title	Credits
AOE 4654	Space Weather: The Solar Wind and Magnetosphere	3
AOE 4674	Upper Atmosphere/Ionosphere Space Weather	3
CS 3214	Computer Systems	3
CS 4224	Linux Kernel Programming	3
CS 4264	Principles of Computer Security	3
CS 4504	Computer Organization	3
CS 4824	Machine Learning	3

The following courses **cannot** be used toward secondary focus:

Code	Title	Credits
ECE 3054	Electrical Theory	3
ECE 3074	AC Circuit Analysis Laboratory	1
ECE 3254	Industrial Electronics	3
ECE 3274	Electronic Circuits Laboratory II	1
ECE 3354	Electric Power Engineering Laboratory	1
ECE 3524	Introduction to Unix for ECE	2
ECE 4944	Cybersecurity Seminar	1

Individualized Secondary Focus

(Must be preapproved by ECE Department)

Electrical and computer engineering has applications across a wide variety of fields, such as medicine, human-computer interaction, finance, and entertainment. People with ECE degrees can be entrepreneurs, patent lawyers, policy makers, and business executives. The individualized secondary focus helps students pursue these interests. This option can be used in place of a pre-defined, in-department secondary focus.

The individualized secondary focus typically is pursued via an already defined university-approved program such as a degree, major, minor, or certificate that the student has declared. Students are encouraged to select courses from these programs, subject to the guidelines below.

1. To begin this process, students must first meet with their academic advisor.
2. The student must complete a brief proposal form describing the expected added value to their major. This includes a narrative about how these courses support the student's career goals and ability to achieve their professional aspirations. This proposal must be approved by the Director of Undergrad Program or designee.
3. Individualized secondary focus plans must include 3 courses within the following parameters:
   a. None of the courses may duplicate the student's ECE major requirements.
   b. None of the courses can be at the 1xxx level (1xxx courses required for university-approved programs, e.g. minors, can be used for a student's free electives).
   c. A maximum of one course can be at the 2xxx level, and only if it is a requirement of a university approved program, or if the course is a prerequisite to one or more of the other two courses in the individualized secondary focus.
   d. A minimum of one course must be at the 4xxx level.
4. If the set of courses is part of an already defined university program, the student should attach documentation to the proposal form.
5. If the set of three courses are not part of an already defined university-approved program, the student must also obtain written approval from the department that houses the courses.

6. It is the student's responsibility to ensure that the set of courses is available to be taken in a timely manner. The ECE department is not responsible for changes of programs elsewhere in the university.

MATH Elective Requirement

Micro-Nanosystems majors are required to take one math elective course from the following list. Some courses may include prerequisite courses not required for the EE curriculum. It is the student's responsibility to be aware of prerequisites and to ensure that all prerequisites are completed prior to enrolling in the chosen course. Note that courses may be restricted to specific majors during certain semesters

Enrollment into courses will be based on sufficient resources, including faculty availability and student demand.

Code	Title	Credits
MATH 2534	Introduction to Discrete Mathematics	3
MATH 3034	Introduction to Proofs	3
MATH 3214	Calculus of Several Variables	3
MATH/CS 3414	Numerical Methods	3
MATH 4445	Introduction to Numerical Analysis	3
MATH 4446	Introduction to Numerical Analysis	3
MATH 4564	Operational Methods for Engineers	3
MATH 4574	Vector and Complex Analysis for Engineers	3

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ECE Department fully supports this policy. Specific expectations for satisfactory progress for BSCPE and BSEE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)
- Upon completing 2 semesters in ECE, students must have satisfactorily completed ECE 2024 Circuits and Devices, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, MATH 2214 Introduction to Differential Equations, and PHYS 2306 Foundations of Physics
- Upon completing 3 semesters in ECE, students must have satisfactorily completed ECE 2804 Integrated Design Project.
- Upon attempting 90 credits, BSCPE and BSEE students must have successfully completed 33 credits of in-major courses and have 2.0 overall and in-major GPAs. (The BSCPE and BSEE in-major GPA includes all ECE courses, including repeats.

Graduation Requirements

Grade Requirement

Students must earn a C or higher in the following ECE courses: ECE 1004 Introduction to ECE Concepts, ECE 2024 Circuits and Devices, ECE 2214 Physical Electronics, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, ECE 2564 Embedded Systems, ECE 2714 Signals and Systems, ECE 2804 Integrated Design Project.

Statement of Prerequisites

Pre-requisites for each course are listed after the course title. In general, all ECE courses require a C- or better in prerequisite courses. Students must earn a C or higher in the ECE courses listed above. There are no hidden prerequisites in this program of study. Prerequisites may change from what is indicated. Be sure to consult the Timetable of Classes or check with your advisor for the most current requirements.

Graduation Requirements

Each student must complete at least 129 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In determining the Micro/Nanosystems in-major GPA, all ECE courses, including repeats, are used.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
2. MATH 2405H Mathematics in a Computational Context + MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra + MATH 2204 Introduction to Multivariable Calculus + MATH 2214 Introduction to Differential Equations
3. ENGE 4735 Interdisciplinary Design Capstone + ENGE 4736 Interdisciplinary Design Capstone may be substituted for ECE 4805 Senior Design Project + ECE 4806 Senior Design Project. Students who wish to enroll in ENGE 4735/ENGE 4736 must successfully complete all prerequisites for ECE 4805 and must be approved by the Director of the ECE Major Design Experience prior to enrolling. These courses will also count in the in-major GPA.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ECE Department fully supports this policy. Specific expectations for satisfactory progress for BSCPE and BSEE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)
- Upon completing 2 semesters in ECE, students must have satisfactorily completed ECE 2024 Circuits and Devices, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, MATH 2214 Introduction to Differential Equations, and PHYS 2306 Foundations of Physics
- Upon completing 3 semesters in ECE, students must have satisfactorily completed ECE 2804 Integrated Design Project.
- Upon attempting 90 credits, BSCPE and BSEE students must have successfully completed 33 credits of in-major courses and have 2.0 overall and in-major GPAs. (The BSCPE and BSEE in-major GPA includes all ECE courses, including repeats).

Graduation Requirements

Each student must complete at least 128 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In determining the Networking & Cybersecurity in-major GPA, all ECE courses, including repeats, are used.

Grade Requirement

Students must earn a C or higher in the following ECE courses: ECE 1004 Introduction to ECE Concepts, ECE 2024 Circuits and Devices, ECE 2214 Physical Electronics, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, ECE 2564 Embedded Systems, ECE 2714 Signals and Systems, ECE 2804 Integrated Design Project.

Statement of Prerequisites

Pre-requisites for each course are listed. In general, all ECE courses require a C- or better in prerequisite courses. Students must earn a C or higher in the ECE courses listed above. There are no hidden prerequisites in this program of study. Prerequisites may change from what is indicated. Be sure to consult the Timetable of Classes or check with your advisor for the most current requirements.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
2. MATH 2405H Mathematics in a Computational Context + MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra + MATH 2204 Introduction to Multivariable Calculus + MATH 2214 Introduction to Differential Equations
3. ENGE 4735 Interdisciplinary Design Capstone + ENGE 4736 Interdisciplinary Design Capstone may be substituted for ECE 4805 Senior Design Project + ECE 4806 Senior Design Project . Students who wish to enroll in ENGE 4735/ENGE 4736 must successfully complete all prerequisites for ECE 4805 and must be approved by the Director of the ECE Major Design Experience prior to enrolling. These courses will also count in the in-major GPA.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

or ENGE 1414	Foundations of Engineering Practice	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathways 7 should be double counted with either Pathways 2, 3 or 6a to avoid taking any additional credit hours.		3
Subtotal		53
Total Credits		**128**

Secondary Focus

The Software Systems Major requires 9 credits for a secondary focus area. Students have the flexibility to choose any 3 ECE courses (9 credits) at the 3xxx level or 4xxx level to meet the secondary focus requirements as long as at least one course (3 credits) is at the 4xxx level and the courses do not duplicate major courses. Alternatively, students may seek an approved individualized secondary focus. See the requirements below (page 3) for more information.

Secondary Focus Requirement

The ECE secondary focus requirement consists of 3 ECE courses (9 credits) at the 3xxx level, 4xxx level, or 5xxx level where at least one course (3 credits) is at the 4xxx or 5xxx level. **None of the 3 courses can duplicate a course from the student's major.** All courses used for secondary focus must be taken on an A-F basis. For purposes of satisfying the secondary focus requirements, the sum of the number of hours taken from ECE 4974 Independent Study and ECE 4994 Undergraduate Research cannot exceed 6 credits.

The following courses are also included in the secondary focus:

Code	Title	Credits
AOE 4654/ ECE 4154	Space Weather: The Solar Wind and Magnetosphere	3
AOE 4674/ ECE 4174	Upper Atmosphere/Ionosphere Space Weather	3
CS 3214	Computer Systems	3
CS 4224/ ECE 4414	Linux Kernel Programming	3
CS 4264	Principles of Computer Security	3
CS/ECE 4504	Computer Organization	3
CS 4824/ ECE 4424	Machine Learning	3

The following courses **cannot** be used toward secondary focus:

Code	Title	Credits
ECE 3054	Electrical Theory	3
ECE 3074	AC Circuit Analysis Laboratory	1
ECE 3254	Industrial Electronics	3
ECE 3274	Electronic Circuits Laboratory II	1
ECE 3354	Electric Power Engineering Laboratory	1
ECE 3524	Introduction to Unix for ECE	2
ECE 4944	Cybersecurity Seminar	1

Individualized Secondary Focus

(Must be preapproved by ECE Department)

Electrical and computer engineering has applications across a wide variety of fields, such as medicine, human-computer interaction, finance, and entertainment. People with ECE degrees can be entrepreneurs, patent lawyers, policy makers, and business executives. The individualized secondary focus helps students pursue these interests. This option can be used in place of a pre-defined, in-department secondary focus.

The individualized secondary focus typically is pursued via an already defined university-approved program such as a degree, major, minor, or certificate that the student has declared. Students are encouraged to select courses from these programs, subject to the guidelines below.

1. To begin this process, students must first meet with their academic advisor.
2. The student must complete a brief proposal form describing the expected added value to their major. This includes a narrative about how these courses support the student's career goals and ability to achieve their professional aspirations. This proposal must be approved by the Director of Undergrad Program or designee.
3. Individualized secondary focus plans must include 3 courses within the following parameters:
   a. None of the courses may duplicate the student's ECE major requirements.
   b. None of the courses can be at the 1xxx level (1xxx courses required for university-approved programs, e.g. minors, can be used for a student's free electives).
   c. A maximum of one course can be at the 2xxx level, and only if it is a requirement of a university approved program, or if the course is a prerequisite to one or more of the other two courses in the individualized secondary focus.
   d. A minimum of one course must be at the 4xxx level.
4. If the set of courses is part of an already defined university program, the student should attach documentation to the proposal form.
5. If the set of three courses are not part of an already defined university-approved program, the student must also obtain written approval from the department that houses the courses.
6. It is the student's responsibility to ensure that the set of courses is available to be taken in a timely manner. The ECE department is not responsible for changes of programs elsewhere in the university.

1.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ECE Department fully supports this policy. Specific expectations for satisfactory progress for BSCPE and BSEE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)
- Upon completing 2 semesters in ECE, students must have satisfactorily completed ECE 2024 Circuits and Devices, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, MATH 2214 Introduction to Differential Equations, and PHYS 2306 Foundations of Physics
- Upon completing 3 semesters in ECE, students must have satisfactorily completed ECE 2804 Integrated Design Project.
- Upon attempting 90 credits, BSCPE and BSEE students must have successfully completed 33 credits of in-major courses and have 2.0 overall and in-major GPAs. (The BSCPE and BSEE in-major GPA includes all ECE courses, including repeats).

Graduation Requirements

Graduation Requirements

Each student must complete at least 128 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In determining the Software Systems in-major GPA, all ECE courses, including repeats, are used.

Grade Requirement

Students must earn a C or higher in the following ECE courses: ECE 1004 Introduction to ECE Concepts, ECE 2024 Circuits and Devices, ECE 2214 Physical Electronics, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, ECE 2564 Embedded Systems, ECE 2714 Signals and Systems, ECE 2804 Integrated Design Project.

Statement of Prerequisites

Pre-requisites for each course are listed. In general, all ECE courses require a C- or better in prerequisite courses. Students must earn a C or higher in the ECE courses listed above. There are no hidden prerequisites in this program of study. Prerequisites may change from what is indicated. Be sure to consult the Timetable of Classes or check with your advisor for the most current requirements.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
2. MATH 2405H Mathematics in a Computational Context + MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra + MATH 2204 Introduction to Multivariable Calculus + MATH 2214 Introduction to Differential Equations
3. ENGE 4735 Interdisciplinary Design Capstone + ENGE 4736 Interdisciplinary Design Capstone may be substituted for ECE 4805 Senior Design Project + ECE 4806 Senior Design Project . Students who wish to enroll in ENGE 4735 /ENGE 4736 must successfully complete all prerequisites for ECE 4805 and must be approved by the Director of the ECE Major Design Experience prior to enrolling. These courses will also count in the in-major GPA.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Secondary Focus Requirement

The ECE secondary focus requirement can be completed in one of two ways:

Focus Areas within ECE

The ECE secondary focus requirement consists of 3 ECE courses (9 credits) at the 3xxx level, 4xxx level, or 5xxx level where at least one course (3 credits) is at the 4xxx or 5xxx level. **None of the 3 courses can duplicate a course from the student's major.** All courses used for secondary focus must be taken on an A-F basis. For purposes of satisfying the secondary focus requirements, the sum of the number of hours taken from ECE 4974 Independent Study and ECE 4994 Undergraduate Research cannot exceed 6 credits.

The following courses are also included in the secondary focus:

Code	Title	Credits
AOE 4654	Space Weather: The Solar Wind and Magnetosphere	3
AOE 4674	Upper Atmosphere/Ionosphere Space Weather	3
CS 3214	Computer Systems	3
CS 4224	Linux Kernel Programming	3
CS 4264	Principles of Computer Security	3
CS 4504	Computer Organization	3
CS 4824	Machine Learning	3

The following courses **cannot** be used toward secondary focus:

Code	Title	Credits
ECE 3054	Electrical Theory	3
ECE 3074	AC Circuit Analysis Laboratory	1
ECE 3254	Industrial Electronics	3
ECE 3274	Electronic Circuits Laboratory II	1
ECE 3354	Electric Power Engineering Laboratory	1
ECE 3524	Introduction to Unix for ECE	2
ECE 4944	Cybersecurity Seminar	1

Individualized Secondary Focus

(Must be preapproved by ECE Department)

Electrical and computer engineering has applications across a wide variety of fields, such as medicine, human-computer interaction, finance, and entertainment. People with ECE degrees can be entrepreneurs, patent lawyers, policy makers, and business executives. The individualized secondary focus helps students pursue these interests. This option can be used in place of a pre-defined, in-department secondary focus.

The individualized secondary focus typically is pursued via an already defined university-approved program such as a degree, major, minor, or certificate that the student has declared. Students are encouraged to select courses from these programs, subject to the guidelines below.

1. To begin this process, students must first meet with their academic advisor.
2. The student must complete a brief proposal form describing the expected added value to their major. This includes a narrative about how these courses support the student's career goals and ability to achieve their professional aspirations. This proposal must be approved by the Director of Undergrad Program or designee.
3. Individualized secondary focus plans must include 3 courses within the following parameters:
   a. None of the courses may duplicate the student's ECE major requirements.
   b. None of the courses can be at the 1xxx level (1xxx courses required for university-approved programs, e.g. minors, can be used for a student's free electives).
   c. A maximum of one course can be at the 2xxx level, and only if it is a requirement of a university approved program, or if the course is a prerequisite to one or more of the other two courses in the individualized secondary focus.
   d. A minimum of one course must be at the 4xxx level.
4. If the set of courses is part of an already defined university program, the student should attach documentation to the proposal form.
5. If the set of three courses are not part of an already defined university-approved program, the student must also obtain written approval from the department that houses the courses.
6. It is the student's responsibility to ensure that the set of courses is available to be taken in a timely manner. The ECE department is not responsible for changes of programs elsewhere in the university.

Math Elective

Code	Title	Credits
MATH 2534	Introduction to Discrete Mathematics	3
MATH 3034	Introduction to Proofs	3
MATH 3214	Calculus of Several Variables	3
MATH/CS 3414	Numerical Methods	3
MATH 4445	Introduction to Numerical Analysis	3
MATH 4446	Introduction to Numerical Analysis	3
MATH 4564	Operational Methods for Engineers	3
MATH 4574	Vector and Complex Analysis for Engineers	3

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ECE Department fully supports this policy. Specific expectations for satisfactory progress for BSCPE and BSEE majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (under Academic Policies)
- Upon completing 2 semesters in ECE, students must have satisfactorily completed ECE 2024 Circuits and Devices, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, MATH 2214 Introduction to Differential Equations, and PHYS 2306 Foundations of Physics
- Upon completing 3 semesters in ECE, students must have satisfactorily completed ECE 2804 Integrated Design Project.
- Upon attempting 90 credits, BSCPE and BSEE students must have successfully completed 33 credits of in-major courses and have 2.0 overall and in-major GPAs. (The BSCPE and BSEE in-major GPA includes all ECE courses, including repeats).

Graduation Requirements

Each student must complete at least 129 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In determining the Applied Electromagnetics in-major GPA, all ECE courses plus ENGE 4735 and ENGE 4736, including repeats, are used.

Grade Requirement for Core Courses

Students must earn a C or higher in all ECE core courses: ECE 1004 Introduction to ECE Concepts, ECE 2024 Circuits and Devices, ECE 2214 Physical Electronics, ECE 2514 Computational Engineering, ECE 2544 Fundamentals of Digital Systems, ECE 2564 Embedded Systems, ECE 2714 Signals and Systems, and ECE 2804 Integrated Design Project.

Statement of Prerequisites

Pre-requisites for each course are listed. In general, all ECE courses require a C- or better in prerequisite courses. Students must earn a C or higher in all ECE core courses (listed above). There are no hidden prerequisites in this program of study. Prerequisites may change from what is indicated. Be sure to consult the Timetable of Classes or check with your advisor for the most current requirements.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
2. MATH 2405H Mathematics in a Computational Context + MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra + MATH 2204 Introduction to Multivariable Calculus + MATH 2214 Introduction to Differential Equations
3. ENGE 4735 Interdisciplinary Design Capstone + ENGE 4736 Interdisciplinary Design Capstone may be substituted for ECE 4805 Senior Design Project + ECE 4806 Senior Design Project. Students who wish to enroll in ENGE 4735/ENGE 4736 must successfully complete all prerequisites for ECE 4805 and must be approved by the Director of the ECE Major Design Experience prior to enrolling. These courses will also count in the in-major GPA.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Engineering Education

Our Website (http://www.enge.vt.edu)

Overview

The Department of Engineering Education (ENGE) is home to General Engineering (GE) students. The department teaches the interdisciplinary first-year engineering courses, advises General Engineering (GE) students, and offers a graduate certificate and a Ph.D. in engineering education.

At the undergraduate level, the department provides the foundation for students to begin their engineering journey, preparing them for academic success in one of the degree-granting College of Engineering programs and for success as an engineer. At the graduate level, the department prepares scholars to advance knowledge and address significant challenges facing engineering education in careers including engineering faculty, policy makers, corporate training, university assessment and university administration.

Accreditation statements may be found in the listings for individual undergraduate degree programs.

First Year Students and General Engineering

The General Engineering (GE) program of the EngE department serves first-year students in the College of Engineering. Through EngE courses, first-year students participate in problem solving, engineering analysis and design exercises that represent the essence of the engineering profession. The courses emphasize team-based, design-oriented, hands-on experiences to develop students' concepts of engineering and engineering methods, while reinforcing the role of concurrent required courses (e.g. mathematics, English, physics). They also serve as a foundation for subsequent courses in the various engineering curricula. Coverage of engineering ethics instills a sense of the responsibilities of engineers to society. Algorithm development and computer programming develop logical thinking, provide the background for computer use in later courses, and support problem-solving skills. Spatial visualization skills are developed through engineering graphics, a primary engineering tool. Through writing and presentations, students begin to hone their professional communication skills, including audience analysis, visual rhetoric, effective writing styles, issues in collaborative writing, techniques of oral presentation, print and Web-based research, graphics for written and oral presentations, and editing.

General Engineering students have access to the **Frith First-Year Makerspace** run by the Engineering Education department. The Frith First-Year Makerspace (formerly the Frith Lab) is designed to support the retention and development of young engineers through hands-on learning, peer mentoring, and authentic problem-solving. Part collaboration and innovation space, part fabrication and prototyping space, and part learning laboratory, Frith is integrated into the first-year foundations of engineering courses and enables General Engineering students to learn by dissecting, designing, making, and analyzing engineering products. The Makerspace houses equipment for 3D printing, laser cutting, metalworking, woodshop work, and crafts. https://enge.vt.edu/undergraduate/frith.html

All College of Engineering students must own

1. a laptop or 2-in-1 tablet running Windows 10 or 11 and meeting current specifications, and
2. stipulated software used to analyze and solve problems in and out of class.

Computer requirements for engineering students can be located at https://eng.vt.edu/admissions/computer-requirement.html.

Process for Declaring a Degree-Granting Engineering Major

The General Engineering program introduces first-year engineering students to foundational concepts and practices in engineering, allows time to adjust to the College, and provides opportunities to investigate the College's individual degree programs and select the branch of engineering or computer science best suited to their skills and interests. At the end of the year - after academic advising, contacts with the various departments, and satisfactory progress - students select a degree program and, if academically eligible, are transferred to the appropriate degree-granting department.

Entry into a degree-granting engineering department requires that students successfully complete all required first-year courses.

Please see the College of Engineering catalog section titled "Required Academic Progress" for details, and visit https://eng.vt.edu/academics/undergraduate-students/resources-support/change-of-major.html for application policies and dates.

Code	Title	Credits
Typical First Semester		
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
ENGE 1215	Foundations of Engineering	2
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable	4
Typical Second Semester		
ENGE 1216	Foundations of Engineering	2
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable	4
PHYS 2305	Foundations of Physics	4

Head: J.M. Case
Assistant Head for Undergraduate Programs: N.P. Pitterson
Assistant Head for Graduate Programs: W.C. Lee
Professors: J.M. Case, D.B. Knight, V.K. Lohani, H.M. Matusovich, L.D. McNair, and M.C. Paretti
Associate Professors: D. Bairaktarova, J.R. Grohs, T.W. Knott, W.C. Lee, N.P. Pitterson, S.L. Rodriguez, and Q. Zhu
Assistant Professors: M.V. Huerta, A.S. Katz, D. Kim, and S. Sajadi
Associate Professor of Practice: M.B. James, and N.C.T. Van Tyne
Assistant Professor of Practice: N.J. Bedard

Collegiate Assistant Professor: B.D. Chambers, T.Clarke Douglas, D.A. Gray, J.D. Ortega Álvarez, M.M. Soledad, and C. Wallwey
Senior Instructor: J.L. Lo
Instructor: E.H. Dogan and C.A. Twyman
Professor Emeritus: O.H.Griffin
Associate Professor Emeritus: J.B. Connor, R.M. Goff, M.H. Gregg and T.D.L. Walker
Academic and Career Advisors: M. Cheatham, J. Chin, J. Elmore, D. Erb, M. Greene-Havas, A. Mullins, D. Newcomb, J. Newcomer, and A. Noble

Undergraduate Course Descriptions (ENGE)

ENGE 1004 - Explore Engineering (1 credit)
Students will participate in a seminar-style experience guided by representatives from different engineering disciplines to learn more about the programs offered by the College of Engineering at Virginia Tech to aid the change of major process.
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGE 1014 - Engineering Success Seminar (1 credit)
Introduction to opportunities and resources available to College of Engineering students during their undergraduate career at VT. Practice in information gathering skills critical for engineering students. Practice in oral, written, and visual communication. Preparation of an academic plan.
Corequisite(s): ENGE 1215
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGE 1215 - Foundations of Engineering (2 credits)
A first-year sequence to introduce general engineering students to the profession. 1215 (2 credit) data collection and analysis, engineering problem-solving, mathematical modeling, contemporary software tools, professional practices and expectations (e.g. effective communication, working in teams, ethics), and the diversity of fields and majors within engineering. 1216 (2 credits): data collection and analysis, engineering problem-solving, mathematical modeling, design, contemporary software tools, professional practices and expectations (e.g. communication, teamwork, ethics). 1215: Design Lab/Studio (3L, 2C), 1216: Design Lab/Studio (3L, 2C).
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 2 Crd)

ENGE 1216 - Foundations of Engineering (2 credits)
A first-year sequence to introduce general engineering students to the profession. 1215 (2 credit) data collection and analysis, engineering problem-solving, mathematical modeling, contemporary software tools, professional practices and expectations (e.g. effective communication, working in teams, ethics), and the diversity of fields and majors within engineering. 1216 (2 credits): data collection and analysis, engineering problem-solving, mathematical modeling, design, contemporary software tools, professional practices and expectations (e.g. communication, teamwork, ethics). 1215: Design Lab/Studio (3L, 2C), 1216: Design Lab/Studio (3L, 2C).
Prerequisite(s): ENGE 1215
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 2 Crd)

ENGE 1354 - Introduction to Spatial Visualization (1 credit)
Introduction to spatial visualization. Training to improve three-dimensional visualization skills, pictorial sketching, orthographic projection, mental rotation, mental cutting and folding, combining solids.
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGE 1414 - Foundations of Engineering Practice (4 credits)
Introduction to engineering profession for transfer General Engineering students including engineering problem solving and design, contemporary software tools, and professional practices and expectations (e.g., communication, teamwork, ethics). Duplicates 1215-1216. Design Lab/Studio.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (6 Lab, 4 Crd)

ENGE 1644 - Global STEM Practice: Leadership and Culture (3 credits)
Develop global competencies in science, technology, engineering, and math (STEM) contexts and understand how problems and viable solutions vary across contexts and how intercultural communication and global leadership are important in an interconnected global workforce. Integrates semester-long on-campus module with international module following semester exams (Rising Sophomore Abroad Program). International module engages students in local culture during visits with STEM businesses and universities. Participation in both modules required. Enrollment by application.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 1 Lab, 3 Crd)

ENGE 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 2094 - Create!: Ideation & Innovation (3 credits)
Apply problem solving framing strategies as part of problem solving design processes. Consider cultural, economic, social, and other perspectives in customer discovery and design processes in order to ensure problem/solution fit. Ideate possible solutions or approaches to address open- ended problems using a variety of methods. Engage in iterative critiques of strategies, solutions and prototypes using methods drawn from industrial design, engineering and the arts. Collaborate in interdisciplinary and diverse project teams. Communicate deliverables in multiple formats and for different audiences. Identify and address impacts of designed services and products through global perspectives, such as patterns of inclusion and exclusion and effects on localized ecosystems.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGE 2524 - Exploring Service Learning Through STEAM/STEM Educational Outreach (3 credits)
Explore volunteerism, traditional service learning, critical service learning, and social change. Develop intercultural competence by examining social identities, power, and privilege with a focus on preK-12 education systems in the United States. Develop Science, Technology, Engineering, Arts, and Math (STEAM) and STEM educational outreach experiences that meet needs identified by community members in teams. Demonstrate career readiness through experiential learning. Pre: Sophomore standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGE 2524H - Service Learning Edu. Outreach (3 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGE 2634 - Introduction to Restricted Research (1 credit)
Introduction to multi-disciplinary, team-based undergraduate engineering research. Emphasis on Department of Defense (DoD) and Intelligence Community missions and projects. Exposure to current restricted research performed around campus. Guest speakers from national labs. Engineering research methods (tools, research integrity/safety/ethics, and communication of results). Deep dive into International Traffic in Arms Regulations-restricted multi-disciplinary DoD engineering problems, potential careers, and security protocols surrounding restricted research and careers.
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGE 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 2984 - Special Study (1-19 credits)
I
Instructional Contact Hours: Variable credit course

ENGE 2984G - Special Study (1-19 credits)
Pathway Concept Area(s): 7 Identity & Equity in U.S.
Instructional Contact Hours: Variable credit course

ENGE 2984M - Special Study (1-19 credits)
Pathway Concept Area(s): 6A Critique & Practice in Arts
Instructional Contact Hours: Variable credit course

ENGE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 3604 - Introductory Industry Design Experience (3 credits)
Workplace and industry culture and practice, including folkways, mores, and ethics, centered on engineering design. Interaction with industry professionals. Workplace competencies including effective teamwork, project management, presenting technical information. Training with software, tools and skills used in design practice in industry.
Prerequisite(s): ENGE 1215 and ENGE 1216
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGE 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

ENGE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 4094 - Startup: Commercialization of Innovation (3 credits)
Work in interdisciplinary teams in an experiential environment replicating modern innovation environments. Engage in real world innovation commercialization opportunities. Individual experiences and projects involving actual inventions, innovations, technologies, intellectual property (e.g. patents) and market opportunities. Integrate design thinking, scientists, entrepreneurs, advisors and other potential collaborators. Create a representation of a plan for a minimum viable product for an innovative product or service based on customer and market feedback.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IDS 4094, MGT 4094

ENGE 4104 - Applied Explorations in Innovation (3 credits)
Work in interdisciplinary teams to scope and plan an open-ended design project focused on technology commercialization that addresses a need or problem. Model systems and products computationally and quantitatively to address issues of technical and market feasibility and to predict performance under uncertain conditions. Engage in iterative design process that combines computational and quantitative processes with user-centered design and market analysis. Produce viable design that includes technical specifications, market evaluation, and customer discovery results. Communicate with wide range of audiences. Analyze ethical and intercultural and global impacts of innovation. Pre: 3 credits of foundational quantitative and computational thinking.
Prerequisite(s): STS 2254 and ENGE 2094 and (MGT 4094 or ENGE 4094 or IDS 4094)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 6D Critique & Prac in Design, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGE 4735 - Interdisciplinary Design Capstone (3 credits)
Team-oriented, open-ended, interdisciplinary design projects focused on industrially relevant problems. A specific, complex engineering design problem taken from problem definition to product implementation and validation. 4735: Focus on problem identification, development of customer needs, project management, solution validation and selection, solution design, engineering teamwork, documentation and communication. 4736: Focus on design implementation, design validation, ethical and societal impacts of engineering design, communication and teamwork. Students majoring in Material Science and Engineering, Mechanical Engineering, Electrical and Computer Engineering, Industrial and Systems Engineering, and Biomedical Engineering must meet prerequisite and corequisite requirements for their respective in-major capstone courses.
Prerequisite(s): (ME 3024 and ME 3034 and ME 3304 and ME 3524 and ME 3534 and ME 3624 and ME 4005 and MSE 2034) or (MSE 4644 and MSE 3044 and MSE 3054 and MSE 3884 and MSE 4414 and MSE 4554) or (MSE 4644 and MSE 3044 and MSE 3054 and MSE 3884 and MSE 4414 and MSE 3304) or (MSE 4644 and MSE 3044 and MSE 3054 and MSE 3884 and MSE 4414 and MSE 3204) or (MSE 4644 and MSE 3044 and MSE 3054 and MSE 3884 and MSE 4554 and MSE 3304) or (MSE 4644 and MSE 3044 and MSE 3054 and MSE 3884 and MSE 4554 and MSE 3204) or (MSE 4644 and MSE 3044 and MSE 3054 and MSE 3884 and MSE 3304 and MSE 3204) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3106) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3106) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3134) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3134) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3204) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3204) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3214) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3214) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3304) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3304) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3544) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3544) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3564) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3564) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3574) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3574) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3614) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3614) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3704) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3704) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4205) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4205) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4234) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4234) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4354) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4354) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4424) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4424) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4524) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4524) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4540) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4540) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4580) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4580) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4704) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4704) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3106) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3106) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3134) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3134) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3204) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3204) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3214) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3214) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3304) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3304) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3544) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3544) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3564) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3564) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3574) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3574) or (ECE 2804 and ECE 3504 and ECE 3105

ENGE 4736 - Interdisciplinary Design Capstone (3 credits)
Team-oriented, open-ended, interdisciplinary design projects focused on industrially relevant problems. A specific, complex engineering design problem taken from problem definition to product implementation and validation. 4735: Focus on problem identification, development of customer needs, project management, solution validation and selection, solution design, engineering teamwork, documentation and communication. 4736: Focus on design implementation, design validation, ethical and societal impacts of engineering design, communication and teamwork. Students majoring in Material Science and Engineering, Mechanical Engineering, Electrical and Computer Engineering, Industrial and Systems Engineering, and Biomedical Engineering must meet prerequisite and corequisite requirements for their respective in-major capstone courses.
Prerequisite(s): ENGE 4735
Corequisite(s): (MSE 4055 for MSE majors) or (ISE 4404 for ISE majors).
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGE 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Industrial and Systems Engineering

Our Website (http://www.ise.vt.edu)

Overview

The mission of the Grado Department of Industrial and Systems Engineering is to:

- Prepare undergraduate and graduate students for life-long success and leadership in the profession, in industry, and in higher education;
- Conduct and disseminate research that advances knowledge; and
- Serve the profession, industry, and society.

Industrial and systems engineering is one of the most diverse fields in engineering. ISE is concerned with the design, improvement, and installation of integrated work systems of people, materials, equipment and technology, processes, information, and capital. The industrial engineer is concerned with creating value and improving performance of integrated systems, whether that involves improving quality and productivity, reducing costs and non-value adding activities, improving customer satisfaction, or improving worker safety.

The applications for industrial engineering capabilities include industry, government, and service organizations. Graduates of the ISE program at Virginia Tech work in manufacturing facilities, distribution warehouses, hospitals, airlines, railroads, banks, amusement parks, the military, federal government, and management consulting firms. The boundaries of where ISEs make contributions are limitless.

The mission of the ISE Undergraduate Program is to prepare industrial and systems engineering students to create value for organizations, the profession, and society. We achieve this mission by recruiting, retaining, and educating high quality and diverse students and by creating a rigorous and collegial environment enabling students to learn industrial engineering methods and tools, built upon a foundation of mathematical, physical, and engineering sciences, and to apply them in any global organizational setting. Students are able to achieve academic and professional success through opportunities to participate in various educational experiences, to develop capabilities as future leaders, and to embark on a lifelong journey of professional development and learning.

Program Educational Objectives and Student Learning Outcomes

The ISE faculty, with input from our external Advisory Board, employers, and students, have defined the following Program Educational Objectives (PEOs) and Student Outcomes for our Undergraduate Program. PEOs are statements that describe the expected accomplishments of ISE graduates within 3-5 years after graduation. Student Outcomes are statements that describe what students are expected to know and be able to do at the time of graduation.

Program Educational Objectives: Within 3-5 years of graduation, ISE alumni will have:

- Created value by applying industrial and systems engineering methods to complex challenges, with critical thinking, creativity and innovation, to design integrated systems and implement sustainable solutions.
- Provided technical or programmatic leadership.
- Pursued professional development activities for the pursuit of knowledge and curiosity in existing specialty areas or emerging trends.
- Communicated effectively with relevant audiences and stakeholders, using written, oral, and visual media.
- Worked effectively and inclusively in teams having attributes such as diverse backgrounds, organizational experience, geographic locations, and demographic compositions.
- Served the profession, alma mater, community, and society as exemplified by our motto *Ut Prosim* (That I May Serve).

Student Learning Outcomes: At the time of graduation, ISE students will have:

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

The Industrial and Systems Engineering program at Virginia Tech is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org), under the commission's General Criteria and the Program Criteria for Industrial and Similarly Named Engineering Programs .

Curriculum

The BSISE curriculum (ISE Undergraduate Program) encompasses coursework addressing the technical, organizational, human, and economic elements of work systems. Our aim is to provide graduates with the knowledge and capabilities to enable them to successfully pursue careers in industrial engineering or to continue on to graduate study.

ISE emphasizes instruction in fundamental engineering principles based on the physical sciences, engineering sciences, mathematics, and statistics. These principles are applied in practical design experiences throughout the undergraduate curriculum.

Coursework in the physical sciences and mathematics provides a solid background for basic engineering science courses, which in turn support courses in industrial engineering. Industrial engineering courses are focused in the areas of operations research, manufacturing systems, human factors and ergonomics, and management systems. In each of these areas, modern computing and software tools support analysis and design activities. Electives provide students with the opportunity to explore other areas of engineering, as well as cultural, societal and creative experiences, which makes for well-rounded, diverse, and globally-aware engineers.

Students gain valuable hands-on experience in multiple areas of the BSISE curriculum via state-of-the-art laboratory facilities. These include the Harris Manufacturing Processes Laboratories (conventional and numerically-controlled machine tools, robotics and automation equipment, and welding and foundry facilities), the Learning Factory (Industry 4.0 sandbox laboratory for undergraduates), and the Human Factors Work Measurement and Methods Engineering Laboratory (equipment for in-class exercises and experiments in work measurement, motion economy and time study, psychophysics, human audition and vision, and work station design).

The capstone experience in the ISE Undergraduate Program is ISE 4005-ISE 4006 Project Management & System Design (also referred to as "Senior Design"). The two-course sequence involves students working in project teams with external company sponsors to solve real-world problems. This provides ISE students with engineering project experience that develops not only their capabilities in applying ISE tools and techniques, but technical and professional skills such as teamwork, communication, project management, and life-long learning skills as well. Student project teams present their findings at the annual Senior Design Symposium, which is attended by company sponsors and the ISE Advisory Board.

Many ISE students participate in Undergraduate Research to help satisfy elective requirements in the curriculum. The opportunity to work more closely with ISE faculty members, in some cases on a one-on-one basis,

can provide more in-depth development of particular ISE capabilities and a more-enriching educational experience.

The ISE program also provides students with the opportunity to pursue minors, such as a Business Minor, Green Engineering Minor, or Statistics Minor. Specific information about minors available to ISE students can be found on the ISE website. Students and employers alike are seeing the benefits of these minors for adding value to the ISE major.

The ISE department participates in the Cooperative Education & Internship Program, in which qualified students may alternate semesters of study with semesters of professional co-op employment or internships. Students are encouraged to pursue these experiences before they graduate to make them more competitive in the work force. Students are also encouraged to participate in career fairs and job interviews on and off campus.

The ISE department also provides students with many significant scholarship opportunities at the undergraduate and graduate levels to encourage and acknowledge high academic performance and achievements. The department also maintains bilateral student exchange agreements with international universities, where students can take ISE courses, which will transfer back to their BSISE. Students may also select other universities at which to perform a study abroad semester.

The ISE department also provides students with many significant scholarship opportunities at the undergraduate and graduate levels to encourage and acknowledge high academic performance and achievements. The ISE department also maintains bilateral student exchange agreements with international universities, where students can take ISE courses which will transfer back to their BSISE. Students may also select other universities at which to perform a study abroad semester.

Program Requirements

Students are strongly encouraged to meet with one of the ISE Academic Advisors to discuss the BSISE curriculum.

- Industrial and Systems Engineering Major (p. 896)

Head: E.M. Van Aken
Associate Head: J.P. Shewchuk
Assistant Head and Graduate Program Director: M.A. Nussbaum
Undergraduate Program Director: N. Cherbaka
Charles O. Gordon Professor: G.D. Taylor, Jr.
Hal G. Prillaman Professor: M.A. Nussbaum
Paul T. Norton Professor: S.C. Sarin
Ralph H. Bogle Professor: Z. Kong
John Lawrence Professor: K.P. Triantis
Professors: P. A. Beling, J.L. Gabbard, M. Jeon, B.M. Kleiner, Z. Kong, M.L. Madigan, M.A. Nussbaum, S.C. Sarin, G.D. Taylor Jr., K.P. Triantis, K.L. Tsui, and E.M. Van Aken
Associate Professors: M. Bansal, X. Chen, D.E. Dickerson, K.P. Ellis, N. Ghaffarzadegan, R. Jin, B. Johnson, S.G. Klauer, A. L'Afflitto, N. Lau, P.K. Rao, J.P. Shewchuk, and E.B. Toy
Assistant Professors: R. Hildebrand, N. Hosseinichimeh, R. Kannan, S. Khodadadian, S. Lim, R.N.C. Patrick, T.G. Topcu, S. Tunc, and H. Zhong
Visiting Assistant Professor: B. Song
Collegiate Full Professor: N. Cherbaka
Collegiate Assistant Professors: K. Carper, J. Godfrey, W.P.V. Nguyen, and L. Savage
Research Associate Professor: S. Kim. T. Sun
Research Assistant Professor: K. Lee
Associate Professor of Practice: M.R. Earnest
Faculty Affiliates: P. Agee, T. Cody, X. Deng, M. Fowler, Y. Hong, S. Hotle, J. Moreland, M. Perez, N. Roofigari-Esfahan, S. Trent
Adjunct Faculty: M. Deegan, J. Geraghty, G. Keller, M. Muscatello, W. Vaneman, and P. Wach
Professors Emeritus: M.P. Deisenroth, W.J. Fabrycky, K.H.E. Kroemer, H.A. Kurstedt, H.D. Sherali, and H.L. Snyder
Associate Professors Emeritus: P. Ghare, P.T. Kemmerling P. Koelling, J.A. Nachlas, and R.E. Taylor
Academic Advisors: J. Kerstiens and P. Van Curen

Undergraduate Course Descriptions (ISE)

ISE 2004 - Introduction to Industrial and Systems Engineering (1 credit)
Introduction to the Industrial and Systems Engineering profession through exposure to problems, principles, and practice. Systems thinking, critical thinking, and contemporary issues in industrial and systems engineering. Introduction to the ISE Department, focusing on faculty and research areas. Importance of ethics and professionalism. Academic planning for the BSISE degree.
Instructional Contact Hours: (1 Lec, 1 Crd)

ISE 2014 - Engineering Economy (2 credits)
Concepts and techniques of analysis for evaluating the value of products/services, projects, and systems in relation to their cost. Economic and cost concepts, calculating economic equivalence, comparison of alternatives, purchase versus lease decisions, financial risk evaluation, cash flow sensitivity analysis, and after-tax analysis.
Instructional Contact Hours: (2 Lec, 2 Crd)

ISE 2024 - Probability Foundations for Industrial and Systems Engineers (3 credits)
Introduction to the mathematical foundations of probability theory for industrial engineers. Understanding of probability as a model for real phenomena, with applications of probability in an industrial engineering context. Review of set theory, counting (permutations and combinations), definition of probability axioms, sample spaces, random variables, independence, probability distribution functions, probability mass or density functions, expectations, moment-generating functions, joint and conditional random vectors and distributions, and distributions of functions of random variables, central limit theorem.
Prerequisite(s): MATH 2204 or MATH 2204H
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 2034 - Data Management for Industrial and Systems Engineers (3 credits)
Investigation of data modeling, storage, acquisition, and utilization in industrial and systems engineering. Development of effective spreadsheet applications. Design and implementation of relational databases via entity-relationship modeling, relational schema, normalization, and queries. Structured query language (SQL) fundamentals and SQL relational databases. Overview of non-relational databases, Big Data, and Data Analytics. All topics covered within the context of typical industrial and systems engineering problems.
Prerequisite(s): CS 1044 or CS 1064 or CS 1114 or ECE 1574
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 2044 - Careers in Industrial and Systems Engineering (1 credit)
Overview of the breadth of careers and professional opportunities in the field of industrial and systems engineering. Technical approaches and solutions, emerging trends, career progression, and leadership aspects of industrial and systems engineering practice. Representation of practice across all areas of industrial and systems engineering as well as across a range of industries.
Instructional Contact Hours: (1 Lec, 1 Crd)

ISE 2214 - Manufacturing Processes Laboratory (1 credit)
Laboratory exercises and experimentation in manufacturing processes. Emphasis on using production machines and equipment to make products using multiple manufacturing processes, coupled with inspection per engineering drawings. Processes include assembly, casting, machining, forming, welding, and non-traditional machining, performed manually and/or via computer programming. Also covers basic shop floor operation and documents used for monitoring and controlling part production.
Instructional Contact Hours: (3 Lab, 1 Crd)

ISE 2404 - Deterministic Operations Research I (3 credits)
Deterministic operations research modeling concepts. Linear programming, integer programming, and non-linear programming modeling, assumptions, algorithms, modeling languages, and modern optimization software. Graphical solution, Simplex tableau method and its graphical interpretation. Branch and bound and branch and cut methods. Duality, sensitivity analysis, and Karush-Kuhn-Tucker (KKT) Optimality Conditions with economic interpretation. Network models (formulations and algorithms) including transportation problems, assignment problems, shortest path problems, maximum flow problems, minimum cost network flow problems, and minimal spanning tree problems.
Prerequisite(s): MATH 1114 or MATH 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 2804 - Foundations of Systems Engineering (3 credits)
A systems approach to designing, building, verifying, deploying, operating, and sustaining complex engineered systems. Emergent properties of systems, system lifecycle, and systems engineering as a process driven discipline. Technical management of processes regarding acquisition, contracting, and development. Problem formulation and elicitation of requirements. Creation of system elements: resource components, functions, internal and external interfaces. Introduction to decision analysis and risk management, model-based systems engineering and system architectures.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ISE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ISE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ISE 3004 - Industrial Cost Control (3 credits)
Introduction to basic accounting concepts and operating characteristics of accounting systems. Principles of financial, cost and activity-based accounting, design of accounting systems, techniques of analysis, and cost control. Emphasis on interpretation of accounting for decision-analysis, including the benefits of limitations of accounting information.
Prerequisite(s): ISE 2014 or ME 3024
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3034 - Technical Communication for Engineers (3 credits)
Fundamentals of effective technical writing. Structure, presentation, and utility of common engineering documents: laboratory reports, technical reports, proposals, progress reports, and project reports. Practice in writing common engineering documents, both individually and collaboratively. Strategies and practice for effective oral technical presentations, both individually and group-based. Ethical and legal considerations in technical writing and oral technical presentations. All topics covered within the context of typical engineering problems and practice.
Prerequisite(s): ENGL 1106
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3204 - Manufacturing Processes (3 credits)
Survey of manufacturing processes including casting, forming, machining, welding, joining, and nontraditional processes such as electrical-discharge machining. Basic manufacturing materials and their properties, structure of metals, metal deformation and heat treatment. Mathematical modeling of common manufacturing processes; process planning and the effect of plans on cost; impact of product design on manufacturability and assemblability. Recent trends in manufacturing, sustainable manufacturing. Also includes topics in inspection and testing, computer-aided manufacturing, and numerical control.
Prerequisite(s): ENGE 1216 or ENGE 1414
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3214 - Facilities Planning and Logistics (3 credits)
Theory, concepts, and methods for designing and analyzing facilities and material flow in manufacturing, storage, and distribution environments. Topic areas include material handling systems, facility layout, facility location, warehousing, distribution, logistics, and transportation. C- or better in ISE 2014, 2404, and 3414.
Prerequisite(s): ISE 2014 and ISE 2404
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3414 - Probabilistic Operations Research (3 credits)
This course introduces probability models used to investigate the behavior and performance of manufacturing and service systems under conditions of uncertainty. Major topics include probability, conditioning, elementary counting processes, and Markov chains and Markov processes. Emphasis is on the use of these tools to model queues, inventories, process behavior, and equipment reliability. C- or better required in STAT 4105, MATH 2224 or 2204, MATH 2214 or 2214H, and ISE 2004.
Prerequisite(s): ISE 2024 and (MATH 2204 or MATH 2204H or MATH 2406H) and (MATH 2214 or MATH 2214H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3424 - Discrete-Event Computer Simulation (3 credits)
Analysis and design of work systems through static and dynamic simulation. Topics include an introduction to systems analysis and modeling, simulation optimization, model development and testing, and problem analysis through simulation. C- or better required in ISE 3414 and STAT 4105.
Prerequisite(s): ISE 3414
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ISE 3434 - Deterministic Operations Research II (3 credits)
Advanced concepts in deterministic operations research, including theory of complexity, integer programming, advanced linear programming techniques, nonlinear programming, dynamic programming. Covers modeling languages and optimization software for integer programming and nonlinear programming problems. Grade of C- or better required in ISE 2004, 2404 and MATH 2204 or 2224.
Prerequisite(s): ISE 2404 and (MATH 2224 or MATH 2204) and ISE 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3614 - Human Factors Engineering and Ergonomics (3 credits)
Investigation of human factors, ergonomics, and work measurement engineering, with emphasis on a systems approach toward workplace and machine design. Discussion of basic human factors research, discipline-specific ethics, design/evaluation methods for industrial and artificial intelligence (AI) systems including human machine interactions, human information processing, visual and auditory processes, design of display and control, effects of environmental stressors on humans, visualization and sonification of large datasets, human factors role in the design of machine learning and AI applications.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3624 - Industrial Ergonomics (3 credits)
Introduction to ergonomics and work measurement with an emphasis on people at work. Discussion of methods for work measurement, ergonomic assessment, and evaluation, with major topics including productivity and performance, manual materials handling, work-related musculoskeletal disorders, safety, training and legal issues. C- or better required in ISE 3614.
Prerequisite(s): ISE 3614 and ESM 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4004 - Theory of Organization (3 credits)
A theory of cooperative behavior in formal organizations, including the structure and elements of formal organizations. The executive process and the nature of executive responsibility also are examined.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4005 - Project Management and Systems Design (2 credits)
Capstone design experience for ISE majors. 4005: Structured systems engineering and project management methods and tools to plan, manage, and execute technical industrial and systems engineering projects. Students work in teams to apply industrial and systems engineering and project management tools to define and analyze a real-world problem and communicate results effectively. 4006: Designing, implementing, and evaluating work system solutions, all via students working in teams. Communication of solutions to various project stakeholders.
Prerequisite(s): ISE 2034 and ISE 2214 and ISE 3034 and ISE 3214 and ISE 3424 and ISE 3624 and ISE 4204
Corequisite(s): ISE 4404
Instructional Contact Hours: (2 Lec, 2 Crd)

ISE 4006 - Project Management and Systems Design (2 credits)
Capstone design experience for ISE majors. 4005: Structured systems engineering and project management methods and tools to plan, manage, and execute technical industrial and systems engineering projects. Students work in teams to apply industrial and systems engineering and project management tools to define and analyze a real-world problem and communicate results effectively. 4006: Designing, implementing, and evaluating work system solutions, all via students working in teams. Communication of solutions to various project stakeholders.
Prerequisite(s): ISE 4005
Instructional Contact Hours: (2 Lec, 2 Crd)

ISE 4014 - Introduction to Management Systems (3 credits)
Introduction to a systems approach for the design and improvement of management systems used in organizations. Discussion of organizational improvement approaches to improve the design and operation of management systems used in managerial decision-making. Analysis of success and failure of organizational improvement projects. Discussion of performance measurement systems, evaluation, and assessment tools.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4015 - Management Systems Theory, Applications, and Design (3 credits)
Systems approach to management, domains of responsibility, structured and synergistic management tools, management system model, contextual frameworks, information portrayal, automation objectives model, evaluation, shared information processing, information modeling. A management process for definition, measurement, evaluation and control, the organization as an information processor, corporate culture, scoping agreements, schemas and management elements, structured design.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4204 - Production Planning and Inventory Control (3 credits)
Planning and control of operations in both manufacturing and service industries. Management and utilization of resources to support cost effective products and services. Principles, models, and techniques used for production planning and inventory control.
Prerequisite(s): ISE 2404 and ISE 3414 and STAT 4706
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4214 - Lean Manufacturing (3 credits)
Overview of Lean Manufacturing principles, theory, methods, and techniques in modern manufacturing enterprises. Lean philosophy and basic concepts, master production scheduling and production smoothing, assembly line sequencing, setup time reduction, U-shaped line balancing/operation, machine arrangement, kanban, autonomation, and value stream mapping. Investigation and discussion of lean manufacturing case studies. C- or better required in ISE 4204.
Prerequisite(s): ISE 4204
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4264 - Industrial Automation (3 credits)
Survey of various technologies employed in industrial automation, with emphasis on industrial applications of robotics, machine vision and learning, and programmable controllers. Introductory robot motion modeling, investigation into problems in Computer- Aided Design (CAD)/Computer-Aided Manufacturing (CAM) integration. Examination of components commonly employed in automation systems, their aggregation, and related production process design.
Prerequisite(s): ISE 3204 or ISE 2214
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ISE 4304 - Global Issues in Industrial Management (3 credits)
Industrial management topics of current interest explored from a global perspective. Current domestic and international challenges resulting from a global marketplace and the proliferation of information and technology. Industrial management and organizational performance, total quality management, business process re-engineering, leadership, organizational change, role of communication and information, and ethics. Examination and comparison across international boundaries.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4404 - Statistical Quality Control (3 credits)
Application of statistical methods and probability models to the monitoring and control of product quality. Techniques for acceptance sampling by variables and attributes. Shewhart control charts for both mean and range of quality characteristics. Design of experiments and analysis of variance for effective data-generation processes. Motivation behind, and theoretical development and application of, both control charts and design of experiments. Design of effective quality control procedures.
Prerequisite(s): ISE 3414 and STAT 4706
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4414 - Industrial Quality Control (3 credits)
Implementation of statistical quality control techniques in an industrial setting. Development and analysis of cost models for use in the design of optimal quality control plans. Also included are new techniques, advanced quality control models, and an examination of the role of industrial statistics in the overall product quality assurance function. C- or better required in ISE 4404.
Prerequisite(s): ISE 4404
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4424 - Logistics Engineering (3 credits)
Introduction to the key issues in the integrated support of a product or process. Synthesis of topics from earlier studies to provide a cohesive approach to their applications. Logistics engineering provides a survey of product support issues and methods of resolving them within the context of the overall production activity. C- or better required in ISE 3414.
Prerequisite(s): ISE 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4434 - Supply Chain and Operations Engineering (3 credits)
Mathematical models, algorithms, and tools to support the design/redesign and management of supply chain systems. Resiliency, reliability, efficiency, and effectiveness of supply chains; collaboration and coordination among the different decision-makers in supply chains; impact of new developments on supply chain engineering, including the growth of the internet and e-commerce, the need to build suitable and environmentally-friendly supply chains. Mathematical modeling and system-wide optimization of the entire supply chain system under certainty.
Prerequisite(s): ISE 2404 and ISE 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4624 - Physical Work Assessment (3 credits)
Physical ergonomics assessment methods, including cardiorespiratory testing, metabolic energy expenditure and balance, strength, anthropometry, endurance and fatigue, electromyography, biomechanics, thermal stress.
Prerequisite(s): ISE 3624
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4634 - Human Factors in Transportation (3 credits)
Introduction to human factors principles applied to surface transportation for industrial engineers. Understanding of human factors research methods, with applications for safety to the transportation system. Haddon's Matrix, human factors research methods, crash countermeasures, public policy implications, and automated driving systems.
Prerequisite(s): ISE 3614
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4644 - Risk and Hazard Control (3 credits)
Introduction to the fields of risk assessment, risk and hazard control, safety management, process safety, and system safety engineering through exposure to problems, principles, and practice. Integrated systems approach to problem solving. Industrial accident and disaster case study analysis and review of contemporary issues. Review of risk analysis and control techniques and overview of global regulations and guidelines for process, industrial, and occupational safety. C- or better required in ISE 3614.
Prerequisite(s): ISE 3614
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4654 - Principles of Industrial Hygiene (3 credits)
Introduction to the foundations of the field of Industrial Hygiene, that discipline devoted to the anticipation, recognition, measurement, evaluation, and control of occupational health hazards. Includes biological (e.g. microbial agents, allergens), chemical (e.g. solvents, carcinogens, dusts), and physical (e.g. radiation , temperature) hazards. Overview of control of health hazards, such as personal protective equipment, administrative controls, and engineering controls. Will involve lecture and participatory case-study activities. Will provide ample opportunity for hands-on use of monitoring equipment, protective equipment and controls testing devices.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4804 - System Dynamics Modeling of Industrial Systems (3 credits)
Computer-aided approach to analyze and make better decisions in complex industrial systems. Systems thinking and causal loop modeling of complexity over time. Interconnectivity of industrial systems, production, and service. Stock-flow diagrams. Systems modeling of product development and market adoption. Simulation of dynamic problems arising in complex systems. Systems modeling and simulation-based decision analysis to improve performance in service and manufacturing.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ISE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ISE 4984A - Special Study (1-19 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: Variable credit course

ISE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Industrial and Systems Engineering Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
ISE 2004	Introduction to Industrial and Systems Engineering	1
ISE 2014	Engineering Economy	2
ISE 2214	Manufacturing Processes Laboratory	1
ISE 2024	Probability Foundations for Industrial and Systems Engineers	3
ISE 2034	Data Management for Industrial and Systems Engineers	3
ISE 2404	Deterministic Operations Research I	3

ISE 3614	Human Factors Engineering and Ergonomics	3
ISE 3214	Facilities Planning and Logistics	3
ISE 3414	Probabilistic Operations Research	3
ISE 3424	Discrete-Event Computer Simulation	3
ISE 3624	Industrial Ergonomics	3
ISE 4204	Production Planning and Inventory Control	3
ISE 4005	Project Management and Systems Design	2
ISE 4404	Statistical Quality Control	3
ISE 4006	Project Management and Systems Design	2
Subtotal		38
Major Requirements		
ISE 2804	Foundations of Systems Engineering	3
MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus (C-)	3
ESM 2104	Statics	3
STAT 4706	Probability and Statistics for Engineers	3
Career Bridge Experience [1]		
ENGE 3900	Bridge Experience	0
Electives		
Programming Elective		
Select one of the following:		3
CS 1044	Introduction to Programming in C (C-)	
CS 1064	Introduction to Programming in Python (C-)	
CS 1114	Introduction to Software Design (C-)	
ISE Technical Electives [2]		
Select nine credits from the following:		9
ISE 3004	Industrial Cost Control	
ISE 3204	Manufacturing Processes	
ISE 3434	DETERMINISTIC OPERATIONS RESEARCH II: Algorithms, Software, & ML	
ISE 4004	Theory of Organization	
ISE 4014	Introduction to Management Systems	
ISE 4214	Lean Manufacturing	
ISE 4264	Industrial Automation	
ISE 4304	Global Issues in Industrial Management	
ISE 4414	Industrial Quality Control	
ISE 4424	Logistics Engineering	
ISE 4434	Supply Chain and Operations Engineering	
ISE 4624	Physical Work Assessment	
ISE 4644	Risk and Hazard Control	
ISE 4654	Principles of Industrial Hygiene	
ISE 4804	System Dynamics Modeling of Industrial Systems	
ISE 4974	Independent Study	
ISE 4984	Special Study	
ISE 4994	Undergraduate Research	
Technical Electives [3]		
Select six credits [4]		6
Engineering Science Electives [5]		
Select one of the following:		3
ECE 3054	Electrical Theory	
ESM 2204	Mechanics of Deformable Bodies	
ESM 2304	Dynamics	
MSE 2034	Elements of Materials Engineering	
Free Electives [6, 7]		*3*
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
ISE 3034	Technical Communication for Engineers (1A)	3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six credits in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
PHYS 2305	Foundations of Physics	4
PHYS 2306	Foundations of Physics	4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F)	4
MATH 1226	Calculus of a Single Variable (5F)	4
MATH 2214	Introduction to Differential Equations (5A)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215	Foundations of Engineering (6D)	2
ENGE 1216	Foundations of Engineering (6D)	2
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathways 7 should be double-counted with either Pathways 2, 3 or 6a to avoid taking any additional credit hours		
Total Credits		**124**

1 Career Bridge Experiences help prepare students for post-graduation life and develop a professional identity. Internships, Co-ops, and Undergraduate Research are examples of possible Career Bridge Experiences. Students must participate in a Career Bridge Experience to complete the BS ISE degree. Because some of these experiences are not credit bearing, the ENGE 3900 course is used to track and assess student participation in a Career Bridge Experience and to record fulfillment of this degree requirement on the transcript. Students should enroll in ENGE 3900 during the semester (or one of the semesters) that they undertake the Career Bridge Experience. Enrollment in ENGE 3900 requires approval of a Career Bridge Plan. Further information about acceptable Career Bridge Experiences and the process for submitting a Career Bridge Plan are explained in ISE 2004.

2 The purpose of this requirement is to enable student to develop expertise in a particular area of the ISE discipline.

- Courses must be selected from the list provided. Course offerings are subject to change and the availability of sufficient resources: check the Timetable of Classes for actual course offerings each semester.
- A maximum of six (6) credits of ISE 4974 Independent Study or ISE 4994 Undergraduate Research is allowed without prior approval from the ISE Undergraduate Program Director.

[3] The purpose of this requirements is for students to further develop technical skills and to provide the opportunity to focus on a particular technical area by taking electives with significant technical content.
- The courses must be on an A-F basis, unless prior approval (for P/F basis) has been obtained from the ISE Undergraduate Program Director.
- Up to three (3) credits can be obtained via ISE Technical Elective courses not being used for ISE Technical Elective credit.

[4] Courses must be selected as follows:
- Any 3000 or 4000 level course from AOE, BMES, BSE, CEE, CEM, CHE, CHEM, CMDA, CS, ECE, ESM, MATH, ME, MSE, MINE, NSEG, PHYS, STAT **except** the following: CEE 4804 Professional and Legal Issues in Civil Engineering, CHEM 4014 Survey of Chemical Literature, CS 3604 Professionalism in Computing, CS 4214 Simulation and Modeling, MATH 4044 History of Mathematics, MATH 4625 Mathematics for Secondary Teachers, MATH 4626 Mathematics for Secondary Teachers, MATH 4644 Secondary School Mathematics With Technology, MATH 4664 Senior Math Education Seminar, ME 4454 Engineering Leadership in Practice:Managing the Technical Design Process, STAT 3005 Statistical Methods, STAT 3006 Statistical Methods, STAT 3604 Statistics for Social Science, STAT 3615 Biological Statistics, STAT 3704 Statistics for Engineering Applications, STAT 4105 Theoretical Statistics, STAT 4604 Statistical Methods for Engineers, STAT 4705 Probability and Statistics for Engineers, STAT 4714 Probability and Statistics for Electrical Engineers
- ENGR 3124 Introduction to Green Engineering and/or ENGR 4134 Environmental Life Cycle Assessment
- Other courses are allowed only with prior approval from the ISE Undergraduate Program Director.

[5] The purpose of this requirement is for students to broaden their knowledge of engineering science outside ISE.
- Courses must be selected from the list below (unless prior approval has been obtained from the ISE Undergraduate Program Director.

[6] Students may not use a given course to satisfy both Free Elective and Pathways requirements: any given course can satisfy one requirement only.

[7] Only free electives and courses offered on a P/F basis only (e.g. FA 2004 Creativity and the Artistic Experience may be taken under the P/F grading option.)

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ISE Department fully supports this policy. In addition, upon completion of two semesters as an ISE major, students must have:

- a minimum in-major GPA of 2.00 or better (in-major GPA is determined from all ISE and required STAT classes);

Graduation Requirements

Each student must complete at least 124 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. (In-major GPA is determined from ISE and required STAT classes.)

Pre-requisites: Students must earn a C- or better in ISE, STAT, and MATH courses which are prerequisites for subsequent ISE courses, with the exception of ISE 2004, ISE 2014, and ISE 2214.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Roadmap

Roadmap

First Year		
Fall Semester		**Credits**
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable (C-)	4
ENGE 1215	Foundations of Engineering	2
Programming Elective		3
Select three credits in Pathways 2, 3, 6A, or 7		3
	Credits	**15**
Spring Semester		
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable	4
PHYS 2305	Foundations of Physics (w/ lab)	4
ENGE 1216	Foundations of Engineering	2
Select three credits in Pathways 2, 3, 6A, or 7		3
	Credits	**16**
Second Year		
Fall Semester		
MATH 2114	Introduction to Linear Algebra (C-)	3
MATH 2204	Introduction to Multivariable Calculus (C-)	3
PHYS 2306	Foundations of Physics (w/lab)	4
ISE 2004	Introduction to Industrial and Systems Engineering	1
ISE 2014	Engineering Economy	2
ISE 2214	Manufacturing Processes Laboratory	1
ISE 2804	Foundations of Systems Engineering	3
	Credits	**17**
Spring Semester		
ESM 2104	Statics	3

Materials Science and Engineering

Our Website (http://www.mse.vt.edu)

Overview

Materials engineers and scientists study the structure and properties of engineering materials on scales ranging from the atomic through the microscopic to the macroscopic. These materials include ceramics and glasses, metals, polymers, composites, biomaterials, nanomaterials, semiconductors, and electronic, magnetic, and photonic materials. Materials engineers develop new materials, improve traditional materials, and manufacture materials economically through synthesis, processing, and fabrication. They seek to understand physical and chemical phenomena in material structures and to measure and characterize materials properties of all kinds including mechanical, electrical, optical, magnetic, thermal, and chemical. They predict and evaluate the performance of materials as structural or functional elements in engineering systems and structures. They work in teams with engineers in other disciplines in selecting, designing and processing materials for optimal performance.

Significant opportunities exist for graduates in the aerospace, automobile, transportation, medical, microelectronics, telecommunications, chemical, petroleum, energy storage, power generation, and energy conservation industries, as well as within the basic industries producing materials--for example, the copper, aluminum, steel, ceramics, glass, and polymer industries. Opportunities also exist in government-operated engineering centers and research laboratories. Graduates work in entry level engineering, manufacturing, materials selection and design, quality assurance and control, research and development, technical consulting, management, and sales and marketing. Graduates have an excellent background for continuing education in science, engineering, medicine, law (e.g. patent law), and business.

Accreditation, Program Educational Objectives, and Student Outcomes

Accreditation

The B.S. in MSE degree program at Virginia Tech is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org, under the commission's General Criteria and the Program Criteria for Materials, Metallurgical, Ceramics and Similarly Named Engineering Programs.

Program Educational Objectives

The goal of the BS degree program in MSE is to provide the educational foundation that enables alumni to pursue their personal career objectives. Historically, the majority of our alumni become valued members of industrial and/or research teams within the field of materials science or related technical disciplines while a smaller percentage pursue graduate education or other personal career objectives.

The specific program educational objectives for the BS degree program in MSE are to produce alumni who are:

- effective communicators with written, oral, and visual media:
- able to apply critical thinking skills to engineering and research problems: and
- effective learners able to apply technical tools, techniques, and knowledge specific to their field of employment or graduate studies.

Student Learning Outcomes

Upon graduation, students completing the B.S. degree program in MSE will have:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Curriculum

Students typically enter the MSE Department following completion of their first-year studies within the College of Engineering, as administered by the Department of Engineering Education (ENGE); a description of required first year coursework can be found within the ENGE section of this catalog.

In addition to foundation courses in MSE, students tailor an individualized program of elective study. 12 credits of technical electives will be selected to emphasize certain subdisciplines of MSE (e.g., metals, ceramics, polymers, electronic materials, composites, biomaterials, nanomaterials, etc.) or to prepare for a career in an engineering application area. Course-work totals 126 credit hours as detailed in the University Catalog at Program Explorer | Virginia Tech (https://catalog.vt.edu/program-explorer/).

The undergraduate curriculum contains a nationally recognized integrated program of instruction in engineering communication including writing, public speaking, proposal preparation, reporting, research skills, critical and creative thinking, and graphical presentation. More information regarding this unique program can be found at https://mse.vt.edu/Programs.html

The undergraduate program culminates with a two-semester team-oriented engineering design capstone project in which the students address a significant problem in their area of special interest.

The MSE students have pursued various minors including Green Engineering, Chemistry, Mathematics, Music, Nuclear, and various others.

Educational Enhancement Opportunities

Students of MSE can participate in the cooperative education program in which qualified students may alternate semesters of study with semesters of professional employment. (www.career.vt.edu/experience/ceip.html (http://www.career.vt.edu/experience/ceip.html))

MSE also participates in the university honors degree options (see www.honorscollege.vt.edu (http://www.honorscollege.vt.edu)).

Study abroad opportunities are also available Studying Abroad | Global Education Office | Virginia Tech (https://www.globaleducation.vt.edu/students/Outbound.html).

- Materials Science and Engineering Major (p. 905)
- Materials Science and Engineering Major with Nuclear Materials Option (p. 908)

Head: S.G. Corcoran (interim)
Jack E. Cowling Professor: D.D. Viehland
Professors: S.K. Kodambaka, G.Q. Lu, M. Murayama, G.R. Pickrell, and W.T. Reynolds Jr.
Associate Professors: A.O. Aning, L.V. Asryan, W. Cai, S.G. Corcoran, C. Hin, A.R. Whittington[1], and H. Yu.
Assistant Professors: X. Bai, T. Pham, C. Tallon, and T. Rost
Collegiate Associate Professor: T.W. Staley
Collegiate Assistant Professor: H. Kindlund and H.M. Elmkharram
Associate Professors of Practice: A.P. Druschitz, and S. McGinnis
Assistant Professor of Practice: C.B. Burgoyne
Research Associate Professors: J-F. Li and C.T.A. Suchicital
Research Assistant Professor: Y. Zhu
Instructors: R. Clark, and W.C. Hill
Professors Emeritus: J.J. Brown Jr., R.O. Claus, N.E. Dowling, D. Farkas, G.V. Gibbs, D.P.H. Hasselman, and R.W. Hendricks
Affiliated Faculty: R.C. Batra, M.J. Bortner, A. Brand, S.W. Case, R.V. Davalos, C. DiMarino, P. Dove, S. Emori, Y. Fu, A. Goldstein, J.R. Heflin, X. Jia, B. Johnson, B. Lattimer, G. Liu, F. Lin, R. Mahajan, R.B. Moore, A. Morris, K. Ngo, K. Park, L. Quan, N.L. Ross, J. Song, M. Van Dyke, C.B. Williams, R.H. Yoon, and Y. Zhang.

Undergraduate Course Descriptions (MSE)

MSE 1004 - Materials In Todays World (1 credit)
An introductory course designed for the student with a basic high school science background who wishes to understand and learn about the exciting materials developments which are affecting us all in todays world. The course will introduce the structures and properties of metals, ceramics, polymers (plastics), composites, and materials for electronic and optical applications. Students will also gain an appreciation for the processing and design limitations of materials used in everyday applications.
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 1014 - The Science of Materials in Everyday Life (3 credits)
Introduction to the science of materials using everyday applications in modern society from medicine, transportation, sports, art, music, infrastructure, and electronics. Discussion of metals, ceramics, plastics, biomaterials, and hybrid materials based on the fundamental science dictating their structure properties, and processing. Considerations of tradeoffs between environmental sustainability, ethical and societal issues, and economics for materials choices.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 2014 - Materials Engineering Transition (1 credit)
Supplemental coverage of introductory topics not included in courses delivered to non-MSE majors.
Prerequisite(s): MSE 2034 or MSE 3094 or AOE 3094
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 2034 - Elements of Materials Engineering (3 credits)
This course is designed to introduce the non-MSE student to the structures and properties of metals, ceramics, polymers, and composites. In addition, students will gain an understanding of the processing and design limitations of these materials, as well as being introduced to new classes of materials being developed to meet the ever expanding range of material requirements. Non-MSE majors only.
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 2044 - Fundamentals of Materials Engineering (4 credits)
This course is designed to introduce the MSE major to the structures and properties of metals, ceramics, polymers, composites, and electronic materials. Students will also gain an understanding of the processing and design limitations of materials. Topics fundamental to the further study of materials, such as crystal structures, phase diagrams, and materials design and processing will be emphasized as foundations for future MSE courses.
Prerequisite(s): CHEM 1035
Corequisite(s): PHYS 2305
Instructional Contact Hours: (4 Lec, 4 Crd)

MSE 2054 - Fundamentals of Materials Science (3 credits)
Introduces MSE majors to fundamental underlying concepts governing phase equilibrium, microstructure, electronic properties of materials, and transport phenomena as a foundation to understanding materials behavior and processing.
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 2114 - Math Programming MSE I (1 credit)
Basic computational and graphical functions in mathematics oriented programming languages using data and engineering examples from the field of Materials Science. Students apply general methods to problems of their choice through mini- projects.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 2884 - Materials Engineering Professional Development I (1 credit)
Topics on professional, communications, and leadership skills in entering the engineering workplace; building and presenting qualifications for professional development; expanding the professional network; and ethical, diversity, inclusion, and equity in the engineering workplace. Career gap analysis, team dynamics, resumes, job interviews, cover letters, scholarship essays, personal statements, professional development portfolios, case studies, poster presentations. Pre: Sophomore standing in the MSE major.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 2984D - Special Study (1-19 credits)
Pathway Concept Area(s): 4 Reasoning in Natural Sci.
Instructional Contact Hours: Variable credit course

MSE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 3044 - Transport Phenomena in MSE (3 credits)
Mass transport (continuum and atomistic diffusion), heat transport and fluid flow (momentum transport). Analytical and computer based methods for solving transport problems.
Prerequisite(s): MSE 2044 and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 3054 - Mechanical Behavior of Materials (3 credits)
Mechanical properties and behavior of engineering materials subjected to static, dynamic, creep, and fatigue loads under environments and stress states typical of service conditions; biaxial theories of failure; behavior of cracked bodies; microstructure-property relationships and design methodologies for homogeneous and composite materials.
Prerequisite(s): ESM 2204 and (MSE 2034 or MSE 2044 or MSE 3094 or AOE 3094 or CEE 3684)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 3054

MSE 3064 - Mechanical Behavior of Materials Laboratory (1 credit)
Laboratory experiments on behavior and mechanical properties of solid materials. Tension, compression, bending, hardness, nano-indentation, and impact tests; behavior of cracked bodies; fatigue and crack growth tests; creep deformation; microstructure-property relationships; laboratory equipment, instrumentation, and computers.
Prerequisite(s): ESM 2204
Corequisite(s): MSE 3054
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: ESM 3064

MSE 3104 - Mineralogy (3 credits)
Principles of modern mineralogy, crystal chemistry, and crystallography, with emphasis on mineral atomic structure and physical property relationships, mineralogy in the context of geology, geochemistry, environmental science and geophysics, phase equilibria, mineral associations, and mineral identification, and industrial applications of minerals. There are three required field trips during the semester.
Prerequisite(s): CHEM 1035 or CHEM 1055 or (ISC 1106 and ISC 1116)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: GEOS 3504

MSE 3114 - Mathematics Programming in Materials Science II (1 credit)
Advanced computational and graphical methods in mathematics oriented programming languages. Students develop programs that solve and/or provide visualizations of solutions to materials science and engineering problems.
Prerequisite(s): MSE 2114
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 3134 - Crystallography and Crystal Structures (3 credits)
Provides a comprehensive foundation in crystallography including lattices, point groups, space groups, reciprocal lattices, properties of x-rays, and electron density maps, all leading to a formal description of structures and an interpretation of the published crystallographic data.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 3204 - Fundamentals of Electronic Materials (3 credits)
Introduction to the electrical, magnetic, and optical properties of solid-state materials. Development of atomic scale models for physical phenomena that are observable at the macroscopic scale. Connection is made between basic materials properties and the operational characteristics of selected solid-state devices.
Prerequisite(s): MSE 2054 and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 3304 - Physical Metallurgy (3 credits)
Deformation of crystalline solids and its relationship to crystal structure and crystal defects: crystal structures of metals, dislocations and plastic deformation, vacancies, recovery, recrystallization, grain growth, deformation twinning and martensite.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 3314 - Materials Laboratory I (1 credit)
Sample preparation for materials characterization techniques including various types of microscopy, spectroscopy, diffraction, and hardness testing. Instruction in the use of heat treating equipment and polishing and chemical etching procedures.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 3324 - Elementary Metal Casting Laboratory (1 credit)
Introduction to metal casting processes; gating, risering, molding and puring. Hands-on experience. Emphasis on safe foundry practices. Oral and written reports are required.
Prerequisite(s): (MSE 2034 or MSE 2044) and ISE 2214
Corequisite(s): MSE 3354
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 3334 - Test Methods for Foundry Laboratories (2 credits)
The properties of foundry sand, molten metal and castings are measured using standard laboratory test procedures. Safe foundry practices are emphasized. Oral and written reports are required.
Prerequisite(s): (MSE 2034 or MSE 2044) and ISE 2214
Corequisite(s): MSE 3354
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MSE 3354 - Foundry Safety (1 credit)
Provides comprehensive training in foundry safety procedures and policies. (May register multiple times).
Prerequisite(s): (MSE 2034 or MSE 2044) and ISE 2214
Corequisite(s): 3324 or 3334 or 4324.
Instructional Contact Hours: (2 Lec, 1 Crd)

MSE 3884 - Materials Engineering Professional Development II (1 credit)
Teamwork, ethical, professional, and communication practices in collaborative engineering environments; identification of areas of interest for potential senior design capstone projects; discipline-specific preliminary research in preparation for senior design projects: motivations and needs identification, broader impact (economic, social, environmental, and global), relevant theoretical concepts and methodologies, ethical engineering considerations, management logistic such identification of facilities and equipment, risk and safety analysis, critical paths and project timelines; basic project and time management; collaborative communications in written and oral form, personal professional development plans. Extends the basic treatment of these topics given in MSE 2884. Pre: Junior standing in the MSE major.
Prerequisite(s): MSE 2884
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 3954 - Study Abroad (1-6 credits)
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)

MSE 4034 - Thermodynamics of Materials Systems (3 credits)
Topics in thermodynamics on the solution of materials selection and design related problems such as materials stability at high temperatures and in corrosive chemical environments. Thermodynamic principles important in controlling equilibrium in single component systems and multicomponent solid solutions and in establishing the thermodynamic driving force in kinetic processes which are important in materials processing unit operations. Estimation of thermodynamic properties and equilibrium calculations in multicomponent and multiphase systems.
Prerequisite(s): MSE 2044
Corequisite(s): CHEM 1036
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4044 - Powder Processing (3 credits)
Processing methods associated with powder synthesis, characterization, colloidal processing, and forming of powder compacts. Theory of solid state and liquid phase sintering.
Prerequisite(s): MSE 3044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4055 - Materials Selection and Design I and II (3 credits)
4055: Selection of materials for engineering systems, based on constitutive analyses of functional requirements and material properties. 4056: The role and implications of processing on material selection.
Prerequisite(s): (MSE 3204 and MSE 3304) or (MSE 3204 and MSE 4414) or (MSE 3204 and MSE 4554) or (MSE 3304 and MSE 4414) or (MSE 3304 and MSE 4554) or (MSE 4414 and MSE 4554)
Corequisite(s): MSE 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4056 - Materials Selection and Design I and II (3 credits)
4055: Selection of mateials for engineering systems, based on constitutive analyses of functional requirements and material properties. 4056: The role and implications of processing on material selection.
Prerequisite(s): MSE 4055
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4075 - Senior Design Laboratory (1 credit)
A capstone design course centered around an open-ended, faculty-advised senior project involving the design of a process, material, or a technique for solving a technological problem. Senior standing in MSE required.
Prerequisite(s): MSE 4644
Corequisite(s): MSE 4055, MSE 4085
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 4076 - Senior Design Laboratory (2 credits)
A capstone design course centered around an open-ended, faculty-advised senior project involving the design of a process, material, or a technique for solving a technological problem. Senior standing in MSE required.
Prerequisite(s): MSE 4075
Corequisite(s): MSE 4086
Instructional Contact Hours: (6 Lab, 2 Crd)

MSE 4085 - Senior Capstone Recitation (2 credits)
Topics in engineering professional practice, project planning and reporting, including discussion and presentation of proposals, interim and project reports. Instruction in environmental, social, and economic impacts of engineering; design theory and analysis; ethics, continuous learning, and global issues. Capstone course runs in parallel with faculty-advised Senior Design Laboratory. 4085: Emphasis on project planning and management techniques, teamwork strategies, literature research, and technical communication style. 4086: Continuing development of technical documents, with emphasis on professional communication to various audience formats. Additional focus on broader impacts of technical projects, including social, economic, environmental, ethical, and global contexts. Pre: Senior standing in MSE.
Prerequisite(s): MSE 3884
Corequisite(s): 4075 or 4095H for 4085; 4076 or 4096H for 4086. (2H,2C) for 4085. (1H,1C) for 4086.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 2 Crd)

MSE 4085H - Senior Capstone Recitation (2 credits)
Topics in engineering professional practice, project planning and reporting, including discussion and presentation of proposals, interim and project reports. Instruction in environmental, social, and economic impacts of engineering; design theory and analysis; ethics, continuous learning, and global issues. Capstone course runs in parallel with faculty-advised Senior Design Laboratory. 4085: Emphasis on project planning and management techniques, teamwork strategies, literature research, and technical communication style. 4086: Continuing development of technical documents, with emphasis on professional communication to various audience formats. Additional focus on broader impacts of technical projects, including social, economic, environmental, ethical, and global contexts. Pre: Senior standing in MSE.
Prerequisite(s): MSE 3884
Corequisite(s): 4075 or 4095H for 4085; 4076 or 4096H for 4086. (2H,2C) for 4085. (1H,1C) for 4086.
Instructional Contact Hours: (2 Lec, 2 Crd)

MSE 4086 - Senior Capstone Recitation (1 credit)
Topics in engineering professional practice, project planning and reporting, including discussion and presentation of proposals, interim and project reports. Instruction in environmental, social, and economic impacts of engineering; design theory and analysis; ethics, continuous learning, and global issues. Capstone course runs in parallel with faculty-advised Senior Design Laboratory. 4085: Emphasis on project planning and management techniques, teamwork strategies, literature research, and technical communication style. 4086: Continuing development of technical documents, with emphasis on professional communication to various audience formats. Additional focus on broader impacts of technical projects, including social, economic, environmental, ethical, and global contexts. Pre: Senior standing in MSE.
Prerequisite(s): MSE 4085
Corequisite(s): 4075 or 4095H for 4085; 4076 or 4096H for 4086. (2H,2C) for 4085. (1H,1C) for 4086.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 4095H - Honors Senior Design-Laboratory (3 credits)
Two-semester MSE capstone design course centered around an open-ended, faculty-advised senior honors project involving the design of a process, material, or a technique for solving a technological problem. Outcomes and work effort are consistent with that expected of honors students. MSE 4095H: Literature search, planning and proof-of-concept studies of assigned project. Individual preparation and presentation of an original senior honors thesis related to a team project in which the students also participate. Presentation of detailed project plan to faculty. MSE 4096H: Execution of proposed project, analysis of results and preparation of journal-quality presentation of results. Oral presentation of results to MSE faculty and students. Enrollment in University Honors and senior standing in MSE required.
Prerequisite(s): MSE 4644
Corequisite(s): MSE 4055, MSE 4085
Instructional Contact Hours: (9 Lab, 3 Crd)

MSE 4096H - Honors Senior Design Laboratory (3 credits)
Two-semester MSE capstone design course centered around an open-ended, faculty-advised senior honors project involving the design of a process, material, or a technique for a solving a technological problem. Outcomes and work effort are consistent with that expected of honors students. MSE 4096H: Execution of proposed project, anaylsis of results and preparation of journal-quality presentation of results. Oral presentation of results to MSE faculty and students. Enrollment in University Honors and senior standing in MSE required.
Prerequisite(s): UH 4095H
Corequisite(s): MSE 4086
Instructional Contact Hours: (9 Lab, 3 Crd)

MSE 4164 - Principles of Materials Corrosion (3 credits)
Introduction to the scientific principles of materials corrosion and corrosion protection. Topics include: thermodynamics of materials corrosion, including potential- PH (Pourbaix) diagrams, kinetics of corrosion reactions and mixed potential theory, types of corrosion (uniform, galvanic, crevice, pitting, fatigue, stress corrosion cracking, intergranular, and hydrogen embrittlement), material/environmental factors that promote or prevent the various types of corrosion, and methods and techniques of corrosion testing.
Corequisite(s): MSE 4034
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4174 - Corrosion and Degradation of Materials Laboratory (1 credit)
Introduction to experimental techniques and principles used to study the effects of environmental exposure on various contemporary advanced materials systems. Emphasis on creation and measurement of property variations in engineered materials caused by time and chemical or energetic stimuli, and effective communication of these results.
Prerequisite(s): MSE 4034 and MSE 3314 and MSE 4424
Corequisite(s): MSE 3044
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 4224 - Electronic, Magnetic, and Optical Properties of Materials Laboratory (1 credit)
Introduction to experimental techniques used to study the electronic, magnetic, and optical properties of contemporary advanced materials systems; property variations made possible by composition and processing of engineered materials; and interaction of fields with materials – including effective communication of these results.
Prerequisite(s): MSE 3204 and MSE 3314 and MSE 4424
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 4234 - Semiconductor Processing (3 credits)
Manufacturing practices used in silicon integrated circuit fabrication and the underlying scientific basis for these process technologies. Physical models are developed to explain basic fabrication steps, such as substrate growth, thermal oxidation, dopant diffusion, ion implantation, thin film deposition, etching, and lithography. The overall CMOS integrated circuit process flow is described within the context of these physical models.
Prerequisite(s): ECE 2214
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4234

MSE 4304 - Metals and Alloys (3 credits)
This course covers the production, properties and uses of commercially important metals and alloys. The influence of structure, chemistry, and processing upon the properties of metals is emphasized. Alloy selection is discussed. Mechanical, electrical, thermal and chemical characteristics of ferrous and nonferrous alloys are studied.
Prerequisite(s): MSE 2034 or MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4305 - Physical Metallurgy and Modeling of Metal Casting (3 credits)
4305: Casting processes; solidification and its influences on the structure and chemistry of castings; role of fluid flow and heat transfer in mold design; origin and control of casting defects. 4306: Design, layout, and modeling of metal components cast from aluminum, bronze, iron and steel; design of metal running systems; modeling of solidification process.
Prerequisite(s): MSE 3304
Corequisite(s): 3044 or ME 3304 for 4306.
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4306 - Physical Metallurgy and Modeling of Metal Casting (3 credits)
4305: Casting processes; solidification and its influence on the structure and chemistry of castings; role of fluid flow and heat transfer in mold design; origin and control of casting defects. 4306: Design, layout, and modeling of metal components cast from aluminum, bronze, iron and steel; design of metal running systems; modeling of solidification processes.
Prerequisite(s): (MSE 2034 or MSE 2044) and MSE 3324
Corequisite(s): 3044 or ME 3304 for 4306.
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4314 - Bladesmithing (3 credits)
Introduction to bladesmithing processes. Hands-on experience with heating metal, visual temperature measurement, manual hammer forging, forge welding, cooling metal, and heat treatment. Emphasis on safe forging and bladesmithing practices.
Corequisite(s): MSE 3304, MSE 3354
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MSE 4324 - Advanced Metal Casting Laboratory (2 credits)
Advanced metal casting processes; no-bake sand molds; investment casting; rapid prototyping; melting and casting of aluminum, bronze, iron and steel. Casting finishing including shot and sand blasting. Hands-on experience. Emphasis on safe foundry practices. Oral and written reports are required.
Prerequisite(s): MSE 3324
Corequisite(s): MSE 3354
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

MSE 4334 - Applied Materials Analysis (3 credits)
Fundamental materials theory applied to structure-property relationships in materials science and engineering through basic characterization techniques. Demonstrations, lab exercises, and practical application of modern characterization techniques such as Scanning and Transmission Electron Microscopy (SEM, TEM), Focused Ion Beam (FIB), and Atomic Force Microscopy (AFM).
Prerequisite(s): MSE 2044 and (MSE 3314 or MSE 4424)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MSE 4384 - Nuclear Materials (3 credits)
An introduction to materials for nuclear applications with emphasis on fission reactors. Fundamental radiation effects on materials; material properties relevant to structural, moderator, reflector, blanket, coolant, control shielding and safety systems; processes such as nuclear fuel cycles, fuel enrichment and reprocessing; and related structural systems.
Prerequisite(s): (MSE 3044 or ME 3304) and (MSE 3054 or ESM 3054 or ME 3614)
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4394 - Introduction to Molecular Dynamics Simulation (3 credits)
Background of molecular dynamics simulation method. Fundamental molecular dynamics principles, algorithms and components (atomic structure, periodic boundary conditions, interatomic potentials, equations of motion of atoms, statistical ensembles, integration of equations of motion). Implementation of algorithms into codes. Simulations of the time evolution of atoms, particles, or molecules under static or varying thermodynamic conditions and external loads. Connection between atom trajectories and evolution of the physical property of the simulation system with statistical mechanics principles. Hands-on case studies using molecular dynamics simulation package, LAMMPS. Prior knowledge of a programming language such as Fortran, C, C++, Matlab, Mathematica, Python, Java is highly recommended. Pre: Junior standing.
Prerequisite(s): MSE 2034 or MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4414 - Physical Ceramics (3 credits)
Study of the relationships between the physical properties (thermal, optical, mechanical, electrical and magnetic) and the structure and composition of ceramics at the atomic and microscopic level as affected by processing and service environment. Emphasis will be placed on application and design using structural ceramics.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4424 - Materials Laboratory II (1 credit)
Processing and characterization of materials; exploration of the influence of processing parameters on physical and mechanical properties. Emphasis on material synthesis.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 4434 - Ceramic and Glass Materials Processing Laboratory (1 credit)
Introduction to experimental techniques used to synthesize, process, and analyze resulting properties of ceramic and glass materials. Measurement of property variations made possible by changing composition and processing of engineered ceramic systems.
Prerequisite(s): MSE 4414 and MSE 3314 and MSE 4424
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 4544 - Laboratory In Polymer Science (2 credits)
Experimental techniques used in the synthesis of various linear polymers, copolymers, and crosslinked networks. Determination of polymer molecular weights and molecular weight distribution. Methods used in the thermal, mechanical, and morphological characterization of polymeric systems.
Prerequisite(s): CHEM 3616 and CHEM 4534
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)
Course Crosslist: CHEM 4074

MSE 4554 - Polymer Engineering (3 credits)
This course is designed to introduce the student to polymers from the MSE perspective. The basics of polymer syntheses and polymerization will be outlined. The relationship between processing, structure, and properties will be presented with respect to the performance and design requirements of typical polymer applications.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4574 - Biomaterials (3 credits)
Materials for biomedical applications. Basic material types and properties, functional uses of materials in medical applications, and tissue response mechanisms. Integrated design issues of multicomponent material design in prosthetic devices for hard and soft tissues, orthopedics , cardiovascular, and drug delivery applications.
Prerequisite(s): MSE 2034 or MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BMES 4574

MSE 4584 - Biomimetic Materials (3 credits)
Introduction to structure property relationships in biological materials such as wood, bone, shells, spider silk, connective tissue, blood vessels and jellyfish. Proteins and polysaccharides, biosynthesis and assembly, biomineralization, hierarchical organization. Introduction to tissue engineering and regenerative medicine. Life cycle, environmental aspects of biofabrication.
Prerequisite(s): (MSE 2034 or MSE 2044) and (CHEM 1036 or BIOL 1106)
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4604 - Composite Materials (3 credits)
The application of the fundamental concepts of mechanics, elasticity, and plasticity to multiphase and composite materials. Constitutive equations for the mechanical and physical properties of metal, ceramic, and polymeric matrix composites. The role of processing and microstructure on properties.
Prerequisite(s): (MSE 2034 or MSE 2044) and ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4614 - Nanomaterials (3 credits)
Synthesis methods of 0D nanoparticles, 1D nanotubes/nanowires/ nanorods, 2D nanoribbons and nanofilms, and special nano-features on supports. Bottom-up and top-down approaches. Methods of characterization for nanomaterials. Processing of nanospecies into higher order dimensions; conventional processing techniques; techniques developed solely for nanomaterials. Chemical, physical, mechanical, and electrical properties of nanomaterials and applications of nanomaterials.
Prerequisite(s): MSE 4034
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4644 - Materials Optimization Through Designed Experiments (3 credits)
Methods of analysis of variation in materials systems, manufacturing or R&D through the use of statistical methods including experimental design techniques. Instructional examples related to Materials Science and Engineering.
Prerequisite(s): MSE 3314 or MSE 4424
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 4984A - Special Study (1-19 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: Variable credit course

MSE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 29844 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Materials Science and Engineering Major

Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathway 7 should be double counted with either Pathway 2, 3 or 6a to avoid taking any additional credit hours.		
Subtotal		49
Total Credits		**126**

1 ENGE 4735 Interdisciplinary Design Capstone + ENGE 4736 Interdisciplinary Design Capstone may be substituted for MSE 4075 Senior Design Laboratory + MSE 4076 Senior Design Laboratory + MSE 4085 Senior Capstone Recitation + MSE 4086 Senior Capstone Recitation. Students will need to meet the prerequisites for MSE 4075/4085 to be eligible to take ENGE 4735/4736. These courses will also count in the in-major GPA.

2 To enroll in MSE 4095H and MSE 4096H, students must be in the Honors College and receive approval from the MSE department.

3 Students interested in focusing in the area of polymers are strongly encouraged to take CHEM 1036 General Chemistry in the first spring semester and speak with the MSE undergraduate advisor.

Technical Electives:

Twelve (12) credits are required from the lists below[1,2]. A minimum of six credits must be taken from group one and a maximum of six credits may be taken from group two. All 12 credits may be satisfied from group one. Courses must be taken for a grade (Pass/Fail not acceptable). Other courses not listed may be counted with special approval; initiate requests through the MSE Undergraduate Academic Advisor.

1 Technical elective credit may be earned in study abroad opportunities. Please see your MSE undergraduate academic advisor.

2 MSE 4974 Independent Study + MSE 4994 Undergraduate Research total credit hours limited to a maximum of six without prior approval.

Group 1: Materials Specific Courses

Must choose a minimum of six credits.

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The MSE Department fully supports this policy. Specific expectations for satisfactory progress for Materials Science and Engineering majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91
- Maintain an in-major GPA of 2.0 or better and an overall GPA of 2.0 or better
- Students may not earn a semester GPA less than 2.0 in any two consecutive semesters
- Students must complete a minimum of nine credits per semester satisfying the MSE degree requirements,
- A grade of C or better in MSE 2044 Fundamentals of Materials Engineering (or MSE 2034 Elements of Materials Engineering) is required as a prerequisite for all MSE courses, and
- Students are allowed to take MSE 2044 Fundamentals of Materials Engineering (or MSE 2034 Elements of Materials Engineering) a maximum of two times in their attempt to achieve a grade of C or better.

Graduation Requirements

To qualify for a B.S. degree in MSE, a student must:

1. Complete at least 126 credit hours
2. Earn a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In-major GPA is calculated using all courses taken under the MSE designator.

Acceptable Substitutions

1. ISE 2014 Engineering Economy and a one credit free elective may be substituted for ECON 2005 Principles of Economics .
2. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra.
3. MATH 2405H Mathematics in a Computational Context and MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra , MATH 2204 Introduction to Multivariable Calculus , and MATH 2214 Introduction to Differential Equations.
4. MSE 2034 Elements of Materials Engineering and MSE 2014 Materials Engineering Transition may be substituted for MSE 2044 Fundamentals of Materials Engineering.
5. ENGE 4735 Interdisciplinary Design Capstone and ENGE 4736 Interdisciplinary Design Capstone may be substituted for MSE 4075 Senior Design Laboratory , MSE 4085 Senior Capstone Recitation , MSE 4076 Senior Design Laboratory , and MSE 4086 Senior Capstone Recitation . These courses will also count in the in-major GPA.

Foreign Language Requirement

Students must have had two years of a foreign language in high school or one year at the college level (six credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

	Credits	**15**
	Total Credits	**126**

Mechanical Engineering

Our Website (http://www.me.vt.edu)

Nature of the Profession

Mechanical engineering is the broadest of the engineering professions. Because of the breadth of the ME discipline, mechanical engineers work in a wide variety of technical areas and are employed in a range of job functions. Specialty areas within the mechanical engineering discipline include, among many others, acoustics, biomechanics, CAD, controls, energy conversion and energy management, HVAC, materials, mechanical design, mechatronics, nuclear engineering, robotics and automation, and turbomachinery. The actual job functions which mechanical engineers perform vary widely as well. ME's work in design, research and development, manufacturing, service and maintenance, as well as technical sales, in almost every industry. Many are in management and administration. Many mechanical engineering graduates go on to more advanced degrees, or continue their education in other fields, such a law or business.

Employment Opportunities

Because of the diversity and breadth of the mechanical engineering profession, ME graduates find employment in a wide variety of industries, laboratories, and consulting firms. This results in a relatively stable job market that is not dependent upon a single particular industry. The textile, petroleum, chemical, electronic, automotive, aerospace, power generation, HVAC, and manufacturing industries hire large numbers of mechanical engineering graduates and the starting salaries for ME's are very competitive with the other engineering disciplines.

Because of the wide diversity of specialties and job functions any two mechanical engineers might have significantly different day-to-day activities and responsibilities. Some may be concerned with very large engineering systems while others are working with small and even microscale devices and components; some work might call for highly analytical or mathematical approaches while other work might be more amenable to experimental or empirical approaches. Mechanical engineers may be involved in the operation of processing plants, or the design of engines, prosthetic devices, steam and gas turbines or compressors and pumps, alternative fuel devices, and many other devices and systems. At Virginia Tech there is a close association between the ME departments research and design project activities with industry. This enhances the opportunities for student interaction with industry representatives.

Accreditation, Program Educational Objectives, and Student Learning Outcomes

The Bachelor of Science in Mechanical Engineering (BSME) degree program at Virginia Tech is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org), under the commission's General Criteria and the Program Criteria for Mechanical and Similarly Named Engineering Programs.

Program Educational Objectives

Within a few years after graduating from the Mechanical Engineering Department at Virginia Tech, the graduates will attain:

- Positions where they utilize fundamental technical knowledge and skills in mathematics, science, and engineering to analyze and solve problems, and apply these abilities to generate new knowledge, ideas or products in academia, industry or government.
- Practical experience and organizational skills, enabling them to interact and communicate effectively (written and/or oral) with a diverse group of stakeholders to accomplish a variety of tasks.
- Roles of increasing responsibility leading to leadership positions that benefit themselves, their employers and society.
- Skills in life-long learning (e.g. self-study, continuing education/short courses or workshops, and/or formal graduate level education), as well as skills to motivate and encourage co-workers to also pursue lifelong learning.
- Roles where they demonstrate professional and ethical responsibilities toward peers, employers, and society and follow these precepts in their daily lives.

Student Learning Outcomes

We expect our students to have the following skills, knowledge, and behaviors by the time of their graduation. We want our students to obtain:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

The Curriculum

The department is committed to providing students with an exceptional experience in both the theory and practice of mechanical engineering. In the senior capstone sequence students are required to apply classroom knowledge to complex engineering problems requiring teamwork, problem formulation, economic analysis, effective communication, and product realization. These projects are carefully selected and updated to ensure relevancy to contemporary technical issues and needs. The department encourages the involvement of students prior to their senior year and students outside the department and college in these projects. The department also encourages hands-on student involvement by providing dedicated machine and welding shops that exclusively serve the undergraduate program. The required sophomore-level Manufacturing Processes Laboratory course and certification by a professional machinist are required prior to use of either of these shops. Opportunity for professional development is provided by participation in student professional organizations, such as the American Society of Mechanical Engineers, ASME, and the American Nuclear Society, ANS. In addition to the *Mechanical Engineering* major, there are majors in *Automotive Engineering* and *Robotics and Mechatronics* which offer additional specialization in those areas while still leading to the BS in Mechanical Engineering degree.

The ME curriculum provides a strong foundation in the basic physical and chemical sciences and in mathematics. These are followed by courses that provide a background in thermodynamics, numerical methods, solid and fluid mechanics, manufacturing processes, machine design, vibrations, heat and mass transfer, controls, statistics and materials. Courses in English and in the humanities and social sciences are included to broaden the individual. This background is strengthened and unified through a sequence of engineering design courses. Instructional laboratories in the junior year provide opportunities for students to learn measurement and instrumentation techniques. Students apply these skills to the acquisition and analysis of data from various engineering systems.

In all professional endeavors the mechanical engineer must consider ecological effects as well as the economic and social needs of people. The mechanical engineer must consider the conservation of natural resources and the environmental impact in the design of systems. These considerations are included in a number of ME courses and technical elective classes. Students wishing to further strengthen this area may wish to consider the Green Engineering Option at www.eng.vt.edu/green/index.php (http://www.eng.vt.edu/green/).

The unifying activity in all aspects of mechanical engineering is the design function. A special emphasis has been placed on the use of computer-aided design methods and applied design project experience as a required part of the curriculum. Elective courses in the junior and senior years provide students with the opportunity to pursue specialized interests related to career plans or preparation for graduate study.

The department participates in the Cooperative Education Program in which qualified students may alternate semesters of study with semesters of professional employment. Approximately twenty percent of all mechanical engineering students participate in this program.

The department offers graduate programs leading to the M.S., M.Eng., and Ph.D. in mechanical engineering (see the Graduate Catalog (https://catalog.vt.edu/graduate/)).

The Department of Mechanical Engineering actively seeks input on the nature and quality of our program from all interested individuals and organizations, including students, employers and supporting agencies. Our goal is to provide the best possible service to the students who entrust their education to us. Through our continuous improvement efforts, we pledge to continually improve the content of our curriculum, our educational methods and our facilities. Comments to the department head or any member of the faculty are welcomed. Note that because of this continuous improvement process entrance and degree requirements and course content are subject to change. Please consult the department academic advisor for current information.

- Automotive Engineering Major (p. 923)
- Mechanical Engineering Major (p. 925)
- Robotics and Mechatronics Major (p. 931)

Head: B. Lattimer
William S. Cross Professor: D. K. Tafti
Nicholas & Rebecca Des Champs Professor: B. Lattimer
George R. Goodson Professor: R. Pitchumani

Lewis A. Hester Professor: R. L. Mahajan
Robert E. Hord, Jr. Professor: A. Haghighat
Robert E. Hord Jr. Professor: C. Sandu
Robert E. Hord Jr. Professor: M. von Spakovsky
Samuel P. Langley Professor: C.R. Fuller
Chris C. Kraft Professor of Engineering: W. F. Ng
Clifton C. Garvin Professor: R.C. Batra
J. Bernard Jones Professor: M. Ahmadian
John R. Jones III Fellow: M. Bartlett
John R. Jones III Fellow: B. Behkam
John R. Jones III Fellow: J. Boreyko
John R. Jones III Fellow: R. Qiao
Mary V. Jones Fellow: S. Shahab
Raymond E. and Shirley B. Lynn Professor: R. Mueller
Rolls Royce Professor: C. Son
L. S. Randolph Professor: C.B. Williams
University Distinguished Professor: R.C. Batra
Adhesive and Sealant Science Professor: D.A. Dillard
Professors: M. Ahmadian, R.C. Batra, B. Behkam, P. Ben-Tzvi, L. Collins, R. De Vita, D.A. Dillard, C.R. Fuller, A. Haghighat, K.B. Kochersberger, A.J. Kurdila, B. Lattimer, R.L. Mahajan, R. Mueller, A.S. Nain, W.F. Ng, M.R. Paul, R. Pitchumani, R. Qiao, B. Raeymaekers, C. Sandu, J.J. Socha, C. Son, M.A. Stremler, D.K. Tafti, S. Taheri, M.R. von Spakovsky, C.B. Williams, and J. Zhang
Associate Professors: P. Acar, K.H. Akbari, A. Asbeck, O. Barry, M. Bartlett, J.H. Bohn, J. Boreyko, J. Cheng, M.W. Ellis, J.B. Ferris, W. Hardy, C. Hin, S. Huxtable, M.E.F. Kasarda, S. Li, Z. Li, Y. Liu, S. Shahab, S.C. Southward, A.E. Staples, A. Untaroiu, R.L. West, and A.L. Wicks
Assistant Professors: S. Kale, E. Komendera, D. Losey, J. Meadows, N. Naughton, and Z. Tian
Professor of Practice: J. Sole
Associate Professor of Practice: L. Vick
Collegiate Associate Professor: D. Freeman, D. Gonzales, J.K. Lord, M. Nowinski, and J. Warfford
Professors Emeritus: L.J. Arp, R.A. Comparin, T. Diller, N.S. Eiss, R.E. Hedgepeth, C.J. Hurst, , R.G. Leonard, J. R. Mahan, L.D. Mitchell, R. Mitchiner, D.J. Nelson, T.F. Parkinson, F.J. Pierce, J.R. Thomas, W.C. Thomas, and R.J. Whitelaw
Adjunct Professors: R. Anderl (TU Darmstadt), P.G. Brolinson (Edward Via College of Osteopathic Medicine), D. Carlson (Lord Corp.), A. Eskandarian (VCU), J. Funk (Biodynamic Research Corp.), M.J. Hampe (TU Darmstadt), T. Kress (BEST Engineering), A. Leonessa (NSF), D. Rabe (Air Force Research Lab), and B. Sanders (Air Force Research Lab)
Advanced Instructors: B. Aidi, J. Bolton, C. Galitz, S. Davison, S. Tahmasian
Instructors: J. Barbish, T.S. Chang, R. Clark, H. Pendar, J. Rule

Undergraduate Course Descriptions (ESM)

ESM 2014 - Professnl Dvlpmnt Seminar ESM (1 credit)
Topics designed to foster the professional development of the ESM student. ESM program objectives and outcomes. Professional careers, employment opportunities, expectations to the profession. Technical concentration within the ESM major. Ethical decision-making, safe and life-long learning.
Instructional Contact Hours: (1 Lec, 1 Crd)

ESM 2104 - Statics (3 credits)
Vector mechanics of forces and moments, free-body diagrams, couples, resultants, equilibrium of particles and rigid bodies in two and three dimensions, forces in trusses, frames, and machines, centroids, centers of mass, distributed forces, internal shear forces and bending moments in beams, shear and moment diagrams, friction, belt friction, area of moments of inertia, parallel axis theorem. Course requirements may be satisfied by taking MATH prerequisite prior to or concurrent with course.
Prerequisite(s): MATH 1226
Corequisite(s): MATH 2204 or MATH 2204H or MATH 2406H
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 2114 - Statics & Structures (3 credits)
Vector algebra of forces, movements, couples and resultants. Free-body diagrams. Equilibrium of particles and rigid bodies in two and three dimensions. Friction. Forces in trusses and frames. Centroids, centers of mass, area moments of inertia. Internal axial forces, shear forces, and bending moments in bars in beams. Shear and moment diagrams. Stress and strain in bars in beams.
Corequisite(s): MATH 2204 or MATH 2204H or MATH 2406H.
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 2204 - Mechanics of Deformable Bodies (3 credits)
Concepts of stress, strain, and deformation. Factor of safety. Stress-strain relationships and material properties. Stress concentrations. Area moments of inertia. Axially loaded members, torsionally loaded members, bending of beams. Shear and moment diagrams. Stresses due to combined loading. Thin-walled pressure vessels. Transformation of stress including Mohrs circle. Beam deflections and buckling stability.
Prerequisite(s): (ESM 2104 or ESM 2114) and (MATH 2204 or MATH 2204H or MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 2304 - Dynamics (3 credits)
Vector treatment of the kinematics and kinetics of particles and rigid bodies, Newtons laws, work and energy, impulse and momentum, impact, mass moments of inertia, rotating axes.
Prerequisite(s): (ESM 2104 or ESM 2114) and (MATH 2204 or MATH 2204H or MATH 2406H)
Corequisite(s): MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 3024 - Introduction to Fluid Mechanics (3 credits)
Fluid properties. Hydrostatics. Derivation and application of the mass, momentum, and energy conservation equations. Dimensional analysis and similitude. Introduction to analyses of pipe flows and piping systems, open channel flows, and fluid forces on solid bodies.
Prerequisite(s): PHYS 2305 and ESM 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 3034 - Fluid Mechanics Laboratory (1 credit)
Introduction to experimental fluid mechanics. Dimensional analysis. Experiments on fluid properties, flow measurements, and flow visualization, including manometry, determining hydrostatic forces on submerged surfaces, applications of the impulse-momentum principle, velocity measurements, measuring drag forces, quantifying flow in channels. Modern data acquisition techniques.
Prerequisite(s): ESM 2304 and ECE 3054
Corequisite(s): ESM 3234
Instructional Contact Hours: (3 Lab, 1 Crd)

ESM 3054 - Mechanical Behavior of Materials (3 credits)
Mechanical properties and behavior of solid materials subjected to static, cyclic, and sustained loads resulting from stress states, environments, and stress histories typical of service conditions; multiaxial failure criteria; behavior of cracked bodies; fatigue of materials; creep of materials; microstructure-property relationships; design methodologies.
Prerequisite(s): ESM 2204 and (MSE 2034 or MSE 2044 or MSE 3094 or AOE 3094 or CEE 3684)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MSE 3054

ESM 3064 - Mechanical Behavior of Materials Laboratory (1 credit)
Laboratory experiments on behavior and mechanical properties of solid materials. Tension, compression, bending, hardness, nano-indentation, and impact tests; behavior of cracked bodies; fatigue and crack growth tests; creep deformation; microstructure-property relationships; laboratory equipment, instrumentation, and computers.
Prerequisite(s): ESM 2204
Corequisite(s): ESM 3054
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: MSE 3064

ESM 3114 - Problem Definition and Scoping in Engineering Design (1 credit)
Define open-ended engineering design projects, identify relevant broad social, global, economic, cultural and technical needs and constraints, determine ways in which technical skills contribute to addressing complex engineering design challenges. Identify a capstone project for ESM 4015-4016. Pre-requisite: Junior standing in ESM.
Prerequisite(s): ESM 2014
Instructional Contact Hours: (2 Lab, 1 Crd)

ESM 3124 - Dynamics II- Analytical and 3-D Motion (3 credits)
Review of Newtons Laws, introduction to Lagranges equations, rotating coordinate systems, particle dynamics, systems of particles, rigid-body dynamics, small amplitude oscillations, holonomic and nonholonomic constraints, phase space and energy methods.
Prerequisite(s): ESM 2304 and (MATH 2214 or MATH 2214H or MATH 2406H) and (MATH 2204 or MATH 2204H or MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 3134 - Dynamics III - Vibration and Control (3 credits)
Single-degree-of-freedom vibration, n-degree-of-freedom systems, continuous systems, nonlinear systems, system stability, introduction to the feedback control of dynamic systems.
Prerequisite(s): ESM 3124 and MATH 4564
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 3154 - Solid Mechanics (3 credits)
Introduction to tensors, mathematical description of deformations and internal forces in solids, equations of equilibrium, principle of virtual work, linear elastic material behavior, solution for linear elastic problems including axially and spherically symmetric solutions, stress function solutions to plane stress and strain problems, solutions to 3-D problems, energy methods.
Prerequisite(s): ESM 2204 and (MATH 2214 or MATH 2214H)
Corequisite(s): MATH 4574
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 3234 - Fluid Mechanics I-Control Volume Analysis (3 credits)
Fluid statics. Control volume approach to flow analysis: conservation laws, pipe flows, compressible flow, open channel flow.
Prerequisite(s): ESM 2304 and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 3334 - Fluid Mechanics II-Differential Analysis (3 credits)
Introduction to continuum mechanics for fluid systems. Fluid kinematics. Differential approach to flow analysis: conservation equations, exact solutions, potential flows, viscous flows.
Prerequisite(s): ESM 3234 or ME 3404
Corequisite(s): MATH 4574
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 3444 - Mechanics Laboratory (2 credits)
Concepts in instrumentation, data acquisition, and signal analysis. Measurements of mechanics quantities and phenomena associated with solid, fluid, and dynamical systems. Open-ended problem definition and approach formulation. Application and synthesis of engineering mechanics fundamentals to the modeling and solution of open-ended problems. Group-working skills and effective written and oral communication.
Prerequisite(s): ESM 3234 and ESM 3034 and ESM 3054 and ESM 3064 and ESM 3124 and ECE 3054
Corequisite(s): ESM 3134, ESM 3154, ESM 3334
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

ESM 3704 - Basic Principles of Structures (3 credits)
Static equilibrium of forces and moments, concurrent and nonconcurrent force systems, center of gravity, concentrated and distributed loads. Solution of trusses. Stress and strain, elastic behavior of materials, cables and arches, shear, bending, and deformation in beams, indeterminate structures. Not available to students in engineering.
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4014 - Applied Fluid Mechanics (3 credits)
Analysis of flow over practical configurations, panel methods, Reynolds-averaged Navier-Stokes equations, turbulent boundary layers, flow separation and three-dimensional effects. Unsteady flows, fluid-structure interactions.
Prerequisite(s): ESM 2074 and ESM 3016
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4015 - Creative Design and Project (3 credits)
Capstone senior design project. Synthesis and application of fundamental principles of engineering science and mechanics to an open-ended problem. 4015: Project proposal, including objectives, goals and plans for project. Identification of needs, constraints, and engineering standards with consideration of public health, safety, and welfare, including ethical, global, cultural, societal, environmental, and economic contexts. Proof-of-concept prototyping. Teamwork and communication of design and project progress. 4016: Design specifications with consideration of public health, safety, and welfare, as well as ethical, global, cultural, social, environmental, and economic factors where applicable. Design, test, and analysis of functional prototype. Teamwork and communication of design and project progress. Pre: Senior standing.
Prerequisite(s): ESM 3114
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4016 - Creative Design and Project (3 credits)
Capstone senior design project. Synthesis and application of fundamental principles of engineering science and mechanics to an open-ended problem. 4015: Project proposal, including objectives, goals and plans for project. Identification of needs, constraints, and engineering standards with consideration of public health, safety, and welfare, including ethical, global, cultural, societal, environmental, and economic contexts. Proof-of-concept prototyping. Teamwork and communication of design and project progress. 4016: Design specifications with consideration of public health, safety, and welfare, as well as ethical, global, cultural, social, environmental, and economic factors where applicable. Design, test, and analysis of functional prototype. Teamwork and communication of design and project progress. Pre: Senior standing.
Prerequisite(s): ESM 4015
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4024 - Advanced Mechanical Behavior of Materials (3 credits)
Mechanical behavior of materials, emphasizing solid mechanics aspects and methods for predicting strength and life of engineering components. Plasticity, failure criteria, fracture mechanics, crack growth, strain-based fatigue, and creep. Microstructure-property relationships, and laboratory demonstrations.
Prerequisite(s): ESM 3054 or MSE 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4044 - Mechanics of Composite Materials (3 credits)
Introduction to the deformation, stress, and strength analysis of continuous-fiber-polymer-matrix laminated composites. Fabrication, micromechanics of stiffness and expansional coefficients, classical lamination theory (CLT). Environmentally induced stresses. Computerized implementation and design.
Prerequisite(s): ESM 2204 or AOE 2024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CEE 4610

ESM 4084 - Engineering Design Optimization (3 credits)
Use of mathematical programming methods for engineering design optimization including linear programming, penalty function methods, and gradient projection methods. Applications to minimum weight design, open-loop optimum control, machine design, and appropriate design problems from other engineering disciplines.
Prerequisite(s): MATH 2224 or MATH 2204 or MATH 2204H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4084

ESM 4105 - Engineering Analysis of Physiologic Systems (3 credits)
Engineering analysis of human physiology. Physiologic systems are treated as engineering systems with emphasis input-output considerations, system interrelationships and engineering analogs. 4105 - Mass and electrolyte transfer, nerves, muscles, renal system. 4106 - cardiovascular mechanics, respiratory system, digestive systems, senses.
Prerequisite(s): ESM 2304 and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4106 - Engineering Analysis of Physiologic Systems (3 credits)
Engineering analysis of human physiology. Physiologic systems are treated as engineering systems with emphasis input-output considerations, system interrelationships and engineering analogs. 4105 - Mass and electrolyte transfer, nerves, muscles, renal system. 4106 - cardiovascular mechanics, respiratory system, digestive systems, senses.
Corequisite(s): ME 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4114 - Nonlinear Dynamics and Chaos (3 credits)
Motion of systems governed by differential equations: stability, geometry, phase planes, bifurcations, Poincare sections, point attractors, limit cycles, chaos and strange attractors, Lyapunov exponents. Forced, nonlinear oscillations: jump phenomena, harmonic resonances, Hopf bifurcations, averaging and multiple-scales analysis. Systems governed by discrete maps: return maps, cobweb plots, period-multiplying bifurcations, intermittency, delay coordinates, fractal dimensions.
Prerequisite(s): (ESM 2304 or PHYS 2504) and (MATH 2214 or MATH 2214H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4514

ESM 4154 - Nondestructive Evaluation of Materials (3 credits)
Concepts and methods of nondestructive evaluation of materials. Discussion of techniques and mathematical bases for methods involving mechanical, optical, thermal, and electromagnetic phenomena; design for inspectability; technique selection criteria; information processing and handling; materials response measurement and modeling; signal analysis.
Prerequisite(s): ESM 3054 and (PHYS 2206 or PHYS 2306)
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4194 - Sustainable Energy Solutions for a Global Society (3 credits)
Addresses energy metrics, global and US energy supply and demand, transitional energy sources (natural gas, petroleum, coal, nuclear), sustainable/renewable source (solar, geothermal, hydro, tidal, wind, biofuels), and methods for increasing efficiencies (energy storage, batteries, green building, conservation). Options for transportation, electricity, lighting and heating needs of industry, agriculture, community, and citizens. Production, transmission, storage, and disposal issues considered in the context of global political, economic, and environmental impacts. Senior Standing in major may be substituted for pre-requisite ENGL 3764.
Prerequisite(s): (CHEM 1035 or CHEM 1055) and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ME 4194

ESM 4204 - Musculoskeletal Biomechanics (3 credits)
Skeletal anatomy and mechanics. Muscle anatomy and mechanics. Theory and application of electromyography. Motion and force measuring equipment and techniques. Inverse dynamics modeling of the human body. Current topics in musculoskeletal biomechanics research.
Prerequisite(s): ESM 2304 and (CS 1044 or CS 1064 or CS 1114 or AOE 2074 or ESM 2074 or ME 2004)
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4224 - Biodynamics and Control (3 credits)
Study of human movement dynamics and neuromuscular control of multi-degree-of-freedom systems. Computational simulation of forward-dynamics and state-space linear control of human movement to investigate functional performance and neuromuscular pathology.
Prerequisite(s): ESM 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4234 - Mechanics of Biological Systems (3 credits)
Anatomy and physiology of biological systems such as cells, tissues, and organs. Experimental techniques for determining the mechanical behavior of biological systems. Simplified mechanics-based mathematical models of biological systems. Specific biological systems include cells, tissues, and organs of the musculoskeletal, cardiovascular, integumentary system, and reproductive systems.
Prerequisite(s): ESM 2204 and MATH 2214 and MATH 2114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BMES 4234

ESM 4245 - Mechanics of Animal Locomotion (3 credits)
4245: Mechanical and biological principles of terrestrial animal locomotion, including walking, running, jumping, climbing, burrowing, and crawling. Terrestrial locomotion- based bio-inspired design. 4246: Mechanical and biological principles of animal locomotion in fluids, including active and gliding flight, swimming, jetting, and running on water. Engineering design inspired by fluid based biological locomotion.
Prerequisite(s): ESM 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4246 - Mechanics of Animal Locomotion (3 credits)
Mechanical and biological principles of of animal locomotion in fluids, including active and gliding flight, swimming, jetting, and running on water. Enginneering desgn inspired by fluid-based biological locomotion.
Corequisite(s): ESM 3024 or ESM 3234 or ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4304 - Hemodynamics (3 credits)
Study of the human cardiovascular system and blood flow. Anatomy and physiology of the human heart, vascular system, and its organization. Blood physiology and rheology. Non-Newtonian blood flow models. Steady and pulsatile blood flow in rigid and elastic arteries. Pressure waves in elastic arteries. Three-dimensional blood flow in the aortic arch and flow around heart valves.
Prerequisite(s): ESM 3334 or ME 3404 or ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4404 - Fundamentals of Professional Engineering (2 credits)
A refresher of basic principles and problem solving techniques involving twelve subject areas most common to all engineering curricula. The topics include those tested by the National Council of Engineering Examiners on the EIT (Engineer in Training) examination, the first requirement, in all fifty states, toward P.E. (Professional Engineer) licensing. Duplicates material of other engineering courses and impracticable for non-engineers, hence not usable for credit toward any degree. Pre: Junior and senior standing in Engineering or in Building Construction or Graduate students in Engineering.
Instructional Contact Hours: (2 Lec, 2 Crd)

ESM 4444 - Stability of Structures (3 credits)
Introduction to the methods of static structural stability analysis and their applications. Buckling of columns and frames. Energy method and approximate solutions. Elastic and inelastic behavior. Torsional and lateral buckling. Use of stability as a structural design criterion.
Prerequisite(s): AOE 3024 or CEE 3404
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4054

ESM 4614 - Probability-Based Modeling, Analysis, and Assessment (3 credits)
Uncertainty analysis of engineering data, parameters estimation, probability concepts, random variables, functions of random variables, probability-based performance functions and failure modes, risk and reliability functions, probability of failure and safety index, random sequences and stochastic processes, correlation functions and spectral densities, return period and extreme values, failure rates, performance monitoring and service life prediction.
Prerequisite(s): ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BMES 4614

ESM 4734 - An Introduction to the Finite Element Method (3 credits)
The finite element method is introduced as a numerical method of solving the ordinary and partial differential equations arising in fluid flow, heat transfer, and solid and structural mechanics. The classes of problems considered include those described by the second-order and fourth-order ordinary differential equations and second-order partial differential equations. Both theory and applications of the method to problems in various fields of engineering and applied sciences will be studied.
Prerequisite(s): (CS 3414 or MATH 3414 or AOE 2074 or ESM 2074) and (MATH 2224 or MATH 2224H or MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4024

ESM 4904 - Project and Report (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 4994H - Undergraduate Research (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (ME)

ME 2004 - Engineering Analysis Using Numerical Methods (3 credits)
Numerical methods applied to engineering analysis with a design/lab studio. Numerical techniques including root finding, linear algebra, integration, ordinary differential equations, curve fitting, discrete Fourier transforms, optimization. Structured programming and iterative problem-solving using a high-level environment such as Matlab. Design/Lab Studio.
Prerequisite(s): (ENGE 1215 or ENGE 1414) and MATH 1226 and (MATH 2114 or MATH 2114H or MATH 2405H or MATH 2214 or MATH 2214H or MATH 2406H)
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

ME 2024 - Introduction to Engineering Design and Economics (3 credits)
Design process, mini-design projects, collaborative design, product dissection, economics of decision making, reverse engineering, intellectual property, oral, written, and graphic communications, engineering ethics.
Prerequisite(s): ENGE 1216 or ENGE 1114 or ENGE 1434 or ENGE 1414
Corequisite(s): ESM 2104, MATH 2114, PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 2124 - Introduction to Thermal and Fluid Engineering (2 credits)
Basics of thermodynamics, fluid mechanics, and heat transfer. Fluid and thermal properties of materials. Ideal gas equation of state. First law of thermodynamics in closed systems. Transient heat transfer. First law of thermodynamics in open systems. Fluid mechanics balances, open systems. Emphasis on applications in all topic areas.
Prerequisite(s): (ESM 2104 or PHYS 2306) and (MATH 2114 or MATH 2114H)
Corequisite(s): MATH 2214
Instructional Contact Hours: (2 Lec, 2 Crd)

ME 2134 - Thermodynamics (4 credits)
Classical (equilibrium) thermodynamics and its applications. Includes thermodynamic properties of pure substances: property diagrams, property tables, property software, equations of state; the first law of thermodynamics; the second law of thermodynamics; gas mixtures; combustion: atomic and energy balances; and power and refrigeration cycles.
Prerequisite(s): PHYS 2305 and (MATH 2204 or MATH 2204H or MATH 2406H) and CHEM 1035
Corequisite(s): (MATH 2214 or MATH 2214H or MATH 2406H).
Instructional Contact Hours: (4 Lec, 4 Crd)

ME 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 3024 - Engineering Design and Economics (3 credits)
Engineering design process; project management; product planning; customer needs, specifications, and Quality Function Deployment (QFD); benchmarking and intellectual property; concept generation, screening, scoring, and selection; design for assembly, product architecture, economic, and ethical considerations; concept testing. Written and oral communications of engineering design; computer aided design. Team-based term project with prototype fabrication of mechanical assembly manipulated by a microcontroller. For Pathways Advanced Discourse credit, must complete combination of ME 3024, ME 3034, and ME 4015-4016.
Prerequisite(s): ESM 2104 and ENGL 1106
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3034 - Mechanical Engineering Discourse (1 credit)
Principles and application of effective technical and professional communication in mechanical engineering; organizing, structuring, and developing effective written documents and oral presentations for a range of audiences, including technical reports, memorandums, laboratory reports, live and recorded presentations, and posters for public exhibition; use of effective language and style; development of effective visual aids; presentation delivery skills; acquiring new knowledge using appropriate learning strategies by finding, comprehending and evaluating information from a variety of sources; ethical and professional responsibilities in both identifying appropriate information and communicating technical results. For Pathways Advanced Discourse credit, must complete combination of ME 3024, ME 3034, and ME 4015-4016.
Prerequisite(s): ENGL 1106
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)

ME 3124 - Thermodynamics (3 credits)
Classical thermodynamics and its applications. Thermodynamic properties of pure substances: property tables, property software, equations of state. First law of thermodynamics. Second law of thermodynamics. Gas mixtures. Combustion: atom and energy balances. Power and refrigeration cycles.
Prerequisite(s): (ME 2124 and MATH 2214 and MATH 2204) or (ME 2124 and MATH 2214 and MATH 2204H) or (ME 2124 and MATH 2214 and MATH 2224) or (ME 2124 and MATH 2214 and MATH 2224H) or (ME 2124 and MATH 2214H and MATH 2204) or (ME 2124 and MATH 2214H and MATH 2204H) or (ME 2124 and MATH 2214H and MATH 2224) or (ME 2124 and MATH 2214H and MATH 2224H) or (ME 2124 and MATH 2405H and MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3134 - Fundamentals of Thermodynamics (3 credits)
Fundamental concepts, first and second laws, gas and vapor processes with emphasis on chemical reactions, statistical interpretation of entropy, limited use of thermodynamic property tables. This course is for non-ME students.
Prerequisite(s): MATH 2214 or MATH 2214H
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3194 - Technology, Innovation and Humanistic Engineering for a Sustainable Future (3 credits)
Foundational understanding of converging, emerging and disruptive technologies. Pedagogical aspects of innovation, team dynamics and effective communication. Leadership Cube—Six principles of effective leadership. Humanistic engineering. Sustainable energy and sustainable water platforms. Smart device designs for disease diagnostics and mitigation. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3304 - Heat and Mass Transfer (3 credits)
Comprehensive basic course in heat and mass transfer for mechanical engineering students. Principles of conduction, convection, and radiation with applications to heat exchangers and other engineering systems.
Prerequisite(s): ME 2134 and ME 3414 and (MATH 2214 or MATH 2214H or MATH 2306H) and (MATH 2204 or MATH 2204H or MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3404 - Fluid Mechanics (3 credits)
Comprehensive first course in basic and applied fluid mechanics. Fluid properties, statics, kinematics, and dynamics. Eulers and Bernoullis equations. Hydrodynamics. Dimensional analysis and similitude. Real fluids, laminar and turbulent flows. Boundary layer model and approximate analysis. Compressible flow and propulsion devices. Flow measurement. Introduction to turbomachinery with applications.
Prerequisite(s): (ME 2124 and MATH 2214 and MATH 2204) or (ME 2124 and MATH 2214 and MATH 2204H) or (ME 2124 and MATH 2214 and MATH 2224) or (ME 2124 and MATH 2214 and MATH 2224H) or (ME 2124 and MATH 2214H and MATH 2204) or (ME 2124 and MATH 2214H and MATH 2204H) or (ME 2124 and MATH 2214H and MATH 2224) or (ME 2124 and MATH 2214H and MATH 2224H) or (ME 2124 and MATH 2405H and MATH 2406H)
Instructional Contact Hours: (2 Lec, 1 Lab, 3 Crd)

ME 3414 - Fluid Dynamics (4 credits)
Comprehensive first course in fluid dynamics. Fluid properties. Hydrostatics. Mass, momentum,and energy conservation in control volumes. Elementary dynamics and Bernoullis equation.Dimensional analysis and similitude. Laminar and turbulent flows. Introduction to Eulers and Navier-Stokes equations. Pipe flows. External flows and boundary layers. Introduction to compressible flows. Includes laboratory experiments.
Prerequisite(s): ME 2004 and (MATH 2114 or MATH 2114H or MATH 2405H) and (MATH 2204 or MATH 2204H or MATH 2406H) and (MATH 2214 or MATH 2214H or MATH 2406H)
Corequisite(s): ME 2134
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ME 3504 - Dynamic Systems - Vibrations (3 credits)
Principles of dynamic system modeling with emphasis on second order mechanical systems. Harmonic and nonharmonic vibrations of single and multi-degree of freedom systems. Applications of computer simulation and analysis techniques in vibrations.
Prerequisite(s): (ME 3514 and MATH 2214) or (ME 3514 and MATH 2214H) or (ME 3514 and MATH 2405H and MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3514 - System Dynamics (3 credits)
Mathematical descriptions of physical systems behavior including mechanical, electrical, thermal, and fluid systems and their combinations; system descriptions using state variable and transfer functions; analysis of system responses: convolution integral, frequency response, numerical simulations, and Laplace transform methods; systems concepts: input-output, causality, and analogies; general process descriptions including first-order, second-order, and time delayed.
Prerequisite(s): (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2204 and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2204 and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2204 and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2204H and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2204H and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2204H and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2224 and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2224 and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2224 and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2224H and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2224H and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2224H and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2204 and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2204 and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2204 and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2204H and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2204H and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2204H and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2224 and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2224 and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2224 and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2224H and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2224H and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2224H and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2405H and MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3524 - Mechanical Vibrations (4 credits)
Development and application of mathematical methods, physical understanding, and computational tools for modeling, analysis, and design of vibrating systems. Free and forced vibration of single and multiple degree-of-freedom systems, particularly systems experiencing sinusoidal excitation. Distributed parameter systems. Practical engineering applications.
Prerequisite(s): ESM 2304 and (MATH 2114 or MATH 2114H or MATH 2405H) and (MATH 2214 or MATH 2214H or MATH 2406H) and ME 2004
Instructional Contact Hours: (4 Lec, 4 Crd)

ME 3534 - Controls Engineering I (4 credits)
Fundamentals of feedback control theory, time-domain and frequency-domain analysis, automatic control system design synthesis to meet performance and stability requirements, numerical simulation and discrete real-time implementation on microcontrollers.
Prerequisite(s): ME 2004 and (MATH 2114 or MATH 2114H or MATH 2405H) and (MATH 2214 or MATH 2214H or MATH 2406H) and (MATH 2204 or MATH 2204H or MATH 2406H) and ESM 2104 and ESM 2304
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ME 3604 - Kinematics and Dynamics of Machinery (3 credits)
Kinematic analysis and design of cams, gears, and linkages, velocity, acceleration and force analysis, kinematic synthesis, balancing, kinematic and force analysis by complex numbers, computer-aided analysis, and synthesis of linkages.
Prerequisite(s): ESM 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3614 - Mechanical Design I (3 credits)
Design of mechanical components subject to static and fatigue loads. Design using screws, fasteners, springs and bearings. Computer-aided design using transfer matrix and finite element methods.
Prerequisite(s): ESM 2204 and (MATH 2214 or MATH 2214H) and (MATH 2114 or MATH 2114H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3624 - Mechanical Design (4 credits)
Comprehensive first course in mechanical design. Stress and Strain. Fundamentals of designing mechanical components subjected to static and cyclical loads. Design elements for screws, fasteners, springs, and welds. Hands-on laboratory learning of concepts discussed in class. Course credit will not be awarded for both ME 3614 and ME 3624.
Prerequisite(s): ME 2004 and ESM 2204 and (MATH 2214 or MATH 2214H or MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ME 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 4005 - Mechanical Engineering Lab (3 credits)
Principles of measurement, measurement standards and accuracy, detectors and transducers, digital data acquisition principles, signal conditioning systems and readout devices statistical concepts in measurement, experimental investigation of engineering systems, technical report writing.
Prerequisite(s): (STAT 3704 or STAT 4604 or STAT 4705 or STAT 4714) and ME 3524 and ECE 2054
Corequisite(s): ME 3534
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ME 4006 - Mechanical Engineering Lab (3 credits)
Principles of measurement, measurement standards and accuracy, detectors and transducers, digital data acquisition principles, signal conditioning systems and readout devices statistical concepts in measurement, experimental investigation of engineering systems, technical report writing.
Prerequisite(s): ME 4005 and ECE 3254
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ME 4015 - Engineering Design and Project (3 credits)
Team oriented, open-ended, multi-disciplinary design projects focused on industrially relevant problems. A specific, complex engineering design problem taken from problem definition to product realization and testing. Emphasis on documenting and reporting technical work. Making informed judgments which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 4015: Problem identification, including consideration of public health and welfare, as well as global, cultural, social, environmental, and economic factors and constraints; idea generation and concept selection; application of design, test, and analysis tools developed in previous courses; ethical and professional responsibilities; verification and validation; communication and working in teams. 4016: Project management; working on teams, analysis and optimization, fabrication and testing, and communicating technical ideas. For Pathways Advanced Discourse credit, must complete combination of ME 3024, ME 3034, and ME 4015-4016.
Prerequisite(s): ME 3024 and ME 3034 and ME 3524 and ME 3534 and ME 3624 and ME 4005 and (ME 3304 or MSE 2034) and ME 3414
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ME 4016 - Engineering Design and Project (3 credits)
Team oriented, open-ended, multi-disciplinary design projects focused on industrially relevant problems. A specific, complex engineering design problem taken from problem definition to product realization and testing. Emphasis on documenting and reporting technical work. Making informed judgments which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 4015: Problem identification, including consideration of public health and welfare, as well as global, cultural, social, environmental, and economic factors and constraints; idea generation and concept selection; application of design, test, and analysis tools developed in previous courses; ethical and professional responsibilities; verification and validation; communication and working in teams. 4016: Project management; working on teams, analysis and optimization, fabrication and testing, and communicating technical ideas. For Pathways Advanced Discourse credit, must complete combination of ME 3024, ME 3034, and ME 4015-4016.
Prerequisite(s): ME 4015
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ME 4034 - Bio-Inspired Technology (3 credits)
Introduction to engineering solutions inspired by biological systems. Overview over the approach of bio-inspired technology and the state of the art. Exploration of the relationship between engineered and natural biological systems. Explanation of concepts of biological systems, such as evolutionary optimization, sensing, actuation, control, system integration, assembly and materials in engineering terms. Practice of interdisciplinary analysis skills in technical report writing projects where man-made and biological systems are evaluated for parallels to engineering and their technological potential.
Prerequisite(s): (PHYS 2205 and PHYS 2206) or (PHYS 2305 and PHYS 2306)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4124 - Computer Aided Design of Fluid-Thermal Systems (3 credits)
Review of physical laws and engineering concepts introduced in thermodynamics, fluid mechanics, and heat transfer with applications. Emphasis on analysis, modeling, and design of engineering systems, components, and physical phenomena with state-of-the-art computer software such as Ansys CFX, Star CCM, Aspen Plus, and ProSimPlus.
Prerequisite(s): (ME 3124 or ME 2134) and (ME 3404 or ME 3414) and ME 3304
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

ME 4154 - Industrial Energy Systems (3 credits)
Survey of energy-intensive technologies used in typical industrial plants, with emphasis on cost-effective energy conservation. Burners, boilers, pumps, air compressors, electric motors, lights, refrigeration plants, HVAC systems, cogeneration systems, waste heat recovery equipment. Energy-efficient design and operation. Determination of energy efficiency based on field measurements. Economic analysis of energy conservation measures. Mitigation of environmental impacts.
Prerequisite(s): ME 2134 or CHE 2164 or BSE 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4164 - Energy Systems for Buildings (3 credits)
Application of the fundamental principles of thermodynamics, heat transfer, and fluid flow to analyze energy use for building environmental control. Exploration of approaches for configuring basic thermal-fluid engineering components (e.g. pumps, piping, fans, heat exchangers, refrigeration cycles, etc.) to yield systems that provide heating, cooling, and ventilation. Introduction to techniques and software tools for estimating energy use by these systems and the associated economic and environment impact. Examination of alternate technologies for meeting building energy needs including small scale combined heat and power systems and renewable energy systems.
Prerequisite(s): ME 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4174 - Spacecraft Propulsion (3 credits)
Spacecraft propulsion systems and their applications in orbital, interplanetary, and interstellar flight. Rocket propulsion fundamentals; advanced mission analysis; physics and engineering of chemical rockets, electrical thrusters, and propellantless systems (tethers and sails); spacecraft integration issues.
Prerequisite(s): AOE 3164 or AOE 4234 or ME 4234
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4174

ME 4184 - Drone Technology and Flight Operations (3 credits)
Basic aviation science, skills training in uncrewed flight operations, and knowledge of the regulatory environment that governs drone flight. Aerodynamics, propulsion, aircraft performance, sensing and control, meteorology, the Federal Aviation Regulations, safety and risk management. Flight management tools for conducting preflight inspections and approving flight missions. Pre: Students in Mechanical Engineering will be given preference, other programs and students eligible with permission.
Instructional Contact Hours: (2 Lec, 1 Lab, 3 Crd)

ME 4194 - Sustainable Energy Solutions for a Global Society (3 credits)
Addresses energy metrics, global and US energy supply and demand, transitional energy sources (natural gas, petroleum, coal, nuclear), sustainable/renewable source (solar, geothermal, hydro, tidal, wind, biofuels), and methods for increasing efficiencies (energy storage, batteries, green building, conservation). Options for transportation, electricity, lighting and heating needs of industry, agriculture, community, and citizens. Production, transmission, storage, and disposal issues considered in the context of global political, economic, and environmental impacts. Senior Standing in major may be substituted for pre-requisite ENGL 3764.
Prerequisite(s): (CHEM 1035 or CHEM 1055) and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4194

ME 4204 - Internal Combustion Engines (3 credits)
Analysis and design of gasoline and diesel engines. Fundamental processes and their application in current technology. Thermodynamics: air standard and air-fuel cycles. Combustion: stoichiometry, fuels, chemical equilibrium, chemical kinetics, flame propagation, knock, pollutant formation and control. Flow processes: volumetric efficiency, intake and exhaust tuning, two-stroke scavenging, carburetion, fuel injection, super- and turbo-charging.
Prerequisite(s): ME 2134 and ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4224 - Gas Turbines for Power and Propulsion (3 credits)
Introduction to various applications of gas turbines for land, sea and air. Aero-thermo-mechanical aspects of component performance and reliability. Operational characteristics, limitations and component matching. Industrial standards, development and certification requirements. Design of gas turbine engines and comparison of the predicted performance (specific fuel consumption) against the in-service operation.
Prerequisite(s): ME 2134 and ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4234 - Aerospace Propulsion Systems (3 credits)
Design principles and performance analysis of atmospheric and space propulsion engines and systems. Application of thermodynamics, compressible fluid flow and combustion fundamentals to the design of gas turbine and rocket engines and components, including inlets, turbomachines, combustors, and nozzles. Matching of propulsion system to vehicle requirements. Must have a C- or better in pre-requisites ME 3404 and ME 3124 or AOE 3114 and AOE 3134.
Prerequisite(s): AOE 3114 and (AOE 3164 or AOE 3264) or ME 3414 and ME 2134
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4234

ME 4324 - Energy Systems: Theory and Applications (3 credits)
Theory and applications of thermodynamic and fluid mechanics principles as applied to energy systems. Fundamental concepts on exergy, mixtures, psychrometry and thermochemistry. Analyses and applications include vapor and gas power systems, refrigeration, air conditioning, combustion processes and one-dimensional compressible flow.
Prerequisite(s): ME 2134 and ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4344 - Biological Transport Phenomena (3 credits)
Engineering analysis and predictive modeling of heat and mass transport in biological systems (e.g., tissues, organs, organisms, and biomedical devices). Examination of processes that involve conduction, convection, diffusion, generation/consumption. Application of analytical and computational methods to solve differential equations that describe unsteady and/or multi-dimensional transport. Topics include oxygen transport, pharmacokinetic analysis, kidney function, blood perfusion, burns, and cryopreservation.
Prerequisite(s): (CHE 3114 and CHE 3044 and CHE 3144) or (ME 3304 and ME 3404)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CHE 4304

ME 4454 - Engineering Leadership in Practice: Managing the Technical Design Process (3 credits)
Introduction to management and mentoring skills associated with the application of the engineering design process. Course covers skills necessary for leading diverse teams of people through a technical design project. Managing teams of local high school students through an authentic technical design experience associated with design competitions. Course addresses the practical applications of science, math and engineering, while building and managing teams of people to meet technical project goals. Prerequisite: ME 4015 or similar team-based design experience, or by permission of instructor.
Prerequisite(s): ME 4015
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: EDCI 4454

ME 4464 - Introduction to Compressible Flows (3 credits)
Derivation of mass, momentum, and energy conservation equations for one dimensional (1-D), steady, inviscid, compressible gas flows of calorically perfect gases. Departure from incompressible flow theory. Importance of Mach number. Isentropic flows. Steady and unsteady 1-D normal shock flows. Oblique shock flows (with surface reflections) and/or Prandtl-Meyer expansion waves. Converging and converging-diverging quasi-1-D nozzle flows. Inviscid flows in straight ducts with heat addition; adiabatic flows in straight ducts with friction. Introduction to Newtonian hypersonic flow theory, high temperature effects, and rarefied gas principles.
Prerequisite(s): ME 2134 and ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4504 - Dynamic Systems - Controls Engineering I (3 credits)
Fundamentals of feedback control theory, classical analysis and design techniques for automatic controls, introduction to modern control theory.
Prerequisite(s): (ME 3514 and MATH 2214) or (ME 3514 and MATH 2214H) or (ME 3514 and MATH 2405H and MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4524 - Introduction to Robotics and Automation (3 credits)
Automation, robot technology, kinematics, dynamics, trajectory planning, and control of two-dimensional and spatial robots; robot programming; design and simulation of robotic devices.
Prerequisite(s): ME 2004 and ME 3524 and ME 3534
Corequisite(s): ME 4584
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4534 - Land Vehicle Dynamics (3 credits)
Analytical methods for land vehicle dynamics. Mechanics of pneumatic tires on pavement and steel wheels on rails. Vehicle stability, handling, response to random guideway and roadway irregularities, ride quality computation methods and standards, suspension design.
Prerequisite(s): ME 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4544 - Automotive Engineering (3 credits)
Vehicle performance, drive train, suspension, steering, and brake systems. Steady state and transient conditions. Senior standing in Mechanical Engineering required.
Prerequisite(s): ME 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4554 - Advanced Technology for Motor Vehicles (3 credits)
Energy use and environmental issues for motor vehicles: Emissions standards, fleet requirements, dynamometer testing, fuel economy, and vehicle performance. Alternative fuel vehicles: Characteristics and infrastructure of fuels, batteries, electric vehicles, and hybrid electric vehicles. Vehicle design: Modeling and simulation of vehicle energy use and performance, component sizing. Fuel cells for transportation. Heavy-duty vehicles and busses. Low mass vehicles and future vehicle technology.
Prerequisite(s): ME 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4564 - Vehicle Control (3 credits)
Overview of vehicle control systems and control algorithms for anti-lock braking, stability, road holding, lane departure, traction control, and tire pressure monitoring. Advanced driver assist systems and intelligent tire technology. Hands-on experience with hardware-in-the- loop systems. Mathematical modeling and simulation of vehicle control.
Prerequisite(s): ME 3524 and ME 3534
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4584 - Robotics Laboratory (1 credit)
Develop, compile, and test algorithms for serial and mobile robots. Robot forward and inverse kinematics, task planning, velocity kinematics, force rendering, control, haptics, mapping and localization, computer vision and path planning.
Corequisite(s): ME 4524 or ECE 4704
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: ECE 4584

ME 4614 - Mechanical Design II (3 credits)
Design of mechanical elements such as welded joints hydrodynamic bearings, spur gears, shafts, brakes. Alternative fatigue design methods, cumulative fatigue, mechanical design computer software.
Prerequisite(s): ME 3624
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4624 - Finite Element Practice in Mechanical Design (3 credits)
Application of the finite element method to stress analysis problems in mechanical design. Modeling techniques, proper use of existing computer programs, interpreting of results, application to design modification.
Prerequisite(s): ME 3624
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4634 - Introduction to Computer-aided Design and Manufacturing (3 credits)
Participants will study the computer-aided design and manufacturing of mechanical systems. A mechanical system will be designed including preliminary design, analysis, detail design, numerical control programming, and documentation. Applications programs will be written and interfaced to the CAD/CAM database. All assignments will be carried out on a CAD/CAM system.
Prerequisite(s): ME 3024
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ME 4644 - Introduction to Rapid Prototyping (3 credits)
Participants will study topics fundamental to rapid prototyping and automated fabrication, including the generation of suitable CAD models, current rapid prototyping fabrication technologies, their underlying material science, the use of secondary processing, and the impact of these technologies on society. The rapid prototyping process will be illustrated by the actual design and fabrication of a part. Programming skills required.
Prerequisite(s): ME 3024
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4654 - Optimization Techniques in Engineering (3 credits)
Fundamental mathematical concepts for optimization and optimality conditions. Classification of optimization techniques/problems in engineering. Concepts of forward and inverse design. Linear programming. Step-size calculation methods. Search direction calculation methods. 1st and 2nd order gradient-based algorithms. Evolutionary strategies for optimization. Pattern search/genetic algorithm. Sensitivity analysis. Reliability-based and robustness-based optimization.
Prerequisite(s): ME 2004 or (AOE 2074 and CS 1044 and CS 1054 and CS 1064 and CS 1114 and CS 1124 and ECE 1574)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4664 - Introduction to Global Collegiate Engineering Design (3 credits)
Participants will study topics fundamental to global collaborative engineering design, product data management, and collaborative product data management. These topics will be applied during a team project with team members located overseas, utilizing state-of-the-art collaborative engineering and product data management software and hardware technologies. Partially duplicates 5664. Credit may only be received for one course.
Prerequisite(s): ME 3024
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4674 - Materials Selection in Mechanical Design (3 credits)
Systematic approach to materials selection accounting for market need, functional requirements, shape, safety, cost and environmental issues. Overview of design process, material property charts, material indices, selection of materials with multiple constraints and/or conflicting objectives, shape factors, design considerations in hybrid materials, environmental issues as well as several case studies.
Prerequisite(s): ESM 2204 and MSE 2034
Corequisite(s): ME 3624
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4684 - Industrial Internet of Things (3 credits)
Theory and applications of Industrial Internet of Things (IIoT). Industrial data flow, devices and network in manufacturing. Basics for IIoT architecture and implementation of IIoT solutions with cloud computing platforms and OEM IIoT platforms. Device connection, data transfer and application of diagnostics, maintenance, and predictive data analytics on IIoT platforms.
Prerequisite(s): ME 3534 or (CS 1044 or CS 1054 or CS 1064 or CS 1114)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4724 - Engineering Acoustics (3 credits)
Basic acoustical theory and practice, acoustic terminology, measurement, transmission, and perception of sound, muffler design, noise control techniques.
Prerequisite(s): ME 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4734 - Robotics and Mechatronics Seminar (1 credit)
Topics in robotics and mechatronics. Invited lectures from industry, government organizations and universities. Recent research results, developments and challenges, providing a global and social context for the topics.
Prerequisite(s): ME 3534 and ECE 3254
Instructional Contact Hours: (1 Lec, 1 Crd)

ME 4735 - Mechatronics (3 credits)
Electromechanical system modeling, control and applications. Design and building of electronic interfaces and controllers for mechanical devices, sensors, signal acquisition, filtering, and conditioning. Microcontroller-based closed-loop control and device communications. Sensor and actuator selection, installation, and application strategies are studied. A term design project is a key component to this course (for 4736).
Prerequisite(s): (ECE 3254 and ME 3514) or (ECE 2004 and ECE 2704)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4736 - Mechatronics (3 credits)
Electromechanical system modeling, control and applications. Design and building of electronic interfaces and controllers for mechanical devices, sensors, signal acquisition, filtering, and conditioning. Microcontroller-based closed-loop control and device communications. Sensor and actuator selection, installation, and application strategies are studied. A term design project is a key component to this course (for 4736).
Prerequisite(s): ME 4735
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4744 - Mechatronics: Theory and Application (4 credits)
Electromechanical design and control applications. Theory, modeling, simulation, analysis, design and building of electronic interfaces and controllers; sensors and actuators; software development, micro-controller technology, and applications. Design Lab/Studio.
Prerequisite(s): ME 3534 and ECE 3254 and (CS 1044 or ECE 1574 or CS 2505)
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

ME 4754 - Mechatronics: Advanced Topics and Application (3 credits)
Electromechanical design and control applications. Design and building of electronic interfaces and controllers including sensors, actuators, signal acquisition, filtering, and conditioning for applications. Systems integration with wireless communication; image processing; embedded programs for data acquisition and feedback control applications.
Prerequisite(s): ME 4744
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4764 - Audio Engineering Technology (3 credits)
Principles and design in the field of audio engineering. Loudspeaker design and construction, microphone technology, digital audio acquisition, signal processing in audio engineering, human perception, technical acoustics, binaural hearing, surround sound processing and production, theory, measurement, and reproduction of 3D surround sound, virtual instrument theory and practice, room acoustics and simulation, principles of audio effects (e.g., compression, reverberation, equalization), and acoustic materials engineering.
Prerequisite(s): ME 3524 and ME 3534
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4824 - Introduction to Human-Robot Interaction (3 credits)
Formalizing interaction between robots and humans. Developing learning and control algorithms that enable robots to seamlessly and intelligently collaborate with humans. Mathematical approaches to human-robot interaction, learning from demonstration, Bayesian inference, intent detection, safe and optimal control, assistive autonomy, and user study design. Review and present existing literature.
Prerequisite(s): ME 4524
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4854 - Nano and Micromechanics of Materials (3 credits)
Analysis of microstructural mechanics, crystal structures, defects, and dislocations. Mechanical behavior of crystalline materials at the microscale. Computational modeling of mechanical behavior in discrete atomistic and molecular systems, including molecular dynamics. Application of these methods to polymers and other soft materials, biological materials, carbon-based materials, and metallic alloys.
Prerequisite(s): ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4864 - Micro/Nano-Robotics (3 credits)
Overview of Micro/Nano-robotic systems. Physics of reduced length scales (scaling effects in the physical parameters, surface forces, contact mechanics, and Micro/Nano-scale dynamical phenomena), Basics of Micro/Nano-manufacturing, microfabrication and soft lithography, Biomimetic design strategies for mobile micro-robots, Principle of transduction, material properties and characteristics of Micro/Nano-actuators (piezoelectric, shape-memory alloy, and a variety of MEMS and polymer actuators), Control requirements and challenges of Micro/Nano-actuators, Micro/Nano sensors for mobile microrobotic applications, Micro/Nano-manipulation (scanning probe microscopy, operation principles, designing experiments for nanoscale mechanical characterization of desired samples).
Prerequisite(s): ME 3414 and ME 3624 and ME 3534
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 4974H - Independent Study (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

ME 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 4984A - Special Study (1-19 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: Variable credit course

ME 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (NSEG)

NSEG 3145 - Fundamentals of Nuclear Engr (3 credits)
Application of fundamental principles of neutron physics and reactor theory. Introduction to nuclear cross-section data, neutron scattering, nuclear fission, and diffusion theory. Examination of current and next generation nuclear power.
Prerequisite(s): MATH 2214 or MATH 2214H or MATH 2406H
Instructional Contact Hours: (3 Lec, 3 Crd)

NSEG 3146 - Fundamental of Nuclear Engr (3 credits)
Application of fundamental principles of neutron physics and reactor theory. Calculation of critical mass and dimensions of a reactor using modified one-group theory; reactivity changes in the core due to control rods, chemical boron shim, temperature changes, and fissioin production poisons. Determination of reactor thermal design criteria. Introduction to radiation protection and reactor accident analysis. Nuclear enginering ethics principles.
Prerequisite(s): NSEG 3145 or ME 3145
Instructional Contact Hours: (3 Lec, 3 Crd)

NSEG 3604 - Radiation Detection, Protection and Shielding (3 credits)
Radioactive decay, interaction of charged particles and photons with matter, methods of radiation detection and radiation dosimetry, counting statistics, radiation protection criteria and exposure limits, external radiation protection using time, distance and shielding.
Prerequisite(s): PHYS 2306
Corequisite(s): MATH 2214 or MATH 2214H or MATH 2406H.
Instructional Contact Hours: (3 Lec, 3 Crd)

NSEG 4204 - Nuclear Fuel Cycle (3 credits)
Uranium nuclear fuel cycle: radiation basics, uranium reserves, mining, conversion, enrichment, fuel manufacturing, in-core fuel management and refueling, spent fuel storage, reprocessing/recycling and final disposition as waste in a geologic repository. Introduction to nuclear safeguards and nonproliferation as applied to each step of cycle. Alternative fuel cycles.
Prerequisite(s): MATH 2214 or MATH 2214H or MATH 2406H
Corequisite(s): NSEG 3146
Instructional Contact Hours: (3 Lec, 3 Crd)

NSEG 4214 - Nuclear Power Plant Operations (3 credits)
Emphasis on pressurized water reactor plant operations. Review of boiling water reactor operations. Detailed system functions and operation, reactor plant startup and shutdown procedures, reactor refueling, reactor plant safety analysis, reactor plant licensing, ethics and integrity in the nuclear industry.
Prerequisite(s): NSEG 3145
Corequisite(s): NSEG 3146
Instructional Contact Hours: (3 Lec, 3 Crd)

NSEG 4424 - Reactor Thermal Hydraulics (3 credits)
Fundamental processes of heat generation and transport in nuclear reactors: reactor coolant systems and components, heat generation and spatial distribution, heat transport by conduction and convection, single-phase flow, two-phase flow and boiling, critical heat flux.
Prerequisite(s): MATH 2214 or MATH 2214H or MATH 2406H
Corequisite(s): NSEG 3145
Instructional Contact Hours: (3 Lec, 3 Crd)

NSEG 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NSEG 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NSEG 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

NSEG 4994H - Undergraduate Research (1-19 credits)
Honors Section
Instructional Contact Hours: Variable credit course

Automotive Engineering Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
ME 2004	Engineering Analysis Using Numerical Methods	3
ME 3414	Fluid Dynamics (w lab)	4
ME 3624	Mechanical Design (w lab)	4
ME 3304	Heat and Mass Transfer	3
ME 3534	Controls Engineering I (w lab)	4
ME 4005	Mechanical Engineering Lab	3
Subtotal		21
Major Requirements		
ME 4534	Land Vehicle Dynamics	3
ME 4544	Automotive Engineering	3
ME 4564	Vehicle Control	3
Select 9 credits of technical electives from the list shown.		9
Subtotal		18
Additional Course Requirements		
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
ECE 2054	Applied Electrical Theory	3
ESM 2104	Statics	3
ESM 2204	Mechanics of Deformable Bodies	3
ESM 2304	Dynamics	3
ISE 2214	Manufacturing Processes Laboratory	1
MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus	3
ME 2134	Thermodynamics	4
ME 3524	Mechanical Vibrations	4
MSE 2034	Elements of Materials Engineering	3
STAT 3704	Statistics for Engineering Applications	2
Subtotal		36
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
ME 3024	Engineering Design and Economics (1A)	3
ME 3034	Mechanical Engineering Discourse (1A)	1
ME 4015 & ME 4016 or ENGE 4735 & ENGE 4736	Engineering Design and Project and Engineering Design and Project (1A) [2] Interdisciplinary Design Capstone and Interdisciplinary Design Capstone	6
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six credits in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
PHYS 2305	Foundations of Physics	4
PHYS 2306	Foundations of Physics	4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F) [1]	4
MATH 1226	Calculus of a Single Variable (5F)	4
MATH 2214	Introduction to Differential Equations (5A)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216 or ENGE 1414	Foundations of Engineering and Foundations of Engineering (6D) Foundations of Engineering Practice	4
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select a course with covers both Concept 7 and Pathways Concept 2 or 3 to avoid taking additional credits.		
Subtotal		54
Total Credits		**129**

1. Consult Timetable of Classes or University Course Catalog for minimum required prerequisite grade in MATH1225 to proceed to other MATH courses such as MATH1226 and MATH2114.
2. All students should enroll in ME4015. Students interested in joining an ENGE4735/4736 senior design project should apply through the ME4015 senior design coordinator during the project selection process at the start of the Fall semester. Because participation in all projects is limited, students are not guaranteed a seat in any particular project. Grades earned in ENGE4735/4736 will also count towards a student's in-major GPA. Students must meet all ME4015 prerequisites to be eligible to enroll in ENGE4735.

Technical Electives

The Automotive Engineering major requires 9 credits of approved technical electives from list. No more than 6 of these credits can be taken Pass/Fail. Please see attached list for technical elective choices.

Code	Title	Credits
ECE 3254	Industrial Electronics	3
ME 3604	Kinematics and Dynamics of Machinery	3
ME 4204	Internal Combustion Engines	3
ME 4554	Advanced Technology for Motor Vehicles	3
ME 4614	Mechanical Design II	3
ME 4624 or ME 5634	Finite Element Practice in Mechanical Design [2,3] Finite Elements in Machine Design	3
ME 4634	Introduction to Computer-aided Design and Manufacturing	3
ME 4644 or ME 5644	Introduction to Rapid Prototyping [2,3] Rapid Prototyping	3
ME 4654 or ME 5794	Optimization Techniques in Engineering [2,3] Optimization Techniques in Engineering	3
ME 4674	Materials Selection in Mechanical Design	3
ME 4744	Mechatronics: Theory and Application	4
ME 4974	Independent Study [1]	1-19
ME 4994	Undergraduate Research [1]	1-19

1. Independent study and undergraduate research must be automotive-related and requires departmental/major approval. No more than 6 credits total of independent study and/or undergraduate research can

count towards technical elective requirement. Consult undergraduate advisor with questions.

[2] Students not already accepted into the accelerated BS/MS graduate program should plan to take the 4000-level version of these classes.

[3] Students within 2 semesters of graduating who have a minimum overall GPA of 3.0 or higher who have not been accepted into an accelerated BS/MS program may request permission to enroll in a 5000-level ME course provided that: (1) an undergraduate version of the course is not available, (2) the student cannot otherwise complete the major with current undergraduate course offerings, and (3) the student has earned a B or higher in all previous ME courses. Permission from both the ME department head and the course instructor are required for the student to enroll in a 5000-level ME course. These courses may not be used on the Plan of Study for a graduate degree at Virginia Tech.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ME Department fully supports this policy. Specific expectations for satisfactory progress for Mechanical Engineering majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog http://www.undergradcatalog.registrar.vt.edu/
- Once a student is in the ME major, a student must:
  - Within 2 semesters of entering ME Department, complete PHYS2305, ENGL1106, CHEM1035, MATH2114, and ME2004
  - Within 3 semesters of entering ME Department, complete ME2134
  - Complete a minimum of 12 credits that apply toward a BSME degree during each 12 month period
  - Maintain an in-major GPA of at least 2.00. In-major is calculated using all courses taught under the ESM, ME, and NSEG designators and ENGE 4735 and ENGE 4736 if applicable .
  - Complete ESM 2104 Statics, MATH 2114 Introduction to Linear Algebra and MATH 2204 Introduction to Multivariable Calculus within 50 attempted required course credits (not to include Pathways courses, technical electives or free electives)
  - Complete ESM 2304 Dynamics, ME 2004 Engineering Analysis Using Numerical Methods and MATH 2214 Introduction to Differential Equations within 69 attempted required course credits (not to include Pathways courses, technical electives or free electives)
  - Complete ME 2134 Thermodynamics, ME 3524 Mechanical Vibrations, and (ME 3024 Engineering Design and Economics or ME 3624 Mechanical Design) with 87 attempted required course credits (not to include Pathways courses, technical electives or free electives)
  - Complete ME 4015 Engineering Design and Project and ME 4544 Automotive Engineering within 104 attempted required course credits (not to include Pathways courses, technical electives or free electives)

Graduation Requirements

Graduation Requirements

Each student must complete at least 129 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In-major GPA is determined from all courses with Engineering Science and Mechanics (ESM), Mechanical Engineering (ME), and Nuclear Engineering (NSEG) designators and ENGE 4735/ENGE 4736 if applicable.

Required courses in the Automotive Engineering "Major Requirements" category (ME 4534, ME 4544, and ME 4564) and electives in the "Technical Elective" category cannot be double-counted as technical electives towards a second Mechanical Engineering (BSME) major.

General Information about Checksheet

Course offerings are subject to change based on course enrollment and the availability of sufficient resources. Students should confirm course offerings in advance with their department.

Statement of Prerequisites

Prerequisites may change. Students are responsible for pre-requisites and pre-requisites of pre-requisites whether specifically listed in the Undergraduate Course Catalog or not.

Be sure to consult the University Timetable of Classes or check with your advisor for the most current prerequisite requirements. Note that some courses, such as MATH 1225, may have a minimum grade requirement to move on to other courses at Virginia Tech, such as MATH 2114 and MATH 1226.

Acceptable Substitutions

1. MATH 2405H (5 cr) may be substituted for MATH 2114 (3 cr)
2. MATH 2405H + MATH 2406H may be substituted for MATH 2114 (3 cr) + MATH 2204 (3 cr) + MATH 2214 (3 cr)
3. STAT 4604 (3 cr), STAT 4705 (3 cr), or STAT 4714 (3 cr) may be substituted for STAT 3704 (2)
4. MSE 2044 (4 cr) may be substituted for MSE 2034 (3 cr).

Foreign Language Requirement

Foreign Language Requirements

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable [1]	4
ENGE 1215	Foundations of Engineering	2
Select three credits in Pathways 2, 3, 6A, or 7 [2]		3
	Credits	**16**
Spring Semester		
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable [1]	4

MATH 2114	Introduction to Linear Algebra [1]	3
ENGE 1216	Foundations of Engineering	2
PHYS 2305	Foundations of Physics (w/lab)	4
	Credits	**16**
Second Year		
Fall Semester		
ESM 2104	Statics	3
ISE 2214	Manufacturing Processes Laboratory	1
MATH 2204	Introduction to Multivariable Calculus	3
PHYS 2306	Foundations of Physics	4
MSE 2034	Elements of Materials Engineering	3
ME 2004	Engineering Analysis Using Numerical Methods	3
	Credits	**17**
Spring Semester		
ECE 2054	Applied Electrical Theory	3
ESM 2204	Mechanics of Deformable Bodies	3
ESM 2304	Dynamics	3
MATH 2214	Introduction to Differential Equations	3
ME 2134	Thermodynamics	4
	Credits	**16**
Third Year		
Fall Semester		
STAT 3704	Statistics for Engineering Applications	2
ME 3024	Engineering Design and Economics	3
ME 3414	Fluid Dynamics (w lab)	4
ME 3524	Mechanical Vibrations	4
ME 3624	Mechanical Design (w lab)	4
	Credits	**17**
Spring Semester		
ME 4544	Automotive Engineering	3
ME 3304	Heat and Mass Transfer	3
ME 3534	Controls Engineering I (w lab)	4
ME 4005	Mechanical Engineering Lab	3
ME 3034	Mechanical Engineering Discourse	1
Select three credits in Pathways 2, 3, 6A, or 7 [2]		3
	Credits	**17**
Fourth Year		
Fall Semester		
ME 4015	Engineering Design and Project	3
ME 4564	Vehicle Control	3
Technical Electives		3
Technical Electives		3
Select three credits in Pathways 2, 3, 6A, or 7 [2]		3
	Credits	**15**
Spring Semester		
ME 4016	Engineering Design and Project	3
ME 4534	Land Vehicle Dynamics	3
Select three credits in Pathways 2, 3, 6A, or 7 [2]		3
Select three credits in Pathways 2, 3, 6A, or 7 [2]		3
Technical Electives		3
	Credits	**15**
	Total Credits	**129**

1. Consult Timetable of Classes or University Course Catalog for minimum required prerequisite grade in MATH1225 to proceed to other Virginia Tech MATH courses such as MATH1226 and MATH2114.
2. If enrolling in a Pathways Concept 7 elective, choose one that also covers either Concept 2 or 3 to avoid taking 3 additional credits to meet graduation requirements.

1. Consult Timetable of Classes or University Course Catalog for minimum required prerequisite grade in MATH 1225 to proceed to other Virginia Tech MATH courses such as MATH 1226 and MATH 2114.
2. All students should enroll in ME 4015. Students interested in joining an ENGE 4735/ENGE 4736 senior design project should apply through the ME4015 senior design coordinator during the project selection process at the start of the Fall semester. Because participation in all projects is limited, students are not guaranteed a seat in any particular project. Grades earned in ENGE 4735/ENGE 4736 will also count towards a student's in-major GPA. Students must meet all ME 4015 prerequisites to be eligible to enroll in ENGE 4735.
3. If one course is used to satisfy both Pathways Concept 7 and another Pathways Concept, additional free elective credits may be required to reach the minimum 129 credits required for graduation.

Technical Electives

Technical elective requirements are satisfied by one of two different paths. Note that required courses listed as "Major Requirements" or used to satisfy Technical Elective requirements for other BSME majors may not be double-counted as Technical Electives towards this general Mechanical Engineering major.

Path 1: Fifteen credit hours of approved technical electives. Nine of the fifteen elective credit hours must be 3000-level or higher Engineering Science and Mechanics (ESM), Mechanical Engineering (ME) or Nuclear Engineering (NSEG) courses. A maximum of three credits of technical elective may be taken from Technical Elective List #2. Up to six credits of technical electives may be taken Pass/Fail. Not all technical electives are offered in the Pass/Fail grade mode. See the list below for technical elective choices.

Path 2: Complete one of the following minors and fifteen elective credit hours from the list of electives associated with Path 1. Only three of the fifteen elective credits may be taken from List #2.
Accepted minors under Path 2: Biomedical Engineering, Computer Science, Green Engineering, Physics. Consult academic advisor if pursuing a math, science, or engineering-related second major or minor to see if it might qualify for a waiver of the minimum 9 credits ME/NSEG-subject tech electives.

Technical Elective List #1

Code	Title	Credits
Aerospace and Ocean Engineering (AOE)		
Select any 3000 or 4000 level AOE course EXCEPT the following:		
AOE 3014	Fluid Dynamics for Aerospace and Ocean Engineers	
AOE 3034	System Dynamics and Control	
AOE 3044	Boundary Layer and Heat Transfer	
AOE 3054	Experimental Methods	
AOE 3984	Special Study [1]	
AOE 4004	State-Space Control	
AOE 4024	An Introduction to the Finite Element Method	
AOE 4065	Air Vehicle Design	
AOE 4066	Air Vehicle Design	
AOE 4105	Experiments for Aerospace Design	
AOE 4106	Experiments for Aerospace Design	
AOE 4165	Space Vehicle Design	
AOE 4166	Space Vehicle Design	
AOE 4205	Experiments for Ocean Vehicle Design	
AOE 4206	Experiments for Ocean Vehicle Design	
AOE 4265	Ocean Vehicle Design	
AOE 4266	Ocean Vehicle Design	
AOE 4974	Independent Study [2]	
AOE 4984	Special Study [1]	
AOE 4994	Undergraduate Research [2]	
Biological Systems Engineering (BSE)		
Select any 3000 or 4000 level BSE course EXCEPT the following:		
BSE 3014	Introduction to Fluid Mechanics	
BSE 3144	Engineering Analysis for Biological Systems using Numerical Methods	
BSE 3154	Thermodynamics of Biological Systems	
BSE 3504	Transport Processes in Biological Systems	
BSE 3954	Study Abroad	
BSE 3984	Special Study [1]	
BSE 4304	Introduction to Watershed Modeling	
BSE 4125	Comprehensive Design Project	
BSE 4126	Comprehensive Design Project	
BSE 4204	Instrumentation for Biological Systems	
BSE 4224	Field Methods in Hydrology	
BSE 4974	Independent Study	
BSE 4984	Special Study	
BSE 4994	Undergraduate Research	
Biomedical Engineering (BMES)		
Select any non-duplicating 3000 or higher level BMES courses EXCEPT the following:		
BMES 3004	Helmet Design: Biomechanics to Health & Social Disparities in Sports	
BMES 3984	Special Study [1]	
BMES 4015	BME Senior Design and Project	
BMES 4016	BME Senior Design and Project	
BMES 4974	Independent Study [2]	
BMES 4984	Special Study [1]	
BMES 4994	Undergraduate Research [2]	
Building Construction (BC)		
Select any 3000 or 4000 level BC course EXCEPT the following:		
BC 3954	Study Abroad	
BC 3984	Special Study [1]	

BC 4974	Independent Study [2]	
BC 4984	Special Study [1]	
BC 4994	Undergraduate Research [2]	
Construction Engineering and Management (CEM)		
Select any 3000 or 4000 level CEM course EXCEPT the following:		
CEM 3984	Special Study [1]	
CEM 4024	Construction Law and Contract Administration	
CEM 4445	CEM Capstone	
CEM 4446	CEM Capstone	
CEM 4974	Independent Study [2]	
CEM 4984	Special Study [1]	
CEM 4994	Undergraduate Research [2]	
Chemical Engineering (CHE)		
Select any 3000 or 4000 level CHE course EXCEPT the following:		
CHE 3015	Process Measurement & Control	
CHE 3044	Heat Transfer	
CHE 3114	Fluid Transport	
CHE 3124	Chemical Engineering Simulations and Process Modeling	
CHE 3984	Special Study [1]	
CHE 4014	Chemical Engineering Laboratory	
CHE 4024	Unit Operations and Scale-Up	
CHE 4144	Business and Marketing Strategies for the Process Industries	
CHE 4304	Biological Transport Phenomena	
CHE 4974	Independent Study [2]	
CHE 4984	Special Study [1]	
CHE 4994	Undergraduate Research [2]	
Chemistry (CHEM)		
CHEM 3615	Physical Chemistry	3
CHEM 3616	Physical Chemistry	3
CHEM 3625	Physical Chemistry Laboratory	1
CHEM 3626	Physical Chemistry Laboratory	1
CHEM 4074	Laboratory in Polymer Science	2
CHEM 4114	Instrumental Analysis	3
CHEM 4124	Instrumental Analysis Laboratory	1
CHEM 4404	Physical Inorganic Chemistry	3
CHEM 4424	Polysaccharide Chemistry	3
CHEM 4524	Identification of Organic Compounds	3
CHEM 4534	Organic Chemistry of Polymers	3
CHEM 4554	Drug Chemistry	3
CHEM 4615	Physical Chemistry for the Life Sciences	3
CHEM 4616	Physical Chemistry for the Life Sciences	3
CHEM 4634	Polymer and Surface Chemistry	3
CHEM 4734	Environmental Soil Chemistry	3
Civil and Environmental Engineering (CEE)		
Select any 3000 or 4000 level CEE course EXCEPT the following:		
CEE 3304	Fluid Mechanics for Civil and Environmental Engineering	
CEE 3684	Civil Engineering Materials	
CEE 3954	Study Abroad	
CEE 3984	Special Study [1]	
CEE 4804	Professional and Legal Issues in Civil Engineering	
CEE 4974	Independent Study [2]	
CEE 4984	Special Study [1]	
CEE 4994	Undergraduate Research [2]	
Computer Science (CS)		
CS 3114	Data Structures and Algorithms	3
CS 3214	Computer Systems	3
CS 3304	Comparative Languages	3
CS 3414	Numerical Methods	3
CS 3704	Intermediate Software Design and Engineering	3
CS 3714	Mobile Software Development	3
CS 3724	Introduction to Human-Computer Interaction	3
CS 3744	Introduction to GUI Programming and Graphics	3
CS 3754	Cloud Software Development	3
CS 3824	Introduction to Computational Biology and Bioinformatics	3
CS 4104	Data and Algorithm Analysis	3
CS 4114	Introduction to Formal Languages and Automata Theory	3
CS 4204	Computer Graphics	3
CS 4214	Simulation and Modeling	3
CS 4234	Parallel Computation	3
CS 4244	Internet Software Development	3
CS 4254	Computer Network Architecture and Programming	3
CS 4304	Compiler Design and Implementation	3
CS 4414	Issues in Scientific Computing	3
CS 4504	Computer Organization	3
CS 4570	Wireless Networks and Mobile Systems	3
CS 4604	Introduction to Data Base Management Systems	3
CS 4704	Software Engineering Capstone	3
CS 4804	Introduction to Artificial Intelligence	3
CS 4824	Machine Learning	3
Electrical and Computer Engineering (ECE)		
Select any 3000 or 4000 level ECE course EXCEPT the following:		
ECE 3004	AC Circuit Analysis	
ECE 3054	Electrical Theory	
ECE 3074	AC Circuit Analysis Laboratory	
ECE 3704	Continuous and Discrete System Theory	
ECE 3714	Introduction to Control Systems	
ECE 3974	Independent Study	
ECE 3984	Special Study [1]	
ECE 4584	Robotics Laboratory	
ECE 4704	Principles of Robotics Systems	
ECE 4805	Senior Design Project	
ECE 4806	Senior Design Project	
ECE 4974	Independent Study [2]	
ECE 4984	Special Study [1]	
ECE 4994	Undergraduate Research [2]	
Engineering (ENGR)		
ENGR 3124	Introduction to Green Engineering	3
ENGR 4134	Environmental Life Cycle Assessment	3
Engineering Science and Mechanics (ESM)		
Select any 3000 or 4000 level ESM course EXCEPT the following:		

ESM 3024	Introduction to Fluid Mechanics	
ESM 3034	Fluid Mechanics Laboratory	
ESM 3114	Problem Definition and Scoping in Engineering Design	
ESM 3134	Dynamics III - Vibration and Control	
ESM 3234	Fluid Mechanics I-Control Volume Analysis	
ESM 3444	Mechanics Laboratory	
ESM 4015	Creative Design and Project	
ESM 4016	Creative Design and Project	
ESM 4194	Sustainable Energy Solutions for a Global Society	
ESM 4404	Fundamentals of Professional Engineering	
ESM 4974	Independent Study [2]	
ESM 4984	Special Study [1]	
ESM 4994	Undergraduate Research [2]	
Geological Sciences (GEOS)		
GEOS 3104	Elementary Geophysics	3
GEOS 4164	Potential Field Methods in Exploration Geophysics	4
Industrial and Systems Engineering (ISE)		
Select any 3000 or 4000 level ISE course EXCEPT the following:		
ISE 3984	[2]	
ISE 4005	Project Management and Systems Design	
ISE 4006	Project Management and Systems Design	
ISE 4974	Independent Study [2]	
ISE 4984	Special Study [1]	
ISE 4994	Undergraduate Research [2]	
Materials Science and Engineering (MSE)		
Select any 3000 or 4000 level MSE course EXCEPT the following:		
MSE 3114	Mathematics Programming in Materials Science II	
MSE 3354	Foundry Safety	
MSE 3884	Materials Engineering Professional Development II	
MSE 3954	Study Abroad	
MSE 3984	[1]	
MSE 4075	Senior Design Laboratory	
MSE 4076	Senior Design Laboratory	
MSE 4085	Senior Capstone Recitation	
MSE 4086	Senior Capstone Recitation	
MSE 4095H	Honors Senior Design-Laboratory	
MSE 4096H	Honors Senior Design Laboratory	
MSE 4974	Independent Study [2]	
MSE 4984	Special Study [1]	
MSE 4994	Undergraduate Research [2]	
Mathematics (Math)		
MATH 3034	Introduction to Proofs	3
MATH 3214	Calculus of Several Variables	3
MATH 3224	Advanced Calculus	3
MATH 4124	Introduction to Abstract Algebra	3
MATH 4175	Cryptography	3
MATH 4225	Elementary Real Analysis	3
MATH 4226	Elementary Real Analysis	3
MATH 4234	Elementary Complex Analysis	3
MATH 4245	Intermediate Differential Equations	3
MATH 4246		3
MATH 4425	Fourier Series and Partial Differential Equations	3
MATH 4426	Fourier Series and Partial Differential Equations	3
MATH 4445	Introduction to Numerical Analysis	3
MATH 4446	Introduction to Numerical Analysis	3
MATH 4564	Operational Methods for Engineers	3
MATH 4574	Vector and Complex Analysis for Engineers	3
Mechanical Engineering (ME)		
Select any non-required or non-duplicating 3000 or higher level ME course EXCEPT the following:		
ME 3984	Special Study [1]	
ME 4454	Engineering Leadership in Practice:Managing the Technical Design Process	
ME 4974	Independent Study [2]	
ME4984	[1]	
ME 4994	Undergraduate Research [2]	
Mining and Minerals Engineering (MINE)		
Select any 3000 and 4000 level MINE course EXCEPT the following:		
MINE 3984	Special Study [1]	
MINE 4635	Mining Engineering Capstone	
MINE 4636	Mining Engineering Capstone	
MINE 4664	Resource Engineering Leadership Seminar	
MINE 4974	Independent Study [2]	
MINE 4984	Special Study [1]	
MINE 4994	Undergraduate Research [2]	
Nuclear Engineering (NSEG)		
Select any non-duplicating 3000 or higher level NSEG course EXCEPT the following:		
NSEG 3984	[1]	
NSEG 4974	Independent Study [2]	
NSEG 4984	Special Study [1]	
NSEG 4994	Undergraduate Research [2]	
Physics (PHYS)		
PHYS 3355	Intermediate Mechanics	3
PHYS 3356	Intermediate Mechanics	3
PHYS 3405	Intermediate Electricity and Magnetism	3
PHYS 3406	Intermediate Electricity and Magnetism	3
PHYS 3655	Introduction to Astrophysics	3
PHYS 3656	Introduction to Astrophysics	3
PHYS 3704	Thermal Physics	3
PHYS 4315	Modern Experimental Physics	2
PHYS 4316	Modern Experimental Physics	2
PHYS 4455	Introduction to Quantum Mechanics	3
PHYS 4456	Introduction to Quantum Mechanics	3
PHYS 4504	Introduction to Nuclear and Particle Physics	3
PHYS 4554	Introduction to Solid State Physics	3
PHYS 4574	Nanotechnology	3
PHYS 4614	Optics	3
PHYS 4624	Optics Laboratory	1
PHYS 4674	Introduction to General Relativity	3
PHYS 4714	Introduction to Biophysics	3
Statistics (STAT)		
Select any 4000 level Stat course EXCEPT the following:		
STAT 4524	Sample Survey Methods	

STAT 4604	Statistical Methods for Engineers	
STAT 4705	Probability and Statistics for Engineers	
STAT 4706	Probability and Statistics for Engineers	
STAT 4714	Probability and Statistics for Electrical Engineers	
STAT 4804	Elementary Econometrics	
STAT 4964	Field Study	
STAT 4974	Independent Study [2]	
STAT 4984	Special Study [1]	
STAT 4994	Undergraduate Research [2]	
Urban Affairs and Planning (UAP)		
UAP 4374	Land Use and Environment: Planning and Policy	3
UAP 4394	Community Renewable Energy Systems	3

1 Any 2984, 3984, 4984 course from any department on List #1 or #2 must be approved on an individual course basis; see departmental advisor to request technical elective credit for these courses. The approval process for these courses will also determine whether they count toward the 3 credit limit associated with List #2.

2 Any 4974, 4994, and 5974 course from any department on List #1 or #2 other than ME must be approved on an individual course basis; see departmental advisor to request technical elective credit for these courses. All 4974, 4994, and 5974 courses (whether from ME or another department) count toward the 3 credit limit associated with List #2.

Technical Elective List #2

Code	Title	Credits
Agricultural, Leadership, and Community Education (ALCE)		
ALCE 2484	Engine and Power Train Technology	3
Biomedical Engineering (BMES)		
BMES 2104	Introduction to Biomedical Engineering	3
Chemistry (CHEM)		
CHEM 2514	Survey of Organic Chemistry	3
Computer Science (CS)		
CS 2114	Software Design and Data Structures	3
CS 2505	Introduction to Computer Organization	3
English (ENGL)		
ENGL 4804	Grant Proposals and Reports	3
Education, Curriculum & Instruction (EDCI)		
EDCI 4454	Engineering Leadership in Practice:Managing the Technical Design Process	3
Electrical & Computer Engineering (ECE)		
ECE 2164	Exploration of the Space Environment	3
Engineering Education (EngE)		
ENGE 4094	Startup: Commercialization of Innovation	3
Industrial Design (IDS)		
IDS 2044	Human Factors	3
IDS 3124	Materials and Processes	3
Mechanical Engineering (ME)		
ME 4454	Engineering Leadership in Practice:Managing the Technical Design Process	3
Residential Environments and Design (RED)		
RED 4604	Environmental and Sustainability Issues in Housing	3

1 Any 2984, 3984, 4984 course from any department on List #1 or #2 must be approved on an individual course basis; see departmental advisor to request technical elective credit for these courses. The approval process for these courses will also determine whether they count toward the 3 credit limit associated with List #2.

2 Any 4974, 4994, and 5974 course from any department on List #1 or #2 other than ME must be approved on an individual course basis; see undergraduate ME advisor to request technical elective credit for these courses. All 4974, 4994, and 5974 courses (whether from ME or another department) count toward the 3-credit limit associated with List #2.

Note: Students are responsible for checking the prerequisite courses for any listed technical elective course. Many courses on the lists require one or more prerequisite courses which are not part of the ME curriculum which may prevent students from enrolling in these courses. Students may need to get permission from the department offering a course to sign up for non-ME courses.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ME Department fully supports this policy. Specific expectations for satisfactory progress for Mechanical Engineering majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog http://www.undergradcatalog.registrar.vt.edu/
- Once a student is in the ME major, a student must:
  - Within 2 semesters of entering ME Department, complete PHYS2305, ENGL1106, CHEM1035, MATH2114, and ME2004
  - Within 3 semesters of entering ME Department, complete ME2134
  - Complete a minimum of 12 credits that apply toward the ME degree during each 12 month period
  - Maintain an in-major GPA of at least 2.00. In-major is calculated using all courses taught under the ESM, ME, and NSEG designators and ENGE4735 and ENGE4736.
  - Complete ESM 2104 Statics, MATH 2114 Introduction to Linear Algebra and MATH 2204 Introduction to Multivariable Calculus within 50 attempted required course credits (not to include Pathways courses, technical electives or free electives)
  - Complete ESM 2304 Dynamics, ME 2004 Engineering Analysis Using Numerical Methods and MATH 2214 Introduction to Differential Equations within 69 attempted required course credits (not to include Pathways courses, technical electives or free electives)
  - Complete ME 2134 Thermodynamics, ME 3524 Mechanical Vibrations, and (ME 3024 Engineering Design and Economics or ME 3624 Mechanical Design) with 87 attempted required course credits (not to include Pathways courses, technical electives or free electives)
  - Complete ME 4015 Engineering Design and Project within 104 attempted required course credits (not to include Pathways courses, technical electives or free electives)

Graduation Requirements

Graduation Requirements

Each student must complete at least 129 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In-major GPA is determined from all courses with Engineering Science and Mechanics (ESM), Mechanical Engineering (ME) and Nuclear Engineering (NSEG) designators and ENGE 4735/ENGE 4736 if applicable. Required courses or courses used to satisfy technical elective requirements for other BSME major(s) cannot be double counted as technical electives towards this general ME major.

General Information about Checksheet

Course offerings are subject to change and the availability of sufficient resources. Students should confirm course offerings in advance with their department.

Statement of Prerequisites

Prerequisites may change. Students are responsible for pre-requisites and pre-requisites of pre-requisites whether specifically listed in the Undergraduate Course Catalog or not.

Be sure to consult the University Timetable of Classes or check with your advisor for the most current prerequisite requirements. Note that some courses, such as MATH 1225, may have a minimum grade requirement to move on to other courses at Virginia Tech, such as MATH 2114 and MATH 1226.

Acceptable Substitutions

1. MATH 2405H (5 cr) may be substituted for MATH 2114 (3 cr)
2. MATH 2405H + MATH 2406H may be substituted for MATH 2114 (3 cr) + MATH 2204 (3 cr) + MATH 2214 (3 cr)
3. STAT 4604 (3 cr), STAT 4705 (3 cr), or STAT 4714 (3 cr) may be substituted for STAT 3704.
4. MSE 2044 (4 cr) may be substituted for MSE 2034 (3 cr).

Foreign Language Requirement

Foreign Language Requirements

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable [1]	4
ENGE 1215	Foundations of Engineering	2
Select three credits in Pathways 2, 3, 6A, or 7		3
	Credits	**16**
Spring Semester		
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable [1]	4
MATH 2114	Introduction to Linear Algebra [1]	3
ENGE 1216	Foundations of Engineering	2
PHYS 2305	Foundations of Physics (w/lab)	4
	Credits	**16**
Second Year		
Fall Semester		
ESM 2104	Statics	3
ISE 2214	Manufacturing Processes Laboratory	1
MATH 2204	Introduction to Multivariable Calculus	3
PHYS 2306	Foundations of Physics	4
MSE 2034	Elements of Materials Engineering	3
ME 2004	Engineering Analysis Using Numerical Methods	3
	Credits	**17**
Spring Semester		
ECE 2054	Applied Electrical Theory	3
ESM 2204	Mechanics of Deformable Bodies	3
ESM 2304	Dynamics	3
MATH 2214	Introduction to Differential Equations	3
ME 2134	Thermodynamics	4
	Credits	**16**
Third Year		
Fall Semester		
STAT 3704	Statistics for Engineering Applications	2
ME 3024	Engineering Design and Economics	3
ME 3414	Fluid Dynamics (w lab)	4
ME 3524	Mechanical Vibrations	4
ME 3624	Mechanical Design (w lab)	4
	Credits	**17**
Spring Semester		
ME 3304	Heat and Mass Transfer	3
ME 3534	Controls Engineering I (w lab)	4
ME 4005	Mechanical Engineering Lab	3
ME 3034	Mechanical Engineering Discourse	1
Select three credits in Pathways 2, 3, 6A, or 7		3
Select three credits in Pathways 2, 3, 6A, or 7		3
	Credits	**17**
Fourth Year		
Fall Semester		
ME 4015	Engineering Design and Project	3
Technical Elective		3
Technical Elective		3
Technical Elective		3
Select three credits in Pathways 2, 3, 6A, or 7		3
	Credits	**15**
Spring Semester		
ME 4016	Engineering Design and Project	3
Technical Elective		3
Technical Elective		3
Select three credits in Pathways 2, 3, 6A, or 7		3
Select three credits in Pathways 2, 3, 6A, or 7		3
	Credits	**15**
	Total Credits	**129**

[1] Consult Timetable of Classes or University Course Catalog for minimum required prerequisite grade in MATH1225 to proceed to other MATH courses such as MATH1226 and MATH2114 at Virginia Tech.

Robotics and Mechatronics Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
ME 2004	Engineering Analysis Using Numerical Methods	3
ME 3414	Fluid Dynamics (w lab)	4
ME 3624	Mechanical Design (w lab)	4
ME 3304	Heat and Mass Transfer	3
ME 3534	Controls Engineering I (w lab)	4
ME 4005	Mechanical Engineering Lab	3
Subtotal		21
Major Requirements		
CS 1044	Introduction to Programming in C	3
or CS 2505	Introduction to Computer Organization	
ECE 3254	Industrial Electronics	3
ME 4524	Introduction to Robotics and Automation [1]	3
or ME 5704	Robotics and Automation	
ME 4744	Mechatronics: Theory and Application	4
ME 4584	Robotics Laboratory	1
ME 4734	Robotics and Mechatronics Seminar	1
Technical Elective		3
Subtotal		18
Additional Course Requirements		
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
ECE 2054	Applied Electrical Theory	3
ESM 2104	Statics	3
ESM 2204	Mechanics of Deformable Bodies	3
ESM 2304	Dynamics	3
ISE 2214	Manufacturing Processes Laboratory	1
MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus	3
ME 2134	Thermodynamics	4
ME 3524	Mechanical Vibrations	4
MSE 2034	Elements of Materials Engineering	3
STAT 3704	Statistics for Engineering Applications	2
Subtotal		36
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
ME 3024	Engineering Design and Economics (1A)	3
ME 3034	Mechanical Engineering Discourse (1A)	1
ME 4015 & ME 4016	Engineering Design and Project and Engineering Design and Project (1A) [2]	6
or ENGE 4735 & ENGE 4736	Interdisciplinary Design Capstone and Interdisciplinary Design Capstone	
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six credits in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
PHYS 2305	Foundations of Physics	4
PHYS 2306	Foundations of Physics	4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F) [3]	4
MATH 1226	Calculus of a Single Variable (5F)	4
MATH 2214	Introduction to Differential Equations (5A)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216	Foundations of Engineering and Foundations of Engineering	4
or ENGE 1414	Foundations of Engineering Practice	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select a course with covers both Concept 7 and Pathways Concept 2 or 3 to avoid taking additional credits.		3
Subtotal		54
Total Credits		**129**

1 Undergraduate students not already accepted into the accelerated BS/MS graduate program should plan to take the 4000-level version of this course. Students taking ME 5704 in place of ME 4524 are NOT exempted from the 1-credit lab (ME 4584). Students within 2 semesters of graduating who have a minimum overall GPA of 3.0 or higher who have not been accepted into an accelerated BS/MS program may request permission to enroll in a 5000-level ME course provided that: (1) an undergraduate version of the course is not available, (2) the student cannot otherwise complete the major with current undergraduate course offerings, and (3) the student has earned a B or higher in all previous ME courses. Permission from both the ME department head and the course instructor are required for the student to enroll in a 5000-level ME course. These courses may not be used on the Plan of Study for a graduate degree at Virginia Tech.

2 All students should enroll in ME 4015. Students interested in joining an ENGE 4735/ENGE 4736 senior design project should apply through the ME4015 senior design coordinator during the project selection process at the start of the Fall semester. Because participation in all projects is limited, students are not guaranteed a seat in any particular project. Grades earned in ENGE 4735/ENGE 4736 will also count towards a student's in-major GPA. Students must meet all ME 4015 prerequisites to be eligible to enroll in ENGE 4735.

3 Consult Timetable of Classes or University Course Catalog for minimum required prerequisite grade in MATH 1225 to proceed to other MATH courses such as MATH 1226 and MATH 2114.

Technical Elective List

Code	Title	Credits
ME 3604	Kinematics and Dynamics of Machinery	3
ME 4034	Bio-Inspired Technology [1]	3
or ME 5034	Bio-Inspired Technology	
ME 4184	Drone Technology and Flight Operations	3
ME 4564	Vehicle Control	3
ME 4624	Finite Element Practice in Mechanical Design [1]	3
or ME 5634	Finite Elements in Machine Design	

ME 4634	Introduction to Computer-aided Design and Manufacturing	3
ME 4644	Introduction to Rapid Prototyping [1]	3
or ME 5644	Rapid Prototyping	
ME 4754	Mechatronics: Advanced Topics and Application	3
ME 4824	Introduction to Human-Robot Interaction [1]	3
or ME 5824	Algorithmic Human-Robot Interaction	
ME 4864	Micro/Nano-Robotics [1]	3
or ME 5864G	Advanced Micro/Nano-Robotics	
ME 4974	Independent Study [2]	3
ME 4994	Undergraduate Research [2]	3

Any non-duplicating ME/ECE/CS 4000-5000 level Controls course. Requires departmental approval.

[1] Undergraduate students not already accepted into the accelerated BS/MS graduate program should plan to take the 4000-level version of this course. Students within 2 semesters of graduating who have a minimum overall GPA of 3.0 or higher who have not been accepted into an accelerated BS/MS program may request permission to enroll in a 5000-level ME course provided that: (1) an undergraduate version of the course is not available, (2) the student cannot otherwise complete the major with current undergraduate course offerings, and (3) the student has earned a B or higher in all previous ME courses. Permission from both the ME department head and the course instructor are required for the student to enroll in a 5000-level ME course. These courses may not be used on the Plan of Study for a graduate degree at Virginia Tech.

[2] Independent study and undergraduate research must be robotics- or mechatronics-related and require departmental/major approval. Consult undergraduate advisor with questions.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The ME Department fully supports this policy. Specific expectations for satisfactory progress for Mechanical Engineering majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog http://www.undergradcatalog.registrar.vt.edu/
- Once a student is in the ME degree (regardless of major), a student must:
  - Complete a minimum of 12 credits that apply toward the ME degree during each 12 month period
  - Within 2 semesters of entering ME Department, complete PHYS2305, ENGL1106, CHEM1035, MATH2114, and ME2004
  - Within 3 semesters of entering ME Department, complete ME2134
  - Maintain an in-major GPA of at least 2.00. In-major GPA is calculated using all courses taught under the ESM, ME, and NSEG designators plus ENGE4735 and ENGE4736 if applicable.
  - Complete ESM 2104 Statics, MATH 2114 Introduction to Linear Algebra and MATH 2204 Introduction to Multivariable Calculus within 50 attempted required course credits (not to include Pathways courses, technical electives or free electives)
  - Complete ESM 2304 Dynamics, ME 2004 Engineering Analysis Using Numerical Methods and MATH 2214 Introduction to Differential Equations within 69 attempted required course credits (not to include Pathways courses, technical electives or free electives)
  - Complete ME 2134 Thermodynamics, ME 3524 Mechanical Vibrations, and (ME 3024 Engineering Design and Economics or ME 3624 Mechanical Design) within 87 attempted required course credits (not to include Pathways courses, technical electives or free electives)
  - Complete (ME 4015 Engineering Design and Project and ME 4524 Introduction to Robotics and Automation within 104 attempted required course credits (not to include Pathways courses, technical electives or free electives)

Graduation Requirements

Graduation Requirements

Each student must complete at least 129 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In-major GPA is determined from all courses with Engineering Science and Mechanics (ESM), Mechanical Engineering (ME), and Nuclear Engineering (NSEG) designators and ENGE 4735 and ENGE 4736 if applicable.

Required courses in the Robotics and Mechatronics "Major Requirements" category (ECE 3254, ME 4524, ME 4744, ME 4584, and ME 4734) and courses used to satisfy the Technical Elective requirement for this major cannot be double counted towards a second Mechanical Engineering major as Technical Elective credit.

General Information about Checksheet

Course offerings are subject to change and the availability of sufficient resources. Students should confirm course offerings in advance with their department.

Technical Electives

The Robotics and Mechatronics major requires 3 credits of approved technical electives from list. Please see attached list for technical elective choices.

Statement of Prerequisites

Prerequisites may change. Students are responsible for pre-requisites and pre-requisites of pre-requisites whether specifically listed in the Undergraduate Course Catalog or not.

Be sure to consult the University Timetable of Classes or check with your advisor for the most current prerequisite requirements. Note that some courses, such as MATH 1225, may have a minimum grade requirement to move on to other courses at Virginia Tech such as MATH 2114 and MATH 1226.

Acceptable Substitutions

1. MATH 2405H (5 cr) may be substituted for MATH 2114 (3 cr)
2. MATH 2405H (5 cr) + MATH 2406H (5 cr) may be substituted for MATH 2114 (3 cr) + MATH 2204 (3 cr) + MATH 2214 (3 cr)
3. STAT 4604 (3 cr), STAT 4705 (3 cr), or STAT 4714 (3 cr) may be substituted for STAT 3704 (2 cr)
4. MSE 2044 (4 cr) may be substituted for MSE 2034 (3 cr)

Foreign Language Requirement

Foreign Language Requirements

Students must have completed 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable [1]	4
ENGE 1215	Foundations of Engineering	2
Select three credits in Pathways 2, 3, 6A, or 7 [2]		3
	Credits	**16**
Spring Semester		
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable [1]	4
MATH 2114	Introduction to Linear Algebra [1]	3
ENGE 1216	Foundations of Engineering	2
PHYS 2305	Foundations of Physics (w/lab)	4
	Credits	**16**
Second Year		
Fall Semester		
ESM 2104	Statics	3
ISE 2214	Manufacturing Processes Laboratory	1
MATH 2204	Introduction to Multivariable Calculus	3
PHYS 2306	Foundations of Physics (w/lab)	4
MSE 2034	Elements of Materials Engineering	3
ME 2004	Engineering Analysis Using Numerical Methods	3
	Credits	**17**
Spring Semester		
ECE 2054	Applied Electrical Theory	3
ESM 2204	Mechanics of Deformable Bodies	3
ESM 2304	Dynamics	3
MATH 2214	Introduction to Differential Equations	3
ME 2134	Thermodynamics	4
	Credits	**16**
Third Year		
Fall Semester		
STAT 3704	Statistics for Engineering Applications	2
ME 3024	Engineering Design and Economics	3
ME 3414	Fluid Dynamics (w lab)	4
ME 3524	Mechanical Vibrations	4
ME 3624	Mechanical Design (w lab)	4
	Credits	**17**
Spring Semester		
ECE 3254	Industrial Electronics	3
ME 3304	Heat and Mass Transfer	3
ME 3534	Controls Engineering I (w lab)	4
ME 4005	Mechanical Engineering Lab	3
CS 1044	Introduction to Programming in C	3
ME 3034	Mechanical Engineering Discourse	1
	Credits	**17**
Fourth Year		
Fall Semester		
ME 4015	Engineering Design and Project	3
ME 4524	Introduction to Robotics and Automation	3
ME 4744	Mechatronics: Theory and Application	4
ME 4584	Robotics Laboratory	1
ME 4734	Robotics and Mechatronics Seminar	1
Select three credits in Pathways 2, 3, 6A, or 7 [2]		3
	Credits	**15**
Spring Semester		
ME 4016	Engineering Design and Project	3
Technical Elective		3
Select three credits in Pathways 2, 3, 6A, or 7 [2]		3
Select three credits in Pathways 2, 3, 6A, or 7 [2]		3
Select three credits in Pathways 2, 3, 6A, or 7 [2]		3
	Credits	**15**
	Total Credits	**129**

1. Consult Timetable of Classes or University Course Catalog for minimum required prerequisite grade in MATH1225 to proceed to other MATH courses such as MATH1226 and MATH2114.
2. If enrolling in a Pathways Concept 7 elective, choose one that also covers either Concept 2 or 3 to avoid taking 3 additional credits to meet graduation requirements.

Mining and Minerals Engineering

Our Website (http://www.mining.vt.edu)

Overview

The Department of Mining and Minerals Engineering offers an engineering program containing aspects of mineral science, engineering, and technology that is professionally related to the minerals industry. Graduates of this program find domestic and international employment opportunities with hardrock, coal, industrial minerals, and construction aggregates producers, as well as with government agencies and equipment vendors.

The mission of the department is to produce high quality, rigorously trained mining engineers, whose background and education reflect the current level of technology and thought of the profession, and who can enter directly into engineering practice or, alternatively, graduate school for further study.

Accreditation, Program Educational Objectives, and Student Outcomes

The B.S. degree program in Mining Engineering is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org), under the commission's General Criteria and the Program Criteria for Mining and Similarly Named Engineering Programs.

The Department of Mining and Minerals Engineering seeks, as its **Program Educational Objectives**, to prepare alumni within a few years of graduation to possess:

- the intellectual ability to critically assess and tackle any engineering problem they may encounter;
- the communication skills to communicate technical information to a variety of audiences including technically trained supervisors and subordinates as well as non-technical members of the work force and the general public;
- the leadership and team building skills to lead projects and function as entry-level managers as well as work productively as members of a team;

- an understanding of the practical aspects of the mining industry and an appreciation for mining as a business; and
- an awareness of societal issues and how these issues affect their role as future professional engineers working for the general benefit of society.

Upon the time students complete the BS in Mining Engineering degree, the **Student Outcomes** that each graduate should have are:

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. an ability to communicate effectively with a range of audiences.
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Curriculum

The mining engineering curriculum utilizes the basic and engineering sciences to develop the various areas of activity of the mining engineer: mineral exploration, evaluation, development, extraction, mineral processing, conservation, protection of the environment, and mineral economics. Course work in these areas provides a unique background for engineering and management positions in industry and government, as well as for continuation of specialized graduate studies.

Intrinsic to the curriculum is the development of a meaningful, major engineering design experience that builds upon the fundamental concepts of mathematics, basic sciences, the humanities and social sciences, engineering topics, and communication skills. This design experience is stressed within the major and grows with the development and progression of the student. Ethical, social, safety, economic, and environmental considerations are emphasized in the design experience throughout many courses, including the capstone senior design course. Finally, the major engineering design experience is a focal point of the mining engineering curriculum and is consistent with the objectives and goals of the program.

The program has an emphasis on the application of computers to mining and minerals processing operations. Furthermore, it exposes students to laboratory courses which focus on conducting experiments, understanding the principles involved in each experiment, and analyzing and interpreting experimental data. Information on the mission, goals, and curriculum of the program is continuously updated on the departmental website.

The Cooperative Education Program, as well as opportunities for financial support in the form of scholarships, loans, awards, and summer employment, are available to undergraduate and graduate students. Graduate programs are available leading to the M.S., M. Eng., and Ph.D.

- Mining Engineering Major (p. 937)

Head: A. Noble
University Distinguished Professor and Nicholas T. Camicia
Professor: R.H. Yoon
Stonie Barker Professor: E.A. Sarver
Professor: E.C. Westman and A. Noble
Associate Professors: B. Nojabaei, N. Ripepi, E.A. Sarver, and W. Zhang
Assistant Professors: R. Pandey
Professor of Practice: R. Bishop
Affiliated Faculty: R. Pollyea

Undergraduate Course Descriptions (MINE)

MINE 1024 - Leadership and Service in the Mineral Industries (1 credit)
Leadership and service principles. Awareness of self and others through personality typing. Strategic planning. Importance of energy and mineral industries to developed and developing countries as well as associated consequences. Mineral extraction and purification processes and calculations. Conflict resolution. Challenges and opportunities available in the energy and mineral industries. May include guest speakers and field trips.
Instructional Contact Hours: (1 Lec, 1 Crd)

MINE 1034 - Automation and Data Analytics in the Mineral Industries (1 credit)
Discovering challenges and opportunities available in autonomous vehicles, systems, and data analytics associated with the energy and mineral industries. Fundamentals of robotics and data analytics; hands on projects with autonomous kits and drones; analysis of industry data, including production studies; introduction to presentation of complex data in a simplified manner; introduction to simulations and digital twins.
Instructional Contact Hours: (1 Lec, 1 Crd)

MINE 1044 - Space Mining (1 credit)
Explore challenges and opportunities in off-earth mining. Resources currently identified on earth and critical uses; astroidal, lunar, and martian resources; operating conditions in space; environmental, social, and governance issues; economic drivers; in situ resource utilization.
Instructional Contact Hours: (1 Lec, 1 Crd)

MINE 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 2114 - Energy and Raw Materials: Geopolitics and Sustainable Development (3 credits)
Supply and demand of energy resources and raw materials. Domestic and global trends. Development of energy and mineral resources. Electricity generation, efficiency, and distribution. Energy and raw materials infrastructure Disparities in resource-producing vs. resource-consuming regions. Environmental considerations and engineering management. Land use and reclamation. Greenhouse gas management. Policy, regulations, and incentives. Geopolitical considerations. Conservation and efficiency. Sustainable development. This course is available to undergraduate students of all ranks and all majors.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 2504 - Introduction to Mining Engineering (3 credits)
Introduction to the complete field of mining and minerals engineering, including phases of mine development, discreet mining methods and mineral processing operations. Consideration in unconventional oil and gas development. Emphasis on basic engineering problem solving skills, and considerations for worker health and safety, economics, and environmental and social issues.
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 2524 - Elements of Mine Design (3 credits)
Basic concepts used in the modeling and design of mining systems including basic statistical concepts, sampling, geological and geostatistical modeling of ore bodies, ore reserve estimation, and selection of basic mine development methods.
Prerequisite(s): MINE 2504 and GEOS 1004
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MINE 2534 - Mine Surveying and Mapping (3 credits)
Specialized principles of field surveying and mapping as applied to the delineation of mineral deposits and the design and monitoring of surface and underground mining operations. Introduction to modern surveying instruments, field techniques, and computational procedures. Basic digital mine mapping to include standard mine symbols and representation of surface and underground mine workings. Partially duplicates ENGE 2824.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MINE 2544 - Leadership for Responsible Mining (2 credits)
Principles of leadership for the global resource industries including identification of project impacts and risks, stakeholder analysis and conflict management. Emphasis on engineering ethics and effective communications. Sustainable development of mineral and energy resources, with focus on emerging technical, economic, environmental and social issues in the US and abroad.
Prerequisite(s): ENGL 1106
Corequisite(s): MINE 2504
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 2 Crd)

MINE 2564 - Resource Exploration and Design (3 credits)
Basic methods and concepts in exploration and modeling of ore bodies. Resource exploration planning. Exploration technologies for potential mine sites. Design of mining systems. Computational modeling of ore bodies and mine systems. Environmental, regulatory, ethical, and social considerations in mine system design.
Prerequisite(s): GEOS 1004
Corequisite(s): MINE 2504
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MINE 2714 - Introduction to Petroleum and Natural Gas Engineering (3 credits)
Introduction to basics of petroleum and natural gas engineering. Concepts of conventional and unconventional fossil fuel energy; basics of rock mechanics and reservoir fluid properties. Concepts of drilling and completion engineering. Concepts of hydraulic fracturing; basic knowledge of formation evaluation and various rock types. Basics of geophysical monitoring methods; basics of different oil and gas reservoirs; basics of production engineering and fundamentals of recovery mechanisms, discussion of petroleum and natural gas social and policy issues.
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 3544 - Mineral Processing Laboratory (1 credit)
Laboratory investigations of the unit operations and principles of mineral processing including ore preparation (size reduction, mineral liberation, and classification) and mineral recovery (froth flotation, electrostatic separation, magnetic separation, and solid-liquid separation).
Prerequisite(s): MINE 3534
Corequisite(s): MINE 3554
Instructional Contact Hours: (3 Lab, 1 Crd)

MINE 3564 - Underground Mine Design (3 credits)
Design fundamentals of mining systems and stope development for tabular and massive underground mineral deposits. Equipment selection and application, permitting, cost analysis and production simulation.
Prerequisite(s): MINE 2564 and MINE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3574 - Surface Mine and Quarry Design (3 credits)
Surface mining methods, and their selection; mine planning and design; excavation, haulage and ancillary systems; equipment selection and maintenance; impoundment and piles design; mine closure/reclamation.
Prerequisite(s): MINE 2564 and MINE 3674
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3584 - Ventilation Engineering (3 credits)
Subsurface ventilation systems. Ventilation planning and design, laws of airflow, airway resistance. Ventilation surveys, network analysis, ventilation economics. Ventilation software. Fan types, impeller theory, fan laws and testing. Mine ventilation thermodynamics.
Prerequisite(s): MINE 2504
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MINE 3604 - Mining Geomechanics (3 credits)
Properties and behavior of geologic materials and masses and their classifications and ratings. Design principles of structures founded on and in rocks and basic aspects of ground control in mining. Laboratory techniques used in the determination of geologic materials properties and behavior. Determination of rock index properties, strengths, failure criterion and mechanical behavior.
Prerequisite(s): MINE 2504 and GEOS 1004 and ESM 2204
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MINE 3624 - Mineral Resource Project Management (3 credits)
Applied and theoretical concepts in the valuation and management of mining and energy extraction projects. Project engineering, resource management, scheduling, and tracking. Estimation of capital costs, operating costs, and revenues for underground and surface mines, mineral beneficiation plants, and oil and gas ventures. Commodity sales contracts and price projections. Cash flow analysis, revenue-generating and service producing alternative selection, taxes/deductions. Quantitative risk analysis including stochastic simulation. Environmental, ethical, and legal considerations in project management.
Prerequisite(s): MINE 2504 and MINE 2564
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3634 - Fundamentals of Mineral Processing (3 credits)
Principles of mineral processing with an emphasis on metallurgical data evaluation, unit operations, and flowsheet configurations. Metallurgical accounting, slurry calculations, grade-recovery relationships, chemical aspects of mineral processing, and particle size analysis. Unit operations including rushing, grinding, size separation, gravity separation, magnetic and electrostatic separation, froth dewatering. Laboratory investigations of the unit operations and principles of mineral processing.
Prerequisite(s): MINE 2504 and GEOS 1004 and CHEM 1035
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MINE 3644 - Applications in Mineral Processing (2 credits)
Applied concepts in the design and operation of mineral processing plants. Flowsheet engineering, unit selection, unit sizing, water/mass flow balancing, simulation, process control, and cost estimation. Environmental, economic, and legal considerations in process plant design.
Prerequisite(s): MINE 3634
Instructional Contact Hours: (2 Lec, 2 Crd)

MINE 3664 - Fluids and Thermodynamics for Resources (3 credits)
Fluid properties and hydrostatics. Derivation and application of the continuity, momentum, and energy equation (Bernoulli's equation) for ideal and real fluid flow (laminar or turbulent). Properties of pure substances: property tables, property software, equations of state. First law of thermodynamics. Second law of thermodynamics. Gas mixtures. Applications in the resource extraction industries.
Prerequisite(s): ESM 2304 and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3674 - Explosives and Rock Fragmentation (3 credits)
Rock fragmentation for excavation; drilling fragmentation, rock drilling systems; blasting fragmentation, types and properties of commercial explosives and accessories, system of initiation, design of blasting rounds, applications in mining and construction, structural damage criteria, overbreak control, safe practice and regulations; fragmentation by excavation machines; excavation system selection and design.
Prerequisite(s): MINE 2504 and GEOS 1004 and ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3714 - Petroleum and Natural Gas Reservoir Engineering (3 credits)
Introduction to oil and gas reservoirs; basics of reservoir rock and fluid properties; fundamentals of different petroleum reservoirs; determination of oil and gas in place; material balance equation; prediction of transient pressure distribution; prediction of saturation distribution; basics of recovery mechanisms; single and multiphase flows in petroleum reservoirs; and prediction of recovery factor and production rate.
Prerequisite(s): MINE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3724 - Formation Evaluation and Engineering (3 credits)
Well log measurements and interpretation; standard logging suites used in industry; core sampling methods and laboratory analysis; relationship of well data to seismic and other geophysical data; relationship of well-derived reservoir properties to reservoir estimation calculations, well completions strategies, and development strategies.
Prerequisite(s): MINE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 4504 - Materials Handling and Power Systems (3 credits)
Principles of materials handling, fluid power and electrical power systems for surface and underground mining operations. Engineering analysis and design of secondary haulage operations (belt conveyors, hoists, trucks, railways), fluid power systems (hydraulics, pumps, piping networks, compressors, pneumatic equipment). Electrical systems (electrical machinery, distribution networks, controls), and other ancillary systems required to support mining operations. Assessment of equipment reliability and development of preventive maintenance programs.
Prerequisite(s): ESM 3024
Corequisite(s): ECE 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 4614 - Health and Safety Systems (3 credits)
Investigation of health and safety management systems. Study of mine legislation; data analysis of accidents; hazard identification; risk management; training programs; emergency response plans.
Prerequisite(s): MINE 3564 or MINE 3574
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 4624 - Mine and Water Reservoir Engineering (3 credits)
Essential topics related to water in resource extraction projects, including surface and ground water hydrology, chemistry and treatment of mine-influenced waters and waters from unconventional oil and gas production, and mine dewatering. Emphasis on basic design calculations and modeling.
Prerequisite(s): MINE 3664 and (MINE 3564 or MINE 3574)
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 4635 - Mining Engineering Capstone (2 credits)
4635: Serves as the capstone design course sequence for Mining and Minerals Engineering. Undertake a comprehensive design project and feasibility study that integrates courses taken throughout their curriculum, in consideration of public and occupational health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors and constraints. Includes exploration of professional and ethical obligations of engineers and impacts of projects on communities, project management, communication, and working in teams. 4636: Serves as the capstone design course sequence for Mining and Minerals Engineering. Undertake a comprehensive design project and feasibility study that integrates courses taken throughout their curriculum, in consideration of public and occupational health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors and constraints. Includes exploration of professional and ethical obligations of engineers and impacts of projects on communities, project management, communication, and working in teams. Culminates in the preparation of a technical report that describes the commercial development, extraction and closure of a mineral deposit under global reporting standards, and provides detailed operational layouts, production calculations, and engineering cost analyses.
Prerequisite(s): MINE 2544 and (MINE 3564 or MINE 3574) and MINE 3624
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 2 Crd)

MINE 4636 - Mining Engineering Capstone (2 credits)
4635: Serves as the capstone design course sequence for Mining and Minerals Engineering. Undertake a comprehensive design project and feasibility study that integrates courses taken throughout their curriculum, in consideration of public and occupational health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors and constraints. Includes exploration of professional and ethical obligations of engineers and impacts of projects on communities, project management, communication, and working in teams. 4636: Serves as the capstone design course sequence for Mining and Minerals Engineering. Undertake a comprehensive design project and feasibility study that integrates courses taken throughout their curriculum, in consideration of public and occupational health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors and constraints. Includes exploration of professional and ethical obligations of engineers and impacts of projects on communities, project management, communication, and working in teams. Culminates in the preparation of a technical report that describes the commercial development, extraction and closure of a mineral deposit under global reporting standards, and provides detailed operational layouts, production calculations, and engineering cost analyses.
Prerequisite(s): MINE 4635
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 2 Crd)

MINE 4644 - Environmental Management for Mining and Geoenergy (2 credits)
Environmental impacts of mines and geoenergy resource development projects, including water, land and air pollution. Statutory and regulatory environmental requirements, with an emphasis on permitting, monitoring and compliance. Best practices for environmental management systems.
Prerequisite(s): MINE 3564 or MINE 3574
Instructional Contact Hours: (2 Lec, 2 Crd)

MINE 4654 - Mine Power Systems and Automation (3 credits)
Fundamentals of electrical theory. Circuit elements, calculations and network analysis. Components and design of mine power systems. Motors, cables, load flow analyses, transmission and distribution. Electrical safety. U.S. mine-specific regulation, intrinsic safety and permissibility. Applications in mine systems automation via programmable logic control. Basic ladder logic routines.
Prerequisite(s): MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 4664 - Resource Engineering Leadership Seminar (1 credit)
Invited speakers and subject experts, assigned readings, facilitated activities and discussions, personality and values assessment, learning taxonomy and learning styles, diversity in the workplace, implications of personal differences for workplace and leadership dynamics, strategies and best practices for effective leadership, oral and written communication for diverse audiences. Pre: Senior Standing.
Instructional Contact Hours: (1 Lec, 1 Crd)

MINE 4714 - Well Drilling and Completion Engineering (3 credits)
Introduction to drilling and completion design; functions of drilling fluids; wellbore hydraulics and drilling bits; principles of well control; casing design; design of cementing jobs; directional drilling in conventional and unconventional formations, completions.
Prerequisite(s): MINE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 4724 - Petroleum and Natural Gas Production Engineering (3 credits)
Extraction of reservoir fluids; oil and gas thermodynamic properties; phase behavior of petroleum fluids; analysis of surface production facilities; fluid separation; processing of reservoirs fluids; fluid disposal in an environmentally acceptable manner; surface transportation systems; separator design; design of artificial lift systems.
Prerequisite(s): MINE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Mining Engineering Major

Code	Title	Credits
Degree Core Requirements		
MINE 2504	Introduction to Mining Engineering	3
MINE 2564	Resource Exploration and Design	3
MINE 3604	Mining Geomechanics	3
MINE 3624	Mineral Resource Project Management	3
MINE 3564	Underground Mine Design	3
MINE 3574	Surface Mine and Quarry Design	3
MINE 4614	Health and Safety Systems	3
MINE 4644	Environmental Management for Mining and Geoenergy	2
Subtotal		23
Additional Course Requirements		
ESM 2104	Statics	3
ESM 2204	Mechanics of Deformable Bodies	3
ESM 2304	Dynamics	3
GEOS 1004	Earth Science: Our Past, Present, and Future	3
GEOS 1104	Introduction to Earth Sciences Laboratory	1
GEOS 3404	Elements of Structural Geology	3
or GEOS 4824	Engineering Geology	
GEOS 4624	Mineral Deposits	3
MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus	3
MINE 2534	Mine Surveying and Mapping	3
MINE 3634	Fundamentals of Mineral Processing	3
MINE 3664	Fluids and Thermodynamics for Resources	3
MINE 3674	Explosives and Rock Fragmentation	3
MINE 3644	Applications in Mineral Processing	2
MINE 3584	Ventilation Engineering	3
MINE 4624	Mine and Water Reservoir Engineering	3
MINE 4654	Mine Power Systems and Automation	3
MINE 4664	Resource Engineering Leadership Seminar	1
Elective Courses		
Technical Electives		6
Subtotal		55
Pathways to General Education		

Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
MINE 2544	Leadership for Responsible Mining (1A)	2
MINE 4635	Mining Engineering Capstone (1A)	2
MINE 4636	Mining Engineering Capstone (1A)	2
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six hours in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six hours in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		3
Pathways Concept 4 - Reasoning in the Natural Sciences		
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
PHYS 2305	Foundations of Physics	4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F ; C-)	4
MATH 1226	Calculus of a Single Variable (5F)	4
MATH 2214	Introduction to Differential Equations (5A)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three hours in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216 or ENGE 1414	Foundations of Engineering and Foundations of Engineering (C-) Foundations of Engineering Practice	4
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathways 7 should be double counted with either Pathways 2, 3 or 6a to avoid taking any additional credit hours.		3
Subtotal		50
Total Credits		**128**

Technical Electives

Courses with substantial duplication of courses taken previously will not qualify for credit. MINE 4974 Independent Study and MINE 4994 Undergraduate Research may not be used as electives. Additional technical electives may be used as a substituted course through a 4984 or 5984 course with the review and approval from the department head.

Choose from the courses listed below, noting that some courses are not available to all students because they may have prerequisites or be restricted to majors in the offering department.

Code	Title	Credits
BSE 4394	Water Supply and Sanitation in Developing Countries	3
CEE 3104	Introduction to Environmental Engineering	3
CEE 4264	Sustainable Land Development	3
CEE 4144	Air Resources Engineering	3
CEE 3514	Introduction to Geotechnical Engineering	4
CEE 4514	Methods in Geotechnical Engineering	3
ECON 4014	Environmental Economics	3
ENSC 3634	Physics of Pollution	3
CSES 4644	Land-based Systems for Waste Treatment	3
ENSC 4774	Reclamation of Drastically Disturbed Lands	3
FIN 3104	Introduction to Finance	3
FIN 3134	Financial Analytics	3
FIN 3144	Investments: Debt, Equity and Derivatives	3
FIN 3154	Corporate Financial Analytics and Strategy	3
FIN 4144	International Financial Management	3
FIN 4214	Financial Modeling in Excel	3
FREC 4014	Natural Resources Economics	3
GEOG 4354	Introduction to Remote Sensing	3
GEOS 3014	Environmental Geosciences	3
GEOS 3204	Sedimentology-Stratigraphy	3
GEOS 3504	Mineralogy	3
GEOS 3614	Soils	3
GEOS 4164	Potential Field Methods in Exploration Geophysics	4
GEOS 4404	Advanced Structural Geology	3
GEOS 4634	Environmental Geochemistry	3
GEOS 4804	Groundwater Hydrology	3
ISE 4004	Theory of Organization	3
ISE 4654	Principles of Industrial Hygiene	3
MGT 3304	Management Theory and Leadership Practice	3
MGT 4314	International Management	3
MINE 2714	Introduction to Petroleum and Natural Gas Engineering	3
MINE 3714	Petroleum and Natural Gas Reservoir Engineering	3
MINE 3724	Formation Evaluation and Engineering	3
MINE 4714	Well Drilling and Completion Engineering	3
MINE 4724	Petroleum and Natural Gas Production Engineering	3
MSE 3304	Physical Metallurgy	3
PSYC 3024	Human Behaviors and Natural Environments	3
PSYC 3054	Health Psychology	3
UAP 3354	Introduction to Environmental Policy and Planning	3
UAP 4264	Environmental Ethics and Policy	3
UAP 4374	Land Use and Environment: Planning and Policy	3

1. Each student must meet the minimum University wide criteria as described for satisfactory progress and summarized in the Undergraduate Catalog (under Academic Policies -> University Policies Governing Enrollment -> Satisfactory Progress). After having completed 72 credit hours (including transfer, advanced placement, advanced standing, and credit by examination) a student must:
2. Maintain an overall and in major GPA of 2.0 or better. (In-major GPA is calculated using all courses taken under the MINE designator)
3. Have passing grades in MINE 2504 Introduction to Mining Engineering, MATH 2204 Introduction to Multivariable Calculus and MATH 2214 Introduction to Differential Equations.

Graduation Requirements

Each student must complete at least 128 semester credit hours with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. In-major GPA is determined from all courses with MINE designator.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
2. MATH 2405H Mathematics in a Computational Context and MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra, MATH 2204 Introduction to Multivariable Calculus, and MATH 2214 Introduction to Differential Equations

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

Roadmap

First Year		
Fall Semester		**Credits**
CHEM 1035	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
ENGL 1105	First-Year Writing	3
ENGE 1215	Foundations of Engineering	2
MATH 1225	Calculus of a Single Variable (C-)	4
Pathways Concept 2, 3, 6a, or 7		3
	Credits	**16**
Spring Semester		
ENGE 1216	Foundations of Engineering	2
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable	4
MATH 2114	Introduction to Linear Algebra	3
PHYS 2305	Foundations of Physics	4
Pathways Concept 2, 3, 6a, or 7		3
	Credits	**19**
Second Year		
Fall Semester		
ESM 2104	Statics	3
GEOS 1004	Earth Science: Our Past, Present, and Future	3
GEOS 1104	Introduction to Earth Sciences Laboratory	1
MATH 2204	Introduction to Multivariable Calculus	3
MINE 2504	Introduction to Mining Engineering	3
MINE 2534	Mine Surveying and Mapping	3
	Credits	**16**
Spring Semester		
ESM 2204	Mechanics of Deformable Bodies	3
ESM 2304	Dynamics	3
MATH 2214	Introduction to Differential Equations	3
MINE 2544	Leadership for Responsible Mining	2
MINE 2564	Resource Exploration and Design	3
Pathways Concept 2, 3, 6a, or 7		3
	Credits	**17**
Third Year		
Fall Semester		
MINE 3604	Mining Geomechanics	3
MINE 3624	Mineral Resource Project Management	3
MINE 3634	Fundamentals of Mineral Processing	3
MINE 3664	Fluids and Thermodynamics for Resources	3
MINE 3674	Explosives and Rock Fragmentation	3
	Credits	**15**
Spring Semester		
GEOS 3404 or GEOS 4824	Elements of Structural Geology or Engineering Geology	3
MINE 3564	Underground Mine Design	3
MINE 3574	Surface Mine and Quarry Design	3
MINE 3584	Ventilation Engineering	3
MINE 3644	Applications in Mineral Processing	2
Pathways Concept 2, 3, 6a, or 7		3
	Credits	**17**
Fourth Year		
Fall Semester		
MINE 4614	Health and Safety Systems	3
MINE 4624	Mine and Water Reservoir Engineering	3
MINE 4635	Mining Engineering Capstone	2
MINE 4654	Mine Power Systems and Automation	3
MINE 4664	Resource Engineering Leadership Seminar	1
Technical Elective		3
	Credits	**15**
Spring Semester		
GEOS 4624	Mineral Deposits	3
MINE 4636	Mining Engineering Capstone	2
MINE 4644	Environmental Management for Mining and Geoenergy	2
Technical Elective		3
Pathways Concept 2, 3, 6a, or 7		3
	Credits	**13**
	Total Credits	**128**

Myers-Lawson School of Construction (Construction Engineering and Management Program)

Our Website (http://cem.mlsoc.vt.edu/)

Overview

The Myers-Lawson School of Construction offers students in the College of Engineering a Bachelor of Science Degree in Construction Engineering and Management. This degree is designed for students who wish to pursue a management or engineering career in the construction industry. The undergraduate program facilitates the development of critical technical, managerial and professional knowledge and skills required for entry into the construction industry or graduate studies. This body of knowledge includes the decision and optimization methods required to integrate and manage the resources essential to construction operations along with the skills that support the development of safe, ethical, socially responsible, and sustainable solutions for the built environment.

Construction managers plan, direct, and coordinate construction projects, including the building of all types of residential, commercial, and industrial structures, roads, bridges, and other public works projects. Construction managers coordinate and supervise the construction process from the conceptual development stage through final construction, ensuring the project is completed within time and budget constraints and is compliant with building and safety codes and other regulations.

The focus of this degree is construction management with engineering and business management as additional focus areas of study. The degree

retains an emphasis on engineering, with a focus on construction theory and applications, while providing students the opportunity to define the areas of business management they wish to study to complement their career goals. The program offers majors in Construction Engineering and Management and Construction Safety Leadership.

Coursework (CEM xxxx) focuses on the specific knowledge, skills and abilities (KSA) critical for successful Construction Engineering and Management. Additional coursework is leveraged from the Via Department of Civil and Environmental Engineering, and the Department of Building Construction. The latter department is also in the School.

Classroom instruction in the construction engineering and management program is reinforced by instructional laboratories, field trips and guest lectures by leading construction professionals. The program seeks to employ the latest educational technology and innovative teaching methods.

Students in the School have the opportunity to participate in a summer internship program during which they may apply the concepts learned in the classroom in real world applications. The School encourages all students to participate in professional work experience prior to graduation, and all students are encouraged to pursue their FE and PE licenses.

Accreditation

The Construction Engineering and Management Program is accredited by the Engineering Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Construction and Similarly Named Engineering Programs and is also accredited by the Applied and Natural Science Accreditation Commission of ABET, https://www.abet.org (https://www.abet.org/), under the commission's General Criteria and the Program Criteria for Construction and Similarly Named Engineering Programs.

Program Educational Objectives

The Program Educational Objectives of the Construction Engineering and Management program are that, within a few years of program completion, graduates should be effectively serving society as construction engineering and management professionals by:

- Identifying, designing, analyzing, integrating, and managing the technical, material, financial, legal, and personnel administration aspects that support construction operations, projects and organizations throughout the project lifecycle, i.e., from programming to decommissioning.
- Incorporate safety, efficiency, cost effectiveness, environmental sensitivity and social awareness into the development, planning and implementation of construction operations and processes.
- Apply skills of effective communication, entrepreneurship, teamwork, values-based leadership, professional and ethical behaviors that are the necessary complement to technical competence.
- Continue their professional development and learning which may include professional licensure or certification, graduate level education, continuing education courses, self-directed study and active involvement in the construction community.

Student Outcomes

The Student Outcomes defined knowledge, skills and abilities which a student should attain upon completion of the BS in Construction Engineering and Management degree. The Construction Engineering and Management Program has student outcomes that correspond to requirements for its accreditation under the Engineering Accreditation Commission (EAC) of ABET and the Applied and Natural Science Accreditation Commission (ANSAC) of ABET (as noted in parentheses below). The outcomes are that, by the time of their degree completion, students should have:

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. an ability to communicate effectively with a range of audiences.
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Class Size

Our goal is to keep the average class size for all CEM courses low, around 40 students per section. Our average entering class size each fall semester is around 60 students. We want to encourage students to get to know each other and their faculty and to provide opportunities for engagement with one another. Creating a warm, inviting, inclusive, and engaging community is a part of our culture in CEM.

Program Contact

he contact person for the undergraduate Construction Engineering and Management program is the CEM Program Chair Ashley Johnson. Ashley can be reached at alj@vt.edu.

- Construction Engineering and Management Major (p. 951)
- Construction Safety Leadership Major (https://catalog.vt.edu/undergraduate/college-engineering/construction-engineering-management/construction-safety-leadership-bs/)

Director: Brian Kleiner
Program Coordinator: Ashley Johnson
Principle Faculty: K. Afsari, A. Akanmu, X. Gao, L. Franklin, J. Iorio, A. Johnson, B. Kleiner, L. Lally, C. Smith

Undergraduate Course Descriptions (BC)

BC 1014 - Building A Strong Foundation for Success (2 credits)
Exploration of career options within the built environment and construction industry. Professional development, digital literacy, which will include creation of media and "personal brand" identity. Exploration of ideas from multiple viewpoints and perspectives. Oral, written, and visual presentation of ideas such as resume development. Introduction to ethical considerations. Reflection on "Self-as-Learner." Critical-Thinking skills as they apply to construction projects. Development of group roles as they apply to construction projects. Identification of universities resources, policies, procedures, academic and social engagement opportunities.
Instructional Contact Hours: (2 Lec, 2 Crd)

BC 1114 - Introduction to Building Construction (3 credits)
Introduction to construction with understanding of different market sectors, specializations, career path opportunities, industry stakeholders, and processes. Comprehension of quality assurance, control, project delivery systems, basic estimating, and scheduling. Application of communication skills to professional settings and use of basic calculations to solve construction math problems.
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 1124 - Construction Documents and Safety (2 credits)
Role of construction drawings and specifications. Interpretation of construction documents and creation of basic project documentation. Health, safety, and environmental hazards encountered in the construction industry. Design Lab Studio (1H, 2L, 2C)
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

BC 1214 - Introduction to Building Construction I (3 credits)
Introduction to construction with an overview of construction drawings and specifications, construction terminology, building codes and building systems, cost estimating and bidding, construction management processes, construction documents, load paths and foundations, construction health and safety, and hands-on experiential learning through lab exercises. Strategic career success factors and introduction to ethical decisions in construction management.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 1224 - Introduction to Building Construction II (3 credits)
Overview of the important areas of contracting and the workings of the construction industry. Application of construction management theory, processes, and terminology including, definable building systems, building code interpretations, the reading and preparing of basic construction drawings and integrating construction details and project specifications to derive safe construction means and methods, equipment section, cost estimates and time schedules.
Prerequisite(s): BC 1214 or BC 1114
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 2004 - Construction Surveying (1 credit)
Surveying in context of the construction process, basic surveying methods, equipment, emerging technologies, topographic surveying, and application to construction layout.
Prerequisite(s): BC 1124
Instructional Contact Hours: (1 Lec, 1 Crd)

BC 2014 - Construction Principles I (3 credits)
Fundamentals of the construction technology and process emphasizing project management/operations, materials and methods. Utilization of industry-specific technology/software applications, techniques and sequences/project loading for the construction of buildings in compliance with Construction Specifications Institute (CSI) Divisions 00-05, 31, 32, 33. Planning, scheduling, materials cost analysis, job-appropriate equipment and labor requirements, masonry applications, concrete and formwork. Site preparation and utilization, use of construction industry-specific software, interpretation of project drawing documents. Integration of project safety and health issues. Quantity surveying for the management of construction resources, according to current principles and industry standards.
Prerequisite(s): BC 1224 or BC 1124
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 2024 - Construction Principles II (3 credits)
Continuation of the fundamentals of construction technology and process emphasizing materials, methods, techniques and sequences for the construction of buildings using Construction Specifications Institute (CSI) Divisions 01, 06-14, 21. Interpretation of construction details relevant to a construction project. Cost impact of building codes and inspections. Development of presentation skills using project-based learning. Planning, scheduling, labor needs, and quantity surveying for the management of construction resources. Development of safety and quality assurance plans, including building systems for fire suppression.
Prerequisite(s): BC 2014
Corequisite(s): BC 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2044 - Construction Materials (3 credits)
Introduction to the life cycle, properties, behaviors, and sustainability impacts of common construction materials including wood, insulation, asphalt, ferrous and nonferrous metals, aggregate, concrete, masonry, glass, and plastics. Theory of materials including material properties; behavior under physical, thermal, and environmental loads; and interfaces between dissimilar materials. Methods and criteria for material comparison and selection for sustainable construction. Preparation of professional written reports as a team and individually; Project management for materials selection/application.
Corequisite(s): BC 2214
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 2064 - Integrated Construction I (3 credits)
Application of construction means, materials and methods related to quantity take-off, cost management, scheduling, resource management, document drawing, building information modeling in support of a selected project. Project cost impact of building code requirements. Emphasis on structural components of selected project.
Prerequisite(s): BC 2014 and BC 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2104 - Building Effective Construction Teams (3 credits)
Introduction to leadership behavior styles and their impact on construction management team performance, including analysis of how ethical behavior and individual strengths support positive relationship-building. Development of management strategies to maximize positive conflict outcomes through trust-building between construction project stakeholders. Identification of the role that implicit bias plays in decision-making within diverse project teams. Development of presentation skills for a construction audience.
Prerequisite(s): BC 1224 or BC 1124
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2114 - Information Technology in Design and Construction (3 credits)
Building delivery and project management improvements through the use of information technology (IT) are explored, including scheduling software, building information modeling (BIM) tools, and virtual design and construction (VDC) simulation software and their corresponding theories and concepts that integrate design and construction. Use BIM/VDC tools for graphical presentations, databases, and spreadsheets.
Prerequisite(s): BC 1224 or CEM 2104 or BC 1124
Corequisite(s): BC 2014
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2134 - Construction Data Analysis (2 credits)
Identification and use of various types and sources of construction market data and the tools for analyzing construction data to support managerial decision making. Different forms of applying mathematics to the construction market for better productivity and processes across the construction industry. Develop insights to inform management and investment decisions. Use of cost-benefit analysis as applied to construction management in determining feasibility of projects.
Prerequisite(s): MATH 1025 or MATH 1225
Instructional Contact Hours: (2 Lec, 2 Crd)

BC 2214 - Why Buildings Stand Up (3 credits)
Overview of fundamental principles explaining why structures remain stable under various loading conditions. Explores different types of structures and applied loads and analyzes both determinate and indeterminately supported structures. Calculation of shear, bending moments, deflections in beams, and buckling. Discussion of ethical impacts on user safety and hazard avoidance, in project design and construction methods, materials, etc. Explores different types of soil composition and their strength properties.
Prerequisite(s): (BC 1224 or BC 1124) and (MATH 1025 or MATH 1225)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2354 - Residential Construction Technologies (3 credits)
Identify and evaluate conventional construction materials, methods, building systems, and products to less-familiar, innovative technological alternatives for a specific residential construction project. Compare innovative technological alternatives with material and cost estimates. Overview of conventional materials, equipment, designs, and processes in residential construction. Investigate recent literature on emerging technologies to determine best practices. Strengthen understanding of the primary building systems in residential construction applications.
Prerequisite(s): BC 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 3014 - Building Physics and Environmental Systems (3 credits)
Theory and analysis methods relative to performance of envelope systems and the design and integration of mechanical and electrical building systems. Topics covered include: envelope systems and performance metrics, conceptual and technical design theory, operational principles, and maintenance issues, all necessary for determining the selection of passive and active environmental control systems within a building including: envelope system, heating, ventilation, air conditioning, lighting, and acoustical systems.
Prerequisite(s): PHYS 2205 and PHYS 2215 or PHYS 2305
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 3064 - Integrated Construction II (3 credits)
Application of construction means, materials and methods as they relate to quantity take-off, cost management, scheduling and resource management, document drawing, building information modeling in support of a selected project. Emphasis on building systems components of selected project.
Prerequisite(s): (BC 2064 or CEM 2104) and (PHYS 2205 and PHYS 2215 or PHYS 2305)
Corequisite(s): BC 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 3114 - Building Systems Technology (3 credits)
Emphasis is placed on the integration and physical installation of passive and active environmental control systems including: heating, ventilation, air conditioning, lighting, acoustics, plumbing, and fundamentals of thermal loads.
Prerequisite(s): BC 2024 and (PHYS 2305 or PHYS 2205 and PHYS 2215) or (CEM 2104 and PHYS 2305)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 3134 - Temporary Structures in Construction (3 credits)
Introduction to temporary structure systems used to support construction operations. Concrete formwork, scaffolding systems, excavation shoring systems, dewatering techniques, and hoisting operations. Assessment of systems, cost, quality, safety, sustainability, and schedule impacts.
Prerequisite(s): (BC 2044 and BC 2024 and BC 2214) or CEE 3684
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CEM 3134

BC 3954 - Study Abroad (1-19 credits)
Study abroad in Spain.
Instructional Contact Hours: Variable credit course

BC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 4024 - Estimating, Production, and Cost Engineering (3 credits)
Interpretation of plans and specifications, preparation of construction estimates, and cost control. Methods analysis, resource requirements, and resource costs in building systems, including system components, and in large-scale civil engineering works such as highways, bridges, and hydraulic structures.
Prerequisite(s): CEE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CEE 4014

BC 4064 - Integrated Construction III (3 credits)
Application of construction means, materials and methods as they relate to quantity take-off, cost management, scheduling and resource management, document drawing, building information modeling in support of a selected project. Emphasis on administrative/general contractor functions (such as project safety, budget development, and permitting) of the selected project.
Prerequisite(s): BC 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4114 - Building Information Modeling in Design and Construction (3 credits)
Introduction to means and methods to enrich the geometric information of a building model with semantic data such as, material, structural and performance values. Concept of interoperability in architecture, engineering and construction industry. Overview of approaches to information modeling such as Standard for the Exchange of Product model data (STEP), Industry Foundation Classes (ifc), Construction Operations Building Information Exchange (COBie) and Green Building XML (gbXML). Key concepts of object-oriented modeling and programming.
Prerequisite(s): BC 2114 or (ENGE 1215 and ENGE 1216)
Corequisite(s): CS 1014
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4124 - Digital Construction & Manufacturing (3 credits)
Explore working principles, design projects, & experiment with construction digital information modeling, computer numerical control (CNC), and computer aided manufacturing (CAM) processes. Fundamentals of digital prototyping. Analysis of the industry tools such as 3D scanners, 3D printers, CNC manufacturing techniques, and others, used to provide familiarity with technologies & provide understanding of their benefits & limitations.
Prerequisite(s): BC 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4164 - Production Planning and Process Design for Construction (3 credits)
The course deals with the planning and design of construction processes. Course topics include production systems, behavior of construction systems and workers, the relationships between subsystems in the construction process, queuing systems, process modeling and simulation. The major emphasis is on production and productivity. Production problems that typically occur in construction systems are discussed. The course also explores recent innovations in construction system design such as lean construction and agile construction.
Prerequisite(s): BC 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4264 - Fundamentals of Construction Management (6 credits)
Practical construction management methods within the built environment. Construction materials, document drawings, management activities, fundamentals of construction scheduling and planning. Quality, quantity, and cost of materials necessary to complete a construction project. Construction information technology tools. Partially duplicates BC 2014 and 2114. Pre: Junior Standing.
Instructional Contact Hours: (6 Lec, 6 Crd)

BC 4314 - Building Performance and Energy Management (3 credits)
Fundamentals of building performance mandates for the built environment. Practical means and methods for evaluating building performance metrics within integrated design including acoustic performance, visual performance, and indoor air quality and management. Specific focus on energy resources consumed by thermal, hygrothermal, lighting, and other environmental building systems. Assessment of building energy consumption and analysis of retrofit scenarios through performance evaluation over the entire building life cycle.
Prerequisite(s): BC 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4324 - Innovation in Residential Construction (3 credits)
Mechanisms of historical and current innovations in the residential construction industry. Theory and application within the realms of innovation, diffusion, technology, adoption, new product development, housing innovation literature, supply chain management, sustainability, information technology, commercialization, and housing policy. Innovation theories and applications to residential construction through the analysis and utilization of data-driven hypotheses typical to the industry.
Prerequisite(s): BC 2354 and BC 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4334 - Sustainable Building Performance Management (3 credits)
Introduction to means and methods for managing the sustainability of buildings and their performance over the life cycle. Best practices for sustainable projects in the areas of planning/development, site design, project management, energy and water conservation and green building assessment tools and methods; Leadership in Energy and Environmental Design (LEED) rating system; economic analysis of green building alternatives; and implementation planning.
Prerequisite(s): BC 3064 and BC 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4364 - Lifecycle BIM for Facility Management (3 credits)
BIM (Building Information Modeling) concepts and tools that are critical for facility operation and maintenance. Identifying, capturing, analyzing, exporting and exchanging facility lifecycle data. Spreadsheet-based and BIM based facility management platforms. Case studies and real-life application for understanding mechanical, electrical, and plumbing systems from an owner or facility manager perspective. Workflow processes for data exchange.
Prerequisite(s): BC 2114 and BC 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4374 - Residential Housing and Land Development (3 credits)
Application of means, methods, and strategies for delivering single and multi-family residential housing in urban and suburban contexts. Project planning, including market analysis to determine highest and best use of an identified property, marketing and sales strategies, site and product design and procurement, infrastructure requirements, zoning and government agency regulations, financial analysis and feasibility study, financing strategies, and delivery control systems. Roles of developer and project team in preparing formal proposals for a housing development to be submitted for financing. Identification and application of interfaces with project stakeholders. Overview of contemporary topics such as green development and affordable housing.
Prerequisite(s): BC 2354 and BC 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4434 - Construction Practice I (3 credits)
Explores advanced business and management practices and applications to vertical construction projects. Topics include scope, planning and scheduling, assemblies estimating, cash flow controls. Creation of work breakdown structure, application of concepts of assemblies estimating and general conditions to interpret insurance and contract requires along with digital construction practices.
Prerequisite(s): BC 3064 and BC 3114 and BC 3134
Corequisite(s): BC 4064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4444 - Construction Practice II (4 credits)
This course explores and applies the business and construction practices related to operation of a construction company to a capstone experience. Construction operation is examined as it relates to construction, financial and personnel management. Project management topics studied in this course are applied in the corequisite lab. This course is formally designated as a writing intensive course. Formal written and edited and oral presentations are presented and critiqued by the BC faculty team, the writing resource center, students and industry professionals.
Prerequisite(s): BC 4434
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BC 4754 - Internship (1-3 credits)
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

BC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (CEE)

CEE 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 2804 - Introduction to Civil and Environmental Engineering (3 credits)
Overview of the specialty areas within the civil engineering profession, professional engineer licensing, and engineering ethics. Includes recognizing contemporary issues in civil engineering, civil engineering work in the surrounding community, and the impact of civil engineering solutions on society. Emphasizes successful personal business practices for civil engineering professionals, to include the fundamentals of effective oral, written, and visual communication skills for the Civil Engineer. Introduction to engineering library resources. For Pathways Advanced Discourse credit, must complete combination of CEE 2804, CEE 3304, CEE 4804
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 2814 - Geomatics (4 credits)
Introduction to data measurement issues in the civil and environmental engineering sub disciplines. Collection techniques, analysis, errors, statistical description and visualization. Spatial measurements such as leveling, distance and angles, mapping and topographic surveys, the Global Positioning System, LiDAR, terrain models, earthwork methods, construction surveying, coordinate systems, and Geographic Information Systems. Non-CEE students are exempt from the CEE 2834 corerequisite.
Prerequisite(s): ENGE 1216 or ENGE 1414
Corequisite(s): CEE 2834
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

CEE 2834 - Civil Engineering Drawings and Virtual Modeling (3 credits)
Introduction to the use of Computer-Aided Drafting, Building Information Modeling and Geographic Information Systems software. Interpretation of civil engineering drawings. Creation of civil engineering plans and two- and three- dimensional visualizations. Professional collaboration tools. Basemap creation. Basic analysis tools utilizing Geographic Information Systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 3014 - Construction Management (3 credits)
Introduction to the fundamental elements involved in managing construction projects. Project lifecycle, delivery methods and contracts, equipment and labor productivity, scheduling, and cost estimating and control. Pre: Junior standing
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3104 - Introduction to Environmental Engineering (3 credits)
Overall view of environmental engineering with emphasis on hazardous waste management, water treatment, wastewater treatment, air pollution and its control, solid waste management, groundwater pollution and environmental regulations.
Prerequisite(s): CHEM 1035 and CHEM 1045 and (MATH 1026 or MATH 1206 or MATH 1206H or MATH 1226 or MATH 2016 or MATH 2024) and (PHYS 2305 or PHYS 2205)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3274 - Introduction to Land Development Design (3 credits)
An introduction to the land development design process including site selection and feasibility, environmental considerations, utility layout, grading, stormwater management and integrating planning with the design of infrastructure to support residential and commercial development.
Prerequisite(s): CEE 2814 and (CEE 2824 or CEE 2834)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3304 - Fluid Mechanics for Civil and Environmental Engineering (4 credits)
Introductory course in fluid mechanics. Includes concepts and measurements of fluid properties; computing hydrostatic and hydrodynamic forces on hydraulic structures; computing fluid pressures, discharges, and velocities; and determining energy losses in pipe flows. Course includes conducting hydraulic laboratory experiments and demonstrations, analyzing and interpreting collected data, and preparing technical laboratory reports. Emphasizes the fundamentals of effective interpersonal, written, and visual communication skills for technical civil engineering reports. Design Lab/Studio. For Pathways Advanced Discourse credit, must complete combination of CEE 2804, CEE 3304, CEE 4804
Prerequisite(s): ESM 2104 and CEE 2804
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3314 - Water Resources Engineering (4 credits)
Open channel flow; hydrology; hydraulic modeling; hydraulic machinery and structures; laboratory experiments and demonstrations. Design Lab/Studio.
Prerequisite(s): CEE 3304
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3404 - Introduction to Structural Engineering (3 credits)
Introduction to structural engineering as an art and science and its fundamental tenets; description of structural systems, structural loads, and load paths; structural models, case studies of successful and unsuccessful structural designs; calculations of forces and deformation for simple determinate structures (trusses, beams and simple frames) and indeterminate structures using virtual work, use of stiffness methods in computer programs.
Prerequisite(s): ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3424 - Reinforced Concrete Structures I (3 credits)
Behavior and design of reinforced concrete members based on ultimate strength. Uncertainty, load and resistance factors. Load paths in framing systems. Beams, columns and slabs in flexure and shear. Deflections and crack control. Design of reinforced concrete members. Columns under axial forces, shear and flexure.
Prerequisite(s): (CEE 3404 or BC 2214) and (CEE 3684 or BC 2044)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3434 - Design of Steel Structures I (4 credits)
Properties and behavior of structural steel. Design of steel members and connections using American Institute of Steel Construction specifications. Consideration of loads, structural safety, and serviceability. Design of members to resist tension, compression, and bending. Design of basic steel connections including tension connections, bearing plates, and base plates. Team-based design project to design a simple steel framed building. Design Lab/Studio.
Prerequisite(s): (CEE 3404 or BC 2214) and (CEE 3684 or ESM 3054 or BC 2044)
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3514 - Introduction to Geotechnical Engineering (4 credits)
Introduction to soil as an engineering material for construction and infrastructure support. Geological processes, soil classification, phase relations, geostatic and applied stresses, permeability, seepage effects, settlement, and strength. Laboratory testing, interpretation, and presentation of results. Application of geotechnical principles to civil and environmental engineering problems. Design Lab/Studio.
Prerequisite(s): ESM 2204 and GEOS 2104
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3604 - Introduction to Transportation Engineering (3 credits)
Planning, design and operation of transportation systems with emphasis in multimodal transportation techniques and unified system engineering theories to analyze large scale transportation problems. Discussion of Intelligent Vehicle Highway Systems (IVHS) and hands on experience in computer models in transportation operations and planning. Interactions between transportation infrastructure and environmental engineering planning. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3684 - Civil Engineering Materials (4 credits)
Fundamental nature and performance of civil infrastructure materials, including metals, portland cement concrete, asphalt concrete, polymers, and wood. Material properties, microstructure, and mechanical behavior. Laboratory experimental procedures and standardized testing, property variability, durability, sustainability and resilience. Design of cementitious and asphalt mixtures, experimental design, non-destructive testing. Design lab/studio.
Prerequisite(s): CHEM 1045 and CHEM 1035 and ESM 2204 and GEOS 2104 and (CEE 2814 or CEM 2824)
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3804 - Computer Applications for Civil and Environmental Engineers (3 credits)
Introduction to computer applications in civil and environmental engineering. Integration of quantitative analysis for design, data management, computer programming and problem solving skills with computer tools and techniques. Topics include systems analysis, numerical methods, optimization, data mining, computer programming and data queries. Analysis and interpretation of a global data set. Pre: Junior Standing.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3814 - Analytical Tools in Civil and Environmental Engineering (3 credits)
Computer programming and data analysis for civil and environmental engineering projects. Acquiring, cleaning and pre-processing data sets. Probability distributions, hypothesis testing, and regression modeling. Time series and frequency analysis. Data visualization.
Prerequisite(s): CEE 3804
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

CEE 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 4014 - Estimating, Production, and Cost Engineering (3 credits)
Interpretation of plans and specifications, preparation of construction estimates, and cost control. Methods analysis, resource requirements, and resource costs in building systems, including system components, and in large-scale civil engineering works such as highways, bridges, and hydraulic structures.
Prerequisite(s): CEE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BC 4024

CEE 4024 - Construction Control Techniques (3 credits)
Techniques used to plan, schedule, and control the Construction Process. Emphasizes manual and computer-based approaches. Focuses on an analytical approach towards the construction process whereby good technical methodologies and solutions are converted to reality through construction practices. A grade of C- or better required in prerequisite.
Prerequisite(s): CEE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4034 - Smart Sustainable Infrastructure (3 credits)
Challenges and barriers to sustainable infrastructure. Effects of a changing planet and society on current infrastructure systems. Technology and data use for engineering. Infrastructure data interpretation. Data-driven engineering solutions.
Prerequisite(s): CEE 3804
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4074 - Construction Engineering: Means and Methods (3 credits)
Construction means, methods, and equipment used to transform a particular design concept into a completed usable structure or facility. Selection and optimization of individual units as well as the systems needed to produce the required work to the required quality on time and on budget.
Prerequisite(s): CEE 3014 or CEM 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4104 - Water and Wastewater Treatment Design (3 credits)
Design of municipal water and wastewater treatment plants. Emphasis on characterization of water and wastewater and physical, chemical, and biological treatment methods. Sludge processing advanced treatment methods and treatment plant hydraulics are considered. A grade of C- or better required in prerequisites.
Prerequisite(s): CEE 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4114 - Fundamentals of Public Health Engineering (3 credits)
Public health engineering principles for protection against biological and chemical health hazards. Emphasis on major communicable diseases that plague mankind, organisms that cause them, routes of transmission, and engineering methods of control. Appropriate control methods for rural areas and developing countries.
Prerequisite(s): CEE 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4134 - Environmental Sustainability - A Systems Approach (3 credits)
Quantitative methods to evaluate environmental sustainability using a sytems approach. Sustainability assessment frameworks, oreintors and indicators, indicators of sustainable development, green-house gas emissions, renewable energy systems, whole-system design, economic systems and input-outpur techniques, system dynamics models, emergence and agent-based models. Class project requiring integration of environmental, economic and social systems using system dynamics and agent-based models. Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4144 - Air Resources Engineering (3 credits)
Effects, regulation, sources, and control of air pollution. Application of engineering calculations and models to estimate emissions, predict pollutant concentrations, and design pollution control equipment. Senior standing required. A grade of C- or better required in prerequisites.
Prerequisite(s): CEE 3104 or ENGR 3124 or GEOS 3114 or ENSC 3634
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4174 - Solid and Hazardous Waste Management (3 credits)
Introduction to the problems, regulations and techniques associated with the management of solid and hazardous waste. Composition, volume and characterization of the wastes. Design of collection and disposal systems, including landfills, solidification/stabilization and incineration. A grade of C- or better required in pre-requisite 3104.
Prerequisite(s): CEE 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4254 - Municipal Engineering (3 credits)
An introduction to the field of municipal engineering. Infrastructure, capital projects, financing, sustainability, disaster planning and response, and plan review for development projects. Senior standing required.
Prerequisite(s): CEE 3274
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4264 - Sustainable Land Development (3 credits)
An introduction to the modern techniques for developing land while maintaining a focus on long-term sustainability. Topics include site layout, stormwater impact, air quality and microclimate, living resources, LEED and EarthCraft development standards. Pre-requisite: Senior Standing required
Prerequisite(s): CEE 3274
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4274 - Land Development Design (3 credits)
Overview of land development projects including construction practices, legal issues, and government policies. Feasibility study, engineering evaluation. Grading and roadway design, layout design of lots, buildings, streets, sewers, and stormwater control. Interactive graphics and automated drafting.
Prerequisite(s): CEE 3274
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4284 - Advanced Land Development Design (3 credits)
Advanced course in land development design focusing on site grading and parking, stormwater management, and erosion control. Reviews project design criteria and applicable municipal and state guidelines. Uses CAD software for design and deliverables. Senior/Graduate standing required.
Prerequisite(s): CEE 3274
Corequisite(s): CEE 4274
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4304 - Hydrology (3 credits)
Precipitation, evaporation, consumptive use, infiltration; stream flow, flood routing; statistical analysis of hydrologic data, flood and drought forecasting, risk analysis, subsurface flow, well hydraulics, introduction to urban drainage design. A grade of C- or better required in pre-requisite.
Prerequisite(s): CEE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4314 - Groundwater Resources (3 credits)
Fundamentals of groundwater hydrology; flow through porous media, both saturated and unsaturated; flow to wells in both confined and unconfined aquifers; seepage of groundwater to canals and field drains; analysis of aquifer test data to quantify flow and storage parameters; contaminants in groundwater, basic introduction to groundwater modeling. A grade of C- or better required in pre-requisite 3304.
Prerequisite(s): CEE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4324 - Open Channel Flow (3 credits)
Mechanics of open channel flow, including uniform flow, gradually varied flow, channel transitions, and unsteady flow.
Prerequisite(s): CEE 3314
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4334 - Hydraulic Structures (3 credits)
Hydraulic analysis and design of engineering structures for water control, including reservoirs, dams, spillways, spilling basins, drainage structures, and hydraulic models.
Prerequisite(s): CEE 3314
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4344 - Water Resources Planning (3 credits)
Analysis of the water resources planning process and the institutional framework for water resources management. Criteria and procedures for evaluating management alternatives are examined, with emphasis on assessment of economic and environmental impacts. Senior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4384 - Coastal Engineering (3 credits)
Basic wave mechanics principles, surf-zone processes, littoral and sediment processes, shoreline features, astronomical tides, coastal hazards, and functional design of coastal structures. Field trips.
Prerequisite(s): CEE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4394 - Urban Water Sustainability (3 credits)
Coupled socio-hydrologic feedback loops and implications for water systems resilience. Urban water transitions theory and the evolution of water systems through time. Water productivity and the soft path for water. Ecosystem services. Urban water system challenges, including climate change, urbanization, equity and environmental justice, and water security. Centralized and distributed drinking water, stormwater, and wastewater treatment systems. Statistical analysis of urban water systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4404 - Intermediate Structural Analysis (3 credits)
Analysis of statically indeterminate 2D and 3D beam, truss and frame structures by the force and displacement methods. Computer implementation of force method. Influence lines and approximate methods of analysis.
Prerequisite(s): CEE 3404
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4454 - Masonry Structural Design (3 credits)
Masonry materials, material testing, material specifications. Structural behavior and design of masonry elements (walls, beams, and columns) and systems used in structures. Construction techniques and the details of masonry construction. Building codes relating to analysis and design of masonry structures.
Prerequisite(s): CEE 3684 and CEE 3424
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4514 - Methods in Geotechnical Engineering (3 credits)
Principles and techniques for characterizing earth materials (soil and rock) for civil engineering projects in various regional environments; with emphasis on the interdisciplinary approach to field exploration and site description through soil mechanics theory, geologic correlations, geophysical methods, in site testing and sampling. A grade of C- or better required in pre-requisite 3514.
Prerequisite(s): CEE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4534 - Earth Pressures and Foundation Structures (3 credits)
Earth pressure theories and their applications to the design of retaining structures, anchors, and excavation bracing. Bearing capacity and settlement of shallow foundations. Types and capacity of deep foundations.
Prerequisite(s): CEE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4544 - Design of Earth Structures (3 credits)
Application of geotechnical engineering principles in the design and construction of earth structures. Subsurface models, shear strength of soil, slope stability, earth fills, earth retention, ground improvement, sustainability considerations, geotechnical reporting. Team-based design project.
Prerequisite(s): CEE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4554 - Natural Disaster Mitigation and Recovery (3 credits)
Causes, mechanics, classifications, and forces associated with tornadoes, hurricanes, floods, earthquakes, and landslides. Resistance evaluation for existing ground, facilities and structures. Hazard-resistant design of new facilities. Risk and reliability assessment and decision analysis. Strategies and designs for natural disaster risk mitigation. Emergency response for protection of life and property and restoration of lifelines. Includes an interdisciplinary team project. Prerequisite: Senior Standing Required
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4564 - Introduction to Coastal and Marine Geotechnics (3 credits)
Geotechnical aspects of coastal and marine engineering. Introduction to the coastal zone as a working environment. In-situ geotechnical methods and complementary techniques for investigation. Survey strategies. Local field trips for demonstrating methods, practice and design. A grade of C- or better is required in prerequisite 3514.
Prerequisite(s): CEE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4604 - Traffic Engineering (3 credits)
Study of traffic and parking characteristics; application of traffic control devices; principles and techniques used to improve the efficiency and safety of traffic flow systems. A grade of C- or better required in pre-requisite 3604.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4610 - Mechanics of Composite Materials (3 credits)
Introduction to the deformation, stress, and strength analysis of continuous-fiber-polymer-matrix laminated composites. Fabrication, micromechanics of stiffness and expansional coefficients, classical lamination theory (CLT). Environmentally induced stresses. Computerized implementation and design
Prerequisite(s): ESM 2204 or AOE 2024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4044

CEE 4614 - Concrete Materials (3 credits)
Fundamental properties of portland cement concretes. Concrete mixture design procedures. Testing of fresh and hardened properties of concrete. Durability and degradation mechanisms. Condition assessments, forensic materials engineering, and repair strategies.
Prerequisite(s): CEE 3684 or BC 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4624 - Planning Transportation Facilities (3 credits)
Transportation planning process; urban and regional studies, surveys, data analysis, model development and testing; transportation management, administration, finance, system evaluation, implementation, and integration.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4634 - Infrastructure Condition Assessment (3 credits)
Infrastructure components and assessment needs; physical and chemical properties of construction materials; deterioration causes, assessment methods, nondestructive evaluation techniques, infrastructure management systems, performance models, service-life-cycle estimates.
Prerequisite(s): CEE 3684
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4654 - Geometric Design of Highways (3 credits)
Functional design of highways; curves, intersections, interchanges, drainage, and other features involved in highway safety and traffic efficiency.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4664 - Pavement Design (3 credits)
Principles underlying methods for the design of various elements of flexible and rigid pavements for highways and airports; climate and traffic effects; pavement management systems. A grade of C- or better required in pre-requisite 3684.
Prerequisite(s): CEE 3684
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4674 - Airport Planning and Design (3 credits)
Airport planning and economic justification, site selection, configuration, development and design of terminal areas, demand forecasting, access, traffic control. A grade of C- or better required in pre-requisite 3604.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4684 - Transportation Safety (3 credits)
Basic principles associated with transportation safety related to humans, vehicles and infrastructure as well as principles of design for safety and practices of empirical evaluation of safety. Principles and practices of accident investigation and injury epidemiology as well as safeguards and control practices. A grade of C- or better required in prerequisite.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4694 - Freight Operations (3 credits)
Introduction to the operation of modal and intermodal freight facilities. Impact of goods movement on the multi-modal transportation system. Role of privately owned and operated goods movement on public sector transportation operations, management, and decision making. Communication of impacts.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4804 - Professional and Legal Issues in Civil Engineering (3 credits)
An overview of civil engineering professional practice, including business etiquette, professional development, leadership, and lifelong learning. Emphasizes the importance of registration for civil engineers. Compares and contrasts common project delivery methods, processes, key players, and management topics for the design and construction industry. Incorporates analyses of legal and ethical aspects of civil engineering practice. Analyzes contemporary issues and public policies that impact the civil engineering profession, and the impacts of civil engineering solutions on society. Emphasizes effective written, oral, and visual professional communication for the civil engineering professional. For Pathways Advanced Discourse credit, must complete combination of CEE 2804, CEE 3304, CEE 4804
Prerequisite(s): CEE 2804
Corequisite(s): CEE 3304
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4814 - Risk and Reliability Analysis in Civil and Environmental Engineering (3 credits)
Risk assessment and reliability analysis as applied to civil engineering applications. Identification and modeling of non-deterministic problems in civil engineering design and decision making. Application of probability and statistics to performance analysis. Development of probabilistic engineering safety assessments.
Prerequisite(s): CEE 3804
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4824 - Introduction to Forensic Engineering (3 credits)
Basic processes in engineering failure investigations: response, data gathering, testing, modeling, and reporting. Origins of natural and man-made disasters, role of building codes and material specifications, standard of care, ethical standards and legal issues as related to forensic engineering.
Prerequisite(s): CEE 3684 and ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4834 - Cyber-Physical and Remote Sensing Methods in Civil Engineering (3 credits)
Cyber-physical systems and remote sensing methods in civil engineering. Electrodynamics and fundamental physical operating principles. Sensing and sensor deployment strategies. Data acquisition and reduction. Signal and image processing techniques. Data interpretation, management, and curation.
Prerequisite(s): CEE 3814 or BSE 3144
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4844 - Building Information Modeling and Integrated Practices (3 credits)
Introduction to Building Information Modeling (BIM). Architectural modeling, custom parametric object creation, virtual structural modeling. Constructability and construction management analysis. Reality capturing technologies. Virtual reality and immersive virtual environments. Contemporary topics and new directions for BIM technologies. Pre: Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (CEM)

CEM 1974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEM 2104 - Introduction to Construction Engineering and Management (3 credits)
Overview of the construction engineering and management profession specialty areas. Introduction to the undergraduate program of study. Fundamentals of effective oral, written and visual communication skills. Professionalism, ethics, and legal issues relating to the industry. Contemporary issues facing the industry. Engineering library resources. Project drawings, computer aided design (CAD), and responding to Requests for Proposals (RFPs).
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 2404 - Construction Project Documents (1 credit)
Interpret design documents for construction projects. Analyze project documents to select appropriate construction engineering methods. Quantify materials using appropriate methods and technology. Review and comparison of construction documentation in various industry sectors. Identify information required for construction that is missing or ambiguous in the design documentation. Create and analyze a request for information (RFI) to modify and update the project documentation.
Corequisite(s): CEM 2104
Instructional Contact Hours: (3 Lab, 1 Crd)

CEM 2714 - Construction Safety Systems (3 credits)
Introduction to construction safety and the importance of safety, health, and wellness in the construction industry. Identify systematic safety issues and safety management systems, evaluation of safety systems through MEAD (MacroErgonomic Analysis and Design) methodology to recommend safety management systems to improve safety outcomes on construction operations. Assess health, safety, and wellness initiatives for construction worker safety and well-being. Pre: Sophomore Standing
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 2824 - Construction Site Analysis (3 credits)
Geospatial information, Global Positioning Systems (GPS), surveying, and aerial photography for condition assessment, solving construction engineering problems, and managing construction control processes. Topographic survey methodology for field layout and stakeout processes in construction. Geospatial data collection techniques for construction risk analysis. Document existing site conditions. Use of software, and custom program tools. Individual and team projects and presentations.
Corequisite(s): 2104 or BC 1224 or CEE 2834.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

CEM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEM 3024 - Construction Estimating and Scheduling (3 credits)
Introduction to estimating and scheduling of construction operations using construction documents. Quantity takeoff, resource and crew enumeration, network logic, activity durations, Critical Path Method (CPM) and Location-Based Management System (LBMS). Bid assembly with markups. Construction decisions based on ethical principles. A grade of C- or better is required in prerequisite.
Prerequisite(s): CEM 2104 or BC 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 3064 - Intro to Lean Construction (3 credits)
Introduction to Lean Construction thinking, principles, and practices, definitions, history, theory, and fundamentals related to project production systems. Operating system, organization practices, commercial terms. Pull planning and Last Planner System, teh Big Room concept, and Integrated Form of Agreement (IFOA). Conventional Lean practices A3 problem solving, 5 Whys Root Cause Analysis, and 5s Methadology. Continuous improvement, respect for people, elimination of waste, reducing variability and increasing plan reliability.
Prerequisite(s): CEM 2104 or BC 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 3074 - Global Design and Construction for Sustainable Development (3 credits)
A collaborative approach for applying engineering systems and design to global issues. Design, engineering, and construction focused on social responsibility in the global village. Multi-disciplinary teamwork requiring identification of client needs and design considerations, development of site layouts, selection of resources, management of schedule, cost, materials, personnel, quality, and jobsite safety. Applied conflict handling skills and self-reflection on social responsibility, service, intercultural global awareness, and evaluating the success of sustainable projects. May be repeated one time with different content for a maximum of six credits. Multi-day field trip required. Pre: Junior Standing.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

CEM 3084 - Construction Economy (3 credits)
Engineering economics, accounting, finance, and entrepreneurship. Construction financial management and financial decision-making. Construction financial risk, estimation, and generation of financial statements. Construction company creation and business plan development. Assessment of construction project delivery methods and impacts of retainage, bonding, and taxation.
Prerequisite(s): CEM 2104 or BC 2024
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 3134 - Temporary Structures in Construction (3 credits)
Introduction to temporary structure systems used to support construction operations. Concrete formwork, scaffolding systems, excavation shoring systems, dewatering techniques, and hoisting operations. Assessment of systems, cost, quality, safety, sustainability, and schedule impacts.
Prerequisite(s): (BC 2044 and BC 2024 and BC 2214) or CEE 3684
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BC 3134

CEM 3154 - Smart Construction (3 credits)
Introduction to smart construction, definitions, principles and practices. Exploration of inefficiencies associated with the traditional approaches to construction. Intelligence requirements of the building lifecycle. Smart planning and contracting practices, and facilitating technologies. Smart design principles, techniques, technologies, strategies for involving down-stream stakeholders in the design of buildings for constructability and maintainability. Overview of digital infrastructure, types, selection and role in integrating the design and construction phases.
Prerequisite(s): BC 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 3164 - Construction Health and Safety (3 credits)
Introduction to fundamentals of Occupational Health and Safety (OHS) for the construction industry. History of OHS regulation and specific governmental regulations, standards and laws. Health, safety, and environmental hazards identification. Methods of quantifying exposure and estimating risk. Design and prioritization of control solutions to mitigate hazards. Contemporary issues and theoretical frameworks in the field of OHS management relevant to the industry. Prevention through Design, behavior-based safety, different construction project delivery methods, safety climate and culture, control banding, and systems safety.
Corequisite(s): CEM 2104 or BC 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 3714 - Controlling Construction Safety Hazards (3 credits)
Perceive, recognize (cognitive recall), and examine/classify (decision making) construction safety hazards and their underlying energy sources. To control hazards, the construction hierarchy of controls guides a safety by design methodology. Accident investigation or forensic processes using design-based arguments to determine root causes of incidents. Pre: Sophomore Standing
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEM 4024 - Construction Law and Contract Administration (3 credits)
Application of contract law, torts, and statutory law in construction. Legal context, parties, interpreting contracts and specifications, contract changes, differing site conditions, delays, disruptions, and acceleration. Dispute avoidance and resolution. Ethics and risk management. Pre: Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4314 - Design of Wood Structures (3 credits)
Analysis and design of wood structures comprised of solid wood and/or composite wood products. Evaluation of mechanical properties of wood materials. Design of individual tension, compression and bending members, and wood-steel dowel connections. Lateral loading design of diaphragms and shearwalls.
Prerequisite(s): SBIO 3314 or CEE 3404
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SBIO 4314

CEM 4445 - CEM Capstone (3 credits)
4445: Preliminary design of infrastructure, planning and scheduling of design and construction, cost estimating and budgeting, life cycle cost analysis, application of technology to support construction, maintenance, and facilities operation, and project risk management. Collaboration-based course utilizing design-build project delivery methodology. Design and construction considerations include public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. Underpinning themes include safety and constructability by design, sustainability, resilience, and reliability. 4446: Final design of infrastructure, planning and scheduling of design and construction, cost estimating and budgeting, life cycle cost analysis, application of technology to support construction, maintenance, and facilities operation, and project risk management. Collaboration-based course utilizing design-build project delivery methodology. Design and construction considerations include public health, safety, and welfare, as well as global, cultural, social, ethical, environmental, and economic factors. Underpinning themes include safety and constructability by design, sustainability, resilience, and reliability. The final deliverable includes a comprehensive written proposal and oral presentation. Pre: Senior standing.
Prerequisite(s): CEM 3024
Corequisite(s): CEM 3134
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4446 - CEM Capstone (3 credits)
4445: Preliminary design of infrastructure, planning and scheduling of design and construction, cost estimating and budgeting, life cycle cost analysis, application of technology to support construction, maintenance, and facilities operation, and project risk management. Collaboration-based course utilizing design-build project delivery methodology. Design and construction considerations include public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. Underpinning themes include safety and constructability by design, sustainability, resilience, and reliability. 4446: Final design of infrastructure, planning and scheduling of design and construction, cost estimating and budgeting, life cycle cost analysis, application of technology to support construction, maintenance, and facilities operation, and project risk management. Collaboration-based course utilizing design-build project delivery methodology. Design and construction considerations include public health, safety, and welfare, as well as global, cultural, social, ethical, environmental, and economic factors. Underpinning themes include safety and constructability by design, sustainability, resilience, and reliability. The final deliverable includes a comprehensive written proposal and oral presentation. Pre: Senior standing.
Prerequisite(s): CEM 3084 and CEM 4445 and CEM 3134
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4624 - Construction Robotics and Automation (3 credits)
Automation and its application in construction. Automated problem-solving methodologies in Building Information Modeling (BIM) and data interoperability solutions. Robotics and the application of robotic technologies in construction considering safety and technical operation requirements in construction environments and robot programming and controls. Unmanned Aerial Vehicles (UAVs) or drones in construction projects. Emerging areas of research in the field of construction automation and robotics. No programming background is required.
Prerequisite(s): BC 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4634 - Data Analysis and Visualization for Construction and Facilities Management (3 credits)
Introduction to data analysis and visualization theories and techniques applied in the construction and facilities management domain. Data collection, processing, storage, analysis, and visualization methods in the context of construction and building management. Data-driven decision making.
Prerequisite(s): (CEM 2104 or BC 2024 or CEE 3014) and (BC 2114 or CEE 3804)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4644 - Artificial Intelligence for Design, Construction, and Operations (3 credits)
Evaluate the basic concepts and computational tools of artificial intelligence (AI), machine learning, and deep learning in the architecture, engineering, and construction (AEC) industry. Appraise the history and potential to improve automation, digitalization, and diversity and inclusion in the industry. Develop practical expertise in formulating, deploying, and evaluating deep learning models, including convolutional neural networks, pretrained computer vision models, sequential models, and generative AI, through hands-on projects such as infrastructure health monitoring, safety management, and building energy consumption prediction. Foster real-world application of knowledge through project-based learning.
Prerequisite(s): (MATH 2114) and (ENGE 1215 or CS 1014 or ENGE 1414 or CS 1054 or CS 1064 or CS 1114)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4714 - Construction Safety Culture (3 credits)
Examination of construction safety culture and climate and the role of organizational leadership in ethical safety practices. Analyze safety cultures within the construction industry for recommendations of change to shape safety practices.
Prerequisite(s): CEM 2104 or CEM 2714 or BC 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4724 - Construction Industry Futures: Safety, Health, and Wellness (3 credits)
Evaluate the future of the construction industry dynamics (trends, drivers, and disruptors) relative to their impacts on safety, health, and wellness. Compare global construction safety performances and practices. Design adaptable safety, health, and well-being management systems of the future based on technology-human interfaces, climate change, and globalization in construction.
Prerequisite(s): CEM 2104 or CEM 2714 or BC 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

CEM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Construction Engineering and Management Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
CEM 2404	Construction Project Documents	1
CEM 2824	Construction Site Analysis (C-)	3
CEM 3024	Construction Estimating and Scheduling	3
CEM 3134	Temporary Structures in Construction	3
CEE 3404	Introduction to Structural Engineering	3
CEE 3514	Introduction to Geotechnical Engineering	4
CEE 3684	Civil Engineering Materials	4
CEM 4024	Construction Law and Contract Administration	3
CEE 4074	Construction Engineering: Means and Methods	3
CEM 4445	CEM Capstone	3
Subtotal		30
Additional Course Requirements		
BC 2114	Information Technology in Design and Construction	3
BC 3114	Building Systems Technology	3
BC 3064	Integrated Construction II	3
BC 4064	Integrated Construction III	3
ESM 2104	Statics	3
ESM 2204	Mechanics of Deformable Bodies (C-)	3
GEOS 2104	Elements of Geology (C-)	3
MATH 2114	Introduction to Linear Algebra	3
MATH 2204	Introduction to Multivariable Calculus	3
STAT 3704	Statistics for Engineering Applications	2
Technical Electives		6
Advanced Course		6
Career Bridge Experience [1]		
ENGE 3900	Bridge Experience	0
Subtotal		41
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
CEM 2104	Introduction to Construction Engineering and Management (1A ; C-)	3
CEM 3084	Construction Economy (1A)	3
CEM 4446	CEM Capstone (1A)	3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six hours in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
ECON 2005	Principles of Economics (3)	3
ECON 2006	Principles of Economics (3)	3
Pathways Concept 4 - Reasoning in the Natural Sciences		
CHEM 1035 & CHEM 1045	General Chemistry and General Chemistry Laboratory (4; C-)	4
PHYS 2305	Foundations of Physics (4)	4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F ; C-)	4
MATH 1226	Calculus of a Single Variable (5F)	4
MATH 2214	Introduction to Differential Equations (5A ; C-)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three hours in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
ENGE 1215 & ENGE 1216	Foundations of Engineering and Foundations of Engineering (6D)	4
or ENGE 1414	Foundations of Engineering Practice	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathway 7 should be double counted with either Pathway 2 or 6a to avoid taking additional credit hours.		

Subtotal	53
Total Credits	**124**

Advanced Courses

The CEM degree requires 6 hours of advanced courses. Advanced courses may be selected from the following list:

Code	Title	Credits
CEE 3424	Reinforced Concrete Structures I	3
CEE 4404	Intermediate Structural Analysis	3
CEE 4454	Masonry Structural Design	3
CEE 4514	Methods in Geotechnical Engineering	3
CEE 4534	Earth Pressures and Foundation Structures	3
CEE 4544	Design of Earth Structures	3
CEE 4564	Introduction to Coastal and Marine Geotechnics	3
CEE 4610	Mechanics of Composite Materials	3
CEE 4614	Concrete Materials	3
CEE 4634	Infrastructure Condition Assessment	3
CEE 4664	Pavement Design	3
CEM 4314	Design of Wood Structures	3

Technical Electives

The CEM degree requires 6 hours of technical electives. Students can choose to focus on one area of emphasis or can pick and choose courses from multiple areas. Directed electives may be any 3000-5000 level engineering course (courses with prefix: AOE, BMES, BSE, CEE, CEM, CHE, CS, CEC, ENGE, ENGR, ESM, ISE, ME, MINE, MSE, NSEG). Electives in CEM focus areas are listed below:

Code	Title	Credits
Virtual Design		
BC 4114	Building Information Modeling in Design and Construction	3
BC 4124	Digital Construction and Manufacturing	3
BC 4364	Lifecycle BIM for Facility Management	3
Transportation		
CEE 3604	Introduction to Transportation Engineering	3
Management		
CEM 3064	Intro to Lean Construction	3
ACIS 1004	Accounting Foundations	3
CEE 3804	Computer Applications for Civil and Environmental Engineers	3
ISE 4004	Theory of Organization	3
MGT 3304	Management Theory and Leadership Practice	3
Risk Management & Consulting		
CEE 4814	Risk and Reliability Analysis in Civil and Environmental Engineering	3
FIN 3054	Legal and Ethical Environment of Business	3
CEE 4824	Introduction to Forensic Engineering	3
Safety		
CEM 2714	Construction Safety Systems	3
CEM 3164	Construction Health and Safety	3
CEM 3714	Controlling Construction Safety Hazards	3
CEM 4714	Construction Safety Culture	3
CEM 4724	Construction Industry Futures: Safety, Health, and Wellness	3
Smart Construction		
CEM 3154	Smart Construction	3
ECE 3054	Electrical Theory	3
CEM 4624	Construction Robotics and Automation	3
CEM 4634	Data Analysis and Visualization for Construction and Facilities Management	3
CEM 4644	Artificial Intelligence for Design, Construction, and Operations	3
Sustainability		
CEM 3074	Global Design and Construction for Sustainable Development	3
ENGR 3124	Introduction to Green Engineering	3
ENGR 4134	Environmental Life Cycle Assessment	3
ME 4194	Sustainable Energy Solutions for a Global Society	3
CEE 4134	Environmental Sustainability - A Systems Approach	3
BC 3014	Building Physics and Environmental Systems	3
Others		
CEM 4964	Field Work/Practicum [2]	1-19
CEM 4974	Independent Study [2]	1-19
CEM 4994	Undergraduate Research [2]	1-19
REAL 2004	Principles of Real Estate	3

[1] Career Bridge Experiences help prepare students for post-graduation life and develop a professional identity. Internships, Co-ops, and Undergraduate Research are examples of possible Career Bridge Experiences. Students must participate in a Career Bridge Experience to complete the BS CEM degree. Because some of these experiences are not credit bearing, the ENGE 3900 course is used to track and assess student participation in a Career Bridge Experience and to record fulfillment of this degree requirement on the transcript. Students should enroll in ENGE 3900 during the semester (or one of the semesters) that they undertake the Career Bridge Experience. Enrollment in ENGE 3900 requires approval of a Career Bridge Plan.

Further information about acceptable Career Bridge Experiences and the process for submitting a Career Bridge Plan are explained in CEM 2104.

[2] Course must be taken for 3 credit hours.

Satisfactory Progress Towards Degree

University Policy 91 outlines university-wide minimum criteria to determine if students are making satisfactory progress towards the completion of their degrees. The Myers-Lawson School of Construction fully supports this policy. Specific expectations for satisfactory progress for CEM majors are as follows:

- Each student must meet the minimum University-wide criteria as described in Policy 91 and summarized in the Undergraduate Catalog (http://www.undergradcatalog.registrar.vt.edu.)
- A 2.0 overall GPA and a 2.0 in-major GPA must be maintained for continued enrollment in CEM.
- Upon completion of 64 hours, students must have completed CEM 2824 Construction Site Analysis and ESM 2204 Mechanics of

Deformable Bodies with a C- or better and have a minimum 2.0 in-major and a minimum 2.0 overall GPA.

Graduation Requirements

Students must pass all required courses, complete a professional bridge experience, and both the in-major and overall GPA must be at least 2.00 for graduation.

In-Major GPA

Consists of all courses taken under the CEE, CEM and BC designation.

Acceptable Substitutions

- MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra
- MATH 2405H Mathematics in a Computational Context and MATH 2406H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra, MATH 2204 Introduction to Multivariable Calculus, AND MATH 2214 Introduction to Differential Equations
- CEE 2814 Geomatics may be substituted for CEM 2824 Construction Site Analysis and CEM 2404 Construction Project Documents
- STAT 4604 Statistical Methods for Engineers may be substituted for STAT 3704 Statistics for Engineering Applications
- CEE 3434 Design of Steel Structures I may be substituted for an advanced course.

Foreign Language Requirement

Students must have had 2 years of a foreign language in high school or one year at the college level (6 credit hours) of the same language. College-level credits used to meet this requirement do not count towards the degree.

-

Roadmap

First Year		
Fall Semester		**Credits**
CHEM 1035	General Chemistry (C-)	3
CHEM 1045	General Chemistry Laboratory (C-)	1
ENGE 1215	Foundations of Engineering (C-)	2
ENGL 1105	First-Year Writing	3
MATH 1225	Calculus of a Single Variable (C-)	4
Pathway 2		3
	Credits	**16**
Spring Semester		
ENGE 1216	Foundations of Engineering (C-)	2
ENGL 1106	First-Year Writing	3
MATH 1226	Calculus of a Single Variable (C-)	4
MATH 2114	Introduction to Linear Algebra	3
PHYS 2305	Foundations of Physics	4
	Credits	**16**
Second Year		
Fall Semester		
CEM 2104	Introduction to Construction Engineering and Management (C-)	3
CEM 2404	Construction Project Documents	1
ESM 2104	Statics	3
GEOS 2104	Elements of Geology (C-)	3
MATH 2204	Introduction to Multivariable Calculus	3
ECON 2005	Principles of Economics	3
	Credits	**16**
Spring Semester		
BC 2114	Information Technology in Design and Construction	3
CEM 2824	Construction Site Analysis (C-)	3
CEE 4074	Construction Engineering: Means and Methods	3
ESM 2204	Mechanics of Deformable Bodies (C-)	3
MATH 2214	Introduction to Differential Equations	3
	Credits	**15**
Third Year		
Fall Semester		
BC 3114	Building Systems Technology	3
CEE 3404	Introduction to Structural Engineering	3
CEE 3684	Civil Engineering Materials	4
CEM 3024	Construction Estimating and Scheduling	3
CEM 3084	Construction Economy	3
ENGE 3900	Bridge Experience	0
	Credits	**16**
Spring Semester		
BC 3064	Integrated Construction II	3
CEE 3514	Introduction to Geotechnical Engineering	4
ECON 2006	Principles of Economics	3
CEM 3134	Temporary Structures in Construction	3
STAT 3704	Statistics for Engineering Applications	2
	Credits	**15**
Fourth Year		
Fall Semester		
BC 4064	Integrated Construction III	3
CEM 4445	CEM Capstone	3
Advanced Course		3
Technical Elective		3
Pathways 2, 7		3
	Credits	**15**
Spring Semester		
CEM 4446	CEM Capstone	3
CEM 4024	Construction Law and Contract Administration	3
Advanced Course		3
Technical Elective		3
Pathways 6a		3
	Credits	**15**
	Total Credits	**124**

Liberal Arts and Human Sciences

Our Website (http://www.liberalarts.vt.edu)

Overview

The College of Liberal Arts and Human Sciences offers baccalaureate degrees encompassing the humanities and human and social sciences. The College emphasizes the importance of mastering the intellectual skills a liberal arts education develops as well as job skills by encouraging students to apply knowledge from a field and to think creatively. Learn more about our strategic plan (https://liberalarts.vt.edu/content/dam/liberalarts_vt_edu/ood/CLAHS-Strategic-Plan-2024.pdf).

Outstanding faculty members conduct research and teach courses in 11 departments and 3 schools leading to baccalaureate and advanced degrees. Coursework from the College of Liberal Arts and Human

Sciences also provides a foundation of knowledge in fundamental subjects for students in all colleges through the Pathways General Education (https://www.pathways.prov.vt.edu/) program.

The college offers minors in many areas of study. Students are encouraged to include a minor in their program and should consult an advisor for help in choosing one that will advance their career goals.

General Requirements for Graduation

A student in the College of Liberal Arts and Human Sciences must complete at least 120 hours for an undergraduate degree as well as satisfy the following requirements:

- achieve a minimum overall Grade Point Average (GPA) of 2.0 for all hours attempted
- achieve a minimum overall GPA of 2.0 for all hours attempted in all work applied to the major
- complete all other requirements established for their degree by the major department
- complete all college and university Pathways General Education requirements
- complete the language study requirement either through high school enrollment or before receipt of the undergraduate degree.
  - The minimum requirement may be met in high school by completing 2 units of a single foreign or classical language or American Sign Language. Some majors in the College of Liberal Arts and Human Sciences may require 3 units of a single foreign or classical language or American Sign Language.
  - Students who do not complete the University Foreign Language requirement by completing 2 years of the same foreign language in high school must take 1105 and 1106 of a foreign language at the college level. These hours will not count toward the minimum hours required for graduation.

No course required for graduation or in the major/minor may be taken on a pass/fail basis, excluding courses that are offered pass/fail only. (i.e., pass/fail may be used for free electives only).

Pathways General Education

A description of the Pathways General Education curriculum may be found in the Academics (p. 9) section of this catalog. For requirements specific to departments in the College of Liberal Arts and Human Sciences, please contact the individual department.

Honors College

The Honors College is available to students in the College of Liberal Arts and Human Sciences. This program provides an enriched environment for qualified and highly motivated students. More information about honors academic requirements and how to earn an honors diploma is available on the Honors College website: **honorscollege.vt.edu**

Dean's List

An undergraduate student who attempts at least 12 credit hours graded on the A-F option and earns a 3.4 GPA for either spring or fall semester will be included on the online Dean's List for that term. Please note: Students will not appear on the online Dean's List if they are listed in the system as confidential or do not have an active permanent address. Questions about omissions from the online list should be directed to the Office of the University Registrar.

Scholarships

Scholarships are available for students enrolled in the College of Liberal Arts and Human Sciences. Descriptions and deadlines are available on the **college website** and on the **Office of University Scholarships and Financial Aid**.

Experiential Learning: Internships, Study Abroad, and Undergraduate Research

Educational experiences outside the classroom help make students more competitive for internships, jobs, and graduate school applications. Participation in internships, study abroad, and undergraduate research helps prepare students for life after graduation while exposing them to complex cultural issues. Every major offers academic and career advising to support students in connecting with current opportunities. Course credit is available for qualifying experiences.

Academic Advising

The College of Liberal Arts and Human Sciences includes faculty advisors and a team of professional (https://liberalarts.vt.edu/beyond-the-classroom/academic-and-career-advising.html), award-winning Academic Advisors whose primary role is to support students in working toward their personal, academic, and career goals. Each student is assigned to work with at least one academic advisor, depending upon any additionally declared minors or majors. Advisors are prepared to guide students, as partners, through various processes during their time at Virginia Tech including:

- exploring and solidifying major(s) and/or minor(s)
- determining course selections
- developing semester schedules
- creating and adjusting academic plans
- understanding transfer credits
- considering experiential opportunities like study abroad or internships, and
- connecting with appropriate resources and individuals across campus

Career Advising

Career advising is available from multiple sources. The centralized Career and Professional Development (https://www.career.vt.edu), located at the Smith Career Center, offers many services to support the career journey. Beginning with career and major exploration, through the process of assisting students in the job search or graduate and professional school application, Career and Professional Development advisors are a resource for all students.

The College of Liberal Arts and Human Sciences works with employers interested in hiring students to host information sessions and panels. Students can attend multiple career fairs offered on campus to build their network, secure internships, or apply for full-time jobs. Every major also offers a career advisor (https://liberalarts.vt.edu/beyond-the-classroom/internships.html) who specializes in guiding students toward career success.

Pre-Professional Advising

The University provides pre-professional career advisors for all disciplines and the college provides career advisors in areas related to the College.

- Pre-law advising (https://www.prelaw.psci.vt.edu/main/advise.htm) connects students with faculty advisors, student organizations, and related academic opportunities. The advising program, sponsored by the College of Liberal Arts and Human Sciences, is open to students from all majors who are interested in the law. Students may also select majors that offer pre-law concentrations or degree options to help prepare for graduate programs in law. A pre-law student organization is available for interested students.
- Health Professions Advising (https://career.vt.edu/advising/hpa.html) at Virginia Tech assists students in exploring healthcare careers and preparing to apply to professional schools for medicine, dentistry, optometry, pharmacy, chiropractic, occupational therapy, nursing, physician assistant, veterinary medicine, and other health Professions. The advising program is supported by Career and Professional Development and is open to students in all majors.

Graduate Programs

Many of the College of Liberal Arts and Human Sciences departments offer graduate degrees at the Master's and Ph.D. levels. Complete information on these programs, including descriptions of graduate courses, can be found in the Graduate Catalog (https://catalog.vt.edu/graduate/).

- Advertising Major (p. 1119)
- Applied Public Policy Studies Major Option (https://catalog.vt.edu/undergraduate/liberal-arts-human-sciences/political-science/applied-public-policy-studies/)
- Arabic Major (p. 1056)
- Career and Technical Education - Agricultural Education Major (p. 1135)
- Career and Technical Education Major with Business and Information Technologies Education Option (p. 1136)
- Career and Technical Education Major with Family and Consumer Sciences Education Option (p. 1137)
- Career and Technical Education Major with Marketing Education Option (p. 1138)
- Classical Studies Major (p. 1057)
- Communication Major (p. 1121)
- Consumer Studies Major (p. 966)
- Creative Writing Major (p. 986)
- Criminology Major (p. 1163)
- Early Childhood Development and Education Major (https://catalog.vt.edu/undergraduate/liberal-arts-human-sciences/human-development-family-science/early-childhood-dvlp-educ-bs/)
- Elementary Education (PK-6) Major (p. 1139)
- English Language Arts Education Major (p. 1140)
- English Major with Literature Option (p. 987)
- English Major with Pre-Education Option (p. 989)
- English Major with Pre-Law Option (p. 990)
- Environment, Development, and Global Economy Major (https://catalog.vt.edu/undergraduate/liberal-arts-human-sciences/international-studies/environment-development-and-global-economy-major/)
- Environmental Policy and Planning Major (p. 1146)
- EUropean & Transatlantic Studies Major (p. 1023)
- Fashion Merchandising and Design Major (p. 968)
- French Major (p. 1059)
- German Major (p. 1060)
- History and Social Sciences Education Major (p. 1141)
- History Major (p. 1002)
- History Major with Undergraduate Research/Thesis Option (p. 1004)
- Human Development Major (p. 1009)
- Humanities for Public Service Major (p. 1109)
- International Relations Major (p. 1026)
- International Studies Major (p. 1029)

Air Force ROTC

Our Website (http://www.af.vt.edu)

Overview

The Air Force Reserve Officer Training Corps (AFROTC) provides a program of leadership development which prepares college men and

women for service as commissioned officers in the United States Air Force. After graduation, they assume active duty positions in both flying and non-flying specialties. To accomplish this, the Department of Aerospace Studies recruits, selects, retains, and commissions officer candidates as second lieutenants in the United States Air Force. AFROTC:

- Provides ethics and values education, stressing the Air Force core values of integrity first, service before self, and excellence in all we do.
- Prepares cadets to be commissioned as second lieutenants through a curriculum which develops leadership and management skills and provides opportunities to use these skills in a variety of practical applications.
- Provides an understanding of how to lead and influence small organizations, with a strong emphasis on personal integrity, honor, and individual responsibility. The techniques of effective leadership and quality management are stressed to achieve mission accomplishment.
- Enhances the cadets' understanding of the role of the military in society and provides an in-depth orientation to history and tradition of the Air Force and how the Air Force serves the nation. This goal is reinforced by summer hands-on leadership training and career orientation opportunities at Air Force bases around the country.
- In conjunction with the Virginia Tech Corps of Cadets, provides programs and experiences which increase self-confidence, self-discipline, accountability, physical stamina, poise, and other traits essential to the development of a leader of character who is prepared to serve the nation or the commonwealth both in and out of uniform.

The curriculum and leader development programs of the Department of Aerospace Studies are mentally and physically challenging. Cadets learn basic military skills and participate in a demanding physical conditioning program starting in the freshman year. The program moves progressively from followership to leadership experiences and culminates with the senior class cadets planning, organizing, and administering all leadership training for the cadet group. On-campus instruction is conducted both in the classroom by Air Force officers and in the field environment by both officer and cadet leaders. Semiannual visits to Air Force bases expand the cadets' knowledge of Air Force operations and life-style. A demanding summer field training encampment prior to the junior year prepares the cadet for acceptance into the commissioning track.

Air Force ROTC offers four-, and three-year tracks. Four- and three-year track cadets must complete 4 semester hours of AFROTC academics prior to a two-week summer encampment. Students who have Junior ROTC, other-service ROTC, national guard, reserve, or active duty military experience may request credit and advanced placement.

Scholarships

Air Force ROTC offers four-, three-, and two-year scholarships which are based on merit, not need. Though scholarship awards vary, most pay all/partial tuition, books, and approved university fees. High school seniors who are interested in the four-year or guaranteed three-year scholarships must apply at https://www.afrotc.com by February 1 of their senior year. Non-scholarship cadets may apply for three- and two-year scholarships during their freshman and sophomore years. All students who are contracted into the AFROTC program (to include all scholarship winners and those juniors and seniors holding a commissioning contract) receive a tax-free stipend of up to $500 per month while in school.

Virginia Tech requires membership in the Virginia Tech Corps of Cadets to be enrolled in ROTC. All freshman and sophomore cadets maintaining Air Force standards, as well as contracted junior and senior cadets, receive a special Air Force uniform allowance to offset the cost of cadet uniforms. The Corps of Cadets also provides need- and merit-based scholarships for deserving cadets.

Completion of Air Force ROTC may qualify a student to receive a minor in leadership and service from the College of Liberal Arts and Human Sciences.

Air Force ROTC builds leaders and offers every student who successfully completes the program a job upon graduation. The basic requirements for commissioning are: award of a degree from Virginia Tech, including a minimum of 24 hours of AFROTC; be a U.S. citizen of good moral character; meet medical and physical standards; achieve passing scores on the Air Force Officer Qualifying Test; and willingly accept a four-year active duty service commitment.

Head: Gregory B. Lowe, Col., USAF
Professor: Col Gregory B. Lowe
Assistant Professors: Maj Cade, Capt Cousin, Kate Lowe, Capt Penland, Lt Col Smith, and Capt Silverbush
Recruiting Officer: Capt Silverbush (231-5640)
Administrative Assistant: Connie Moses (231-6404)

Undergraduate Course Descriptions (AS)

AS 1115 - Introduction to the Air Force (1 credit)
Introduction to the United States Air Force and Air Force Reserve Officer Training Corps. Mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, and introduction to communication skills.
Corequisite(s): AS 2944
Instructional Contact Hours: (1 Lec, 1 Crd)

AS 1116 - Introduction to the Air Force (1 credit)
Introduction to the United States Air Force and Air Force Reserve Officer Training Corps. Mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, and introduction to communication skills.
Corequisite(s): AS 2944
Instructional Contact Hours: (1 Lec, 1 Crd)

AS 2115 - Team and Leadership Fundamentals (1 credit)
A fundamental understanding of both leadership and team building. 2115: Followership, motivation, listening, problem solving, full-range leadership, standards and accountability, self-assessment, oral and written communication, and financial readiness of an Air Force officer. 2116: Human relations, team building models, ethical decision making, stress management and resiliency, and conflict resolution.
Prerequisite(s): AS 1115 and AS 1116
Corequisite(s): AS 2934, AS 2944
Instructional Contact Hours: (1 Lec, 1 Crd)

AS 2116 - Team and Leadership Fundamentals (1 credit)
A fundamental understanding of both leadership and team building. 2115: Followership, motivation, listening, problem solving, full-range leadership, standards and accountability, self-assessment, oral and written communication, and financial readiness of an Air Force officer. 2116: Human relations, team building models, ethical decision making, stress management and resiliency, and conflict resolution.
Prerequisite(s): AS 2115
Corequisite(s): AS 2934, AS 2944
Instructional Contact Hours: (1 Lec, 1 Crd)

AS 2934 - Air Force Fitness (1 credit)
Reflects change in culture on physical fitness and incorporates fitness as a way of life with the United States Air Force & the Air Force Reserve Officer Training Corps (AFROTC). Structured to motivate members to develop and maintain year-round physical fitness conditioning program emphasizing total-body wellness to meet expeditionary mission requirements. Prepares cadets to tackle squadron fitness programs upon entering active duty. Course may be taken up to 10 times. Pre-requisite: Enrollment on AFROTC
Corequisite(s): AS 2944
Instructional Contact Hours: (2 Lec, 1 Crd)
Repeatability: up to 10 credit hours

AS 2944 - AFROTC Leadership Laboratory (1 credit)
Experiential learning laboratory that allows cadets to practice and demonstrate mastery of leadership skills essential to an Air Force officer. May be taken eight times. Membership in Virginia Tech Corps of Cadets required.
Corequisite(s): AS 1115, AS 1116, AS 2115, AS 2116, AS 3215, AS 3216, AS 4215, AS 4216
Instructional Contact Hours: (4 Lab, 1 Crd)
Repeatability: up to 8 credit hours

AS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AS 3215 - Air Force Management and Leadership (3 credits)
Integrated leadership study emphasizing concepts and skills. Motivational and behavioral processes, management, military ethics, communication, and group dynamics. Examines case studies and scenarios.
Prerequisite(s): AS 2116
Corequisite(s): AS 2944
Instructional Contact Hours: (3 Lec, 3 Crd)

AS 3216 - Air Force Management and Leadership (3 credits)
Integrated leadership study emphasizing concepts and skills. Motivational and behavioral processes, management, military ethics, communications, and group dynamics. Examines case studies and scenarios.
Prerequisite(s): AS 2116
Corequisite(s): AS 2944
Instructional Contact Hours: (3 Lec, 3 Crd)

AS 4215 - National Security Forces in Contemporary American Society (3 credits)
Examines the formulation, organization, and implementation of national security; evolution of strategy; management of conflict; and civil-military interaction. Military profession, officership, and the military justice system. Air Force communication skills.
Prerequisite(s): AS 3216
Corequisite(s): AS 2944
Instructional Contact Hours: (3 Lec, 3 Crd)

AS 4216 - National Security Forces in Contemporary American Society (3 credits)
Examines the formulation, organization, and implementation of national security; evolution of strategy; management of conflict; and civil-military interaction. Military profession, officership, and the military justice system. Air Force communications skills.
Prerequisite(s): AS 3216
Corequisite(s): AS 2944
Instructional Contact Hours: (3 Lec, 3 Crd)

AS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Apparel, Housing, and Resource Management

Our Website (http://www.ahrm.vt.edu)

Overview

The mission of the Department of Apparel, Housing, and Resource Management is to improve quality of life for individuals, families, and the broader community by creating and extending knowledge in apparel, housing, and resource management. We apply business, consumer, and design perspectives to teaching and learning, research, and outreach.

The AHRM Department includes five majors Consumer Studies, Family and Consumer Sciences, Fashion Merchandising and Design, Property Management, and Residential Environments and Design.

Consumer Studies Major

Career Advisor: G. Cheng

The Consumer Studies major prepares students to enter a variety of careers in the public and private sectors. Central to these careers is the ability to analyze issues and problems from the perspectives of consumers, business, and government. Students learn to reasonably advocate consumer interests and to help consumers improve their well-being. They develop fundamental skills that are used to resolve problems faced by consumers in the market place and the work place.

Graduates enter careers related to consumer affairs, marketing and sales, business management, and human resources. Required courses build a thorough understanding of households in the dual roles of producers and consumers that function within an international economic marketplace affected by government policy and regulation. Students study current events to track changing conditions and public policy. Additional courses develop skills for effectively processing and conveying information. A choice of controlled electives enables a student to tailor study to consumer products and promotion or consumer financial services, and counseling.

Consumer Studies students are provided a variety of learning experiences on- and off-campus. Through involvement with student professional associations, as well as relevant state and national organizations, students can develop leadership and organizational skills and network with active professionals. There are opportunities to relate classroom learning to the "real world" with projects and visits with industry, legislators, and regulators. An individualized study experience, typically an internship related to personal career interests, is required.

Fashion Merchandising and Design Major

Career Advisor: S. Wilmot

Apparel fashion is an exciting and competitive field where designers, product developers, manufacturers and retailers create and merchandise products and services for target customers. The Fashion Merchandising

and Design major prepares students for diverse career opportunities available to graduates of the program. Students may find employment with apparel or textile manufacturers or with a wide variety of retailers and fashion media, including magazines and social media websites. Products in apparel fashion range from fast fashion and haute couture to special-use apparel for athletes and extreme sports to accessories and shoes. Graduates from the FMD major may be employed in the areas of product development and/or merchandising. Positions in merchandising include:

- assistant buyer,
- buyer,
- fashion journalist,
- internet merchant,
- merchandise manager,
- showroom manager,
- store manager, and
- visual merchandiser.

Positions in design and product development include:

- creative designer,
- technical designer,
- private label manager,
- sourcing analyst, and
- production manager.

The FMD curriculum is structured to build students' knowledge and skills in the design, development, production, marketing, sale, and use of apparel and other textile products. Individuals employed in today's fashion world need to understand both product design and development and merchandising management. In addition, students learn details about the business and economics of the textile and apparel industry and the cultural and historic aspects of apparel fashion. Supporting courses in accounting or statistics, management, and marketing enhance career preparation.

Many courses in the FMD major promote hands-on learning so that students gain industry type experiences in product development, computer-aided design, textile and apparel evaluation, merchandise planning, promotion, and consumer patronage behavior. Through coursework, internships, study tours, student organizations, and interaction with industry experts, students become prepared to enter the dynamic apparel fashion field.

Property Management Major

Career Advisor: K. Avery

Property management offers a fast-growing career encompassing positions in luxury and affordable apartment developments, senior living communities, mixed-use, and office and retail properties. Hundreds of management positions are available each year, and graduates of Virginia Tech's program are in great demand because they are equipped with skills that address the complexities of managing multimillion-dollar investments. Employment is available in various aspects of the industry including management, operations, marketing, human resources, training, development, and acquisitions.

The property management major offers a wide-ranging program of study that includes specific courses in property management, as well as supporting courses in housing, business, and real estate. All students complete at least one internship that is typically a paid internship with housing provided. The internships give students an opportunity to gain real-world experience, make valuable career contacts, and explore different aspects of property management. Property management's very active advisory board visits campus twice yearly, and many also attend the property management career fair held on campus each March. Board members act as mentors and provide financial support for field trips, professional development, and scholarships. Property management seniors take the National Apartment Association's Certified Apartment Manager exam. Graduating with this credential places new employees a year or more ahead of other entry-level peers.

Residential Environments and Design Major

Career Advisor: G. Galford

The Residential Environments and Design (RED) major focuses on the planning, design, and marketing of residential environments. Required courses emphasize design, human, social, and business factors, including current issues and practices, which influence the environment of housing. The diversity of the population with differing needs, the range of available products, the growth of regulation, the increased concern for health and safety, and the rapid changes in technology are among the factors that lead to a very complex marketplace in the residential industry.

There are many career opportunities for graduates of the RED major, which provide employment as well as business opportunities. Employment opportunities include certified kitchen and bath designers, manufacturing and sales of residential products, residential construction, home furnishings, appliances, and related industries. The future looks bright for those students who choose careers in the residential design industry. A number of trend and demographic indicators suggest that people will continue to spend money on their homes and need products and services from experts. There will be a strong, on-going need in the residential industry for well-educated professionals with specialized knowledge in design and the ability to think and solve complex problems.

The RED major's program in kitchen and bath design is accredited by the National Kitchen and Bath Association, and interested students can prepare to sit for the first level design certification examination. Students in the major are mentored by industry members of the Residential Environments and Design Industry Board. Classroom learning is expanded through field trips, guest speakers, community clients, internships, competitions, and other special projects.

- Consumer Studies Major (p. 966)
- Fashion Merchandising and Design Major (p. 968)
- Property Management Major (p. 969)
- Residential Environments & Design Major (p. 971)

Department Head: Lisa M. Tucker [2,3,7]
Professors: L.M. Tucker [2,3,7], H.I. Chen-Yu, P.J. Fisher, and D.H. Kincade
Associate Professors: E.Z. Hopkins, E. Hwang, J.E. Lee, I.E. Leech, and E. Shin
Assistant Professors: J. Yoo, G.A. Galford, E. Shin, and D.C. Smith-Glaviana
Collegiate Assistant Professor: G. Cheng
Associate Professor of Practice: K. Avery
Assistant Professor of Practice: R. Walsh and S. Wilmot
Visiting Assistant Professor: M. Gawrys

Instructors: H. Illahe

Undergraduate Course Descriptions (AHRM)

AHRM 1014 - Design and Art for Consumers (3 credits)
Overview of art and design principles and elements with a focus on their application in the creation and promotion of apparel, housing, and residential technology products for diverse consumers. Review of historical art and design trends and theories in relation to these products. Interpretative strategies and methodologies in visual art and design. Exploration of the design process, including examinations of human factors and user needs.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

AHRM 1104 - Introduction to AHRM and Student Resources (1 credit)
Introduction to the Department of Apparel, Housing, and Resource Management (AHRM), majors and curriculum requirements. Introduces students to experiential learning opportunities, undergraduate research, and career opportunities. Exploration of programs and services to enhance awareness of opportunities and support systems available for student success.
Instructional Contact Hours: (1 Lec, 1 Crd)

AHRM 2014 - Design for Consumers Studio (3 credits)
Exploration and application of design principles and elements in two-dimensional and three-dimensional designs that support the development and promotion of products for diverse consumers, including apparel, housing, residential technologies. Application of skills, tools, and methods to the creation of design. Utilization of the design process to develop plans for consumer products for diverse users. Design Lab/Studio.
Prerequisite(s): AHRM 1014
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (0 Lec, 5 Lab, 3 Crd)

AHRM 2404 - Consumer Rights (3 credits)
Role of consumers in society and in national and international markets. Consumer rights, responsibilities, policies, regulations and redress. Consumer decision making and planned buying. Current consumer issues such as: product safety, food, health care, housing, environmental impact, banking, credit and insurance from an intercultural perspective.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

AHRM 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 3464, GEOG 3464, HD 3464, HUM 3464, SOC 3464, UAP 3464

AHRM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (CONS)

CONS 2304 - Consumer and Family Finances (3 credits)
Overview of consumer and family finances, including budgeting, goal setting, cash management, credit, insurance, taxes, housing, investment alternatives, and retirement plans. Fundamental tools for financial decision making through the coverage of time value of money, calculations for consumer loans, and tools for financial decisions across the lifecycle. Explore ethical issues surrounding financial decisions.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 2964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 2974H - Indepdendent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 3404 - Consumer Education Strategies (3 credits)
Analysis of the role of effective consumer education strategies in consumer decision-making. Planning, developing, testing, and evaluating consumer education programs using a variety of strategies, including social marketing, for selected community partners and operating the Consumer Education Laboratory.
Prerequisite(s): AHRM 2404 and CONS 2304
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

CONS 3504 - Resource Management for Individuals and Families (3 credits)
Introduction to resource management concepts and theories with application to personal and family life goals. Discussion of values, goals, decision making, planning, and communication in relation to the management process. Application of the management process to the use of resources, time, finances, stress, and the environment.
Prerequisite(s): CONS 2304 and AHRM 2404
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 4304 - Advanced Consumer Family Finances (3 credits)
Advanced financial topics for consumers and families. Identification of employee benefit components including health care, incentive plans, insurance, and retirement. Analysis of consumers insurance needs. Discussion and comparison of retirement and investment tools used by consumers, including public and private retirement components. Interpretation of research directions and policy influences related to employee benefits, insurance, investments, and retirement saving. Investigation of special topics in retirement. Pre: Senior Standing.
Prerequisite(s): CONS 2304 and AHRM 2404
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 4314 - Debtor-Creditor Relationships (3 credits)
Examination of legal and operational aspects of debtor-creditor relationship from the perspective of businesses and debtors. Overview of the types of credit, access to credit, factors contributing to debt problems, and alternatives available for resolution. Focus on collection processes of federal and state bankruptcy laws and regulations.
Prerequisite(s): CONS 2304 and AHRM 2404
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 4324 - Financial Counseling (3 credits)
Examination of debt and budgeting problems affecting families. Utilizes a problem-solving approach. Includes financial counseling strategies for coping with financial crises and becoming proactive in family financial management.
Prerequisite(s): AHRM 2404 and CONS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 4404 - Consumer Protection (3 credits)
Analysis of the effectiveness of consumer protection efforts. Examination of government laws, regulations, and agencies at the federal, state, and local levels, as well as the effectiveness of both business and private consumer protection efforts.
Prerequisite(s): AHRM 2404 and CONS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 4414 - Professionalism in Consumer Affairs (3 credits)
Roles, functions and responsibilites of consumer affairs professionals employed in business, government, and non-profit public/consumer interest organizations. Professional advocacy within employing organizations, managing consumer complaint handling systems and major consumer and career issues are analyzed.
Prerequisite(s): AHRM 2404 and CONS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 4964H - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (FMD)

FMD 1204 - Clothing and People (3 credits)
The study of the influence of culture and society on dress and dress practices, similarities and differences in the dress among groups and individuals, and the role of dress in reflecting and shaping intra- and inter-cultural interactions. The analysis of the construction and communication of personal and social identity (based on age, physical disability, gender, sex, sexual identity, race, ethnicity, religion, cultural and group/subcultural affiliations, etc.) through dress (clothing, accessories, body modifications) using fashion and social science theories and the intersection of various identities and positions in shaping human experience related to dress and appearance. Examination of diversity, equity, inclusion, and social justice issues and solutions related to dress and appearance within the United States and the global fashion industry.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 1224 - Introduction to the Fashion Industry (3 credits)
Development, structure and operations of textile and apparel manufacturers, marketers and retailers in the fashion industry and the product types including menswear, womenswear, childrenswear and accessories. Identification of fashion careers and major fashion markets and vendors both domestic and international. Basic processes and principles governing forecasting fashion acceptance, movement and change as influenced by economic, sociological, psychological, political and technological factors. Sources of industry information such as trade journals, industry websites and company publications.
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 2014 - Digital Drawing (3 credits)
Basic principles and methods for digital drawing with consideration toward diverse populations in the global marketplace. Practice and skill development using a variety of computer tools to express design ideas via digital rendering by targeting diverse populations and understanding current global challenges. Hands-on experience via design projects.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FMD 2204 - Introduction to Textiles (3 credits)
Structure, properties and basic production of textiles and textile components: natural and manufactured fibers; yarns; woven, knit, nonwoven fabrics; mechanical and chemical finishes; colorants and coloration methods. Influence on performance of apparel and interior textile products. Sophomore standing and one semester of Pathways Concept 4 (Reasoning in the Natural Sciences) is required.
Corequisite(s): FMD 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 2214 - Apparel Textiles Laboratory (1 credit)
Identification and characterization of textiles and textile components including: fabrics, finishes and coloration. Influence of these structural parameters on performance of apparel textiles. Sophomore standing and one semester of Pathways concept 4 (Reasoning in the Natural Sciences).
Corequisite(s): FMD 2204
Instructional Contact Hours: (3 Lab, 1 Crd)

FMD 2224 - Fashion Presentation Techniques (3 credits)
Basic principles and methods for executing fashion illustrations, proportions of the fashion figure, design details, portfolio development, identifying target markets and fabric renderings with consideration toward diverse populations in the global marketplace. Exploration and practice in color with work in pencil, color pencil, pastel, and watercolor. Practice and skill development using a variety of manual and computer tools to illustrate construction details and create technical flats. Emphasis placed on the use of correct industry terminology.
Prerequisite(s): AHRM 1014
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FMD 2264 - Apparel Product Development (3 credits)
Study of the pre-production stage of product development in the apparel industry, including planning a line based on market, consumer, and product research, forecasting trends in color, style and materials, developing and selecting designs and styles, and wholesale marketing of a line to retail buyers. Also includes the use of diverse inspiration sources for creating a design, application of computer-aided design to design and style development, and identification of career opportunities and qualifications for professional positions in the industry. Sophomore Standing required.
Prerequisite(s): FMD 2224
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

FMD 2964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 3024 - History of Costume (3 credits)
Study of the evolution and development of Western costume for adults and children from ancient times to the present with a focus on historical, socio-cultural, political, economic, and psychological factors/influences on changes in fashion and design style features. Use of terminology to describe each period's fashion and clothing design style features. Evaluation of similarities and differences between fashion and clothing design style features of different time periods. Discussion of theories of fashion change and fashion revival theories that explain the revival/reoccurrence of features of historic costume styles in contemporary fashion and design.
Prerequisite(s): FMD 1204 and FMD 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 3034 - Historic Costume and Textile Collection Management (3 credits)
An active learning approach to managing and digitizing historic costume and textile collections; conserving historic textiles; and designing and curating historic costume and textile exhibitions. Researching, documenting, interpreting, handling and storing artifacts. Mounting and displaying a professional costume and textile exhibit appropriate for general public viewings and sharing via oral or poster presentations. Community-engagement methods. Design Lab/Studio
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

FMD 3104 - Fashion Retailing Concepts (3 credits)
Detailed investigation and analysis of the fundamentals of fashion merchandising concepts emphasizing problem solving at the retail level. Prerequisite: one semester of Pathways Concept 5 (Quantitative and Computational Thinking) required. Pre: Junior Standing.
Prerequisite(s): FMD 1224
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 3204 - Introduction to Textile Evaluation (3 credits)
Analysis of the performance properties of fabrics. Importance of evaluation to product development, quality control, and specification of care requirements.
Prerequisite(s): FMD 2204 and FMD 2214
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FMD 3224 - Apparel Assembly (3 credits)
Systematizing and assembling garment applications for the apparel industry. Conceptual study of simple to complex apparel construction techniques, stitch and seam types, cost-effective measures, applications with manual manipulation, computers, tools, and equipment.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FMD 3234 - Pattern Drafting for Apparel (3 credits)
Apparel product development using basic and advanced flat pattern drafting techniques and skills. Concepts and application of specifications, flat pattern drafting techniques, garment fit and alteration, pattern grading, and marker layout principles used in apparel engineering, product development, and production, along with the development of skill in using a variety of related manual and computer tools.
Prerequisite(s): FMD 3224
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FMD 3244 - Small Business Apparel Retail Development (3 credits)
Comprehensive study of small business concepts as applied to the textile and apparel retail industry. Analysis of the entrepreneurial mindset and strategies for business entry with emphasis on small business development, including concept and opportunity identification, merchandising and management, operations and control, advertising and promotion, and financial planning for a textile and/or apparel retail business.
Prerequisite(s): FMD 2264 and FMD 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 3264 - Draping (3 credits)
Study and application of basic and advanced draping techniques for patternmaking in the apparel industry, including darts in skirts and bodices, princess lines in bodices, yokes, pleats and gores in skirts, and asymmetrical structures for whole garments; selection of fabrics appropriate for garment styles; evaluation of garment fit, design and construction. Includes students design and construction of garments suitable for juried design competitions or exhibitions. Design Lab/Studio. Pre: Junior Standing
Prerequisite(s): FMD 3224
Instructional Contact Hours: (5 Lab, 3 Crd)

FMD 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4014 - 3D Digital Apparel Design (3 credits)
Implement design solutions using technologically advanced software to create styling on avatars with photorealistic 3D rendering. Transform skills acquired in digital illustration and flat pattern drafting courses into comprehensive tools to create real-life simulated garments. Manipulate or create digital assets (flat patterns, fabric, stitching, trim, etc.) to produce an original style for digital portfolio. Design Lab/Studio (2H, 2L,3C)
Prerequisite(s): FMD 2264 and FMD 3234
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

FMD 4024 - Portfolio (3 credits)
The development and production of a professional apparel portfolio in both paper and ePortfolio format. Pre: Senior Standing required; 3234 or permission of the instructor.
Prerequisite(s): FMD 3234 or FMD 3264
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4034 - Historic Costume and Textile Collection Management (3 credits)
An active and experiential learning approach to historic costume and textile collection management, including describing collection scope, policies, and organizational systems, selecting appropriate basic preservation and conservation techniques used for the care of historic clothing and textiles related to controlling the environment, handling and storage, and cleaning, using standard museum practices when accessioning, dating, labeling, cataloging, mounting/mannequin dressing, and photographing textile artifacts, developing methods for community engagement, and designing and installing historic dress exhibitions. Design Lab Studio.
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

FMD 4124 - Clothing Behavior Patterns (3 credits)
Study of clothing behavior of individuals in relationship to their needs, values, attitudes, interests, and self-concepts. Overview of principles and theories related to individuals emotional, mental, and physical activities when obtaining, using, maintaining, and disposing of apparel products so as to satisfy their needs and desires. Application of principles and theories related to clothing behavior to the analysis of consumer and the development of effective merchandising strategies.
Prerequisite(s): FMD 3104 and (PSYC 1004 or SOC 1004)
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4134 - Fashion E-Tailing (3 credits)
Analysis of technologies, consumer trends, and strategies in fashion e-tailing. Identification of merchandising models, major features, challenges, and trends in fashion e-tailing, including big data, virtual and augmented technologies, and mobile- and social-commerce. Development of a strategic plan for an online fashion venture.
Prerequisite(s): FMD 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4214 - Economics of the Textile and Apparel Industry (3 credits)
Study of the various segments of teh textile and apparel industry. Analysis of the market structure and functioning of each segment and of factors currently affecting the industry.
Prerequisite(s): (AHRM 2204 or FMD 2204) and (ECON 2006 or ECON 2006H) or (AAEC 1005 and AAEC 1006)
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4224 - Fashion Analysis and Communication (3 credits)
Functions of fashion analysis, promotions, forecasting, media, and communications in the fashion industry. Assessment of effective promotional activities based on consumer, market, and trend research of fashion products. Development of fashion promotion, forecasting, and communication plans. Pre: Senior standing.
Prerequisite(s): FMD 2264
Instructional Contact Hours: (2 Lec, 1 Lab, 3 Crd)

FMD 4234 - Apparel Quality Evaluation (3 credits)
Study of quality of ready-to-wear apparel and factors that influence variations in the aesthetic and functional performance of the end product, including consumer perceptions and expectations, manufacturing processes and trends, and the physical components of the end product.
Prerequisite(s): FMD 3204 and FMD 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4244 - New York Fashion Study Tour (3 credits)
Integrative study of methods of operating at all levels within the fashion industry. Special emphasis on design, merchandising, and promotional activities. Seminars on campus and at pre-arranged appointments during a five-day stay in New York. AHRM major; Junior standing. Twelve hours of AHRM/FMD courses required.
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4264 - Fashion Merchandising and Design Strategies (3 credits)
Analysis of consumer characteristics as part of a forecast/market study to prepare new fashion merchandise lines based on key findings from forecasts. Formulate a financial merchandise plan using measures of profitability and pricing and devise financially beneficial marketing communications. Compare and contrast career choices through self-evaluation within the fashion apparel industry.
Prerequisite(s): FMD 3104 and FMD 3204 and FMD 3224 and FMD 4224
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4274 - International Sourcing of Apparel Products (3 credits)
Study of international sourcing of apparel products through a simulation of the sourcing production to illustrate the procedures and factors needed to source apparel abroad and interrelationships among suppliers, retailers and consumers in the global apparel supply chain. Examination of social, economic, political, cultural, ethical, and environmental factors, law and trade barriers that influence a sourcing decision of apparel products abroad.
Prerequisite(s): FMD 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4964H - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4984H - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (PM)

PM 2664 - Introduction to Property Management (3 credits)
The history of residential and commercial property management, roles and responsibilities of real estate managers, developing effective management plans for properties, maintenance strategies, marketing, legal regulations that pertain to real estate management.
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 2684 - Marketing and Leasing Residential Properties (3 credits)
Marketing and leasing functions for multifamily residential properties. Leasing processes, options, and online management tools. Market analysis. State and federal housing laws. Preparation for National Apartment Leasing Professional credentials.
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 2964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 3634 - Managing Affordable and Specialized Housing (3 credits)
Operations management of specialized housing such as senior apartments, active adult communities, independent living communities, assisted living communities, nursing homes, affordable housing, military housing, student housing, as well as community associations and mixed-use housing developments. Consideration of consumer lifestyles, financial circumstances, and sustainability issues for each housing option.
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 3674 - Property Management Operations (3 credits)
Detailed investigation and analysis of the fundamentals of property management operation functions. Functions included: human resources and relationship management, maintenance and risk management, marketing and leasing, and accounting and finance. Property manager and property owner role interpretation through examination of management agreement and plan components as well as nuances among residential properties, office buildings, and shopping centers.
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 3684 - Sustainable Property Management (3 credits)
Comparison and justification of green alternatives during the operations and maintenance phase of the building lifecycle by function with respect to the interrelationships of the social, environmental, and economic spheres of sustainability. Course topics also include group and individual decision-making and their influences on resource use such as energy, water, and waste as well as environmental degradation concern and its influence on various stakeholders and their relationship with each other. Ethical issues as they relate to sustainable property management also covered.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4644 - Advanced Property and Asset Management (3 credits)
Examination of the competencies necessary to maximize the value of real estate assets through effective operations and financial management practices. Includes detailed examination of income maximization, financial reporting, and ownership objectives of real estate investors.
Prerequisite(s): (PM 2674 or PM 3674) and PM 4964
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 4674H - Managing and Marketing Housing for Later Life (2 credits)
Managing and marketing housing for later life, including active adult communities and assisted living facilities. Pre: Junior Standing
Instructional Contact Hours: (2 Lec, 2 Crd)

PM 4684 - Leasing Commercial Properties (3 credits)
Examination of the strategies used to market and lease various types of industrial, office and retail buildings with emphasis placed on brokerage relationships, the legal structure of commercial real estate leases, lease analytics, lease negotiations, and the impact of lease terms on the value of income-producing properties. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 4694 - Contemporary Issues in Property Management (3 credits)
Issues affecting property management, including ethics, professional management decisions, legislative issues, and current management practices. The course culminates in the analysis of an apartment community and development of a management plan. Senior standing.
Prerequisite(s): PM 4964 or PM 4644
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 4744 - Housing Challenges and Policies in the United States (3 credits)
Overview of the issues relating to U.S. housing policy with an emphasis on housing affordability, homeownership, fair housing and community development, and homelessness. Examination of the policy tools used to respond to housing problems at local, state and federal levels.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 4914 - Residential Property Management Study Tour (1-19 credits)
Study tour that examines trends in the multifamily housing industry focusing on marketing, management, design, and customer service. Variable credit 2 credits maximum.
Instructional Contact Hours: Variable credit course

PM 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4964H - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4984H - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (RED)

RED 1604 - Introduction to Residential Design (3 credits)
Analysis of residential spaces to meet the needs of residents. Interrelationship of residential spaces, site, and community, including climate, historic tradition, culture and impact on diversity. House construction systems and finish materials. Current and future trends in design, construction and marketing of housing for diverse households. Impact of codes and regulations on residential design and construction. Professional and labor force issues in the housing industry, interpreting residential floor plans, elevations, detail drawings.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 2234 - Residential Materials (3 credits)
Identifies materials used in residential applications. Flooring, Walls, Ceilings, Trim and Textiles. Reviews properties of materials, wellness for occupants, and sustainability criteria.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 2614 - Residential Construction (3 credits)
Principles of residential construction. Components, materials and methods of residential construction. Terminology used in residential construction. Interior detailing.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 2624 - Residential Design I (3 credits)
Principles of residential design. Concept development using elements and principles of design. Space planning for residential environments including kitchen and bath design. Introduction to hand and computer drawing. Design Lab/Studio.
Prerequisite(s): RED 1604 or RED 2604
Instructional Contact Hours: (5 Lab, 3 Crd)

RED 2644 - Housing and the Consumer (3 credits)
Overview of housing as it relates to consumer needs, values, lifestyles, norms and constraints. Includes structural and tenure alternatives, financial and legal considerations, house design, neighborhood choices, the home buying process, and future directions in housing. Government aspects focus on the history of federal involvement in housing, major housing programs, role of state and local government, and current housing issues and policies.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 2654 - Residential Environments (3 credits)
Application of elements and principles of design in residential spaces and products from diverse cultural perspectives. Examination of human behavior theories that impact the design of residential environments. Development of residential design solutions and processes using computer aided design software. Design Lab/Studio.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 3 Lab, 3 Crd)

RED 2964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 3624 - Residential Design II (3 credits)
Principles of space planning and 3-dimensional design, including activity analysis and user needs, program preparation as applied to residential settings. Zoning and space planning. Design process including schematic design and design development. Design detailing. Graphic design solutions for specific areas of the home, including social, private, kitchen, and outdoor areas. Design Lab/Studio.
Prerequisite(s): RED 2624 and RED 1624
Instructional Contact Hours: (5 Lab, 3 Crd)

RED 3644 - American Housing (3 credits)
Overview of the role of housing in family life and society throughout the history of the United States. Exploration of the impact of technology, resources, and societal values on the design and style of housing and products used in the home.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 3674 - Residential Systems (3 credits)
Residential systems such as lighting, plumbing, electrical, mechanical and security. Smart home technologies and appliances. Integration of systems into residential environments.
Prerequisite(s): RED 2614
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4224 - Historic Preservation of Residential Properties (3 credits)
History, theory, and field methods of historic preservation in the United States such as building and site surveys, historic structures reports, and National Register Nominations; history and theory of European preservation; fundamental concepts and the role of preservation in allied disciplines; preservation in urban, town, neighborhood, and rural contexts; common preservation strategies and initiatives; understanding of community-based preservation efforts; focus on residential properties.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 4604 - Environmental and Sustainability Issues in Housing (3 credits)
Environmental and sustainability issues in single and multifamily housing in the United States encompassing the building, site, lifestyle, energy and water consumption, waste, air quality and toxic materials; analysis and application of social science theories and equity and identity concerns that provide a foundation for the study of environmentally sustainable housing; current and future alternatives for management of energy and water systems and provision of environmentally sustainable housing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 4604H - Environmental and Sustainability Issues in Housing (3 credits)
Environmental and sustainability issues in single and multifamily housing in the United States encompassing the building, site, lifestyle, energy and water consumption, waste, air quality and toxic materials; analysis and application of social science theories and equity and identity concerns that provide a foundation for the study of environmentally sustainable housing; current and future alternatives for management of energy and water systems and provision of environmentally sustainable housing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 4624 - Residential Design III (3 credits)
Planning, design, and evaluation of residential spaces with an emphasis on kitchens and bathrooms, in relation to the total house plan. Emphasis on planning principles and technical requirements with attention to functional use of the spaces to meet the needs of people. Industry standards, best practices. Materials, fixtures, and mechanical systems. Contract documents. Design Lab/Studio.
Prerequisite(s): RED 3624
Instructional Contact Hours: (5 Lab, 3 Crd)

RED 4624H - Advanced Kitchen and Bath Design (3 credits)
Planning, design, and evaluation of residential kitchens and bathrooms, in relation to the total house plan. Emphasis on planning principles and technical requirements with attention to functional use of the spaces to meet the needs of people.
Prerequisite(s): (AHRM 3624 or RED 3624) and (AHRM 3674 or RED 3674)
Instructional Contact Hours: (6 Lab, 3 Crd)

RED 4654 - Residential Design IV (3 credits)
Advanced topics in house planning, particularly kitchen and bath design, with emphasis on independent work of portfolio quality. Sustainability principles, design process, planning guidelines, design competition. May be repeated once for a maximum of 6 credits. Design Lab/Studio (5L,3C)
Prerequisite(s): RED 4624
Instructional Contact Hours: (5 Lab, 3 Crd)
Repeatability: up to 6 credit hours

RED 4664 - Universal Design (3 credits)
Application and assessment of the principles and strategies of universal design in residential and commercial environments, accessibility regulations and guidelines, products, and technologies. Demographic changes affecting global society. Disabilities and changes throughout the lifespan that affect peoples ability to interact with their environments. Marking strategies to promote universal design communities, products, environments and technologies. Methodologies to evaluate accessibility.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 4664H - Universal Design (2 credits)
Evaluation and design of commercial and residential environments with consideration for accessibility, adaptation, safety, and support of the user(s).
Instructional Contact Hours: (2 Lec, 2 Crd)

RED 4764 - Universal Design Lab (1 credit)
Design of residential spaces that meet the needs of a range of users, including older adults and people with disabilities. Principles of universal design are applied to the spatial requirements and product selection for the home.
Prerequisite(s): AHRM 3624 or RED 3624
Corequisite(s): RED 4664
Instructional Contact Hours: (2 Lab, 1 Crd)

RED 4924 - Housing Study Tour (1-19 credits)
A study tour designed to examine the housing industry and trends in design, technology, products and processes. Junior standing required. May be repeated for a maximum of 6 credits.
Instructional Contact Hours: Variable credit course
Repeatability: up to 6 credit hours

RED 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4964H - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4984H - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Consumer Studies Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
AHRM 1104	Introduction to AHRM and Student Resources [1]	1
Economic Well-Being		
AHRM 2404	Consumer Rights [2]	3
ECON 2005 & ECON 2006	Principles of Economics and Principles of Economics	6
or AAEC 1005 & AAEC 1006	Economics of the Food and Fiber System and Economics of the Food and Fiber System	
Product Analysis		
Select one of the following:		3
CONS 3504	Resource Management for Individuals and Families (required for CONS major) [2]	
FMD 1204	Clothing and People	
RED 2644	Housing and the Consumer	
Business Fundamentals		
MKTG 3104	Marketing Management	3
Action Learning		
Select one of the following:		3
CONS 4964	Field Work/Practicum [2]	
CONS 4974	Independent Study [2]	
CONS 4994	Undergraduate Research [2]	
FMD 4244	New York Fashion Study Tour	
Subtotal		19
Major Requirements		
CONS 3404	Consumer Education Strategies [2]	3
CONS 4304	Advanced Consumer Family Finances [2]	3
CONS 4314	Debtor-Creditor Relationships [2]	3
CONS 4324	Financial Counseling [2]	3
CONS 4404	Consumer Protection [2]	3
CONS 4414	Professionalism in Consumer Affairs [2]	3
COMM 2004	Public Speaking	3
ACIS 1004	Accounting Foundations	3
MGT 3304	Management Theory and Leadership Practice	3
Subtotal		27
Controlled Electives		
Select at least 15 credits from the list below:		15
AAEC 3454	Small Business Management and Entrepreneurship	
ACIS 1504	Introduction to Business Analytics and Business Intelligence	
CONS 4974	Independent Study	
CONS 4994	Undergraduate Research	
CRIM 3414	Criminology	
FIN 2114	Investments and Financial Literacy	
FIN 3054	Legal and Ethical Environment of Business	
FIN 3124	Financial Planning for Professionals	
FIN 3204	Risk and Insurance	
HD 2304	Family Relationships	
HNFE 1004	Foods, Nutrition And Exercise	
MGT 3064	Cornerstones of Entrepreneurship and Innovation	
MGT 3324	Organization Behavior	
MGT 3334	Managing Human Resources	
MKTG 3504	Advertising	
MKTG 4154	Marketing Research	
MKTG 4204	Consumer Behavior	
PHS 1514	Personal Health	
PHS 3534	Drug Education	
PSCI 1014	Introduction to United States Government and Politics	
PSCI 1024	Comp Gov & Politics	
PSCI 3224	Public Opinion	
PSCI 3264		
RED 2614	Residential Construction	
RED 2644	Housing and the Consumer	
Subtotal		15
Free Electives		
Select 14 credits of Free Electives		14
Subtotal		14
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105 & ENGL 1106	First-Year Writing and First-Year Writing (1F) [1]	6
Select one course from the options below for Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A) :		3
ENGL 3764	Technical Writing	
ENGL 3774	Business Writing	
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
HD 1004	Childhood and Adolescence [1]	3
HD 2004	Adulthood and Aging	3
Pathways Concept 4 - Reasoning in the Natural Sciences		
Select six credits in Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04)		6
Pathways Concept 5 - Quantitative and Computational Thinking		

CONS 2304	Consumer and Family Finances (5F) [1,2]	3
MATH 1014	Precalculus with Transcendental Functions (5F) [1]	3
or MATH 1025	Elementary Calculus	
or MATH 1524	Business Calculus	
STAT 3604	Statistics for Social Science (5A)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
AHRM 1014	Design and Art for Consumers [1]	3
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A) or Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		45
Total Credits		**120**

1 For satisfactory progress toward a degree, these courses must be completed by the time the student has attempted 75 hours.

2 Courses included in in-major GPA calculation; in-major and overall GPA of 2.0 required for graduation.

Satisfactory Progress Toward Degree

Students must complete the courses listed to equal at least 120 credits, with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. Courses included in the calculation of **in-major** GPA are notated with the applicable footnote.

Graduation Requirements

Credit Hour Requirement

A total of 120 hours is required to graduate with a Consumer Studies degree.

Prerequisites

Some courses required for this major have prerequisites. Please refer to Undergraduate Course Catalog or consult your advisor for information about prerequisites.

Foreign Language Requirement

A sequence of 2 foreign language courses is required for graduation unless 2 high school credits of the same foreign language or 6 transfer credit hours of foreign language have been earned. These credits do not count toward graduation.

First Year		
Fall Semester		**Credits**
ENGL 1105	First-Year Writing (1F)	3
Pathways Concept 4 - Reasoning in the Natural Sciences		3
HD 1004	Childhood and Adolescence	3
MATH 1014 or MATH 1025 or MATH 1524	Precalculus with Transcendental Functions or Elementary Calculus or Business Calculus	3
AHRM 1104	Introduction to AHRM and Student Resources	1
AHRM 2404	Consumer Rights	3
	Credits	**16**

Total Credits		**120**

[1] For satisfactory progress toward a degree, these courses must be completed by the time the student has attempted 72 hours.
A sequence of 2 foreign language courses is required for graduation unless 2 high school credits of the same foreign language or 6 transfer credit hours of foreign language have been earned. These credits do not count toward graduation. See Catalog section on "Graduation Requirements.

[2] Courses included in in-major GPA calculation; in-major and overall GPA of 2.0 required for graduation.

In accordance with University guidelines, courses satisfying Degree Core Requirements may not be double counted to satisfy other areas of a degree such as in Pathways, Major Requirements, etc.

Satisfactory Progress Toward Degree

Students must complete the courses listed to equal at least 120 credits, with a minimum overall GPA of 2.00 and a minimum in-major GPA of 2.00. Courses included in the calculation of **in-major** GPA are notated with the applicable footnote.

Graduation Requirements

Credit Hour Requirement

A total of 120 hours is required to graduate with a Fashion Merchandising and Design degree.

Prerequisites

Some courses required for this major have prerequisites. Please refer to Undergraduate Course Catalog or consult your advisor for information about prerequisites.

Foreign Language Requirement

A sequence of 2 foreign language courses is required for graduation unless 2 high school credits of the same foreign language or 6 transfer credit hours of foreign language have been earned. These credits do not count toward graduation.

Army ROTC

Our Website (http://www.armyrotc.vt.edu)

Overview

The Department of Military Science provides a program of leader development which prepares college men and women for service as officers in the United States Army. After graduation, they serve as commissioned officers on active duty, in the Army Reserves, or in the Army National Guard. To accomplish this, the department:

- Prepares Cadets to be commissioned as Second Lieutenants through a curriculum which develops leadership skills and provides opportunities to use these skills in a variety of experiential learning environments.
- Provides an understanding of how to lead and influence small organizations, with a strong emphasis on character, personal integrity, adaptability, critical thinking, innovation, agility, ethical decision making, goal setting, and mission accomplishment.
- Offers individual training including rappelling, land-navigation, marksmanship, and, for selected students, airborne, air assault, or combat diver training. Army sponsored international programs for cultural awareness and language training as well as internships with Army units and federal agencies worldwide are also offered during the summer.
- In conjunction with the Virginia Tech Corps of Cadets, provides programs and experiences which increase self-confidence, self-discipline, physical stamina, resilience, and other attributes essential to the development of a leader of character--one who is prepared to serve the nation or community either in or out of uniform.

The curriculum and leader development programs of the Department of Military Science are mentally and physically challenging. Cadets learn individual soldier skills and participate in physical conditioning for all four years. On-campus instruction is done both in the classroom and in the field environment. Lab training and leadership development exercises expand the general knowledge of Cadets and provide opportunities for practical leadership experience. A six-week leadership development and assessment course (Advanced Camp) is mandatory the summer between junior and senior year; the course is held at Fort Knox, Kentucky.

- Military Science I (freshmen) includes the semesters Introduction to the Army and Foundations of Leadership. Cadets learn about the U.S. Army and the Profession of Arms, with a focus on the Army Values, the Warrior Ethos, and basic leadership and Soldier skills. Later Cadets are introduced to battle drills and squad tactics, critical thinking and communications skills, as well as the Army's model for holistic health and fitness.
- Military Science II (sophomores) includes the semesters Leadership and Ethics and Army Doctrine and Decision Making. In this year, Cadets focus more on leadership and team building, with continued focus on Soldier fundamentals, and a deeper look at Army Values

in the context of ethics and the law of land warfare. Later Cadets are introduced to the Army problem solving process, troop leading procedures, analytical skills, Joint and Army doctrine, and tactical skills at the platoon level.

- Military Science III (juniors) includes the semesters Training Management and the Warfighting Functions and Applied Leadership in Small Unit Operations. Cadets examine and apply the individual and collective leadership skills to lead a platoon formation (up to 40 personnel) and train on giving and receiving peer evaluations, the fundamentals of organizational training management, and how the Army operates through the Warfighting Functions (such as mission command, movement and maneuver and intelligence).
- Military Science IV (seniors) includes the semesters The Army Officer and Company Grade Leadership. This year is the final preparation for Cadets to serve as commissioned officers and builds on and reinforces all the training and education from the previous three years.
- Military Science V (fifth-year Cadets) includes a Field Study for Cadets requiring a fifth year to graduate. Cadets in their fifth year will continue to train and lead other Cadets as they prepare to be commissioned officers in the United States Army.

Army ROTC offers the conventional four-year military science program where a student enters as a freshman. A three-year program for sophomores is also available. Additionally, a two-year program is offered for juniors and graduate students in some limited cases. Placement credit may be awarded to students with prior Air Force, Navy, or Marine Corps ROTC experience, students with prior or current military service, or to those students who volunteer for additional summer training at Fort Knox, Kentucky.

Scholarships covering full tuition and fees are available for entering freshman though a High School National Army ROTC Scholarship Board process. Applications for these scholarships are available online (https://www.goarmy.com/careers-and-jobs/find-your-path/army-officers/rotc/scholarships/). Otherwise, Cadets enrolled in Army ROTC can compete for campus-based scholarships through the department's Recruiting Operations Officer. All contracted Cadets (scholarship or non-scholarship) enrolled in the junior and senior years of ROTC are paid a tax-free monthly stipend of $420.00 for 10 months during the school year. Membership in the Virginia Tech Corps of Cadets is a pre-requisite for all ROTC classes. The cost of Cadet uniforms is paid by a special Army uniform allowance provided to each enrolled Cadet.

Minor in Leadership and Service

Satisfactory completion of the 26-credit military science curriculum will qualify each Cadet for a Minor in Leadership and Service awarded by the Virginia Tech College of Liberal Arts and Human Sciences.

Head: James B. Cogbill, Colonel, U.S. Army
Professor: J. B. Cogbill
Assistant Professors: D. Harrison, G. Calvert, J. Dufault, T. Spadine, and M. Jackson
Advisor: (540) 231-6401

Undergraduate Course Descriptions (MS)

MS 1005 - Military Science I, Army Reserve Officer Training Corps (2 credits)
First year of military science. MS 1005: Introduction to the Army introduces the personal challenges and competencies that are critical for effective leadership and communication. Student learning focuses on developing individual and interactive skills. Students learn how cultural understanding, goal setting, time management, stress management, and comprehensive fitness relates to leadership and the Army profession. Students further learn the ROTC course structure and progression, and are immersed into Army organizational culture via classroom instruction, physical fitness training, and leadership labs. MS 1006: Foundations of Agile and Adaptive Leadership introduces students to basic knowledge required to be a successful member of a military team, to include the U.S. Armys mission, its role and relationship in the American governance system, U.S. military customs and courtesies, operational terms and graphics, map reading, land navigation squad tactics, the Army Values and Warrior Ethos. This course includes reading assignments, homework assignments, practical exercises, a mid-term exam, and a final exam. Students receive systematic and specific feedback on leader attributes, values, and core leader competencies throughout the course. Successful completion of this course will help prepare cadets for Military Sci II, AROTC.
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

MS 1006 - Military Science I, Army Reserve Officer Training Corps (2 credits)

Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

MS 2005 - Military Science II, Army Reserve Officer Training Corps (3 credits)
Second year of military science. 2005: Troop Leading Procedures focuses on operations order production, leadership principles and styles, ethical and moral reasoning, land navigation and intermediate squad and platoon tactics. Required participation: leadership lab, physical training and field training exercises. 2006: Unified Land Operations focuses on doctrine and symbology, principles of joint operations, intermediate small unit tactics and leadership, effective communication, team building, counseling and coaching methods, code of conduct and law of land warfare. Required participation: leadership lab, physical training and field training exercises.
Prerequisite(s): MS 1005 and MS 1006
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

MS 2006 - Military Science II, Army Reserve Officer Training Corps (3 credits)
Second year of military science. 2005: Troop Leading Procedures focuses on operations order production, leadership principles and styles, ethical and moral reasoning, land navigation and intermediate squad and platoon tactics. Required participation: leadership lab, physical training and field training exercises. 2006: Unified Land Operations focuses on doctrine and symbology, principles of joint operations, intermediate small unit tactics and leadership, effective communication, team building, counseling and coaching methods, code of conduct and law of land warfare. Required participation: leadership lab, physical training and field training exercises.
Prerequisite(s): MS 1006
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

MS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MS 3005 - Military Science III, Army Reserve Officer Training Corps (4 credits)
Third year of military science. 3005: Training management and the warfighting functions focuses on unified land operations, troop leading procedures, operations order production, written and oral communication, training management, squad leadership and tactics, squad and platoon offense/defense, land navigation, after action reviews, leadership, and physical training. Required participation: leadership lab, physical training and field training exercises. 3006: Applied leadership in small unit operations, squad and platoons offense/defense, basic rifle marksmanship, written and oral communication, land navigation, fires support to dismounted operations, leadership, physical training and preparation for advanced camp. Required participation: leadership lab, physical training and weekend field training exercises.
Prerequisite(s): MS 2005 and MS 2006
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

MS 3006 - Military Science III, Army Reserve Officer Training Corps (4 credits)
Third year of military science. 3005: Training management and the warfighting functions focuses on unified land operations, troop leading procedures, operations order production, written and oral communication, training management, squad leadership and tactics, squad and platoon offense/defense, land navigation, after action reviews, leadership, and physical training. Required participation: leadership lab, physical training and field training exercises. 3006: Applied leadership in small unit operations, squad and platoons offense/defense, basic rifle marksmanship, written and oral communication, land navigation, fires support to dismounted operations, leadership, physical training and preparation for advanced camp. Required participation: leadership lab, physical training and weekend field training exercises.
Prerequisite(s): MS 2005 and MS 2006
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

MS 4005 - Military Science IV, Army Reserve Officer Training Corps (4 credits)
Fourth year of military science. 4005: The Army Officer focuses on development of the Army officer. It is an academically challenging course where students develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. Students learn about Army programs that support counseling subordinates and evaluating performance, applying values and ethics to organizational problems, career planning, and legal responsibilities. Required participation: leadership lab, physical training and field training exercises. 4006: Company Grade Leadership focuses on preparing students to fulfill key leadership roles at the company level. This is an academically challenging course where students study, practice, develop, and apply critical thinking skills pertaining to Army leadership, officer skills, Army values and ethics, personal development, small unit tactics, platoon level leadership. Required participation: leadership lab, physical training and weekend field training exercises.
Prerequisite(s): MS 3006
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

MS 4006 - Military Science IV, Army Reserve Officer Training Corps (4 credits)
Fourth year of military science. 4005: The Army Officer focuses on development of the Army officer. It is an academically challenging course where students develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. Students learn about Army programs that support counseling subordinates and evaluating performance, applying values and ethics to organizational problems, career planning, and legal responsibilities. Required participation: leadership lab, physical training and field training exercises. 4006: Company Grade Leadership focuses on preparing students to fulfill key leadership roles at the company level. This is an academically challenging course where students study, practice, develop, and apply critical thinking skills pertaining to Army leadership, officer skills, Army values and ethics, personal development, small unit tactics, platoon level leadership. Required participation: leadership lab, physical training and weekend field training exercises.
Prerequisite(s): MS 3005 and MS 3006
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

MS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

English

Our Website (http://www.english.vt.edu)

Overview

The Department of English offers majors in English (study in literature, including pre-Law and pre-Education options), Professional and Technical Writing, and Creative Writing. A degree in English will appeal to students who are interested in a foundational education in the liberal arts, specializing in literature and writing, and who may pursue careers in business, government, education, law, speech sciences, writing, publishing, advertising, health, activism, the arts, or social services.

The Department of English also offers minors in Literature, Language Sciences, Professional and Technical Writing, and Creative Writing, and many of its courses provide credits for Pathways general education in Discourse, Critical Thinking in the Humanities, Critique and Practice in Design and the Arts, and Critical Analysis of Equity and Identity in the U.S.

English Degree Majors

Students working towards the B.A. in English may choose from three majors, each consisting of 39 required hours.

- A major in English.
  Within the English major, there are three options available to students:
  - Literature,
  - Pre-Education, and
  - Pre-Law.
- A major in Professional and Technical Writing.
- A major in Creative Writing.

Degree Requirements

All three of the majors share a common English core that provides a foundational curriculum in research, critical thinking, and interpretation. Students in all three majors take these core courses together, providing a rich and diverse context for the study of writing and literature.

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the General Education requirements (Curriculum for Liberal Education) (see "Academics (p. 9)") and toward the degree in English.

Satisfactory progress requirements toward the B.A. in English can be found on the major checksheet by visiting the University Registrar website at http://registrar.vt.edu/graduation-multi-brief/index1.html.

Post Graduate Study

Undergraduate majors interested in pursuing advanced degrees (M.A., M.F.A., or Ph.D.) in English should, with the assistance of their professors, mentors, and the department's academic advisor, carefully plan their programs of study. Coverage across periods and genres is strongly recommended, as is a good reading knowledge of another language, for students planning to continue study for a master's or doctoral degree. Getting to know professors and learning as much as possible about the professional elements of the discipline provide excellent preparation for graduate work.

Pathways General Education and English

Pathways General Education requires a six hours of foundational Discourse credits and three hours of advanced or applied Discourse credits. ENGL 1105 First-Year Writing and ENGL 1106 First-Year Writing fulfill the six foundational credits of this Pathways requirement. These courses share a focus on the rhetorical dimensions of writing, speaking, and visual communication. Many 2000-4000 level ENGL courses fulfill the advanced or applied Discourse credits, and can count toward students' majors and Pathways general education. The same is true of most courses that fulfill Critical Thinking in the Humanities, Reasoning in the Social Sciences, Critique and Practice in Design and the Arts, and Critical Analysis of Identity and Equity in the U.S.; courses that meet one or more of these requirements can count for Pathways and major credit.

- Creative Writing Major (p. 986)
- English Major with Literature Option (p. 987)
- English Major with Pre-Education Option (p. 989)
- English Major with Pre-Law Option (p. 990)
- Technical and Scientific Communication Major (https://catalog.vt.edu/undergraduate/liberal-arts-human-sciences/english/technical-scientific-communication-ba/)

Chair: Kelly Pender
Associate Chair: Gena Chandler
Assistant Chair: Jared Gibbs
Alumni Distinguished Professors: L. H. Roy
Clifford A Cutchins III Chair: Su Fang Ng
Professors: C. Eska, J. F. Eska, E. Falco, R. Hicok, K. Hodges, J. Ivory, B. McComisky, D. Mueller, S. F. Ng, K. Pender, K. M. Powell, D. H. Radcliffe, L. H. Roy, M. Vollmer, and R. Weaver-Hightower
Associate Professors: K. Carmichael, G. Chandler, K. Cleland, J. Dubinsky, S. M. Knapp, J. Mann, A. Reed, K. Queen, A. Wadoski, and A. J. Walker
Assistant Professors: S. Baniya, S. Cassnelli, C. Commer, S. Craig, J. Gerdes, C. Itchuaqiyaq, E. Lavender-Smith, C. Lindgren, S. Rabbi, G. Ramirez, T. Thompson, T. Webster, and A. Wiscomb
Collegiate Assistant Professor: S. Patel and M. Weaver
Visiting Assistant Professor: C. Farrington, S. Terazawa, and E. Waldman
Senior Instructors: R. Allnutt, M. Armstrong, E. Bloomer, R. Canter, S. GIlbert, A. F. Kinder, A. Lautenschlager, J. Lawrence, J. Mengert, J. Mooney, S. Mooney, A. Murphy, L. Neilan, S. Oakey, H. R. Patton, V. Ruccolo, and J. Scallorns
Advanced Instructors: N. Baker, S. Baker, C. Correll, J. A. Gibbs, A. Hobin, I. B. Johnson, S. Maycock, K. Morse, and J. Truscello
Instructors: N. Austin, T. Becker, S. Bennington, N. Brown, L. Corwin, C. Craig, N. Dragon, J. Drapeau, L. Fehr, T. Gardner, J. Greene, K. Hall, M. Hemmer, R. Hooper, A. Jones, L. S. King, S. Lohani, M. Marzolf, T. Passwater, S. Patcha-Lum, G. Saeidfar, T. Snyder, C. Taylor, B. Zaldivar Flores, M. Zaldivar, and J. Zan
Postdoctoral Fellows: S. Flego and K. E. Wright
Coordinator of Undergraduate Advising: Dawn Knight

Undergraduate Course Descriptions (ENGL)

ENGL 1EWL - Waiting List for English 1105 (0 credits)
Instructional Contact Hours: (0 Lec, 0 Crd)

ENGL 1004 - Books, Libraries, Archives (3 credits)
First-Year Experience course that introduces students to primary objects and methods of inquiry and invention in English studies. Introduction to library and archival research, ethical inquiry, social and historical function of reading, role of books in society, technologies of publication and reading, and writing effective summaries and critical reflections.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1105 - First-Year Writing (3 credits)
1105: Introduction to rhetorical analysis, visual rhetoric, critical writing, and critical thinking; intensive reading of works in multiple genres; practice in writing and revision; fundamentals of oral presentations. 1106: Continued study in rhetorical analysis and the conventions of various genres; intensive instruction in writing and revision of work that incorporates research; experience in oral presentations.
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1106 - First-Year Writing (3 credits)
1105: Introduction to rhetorical analysis, visual rhetoric, critical writing, and critical thinking; intensive reading of works in multiple genres; practice in writing and revision; fundamentals of oral presentations. 1106: Continued study in rhetorical analysis and the conventions of various genres; intensive instruction in writing and revision of work that incorporates research; experience in oral presentations.
Prerequisite(s): ENGL 1105
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1504 - Introduction to Contemporary Linguistics (3 credits)
Introduction to the sounds of language, processes by which words and sentences are formed, how the meanings of words are established by context, and why languages vary and change over time.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1514 - Language and Society (3 credits)
English language variation considered from social, regional, ethnic, gender, and style perspectives. Emphasis on vernacular varieties of American English. Attention paid to the social evolution of different language varieties and sociolinguistic perceptions of language ideologies. Introduction of methods of data analytics.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1524 - Language and the Mind (3 credits)
Examination of what is unique about human language and the evidence that language affects thought. Investigation of how listeners categorize sounds, parse sentences, and access meaning. Examination of what brain damage and speech errors reveal about language in the brain and mind.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSYC 1524

ENGL 1604 - Introduction to Poetry (3 credits)
Examination of poetry across historical periods, cultural contexts, and geographical areas. Emphasis on poetic forms and conventions, elements of poetic technique, poetic genres, and the vocabulary of poetic craft.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1614 - Introduction to Short Fiction (3 credits)
Analysis of short fiction and novellas from different historical periods and cultures. Emphasis on the structural elements of fiction, on its flexibility as a form for exploring human desires, conflicts, and values, and on its employment by writers from different cultures, ethnicities, and genders.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1624 - Introduction to Detective Fiction (3 credits)
Analysis of classic and modern texts of detective fiction selected from a variety of historical periods and cultural traditions. Emphasis on the structural elements of detective fiction, on its various sub-genres, and on its employment by writers from different cultures, ethnicities, and genders.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1634 - Introduction to Shakespeare (3 credits)
Introduction to Shakespeares drama and poetry, including at least one modern adaptation of a Shakespearean play (play, novel, movie, opera, etc.). Emphasis on the structural elements and conventions of the different genres of Shakespearean plays and poetry and on their representations of gender and ethnicity.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1644 - Introduction to World Literature (3 credits)
World literature in translation. Texts from different time periods, nations, and cultures. Emphasis on close reading, literary elements and conventions, recurring themes, historical and cultural contexts.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1654 - Introduction to Science Fiction and Fantasy (3 credits)
Introduction of literary works within the genres of science fiction and fantasy, focusing on the development and principal characteristics of each genre. Emphasis on the social, cultural, and historical contexts in which particular speculative texts have been produced.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1664 - Introduction to Womens Literature (3 credits)
Introduction to literature written by women, primarily in English. Focus on literary and cultural questions raised in womens writing throughout history and from different social and cultural backgrounds.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1704 - The Harry Potter Phenomenon (3 credits)
Introduction to a millennial childrens literature phenomenon, J.K. Rowlings seven-volume Harry Potter series, and to various critical and cultural responses to the books. Subgenres of fiction used in the series, such as the boarding-school novel and the sports novel; recurring themes in the series; critical concepts such as the Byronic hero and the anti-hero; the role of media in making the series an economic phenomenon; and the relationships of the novels to film versions and fan-fiction spin-offs.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1714 - True Crime Stories in American Culture (3 credits)
Analysis of true crime stories across various media and genres. Emphasis on the origins of true crime, narrative features and conventions of true crime stories, and the social, political, and ethical issues raised by their production and consumption, particularly in terms of race, gender, class, and other components of identity.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2014 - Food Writing (3 credits)
Introduction to the study, analysis, and production of food writing and food media; applied, iterative writing practices within multiple genres focused on the cultural and humanistic qualities of food.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2034 - Analyzing the Sounds of Language (3 credits)
Examination of the acoustic attributes of vowels and consonants using quantitative techniques. Statistical analysis of acoustical differences between and within speakers, enabling predictions about future language choices and outcomes. Basic introduction to using computational software for data processing and visualization, and to ethical issues that arise in collecting an analyzing data.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2044 - Contemporary African American Theatre (3 credits)
Contributions of U.S. Black theatre artists; intersectional identities; performances spaces and society; critical race theory; dramatic storytelling; cultural behaviors; racial discrimination.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2044, TA 2044

ENGL 2104 - African American Linguistics (3 credits)
Overview of some of the language varieties used by African Americans, including African American English, Black American Sign Language, Gullah, Louisiana Creole, and Afro-Latino varieties of Spanish and English. Focus on historical, contemporary, sociopolitical and linguistic factors impacting language practices at the individual and community level. Examination of African American language styles used in expressive forms of art and politics, but also how language ideologies shape responses to African American language in educational, political, and judicial settings. Uses lens of African American Language to explore key linguistic concepts like phonology, morphosyntax, prosody, language acquisition, language contact, and language change.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2104

ENGL 2434 - Legends of King Arthur (3 credits)
Introduction to legends of King Arthur, including stories, novels, and films from a wide historical timespan. Tales of knights, kings, and fair maidens that have entertained generations and irrevocably shaped cultural values surrounding gender relations, justice, violence, and the use and abuse of power. Analysis of individual texts and broader consideration of the Arthurian tradition during key literary-historical periods from the medieval era to the present.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2434

ENGL 2444 - Ancient Greek and Roman Mythology (3 credits)
Surveys ancient Greek and Roman mythology. Provides students with an introduction to selected myths from ancient Greek and Roman literature, including appropriate historical background information. Familiarizes students with how theories of myth have been applied to individual stories and how such mythological tales have been received by authors and artists in subsequent cultures. Explores the interaction and interdependence of mythological tales from different cultures and perspectives. In English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CLA 2444, RLCL 2444

ENGL 2534 - American Literary History (3 credits)
Introduction to American literary traditions, from the Colonial period through Modernism. Emphases on historical, social, and cultural contexts as these are reflected by representative texts.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2544 - British Literary History (3 credits)
Introduction to British literary traditions, from the Anglo-Saxon period through Modernism. Emphasis on historical, social, and cultural contexts as these are reflected by representative texts.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2604 - Introduction to Critical Reading (3 credits)
A writing intensive introduction to the techniques and theoretical implications of close reading and to the literary genres of poetry, drama, fiction, and, in some sections, non-fiction. The focus is on four primary texts, at least one of which was written before the eighteenth century and one after it, and on criticism of at least one of these. The course emphasizes the analytical skills, basic critical terminology, and conventions of literary criticism essential to advanced English studies. Intended primarily for English majors and minors.
Prerequisite(s): ENGL 1105 or COMM 1015
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2634 - Writing and Social Justice (3 credits)
Study of writings about social justice in various local and global contexts. Critical and rhetorical analysis of discourses in social justice through intersectional approaches.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2644 - Introduction to African-American Literature (3 credits)
An introduction to the principal themes, genres, and historical contexts of African-American literature. Formal elements of both the vernacular and written traditions. Impact of historical and social contexts. Ethical questions raised in the literature.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2644

ENGL 2664 - Being Human: Literature and Human Experience (3 credits)
Depictions of nature, the inhuman, and the superhuman in literature; literary explorations of empathy, technology, race, gender, language, dis/ability, and labor in human experience. Novels, short stories, and poems that explore issues of the human: how to define what is human (recognizing flexible and perhaps permeable boundaries between human and nonhuman), how to defend the human (humans at war with themselves and others), how humans are exploited (labor and human capital), and how humans change (technological development and future human evolution). Imaginative and ethical issues in different genres. Revolving topics course; may be repeated once for credit.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ENGL 2724 - Introduction to Displacement Studies (3 credits)
Examines key concepts, ideas, and technologies in global population displacement, including categorization, distribution and governance of displaced groups. Introduces displacement drivers such as natural disaster, climate change, civil unrest, infectious disease, and forced relocation. Identifies digital infrastructures used for, by, and against displaced populations. Describes experiences of displaced people.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2724, LAHS 2724, STS 2724

ENGL 2744 - Introduction to Creative Writing (3 credits)
A workshop for beginning writers who will identify and apply formal elements of a variety of genres and employ the skills, tools, methods, and iterative processes used by creative writers to produce fully developed works of art.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2804 - Contemporary Native American Literatures (3 credits)
This course offers a sampling of fiction, poetry, and non-fiction by the most influential American Indian writers since 1970, authors such as Momaday, Silko, Deloria, Welch, Harjo, and Alexie. Students also learn about those aspects of cosmology and storytelling traditionally shared by all American Indian Nations, as well as about those aspects specific to the individual tribal traditions from which the authors and their characters come.
Prerequisite(s): ENGL 1106 or ENGL H1204 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 2804

ENGL 2814 - Writing for Podcasts (3 credits)
Analysis of exemplary and diverse podcasts, in both audio and transcribed formats. Application of creative writing and technical skills necessary for the composition of original and diverse audio programs. Implementation of formal podcast elements, such as development, performance, structure, production, and promotion. Exploration of creative projects involving scriptwriting, serialized storytelling, hybridized genres, vocal performance, extemporization.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2844 - Introduction to Professional and Technical Writing (3 credits)
Foundations of professional and technical writing and its functions in workplace settings. Practice with problem solving and decision making, audience analysis, document design, usability, and inclusive and ethical documentation, individually and in teams. Practice writing workplace genres such as proposals, reports, and correspondence. Analyze how writing elements such as design, language choices, and diverse data sources affect a document's usability for different audiences.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 3024 - Religion and Literature (3 credits)
Read works from world literature, guided by selected critical readings. Compare/contrast diverse models of religion and literature. Study how modernity has impacted traditions of religion and culture. Interpret literary texts that draw from multiple religions. Analyze religion-literature controversies in a range of social, cultural, political contexts. Synthesize sources of multiple media, formats, and contexts.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3024

ENGL 3134 - Gender and Linguistics (3 credits)
Exploration of differences--real and imagined--in the speech of men and women, and the relationship between these differences to culture. Exploration of how language can reflect and reinforce gender inequality. Linguistic phenomena covered: pitch, vocabulary, sound change, language ideologies, and discourse strategies and types.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WGS 3134

ENGL 3144 - Language and Ethnicity in the United States (3 credits)
Exploration of how racial and ethnic identity are expressed through the use of different languages and dialects. Examination of how language is related to issues of equality, social opportunity, and discrimination in the United States.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3144, SOC 3144

ENGL 3154 - Literature, Medicine, and Culture (3 credits)
The representation of health and illness in literature and the cultural aspects of medicine as a practice.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3204 - Medieval Literature (3 credits)
This course presents medieval British literature from ca. 700 to 1500 in its representative modes and defining contexts, including the literary influences of pagan antiquity, the native British (Celtic) tradition, Scandinavian and contemporary continental influences, the Crusades, the Byzantine Empire, and the philosophical traditions of neoplatonism and scholasticism. Specific authors and texts will vary, but will include poetry, prose, and drama.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3214 - Renaissance Literature (3 credits)
This course presents Renaissance British literature from 1500-1660 in its representative modes and defining contexts, including the discovery of the Copernican universe and the new world, the rise of Protestantism, the resultant Counter-reformation, the movement from humanism to empiricism, and the institution of Parliamentary democracy. Specific authors and texts will vary, but will include poetry, prose, and drama.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3234 - Romantic Literature (3 credits)
This course presents Romantic literature from the late eighteenth century to 1832 in its representative modes and defining contexts, including the French, American, and Industrial Revolutions, the expansion of the British empire, the rise of the novel, Gothicism, and the intellectual influence of periodical essays. Specific authors and texts will vary, but will include poetry, fictional prose, and non-fictional prose.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3264 - Modernist British Literature (3 credits)
This course presents Modernist British literature from 1918-1945 in its representative modes and defining contexts, including World Wars I and II, the collapse of the British empire, the influence of Darwin, Marx, and Freud, and such literary movements as Modernism, Realism, and Stream of Consciousness. Specific authors and texts will vary, but will include poetry, prose, and drama.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3304 - The Languages of Native America (3 credits)
Study of the structures of the native languages of the Americas; their interrelationships; their use in individual speech communities; contact with other languages; the interrelationships of linguistic structure, culture, and thought; their future survival.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 3304

ENGL 3315 - Playwriting (3 credits)
A workshop course in the craft and art of playwriting which emphasizes the development of craft and the nurturing of vision and art. 3315: primary focus is on the writing of original scripts with additional attention paid to the work of influential playwrights and critics. 3316: primary focus is on the creative process of developing a play with the collaborative influences of a director, actors, designers, and other theatre professionals. Consent of instructor required for 3316.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: TA 3315

ENGL 3324 - Acts of Interpretation (3 credits)
Foundational interpretive approaches in literary and rhetorical studies. Emphasis on broad frameworks and their implications for textual analysis.
Prerequisite(s): ENGL 2604
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3364 - Topics in Literature by Women (3 credits)
This rotating topics course examines literature written by women with different national and ethnic identities and from different historical periods. Specific content varies, but the common focus is on the fundamental issues surrounding womens writing, the critical methodologies commonly employed to analyze this writing, and the historical, social, and literary contexts influencing the particular writing being studied. May be repeated once with different content.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3424 - Topics in Russian Literature in English (3 credits)
Variable-content course devoted to the study of Russian literary classics. From general surveys of nineteenth- and twentieth-century literature to more intensive study of the works of a single major author. Aesthetic and rhetorical strategies. Interactions between literary movements and political, historical, and cultural events. May be repeated once with different content for a maximum of 6 credits. Readings and lectures in English. No knowledge of Russian required.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: RUS 3424

ENGL 3434 - The Works of Vladimir Nabokov (3 credits)
Readings in major works of Vladimir Nabokov from the 1920s through the 1970s. Aesthetic and rhetorical strategies, literary analysis, major themes, immigration and cultural knowledge. Taught in English.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RUS 3434

ENGL 3474 - Rhetoric for Professional Writers (3 credits)
Rhetorical theory and writing in professional, technical, and public contexts. Culture, access, power, and ethics in relation to rhetoric in professional and technical writing. Rhetoric strategies for textual and digital production.
Prerequisite(s): ENGL 1106 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3514 - Ethnic Literature for Children (3 credits)
This course examines the historical contexts of and issues surrounding ethnic literature for children. The course considers the literature in terms of aesthetics, cultural representations, and identity. Ethnic literatures considered may include Native American, African American, Asian American, and Latino/a. The course also introduces other ethnic literary traditions, such as world folk tales, that influence or parallel American ethnic childrens books.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3524 - Literature for Children (3 credits)
General critical and historical survey of traditional and contemporary writing for children: picture books, folk literature, modern fantasy, poetry, drama, modern fiction, historical fiction.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3534 - Literature and the Environment (3 credits)
Study of fiction, poetry, and non-fiction that examine environmental issues, sustainability, and the relationship between the human and natural worlds within a local and global context.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3544 - Literature and Cinema (3 credits)
Works of literature and the films into which they have been transformed; emphasis on differences between media.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CINE 3544

ENGL 3624 - Appalachian Literature (3 credits)
Appalachian literature from the region's beginnings to the present, including such diverse voices as women, Native American, Affrilachian, LGBTQ, and Latinx populations. Literary perspectives on the relationships between self, family, and community; place and displacement; and humans and the natural world. Analysis of stereotypes that have perpetuated inequity and displacement of power, as well as consideration of regional efforts to reclaim equity, power, place, and identity.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 3624

ENGL 3644 - The Postcolonial Novel (3 credits)
A study of novels examining the historical, social, and cultural contexts before, during, and after colonization. Emphasis on major writers (e.g., Achebe, Coetzee, Roy, Phillips) across continents (Africa, Asia, North America) and the significant themes, tropes, and theories of the genre.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3654 - Ethnic American Literature (3 credits)
Variable content course which introduces major American ethnic literatures: African-American, Asian-American, Chicano/a, Arab-American, and Native American. Representative texts from one or two of these categories are examined within the cultural, historical, and geographical matrices within which they are written. May be repeated twice for credit if the content is different.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ENGL 3684 - Literature and the Law (3 credits)
This course introduces students to the representation of the law and lawyers in literature. Emphasis is placed on the cultural and historical contexts that shape our perception of the law and legal practice and on the use of facts, research, interpretation, and rhetoric in legal argument. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3684H - Literature and the Law (3 credits)
This course introduces students to the representation of the law and lawyers in literature. Emphasis is placed on the cultural and historical contexts that shape our perception of the law and legal practice and on the use of facts, research, interpretation, and rhetoric in legal argument. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3694 - Topics in World Novels (3 credits)
Rotating-topics course in world novels, either translated into, or originally written in, English. Emphasis on critical reading of novels written from different historic, intellectual, and cultural contexts. Formal and aesthetic analysis to identify themes, traditions, and values that cross periods and national boundaries. May be repeated once with different topics.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ENGL 3704 - Creative Writing: Fiction (3 credits)
This course is designed for students who want to focus in some depth on the writing of various forms of fiction such as the short story and novella. Emphasis is on the writing the critiquing of original fiction in a workshop/studio environment, and the analysis of exemplary texts which serve as models. Students produce a body of original fiction in draft and revised forms. May be repeated for a maximum of 9 credit hours.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 3714 - Creative Writing: Poetry (3 credits)
This course is designed for students who want to focus in some depth on the writing of poetry. Emphasis is on the writing and critiquing of original poetry in a workshop/studio environment, and the analysis of exemplary poems which serve as models. Students analyze various poetic forms and produce a revised body of original poetry. May be repeated for a maximum of 9 credit hours.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 3724 - Creative Writing: Creative Non-fiction (3 credits)
This course is designed for students who want to focus in some depth on the writing of creative non-fiction in its various forms, including memoir, personal experience writing, the lyrical essay, travel narratives, and nature writing. Emphasis is on the writing and critiquing of original creative non-fiction in a workshop/studio, environment and the analysis of exemplary texts which serve as models. Students produce a body of original non-fiction in draft and revised forms. May be repeated for a maximum of 9 credit hours.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 3734 - Community Writing (3 credits)
Introduction to the theory and practice of managing service- learning writing projects in schools, community centers, retirement communities, and public libraries. Survey of best practices in creative writing pedagogy and in creating sustainable community partnerships.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3734H - Community Writing (3 credits)
Introduction to the theory and practice of managing service- learning writing projects in schools, community centers, retirement communities, and public libraries. Survey of best practices in creative writing pedagogy and in creating sustainable community partnerships.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3744 - Writing Center Theory and Practice (3 credits)
Focus on the theory and practice of teaching writing across the disciplines in the Writing Center setting. Emphasis is on writing center theory applied to one-on-one teaching strategies and on techniques for responding appropriately to student writing. To take this course you must first have the professors consent.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3744H - Writing Center Theory and Practice (3 credits)
Focus on the theory and practice of teaching writing across the disciplines in the Writing Center setting. Emphasis is on writing center theory applied to one-on-one teaching strategies and on techniques for responding appropriately to student writing. To take this course you must first have the professors contest.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3754 - Advanced Writing and Research (3 credits)
Advanced study in critical reading and writing for diverse academic, professional, civic, and/or personal contexts, culminating in a course portfolio; applied practice with audience-specific texts in multiple genres, modes, and styles; advanced instruction in research strategies and writing processes for complex rhetorical environments; emphasis on the influence of social and cultural identities across writing contexts.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3764 - Technical Writing (3 credits)
Principles and processes of effective written communication of technical information. Strategies for analyzing various workplace communication situations, adapting to audiences, evaluating online content, understanding ethical dimensions of research, and composing technical discourse, including organizing visual and verbal information. Practice in writing, individually and collaboratively, instructions and procedures, proposals and reports, correspondence, and presentations. Junior standing.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3774 - Business Writing (3 credits)
Principles and processes of effective communication required to succeed in business in global and intercultural contexts. Strategies for writing effective messages, analyzing workplace communication situations, adapting information to various audiences, conducting ethical research, giving oral presentations. Practice in writing memos, letters, emails, blog posts, proposals, and reports. Junior standing required.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3784 - Screenwriting (3 credits)
A workshop course in the craft and art of screenwriting, acquainting students with the standard format of screenplays and evaluation of dramatic structures of influential screenplays. Emphasis on construction of dramatic situations, employing the use of action in developing character and theme. Employment of scene as a visual unit of composition, and the evaluation of dramatic structures of influential screenplays.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3804 - Technical Editing and Style (3 credits)
Technical Editing and Style explores the art of editing from the initial writing task to the final delivery of the document. In addition to learning document management, students study and practice the roles, responsibilities, and tasks that editors perform. The course also covers the rules that govern the fundamentals of style (correctness, clarity, and propriety) and the principles needed to match the tone and formality to the aim, audience, and occasion of the work. Must have pre-requisites or the consent of the Director of Professional Writing.
Prerequisite(s): ENGL 1106 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3814 - Creating User Documentation (3 credits)
This course prepares students to produce both print and online user documentation that enables people to accomplish a given set of tasks (e.g., user guides, online help, policy and procedure manuals, tutorials, and how-to books). Readings include rhetorical theory and discussions of professional practice. Students learn the principles of user and task analysis, information design, usability testing, and indexing. In addition, they have opportunities for hands-on experience with clients and end-users. Must have pre-requisites or the consent of the Director of Professional Writing.
Prerequisite(s): ENGL 1106 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3824 - Visual Rhetoric and Document Design (3 credits)
Theory and practice of visual rhetoric and document design, including attention to ethical design standards and the sociocultural implications of design. Analysis of rhetorical situations to determine the needs of diverse audiences and make effective and ethical design choices. Application of rhetorical theories and formal design strategies to the production of print and digital artifacts using industry-standard design tools (i.e., Adobe InDesign, Illustrator, and Photoshop). Development of the ability to analyze and critique the work of others and to apply such assessments to improve designs in terms of aesthetics and usability.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3834 - Intercultural Issues in Professional Writing (3 credits)
Intercultural and global dimensions of professional and technical writing, including theoretical perspectives and practical applications. Theories of culture, context, identity, language, and technology as relevant to technical and professional communication. Issues of social equity and justice in the field of professional and technical writing. Approaches to engaging in intercultural communication in practice, including localization, globalization, translation, and designing information for and with communities.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3844 - Writing and Digital Media (3 credits)
Fundamental exercises in the production of digital media for internet-capable devices, such as data visualizations, videos, web design, and more. Introduction to ethical reasoning, and its application to contemporary issues about digital media and writing within the context of broader business, organizational, and political practices to collect and use user data.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

ENGL 3954 - Study Abroad (1-9 credits)
Instructional Contact Hours: (1-9 Lec, 1-9 Crd)
Repeatability: up to 9 credit hours

ENGL 3954B - Study Abroad (1-6 credits)
Pathway Concept Area(s): 2 Critical Thinking Humanities
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)

ENGL 3954M - Study Abroad (1-9 credits)
Pathway Concept Area(s): 6A Critique & Practice in Arts
Instructional Contact Hours: (1-9 Lec, 1-9 Crd)

ENGL 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 4004 - Linguistic Discourse Analysis (3 credits)
Introduction to discourse analysis. This course examines spoken and written discourses of English. Further attention will be paid to how discourse functions in political, legal, medical, and educational contexts.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4054 - History of the English Language (3 credits)
Development of English including both its internal history (sounds, vocabulary, inflections, syntax) and its external history (political, social, and intellectual forces). Indo-European origins through the present, with special emphasis on the English Language in America.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4074 - Syntax (3 credits)
Examination of the systemic organization of sentence patterns in human languages. Formulation of problems and evaluation of competing syntatic analyses at the phrase and sentence levels. Analysis of the architecture of phases and of movement processes for grammatical and pragmatic informational coding.
Prerequisite(s): ENGL 1504
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4084 - Conducting Research in the Language Sciences (3 credits)
Research methodology for the study of linguistic structure, sociolinguistic variation, and cross-field approaches. Ethical research methods, data collection, data processing and analysis, presentation of research.
Prerequisite(s): ENGL 1504 and (ENGL 3134 or WGS 3134 or ENGL 3144 or RLCL 3144 or SOC 3144)
Corequisite(s): ENGL 4074, ENGL 4144
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4114 - Chaucer (3 credits)
Critical analysis of themes, styles, and structures in works of Geoffrey Chaucer. Ethical issues, historical context, and cultural traditions. Structure and vocabulary of Middle English. Influence in literary and critical traditions historically and today.
Prerequisite(s): (ENGL 1106 or ENGL 1204H) or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4124 - Introduction to Old English (3 credits)
Introduction to Old English grammar and reading of Old English poetry and prose. Senior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4134 - Language Development (3 credits)
Survey of theories, mechanisms, and processes in human language development. Empirical overview of phonology, semantics, syntax, and pragmatics. Developmental trajectories of mono-and multilingual children. Cultural constraints on language. Perception of language and production of language, in typical and atypical subpopulations (e.g., hearing impairment). Junior/Senior Standing.
Prerequisite(s): PSYC 1004 or PSYC 2004
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSYC 4134

ENGL 4144 - Phonology (3 credits)
Examination of the systematic organization of sounds in human languages based upon problem-based learning. Analysis of syllables and morae, articulatory features, timing of articulatory gestures, and phonological processes that lead to sound change. Assessment of various theoretical and computational approaches to phonology including Articulatory Phonology, Prosodic Phonology, and Optimality Theory.
Prerequisite(s): ENGL 1504
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4164 - Studies in Shakespeare (3 credits)
Revolving topics in Shakespeares drama and poetry, with emphases on poetic and dramatic genres, historical and cultural contexts, significant themes, and popular reception. Additional attention paid to the critical discourse surrounding Shakespeares work. May be repeated twice with different content for a maximum of nine credit hours.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 4204 - Hybrid Forms (3 credits)
Advanced writing workshop. Focus on the fusion of genres, such as prose poetry and multimedia writing, with special emphasis on anomalous and/or experimental forms, like cronicas/chronicles, manifesto/artist's statement, microfiction, erasure, collage, third person nonfiction, flash nonfiction, and the lyric essay. Skills, tools, methods, and iterative processes essential to the production of works of literary art.
Prerequisite(s): ENGL 3704 or ENGL 3714 or ENGL 3724
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4214 - Milton (3 credits)
Miltons poetry from the early works, including COMUS, LYCIDAS, and the sonnets, to his major late works PARADISE LOST, PARADISE REGAINED, and SAMSON AGONISTES; with some attention to the important prose and to the historical context in which he wrote.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4314 - Narrative Medicine (3 credits)
Introduction to the field of narrative medicine, with attention to narrative competence, the use of narrative in medical education, and the function of narratives in the experience of healing. Includes narrative approaches to biomedical ethics.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 4314

ENGL 4314H - Narrative Medicine (3 credits)
Introduction to the field of narrative medicine, with attention to narrative competence, the use of narrative in medical education, and the function of narratives in the experience of healing. Includes narrative approaches to biomedical ethics.
Prerequisite(s): ENGL 3154 or ENGL 3324
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 4314

ENGL 4434 - The American Novel (3 credits)
Development of the American novel from its beginnings in the late 18th century to 20th century postmodernism. Emphasis on works representative of major authors (e.g., Twain and Morrison), important types (e.g., the romantic novel, the historical novel), and significant American themes (e.g., religion, nature, slavery, the frontier).
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4444 - The British Novel (3 credits)
Development of the British Novel from the mid- eighteenth century to World War II, including works by such novelists as Defoe and Austen (origins through romantic era), Dickens, Hardy, and Stevenson (Victorian and Edwardian era), Joyce, Woolf, and Waugh (modern period). Emphasis on evolution of generic styles and conventions against a changing landscape of historical and cultural change.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4474 - Special Topics in Professional and Technical Writing (3 credits)
Advanced, variable-content course that explores a significant or emergent professional & technical writing issue. Examines relevant theories and historical contexts to analyze relationships among rhetoric, culture, access, and power. Identifies common themes and approaches and applies these themes and approaches, shaped by current theories, to professional and technical writing projects. Individual sections focus on differing areas of professional and technical writing (to be specified in the subtitle of the course). May be repeated twice with different content for a maximum of nine credit hours. Pre: Junior Standing.
Prerequisite(s): ENGL 1106 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 4504 - Modern Poetry (3 credits)
British and American poetry from 1900 to World War II with emphasis on such figures as Pound, Williams, Stevens, Yeats, Plath, Smith, and Eliot.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4514 - Contemporary Poetry (3 credits)
British and American poetry from World War II to the present, with emphasis on such figures as Bishop, Lowell, Ashbery, Heaney, and Hughes.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4624 - Studies in a British Author after 1800 (3 credits)
This course examines the life, work, and critical reception of a single major British author (or pair of closely associated authors) writing after 1800. May be taken up to 3 times with different content. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4634 - Studies in an American Author before 1900 (3 credits)
This course examines the life, work, and critical reception of a single major American author (or a pair of closely associated authors) writing before 1900. May be taken up to three times with different content. Junior standing is required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 4644 - Studies in an American Author after 1900 (3 credits)
This course examines the life, work, and critical reception of a single major American author (or pair of closely associated authors) writing after 1900. May be taken up to three times with different content. Junior standing is required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 4664 - Contemporary Fiction (3 credits)
Fiction since 1945 with emphasis upon the most recent two decades: the late modernist narratives of Bellow, Updike, and Percy; the new fiction of Barth, Hawkes, Barthelme; the postmodern fiction of Federman, Carter, Fowles, Katz, Sukenick.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4684 - Special Topics in Literature (3 credits)
An advanced, variable-content course which explores a significant or emergent literary issue or approach, or a body of literature. May be taken twice with different content.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ENGL 4704 - Advanced Creative Writing: Fiction (3 credits)
Designed for senior English majors who have selected the Creative Writing option, this is an intensive, advanced workshop. This capstone course builds on skills students have acquired in creative writing workshops. Primary focus is on the writing and critiquing of original fiction, while paying close attention to the work of established writers who are acknowledged masters of their genres. Students hone their skills as peer reviewers and constructive critics. In the process, they produce a portfolio of their own fiction.
Prerequisite(s): ENGL 3704
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4714 - Advanced Creative Writing: Poetry (3 credits)
Designed for senior English majors who have selected the Creative Writing option, this is an intensive, advanced workshop. This capstone course builds on the skills acquired in previous creative writing workshops. Primary focus is on the writing and critiquing of original poems, while paying close attention to the work of established poets who are acknowledged masters of their genres. Students hone their skills as peer reviewers and constructive critics. In the process, they produce a portfolio of their own poetry.
Prerequisite(s): ENGL 3714
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4724 - Creative Writing: Fiction for Young People (3 credits)
This course is conducted in a workshop setting in which students compose original stories for young people. Elementary techniques of fiction are emphasized, such as plot structure, point of view, setting, characterization, and audience. Must have prerequisites or permission of the instructor.
Prerequisite(s): ENGL 3704
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4744 - Editing an Undergraduate Research Journal: Philologia (3 credits)
A seminar and professional development course on editing and producing a scholarly research journal. Emphasis on the day-to-day production operations of a research journal; the analysis, evaluation, and editing of manuscripts; journal design and layout; website content development; development and distribution of promotional materials; and the production of editorial exchange with authors.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4754 - Editing a Literary Journal (3 credits)
An experiential learning and professional development course on the history and day-to-day operations of literary journal editing with emphasis on composing blog posts and promotional materials, analyzation of the history of print culture, analyzation of current publications, the practice of copyediting and developmental editing, the evaluation of manuscripts for inclusion in a literary journal, the evaluation of job opportunities, and the composition of application materials.
Prerequisite(s): ENGL 1106 and ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4764 - Small Press Publishing (3 credits)
A seminar and professional development course on the history and day-to-day operations of small press culture and production. Emphasis on the design and distribution of promotional materials; the analysis, evaluation, and editing of manuscripts; and practice the art of editorial exchange with authors. Evaluation of job opportunities and composition of application materials. May be repeated 2 times with different content for a maximum of credit hours.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ENGL 4784 - Senior Seminar (3 credits)
Designed for senior English majors, this is a variable topics, in-depth study of a particular issue or theme in language or literature. This capstone course aims to integrate and synthesize previous work in the discipline, focusing especially on close reading, research, and writing skills.
Prerequisite(s): ENGL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ENGL 4804 - Grant Proposals and Reports (3 credits)
This course prepares students to write effective proposals, reports, and informational articles. Students learn to define and write problem statements, program objectives, plans of action, evaluation plans, budget presentations, and summaries. In addition, they sharpen their teamwork, editing, writing, audience awareness, and design skills as they engage in collaborative projects with campus and/or non-profit organizations in the community. Prerequisite or consent of the instructor is required.
Prerequisite(s): ENGL 1106 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4814 - Developing Online Content (3 credits)
Covers the process of creating documents for online environments. Builds on knowledge and skills acquired in foundational Professional Writing courses. Involves production of websites from scratch, starting with low-fidelity mockups and advancing to formatting layouts adaptable to the diverse screen sizes of computers and mobile devices. Focuses on a balance of structure (code), content (information), and format (presentation and design).
Prerequisite(s): ENGL 1106 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4824 - Science Writing (3 credits)
Writing in and about the natural and social sciences. Students will write documents such as abstracts, research proposals, and ethnographies, analyze the development of disciplinary writing practices, and study non-fiction science writing for general audiences. Senior standing or instructor approval required.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4854 - Writing, Research, Study Abroad (3 credits)
Application of academic abroad experience to students disciplinary studies on campus. Conducted after international education abroad experience. Collaborative writing and research projects as well as individual, independent research. Approval of course instructor required. Open to all majors. Pre-requisite: A formal study abroad educational experience; department approval.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4874 - Issues in Professional and Public Discourse (3 credits)
In this course designed for English majors in the Professional Writing Option, students will focus on the ways in which scientific, technical, and professional communication influence, and are influenced by, public discourse. Drawing on strategies of rhetorical criticism, students will gain an understanding of the persuasive value of style, arrangement, and delivery by investigating their professional roles in helping to structure public debate. Pre: Completion of at least 9 credit hours from the following courses: 2844, 3104, 3474, 3804, 3814, 3824, 3834, 3844, 4474, 4804, 4814, 4824.
Prerequisite(s): ENGL 3104 or ENGL 2844
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4954 - Study Abroad: Issues and Texts (1-6 credits)
An advanced, variable-content and multi-disciplinary course that explores global themes and literature(s) during a month-long, faculty-led summer study abroad experience. Pre-requisite: Junior Standing required. Variable credit course, repeatable up to 6 credits.
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)
Repeatability: up to 6 credit hours

ENGL 4954B - Study Abroad (1-6 credits)
Pathway Concept Area(s): 2 Critical Thinking Humanities
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)

ENGL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

[1] In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g. Pathways).

Note: All English courses above the 1000-level have as a pre-requisite completion of the First-Year Writing Requirement—i.e., completion of ENGL 1106 First-Year Writing or COMM 1016 Communication Skills.

Satisfactory Progress toward the B.A. in English, Major in Creative Writing

Satisfactory progress toward the B.A. in English, Major in Creative Writing, requires that upon having attempted 72 credits (including transfer, advanced placement, advanced standing, credit by examination, and course withdrawal), students must have passed 12 of the required credits in the English Core (Section I) and have attained a GPA of 2.0 or better both within the major and overall.

Graduation Requirements

The B.A. in English with a Major in Creative Writing requires 39 hours in English, distributed as follows, and 120 hours overall. In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g. Pathways).

Note: All English courses above the 1000-level have as a pre-requisite completion of the First-Year Writing Requirement — i.e., completion of 1106 or COMM 1016. Some courses required for this major have other pre-requisites/co-requisites and/or enrollment requirements. Please refer to the Undergraduate Catalog or consult your advisor for information about the specific pre-req/co-req or enrollment requirements for a specific course.

In order to graduate, students must complete the degree with a GPA of 2.0 or better both within the Creative Writing Major and overall. All English courses above the 1000-level are factored into the in-major GPA.

Foreign Language Requirements

Foreign Language Requirement

- 3 years in high school *or*
- 2 years in high school + an 1106 foreign language (e.g., FR, GR, SPAN) *or*
- Less than 2 years in high school + an 1105-1106 foreign language (e.g., FR, GR, SPAN) grouping.

[1] In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g.Pathways).

[2] Course is required for this major have other pre-requisites/co-requisites and/or enrollment requirements. Please refer to the Undergraduate Catalog or consult your advisor for information about the specific pre-req/co-req or enrollment requirements for a specific course.

Note: All English courses above the 1000-level have as a pre-requisite completion of the First-Year Writing Requirement—i.e., completion of 1106 or COMM 1016 Communication Skills.

Satisfactory Progress Toward the B.A. in English, Major in English: Pre-Education Option

Satisfactory progress toward the B.A. in English, Major in English: Pre-Education Option, requires that upon having attempted 72 credits (including transfer, advanced placement, advanced standing, credit by examination, and course withdrawal), students must have passed 12 of the required credits in the English Core (Section I) and have attained a GPA of 2.0 or better both within the major and overall. In order to graduate, students must complete the degree with a GPA of 2.0 or better both within the English Major: Pre-Education Option and overall. All English courses above the 1000-level are factored into the in-major GPA.

Graduation Requirements

The B.A. in English with a Major in English, in the Pre-Education Option, requires 45 hours in English, distributed as follows, and 120 hours overall. In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g. Pathways).

Note: All English courses above the 1000-level have as a pre-requisite completion of the First-Year Writing Requirement—i.e., completion of 1106 or COMM 1016 Communication Skills . Some courses required for this major have other prerequisites/co-requisites and/or enrollment requirements. Such courses are identified by an asterisk (*) on this checksheet. Please refer to the Undergraduate Catalog or consult your advisor for information about the specific pre-req/co-req or enrollment requirements for a specific course.

Foreign Language Requirement

- 3 years in high school *or*
- 2 years in high school + an 1106 foreign language (e.g., FR, GR, SPAN) *or*
- Less than 2 years in high school + an 1105-1106 foreign language (e.g., FR, GR, SPAN) grouping.

English Major with Pre-Law Option

Program Curriculum

Code	Title	Credits
Degree Core Requirements [1]		
Foundational Theories and Content		
ENGL 1004	Books, Libraries, Archives	3
ENGL 1514	Language and Society	3
ENGL 2604	Introduction to Critical Reading	3
ENGL 3324	Acts of Interpretation	3
ENGL 3754	Advanced Writing and Research	3
English and Cross-cultural Representation		
Select two of the following:		6
ENGL 3144	Language and Ethnicity in the United States	
ENGL 3644	The Postcolonial Novel	
ENGL 3654	Ethnic American Literature	
ENGL 3834	Intercultural Issues in Professional Writing	
Subtotal		21
Major Requirements		
Literary History		
ENGL 2534	American Literary History	3
ENGL 2544	British Literary History	3
Capstone Experience		
ENGL 4784	Senior Seminar	3

History

Our Website (http://www.liberalarts.vt.edu/departments-and-schools/department-of-history.html)

Overview

History is the study of people and events of the past to better understand how to meet the challenges of the future. Our students develop important 21st-century skills in research and analysis, speaking and writing excellence, the synthesis of diverse information, digital and media literacy, intercultural understanding, and historical/contextual expertise.

Widely recognized for promoting undergraduate research, the history curriculum prepares students for fulfilling careers in the technology sector, law, business, the military, intelligence, non-profit management and administration, healthcare, media and communication, information management, and education. History also provides the knowledge and skill students need for graduate work in Journalism, Law, Business, and Medicine, or the liberal arts or social sciences.

Courses at the 1000 level are introductory surveys open to anyone with an interest in history but without a strong background in the subject. Students intending to continue in history should take these courses in their freshman or sophomore years. Courses at the 2000 level, with the exception of Historical Methods, are introductory surveys of particular topics for a general undergraduate audience. Courses at the 3000 level, primarily for sophomores and above, provide more focused and detailed study of a period, place, or topic introduced at the 1000 or 2000 level. Courses at the 4000 level are conducted as seminars that emphasize original writing and research, and are generally restricted to students with junior standing or above who have already taken six hours or more of college-level history.

Majors

The history curriculum is designed to introduce fundamental skills of the discipline, followed by upper division courses that develop knowledge and skills, culminating in a capstone research experience. It is a deliberately flexible curriculum built to encourage students to double major, minor, or undertake study abroad, internships, and/or undergraduate research.

History majors complete a minimum of 39 hours in History, including 21 hours of core history courses and 18 hours of depth studies that can be tailored to students' own interests.

Majors who choose to undertake the Research/Thesis Option will complete the requirements of the B.A. in History and six hours of undergraduate research that results in the completion of a Thesis, OR three hours of undergraduate research that builds on work completed in HIST 4914 History Research Seminar along with three hours of History elective credit at the 2000 level or above.

Minors

History minors require completion of a minimum of 18 hours of history courses, some of which must meet a Depth Studies requirement. We offer minors in History, War and Society, American Indian Studies, Asian Studies, and Russian Area Studies. You may find requirements by visiting the University Registrar website http://registrar.vt.edu/graduation-multi-brief/index1.html.

Advising

A professional advisor assists each major in planning to meet their degree requirements. The student is expected to confer with the advisor at regular intervals regarding the progress of his or her studies. Students also work with one or more faculty mentors who provide guidance regarding academic and professional choices.

Virginia Tech offers extensive career advising (http://career.vt.edu/).

Experiential Learning

The history department encourages our students to undertake study abroad, internships, and undergraduate research projects and offers students curriculum that allows them to achieve academic credit for these experiences. Check out the wide variety of study abroad programs available through the Global Education Office (https://www.globaleducation.vt.edu/). Research the wide array of career-related experiences (http://career.vt.edu/experience.html) you can have while still in College, especially Hokies4Hire (http://career.vt.edu/job-search/H4H-OCI.html).

Honors

Outstanding history majors may be eligible to join the Honors College and complete an Honors Laureate Diploma. For more about the Honors College, please visit https://honorscollege.vt.edu.

Student Organization

The department is host to a student-run History Club and a local chapter of the National History Honors Society Phi Alpha Theta. Social and academic events allow for informal interaction between students and faculty. Don't miss our annual trivia competition Stump the Chumps between faculty, undergraduates, and graduate students!

Satisfactory Progress

Satisfactory progress requirements toward the B.A. in history can be found on the major checksheet by visiting the University Registrar website at http://registrar.vt.edu/graduation-multi-brief/index1.html.

- History Major (p. 1002)
- History Major with Undergraduate Research/Thesis Option (p. 1004)

Chair: Jennifer Hart
Associate Chair: Carmen Gitre
Professors: M.V. Barrow Jr., L. A. Belmonte, A.R. Ekirch, E.T. Ewing, M. Heaton, R.F. Hirsh, B. L. Shadle, and P.R. Wallenstein
Associate Professors: D. Agmon, G.R. Bugh , S. Cook, N. Copeland, A. Demmer, C. Gitre, E. Gitre, H. L. Gumbert, D.P. Halpin, M. Kiechle, M. Mollin , P. Quigley, H. Schneider, R. P. Stephens, J. Taylor, D.B. Thorp, L. Winling, A. Zeide
Assistant Professors: R. Midura, E. Polanco
Collegiate Associate Professor: M. Dufour
Collegiate Assistant Professor: D. Freas
Instructor: A. Narayanan

Undergraduate Course Descriptions (HIST)

HIST 1004 - Introduction to History (3 credits)
Introduces students to the main concepts and issues of discipline of history. Familiarizes students with the Department of History, educational requirements, university resources, and career opportunities for History majors.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1014 - Topics in Reacting to the Past (3 credits)
Introduction to fundamental issues in history through historical simulations. Enacting specific roles in historical situations while improving liberal learning skills, including evaluating evidence, understanding multiple perspectives, writing persuasive essays, and developing public speaking skills. Specific topics may vary from semester to semester. May be repeated one time with different content for a maximum of six credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

HIST 1024 - Ancient History (3 credits)
Surveys the civilizations and peoples of Greece, Rome, and the Ancient Near East (including Egypt and Mesopotamia) from the invention of writing around 3,000 B.C. to the fall of the Roman Empire in the fifth century C.E. through study of literature as well as archaeological artifacts. Examines the interactions and interdependencies of these civilizations and considers their enduring influence.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1025 - Introduction to European History (3 credits)
Examines the political, social, and cultural history of Europe since the medieval period. Focuses on the complex interplay between demographic transformation, social and political change, and cultural development. 1025: Explores the legacy of the Roman Empire, the expansion and consolidation of "Europe," the medieval world and expansion in the Atlantic World. 1026: Explores the rise of Absolutism and the Enlightenment, the Age of Revolutions, imperialism, the rise of new political ideologies and nation-building, and Europe in the twentieth century world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1026 - Introduction to European History (3 credits)
Examines the political, social, and cultural history of Europe since the medieval period. Focuses on the complex interplay between demographic transformation, social and political change, and cultural development. 1025: Explores the legacy of the Roman Empire, the expansion and consolidation of "Europe," the medieval world and expansion in the Atlantic World. 1026: Explores the rise of Absolutism and the Enlightenment, the Age of Revolutions, imperialism, the rise of new political ideologies and nation-building, and Europe in the twentieth century world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1084 - Food Studies (3 credits)
Interdisciplinary introductory course explores how food shapes and is shaped by culture and society. Examines how people use food to express meanings (e.g., via foodways, story, art, architecture, religion, ethical codes), how food options, practices, and inequities are shaped by social structures (e.g. cultural and legal norms regarding race, class, and gender), and how the material properties of food (e.g., chemical, ecological, technological) are linked to identities, ideological commitments, and historical moments.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 1084, RLCL 1084, SOC 1084

HIST 1115 - History of the United States (3 credits)
Examines the history of the United States through intersections of politics, economics, sciences, the arts and significant social movements. Considers how the modern United States has emerged through the interactions of diverse ethnic, racial, national, class, and religious groups. 1115: pre-Columbian societies through the Civil War; 1116: Reconstruction through present. Sequence recommended as preparation for advanced courses in United States history.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1116 - History of the United States (3 credits)
Examines the history of the United States through intersections of politics, economics, sciences, the arts and significant social movements. Considers how the modern United States has emerged through the interactions of diverse ethnic, racial, national, class, and religious groups. 1115: pre-Columbian societies through the Civil War; 1116: Reconstruction through present. Sequence recommended as preparation for advanced courses in United States history.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1214 - History of the Modern World (3 credits)
An examination of the global significance of the critical political, social, cultural, and international issues in the 20th century.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1215 - Intro to World History (3 credits)
Examine political, economic, social, and cultural change around the world over the course of human existence, with particular emphasis connections and comparisons of human societies across space and time. 1215: Covers early civilizations to 1500 CE. Major themes include the development of human civilization and the interactions of different societies through exchange of people, ideas, goods, and disease. 1216: Covers from 1500 CE to present. Major themes include the spread of European imperialism and resistance to it, development of nation-states, world wars, and post-colonial globalization.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1216 - Intro to World History (3 credits)
Examine political, economic, social, and cultural change around the world over the course of human existence, with particular emphasis connections and comparisons of human societies across space and time. 1215: Covers early civilizations to 1500 CE. Major themes include the development of human civilization and the interactions of different societies through exchange of people, ideas, goods, and disease. 1216: Covers from 1500 CE to present. Major themes include the spread of European imperialism and resistance to it, development of nation-states, world wars, and post-colonial globalization.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1224 - Conquest and Culture in Latin American Empires (3 credits)
Explores major themes and events in the political and cultural history of major empires in Mexico and Peru from 900 to 1600. Examines the emergence of indigenous empires, their confrontation with European conquistadors, and life in the early colonial period. Discusses the cultural collision that occurred when Europeans arrived in the Americas, and complicates the narrative of the conquest. Focuses on the complex interplay between geography, political and economic organization, and social change. Investigates the position of indigenous peoples in pre-Columbian and European empires in Mesoamerica and the Andes. Discussion of the methods and sources to interpret postclassic and early Colonial Latin America.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1354 - Conflict and Security in Modern East Asia (3 credits)
Survey of the 20th century history of five states in northeast Asia, People's Republic of China, Taiwan, Japan, North and South Korea, and the connections between them. Causes and consequences of war, colonization and nationalist movements and their implications for contemporary regional and global relations. Emphasis on cultural concepts, political ideologies, social relations and historical conflicts as background to current security concerns.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1515 - History of Africa (3 credits)
Examines political, economic, social and cultural themes in African history from the beginnings of human civilization to the recent past, with particular emphasis on historical experiences of race, gender, class, religion, ethnicity, and nationality. 1515: Covers early civilizations through the abolition of the slave trade. Examines migrations and trade, the expansion of Islam, and slavery in Africa and the Atlantic and Indian Oceans. 1516: Covers Africa since the nineteenth century. Examines European conquest, and major political, cultural and social changes during the colonial and post-colonial eras.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1516 - History of Africa (3 credits)
Examines political, economic, social and cultural themes in African history from the beginnings of human civilization to the recent past, with particular emphasis on historical experiences of race, gender, class, religion, ethnicity and nationality. 1515: Covers early civilizations thorugh the abolitionof the slave trade. Examines migrations and trade, the expansion of Islam, and slavery in African and the Atlantic and Indian Oceans. 1516: Covers Africa since the nineteenth century. Examines European conquest, and major political, cultural and social changes during the colonial and post-colonial eras.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1764 - History of Rock n Roll (3 credits)
Rock 'n' roll in historic and cultural contexts. Effects on social identity, worldviews, economic justice, cultural appropriation, diversity, power, and traditions. Creative and aesthetic influences in human experience and cultural expression. Significant music figures, movements, and trends in artistic, political, social, technological, and industrial developments in the U.S.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 2004 - Historical Methods (3 credits)
Explanation of the discipline of history: its history, philosophies, and methods, with emphasis on historical research.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2054 - Engineering Cultures (3 credits)
Development of engineering and its cultural values in historical and transnational perspectives. Explores the varying knowledge, identities, and commitments of engineers and engineering across different countries. Examines values in emergent infrastructures of engineering education and work, and the participation of engineers and engineering in evolving forms of capitalism. Helps students learn to reflect critically on their knowledge, identities, and commitments in varying curricula and a globalizing world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 2054

HIST 2104 - Topics and Critical Issues in US History (3 credits)
Introduction to the problems, methods and skills of the discipline of history through the study of significant themes and critical issues in the history of the United States. Emphasis on the study of source materials and historical interpretations of specific themes in American history. Themes grounded in issues of class, race, gender, and equality in US history. Specific topics will vary from semester to semester. Course may be repeated twice for a maximum of 9 credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

HIST 2114 - Topics and Critical Issues in European History (3 credits)
Introduction to the problems, methods and skills of the discipline of history through the study of significant themes and critical issues in European history. Emphasis on the study of source materials and historical interpretations. Specific thematic content is variable. Themes grounded in European history/Europe's role in world that interrogate the concept of "the West." Specific topics will vary from semester to semester. Course may be repeated twice for a maximum of 9 credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

HIST 2124 - Topics and Critical Issues in World History (3 credits)
Introduction to the problems, methods and fundamental skills of the discipline of history through the study of significant themes and critical issues in world history. Emphasis on the study of source materials and historical interpretations. Specific thematic content is variable. Examines political, economic, social, and cultural change at historically specific periods of time around the world with a focus on drawing comparisons and making connections across regional spaces. Specific topics may vary from semester to semester. May be repeated two times with different content for a maximum of 9 credit hours.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

HIST 2134 - The Revolution Will Be Televised: Topics in History on TV (3 credits)
Explores topics in history through the lens of specific TV shows or series. Featured shows and topics will vary from semester to semester. Considers how television programs have represented historical events, ideas, and communicated ideas about race, gender, sexuality, class, or culture. May be repeated once with different content for a maximum of 6 credit hours.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

HIST 2166 - History of France (3 credits)
French history from Roman Gaul to the present. 2165: Roman, Medieval, and Renaissance France; Absolute Monarchy. 2166: The Revolution; Nineteenth and Twentieth Century France.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2184 - History of the Balkans (3 credits)
History of Southeastern Europe from the sixth century to the present. Chief themes are movement of peoples, Byzantine and Ottoman Empires, religious conflicts, social developments, and rival nationalisms.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2224 - Ancient Greek and Roman Women (3 credits)
Examines the history of ancient Greek and Roman women from ninth century BCE to the fall of the Roman Empire. Analyzes contributions of women to each civilization. Studies construction of and contemporary debates about women's ascribed social, political, and cultural roles.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CLA 2224

HIST 2234 - Classics in the Modern World (3 credits)
Examines the influences, traditions, and receptions of the ancient Greeks and Romans in the modern world, especially in the United States. Explores the re-interpretation of the ancient Greek and Roman world across mediums, and by leaders and governments in diverse societies. Discusses contexts and ideologies of re-makings of the ancient Greek and Roman world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CLA 2234

HIST 2244 - Cities of Rome (3 credits)
Examines the building development of the ancient city of Rome and selected Roman cities; investigates how social, political, and cultural aspects of private and public architecture in these physical cities both create meaning and preserve memory. Explores the ways in which later cultures, especially through literature, have engaged with the pervasive and persistent influence of ancient Rome, not just as a physical place, but also as a cultural construct.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CLA 2244

HIST 2264 - America in the 1960s (3 credits)
Surveys the political, social, and cultural history of the U.S. over the long Sixties (mid-1950s to mid-1970s). Examines the civil rights movement, Vietnam War and antiwar movement, identity politics, cultural revolutions, American liberalism, and American conservatism. Explores how intersection of race, class, gender, ethnicity and age shaped varying experiences of the 1960s. Emphasis on the study of source materials and historical interpretations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2275 - African-American History (3 credits)
2275: African continent through Civil War. Examines trajectory of slavery as well as its global impacts and legacy, the development of racial thought, slave resistance and rebellions, the fight for Emancipation, and African American contributions to culture, economics and society of United States. 2276: Reconstruction through present. Examines impact and legacy of Reconstruction, the fight against Jim Crow segregation, and the social, cultural, political and economic contributions of African Americans in the nineteenth and twentieth century United States. Exploration of the global implications of race relations in the United States.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2275

HIST 2276 - African-American History (3 credits)
2275: African continent through Civil War. Examines trajectory of slavery as well as its global impacts and legacy, the development of racial thought, slave resistance and rebellions, the fight for Emancipation, and African American contributions to culture, economics and society of United States. 2276: Reconstruction through present. Examines impact and legacy of Reconstruction, the fight against Jim Crow segregation, and the social, cultural, political and economic contributions of African Americans in the nineteenth and twentieth century United States. Exploration of the global implications of race relations in the United States.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2276

HIST 2345 - History of the Middle East (3 credits)
History of the Middle East from the seventh century to today, with emphasis on formation of Islamic civilization, medieval and early modern political systems, European imperialism, and the struggle for independence. 2345: seventh century to 1914; 2346: independence, wars, revolutions, and social change since 1914.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2346 - History of the Middle East (3 credits)
History of the Middle East from the seventh century to today, with emphasis on formation of Islamic civilization, medieval and early modern political systems, European imperialism, and the struggle for independence. 2345: seventh century to 1914; 2346: independence, wars, revolutions, and social change since 1914.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2355 - History of China (3 credits)
China from prehistory to the present. Special attention to political, social, economic, and cultural developments. 2355: Prehistory, Imperial China to the sixteenth century; 2356: late Imperial China to modern and contemporary China.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2356 - History of China (3 credits)
China from prehistory to the present. Special attention to political, social, economic, and cultural developments. 2355: Prehistory, Imperial China to the sixteenth century; 2356: late Imperial China to modern and contemporary China.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2364 - History of Japan (3 credits)
Political, social, economic, and cultural development of Japan from earliest times to present; emphasis on problems of modernization in the nineteenth and the twentieth centuries.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2374 - Gods and Kings in Premodern India (3 credits)
History of India from pre-historical times to approximately 1700, with particular focus on the interplay between religion and politics. Emphasis on sources for and interpretations (historiography) of early Indian history. Literary versus archaeological record of pre-historic India, the earliest empires and rulers, and impact of the Islamic and wider world on India. Legacies of ancient and medieval India in the contemporary world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2374

HIST 2384 - Gandhi in the Making of Modern India (3 credits)
History of India since approximately 1700, with particular focus on Gandhis influence on modern India and the world. Emphasis on sources for and interpretations (historiography) of modern Indian history. Examination of pre-colonial and colonial pasts and legacies. Exploration of Gandhis role in political, social, cultural, and religious movements of the early 20th century, and Gandhis legacy in the independent states of South Asia and the contemporary world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2384

HIST 2394 - Tofu to Tikka: Food in Asian History (3 credits)
Exploration of the evolution and alterations of food and cuisines throughout Asian history. Examination of the economic, geographical, political, philosophical/religious, and social underpinnings of food in premodern Asian societies; influence of the Columbian Exchange of Asian and global cuisines; Euro-American imperialism's impact on food and society in Asia and in the European and American metropoles; emergence of national cuisines in Asia; and Asian food in the post-colonial diaspora.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2394

HIST 2484 - Modern Germany (3 credits)
Political, social, economic, and cultural history of Germany since 1815. Discussion of the origins, experience and impact of political ideologies and national unification/reunification, colonial expansion, Nazism, war and genocide, and the role of Germany in Europe and the world. Diverse perspectives on German history and its implications through primary and secondary source materials. Particular focus on historiographical interpretations of the German past.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2494 - Cities in History (3 credits)
Examines the changing conditions of urban life and the shifting roles that cities have played in U.S. history. Identifies transformations and movements in physical development, including urban form, architecture, urban planning, infrastructure, and environmental conditions. Details the processes of immigration and the consequences of demographic change in cities. Analyzes the contests over politics arising from these urban changes.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2504 - Crime and Punishment in American History (3 credits)
Analyzes changing understandings of crime and punishment from the Colonial Era to the Age of Mass Incarceration. Considers how factors of race, ethnicity, class, and gender intersected with changing ideas of criminality and punishments.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CRIM 2504

HIST 2514 - U.S. Food History (3 credits)
Introduction to the history of food in the United States. Examines food cultures, food systems, food industries, nutrition, government regulation, inequalities, and environmental effects of food and agricultural production. Studies these topics across different demographics in the United States and its global context, with attention to change over time.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2524 - History of Agriculture (3 credits)
Survey of agricultural history in the United States, with comparative global case studies. Examination of indigenous practices, labor, development of market economies, relationships among plants and animals, scientific and technological change, landscape transformation and sustainability, food systems, and inequality and exploitation within cultures and societies.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2534 - America at War (3 credits)
The United States at war from the American Revolution to the War on Terror. Emphasis on how U.S. policymakers have justified war, popular understandings of "the enemy," the merits and limitations of distinctions between civilians and service members, and the role of technological innovation. Engagements with interdisciplinary and intersectional perspectives with a war and society approach.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2544 - U.S. South: Pre-Colombian to 1865 (3 credits)
Surveys history and cultures of the U.S. South from the Pre-Colombian era to the modern South. Analyzes the enslavement and emancipation of Black southerners, slave resistance, the impact of capitalism, Reconstruction, the creation of the Lost Cause mythology and Jim Crow segregation. Examines the political and economic influences of the region from the emergence of abolitionist thought, populism, the long struggle for racial equality, and the creation of the Sunbelt. Special emphasis placed on struggles for social justice, civil rights and demographic changes within the region.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2554 - U.S. South: 1865 to Present (3 credits)
Surveys history and cultures of the U.S. South from the Pre-Colombian era to the modern South. Analyzes the enslavement and emancipation of Black southerners, slave resistance, the impact of capitalism, Reconstruction, the creation of the Lost Cause mythology and Jim Crow segregation. Examines the political and economic influences of the region from the emergence of abolitionist thought, populism, the long struggle for racial equality, and the creation of the Sunbelt. Special emphasis placed on struggles for social justice, civil rights and demographic changes within the region.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2604 - Introduction to Data in Social Context (3 credits)
Examines the use of data to identify, reveal, explain, and interpret patterns of human behavior, identity, ethics, diversity, and interactions. Explores the historical trajectories of data to ask how societies have increasingly identified numerical measures as meaningful categories of knowledge, as well as the persistent challenges to assumptions about the universality of categories reducible to numerical measures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 5F Quant & Comp Thnk Found., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 2604, STS 2604

HIST 2624 - Topics in the History of Data in Social Context (3 credits)
Examination of the meaning of data in historical context. Exploration of how historical context shapes classification, collection, and interpretation of data. Analysis of data as a meaningful category of human experience. Variable content. May be repeated once for up to six (6) hours of credit.
Pathway Concept Area(s): 1A Discourse Advanced, 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

HIST 2715 - History of Technology (3 credits)
Development of technology and engineering in their social and cultural contexts. Examines the interaction of people, cultures, technologies, and institutions such as governments, religious bodies, corporations, and citizens groups. 2715: Examines the creation and modification of technologies to establish the basic structures of civilization, from prehistory to the Industrial Revolution (about 1800). 2716: Examines the nature of technological change and consequences in society, from about 1800 to present.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 2715

HIST 2716 - History of Technology (3 credits)
Development of technology and engineering in their social and cultural contexts. Examines the interaction of people, cultures, technologies, and institutions such as governments, religious bodies, corporations, and citizens groups. 2715: Examines the creation and modification of technologies to establish the basic structures of civilization, from prehistory to the Industrial Revolution (about 1800). 2716: Examines the nature of technological change and consequences in society, from about 1800 to present.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 2716

HIST 2724 - Introduction to Displacement Studies (3 credits)
Examines key concepts, ideas, and technologies in global population displacement, including categorization, distribution and governance of displaced groups. Introduces displacement drivers such as natural disaster, climate change, civil unrest, infectious disease, and forced relocation. Identifies digital infrastructures used for, by, and against displaced populations. Describes experiences of displaced people.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 2724, LAHS 2724, STS 2724

HIST 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 2984H - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 3004 - Colonial America (3 credits)
Critical analysis of early American society. Founding and development of the colonies in the 17th century; 18th century colonial life.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3014 - The American Revolution (3 credits)
Causes, nature, and results of the American Revolution, 1763- 1789.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3054 - The American Civil War (3 credits)
Causes, course, and consequences of the American Civil War. Emphasis on transformations in regional and national identity, race relations, the status of African Americans, gender roles, military affairs, and the United States place on the world stage. Develop skill in written and oral discourse.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3084 - Recent America, 1917-Present (3 credits)
Social, economic, cultural, and political history of America from the entry into World War I, the turbulent 1920s, the Great Depression, the New Deal, World War II, postwar prosperity, the Cold War, social and cultural ferment, Vietnam, Watergate, to the new anxieties about the limits of power in the 1980s.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3105 - Women in U S History (3 credits)
Roles of women from colonial settlement to the present. Special attention to family experiences, political agendas, and economic contributions of women and to social construction of gender identities. 3105: to 1865; 3106: since 1865.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3106 - Women in U S History (3 credits)
Roles of women from colonial settlement to the present. Special attention to family experiences, political agendas, and economic contributions of women and to social construction of gender identities. 3105: to 1865; 3106: since 1865.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3124 - Murder in American History (3 credits)
Considers how the definition of murder as a crime has changed from the colonial period to the present day. Uses murder cases to study the dynamics of American society in condemning, condoning, or celebrating murder. Asks how cultural factors, including racial prejudice, gender stereotypes, beliefs about sexuality, and class status affected the act of killing, media coverage of the event, societal reactions, and the execution of justice. Topics covered include abortion, lynching, vigilante justice, and the evolution of the legal system.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CRIM 3124

HIST 3134 - Sports in American History (3 credits)
Impact of sports in American history. Emphasis on the impact of team sports (college and professional basketball, baseball, and football) and individual sports (golf, boxing, and automobile racing) on the development of American society and culture.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3144 - American Environmental History (3 credits)
Explores interactions between Americans and the environment from the time of European contact to the recent past. Traces the sometimes unexpected ways in which nature has shaped history, humans have altered the natural world, environmental attitudes have evolved, and environmental inequalities have arisen.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3164 - Sexuality in American History (3 credits)
Examines the changing social and cultural meanigns of sexual behavior and identity in American life from the colonial era to the present. Explores relationships between sexuality and power, culture and politics, and government regulation with consideration of theoretical frameworks of interpretation. Focuses on dynamics of race, ethnicity, gender, and class.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3174 - Native American History (3 credits)
The Native experience in North America or Latin America from 1491 to present. Emphasis on social diversity and organization, resistance to colonization, leadership and cultural change, and political sovereignty among indigenous peoples. Methods for interpreting a variety of primary sources, including texts, material culture, and archaeological findings. Engagements with shifting historiographical perspectives and political movements for recognition of Native sovereignty.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 3174

HIST 3184 - Food Sovereignty (3 credits)
Food sovereignty, the right to produce and consume culturally relevant food, as a set of practices and as a social movement through comparative case studies. Origins of food sovereignty in response to effects of colonialism, the green revolution, and the global corporate food system on peasant and Indigenous subsistence livelihoods and the concept's transformation through dialogue with indigenous agricultural knowledge and poor peoples' environmentalism. Food sovereignty's challenge to the dominant food system and conceptions of development, how groups implement this vision of democratized social and productive relations through projects of agroecology and land reform, and its potential in the context of ecological calamity.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 3184

HIST 3214 - History of Appalachia (3 credits)
Early settlement, religion, the pre-industrial economy, the coming of the coal and lumber industries, labor activism, politics, migration, and regional identity.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 3214

HIST 3224 - History of Virginia (3 credits)
Social, political, cultural, and economic developments in Virginia, from the sixteenth century to the present.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3234 - The North American West (3 credits)
A study of the peoples and history of the North American West from the sixteenth century through the twentieth.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3254 - The Vietnam War (3 credits)
A critical study of the causes and consequences of the Vietnam War, 1945-1975. Analysis of Americas strategic and military objectives, the nature and conduct of the war, and the growth of the antiwar movement at home.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3274 - The Greek City (3 credits)
History of the ancient Greek city-state (polis) from the Archaic period (800-500 BC) to the creation of the Roman Empire. Principal topics are: origins and definition of the polis; Greek colonization throughout the Mediterranean and Black Seas; the struggle for autonomy in the Classical and Hellenistic periods; and the Hellenizing impact of the polis on non-Greek populations.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3284 - The Roman Revolution (3 credits)
History of the Roman world from 264 B.C. to A.D. 180. Particular attention to the three themes of imperialism, revolution, and empire through extensive reading of the contemporary authors.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3294 - Roman Britain (3 credits)
Examines the social, political, and military origins of early England from Stonehenge to the Norman Conquest; emphasis on archaeology and material culture; and the legacy of the Romans and Romanization on forging a British identity.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3304 - The World of Alexander the Great (3 credits)
Examines the life and times of Alexander the Great and the Hellenistic World, a new cosmopolitan multicultural world initiated by his conquests. Analyzes the rise of Mecedon, the accomplishments and powers of Alexander, and discusses the world forged after him through analysis of literary and non-literary primary sources.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3314 - The Later Roman Empire (3 credits)
Roman Empire in the west from A.D. 180 to A.D. 476 and in the east from A.D. 476 to A.D. 1071. Particular attention to the causes of the fall of the empire in the west and to the Byzantine Empire in the east until the coming of the Turks and the Christian Crusaders.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3324 - The Medieval World (3 credits)
Characteristic thought and institutions of high and late Middle Ages.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3334 - The Renaissance (3 credits)
The Italian Renaissance in its European context. Emphasis upon the culture and institutions of Italian states from 1300 to 1500.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3344 - The Era of The Reformation (3 credits)
Development of Protestantism and reformation of the Catholic Church from 1500 to about 1600. Emphasis upon social, political, and economic factors as well as theology. Examination of conflicts engendered by the reformation movements.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3354 - Reform and Revolution in Early Modern England (3 credits)
Examines the political, social, economic, and religious history of early modern England. Focus on the English Reformation and descent into Civil War and Revolution. Discussion of the Houses of Tudor and Stuart and their roles in radically transforming England into a constitutional monarchy in which the rule of law reigned supreme. Engagement with diverse perspectives on the religious, social, and political upheaval of the sixteenth and seventeenth centuries through focused study of primary and secondary source materials.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3364 - The Age of Revolution and Napoleon (3 credits)
The French Revolution in its European and global context, with particular attention to social and political causes of unrest, strategies of popular mobilization, debates about authority and order, the emergence of empires, and the long-term implications of revolutionary change.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3374 - French Empire (3 credits)
History of French empire from the seventeenth century to the present, in the Carribean, Canada, Asia, North America and Sub-Saharan Africa. Considers indepdendence movements and the effects of post-colonial migrations on metropolitan France. Focus on issues of religion, race, and human rights
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3484 - Nazi Germany: History and Memory (3 credits)
Causes, course, and consequences of the rise of National Socialism in Germany. Political, economic, social, and cultural aspects of life in Germany. Conditions of Weimar Germany; fascism; the emergence of the Nazi Party and its acquisition, exercise and abuse of power; transformation of German society; the problem of Hitler; the Second World War and Holocaust; and memory and representation of the Nazi period.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3494 - The Holocaust (3 credits)
This course provides a historical account, a psychological analysis, and an occasion for philosophical contemplation on the Holocaust. We will examine the deliberate and systematic attempt to annihilate the Jewish people by the National Socialist German State during World War II. Although Jews were the primary victims, Gypsies, people with disabilities, homosexuals, Jehovahs Witnesses and political dissidents were targeted; we will discuss their fate as well. The class will be organized around the examination of primary sources: written accounts, photographic and film, and personal testimony.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 3494, RLCL 3494

HIST 3504 - The Age of The Crusades (3 credits)
The origins and development of religious violence examined from an interdisciplinary and cross-cultural perspective; the place of that phenomenon in medieval society. Christianity, Islam, Judaism and their interactions in the medieval world.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3504

HIST 3534 - Modern Military History (3 credits)
Evolution of warfare in its political and social setting since the French Revolution. Discussion of both European and American military institutions.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3544 - World War II (3 credits)
Examines the origins, nature, and consequences of the Second World War in transnational perspective. Discussion of social, economic, political and diplomatic conditions that led to and shaped the conduct of the war. Engagement with diverse perspectives on the war and its implications through primary and secondary source materials.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3554 - Age of Globalization (3 credits)
An examination of historical forces that have shaped patterns of globalization, with emphasis on the late twentieth and twenty-first centuries. Key themes: debates about the origins of globalization, causes and consequences of global inter-relatedness, influence of key people, events, and ideas on patterns of globalization, and the effects of disease, technology and environment on processes of globalization.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3564 - The Cold War (3 credits)
Examines politics, society, and culture of the Cold War in transnational perspective. Discussion of origins of the Cold War and the emergence of superpowers; cultural, economic and territorial imperialism in the Cold War; the role of ideology; lived experience and the legacy of the Cold War. Engagement with diverse perspectives on the Cold War and its implications through primary and secondary source materials.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3594 - The Rise of Modern Latin America (3 credits)
Major themes and issues in Modern Latin American History. Discussion of the rise of Latin American nations, stressing the internal and external challenges new republics confronted during the nineteenth century and the opportunities and conflicts of the twentieth century.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3604 - Russia to Peter the Great (3 credits)
Russian history from the founding of Russia in the ninth century to the reign of Peter the Great in the early eighteenth century, with special attention to political developments, changes in society and culture and regional context.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3614 - Imperial Russia (3 credits)
Russian history from Peter the Great to the Revolution of 1917, with special attention to political developments, changes in society and culture, and the impact of the regional context.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3624 - Health and Illness in African History (3 credits)
Examines key subjects and themes in the history of health, medicine, and disease in African history. Topics include indigenous health systems, colonial medicine, and post-colonial health crises, including HIV/AIDS.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3644 - Twentieth-Century Russia (3 credits)
The history of the Soviet Union from 1917 to the present, with particular emphasis on collectivization, industrialization, ideology, international relations, and other factors that have determined the peculiar character of the Soviet state.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3654 - Arab-Israeli Conflict (3 credits)
Examines the origin and evolution of the Arab-Israeli Conflict from the late Ottoman era to present. Considers a variety of perspectives on the major events, places, people and history of the conflict, including the British Mandate period, independence, and post-1967. Connects the relationship between events and ideas in Palestine/Israel and their local, regional and global significance through analysis and synthesis of primary and secondary texts. Promotes interpretation of the conflict and potential solutions in written and oral form, both from the student's own and alternative points of view.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3664 - Revolutionary China (3 credits)
Ideological and institutional development of the Chinese Communist movement since 1920; emphasis on problems of historical change in modern China.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3674 - Topics in Chinese History (3 credits)
Examination of variable topics in Chinese history, ranging from the beginnings of civilization to the recent past. Examines the primary sources and histriographic debates of a particular issue. Explores the diversity within China and its relatiionship with the rest of the world. Can be repeated with different content up to 9 hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

HIST 3694 - History through Film (3 credits)
This course introduces students to critical issues in history and representation, utilizing film to analyze central historical issues. The specific thematic content is variable. Course may be repeated for up to 9 credits.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Repeatability: up to 9 credit hours

HIST 3705 - History of Science (3 credits)
Conceptual and institutional development of physical and biological sciences viewed within a cultural and societal context. 3705: Early Science; 3706: Modern Science.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 3705

HIST 3706 - History of Science (3 credits)
Conceptual and institutional development of physical and biological sciences viewed within a cultural and societal context. 3705: Early Science; 3706: Modern Science.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 3706

HIST 3714 - War and Medicine (3 credits)
Examines the relationship between war and medicine. Focus on suffering and care during and after major conflicts, both on the battlefield and the home front. Emphasis on race, class, and gender.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3724 - History of Disease, Medicine, and Health (3 credits)
Development of Western concepts and institutions of disease, medicine, and health with emphasis on nineteenth century to present. Social construction of disease, and relationship between health and social, economic, and political structures. Special attention to roles of race, class, gender and ethical issues in medical care and research, and to the lived experience of suffering, treatment and healing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3734 - History of Modern Biology (3 credits)
Exploration of the history of biology during the nineteenth century and twentieth centuries, including developments in evolutionary biology, genetics and molecular biology, biology and race, and conservation biology. Emphasis on biology's reciprocal relationship with society, how it has helped shape ideas of race and ethnicity, and the ethical dilemmas it has generated.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 3734

HIST 3744 - Social History of Film (3 credits)
This course introduces students to critical issues in the social history of film, examining the production and consumption of film in specific historical moments as well as the effects of film on society, culture, and politics. The specific thematic content is variable. May be repeated with different content for a maximum of 9 credits.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

HIST 3754 - Public History (3 credits)
Investigation of the ways in which historians research, interpret, and present the past to the public.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3764 - Oral History: Methods and Practices (3 credits)
Explores the theory and methodology of oral history practice. Considers the use of oral history interviews in historical research, and explores questions of ethics, interpretation, and the construction of memory. Includes training in technical operations and a variety of interview techniques, transcription, and historical use of interviews.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3774 - Digital History (3 credits)
Develops skills and methods for researching and presenting history in a digital environment, with special emphasis on use of digital media as a tool for public historians.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3914 - Critical Reading and Analysis in History (3 credits)
Develops critical reading skills in history. Demonstrates that historical knowledge is part of a scholarly conversation that grows and evolves over time. Assesses the critical role of interpretation in history, investigates historical controversies and debates, and develops skills to evaluate historiographical trends.
Prerequisite(s): HIST 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 3954B - Study Abroad (1-19 credits)
Pathway Concept Area(s): 2 Critical Thinking Humanities
Instructional Contact Hours: Variable credit course

HIST 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 4004 - Topics in Social and Cultural History (3 credits)
Selected topics in social and cultural history. May be repeated with different content. 3 other hours of history and junior standing required.
Prerequisite(s): HIST 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 4014 - History Lab: Creative Technologies, Hidden Histories, Informal Learning (3 credits)
Application of creative technologies to visualize hidden histories in transdisciplinary experiential learning projects. Training in creative technologies, informal learning techniques, interpretation of marginalized histories, and digital cultural heritage design. Consideration of ethical questions involving the representation of diverse social identities, traditions, and histories. Pre: Sophomore Standing.
Pathway Concept Area(s): 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ART 4014, EDCI 4014

HIST 4864 - Internship (6 credits)
Placement in historically relevant work in one of a variety of settings. These may include museum interpretation and management, archival management, editing, historic preservation and more. Demonstrate historical research and communication skills. Plan with others in a professional setting. Apply disciplinary skills to site-based contemporary problems and situations. Evaluate the experience. P/F only.
Instructional Contact Hours: (6 Lec, 6 Crd)

HIST 4914 - History Research Seminar (3 credits)
Variable topic, writing-intensive, capstone course for history majors. Provides in-depth knowledge of a specific historical subfield. Utilizes archival historical sources, online research databases, and existing literature to create an original work of historical scholarship. May be repeated with different content up to 6 hours. Junior standing or above required.
Prerequisite(s): HIST 3914 or HIST 3904
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

HIST 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

[1] Classes taken to fulfill the History Core Degree Requirements cannot be used to fulfill Pathways requirements.

[2] HIST 1014, HIST 1984, HIST 2984, HIST 3984, HIST 2104, HIST 2114, and HIST 2124 can be substituted to appropriate groups. Please see course schedule or advisor for more information.

[3] With the exception of courses used to justify History Core Degree Requirements, concepts 1a, 2, 3, 5f and 7 may be met with approved History courses.

[4] May complete 1F with ENGL 1105-ENGL 1106 First-Year Writing, or ENGL 1204H , or COMM 1015-COMM 1016 Communication Skills.

Satisfactory Progress Toward Degree

1. Suggested completion of the Pathways to General Education (45 credits) by end of junior year.
2. Suggested completion of 15 hours of history, including HIST 2004 Historical Methods, by semester in which you have attempted 72 credits.
3. GPA of 2.5 or above in all history courses by the end of semester in which you have attempted 18 credits of history.
4. GPA of 2.0 or above in all history courses by the semester in which you have attempted 96 credits.

Graduation Requirements

1. Minimum of 120 credit hours for the degree.
2. Minimum of 36 credits in history (maximum of 60 credits).
3. Completion of HIST 2004 Historical Methods and HIST 3914 Critical Reading and Analysis in History with a grade of C or above.
4. Students must earn a C- or above for a history course to count toward their major requirements.
5. Overall GPA and in-major GPA of 2.00 or above. The in-major GPA is calculated using all HIST courses.

Acceptable Substitutions

With the exception of courses used to satisfy History Core Degree Requirements, the following Pathways concepts may be met with approved History courses: 1A, 2, 3, 5F, 7.

Foreign Language Requirement

Foreign Language

Students who completed 3 years of a single foreign, classical, or sign language in high school have completed this requirement. Students who did not complete 3 years of a foreign, classical, or sign language in high school must complete one of the following:

- 2 years of a foreign, classical, or sign language in high school plus an 1106 foreign language (e.g., FR, GR, SPAN) or the equivalent in college. These 3 hours count towards the 120 required for graduation.
- Complete an 1105-1106 foreign language (e.g., FR, GR, SPAN) grouping or the equivalent in college. These 6 hours do not count toward the 120 required for graduation.

-

Human Development and Family Science

Our Website (http://www.hdfs.vt.edu)

Overview

The Department of Human Development and Family Science offers an undergraduate degree in Human Development. To earn this degree, students can major in Human Development or Early Childhood Development and Education (formerly Childhood Pre-Education). Human Development focuses on family relationships and of human development across the lifespan, human service skills, and public policies and issues that impact individuals and families. Early Childhood Development and Education (formerly Childhood Pre-Education) helps students prepare for careers involving young children. The department's mission is to understand and improve the lives of people of all ages in relationships, families, organizations, and communities.

The program participates in the University Honors Program.

The department offers graduate programs leading to an M.S. or Ph.D. with content options related to adult development and aging, child and adolescent development, family studies, and marriage and family therapy. Graduate students can earn the Graduate Certificate in Gerontology along with their degree or as Commonwealth Campus students (for more information, contact the Center for Gerontology, 237 Wallace Hall, (540) 231-7657). Graduate students can also earn the Graduate Certificate in Human Sexuality Studies along with their degree or as Commonwealth Campus students (for more information, contact the HDFS Department, 366 Wallace Hall, (540) 231-4794). (See the Graduate Catalog)

Human Development and Family Science

The degree in human development is for students interested in a wide variety of careers and graduate school programs. The option provides undergraduate majors with a theoretical and experiential grounding in child and adult development and in family and relational dynamics. Course work includes emphases on how individuals and families develop over the life cycle, on the critical issues and events that influence families, and on family transitions and dynamics. The curriculum also focuses on family diversity and social and public policies that affect individuals and their families. Through course work and field placement experiences, human development and family science students develop and practice skills and communication techniques for working with individuals, families and groups. In addition to course work within the Department of Human Development and Family Science, students take courses in related fields in order to gain a broad perspective on issues that affect human development and families. Students may tailor their studies to their particular professional goals and interests through the use of free electives. The experiential field study requirement, which integrates theory, research, and practice, is pivotal to students' career development. It increases students' professional communication and human service practice skills and helps narrow career interests.

Careers open to human development and family science graduates include: early childhood education, employment and job training services, health and wellness programs, housing services, income programs, mental health services, nutrition and meals programs, protective services, recreation programs, respite services, social services, substance abuse programs, volunteer programs, and child care services. Graduate and professional options that human development and family science graduates may consider include business, community health and public health, law, education, family studies, gerontology, marriage and family therapy, medicine and nursing, occupational therapy, physical therapy, psychology and sociology, public administration, rehabilitation, speech therapy, and social work.

Free Electives (Select 33-35 Credits)

Students are encouraged to consider the wide array of courses across the university curriculum as potential choices for electives to support their major. In consultation with an academic advisor, each student should confirm that prerequisite requirements have been met before enrolling in elective courses.

Satisfactory Progress

A student will be considered to have made satisfactory progress toward the degree when he/she has successfully completed the Pathways General Education requirements for Concepts 1F, 4, and one course for Concept 5F as well as HD 1004 Childhood and Adolescence, by the time the student has attempted 72 semester credits.

- Human Development Major (p. 1009)

Department Head: Paul Springer
Alumni Distinguished Professor: R. Blieszner
Professors: M. Dolbin-McNab, K. A. Roberto, L. Sands, T. Savla, C. L. Smith, and P. Teaster
Associate Professors: E. Grafsky, B. Howell, B. Katz, K.J. Kim, and J.M. Russon
Assistant Professors: K. Choi, C. B. Hornburg, T. Rice, C. Sanner, and R. Wesche
Associate Clinical Professor: J. Case Pease
Research Scientist: I. Bradburn
Senior Instructor: K. Gallagher and A. Gardner
Advanced Instructor: J. Culligan, M. Komelski, V. Lael, and I. Schepisi

Undergraduate Academic Coordinator: A. Lemon
Graduate Academic Coordinator: M. Wyatt
CLAHS Academic Advisor for HD majors: C. Ballard
CLAHS Academic Advisor for CPED and ECDE majors: S. Jarrett

Undergraduate Course Descriptions (HD)

HD 1004 - Childhood and Adolescence (3 credits)
Basic concepts related to human development. Emphasis on developmental theories and principles of physical, social, and emotional growth, development, and behavior of children, individually and within families and cultures, from conception through adolescence. Designed as a general survey Course for majors and non-majors.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 1014 - Introduction to Human Development & Family Science First Year Experience (1 credit)
Introduction to the Human Development and Family Science Department: majors, minors, and curriculum requirements and options. Introduction to academic skills and career exploration. Exploration of University programs and services that support students and promote student development.
Instructional Contact Hours: (1 Lec, 1 Crd)

HD 1134 - Introduction to Disabilities Studies (3 credits)
Introduction to concepts related to physical, intellectual, cognitive, and emotional disability, with a focus on disability as a social construct and lived experiences of people with disabilities across the lifespan. Exploration of texts, videos, and other created artifacts to evaluate concepts and models of disability.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 1984C - Special Study (1-19 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences
Instructional Contact Hours: Variable credit course

HD 2004 - Adulthood and Aging (3 credits)
Introduction to adult development and aging (gerontology). Basic concepts, principles, theories, research methods and social issues of development from emerging adulthood through the end of life. Biopsychosocial analysis of issues affecting aging processes, including family dynamics. Consideration of social, economic, political and ethical issues in aging. Attention to multicultural perspectives and significant global challenges and opportunities related to aging around the world.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 2014 - Integrative Practices for Health, Wellbeing, and Resilience (3 credits)
Theories of integrative (mind-body) health and wellbeing. Examination of multidimensional factors, including stress, personality, relationships, and social environment, as well as issues of identity and equity that influence health across the lifespan. Engagement in contemplative and evidence-based integrative health practices used for promoting health, wellbeing, and resilience. Attention given to ethical use and teaching of practice methods.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 2104 - Quantitative Approaches to Community Research (3 credits)
Computational methods and ethical issues in the collection, transformation, consumption, and use of quantitative data in the design and evaluation of community programs. Consideration of effective data visualization and communication of findings. Emphasis on evaluating the reliability and accuracy of data used to frame decisions about community-related policies and service-oriented programs.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 2104

HD 2304 - Family Relationships (3 credits)
Overview of basic concepts, principles, theories, and issues of development and change in family relationships. Topics include families in historical and contextual perspective, structural and relational diversity in families, and processes of relational development, maintenance, and dissolution in families.
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 2314 - Human Sexuality (3 credits)
Explores the diversity of human sexuality using global perspectives. Biological, historical, developmental, psychological, sociological and self-reflexive approaches. Interdisciplinary examination of the social constructions of sexuality and gender; the historical and contemporary theoretical perspectives and research on sex; the interactions of race, ethnicity, class, gender, sexual orientation, religion, ability, and nationality in shaping sexuality and family formation; the international commercialization of sex; the impact of violence and sexual coercion; the debates surrounding sexual ethics, unintended pregnancy, sex education, and biotechnology; the application of the scientific method, study designs, and methods of observation; the promotion of sexual and reproductive health across the lifespan; and the development of sexual practices, rituals, mythologies, belief systems and other cultural contexts for sexuality across time and around the world.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 2335 - Principles of Human Services (3 credits)
2335: Basic concepts, techniques, and structure of the human services profession. Survey of client/family assessment and problem management. 2336: Advanced topics in human services focusing on: case management, crisis intervention, program administration, specialized interventions, ethics, and professional development.
Corequisite(s): 1004 or Pre: 1004.
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 2336 - Principles of Human Services (3 credits)
2335: Basic concepts, techniques, and structure of the human services profession. Survey of client/family assessment and problem management. 2336: Advanced topics in human services focusing on: case management, crisis intervention, program administration, specialized interventions, ethics, and professional development.
Prerequisite(s): HD 2335
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 3014 - Research Methods in Human Development (3 credits)
Critical thinking and problem-solving involved in applying methods of scientific inquiry to the field of human development and family science. Analysis of individuals, families, and groups. Topics include method of data collection, basic methods for displaying and analyzing data, and writing reports.
Prerequisite(s): HD 2004 and HD 2304 and (STAT 3005 or STAT 3615 or STAT 3604)
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3024 - Community Analytics (3 credits)
Application of data analytics concepts to community issues at local and global levels. Data sources, data quality, data representation and data ethics. Statistical analysis to improve community livability. Communication of data and statistics for community stakeholders. Evaluation of reports that use data. Sophomore standing or higher.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3114 - Issues in Aging (3 credits)
Investigates selected contemporary issues and measures potential solutions in adulthood and old age; family and friend relationships; work and retirement; political, legal, and economic issues; vulnerability related to gender.
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3144 - Education of Exceptional Learners (3 credits)
Introduction to the historical, ethical, legal, and economic models relevant to understanding students with disabilities and meeting their needs to increase their potential for success throughout their lives. Addresses research in early intervention, K-12 instruction, post-secondary education, and transition into work settings.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: EDCI 3144

HD 3214 - Infancy and Early Childhood (3 credits)
Theories, principles, and patterns of physical, cognitive, social and emotional development from conception to the early school years. Micro and macro environmental influences on development, including families and culture, are considered as they interact with genetic/biological determinants of development.
Prerequisite(s): HD 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3224 - Middle Childhood and Adolescence (3 credits)
Theories, principles, and patterns of physical, cognitive, social and emotional development from middle childhood to adolescence. Micro and macro environmental influences, including families and culture, on development as they interact with genetic/biological determinants of development.
Prerequisite(s): HD 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3234 - Child/Youth Community Services (3 credits)
Health and human service programs serving children, youth, and families to address life course development issues in the changing American family. Overview of child/youth care issues in areas such as poverty, health and healthcare, day-care services, school-based services, court services, child abuse and neglect, and children in residential settings. Methods of determining service eligibility, needs assessment techniques, translation of client data into a plan for community-based programs and services, and procedures for maintaining quality assurance.
Prerequisite(s): HD 1004 and HD 2304 and HD 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3254 - Curriculum in Early Childhood (3 credits)
Supervised experience in planning and implementing emergent, play-based learning experiences for young children; examination of the role of the teacher; exploration of early childhood curricular design and materials suitable for addressing milestones of child development based on theory and research; utilization of approaches related to sharing child-specific information with families.
Prerequisite(s): HD 1004 and HD 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3304 - Advanced Helping Skills (3 credits)
Helping skills used in human services settings. Case management, evaluating crisis situations, and approaches to individual and family assessment.
Prerequisite(s): HD 2335 and HD 2336
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AHRM 3464, APS 3464, GEOG 3464, HUM 3464, SOC 3464, UAP 3464

HD 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

HD 3954 - Study Abroad (1-9 credits)
Instructional Contact Hours: (1-9 Lec, 1-9 Crd)

HD 3954C - Study Abroad (1-19 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences
Instructional Contact Hours: Variable credit course

HD 3954G - Study Abroad (1-19 credits)
Pathway Concept Area(s): 7 Identity & Equity in U.S.
Instructional Contact Hours: Variable credit course

HD 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 4304 - Human Services Administration (3 credits)
Issues, functions, and responsibilities involved in developing, implementing, and evaluating family and human services programs.
Prerequisite(s): HD 3234 or HD 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4324 - Advanced Family Relationships (3 credits)
Investigation of challenges, stresses, and crises experienced by diverse, complex families over the life course; protective factors and resilience; coping strategies; prevention and intervention; public policies. Pre: Junior standing.
Prerequisite(s): HD 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4324H - Advanced Family Relationships (3 credits)
Investigation of challenges, stresses, and crises experienced by individuals and families; protective factors and resilience; coping strategies; prevention and intervention; public policies.
Prerequisite(s): HD 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4334 - Perspectives On Addiction and Family Systems (3 credits)
Intra-personal and inter-personal dimensions of compulsive- addictive patterns manifested in the context of the family system. Reciprocal interaction between families and other systems. Junior standing required.
Prerequisite(s): HD 2304 or HD 2314
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4354 - Family, Law, and Public Policy (3 credits)
Theoretical and substantive issues that relate to the development and implementation of family policies. Implications of political culture and family legislation for the well-being of children and their families.
Prerequisite(s): HD 1004 and HD 2335 and HD 2336 and HD 2004 and HD 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4354H - Family, Law, and Public Policy (3 credits)
Theoretical and substantive issues that relate to the development and implementation of family policies. Implications of political culture and family legislation for the well-being of children and their families.
Prerequisite(s): HD 1004 and HD 2335 and HD 2336 and HD 2004 and HD 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4364 - Gender And Family Diversity (3 credits)
Examination of the changing character of individual and family diversity, as related to the intersections among gender, race, class, sexuality, age, and ability. Junior standing required
Prerequisite(s): HD 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4714 - Senior Capstone Seminar (3 credits)
Intensive learning experiences in critical thinking and analysis of human development and family science. Opportunities to demonstrate breadth of learning while developing leadership skills and honing professional competencies. Topics include leadership and team development, problem solving, grant writing, program evaluation, and electronic portfolios. Pre: Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4964 - Field Study (1-19 credits)
Prerequisite(s): HD 1004 and HD 2004 and HD 2335 and HD 2336
Instructional Contact Hours: Variable credit course

HD 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Human Development Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
HD 1004	Childhood and Adolescence	3
HD 2004	Adulthood and Aging	3
HD 2304	Family Relationships	3
HD 2335	Principles of Human Services	3
HD 2336	Principles of Human Services	3
HD 3014	Research Methods in Human Development	3
HD 4714	Senior Capstone Seminar	3
Major Requirements		
HD 1014	Introduction to Human Development & Family Science First Year Experience	1
HD 4324	Advanced Family Relationships	3
HD 4964	Field Study	6
Human Development Electives		
Select three of the following, at least one must be at the 3000 or 4000 level:		9
HD 1134	Introduction to Disabilities Studies	
HD 2014	Integrative Practices for Health, Wellbeing, and Resilience	
HD 2314	Human Sexuality	
HD 3024	Community Analytics	
HD 3114	Issues in Aging	
HD 3214	Infancy and Early Childhood	
HD 3224	Middle Childhood and Adolescence	
HD 3234	Child/Youth Community Services	
HD 3254	Curriculum in Early Childhood	
HD 3304	Advanced Helping Skills	
HD 4334	Perspectives On Addiction and Family Systems	

HD 4994	Undergraduate Research	
Disciplinary Breadth Electives		
Select two of the following:		6
CONS 2304	Consumer and Family Finances	
EDCI/HD 3144	Education of Exceptional Learners	
HUM/RLCL 3204	Multicultural Communication	
HUM/AHRM/APS/GEOG/HD/SOC/UAP 3464	Appalachian Communities	
PSYC 2054	Psychology of Personality	
PSYC 2084	Social Psychology	
SOC 2024	Sociology of Race and Ethnicity	
SOC 2304	Individual In Society	
SOC 3004	Social Inequality	
SOC 3714	Sociology of Aging	
SOC 4714	Sociology of Mental Illness	
WGS 1824	Introduction to Womens and Gender Studies	
WGS/SOC/AFST 2264	Race, Class, Gender, and Sexualities	
Subtotal		46
Free Electives		
Select 29 credits of free electives		29
Subtotal		29
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
COMM 2004	Public Speaking	3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02) [1]		6
Pathways Concept 3 - Reasoning in the Social Sciences		
PSYC 1004	Introductory Psychology	3
SOC 1004	Introductory Sociology (Double counts for Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07))	3
Pathways Concept 4 - Reasoning in the Natural Sciences		
Select six credits in Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04)		6
Pathways Concept 5 - Quantitative and Computational Thinking		
Select one of the following:		
MATH 1014	Precalculus with Transcendental Functions (5F)	3
or MATH 1025	Elementary Calculus	
or MATH 1225	Calculus of a Single Variable	
Select one of the following:		
STAT 3604	Statistics for Social Science (5A)	3
or STAT 3615	Biological Statistics	
Select three additional credits in Pathway 5f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05F) or Pathway 5a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05A)		3
CONS 2304	Consumer and Family Finances (Recommended) [2]	
HD 3024	Community Analytics (Recommended)	
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
Select three credits in Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D) [1]		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
SOC 1004	Introductory Sociology [3]	3
Subtotal		45
Total Credits		**120**

1. Students in the HD major pursuing the minor in Disability Studies (DST) can fulfill Pathways Concept 2 and/or 6d from the DST minor.
2. CONS 2304 Consumer and Family Finances, or HD 3024 Community Analytics, is recommended because these courses fulfill this Pathways requirement and offer content relevant to the HD major.
3. SOC 1004 Introductory Sociology, fulfills Pathways Concept 3 and 7. Students who take one of these courses covering Pathways Concept 7 will only need to take 42 credit hours to fulfill their required Pathways courses, instead of 45.

Satisfactory progress toward the degree is defined as successful completion of HD 1004 Childhood and Adolescence and Pathways Concept 1f, 4, and 5f by the time the student has attempted 72 semester hours.

Graduation Requirements

Minimum University GPA is 2.0. Minimum in-major GPA is 2.0. All core courses and major courses count toward the in-major GPA. In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree.

In addition to satisfying all University, Pathways, and Human Development major requirements, students will complete sufficient Free Electives to total 120 credit hours.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count towards the minimum credit hours required for graduation.

International Studies

Our Website (http://www.liberalarts.vt.edu/academics/majors-and-minors/international-studies-major.html)

Overview

The International Studies Program offers five (5) majors, leading to a **Bachelor of Arts degree in International Studies (BAIS)**. The majors of the BAIS degree are:

- International Studies (IS)
- International Relations (IREL)
- National Security & Foreign Affairs (NSFA)

- Environment, Development, and Global Economy (EDGE)
- European & Transatlantic Studies (EUTS)

Students pursuing these majors are prepared to continue their studies in graduate or law school or immediately apply their skills and knowledge in various professional settings because of the broad applicability of the range of intellectual perspectives and theoretical traditions they are trained in, the global cultural learning to which they are exposed, the competencies they develop in research, writing, and analytical thinking, and the proficiencies they gain in critical foreign languages. Rooted in a strong liberal arts curriculum, the International Studies Program prepares students to enter careers in government service (Department of State, Department of Defense, Department of Homeland Security, the intelligence community), Foreign Service, think tanks, teaching, journalism, international governmental and non-governmental organizations, and global companies based in Virginia, nationally, and internationally.

Majors

Students may choose to pursue one of the five majors offered by the International Studies Program. In this case, no course can double count within or between International Studies-related majors with the exception of IS 1004 Nations and Nationalities,IS 1034 Introduction to International Studies and Political Science IS 2004 Research and Writing in International Studies, IS 2054 Introduction to World Politics, IS 2064 The Global Economy and World Politics, IS 2084 The Evolution of World Order, IS 3115 Selected World Problems, and IS 3116 Selected World Problems .

All students who wish to obtain a major offered by the International Studies Program must complete:

1. the Core Curriculum requirements of the College of Liberal Arts and Human Sciences;
2. the Core Curriculum requirements of the Bachelor of Arts in International Studies (BAIS) degree; and
3. a set of major requirements and elective courses associated with each of the five majors.

The *International Studies (IS)* major is the broadest and most interdisciplinary major of the BAIS degree that offers students the opportunity to learn about foreign cultures, religions, languages, economics, and history. The curriculum is highly interdisciplinary in orientation and is designed to introduce students to a wide range of perspectives in understanding international politics, foreign cultures, and global processes. Whether or not students pursue careers directly related to world affairs, the understandings gained in this major provide students with a broad perspective on the world and the United States' place in it. In addition to major requirements in international studies and political science, students pursuing this major complete a wide range of courses in economics, geography, foreign languages, history, religion and culture, sociology, and other disciplines.

The *International Relations (IREL)* major focuses on the analysis of the political, societal, cultural, ethical, and normative aspects of international relations, as well as offering students a rigorous international and comparative perspective on the contemporary global system. It emphasizes a solid grounding in the methods of analysis used in the social sciences and the field of international relations to help students think critically about international phenomena and analyze the choices and challenges that arise in this arena. It seeks to foster creative thinking about complex global problems and produce competitive graduates and enlightened citizens who possess the necessary knowledge and skills that allow them not only to successfully pursue careers in their chosen field but, most importantly, serve their communities and the nation.

The *National Security and Foreign Affairs (NSFA)* major offers students expertise and understanding of the broad range of threats to national and global security in the 21st century and equips them with the necessary knowledge and skills that allow them to successfully pursue careers in diplomacy and international organizations. The National Security and Foreign Affairs (NSFA) major analyzes the role of diplomacy in the management of world affairs and examines in-depth U.S. grand strategy and foreign policy; the current and future global geopolitical environment that affect the U.S. and its interests; the ends, ways, and means that impact the use of military force; the role and impact of economic power on world affairs; the informational issues that contribute to the holistic implementation of strategy, and counterterrorism and homeland security. It is designed to connect theory and practice thereby providing a hands-on, practical approach to the field that equips students with the tools to analyze threats that challenge U.S. security both at home and abroad.

The *Environment, Development, and Global Economy (EDGE)* major is a successor to the former International Public Policy major. EDGE is designed to help students analyze the choices and challenges that arise in the global economic system and equip them with a better understanding of how states and societies can pursue their economic goals in an environmentally and socially sustainable manner. It emphasizes the role of international organizations in the global economy and in development, as well as help students think critically about globalization and its impact on both developed and developing countries, sustainable development, and the fight against global poverty. Its purpose is to relate theory to practice and provide students with a breadth of knowledge and training in the various facets of sustainable international development and the sub-fields of governance and political economy, environment and development, and international public health. It seeks to prepare students for a fast-growing number and variety of careers in the planning, implementation, and evaluation of development programs, working for governments, international organizations, NGOs, and private companies.

The *European & Transatlantic Studies (EUTS)* major has been designed in response to the growing need for a new generation of scholars and analysts to address issues pertaining to Europe and the relations between the European Union and the United States (transatlantic relations). The purpose of the European & Transatlantic Studies program is to provide its students with the knowledge, skills and competencies necessary to enable them to pursue successful careers both in the public and private sector. Students pursuing a major in European & Transatlantic Studies will examine the historical, political, security, geostrategic, economic (trade, finance, and business), and societal (ethnic, cultural, and religious) aspects of European and transatlantic affairs. They will also gain competence in at least one foreign language. The study of Europe includes the following sub-regions: Western, Central & Eastern Europe; Russia and Eurasia; the Balkans and the Mediterranean region (North Africa & the Middle East), and the broader transatlantic space (relations between Europe, Africa, North America, and Central & Latin America).

Please see http://liberalarts.vt.edu/academics/majors-and-minors/international-studies-major.html for more information.

Major Requirements

The curriculum is designed to provide foundational and development courses, major-specific study, and a capstone experience. Students are introduced to concepts early in the undergraduate career, and the curriculum allows them to build knowledge and skills as they work on increasingly complex tasks. They also develop skills in written, spoken, and visual communication across their studies in the major. At the foundational level, students in every major are required to take the same introductory courses. Then students move into major-relevant specialized courses, and finally join together in the senior year to work on a capstone experience.

Minor Requirements

The International Studies Program offers eight (8) minors, open to all majors at Virginia Tech.

- Minor in Global Engagement (GLBE)
- Minor in International Studies (IS)
- Minor in International Relations (IREL)
- Minor in National Security & Foreign Affairs (NSFA)
- Minor in Global Development and Political Economy (GDPE)
- Minor in European Studies (EUST)
- Minor in European Engagement (EURE)
- Minor in Transatlantic Studies (TRST)

For the 18-hour minor, students enroll in three required courses and choose other three courses from the minor elective list. Please see http://liberalarts.vt.edu/academics/majors-and-minors/international-studies-major.html for details.

The minor in *Global Engagement (GLBE)* offers a "hands on" – "minds on" approach to the understanding of global affairs. Adopting an experiential learning approach, this minor seeks to encourage and reward Virginia Tech students who wish to explore and study the "international" through a variety of educational tools, such as study abroad, in-class simulations, participation in various international organizations models (e.s., Model UN, Model NATO, Model OAS), field studies, undergraduate research, internships and externships, and educational programs and engagement opportunities offered by U.S. national federal agencies and other organizations, such as the Department of State (e.s., Diplomacy Lab and Foreign Policy Classroom), the Council of Foreign Relations, and the U.S. Institute for Peace.

The minor in *International Studies (IS)* offers students an interdisciplinary approach to the study of global affairs. The purpose of the program is threefold: first, to supplement the knowledge and skills that students have acquired through their major field of study with knowledge about the global political and economic system and the global forces and processes that shape our daily lives; second, to further students' critical and analytical skills; and third, to create knowledgeable and enlightened citizens and global leaders.

The minor in *International Relations (IREL)* is designed to offer students a rigorous international and comparative perspective on the contemporary global system. It focuses on the changing political and cultural relations within the international system in the modern era, exploring how global, regional, and domestic factors influence relations between actors on the world stage. Students are equipped with both the foundational skills and specific knowledge necessary to analyze the choices and challenges that arise in this arena. The program seeks to provide a hands-on, practical approach to the field that would equip students with the analytic tools, language expertise, and cross-cultural understanding necessary to pursue successful careers in government, Foreign Service, and international organizations.

The minor in *National Security and Foreign Affairs (NSFA)* analyzes the role of diplomacy in the management of world affairs and provides a hands-on, practical approach to security analysis that would equip students with the tools to analyze threats that challenge US security both at home and abroad. The program seeks to supplement the knowledge and skills that students have acquired through their major field of study with expertise and understanding of the broad range of threats to national and global security in the 21st century, as well as to equip students with the necessary knowledge and skills that would allow them to successfully pursue careers in diplomacy and international organizations.

The minor in *Global Development and Political Economy (GDPE)* is a unique interdisciplinary minor that exposes students to the study of the global political economy, global economic processes, and challenges of sustainable development. It is designed for students who wish to develop the analytical and leadership skills necessary to formulate and advocate policy on key international issues of social and environmental sustainability, the critical analysis of global processes, and issues of global equity and justice. It seeks to provide students with a detailed and systematic understanding of how political institutions, processes, and public policies operate in world affairs. The program brings together the academic study of international relations with theoretical description and analysis of global social and economic processes and formal methods of social and economic analysis. The program seeks to prepare students for a fast-growing number and variety of careers in the planning, implementation, and evaluation of development programs, employment with governments, international organizations, NGOs, and private companies.

The minor in *European Studies (EUST)* seeks to provide students with knowledge, skills and competencies pertaining to European affairs to enable them to pursue successful careers both in the public and private sectors. It focuses on the study of the historical, political, security, geostrategic, economic (trade, finance, and business), and societal (ethnic, cultural, and religious) aspects of European affairs. The study of Europe includes the following sub-regions: Western, Central & Eastern Europe; Russia and Eurasia; the Balkans and the Mediterranean region (North Africa & the Middle East). This minor also focuses on the study of the relations between the European Union and the various world regions, s well as its relations with major great powers (e.s., the United States, Russia, and China) and international organizations (e.s., the United Nations, the World Trade Organization (WTO), and the IMF/World Bank).

The experiential learning minor in *European Engagement (EURE)* offers a "hands on" – "minds on" approach to the understanding of European affairs. It seeks to encourage and reward Virginia Tech students who wish to explore and study European affairs through a variety of educational tools, such as study abroad, in-class simulations, participation in various European organizations models (e.s., Model NATO, Model European Council, etc.), field studies, undergraduate research, internships and externships, and educational programs and engagement opportunities offered by the European Union and its Diplomatic Delegation in Washington DC, as well as by NATO and the Atlantic Council of the United States.

The minor in *Transatlantic Studies* equips students with knowledge about the political, economic, security, religious, and cultural ties binding European states and the states in the Americas (especially North America) together. Whether individual European countries, individual EU

Members States or the European Union as a whole are all seen as the United States' strategic allies or competitors, it is important for students interested in pursuing careers in the Federal Government (especially at the Department of State, the Department of Defense and the Intelligence Community), as well as in the private sector (banking, multinational companies, consulting firms, etc.) to learn about the issues that bound Europe and the United States together.

Satisfactory Progress Toward the Degree

University policy requires that students demonstrate their progress toward the degree by meeting minimum requirements.

To proceed satisfactorily toward a degree, students who pursue the majors in Environment, Development, and Global Economy (EDGE – formerly the major in International Public Policy), International Relations (IREL), International Studies (IS), and National Security & Foreign Affairs (NSFA) must complete IS 1004 Nations and Nationalities, IS 1034 Introduction to International Studies and Political Science, IS 2004 Research and Writing in International Studies, IS 2054 Introduction to World Politics, IS 2064 The Global Economy and World Politics, IS 2084 The Evolution of World Order and Foreign language 2105 & 2106 by the end of the semester in which 60 hours have been attempted; must maintain an overall GPA of at least 2.0 and must maintain an in-major GPA of 2.0.

To proceed satisfactorily toward a degree, students who pursue the major in European & Transatlantic Studies (EUTS) must complete IS 1004 Nations and Nationalities, IS 1024 Comp Gov & Politics, IS 1034 Introduction to International Studies and Political Science, IS 1104 Introduction to European Studies, IS 2004 Research and Writing in International Studies, HIST 1026 Introduction to European History, IS 2084 The Evolution of World Order, HIST 2114 Topics and Critical Issues in European History and Foreign Language 2105 & 2106 by the end of the semester in which 60 hours have been attempted; must maintain an overall GPA of at least 2.0 and must maintain an in major GPA of 2.0.

Students who fall below the standard for either the overall GPA or the in-major GPA will have one semester to regain the required GPA standards. A student who fails to make satisfactory progress toward degree after that semester will be disallowed from continuing in the major.

- EUropean & Transatlantic Studies Major (p. 1023)
- International Relations Major (p. 1026)
- International Studies Major (p. 1029)
- National Security & Foreign Affairs Major (p. 1034)

Director of International Studies: Dr. Besnik Pula

First-year and incoming transfer student advisor: Jennifer Hanratty

Sophomore, junior, and senior student advisor: Phoebe Peterson

For a full list of faculty, please see the Department of Political Science (p. 1078).

Undergraduate Course Descriptions (IS)

IS 1004 - Nations and Nationalities (3 credits)
Introduction to world and American ethnic and indigenous cultures and to social constructions of human and group identity, nationalism and extreme ethno-nationalism. History of the political, economic, and cultural transition from primordial communities to sovereign states. Introduction to the rise of racism, sexism, ethnicism, classism, nativism, xenophobia, etc. in modern societies and episodes of mass political violence including ethnic cleansing and genocide.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 1004

IS 1024 - Comp Gov & Politics (3 credits)
Government and politics of selected countries outside the United States; nature of politics and government, types of political systems, linkages of people and governments, and current political issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 1024

IS 1034 - Introduction to International Studies and Political Science (3 credits)
Introduces students to the fields of International Studies and Political Science and their respective subfields. Familiarizes students with the undergraduate programs in International Studies and Political Science and emphasizes student preparation for careers in the respective fields. Focuses on inquiry, problem-solving, integration of ideas and experiences with a focus on International Studies and Political Science. Familiarizes students with the basic principles of the research and writing process.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 1034

IS 1104 - Introduction to European Studies (3 credits)
Multidisciplinary analysis of core issues and topics in European studies. Current affairs, politics, economics, culture, religions, society and history. Regional and individual country perspectives. Basic research techniques and evaluation of sources.
Instructional Contact Hours: (3 Lec, 3 Crd)

IS 1114 - Introduction to Transatlantic Studies (3 credits)
Multidisciplinary analysis of core issues and topics in transatlantic studies. Origins and evolution of transatlantic interactions. Historical, political, economic, cultural (including language and literature), civilizational, religious, and societal ties binding Europe and the Americas. Basic research techniques and evaluation of sources.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 1114

IS 1204 - Topics in Global Dialogues (1 credit)
Examination of the impact of culture in world politics. Topics under examination include: culture and global diversity; culture, identity, and order in world politics; international conflict and intercultural relations. Extensive use of case studies. May be repeated twice with different content for a maximum of three (3) credits.
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours
Course Crosslist: PSCI 1204

IS 2004 - Research and Writing in International Studies (3 credits)
Introduces the research and writing process in the field of International Studies. Addresses topics such as selecting and planning a research project, conceptualizing a research design, gathering and analyzing data, interpreting the results and writing a report. Prioritizes research within a framework of rigorous, well-rounded and thorough practices of research ethics. Emphasizes intercultural and diverse research and practices.
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

IS 2034 - Geography of Global Conflict (3 credits)
Geographical dimensions of global conflicts, international management of conflicts, conflicts of differences, historical, ideological, failed states and resources will be examined. Background to conflicts, current status of conflicts, different points of view in conflict. Topics in the course will change as the geography of global conflict changes.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2034, PSCI 2034

IS 2044 - Food, War and Conflict (3 credits)
Explores the history of food production and processing relative to the commencement or continuation of conflict. Examines why and how wars have been fought over economic policies, food trade and control of food supplies. Examines efforts to protect food and water supplies from intentional contamination and acts of terrorism. Focus on food products and the preservation, processing and distribution technologies that arose from war and conflict.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FST 2044, PSCI 2044

IS 2054 - Introduction to World Politics (3 credits)
An introduction to the prevalent methods and theories in the study of world politics. Topics include: historical context of contemporary world politics, global actors and power relations, conflict and conflict resolution, international law, and contemporary global issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2054, PSCI 2054

IS 2064 - The Global Economy and World Politics (3 credits)
Introduction to theories and methods in the study of global political economy. Topics include: historical origins, comparative advantage, the factor endowment trade theory, the gold standard, economic nationalism, the Great Depression, the Bretton Woods System, Keynesianism, the Nixon shocks, international organizations, monetary governance, the Great Recession, poverty and underdevelopment, and contemporary challenges of income inequality within and among economies.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2064, PSCI 2064

IS 2084 - The Evolution of World Order (3 credits)
A historical and comparative study of states systems (i.e, ancient, medieval, modern, and contemporary states system). Emphasis on the globalization of the European states system, its various aspects (political, economic, cultural, religious, civilizational, and technological) and its implications for contemporary world order (i.e., the question of human equality and the impact of colonialism and post-colonialism on the question of social, political and economic justice).
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 2084

IS 2104 - Europe Country Analysis (3 credits)
Examination of the politics, economics, culture, society, population patterns, and history of individual European countries. Impact of individual European states' domestic affairs on their respective European sub-regions and Europe as a whole. Analysis of intra-European regional developments. Examination of differing country perspectives on European integration.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 2104

IS 2114 - Transatlantic Political Frameworks (3 credits)
Examination of transatlantic political, security and economic institutions, such as the Organization for Economic Cooperation & Development (OECD), the North Atlantic Treaty Organization (NATO), and the Organization for Security & Cooperation in Europe (OSCE). Impact of domestic politics and external policies on the operation of transatlantic institutions. US-European relations and their impact on transatlantic institutions and European security. Bilateral political links between European and North America States (i.e., the UK-US- Canada, and France-Canada) and their impact on transatlantic relations and European security.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 2114

IS 2134 - Geography of the Global Economy (3 credits)
Geographical dimensions of the global economy since World War II. Globalization and the emergence of a new international division of labor. The relative decline of the United States and the growth of Japan, East Asia and the European Union. Changing geographies of foreign direct investment location. Places and regions in geo-economic discourse. Population and resources issues in the early twenty-first century.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2134, PSCI 2134

IS 2224 - Geography of Europe (3 credits)
Europe: as an idea, as a place, as a space, and as a political entity. Basic knowledge of Europe's historical physical environments, political geography, population distribution, varied cultures, and economic development. Cultural variations and their implications on settlement patterns, political divisions, and economic patterns and processes.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2224, PSCI 2224

IS 2474 - Religion and Violence (3 credits)
Investigation of the categories of religion and secularity as they apply to war and peace. Analysis of episodes from both past and present in which religion seems to have played a role. Introduction to research skills related to the study of religion and violence, building from theoretical and historical considerations.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2474

IS 2484 - Religion and Politics (3 credits)
Investigation of religion and politics as distinct categories in different times and places. Analysis of episodes from both past and present in which religion and politics have come together, or have been kept apart. Examination of the roles religion and politics play in the modern world and how they impact the lived experience of diverse populations both in the United States and throughout the world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 2484, RLCL 2484

IS 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 3004 - Professionalism and Careers in Political Science and International Studies (3 credits)
Designed to teach students how to synthesize skills and information learned in their Political Science and International Studies classes. Exploration of various career options, graduate school options, and proper procedures for seeking and applying for employment and graduate school. Introduction to professionalism in the workplace and professional development in the area of political science and international studies. Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3004

IS 3034 - The CIA: Its Capabilities in Todays Geo-Political World (3 credits)
Role of the discipline of geography in the origins, procedures, and history of CIA. Role of the CIA in providing national intelligence at both strategic and operational levels. Origins and changes to the CIA since WWII. Capabilities to support both policy-makers and national security entities. Case studies illustrating the CIAs operations in different regions of the world.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 3034, PSCI 3034

IS 3044 - The Politics of Internet Governance (3 credits)
Introduces students to theoretical, technological, and policy debates in Internet governance. Topics include multistakeholder governance, cybersecurity and cybercrime, network investigative techniques, data protection, vulnerability disclosure, use of anonymity-granting technologies, network neutrality, virtual currencies, big data, algorithmic bias and decision-making, politics of the domain name system, privacy, free expression, cross-border dispute resolution, data ownership, and challenges to state authority.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3044

IS 3054 - The Dark Web and Threat Analytics (3 credits)
Introduction to dual-use anonymity-granting technologies such as the Dark Web. Covers open source threat intelligence as a technique to assess trends and trajectories in anonymous online content. Substantive topics include the use of Dark Web technologies for political expression in repressive regimes, anonymity and privacy protection in an age of big data as well as the misuse of these tools for doxing, trolling, and the creation of illegal markets for drugs, guns, malicious software, human trafficking, and child abuse imagery. Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3054

IS 3064 - Food Politics (3 credits)
Focuses on how scholars, pundits, citizens, and policymakers think about food on local, national, and global scales. Explores various ways of producing, distributing, and consuming food and how they are implicated in specific organizations of power and possibility. Examines how food, and the discourses surrounding food, help structure understandings of a variety of issues, such as identity, property, labor, gender, race, responsibility, and death.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3064

IS 3104 - Security Studies: Theories and Concepts (3 credits)
Introduces the various theoretical approaches to security. Examines key concepts in the field of Security Studies, such as uncertainty, polarity, war, coercion, terrorism, intelligence, genocide, crimes against humanity, ethnic conflict, and human security.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3104

IS 3114 - Global Security (3 credits)
Explores various theoretical approaches to security and discusses traditional and non-traditional security issues. Focuses on global, international and regional security challenges and examines alternative strategic and tactical solutions for addressing them.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3114

IS 3115 - Selected World Problems (3 credits)
Selected world problems and how they affect various countries and regions. Each semester, a topic will be chosen. 3115: World problems in a global or regional context. 3116: World problems in a European context. 3115 and/or 3116 may be repeated for a combined maximum of 9 credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 3115

IS 3116 - Selected World Problems (3 credits)
Selected world problems and how they affect various countries and regions. Each semester, a topic will be chosen. 3115: World problems in a global or regional context. 3116: World problems in a European context. 3115 and/or 3116 may be repeated for a combined maximum of 9 credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 3116

IS 3125 - Intelligence and National Security (3 credits)
Introduces students to the field of Intelligence Studies. Focuses on the structure, role and capabilities of the U.S. intelligence community and investigates the relationship between intelligence and national security strategy. Addresses topics pertaining to data collection and intelligence analysis, covert operations and counterintelligence. 3125: Intelligence and National Security. 3126: The Intelligence Process.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3125

IS 3126 - Intelligence and National Security (3 credits)
Introduces students to the field of Intelligence Studies. Focuses on the structure, role and capabilities of the U.S. intelligence community and investigates the relationship between intelligence and national security strategy. Addresses topics pertaining to data collection and intelligence analysis, covert operations and counterintelligence. 3125: Intelligence and National Security. 3126: The Intelligence Process.
Prerequisite(s): IS 3125 or PSCI 3125
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3126

IS 3134 - Global Conflict and War (3 credits)
Focuses on the causes, legal and moral constraints, impacts, and consequences of conflict and war. Explores historical and contemporary cases of conflict and war and investigates the role of state and non-state actors in these conflicts. Examines the impact of technology, religion, culture and identity on the present and future of war.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3134

IS 3135 - Strategies of Modern Warfare (3 credits)
3135: Analyzes the theory and practice of conventional warfare and investigates how strategic thought has influenced and shaped modern warfare. 3136: Examines the theory and practice of irregular warfare and focuses on the theory and practice of counterinsurgency and counterterrorism.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3135

IS 3136 - Strategies of Modern Warfare (3 credits)
3135: Analyzes the theory and practice of conventional warfare and investigates how strategic thought has influenced and shaped modern warfare. 3136: Examines the theory and practice of irregular warfare and focuses on the theory and practice of counterinsurgency and counterterrorism.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3136

IS 3144 - Global Governance and Public Policy (3 credits)
Examines the norms, institutions, practices and processes developed by the international community to address global problems such as poverty, pandemics, global warming, displaced persons and transnational crime. Utilizes theories of decision- and policy-making and investigates the role of states, international governmental and non- governmental organizations, coalitions and corporations in global public policy-making.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3144

IS 3154 - Topics in Global Public Policies (3 credits)
Examines in depth selected global public policies pertaining to health, energy, environment, development, education, refugees or labor. May be repeated with different content for a maximum of nine (9) credits.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) or (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 3154

IS 3164 - Global Trade: Structures and Policies (3 credits)
Focuses on the operations of global trading system and its structure, theories of trade in international political economy, world trading powers and international and regional trade international organizations such as the World Trade Organization (WTO), the European Union (EU), the United States-Mexico-Canada Agreement (USMC), European Union (EU), United Nations Conference on Trade and Development (UNCTAD), the United Nations Industrial Development Organization (UNIDO) and the World Intellectual Property Organization (WIPO) and their policies.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3164

IS 3165 - Global Economic Governance and Policy (3 credits)
3165: International Trade - Focuses on the operations of global and regional international organizations such as the World Trade Organization (WTO), the European Union (EU), the United Nations Conference on Trade and Development (UNCTAD), the United Nations Industrial Organization (UNIDO) and the World Intellectual Property Organization (WIPO) and examines their policies and regulations. 3166: International Finance - Focuses on the operations of global and regional international organizations such as the International Monetary Fund (IMF) and World Bank, the European Union (EU), the Organization for Economic Cooperation and Development (OECD) and examines their policies and regulations.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3165

IS 3166 - Global Economic Governance and Policy (3 credits)
3165: International Trade - Focuses on the operations of global and regional international organizations such as the World Trade Organization (WTO), the European Union (EU), the United Nations Conference on Trade and Development (UNCTAD), the United Nationa Industrial Organization (UNIDO) and the World Intellectual Property Organization (WIPO) and examines their policies and regulations. 3166: International Finance - Focuses on the operations of global and regional international organizations such as the International Monetary Fund (IMF) and World Bank, the European Union (EU), the Organization for Economic Cooperation and Development (OECD) and examines their policies and regulations.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3166

IS 3174 - Monetary Foundations of the World Economy (3 credits)
Focuses on the evolution the operations of global and structure of regional international organizations such as the International Monetary Fund (IMF) and World Bank, the global financial and monetary order. Theories of the global and monetary system in international political economy, the structure of world finance, international financial institutions, the rise of new financial powers in the world economy, central banking, monetary and financial regulation and financial crises and policy responses.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3174

IS 3175 - Global Development (3 credits)
3175: The Politics of Development - Examines issues and politics of the developing world and investigates the forces that promote or cut off economic development in low-income countries. Discusses development issues in various world regions. 3176: Economic Development - Emphasizes economic development and focuses on domestic and international policies aiming at addressing poverty in the developing world.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3175

IS 3176 - Global Development (3 credits)
3175: The Politics of Development - Examines issues and politics of the developing world and investigates the forces that promote or cut off economic development in low-income countries. Discusses development issues in various world regions. 3176: Economic Development - Emphasizes economic development and focuses on domestic and international policies aiming at addressing poverty in the developing world.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3176

IS 3184 - Human Security (3 credits)
Introduces the field of human security and examines the conceptual, theoretical, and methodological issues surrounding it. Identifies the relevant human security actors, explores the tools of human security, and discusses the application of human security. Investigates the implications of human security and discusses its future.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3184

IS 3194 - Nuclear Strategy & Politics (3 credits)
Examines the fundamentals of nuclear strategy and investigates the politics associated with the acquisition and proliferation of nuclear weapons. Focuses on nuclear doctrines and policies and explores international efforts associated with nuclear arms control and disarmament. Analyzes the nuclear postures of various nuclear states.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3194

IS 3344 - Global Environmental Issues: Interdisciplinary Perspectives (3 credits)
Critical examination of major global environmental problems from a humanities perspective, including international community responses to global environmental problems such as global warming, atmospheric ozone depletion, acid rain, tropical deforestation, toxic waste. Actions by key actors in the international community to develop solutions. Relationship of justice, fairness, equality, and diversity to political questions of power or authority. Pre: 3 credits of Critical Issues in a Global Context.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3344, UAP 3344

IS 3374 - The Politics of Energy (3 credits)
Critical and humanistic perspectives of energy and its global problems. Politics and ethics of fuel extraction, distribution, and consumption across cultures and histories. Energy narratives, discourses, and aesthetics in the formation of political identities. Energy and the rise of modern democracy and global capitalism, with an emphasis on the energy dimensions of climate justice. Pre: Junior Standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3374

IS 3384 - Politics of Global and Comparative Migration (3 credits)
Theories and politics of international migration. How policies in destination, transit, and origin countries influence migration. Why governments adopt the migration policies they do. Impacts of global, regional, and national politics and policies on migration among countries.
Prerequisite(s): PSCI 1024 or IS 1024 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064 or PSCI 2084 or IS 2084
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3384

IS 3394 - Comparative Politics of Immigrant Inclusion (3 credits)
Theories of citizenship applied across levels of government. Comparative policies for political, social, and military inclusion. Explanations for variations in policies supporting citizenship and inclusion across countries. Explanations for differences among immigrants' political inclusion across countries.
Prerequisite(s): PSCI 1024 or IS 1024 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064 or PSCI 2084 or IS 2084
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3394

IS 3514 - Latin American Government and Politics (3 credits)
Introduction to the political systems of Latin American countries, including legislative-executive relations, interest groups, political parties, electoral systems, political violence, and socio-political development.
Prerequisite(s): PSCI 1014H or PSCI 1014 or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3514

IS 3515 - European Political Systems (3 credits)
The government and politics of selected European states and of the European Union. 3515: normally includes the United Kingdom. 3516: normally includes Germany and Hungary.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3515

IS 3516 - European Political Systems (3 credits)
The government and politics of selected European states and of the European Union. 3515: normally includes the United Kingdom. 3516: normally includes Germany and Hungary.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3516

IS 3524 - Politics of Post-Communist Systems (3 credits)
Institutions, party structures, political economy, elite politics, ethnic conflicts, leadership dynamics, and mass political behavior in Russia and other post-communist political systems.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3524

IS 3534 - African Government and Politics (3 credits)
Survey of major concepts and themes in the study of African politics and development: analyses of the state, political institutions, social forces, democratization, sustainable development, issues of contemporary African politics.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3534

IS 3554 - Comparative Political Economy (3 credits)
Economic policies and collective choice processes of pre-industrial, industrializing, and advanced industrial states; problems and crises of industrial development, economic distribution, and technological transfer in the transition from an agrarian to advanced industrial society.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3554

IS 3574 - Government and Politics of Japan (3 credits)
Introduction to governmental institutions, patterns of political organization and behavior, and key policies of the Japanese political system.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3574

IS 3584 - Governments and Politics of Asia (3 credits)
Introduction to governmental institutions, political behavior, and social and economic policy approaches of China and other selected countries in the Asian region.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3584

IS 3594 - Topics in Middle East Politics and International Relations (3 credits)
Government and politics of Middle Eastern states. Religion, culture and society in the Middle East. Nationalism and Middle East politics. Regional conflicts and regional security. International relations of the Middle East. Great powers and Middle East politics. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 1024 or PSCI 1024 or IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3594

IS 3615 - International Relations (3 credits)
Structure and development of the modern international system, theories of international policies, international law; international organizations.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3615

IS 3616 - International Relations (3 credits)
Structure and development of the modern international system; theories of international policies; international law; international organizations.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3616

IS 3624 - Foreign Policy and Diplomacy (3 credits)
Focuses on actors, issues, and processes pertaining to foreign policy formulation and implementation. Examines theoretical and historical perspectives on foreign policy analysis. Investigates the national security, foreign policy, and diplomacy nexus. Discusses type of diplomacy and diplomatic methods.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3624

IS 3625 - US-Russia Foreign Policies (3 credits)
3625: Formulation of American foreign policy; roles of the President; Congress; press; public; and bureaucracy; central themes, issues, and problems of American diplomacy; 3626: Development and operational practices of Russian foreign policy decision-making in the international environment; party and state political institutions; Marxist-Lenninist ideology.
Prerequisite(s): PSCI 1024 or IS 1024 or PSCI 1024H or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3625

IS 3626 - US-Russia Foreign Policies (3 credits)
3625: Formulation of American foreign policy; roles of the President, Congress, press, and bureaucracy; central themes, issues, and problems of American diplomacy; 3626: Development and operational practices of Russian foreign policy decision-making in the international environment; party and state political institutions; Marxist-Leninist ideology.
Prerequisite(s): PSCI 1024 or PSCI 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3626

IS 3634 - Human Rights: Global Issues (3 credits)
Identification, articulation and clarification of the relationship between human rights and other contemporary international phenomena, issues, events, and processes that affect human rights. Detailed consideration of the diverse traditions and cultural interpretations of human rights.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H or PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3634

IS 3644 - Religion in the Middle East (3 credits)
Critical issues in religion in the Middle East. Competing methods for analyzing religion in the Middle East. Key concepts relating to religion and inter-religious relations in the Middle East such as minority, majority, tolerance, citizenship, and family law. Critical thinking about the relationship between Islam and other religions with particular reference to Muslim-Jewish and Muslim-Christian relations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ARBC 3644, RLCL 3644

IS 3694 - Far-right Violence in the United States (3 credits)
Assessment of theoretical and conceptual foundations to understand the rise of far-right violence in the United States. Identification of causes of radicalization into the far-right. Comparison of case studies of historical and contemporary far-right violence. Evaluation of differences and similarities in historical and contemporary case studies. Appraisal of successful responses to far-right violence.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3694

IS 3704 - National Security Strategy (3 credits)
Focuses on the causes of war and the conditions of peace. Examines the logic, levels, and outcomes of strategy and investigates the impact of international law and politics on the use of force. Explores contemporary strategic theory and discusses current issues in grand strategy.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3704

IS 3734 - National Security (3 credits)
Post-1945 strategic problems, policies, and security commitments of major participants in international politics, especially the United States and Russia; effects of security policies on international and domestic political economies.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3734

IS 3795 - Global Terrorism and Counterterrorism (3 credits)
Evaluation of theories and concepts used to analyze terrorism and counterterrorism. Identification and analysis of origins, causes, and consequences of terrorism globally. Comparison of historical and contemporary terrorism and counterterrorism. Appraisal of how histories of colonialism and the growth of new media affect terrorism and responses to terrorism. Identification of successful counterterrorism methods, strategies and practices. Evaluation of ethics and human rights in global counterterrorism. 3795: histories, origins, and spread of terrorism; 3796: strategies and practices of counterterrorism.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3795

IS 3796 - Global Terrorism and Counterterrorism (3 credits)
Evaluation of theories and concepts used to analyze terrorism and counterterrorism. Identification and analysis of origins, causes, and consequences of terrorism globally. Comparison of historical and contemporary terrorism and counterterrorism. Appraisal of how histories of colonialism and the growth of new media affect terrorism and responses to terrorism. Identification of successful counterterrorism methods, strategies and practices. Evaluation of ethics and human rights in global counterterrorism. 3795: histories, origins, and spread of terrorism; 3796: strategies and practices of counterterrorism.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3796

IS 3804 - European Integration (3 credits)
Analysis of the process of industrial, political, legal, economic, social and cultural integration of states in Europe as a whole or within a European sub-region. History and theories of European integration. Examination of various European organizations whose actions reflect different approaches to and different degrees of integration in Europe.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3804

IS 3814 - The European Union: Institutions and Policies (3 credits)
Evolution, organizational structure, political dynamics, and decision-making mechanisms of the European Union. Major internal and external EU policies such as foreign, security and defense policy, economics, Single Market, and monetary union.
Prerequisite(s): IS 3804 or PSCI 3804
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3814

IS 3824 - European Union's Foreign and Security Policy (3 credits)
The European Union (EU) as an actor in the foreign, security and defense policy fields. The external relations of the EU and its role in world affairs. The institutional arrangements of EU external relations and EU activity in policy areas including human rights, peacekeeping, environmental governance, trade, and economic development.
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3824

IS 3825 - European Union's Foreign Relations (3 credits)
The global strategy and foreign policy objectives of the European Union and the evolving relations between the EU and the rest of the world. EU's role in world affairs. 3825: EU's global strategy and its relations with major world powers, such as the United States, Russia, and China. 3826: EU's global strategy and its relations with countries in various world regions as well as global multilateral organizations, such as the United Nations (UN) and the World Trade Organization (WTO).
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3825

IS 3826 - European Union's Foreign Relations (3 credits)
The global strategy and foreign policy objectives of the European Union and the evolving relations between the EU and the rest of the world. EU's role in world affairs. 3825: EU's global strategy and its relations with major world powers, such as the United States, Russia, and China. 3826: EU's global strategy and its relations with countries in various world regions as well as global multilateral organizations, such as the United Nations (UN) and the World Trade Organization (WTO).
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3826

IS 3834 - European Security Governance (3 credits)
Structure and function of major European security organizations, such as the North Atlantic Treaty Organization (NATO), the European Union (EU), the Organization for Security and Cooperation in Europe (OSCE), and the Collective Security Treaty Organization (CSTO). In-depth analysis of those organizations' role in the European security architecture. Examination of inter-organizational cooperation in addressing European security issues and conflicts.
Prerequisite(s): IS 3804 or PSCI 3804
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3834

IS 3844 - European Geopolitics (3 credits)
Impact of Geography on European politics and economics. Significance of territorial, identity, networking and environmental geopolitics. Theoretical debates in the fields of political and population geography. Current culture and demographic challenges and geopolitical disputes within Europe and particularly between the European Union (EU) and its neighboring world regions.
Prerequisite(s): GEOG 2224 or IS 2224 or PSCI 2224
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 3844, PSCI 3844

IS 3854 - European Political Economy (3 credits)
The European Union's major institutions and policies relating to economic and monetary union and trade. Monetary integration, fiscal and economic policy cooperation, financial integration (including the banking union), the single market and the common commercial policy, the common agricultural policy and the EU's regional policy. The internal structure and organization of the European political economy and the external dimension of Europe and its impact on global economics, ranging from the World Trade Organization to EU enlargement and the Developing World.
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3854

IS 3874 - The European Business Environment (3 credits)
Political, legal, economic, socio-cultural, technological and environmental issues and policies affecting the operation and strategies of foreign companies in Europe. Business operations inside and outside the European Union. Impact of EU policies and the EU legal framework on business strategies and policies of non-EU companies. Business strategy for the European market, marketing and human resources management in Europe, and corporate governance and control in Europe. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MGT 3874, PSCI 3874

IS 3884 - Culture and Society in Contemporary Europe (3 credits)
The impact of religion and culture in contemporary European politics and societies. Nationalism versus European cosmopolitanism. Religion, religious radicalism and religious tolerance in Europe. Culture and society in European urban and rural areas. Attitudes towards women and LGBTQ in Europe. Social foundations and cultural determinants of marginalization of social groups, migrants and refugees.
Prerequisite(s): IS 1104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3884, SOC 3884

IS 3894 - Transatlantic Relations Since 1945 (3 credits)
Analysis of the post- World War II transatlantic relations. Origins and historical context of the transatlantic partnership. Impact of the changing security context and domestic politics on the evolution of transatlantic relations. Causes of tensions and discord between the United States and its European allies and their impact on European security and world order.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3894

IS 3914 - European Economics (3 credits)
Microeconomics, macroeconomics and economic policies of the European Union. EU economic law, institutions, decision-making, and budgeting. Historic and current influences on regional economic development. Monetary and fiscal policies. Economic research methods, analysis, and reporting.
Prerequisite(s): ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 3914, PSCI 3914

IS 3924 - Theories of Transatlantic Relations (3 credits)
Examination of historical, cultural, and civilizational approaches to the study of ties binding Europe and North America. Exploration of the role of identity and national interests in the analysis of transatlantic relations. Investigation of the causes of tensions between the United States and its European allies and the management of these tensions.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3924

IS 3934 - NATO & European Security (3 credits)
Origins and evolution of the North Atlantic Treaty Organization (NATO). Organizational structure, decision and policy-making, missions, and operations. NATO and the European Union's Common Foreign and Security policy (CFSP) and Common Security and Defense Policy (CSDP). Impact of domestic politics and external policies on the operation of NATO and European security.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3934

IS 3944 - International Enrollment (0 credits)
Participation in an approved study abroad program without direct supervision of the Va Tech faculty but with required enrollment in an approved program of study in a foreign university.
Instructional Contact Hours: (0 Lec, 0 Crd)

IS 3944S - International Enroll Special 3 (0 credits)
Participation in an approved Study Abroad program without direct supervision of the Virginia Tech faculty but with required enrollment in an approved program of study in an international university. Course represents three billable hours and no academic credit.
Instructional Contact Hours: (0 Lec, 0 Crd)

IS 3944T - International Enroll Special 4 (0 credits)
Participation in an approved Study Abroad program without direct supervision of the Virginia Tech faculty but with required enrollment in an approved program of study in an international university. Course represents four billable hours and no academic credit.
Instructional Contact Hours: (0 Lec, 0 Crd)

IS 3944U - International Enroll Special 6 (0 credits)
Participation in an approved Study Abroad program without direct supervision of the Virginia Tech faculty but with required enrollment in an approved program of study in an international university. Course represents six billable hours and no academic credit.
Instructional Contact Hours: (0 Lec, 0 Crd)

IS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4004 - Seminar in International Studies (3 credits)
Interdepartmental seminar to synthesize and articulate basic assumptions, theories, and methods of international studies. Senior standing in IS and instructor consent required.
Instructional Contact Hours: (3 Lec, 3 Crd)

IS 4014 - International Development (3 credits)
Utilizes development, gender, and social theory to examine the impact of aid programs on communities in the Third World. Analyzes such issues as the impact of development projects in agriculture, natural resources, and employment on the local people, the impact of aid on women; and the policies and administrative structures that direct the world of international development.
Instructional Contact Hours: (3 Lec, 3 Crd)

IS 4024 - Seminar in Diplomacy and Security (3 credits)
In-depth analysis of selected topics in diplomacy, strategy, and national security including issues pertaining to international conflict and cooperation; dimensions of national power; objectives of national policy and implementation of national strategy; diplomatic negotiations; and conflict resolution. Senior Standing.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4024

IS 4034 - Topics in Diplomacy Lab (3 credits)
Examines the fundamentals of policy analysis and formulation and emphasizes research and writing on topics pertaining to diplomacy, security, and foreign policy. Focuses on policy analysis and evaluation and concentrates on policy design. Emphasizes preparation and presentation of policy reports. May be taken three times for credit with different policy topics. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 4034

IS 4044 - International Communication (3 credits)
Comparative perspectives on global communication systems; problems with the flow of information; roles of international organizations; mass communication and national development; implications for conflict resolution; selected case studies. Senior standing required or instructor consent required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JMC 4044

IS 4054 - Seminar in Global Political Economy (3 credits)
Examines theoretical and historical approaches to global political economy and assesses their practical implications. Focuses on issue areas such as production, trade, money, finance and investment and analyzes their implications for the global economic and political order. Investigates issues pertaining to economies of development and in transition. Senior Standing.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4054

IS 4064 - Seminar in Global Development (3 credits)
Examines how economic and political forces interact in the developing world, discusses the history of these interactions from the pre-colonial period to the present and explores how colonialism shaped the developing worlds economic and political trajectories. Utilizes case studies, historical analysis and development economics to better understand the economic and political condition of countries in the developing world. Senior Standing.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4064

IS 4074 - The Politics of Cybersecurity (3 credits)
Analyses the politics of cybercrime, cyberwar, and the challenges of producing effective cybersecurity. Topics include the economics of cybersecurity, the cross-border nature of global cybercrime, encryption and anonymity-granting technologies, targeting critical national infrastructure, network investigative techniques, cybersecurity measurement, politics of zero-day vulnerabilities, and the process of providing effective cybersecurity at the individual, organizational, subnational, and national levels.
Prerequisite(s): PSCI 3044 or IS 3044
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4074

IS 4104 - Topics in European Studies (3 credits)
Selected issues pertaining to European Studies, such as racism in Europe, European art and society, religion and society in Europe, gender politics, and demographic trends in Europe. May be repeated twice with different content for a maximum of nine (9) credits. Pre: Senior Standing.
Prerequisite(s): IS 1104
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 4104

IS 4114 - Topics in European Union Policies (3 credits)
Governmental and non-governmental actors in environmental policy, climate, energy, health, agricultural, education, industrial, social or similar policymaking. EU organizational structures and decision-making mechanisms. Public opinion. Analysis of policy results and effectiveness. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

IS 4124 - Topics in European Integration (3 credits)
Research and analysis of selected issues pertaining to European integration. Democracy and European governance. Nationalism and European integration. Impact of fascism and racism on European integration. Integration of refugees and migrants in European societies. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 3804 or PSCI 3804
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

IS 4134 - Capstone Research Project in European Studies (3 credits)
Independent research project focusing on contemporary Europe. Identifying a topic of inquiry, formulating a research question, conducting a literature review, and preparing a research proposal. Collecting, evaluating and analyzing data, composing a research paper and presenting the research findings. Topics may originate from any discipline contributing to European studies. Pre: Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

IS 4144 - Topics in Transatlantic Relations (3 credits)
Research and analysis of selected post World War II political, diplomatic and security issues pertaining to transatlantic relations. Topics under examination include: US-EU relations and European security; the transatlantic partnership and world order; transatlantic politics and the global economic system; causes of the transatlantic divide; British foreign policy, transatlantic relations and European security. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 4144

IS 4154 - Topics in Transatlantic Studies (3 credits)
Research and analysis of selected issues pertaining to transatlantic studies. Topics under examination include: religion and the transatlantic world; the political economy of the transatlantic slave trade; and the role of culture, language, and literature in cementing transatlantic ties. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 4154

IS 4174 - Climate Change and the International Policy Framework (3 credits)
Science, causes and impacts of climate change. Mitigation and adaptation measures to address the causes and impacts of climate change. International climate change policy, with attention to the policy making process, in particular the role of the United Nations Framework Convention on Climate Change and climate negotiations. Science and diplomacy in climate negotiations to achieve successful outcomes. The ethical and social implications of climate change policies.
Pathway Concept Area(s): 1A Discourse Advanced, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 4174, PSCI 4174

IS 4184 - Capstone Project Transatlantic Studies (3 credits)
Independent research project focusing on issues and topics pertaining to transatlantic studies. Identifying a topic of inquiry, formulating a research question, conducting a literature review, and preparing a research proposal. Collecting, evaluating and analyzing data, composing a research paper and presenting the research findings. Topics may originate from any discipline contributing to transatlantic studies. Pre: Senior Standing
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4184

IS 4614 - Senior Seminar in International Relations (3 credits)
Selected topics in international relations, including objectives of national policy; dimensions and components of national power; comparative diplomacy; international conflict and cooperation; instruments of conflict resolution. Topics vary from semester to semester as announced. Must have senior standing and any two of the prerequisites.
Prerequisite(s): PSCI 3615 or PSCI 3616 or IS 3615 or IS 3616 or PSCI 3625 or PSCI 3626 or PSCI 3734 or IS 3626 or IS 3734
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4614

IS 4714 - Senior Seminar in Policy Analysis (3 credits)
Theoretical, analytical, and methodological approaches used to assess government activities and public policy. Topics vary from semester to semester as announced. Must have senior standing.
Prerequisite(s): PSCI 3724 and PSCI 3734
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4714

IS 4734 - Theories and Practices of International Conflict Management (3 credits)
Examines alternative perspectives on peace, security, and international intervention and their implications for policy. Focuses on the role of international organizations and other actors in conflict resolution and peace-building and explores issues pertaining to humanitarian intervention, human security, and state-building. Utilizes case studies in peacekeeping and peace building to highlight the link between theory and practice.
Prerequisite(s): PSCI 3616 or IS 3616
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4734

IS 4735 - Topics in Multilateral Diplomacy Workshop (3 credits)
Simulation of diplomatic practice in major global and regional international organizations. Diplomatic strategies and tactics. Effects of decision-making and policy-making structures and processes on diplomatic outcomes. Crisis management and conflict resolutions mechanisms. Diplomatic negotiations and diplomatic resolutions. Extensive use of simulations. 4735: Multilateral diplomacy in global organizations: United Nations (UN) and World Trade Organization (WTO). May be repeated once with different content for a maximum of six (6) credits. 4736: Multilateral diplomacy in sub-global/regional organizations: European Union (EU), North Atlantic Treaty Organization (NATO), and Organization for Security & Cooperation in Europe (OSCE). May be repeated once with different content for a maximum of six (6) credits. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: PSCI 4735

IS 4736 - Topics in Multilateral Diplomacy Workshop (3 credits)
Simulation of diplomatic practice in major global and regional international organizations. Diplomatic strategies and tactics. Effects of decision-making and policy-making structures and processes on diplomatic outcomes. Crisis management and conflict resolutions mechanisms. Diplomatic negotiations and diplomatic resolutions. Extensive use of simulations. 4735: Multilateral diplomacy in global organizations: United Nations (UN) and World Trade Organization (WTO). May be repeated once with different content for a maximum of six (6) credits. 4736: Multilateral diplomacy in sub-global/regional organizations: European Union (EU), North Atlantic Treaty Organization (NATO), and Organization for Security & Cooperation in Europe (OSCE). May be repeated once with different content for a maximum of six (6) credits. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: PSCI 4736

IS 4744 - Intelligence Analysis Workshop (3 credits)
Examines the impact of historical experience and bureaucratic structures on intelligence analysis. Discusses the contents of the intelligence agenda and explores issues pertaining to intelligence analysis. Focuses on the intelligence process and offers a target-centric approach to intelligence analysis. Emphasizes and evaluates the use of structured analytic techniques in intelligence analysis.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4744

IS 4754 - Internship (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

EUropean & Transatlantic Studies Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
Required International Studies Courses		
IS 1034	Introduction to International Studies and Political Science	3
IS 2084	The Evolution of World Order	3
Select one of the following:		3
IS 3115	Selected World Problems

Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
IS 1004 (major requirement) may be utilized to satisfy Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		
Subtotal		27
Total Credits		**120**

1 Please note that not all courses are offered each semester. Check with the department offering the course to find out when courses will be offered.

2 The following languages are suggested for students in the EUTS major: Arabic, French, German, Italian, Russian, and Spanish.
See undergraduate course catalog for current course offerings.
The following courses are only offered as Pass/Fail and **can be used** toward fulfillment of this requirement:

- ARBC 3124 Arabic for Oral Proficiency
- FR 3125 French for Oral Proficiency
- FR 3126 French for Oral Proficiency
- GER 3125 German Oral Proficiency
- GER 3126 German Oral Proficiency
- JPN 3125 Japanese for Oral Proficiency
- JPN 3126 Japanese for Oral Proficiency
- RUS 3124 Russian for Oral Proficiency
- SPAN 3125 Spanish for Oral Proficiency
- SPAN 3126 Spanish for Oral Proficiency

The following courses are **excluded** and cannot be used to fulfill this requirement:
If a student wishes to use an excluded course toward this requirement: Requests for exceptions must be made in writing to the Director of the International Studies Program and the student's assigned advisor. No more than one course exception will be granted.

- ARBC 3304 Modern Arabic Literature in Translation
- ARBC 3474 Topics in Arab Cinema
- CHN 3474 Topics in Chinese Cinema
- FR 3954 Study Abroad
- RUS 3304 Survey of Nineteenth-Century Russian Literature in Translation
- RUS 3314 Survey of Twentieth-Century Russian Literature in Translation

- RUS 3424 Topics in Russian Literature in English
- RUS 3434 The Works of Vladimir Nabokov

[3] IS 3116 Selected World Problems focuses exclusively on problems related to Europe. This course may be repeated for a maximum of nine (9) credit hours.

[4] For the EUTS majors you must complete the following requirements for the Pathways to General Education. More details and course listings can be found at the following link: https://www.pathways.prov.vt.edu. **You must complete each requirement listed.**

[5] Prerequisites of MATH 1014 Precalculus with Transcendental Functions or higher may be required.

Options

Option 1 European Union & Transatlantic Relations

Code	Title	Credits
IS 1104	Introduction to European Studies	3
IS 1114	Introduction to Transatlantic Studies	3
IS 3804	European Integration	3
IS 3814	The European Union: Institutions and Policies	3

Option 4 General

Code	Title	Credits
IS 1104	Introduction to European Studies	3
IS 1114	Introduction to Transatlantic Studies	3
IS 3804	European Integration	3
IS 3814	The European Union: Institutions and Policies	3
Select seven courses from any of the elective lists in Options 1, 2, or 3		21
Total Credits		**33**

Satisfactory Progress

To proceed satisfactorily toward a degree, a student must complete IS 1004 Nations and Nationalities , IS 1034 Introduction to International Studies and Political Science , IS 2004 Research and Writing in International Studies , IS 2054 Introduction to World Politics, IS 2064 The Global Economy and World Politics, IS 2084 The Evolution of World Order and Foreign Language 2105 & 2106 by the end of the semester in which 60 hours have been attempted; must maintain an overall GPA of at least 2.0 and must maintain an in major GPA of 2.0.

Graduation Requirements

Hours Requirement

A total of 120 hours is required to graduate with an International Studies degree of which there are sixty-nine (69) required hours for the Major in EUropean & Transatlantic Studies (EUTS).

In-major GPA

All of the courses in the core and major requirements and major electives are included in the in-major GPA calculation. A GPA of 2.0 or above both overall and in-major GPA is required for graduation.

Prerequisites

Some courses listed may have pre-/co-requisites; please consult the University Course Catalog or check with your advisor.

Dual Use of Courses

In accordance with the State Council guidelines, courses used to fulfill the SCHEV approved degree core may not also be used to meet The Pathways to General Education or major requirements.

Intra-departmental Majoring and Minoring

Due to overlapping of courses, students cannot pursue another major within the Department of Political Science. However, they can pursue any of the minors offered by the department except the Minor in Political Science.

Foreign Language Requirement

University and Admissions Foreign Language Requirement (No Credits Count Toward the Degree)

This is a requirement that is separate from the International Studies requirement. *Completion of this requirement* ***will not*** *fulfill your International Studies Language Requirement.*

- Students who completed three years of a single foreign, classical, or sign language in high school have completed the requirement.
- Students who did not complete three years of a single foreign, classical, or sign language in high school may complete the requirement as follows:
  - Complete two years of a single foreign, classical, or sign language in high school plus 1106 or the equivalent in college (these three hours of 1106 do count toward the 120 required for graduation and calculates into the GPA)

    or
  - Complete an 1105-1106 foreign language (e.g. FR, GR, SPAN) grouping or the equivalent in college (these six hours do **not** count toward the 120 required for graduation).

IS 4974	Independent Study [4]	1-19
IS 4984	Special Study [4]	1-19
IS 4994	Undergraduate Research [4]	1-19

[1] Check the Undergraduate Course Catalog or the Timetable of classes for the most up to date course restrictions and pre-requisites.

[2] Indicates the course has a pre-requisite. Please consult the University Catalog and/or check with your advisor.

[3] IS 4964 Field Study is only offered as Pass/Fail and can be used toward fulfillment of a major elective from the corresponding list.

[4] The content of the Independent Study or Special Study, as well as the topic of Undergraduate Research should be relevant to the International Relations major. Please ask the International Studies advisor in advance whether the proposed Independent Study or Special Study or Undergraduate Research, topic qualifies.

Satisfactory Progress: To proceed satisfactorily toward a degree, a student must complete IS 1004 Nations and Nationalities , IS 1034 Introduction to International Studies and Political Science, IS 2004 Research and Writing in International Studies , IS 2054 Introduction to World Politics , IS 2064 The Global Economy and World Politics , IS 2084 The Evolution of World Order , and Foreign language 2105 & 2106 by the end of the semester in which 60 hours have been attempted; must maintain an overall GPA of at least 2.0 and must maintain an in major GPA of 2.0.

Graduation Requirements

Hours Requirement: A total of 120 hours is required to graduate with an International Studies degree of which there are fifty-seven (57) required hours for the International Relations major.

In-major GPA: All of the courses in the core and major requirements and major electives are included in the in-major GPA calculation. A GPA of 2.0 or above both overall and in-major GPA is required for graduation.

Dual Use of Courses: No course can double count within or between International Studies Program-related majors or minors with the exception of the Core Degree Requirements and IS 1004 Nations and Nationalities , IS 2004 Research and Writing in International Studies , IS 2054 Introduction to World Politics and IS 2064 The Global Economy and World Politics . In accordance with the State Council guidelines, courses used to fulfill the SCHEV approved degree core may not also be used to meet Pathways General Education or major requirements.

Intra-departmental majoring and minoring: Due to overlapping of courses, students pursuing one or more majors associated with the International Studies Program cannot major or minor in Political Science.

Intra-IS Program majoring and minoring: Students may pursue more than one major or minor associated with the International Studies Program. In this case, the policy pertaining to the "Dual Use of Courses" will apply.

Prerequisites: Some courses listed have prerequisites; please consult the University Catalog and/or check with your advisor.

Pathways to General Education: More details and course listings can be found at the following link: https://www.pathways.prov.vt.edu.

Foreign Language Requirements

University and Admissions Foreign Language Requirement

*This is a requirement that is **separate** from the International Studies requirement. Completion of this requirement **will not** fulfill your International Studies Language Requirement.*

- Students who completed three years of a single foreign, classical, or sign language in high school have completed the requirement.
- Students who did not complete three years of a single foreign, classical, or sign language in high school may complete the requirement as follows:
  - Complete two years of a single foreign, classical, or sign language in high school plus 1106 or the equivalent in college {these three hours of 1106 do count toward the 120 required for graduation and calculates into the GPA)

    or
  - Complete an 1105-1106 foreign language (e.g. FR, GR, SPAN) grouping or the equivalent in college {these six hours do NOT count toward the 120 required for graduation).

Total Credits		**120**

1 See undergraduate course catalog for current course offerings. The following courses are only offered as Pass/Fail and **can be used** toward fulfillment of this requirement:

- ARBC 3124 Arabic for Oral Proficiency
- FR 3125 French for Oral Proficiency
- FR 3126 French for Oral Proficiency
- GER 3125 German Oral Proficiency
- GER 3126 German Oral Proficiency
- JPN 3125 Japanese for Oral Proficiency
- JPN 3126 Japanese for Oral Proficiency
- RUS 3124 Russian for Oral Proficiency
- SPAN 3125 Spanish for Oral Proficiency
- SPAN 3126 Spanish for Oral Proficiency

The following courses are **excluded** and cannot be used to fulfill this requirement:
If a student wishes to use an excluded course toward this requirement: Requests for exceptions must be made in writing to the Director of the International Studies Program and the student's assigned advisor. No more than one course exception will be granted.

- ARBC 3304 Modern Arabic Literature in Translation
- ARBC 3474 Topics in Arab Cinema
- CHN 3474 Topics in Chinese Cinema
- FR 3954 Study Abroad
- GER 3474 Topics in German Cinema
- RUS 3304 Survey of Nineteenth-Century Russian Literature in Translation
- RUS 3314 Survey of Twentieth-Century Russian Literature in Translation
- RUS 3424 Topics in Russian Literature in English
- RUS 3434 The Works of Vladimir Nabokov

2
- At least 6 hours at the 3000 and/or 4000 level. Elective courses must be **either** in a second foreign language **or** from the courses listed below.
- Other courses with an international character and/or relevance may also be considered. These courses will be evaluated by the International Studies Program advisor.
- IS major courses selected will not double count toward IS major electives.

3 Please note that not all courses are offered each semester. Check with the department offering the course to find out when courses are offered.

4 Check the Undergraduate Course Catalog or the Timetable of classes for the most up to date course restrictions and pre-requisites.

5 The content of the Independent Study or Special Study, as well as the topic of Undergraduate Research should be relevant to the International Relations major. Please ask the International Studies advisor in advance whether the proposed Independent Study or Special Study or Undergraduate Research, topic qualifies.

6 For the IPPL, IREL, IS, or NSFA majors you must complete the following requirements for the Pathways to General Education. More details and course listings can be found at the following link: https://www.pathways.prov.vt.edu.
You must complete each requirement listed.

7 Prerequisites of MATH 1014 Precalculus with Transcendental Functions or higher may be required.

Satisfactory Progress

To proceed satisfactorily toward a degree, a student must complete IS 1004 Nations and Nationalities , IS 1034 Introduction to International Studies and Political Science , IS 2004 Research and Writing in International Studies , IS 2054 Introduction to World Politics , IS 2064 The Global Economy and World Politics , IS 2084 The Evolution of World Order , and foreign language 2105 & 2106 grouping by the end of the semester in which 60 hours have been attempted; must maintain an overall GPA of at least 2.0 and must maintain an in major GPA of 2.0.

Graduation Requirements

Hours Requirement

A total of 120 hours is required to graduate with an International Studies degree of which there are fifty-seven (57) required hours for the International Studies major.

In-Major GPA

All of the courses in core and major requirements and major electives are included in the in-major GPA calculation. A GPA of 2.0 or above both overall and in-major GPA is required for graduation.

Dual Use of Courses

In accordance with the State Council guidelines, courses used to fulfill the SCHEV approved degree core (Core Degree Requirements) may

not also be used to meet The Pathways to General Education or major requirements.

Intra-Departmental Majoring and Minoring

Due to overlapping of courses, students cannot pursue another major within the Department of Political Science. However, they can pursue any of the minors offered by the department except the Minor in Political Science.

Prerequisites

Some courses listed have prerequisites; please consult the University Catalog and/or check with your advisor.

Foreign Language Requirement

University and Admissions Foreign Language Requirement (No Credits Count Toward the Degree)

*This is a requirement that is **separate** from the International Studies requirement.*
Completion of this requirement **will not** *fulfill your International Studies Language Requirement.*

- Students who completed 3 years of a single foreign, classical, or sign language in high school have completed the requirement.
- Students who did not complete 3 years of a single foreign, classical, or sign language in high school may complete the requirement as follows:
  - Complete 2 years of a single foreign, classical, or sign language in high school plus complete an 1106 foreign language (e.g., FR, GR, SPAN) or the equivalent in college (the 3 hours of 1106 do count toward the 120 required for graduation and calculates into the GPA)
    or
  - Complete an 1105-1106 foreign language (e.g., FR, GR, SPAN) grouping or the equivalent in college (these 6 hours do **not** count toward the 120 required for graduation).
  -

Total Credits	**120**

1 Please note that not all courses are offered each semester. Check with the department offering the course to find out when courses are offered.

2 Check the Undergradate Course Catalog or the Timetable of classes for the most up to date course restrictions and prerequisites.

3 The content of the Independent Study or Special Study, as well as the topic of the Undergraduate Research should be relevant to the International Relations major. Please ask the International Studies advisor whether the proposed Independent Study or Special Study or Undergraduate Research topic qualifies.

4 IS 4964 is only offered as Pass/Fail and **can be used** toward fulfillment of a major elective from the corresponding list.

Satisfactory Progress

To proceed satisfactorily toward a degree, a student must complete IS 1004 Nations and Nationalities, IS 1034 Introduction to International Studies and Political Science, IS 2004 Research and Writing in International Studies, IS 2054 Introduction to World Politics, IS 2064 The Global Economy and World Politics, IS 2084 The Evolution of World Order, and Foreign language 2105 & 2106 by the end of the semester in which 60 hours have been attempted; must maintain an overall GPA of at least 2.0 and must maintain an in major GPA of 2.0.

Graduation Requirements

Hours Requirement

A total of 120 hours is required to graduate with an International Studies degree of which there are fifty-seven (57) required hours for the National Security & Foreign Affairs major.

In-major GPA

All of the courses in the core and major requirements and major electives are included in the in-major GPA calculation. A GPA of 2.0 or above both overall and in-major GPA is required for graduation.

Dual Use of Courses

In accordance with the State Council guidelines, courses used to fulfill the SCHEV approved degree core (Core Degree Requirements) may not also be used to meet the Pathways to General Education or major requirements.

Intra-departmental Majoring and Minoring

Due to overlapping of courses, students cannot pursue another major within the Department of Political Science. However, they can pursue any of the minors offered by the department except the minor in Political Science.

Prerequisites

Some courses listed on this checksheet have prerequisites; please consult the University Catalog and/or check with your advisor.

Foreign Language Requirement

University and Admissions Foreign Language Requirement (No Credits Count Toward the Degree)

*This is a requirement that is **separate** from the International Studies requirement.*
*Completion of this requirement **will not** fulfill your International Studies Language Requirement.*

- Students who completed 3 years of a single foreign, classical, or sign language in high school have completed the requirement.
- Students who did not complete 3 years of a single foreign, classical, or sign language in high school may complete the requirement as follows:
  - Complete 2 years of a single foreign, classical, or sign language in high school plus an 1106 foreign language (e.g., FR, GR, SPAN) or the equivalent in college (these 3 hours of 1106 do count toward the 120 required for graduation and calculates into the GPA)
    or
  - Complete an 1105-1106 foreign language (e.g., FR, GR, SPAN) grouping or the equivalent in college (these 6 hours do **not** count toward the 120 required for graduation).

Modern and Classical Languages and Literatures

Our Website (https://liberalarts.vt.edu/departments-and-schools/department-of-modern-and-classical-languages-and-literatures.html)

Overview

Why study a language?

- 88% of job recruiters say speaking more than one language is critical to business success (Monster).
- Language study enhances any other major.
- Study abroad can be used to complete any language major or minor.
- AP and IB credits may be applied to prerequisites or requirements.
- Students of all majors are welcome in our classes.

Helpful hint: Best to start early because language courses must be taken in sequence and, if you have studied the language before, fluency declines quickly.

Click on the Programs tab above for major requirements. Click here for minor requirements (https://catalog.vt.edu/undergraduate/liberal-arts-human-sciences/modern-classical-languages-literatures/Click here for minor requirements/).

Undergraduate Course Descriptions (CHN)

CHN 1105 - Elementary Chinese (3 credits)
Fundamentals of the Chinese language with emphasis on developing proficiency in practical language use and cultural competency. 1105 is for students with no prior knowledge of the language; 1106 is for students who have completed 1105, or more than one year, but less than three years of high school Chinese.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 1106 - Elementary Chinese (3 credits)
Fundamentals of the Chinese language with emphasis on developing proficiency in practical language use and cultural competency. 1105 is for students with no prior knowledge of the language; 1106 is for students who have completed 1105, or more than one year, but less than three years of high school Chinese.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 1114 - Accelerated Elementary Chinese (6 credits)
Proficiency-oriented approach to Elementary Chinese, designed for learners who wish to progress rapidly through the beginning stages of language learning. Speaking, listening comprehension, reading comprehension, writing, and cultural competency at the novice-high level. Duplicates 1105 and 1106. For students with no prior knowledge of the language.
Instructional Contact Hours: (6 Lec, 6 Crd)

CHN 2105 - Intermediate Chinese (3 credits)
Emphasizes comprehension of written and spoken Mandarin Chinese, communication in Chinese; study of some literature and culture of the Chinese people. 2105 is for students who have completed 1105 and 1106 or equivalent. 2106 is for students who have completed 2105 or equivalent.
Prerequisite(s): CHN 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 2106 - Intermediate Chinese (3 credits)
Emphasizes comprehension of written and spoken Mandarin Chinese, communication in Chinese; study of some literature and culture of the Chinese people. 2105 is for students who have completed 1105 and 1106 or equivalent. 2106 is for students who have completed 2105 or equivalent.
Prerequisite(s): CHN 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 2734 - Chinese Culture and Civilization (3 credits)
Survey of Chinese culture and civilization through interactions between major political and historical events, social and artistic movements in China. Chinese literature, art, architecture, film, and theater in the context of Chinese cultural history. Aesthetic and rhetorical strategies. Interpretation of intercultural experiences from different vantage points. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 3105 - Advanced Chinese (3 credits)
3105: Practice in communication skills in Chinese both orally and in writing, including review of grammar, directed composition, and conversation, with an emphasis on pronunciation, cultural competency, and oral expressions. Not recommended for native speakers. 3106: Reinforcement of oral proficiency, reading, grammar, and writing skills, allowing students to explore a broad range of texts of general and professional interest. Not recommended for native speakers.
Prerequisite(s): CHN 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3106 - Advanced Chinese (3 credits)
3106: Reinforcement of oral proficiency, reading, grammar, and writing skills, allowing students to explore a broad range of texts of general and professional interest. Not recommended for native speakers.
Prerequisite(s): CHN 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3124 - Chinese for Oral Proficiency (3 credits)
Formal conversation, business Chinese, and enhanced cultural competency. Discuss current topics and perform daily transactions. Not recommended for native speakers.
Prerequisite(s): CHN 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3304 - Chinese Literature in Translation (3 credits)
Familiarization with the historical, intellectual, and cultural contexts of major Chinese literary genres. Identification of major cultural movements and concepts in Chinese literature and analysis of literary texts. Examination of aesthetic and rhetorical strategies employed in literary works. Intercultural experiences from different vantage points. The impact of globalization on Chinese literature. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3474 - Topics in Chinese Cinema (3 credits)
Critical issues in the history of modern and contemporary China through cinema. Interactions between major political and historical events and social and cultural movements in China. Chinese cinema in the broader contexts of Chinese cultural history and Chinese society. Interpretation of intercultural experiences from different vantage points. Variable topics such as national identity, social realities during the Republican era, the modernization of China, economic conditions and political responses, gender politics, the reform and opening-up of China, and the impact of globalization on Chinese cinema. Instruction in English. May be repeated once with different content for a maximum of 6 credit hours.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

CHN 3514 - Modern China through the Media (3 credits)
Acquisition of media Chinese through comprehending and analyzing various forms of mass media. Topics of community, national, or international interest. Language used in both formal and informal settings. Enhancement of societal and cultural knowledge through the mass media. Not recommended for native speakers.
Prerequisite(s): CHN 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3524 - Introduction to Chinese Translation (3 credits)
Introduction to the translation of a variety of real-world materials from Chinese into English with the aid of online translation tools. Acquisition of relevant skills to analyze Chinese sentences into phrasal constituents, critique the quality of existing translated works, and create a portfolio of translation work.
Prerequisite(s): CHN 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3534 - Business Chinese (3 credits)
Preparation for the business world in contemporary Modern Standard Chinese-speaking communities. Contextualized usage of specific vocabulary, idiomatic expressions, grammar structures, and cultural practices in spoken and written formats such as business correspondence, formal and informal reports, business documents, and business proposals. Taught in Chinese. Not recommended for native speakers.
Prerequisite(s): CHN 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3544 - Introduction to Classical Chinese (3 credits)
Essentials of classical Chinese vocabulary and grammar. Simple texts in classical Chinese, translation of classical Chinese texts into idiomatic English, and recitations of selected short passages in the language. Not recommended for native speakers. Taught in Chinese.
Prerequisite(s): CHN 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3604 - Chinese Language and Society (3 credits)
Examination of the complex interaction between linguistic practices and social and cultural stratifications in Chinese speaking communities (e.g., Mandarin speakers). Identification of fundamental concepts in the field of sociolinguistics, explanation of the ways in which language expresses different social meanings, analysis of how identity is constructed through language and how belief systems about different identities influence human behavior and social relationships, identification of issues of diversity and inclusion, and interpretation of language behavior from different sociocultural contexts. Taught in English.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 4614 - Teaching Chinese (3 credits)
Focus on practical activities of language learning, from a variety of learners' perspectives. Development of the ability to explain and apply activities for learning Chinese characters, sounds, vocabulary, and sentence patterns; ability to design conversation-based practice tasks.
Prerequisite(s): CHN 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (CLA)

CLA 1134 - The Ancient Mediterranean World (3 credits)
Ancient cultures of the Mediterranean world with a focus on their embodiments in the arts, literature, history, philosophy, and religion. Emphasis on Greek, Hellenistic and Roman cultures, their interrelationships with each other and their historical, cultural, material and intellectual encounters with contemporary Mediterranean cultures as their influence on later and modern cultures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 1134

CLA 2224 - Ancient Greek and Roman Women (3 credits)
Examines the history of ancient Greek and Roman women from ninth century BCE to the fall of the Roman Empire. Analyzes contributions of women to each civilization. Studies construction of and contemporary debates about women's ascribed social, political, and cultural roles.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2224

CLA 2234 - Classics in the Modern World (3 credits)
Examines the influences, traditions, and receptions of the ancient Greeks and Romans in the modern world, especially in the United States. Explores the re-interpretation of the ancient Greek and Roman world across mediums, and by leaders and governments in diverse societies. Discusses contexts and ideologies of re-makings of the ancient Greek and Roman world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2234

CLA 2244 - Cities of Rome (3 credits)
Examines the building development of the ancient city of Rome and selected Roman cities; investigates how social, political, and cultural aspects of private and public architecture in these physical cities both create meaning and preserve memory. Explores the ways in which later cultures, especially through literature, have engaged with the pervasive and persistent influence of ancient Rome, not just as a physical place, but also as a cultural construct.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2244

CLA 2434 - Fairytale, Folklore, and Magic: Popular Literature in Ancient Greece and Rome (3 credits)
Survey of ancient Greek and Roman popular literature. Introduces students to a wide array of texts, ranging from the ancient novel, popular compilations (e.g. books of marvels, fables, and jokes), ritual texts, funerary inscriptions, and folklore/fairytales. Examination of how scholars define popular literature as a category and introduction of contemporary approaches to it. Exploration of the connection of ancient Greek and Roman tales to international ones from different cultures and perspectives. Special attention to the depiction of private rituals in Greek and Latin literature. In English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CLA 2444 - Ancient Greek and Roman Mythology (3 credits)
Surveys ancient Greek and Roman mythology. Provides students with an introduction to selected myths from ancient Greek and Roman literature, including appropriate historical background information. Familiarizes students with how theories of myth have been applied to individual stories and how such mythological tales have been received by authors and artists in subsequent cultures. Explores the interaction and interdependence of mythological tales from different cultures and perspectives. In English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 2444, RLCL 2444

CLA 2454 - Topics in Ancient Greek and Latin Literature (3 credits)
Examines canonical and non-canonical ancient Greek and Latin literary texts in translation and subsequent uses, adaptations and interpretations of these texts in various cultures. Examines concepts common to the humanities. Investigates the interaction and interdependence of literary texts with philosophy, art, music, history, and society. Identifies the uses, influences, and interpretation of these literatures. Examines significance of ancient Greek and Latin literature even though distant from our own space, time and experience. Identifies instances of cultural diversity and inclusion in these works. Taught in English. May be repeated 2 times with different content for a maximum of 9 credit hours.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

CLA 2464 - Mythology, Philosophy and Video Games (3 credits)
Examines how both ancient texts and modern games convey fundamental concepts of the humanities such as community, communication, agency, archetypes, the monomyth, morality, ethics, gender issues, environmental issues, aesthetic experience, xenophobia, and xenophilia. Evaluates the interaction of philosophy, art, technology, mythology, society and entertainment, and combines uses of modern technology and functions of ancient mythology across cultures and communities. Demonstrates the integration of concepts of the humanities as presented in video games.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CLA 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 3954 - Study Abroad (1-19 credits)

Undergraduate Course Descriptions (FR)

FR 1105 - Elementary French (3 credits)
Fundamentals of the French language with emphasis on grammar, reading, composition, and conversation. 1105 for students with no prior knowledge of the language; 1106 for students who have completed 1105 or less than three years in high school.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 1106 - Elementary French (3 credits)
Fundamentals of the French language with emphasis on grammar, reading, composition, and conversation. 1105 for students with no prior knowledge of the language; 1106 for students who have completed 1105 or less than three years in high school.
Prerequisite(s): FR 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 1114 - Accelerated Elementary French (6 credits)
Proficiency-oriented approach to Elementary French, designed for learners who wish to progress rapidly through the beginning stages of language learning. Development of the four language skills (speaking, listening, reading, writing) and basic cultural competency through the study of authentic materials. Duplicates FR 1105 and FR 1106. Taught in French.
Instructional Contact Hours: (6 Lec, 6 Crd)

FR 2105 - Intermediate French (3 credits)
Emphasizes comprehension of written and spoken French, communication in French, literature, and culture of French-speaking world.
Prerequisite(s): FR 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 2106 - Intermediate French (3 credits)
Emphasizes comprehension of written and spoken French, communication in French, literature, and culture of French-speaking world.
Prerequisite(s): FR 2105
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 2114 - Accelerated Intermediate French (6 credits)
Proficiency-oriented approach to intermediate French, designed for learners who wish to progress rapidly through the intermediate stages of language learning. Develops the four language skills (speaking, listening, reading, writing) in a cultural context using authentic materials. Taught in French. Accelerated version of 2105-2106. Duplicates 2105-2106.
Prerequisite(s): FR 1106 or FR 1114
Instructional Contact Hours: (6 Lec, 6 Crd)

FR 2164 - Intermediate Business French (3 credits)
This course emphasizes all four language skills (reading, writing, speaking, and listening) by focusing on various facets of the world of business and technology. It also develops students understanding of French institutions and business practices.
Prerequisite(s): FR 2105
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 2714 - Introduction to French Culture and Civilization (3 credits)
French culture and civilization from prehistoric cave paintings to the present. Interdisciplinary approach to literature, film, art, achitecture, intellectual movements, and lifestyle in the context of French political history, society, and globalization, including elements of French culture that arrived through conquerors, migrants, and immigrants. Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 0 Lab, 3 Crd)

FR 2794H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

FR 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 3105 - Composition, Conversation and Grammar (3 credits)
Development of the ability to write and speak through the effective use of French syntax and morphology. Increased reading and listening skills through the study of authentic materials in the target language. Understanding the role of culture in communication. Conducted in French.
Prerequisite(s): FR 2106 or FR 2164
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3106 - Composition, Conversation and Grammar (3 credits)
Development of the ability to write and speak through the effective use of French syntax and morphology. Increased reading and listening skills through the study of authentic materials in the target language. Understanding the role of culture in communication. Conducted in French.
Prerequisite(s): FR 2106 or FR 2164
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3125 - French for Oral Proficiency (3 credits)
For acquisition of measured levels of proficiency in speaking and understanding spoken French. Content-based instruction in small groups. 3125: to achieve an oral proficiency rating comparable to Intermediate-high on the American Council on the Teaching of Foreign Languages Oral Proficiency Interview (ACTFL-OPI) or S -1+ on the Foreign Service Institute (FSI) scale. 3126: to achieve an oral proficiency rating comparable to Advanced on the ACTFL-OPI or a 2 on the FSI scale. Admission by oral exam.
Prerequisite(s): FR 3105 and FR 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3126 - French for Oral Proficiency (3 credits)
For acquisition of measured levels of proficiency in speaking and understanding spoken French. Content-based instruction in small groups. 3125: to achieve an oral proficiency rating comparable to Intermediate-high on the American Council on the Teaching of Foreign Languages Oral Proficiency Interview (ACTFL-OPI) or S -1+ on the Foreign Service Institute (FSI) scale. 3126: to achieve an oral proficiency rating comparable to Advanced on the ACTFL-OPI or a 2 on the FSI scale. Admission by oral exam.
Prerequisite(s): FR 3105 and FR 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3154 - French for the Natural Sciences (3 credits)
Knowledge of the French language and its cultures to the natural sciences. Study of scientific materials in French. Practice in communication skills through contextualized use of specific vocabulary, idiomatic expressions, grammar structures and cultural practices in real-world situations. Discussion on scientific topics and debates of the French-speaking world. Comparison of the practices and world views of scientists and clinicians in French and English-speaking countries. Taught in French.
Prerequisite(s): FR 3106
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3164 - Advanced Business French (3 credits)
In this skills-based course, students learn to use appropriate French technical vocabulary for different business contexts, do translation, write professional correspondence, and read articles related to the worlds of business, economics, and finance. Cross-cultural differences regarding the work place are also a focus of the course.
Prerequisite(s): FR 3105 and FR 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3304 - Introduction to French Literature (3 credits)
Introduction to French literature through analysis and discussion of selected texts from different periods and genres. Methods, terminology, and practice of literary analysis. Intensive writing component.
Prerequisite(s): FR 3105 or FR 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3314 - Introduction to Francophone Studies (3 credits)
Introduction to the literatures and cultures of French-speaking regions outside of France including North Africa, the Caribbean, Sub-Saharan Africa, and Quebec. Examination of thematic and cultural aspects of literatures of those regions within their socio-historical contexts. Exploration of movements and notions as Negritude, postcolonialism, identity, race, and nation as they relate to the legacy of colonial France. Development of research skills such as finding appropriate sources and proper citation, and of intercultural sensitivity through analysis of works outside Western traditions. Taught in French.
Prerequisite(s): FR 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3424 - French Culture from Middle Ages to Renaissance (3 credits)
Overview of major events, currents, ideas, works, and figures in French culture from the Middle Aes to the end of the Renaissance. Emphasis on nation-building and cultural production. Critical reading and writing in French. Analysis of a variety of literary texts and cultural artifacts affects from a chronological and thematic perspective. Taught in French.
Prerequisite(s): FR 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3434 - French Culture from Baroque to Revolution (3 credits)
Overview of major events, currents, ideas, works, and figures in French culture from the Baroque era to the French Revolution (1610-1799). Emphasis on nation-building and cultural production in a European and Global context. Critical reading and writing in French. Analysis of a variety of literary texts and cultural artifacts from a chronological and thematic perspective. Taught in French.
Prerequisite(s): FR 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3444 - French Culture from Romanticism to Belle Epoque (3 credits)
Overview of major events, movements, ideas, works, and figures in French culture from the Romantic period (1800) through the Belle Epoque (1914). Emphasis on literary and cultural works in their social and historical contexts. Critical reading and analysis in French. Study of the impact of French history on French culture. Interpretation of intercultural experiences according to different world views. Taught in French.
Prerequisite(s): FR 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3454 - French Culture from World Wars to Global Present (3 credits)
Overview of major events, currents, ideas, works, and figures in French culture from World War I to the present, a period characterized by colonialism, world conflict, and globalization. Analysis of literary and cultural works in their social and historical contexts, toward an understanding of the French language as a global idiom involving diverse worldviews and cultures. Taught in German. Variable content. May be repeated once for credit with different content for a maximum of 6 credits.
Prerequisite(s): (GER 3105 and GER 3106) or (GER 3105 and GER 3204) or (GER 3105 and GER 3306) or (GER 3106 and GER 3204) or (GER 3106 and GER 3306)
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

GER 3306 - Topics in German Culture and Literature (3 credits)
Introduces students to critical issues in German culture and literature. Familiarizes students with artistic, cultural, and socio-historical contexts necessary to analyze artifacts (canonical and non-canonical literature, film, art, architecture, and music). Develops critical reading, writing, speaking, and listening skills in German regarding complex texts, contexts, and concepts. Fosters cross-cultural awareness and intercultural sensitivity. 3305: examines pre-20th-century German cultural and literary developments; 3306: examines cultural and literary developments in the 20th and 21st centuries. Taught in German. Variable content. May be repeated once for credit with different content for a maximum of 6 credits.
Prerequisite(s): GER 3105 or GER 3106
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

GER 3474 - Topics in German Cinema (3 credits)
Critical issues in the history of German Cinema. Aesthetic characteristics of major periods, with an emphasis on cinematic trends and ways in which films reflect cultural developments in German-speaking countries. Taught in English. Variable content. May be taken twice for credit with different content.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

GER 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 4154 - Advanced Composition and Stylistics (3 credits)
Intensive advanced work in written German. Development of the students ability to write clear, correct, and articulate German in a variety of modes. Style analysis. Writing intensive.
Prerequisite(s): GER 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 4304 - Age of Goethe (3 credits)
Major writers of the age of Goethe: Goethe, and Schiller; the development of German Classicism.
Prerequisite(s): GER 3105 and GER 3106 and GER 3306
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 4314 - Studies in 19th-Century Literature (3 credits)
Variable content course devoted to the study of 19th century drama, lyric, and prose. May be repeated for credit with different content.
Prerequisite(s): GER 3105 and GER 3106 and GER 3306
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 4324 - Studies in 20th-Century Literature (3 credits)
A variable content course devoted to the study of major literary works of the 20th century. May be repeated for credit with different content.
Prerequisite(s): GER 3105 and GER 3106 and GER 3306
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 4334 - Special Topics in German Life, Literature, and Language (3 credits)
Variable content course devoted to the study of various aspects of German culture, literature, and language. May be repeated for credit with different content.
Prerequisite(s): (GER 3105 and GER 3106) and (GER 3204 or GER 3305 or GER 3306)
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 4794 - Senior Tutorial in German Studies (1 credit)
Individual or small group sessions which give the student the opportunity to hone special language skills, with a focus on post-graduation application of these skills. May concentrate on areas such as technical or business language, linguistics, translation, interpreting, creative writing, specialized literary, or cultural studies. Must be pre-arranged three weeks before end of previous semester. May be taken twice for credit with different content. PRE: one 4000-level German course, major with senior standing, and consent required.

Undergraduate Course Descriptions (ITAL)

ITAL 1105 - Elementary Italian (3 credits)
Fundamentals of the Italian language with emphasis on grammar, reading, composition, and conversation. 1105: for students with no prior knowledge of the language; 1106: for students who have completed 1105 or less than three years in high school.
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 1106 - Elementary Italian (3 credits)
Fundamentals of the Italian language with emphasis on grammar, reading, composition, and conversation. 1105: for students with no prior knowledge of the language; 1106: for students who have completed 1105 or less than three years in high school.
Prerequisite(s): ITAL 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 1204 - Italian Language and Cultures (1-3 credits)
Fundamentals of the Italian Language with emphasis on developing proficiency in practical language use and cultural competency. Offered off campus. Does not fulfill the University foreign language requirement. Variable credit course.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)

ITAL 2105 - Intermediate Italian (3 credits)
Emphasizes comprehension of written and spoken Italian, communication in Italian, literature, and culture of Italy.
Prerequisite(s): ITAL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 2106 - Intermediate Italian (3 credits)
Emphasizes comprehension of written and spoken Italian, communication in Italian, literature, and culture of Italy.
Prerequisite(s): ITAL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

ITAL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 2984B - Special Study (1-19 credits)
Pathway Concept Area(s): 2 Critical Thinking Humanities
Instructional Contact Hours: Variable credit course

ITAL 3105 - Culture Composition and Conversation (3 credits)
Practice in oral and written communication in Italian on a variety of topics in Italian culture. Progressive and comprehensive review of Italian grammar. Expansion of vocabulary.
Prerequisite(s): ITAL 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 3106 - Culture Composition and Conversation (3 credits)
Practice in oral and written communication in Italian on a variety of topics in Italian culture. Progressive and comprehensive review of Italian grammar. Expansion of vocabulary.
Prerequisite(s): ITAL 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 3305 - Introduction to Italian Literature in Context (3 credits)
Overview of genres and themes of Italian literature from national unification to the present. Familiarizes students with the socio-historical context necessary to discuss and write critically about this literature. 3305 examines the period from unification until the end of World War II including representations of national identity at the time of unification and beyond, generic experimentalism, resistance and complicity in the Fascist era, social realities during World War II. 3306: examines the period from the end of World War II to the present including retrospective debates about historical eras, economic conditions and political responses, gender politics, the influence of specific historical migrations on literature. Taught in Italian.
Prerequisite(s): ITAL 3105 or ITAL 3106
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 3306 - Introduction to Italian Literature in Context (3 credits)
Overview of genres and themes of Italian literature from national unification to the present. Familiarizes students with the socio-historical context necessary to discuss and write critically about this literature. 3305 examines the period from unification until the end of World War II including representations of national identity at the time of unification and beyond, generic experimentalism, resistance and complicity in the Fascist era, social realities during World War II. 3306: examines the period from the end of World War II to the present including retrospective debates about historical eras, economic conditions and political responses, gender politics, the influence of specific historical migrations on literature. Taught in Italian.
Prerequisite(s): ITAL 3105 or ITAL 3106
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 3474 - Topics in Italian Cinema (3 credits)
Critical issues in the history of modern and contemporary Italy through cinema, with an emphasis on films produced in Italy that most reflect the nation, its culture and society, and its cinematic trends. Students will discuss and write about the cultural, intellectual, and historical contexts present in Italian cinematic works. Sample topics, depending on the given semester, include organized crime, immigration, the urbanization of Italy, and neorealism. Taught in English. May be repeated, with different content, for a maximum of 6 credit hours.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ITAL 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

ITAL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (JPN)

JPN 1105 - Elementary Japanese (3 credits)
Fundamentals of the Japanese language with emphasis on developing proficiency in practical language use and cultural competency. 1105 is for students with no prior knowledge of the language; 1106 is for students who have completed 1105, or more than one year, but less than three years of high school Japanese.
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 1106 - Elementary Japanese (3 credits)
Fundamentals of the Japanese language, with emphasis on developing proficiency in practical language use and cultural competency. 1105 is for students with no prior knowledge of the language; 1106 is for students who have completed 1105, or more than one, but less than three, units of high school Japanese.
Prerequisite(s): JPN 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 1114 - Accelerated Elementary Japanese (6 credits)
Proficiency-oriented approach to Elementary Japanese, designed for learners who wish to progress rapidly through the beginning stages of language learning. Speaking, listening comprehension, reading comprehension, writing, and cultural competency at the JLPT (Japanese Language Proficiency Test) level 4 (ACTFL novice-high). Accelerated version of 1105-1106. Duplicates 1105 and 1106. For students with no prior knowledge of the language.
Instructional Contact Hours: (6 Lec, 6 Crd)

JPN 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course
Repeatability: up to 19 credit hours

JPN 2105 - Intermediate Japanese (3 credits)
Emphasizes comprehension of written and spoken Japanese, communication in Japanese; study of some literature and culture of the Japanese people. 2105 is for students who have completed 1105 and 1106 or equivalent. 2106 is for students who have completed 2105 or equivalent.
Prerequisite(s): JPN 1106 or JPN 1114
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 2106 - Intermediate Japanese (3 credits)
Emphasizes comprehension of written and spoken Japanese, communication in Japanese; study of some literature and culture of the Japanese people. 2105 is for students who have completed 1105 and 1106 or equivalent. 2106 is for students who have completed 2105 or equivalent.
Prerequisite(s): JPN 2105
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 2114 - Accelerated Intermediate Japanese (6 credits)
Proficiency-oriented approach to Intermediate Japanese, designed for highly motivated learners who wish to progress rapidly through the intermediate stages of language learning or those with some prior experience in Japanese in need of intensive review. Emphasis on reading, writing, listening, and oral communication, and review of intermediate grammar and vocabulary in guided oral and written assignments in tasks such as jobs (full and part time), holidays, vacations, shopping, and education. Study of authentic materials and cultural artifacts in Japanese. Accelerated version of 2105-2106. Duplicates 2105 and 2106. Not recommended for advanced or native speakers of Japanese.
Prerequisite(s): JPN 1106 or JPN 1114
Instructional Contact Hours: (6 Lec, 6 Crd)

JPN 2744 - From Atom to Akira: Japan's Pop Culture (3 credits)
Analysis of Japanese popular culture through anime (animation), manga (comics), and video games. Introduction of important socio-cultural issues in Japan such as language, ideology, identity, gender, race, class, and nationalism. Exploration of the domestic and global popularity of these mediums and their socio-historical contexts, styles, and characteristics. Fostering of cross-cultural awareness and intercultural understanding by addressing global challenges and opportunities in Japan through popular culture. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 3105 - Advanced Japanese (3 credits)
3105: Practice in communication skills in Japanese both orally and writing, including review of grammar, directed composition and conversation, with an emphasis on pronunciation, cultural competency, and oral expressions. Not recommended for native speakers. 3106: Reinforcement of oral proficiency, reading, grammar, and writing skills, allowing students to explore a broad range of texts of general and professional interest. Not recommended for native speakers.
Prerequisite(s): JPN 2106 or JPN 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 3106 - Advanced Japanese (3 credits)
3106: Reinforcement of oral proficiency, reading, grammar, and writing skills, allowing students to explore a broad range of texts of general and professional interest. Not recommended for native speakers.
Prerequisite(s): JPN 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 3125 - Japanese for Oral Proficiency (3 credits)
Devoted to the acquisition of spoken dialect and the enhancement of cultural competency. 3125: Provides students with the ability to converse in every day Japanese conversation. Focus on everyday conversational skills including life topics, transactions, and Japanese media. Emphasis on appropriate body language and understanding of cultural, political, and religious knowledge. 3126: Provides students with the ability to converse in advanced and complex situations. Focus on formal conversations (honorific, humble, and extra-polite) and business Japanese. Not recommended for native speakers.
Prerequisite(s): JPN 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 3126 - Japanese for Oral Proficiency (3 credits)
Devoted to the acquisition of spoken dialect and the enhancement of cultural competency. 3125: Provides students with the ability to converse in every day Japanese conversation. Focus on everyday conversational skills including life topics, transactions, and Japanese media. Emphasis on appropriate body language and understanding of cultural, political, and religious knowledge. 3126: Provides students with the ability to converse in advanced and complex situations. Focus on formal conversations (honorific, humble, and extra-polite) and business Japanese. Not recommended for native speakers.
Prerequisite(s): JPN 3125
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 3304 - Japanese Literature in Translation (3 credits)
Overview of genres, themes, and narrative strategies characteristic of Japanese literature and other cultural artifacts, as well as the various historical and cultural contexts from which they arose. Exploration of themes, such as transience, honor, and community, with a particular focus on change and evolution over time. Assessment of literature and cultural artifacts' rendering of and impact on the construction of Japanese identity, such as race, gender, and sexuality. Creation of cross-cultural awareness by distinguishing the influence of other literary traditions on Japan's literature. Development of intercultural understanding by analyzing common themes in Japanese literature and culture and their implications not just for Japanese life, but also for how they interact with broader global concerns. Taught in English.
Prerequisite(s): ENGL 1106 and ENGL 1204H
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 3474 - Topics in Japanese Cinema (3 credits)
Evaluation of the socio-cultural contexts and perspectives of Japanese cinema, including Japanese cinema's ability both to produce and reproduce socio-cultural contexts like the political, religious, or aesthetic constructs of a particular time period. Explanation of the relationship between those contexts and films, such as the anti-war stance of many pre-WWII directors or the impact of Japan's 1989 financial collapse on cinema. Development of a coherent understanding of Japanese cinema and cinematic techniques through films and literary sources, both primary in translation and secondary. Analysis of intercultural perspectives, such as the influence of American and European films on Japanese cinema and vice-versa, in relation to a student's own cinematic tradition. Comparison of intercultural experiences with broader global concerns, challenges, and opportunities as expressed through Japanese film. Taught in English. Variable content. May be repeated twice with different content for a maximum of 6 credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

JPN 3724 - Modern Japanese Culture and Society (3 credits)
Overview of Japanese society and culture through analysis of Japanese language texts and other cultural artifacts, with an emphasis on modern Japan. Examination of socio-cultural and linguistic factors that have influenced the development of modern Japan and Japanese identity, such as its focus on community, weakened financial clout, growing cultural capital. Exploration of the impact of issues such as aging, work-life balance, globalization, and gender norms that continue to shape modern Japanese society, and relating them to students' lives. Assessment of these issues within regional (Asian) and global contexts. Taught in Japanese.
Prerequisite(s): JPN 3106
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 4104 - Japanese Advanced Grammar (3 credits)
Advanced Japanese grammar skills. Use of special verbs in honorific, extra-modest, and humble form. Analysis and writing of personal and professional texts. Question formation within larger sentences, naming items, using passive and passive-causative sentences. Development of the ability to read, write, and apply the use of 317 intermediate-level kanji in various contexts.
Prerequisite(s): JPN 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (KOR)

KOR 1105 - Elementary Korean (3 credits)
Introduction to speaking, listening, reading, and writing the Korean language. Emphasis on developing proficiency in practical language use, comprehension, and cultural competency. 1105: Basic tasks such as greetings, counting, and simple requests; for students with no prior knowledge of the language. 1106: Transactions like asking directions, expressing personal preferences, or making purchases.
Instructional Contact Hours: (3 Lec, 3 Crd)

KOR 1106 - Elementary Korean (3 credits)
Introduction to speaking, listening, reading, and writing the Korean language. Emphasis on developing proficiency in practical language use, comprehension, and cultural competency. 1105: Basic tasks such as greetings, counting, and simple requests; for students with no prior knowledge of the language. 1106: Transactions like asking directions, expressing personal preferences, or making purchases.
Prerequisite(s): KOR 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

Undergraduate Course Descriptions (LAT)

LAT 1105 - Elementary Latin (3 credits)
Introduction to Latin, for development of reading ability. 1105: Introduction to the basics of the language and short readings of graded difficulty. 1106: Introduction to the basics of the language, continued, with introduction of selected passages from ancient Roman authors for reading, comprehension, and translation.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAT 1106 - Elementary Latin (3 credits)
Introduction to Latin, for development of reading ability. 1105: Accidence, syntax, and vocabulary, with translation of discrete sentences and short readings of graded difficulty. 1106: Accidence, syntax, and vocabulary continued, with the introduction of selected passages from ancient Roman authors for reading, comprehension, and translation.
Prerequisite(s): LAT 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

LAT 2104 - Cicero and Livy (3 credits)
A course in two major Latin prose authors. Review and refinement of the language is combined with an increasing attention to historical, cultural, linguistic and literary questions. May be repeated with different content for a maximum of 9 credits.
Prerequisite(s): LAT 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

LAT 2114 - Latin Epic: Vergil and Ovid (3 credits)
A course in two important Latin poets of the Age of Augustus with a view to increasing the students ability to understand and read Latin. Review and refinement of the language is combined with an increasing attention to historical, linguistic, cultural, and literary questions. May be repeated with different content for a maximum of 9 credits.
Prerequisite(s): LAT 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

LAT 2124 - Latin Lyric: Catullus and Horace (3 credits)
Two important Latin poets of the Late Republic. Review and refinement of the language is combined with an increasing attention to historical, linguistic, cultural, and literary questions. May be repeated with different content for a maximum of 9 credits.
Prerequisite(s): LAT 1105 and LAT 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

LAT 2134 - Late Medieval Latin (3 credits)
Post-classical Latin, from Augustine and Boethius through the Middle Ages, Renaissance, and the Modern Age. Review and refinement of the language is combined with an increasing attention to historical, cultural, linguistic and literary questions. May be repeated with different content for a maximum of 9 credits.
Prerequisite(s): LAT 1105 and LAT 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

LAT 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

LAT 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 3004 - Readings in Latin Literature (3 credits)
A variable content course devoted to the study of major Latin texts not offered in the 2000-level courses. Emphasis is on content, style, and context. May be repeated for credit with different content. Two 2000-level courses in Latin or equivalent proficiency required. Writing Intensive.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAT 4004 - Directed Studies in Latin Prose Composition (3 credits)
Application of Latin grammar structure to the translation of English into Latin. Original compositions are written in Latin. (Will be offered during the academic year whenever there is sufficient enrollment and available staffing). One 3000-level course in Latin required.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAT 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

LAT 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (PORT)

PORT 1106 - Beginning Conversational Portuguese (3 credits)
Essential vocabulary and structures of the Portuguese language as spoken in Brazil; emphasis on active spoken and written use of the language for practical daily purposes.
Instructional Contact Hours: (3 Lec, 3 Crd)

PORT 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PORT 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PORT 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PORT 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PORT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PORT 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PORT 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (RUS)

RUS 1105 - Elementary Russian (3 credits)
Fundamentals of grammar, pronunciation, conversation, and reading. Respond to simple questions using appropriate grammar and syntax, participate in conversation about family, school, everyday situations, etc., write in cursive, and read adapted texts. 1105: Grammar and conversation; 1106: Grammar, conversation, and reading.
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 1106 - Elementary Russian (3 credits)
Fundamentals of grammar, pronunciation, conversation, and reading. Respond to simple questions using appropriate grammar and syntax, participate in conversation about family, school, everyday situations, etc., write in cursive, and read adapted texts. 1105: Grammar and conversation; 1106: Grammar, conversation, and reading.
Prerequisite(s): RUS 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 1114 - Accelerated Elementary Russian (6 credits)
Proficiency-oriented approach to elementary Russian, designed for learners who wish to progress rapidly through the beginning stages of language learning. Develops the four language skills (speaking, listening, reading, writing) in a cultural context. Duplicates 1105 and 1106.
Instructional Contact Hours: (6 Lec, 6 Crd)

RUS 2105 - Intermediate Russian (3 credits)
Grammar, reading, conversation, and composition. Emphasizes comprehension of written and spoken Russian.
Prerequisite(s): RUS 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 2106 - Intermediate Russian (3 credits)
Grammar, reading, conversation, and composition. Emphasizes comprehension of written and spoken Russian.
Prerequisite(s): RUS 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 2114 - Accelerated Intermediate Russian (6 credits)
Proficiency-oriented approach to intermediate Russian for learners who wish to progress rapidly through the intermediate stages of language learning. Develops the four language skills (speaking, listening, reading, writing) in a cultural context. Duplicates 2105 and 2106.
Prerequisite(s): RUS 1106 or RUS 1114
Instructional Contact Hours: (6 Lec, 6 Crd)

RUS 2734 - Introduction to Russian Culture and Civilization (3 credits)
Introduction to Russian Culture and Civilization. Interactions between major political and historical events, social and artistic movements in Russia. Russian literature, art, architecture, film, and theatre in the context of Russian cultural history. Aesthetic and rhetorical strategies. Interpretation of intercultural experiences from different vantage points. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 3105 - Grammar, Composition and Conversation (3 credits)
Detailed study of grammar. Practice in written and oral expression in Russian on a variety of topics. Supplementary readings to emphasize application of grammatical principles. 3105 includes a rapid grammatical review.
Prerequisite(s): RUS 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 3106 - Grammar, Composition and Conversation (3 credits)
Detailed study of grammar. Practice in written and oral expression in Russian on a variety of topics. Supplementary readings to emphasize application of grammatical principles. 3105 includes a rapid grammatical review.
Prerequisite(s): RUS 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 3114 - Accelerated Advanced Russian Grammar Conversation Composition (6 credits)
Proficiency-oriented approach to advanced Russian. Daily progression through advanced Russian grammar, conversation and composition. Accelerated development of the four language modalities (speaking, listening, reading, writing) in a cultural context. Short translations and paraphrases of authentic Russian texts. Duplicates RUS 3105 and 3106.
Prerequisite(s): RUS 2106 or RUS 2114
Instructional Contact Hours: (6 Lec, 6 Crd)

RUS 3124 - Russian for Oral Proficiency (3 credits)
Devoted to the acquisition of measured levels of proficiency in speaking and understanding spoken Russian. Content-based instruction in small groups. For students who would like to achieve an oral proficiency rating comparable to Intermediate-high on the American Council on the Teaching of Foreign Languages Oral Proficiency Interview (ACTFL-OPI) or S-1+ on the Foreign Service Institute (FSI) scale. Admission by oral exam required. Taught alternate years.
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 3304 - Survey of Nineteenth-Century Russian Literature in Translation (3 credits)
Masterpieces of Russian fiction and poetry written between 1815 and 1881. Romantic poetry of the early nineteenth century and traces the beginnings of Russian prose from early short stories to the rise of the novel as the dominant literary form in the second half of the century. History and politics to theological and philosophical issues in various works. Methods, terminology and practice of literary analysis. Taught in English.
Prerequisite(s): ENGL 1106 or ENGL 1204H
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 3314 - Survey of Twentieth-Century Russian Literature in Translation (3 credits)
Masterpieces of the twentieth-century Russian literature. Symbolist, Acmeist and Futurist poetry, modernist and postmodernist prose such as Mikhail Bulgakovs The Master and Margarita, and Viktor Pelevins Life of Insects. Terminology, practice, and standard methods of literary analysis. Interactions between major political events, social and literary movement. Aesthetic and rhetorical strategies. Taught in English.
Prerequisite(s): ENGL 1106 or ENGL 1204H
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 3424 - Topics in Russian Literature in English (3 credits)
Variable-content course devoted to the study of Russian literary classics. From general surveys of nineteenth- and twentieth-century literature to more intensive study of the works of a single major author. Aesthetic and rhetorical strategies. Interactions between literary movements and political, historical, and cultural events. May be repeated once with different content for a maximum of 6 credits. Readings and lectures in English. No knowledge of Russian required.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: ENGL 3424

RUS 3434 - The Works of Vladimir Nabokov (3 credits)
Readings in major works of Vladimir Nabokov from the 1920s through the 1970s. Aesthetic and rhetorical strategies, literary analysis, major themes, immigration and cultural knowledge. Taught in English.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 3434

RUS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 4204 - Topics in Russian Culture and Civilization (3 credits)
Specific topics in Russian culture and civilization. Variable content. May be repeated for credit with different content.
Prerequisite(s): RUS 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 4304 - Studies in Russian Literature (3 credits)
Selected masterpieces of Russian literature, read in original. Lectures and discussions in Russian. May be repeated for credit with different content.
Prerequisite(s): RUS 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (SPAN)

SPAN 1105 - Elementary Spanish (3 credits)
Fundamentals of grammar, composition, and oral skills. Readings carefully selected for comprehension and simple conversation. 1105 for students with no high school Spanish; 1106 for students who have completed 1105 or who have less than three years of high school Spanish.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 1106 - Elementary Spanish (3 credits)
Fundamentals of grammar, composition, and oral skills. Readings carefully selected for comprehension and simple conversation. 1105 for students with no high school Spanish; 1106 for students who have completed 1105 or who have less than three years of high school Spanish.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 1114 - Accelerated Elementary Spanish (4 credits)
Condenses SPAN 1105 and 1106. Proficiency-oriented approach to elementary Spanish, designed for learners with some prior experience in the language or for those who wish to progress rapidly through the beginning stages of language learning. Supplemented with a self-instructional electronic component. Meets University and college foreign language requirement. SPAN 1114 duplicates SPAN 1106.
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

SPAN 2105 - Intermediate Spanish (3 credits)
Review of grammar with increasing emphasis on reading, writing, and oral communication.
Prerequisite(s): SPAN 1106 or SPAN 1114
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 2106 - Intermediate Spanish (3 credits)
Review of grammar with increasing emphasis on reading, writing, and oral communication.
Prerequisite(s): SPAN 2105
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 2114 - Accelerated Intermediate Spanish (6 credits)
Proficiency-oriented approach to intermediate Spanish, designed for learners who wish to progress rapidly through the intermediate stages of language learning. Review of grammar with increasing emphasis on reading, writing, listening, and oral communication. Study of authentic materials and cultural artifacts in Spanish. Study of cultures, traditions, customs, and social conventions of the Spanish-speaking world. Not recommended for native speakers of Spanish. Accelerated version of 2105-2106. Duplicates 2105-2106.
Prerequisite(s): SPAN 1106 or SPAN 1114
Instructional Contact Hours: (6 Lec, 6 Crd)

SPAN 2124 - Intermediate Spanish for Building Construction (3 credits)
Proficiency-oriented approach to intermediate Spanish, designed for learners who wish to incorporate building construction topics at the intermediate stage of language learning. Review of grammar with increasing emphasis on reading, writing, listening, and oral communication applied to the field of Building Construction. Study of authentic materials related to personal and professional situations in the field of Building Construction. Development of communication strategies for risk assessment, health concerns, and basic instructions with Spanish-speaking workers in Building Construction. Duplicates Spanish 2105 Intermediate Spanish. Not recommended for native speakers of Spanish.
Prerequisite(s): SPAN 1106 or SPAN 1114
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 2744 - Topics in Spanish Culture (3 credits)
Examines fundamental concepts related to Spanish culture within a specific historical and geographical context. Interprets cultural artifacts of the period across selected genres, including drama, poetry, film, and/or art. Analyzes how cultural identity is constructed by multiple and diverse disciplinary perspectives and in response to global challenges and opportunities. Taught in English. Repeatable with different topics for a maximum of 6 credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

SPAN 2754 - Topics in Spanish American Culture (3 credits)
Examination of fundamental concepts related to Spanish American culture in variable historical and geographical contexts through the study of one or more of the following: narrative; essay; drama; poetry; film; and art. Emphasis on the interpretation and analysis of cultural texts and other creative artifacts in the context of key historical and political events, in order to understand shifting concepts of cultural identity, advantages and challenges of diversity and inclusion, and global challenges and opportunities in the human world. Taught in English. Course may be repeated, with different topics, for a maximum of 6 credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

SPAN 2764 - Introduction to Latino American Studies (3 credits)
Introduction to interdisciplinary field of Latino American Studies. Exploration of debates and problems of Latin American and Latina/o history and culture. Examination and analysis of transnational, social, and cultural trends. Emphasis on connections between United States and Latin America, and local and regional Latina/o communities. In English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 2774 - Minority Languages in the Spanish-Speaking Context (3 credits)
Examination of language policies and practices with regard to minority languages across the Spanish-speaking context, histories of minority languages in Spanish-speaking areas, and the current socio-political situations of these languages and their speakers. Exploration of issues concerning linguistic rights, such as access to education, economic opportunities, and political status; analysis of the implications of restrictions on minority groups linguistic rights. Discussion of why some minority-language speakers have been more successful in their language conservation or revitalization efforts than others. Taught in English. Does not count toward the Spanish major or minor.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPAN 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPAN 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPAN 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPAN 3105 - Grammar, Composition and Conversation (3 credits)
3105: Practice in communication skills in Spanish. Development of reading, writing, listening and speaking skills. Review and use of grammar. Comprehension of the role of culture in communicating and in understanding cultural differences. Study of authentic materials in Spanish. Not recommended for native speakers of Spanish. 3106: Practice in communication skills in Spanish. Development of reading, writing, listening and speaking skills. Review and use of grammar. Comprehension of the role of culture in communicating and in understanding cultural differences. Study of authentic materials in Spanish. Not recommended for native speakers of Spanish.
Prerequisite(s): SPAN 2106
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3106 - Grammar, Composition and Conversation (3 credits)
3105: Practice in communication skills in Spanish. Development of reading, writing, listening and speaking skills. Review and use of grammar. Comprehension of the role of culture in communicating and in understanding cultural differences. Study of authentic materials in Spanish. Not recommended for native speakers of Spanish. 3106: Practice in communication skills in Spanish. Development of reading, writing, listening and speaking skills. Review and use of grammar. Comprehension of the role of culture in communicating and in understanding cultural differences. Study of authentic materials in Spanish. Not recommended for native speakers of Spanish.
Prerequisite(s): SPAN 2106
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3125 - Spanish for Oral Proficiency (3 credits)
For acquisition of measured levels of proficiency in speaking and understanding spoken Spanish. Content-based instruction in small groups. 3125: to achieve an oral proficiency rating comparable to Intermediate-high on the American Council on the Teaching of Foreign Languages Oral Proficiency Interview (ACTFL-OPI) or S-1+ on the Foreign Service Institute (FSI) scale. 3126: to achieve an oral proficiency rating comparable to Advanced on the (ACTFL-OPI) or a 2 on the FSI scale. Admission by oral exam.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3126 - Spanish for Oral Proficiency (3 credits)
For acquisition of measured levels of proficiency in speaking and understanding spoken Spanish. Content-based instruction in small groups. 3125: to achieve an oral proficiency rating comparable to Intermediate-high on the American Council on the Teaching of Foreign Languages Oral Proficiency Interview (ACTFL-OPI) or S-1+ on the Foreign Service Institute (FSI) scale. 3126: to achieve an oral proficiency rating comparable to Advanced on the (ACTFL-OPI) or a 2 on the FSI scale. Admission by oral exam.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3154 - Spanish for the Natural Sciences (3 credits)
Knowledge of the Spanish language and its cultures to the natural sciences. Study of scientific materials in Spanish. Practice in communication skills through contextualized use of specific vocabulary, idiomatic expressions, grammar structures and cultural practices in real-world situations. Discussion on scientific topics and debates of the Spanish-speaking world. Comparison of the practices and world views of scientists and clinicians in Hispanic and English-speaking countries. Taught in Spanish.
Prerequisite(s): SPAN 3106
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3224 - Topics in Latinx Culture (3 credits)
Transdisciplinary examination of fundamental concepts related to Latinx/Hispanic culture—among these, cultural hybridity, multilingualism, civil rights, activism, social justice, and marginalization—in variable cultural, historical, political, and geographical contexts. Study of one or more of the following: narrative, essay, drama, poetry, popular media and works of art. Emphasis on the interpretation and analysis of texts and other creative artifacts to understand Latinx culture's intersections with race, ethnicity, gender, sexuality, class, religion, indigeneity, nationality, disability, etc., challenges of diversity and inclusion, and the sociopolitical issues affecting those who identify as Latinx or Hispanic in the United States. Course may be repeated, with different topics, for a maximum of 6 credits. Taught in English.
Prerequisite(s): SPAN 2764 or SPAN 3106
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

SPAN 3304 - Introduction to Hispanic Literature (3 credits)
Introduction to Hispanic literary genres (poetry, narrative, essay, and drama) through analysis and discussion of the main historical, political and cultural concepts of Hispanic Literature from Spain and Latin America from the Middle Ages to the present. Identification of issues of diversity (race, gender, and social class) in the Spanish-speaking world. Methods, terminology, and practice of literary analysis. Taught in Spanish.
Prerequisite(s): SPAN 3106
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3404 - Early Peninsular Culture and Literature (3 credits)
Examination of the culture and literature of Spain from the 9th century to the 18th century, including historical documents, narrative, poetry, theatre, and art. Emphasis on the interpretation and analysis of cultural texts in the context of key historical and political events. Examination of multiple levels of cultural identity, including advantages and challenges of diversity, found within the Iberian peninsula during that time frame. Reflection on similarities of intercultural exchange in medieval Spain and our own age. Taught in Spanish.
Prerequisite(s): SPAN 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3414 - Modern Peninsular Culture and Literature (3 credits)
Examination of the culture and literature of Spain from 1700 to the present, including narrative, poetry, theatre, film, and art. Emphasis on the interpretation and analysis of cultural texts in the context of key historical and political events, in order to understand shifting concepts of cultural identity and advantages and challenges of diversity. Taught in Spanish.
Prerequisite(s): SPAN 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3444 - Early Spanish-American Culture and Literature (3 credits)
Exploration of the cultural development of Spanish America from the pre-Hispanic era, the Encounter, the three hundred years of colonialism to Independence from Spain and nation- building in the 19th century; analysis of canonical as well as non-canonical texts, including historical texts, narrative, poetry, drama, art, architecture and music; interpret intercultural experiences from ones own worldview. Taught in Spanish.
Prerequisite(s): SPAN 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3464 - Topics in Modern Mexican and Central American Cultures (3 credits)
Interdisciplinary exploration of concepts of Mexican and Central American cultures from the post-independence periods to the present. Analysis of cultural production within the historical, political, social, and intellectual contexts in which they were created. Interpretation of canonical and non-canonical texts, including historical texts, narratives, poetry, drama, film, art, architecture, and music. Analysis of current events and identification of changes brought on by globalization from an intercultural point of view. Articulation of advantages and challenges of cultural diversity. Taught in Spanish.
Prerequisite(s): SPAN 3106
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3474 - Modern Spanish-Caribbean Culture and Literature (3 credits)
Exploration of the civilization, culture, and literature of the Spanish Carribbean, spanning the 19th century post- independence period to the present; analysis of literary and cultural texts within the historical, political, and social context in which they were created; interpretation of canonical as well as non-canonical texts, including historical texts, narrative, poetry, drama, film, art, architecture, and music; analysis of current events and identification of changes brought on by globalization; articulation of the advantages and challenges of cultural diversity. Taught in Spanish.
Prerequisite(s): SPAN 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3484 - Modern Andean and Southern Cone Culture and Literature (3 credits)
Exploration of the civilization, culture and literature of the Andean and Southern Cone regions of South America, spanning the 19th century post-independence period to the present; examination of literary and cultural texts with the historical, political, and social context in which they were created; study of canonical as well as non-canonical texts, from both high and popular culture, including historical texts, narrative, poetry, drama, film, art, architecture, and music; analysis of current events and identification of changes brought on by globalization; articulation of the advantages and challenges of cultural diversity. Tuaght in Spanish.
Prerequisite(s): SPAN 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3494 - Introduction to Hispanic Linguistics (3 credits)
Introduction to fundamental concepts of Hispanic linguistics. Examination of linguistic properties in Spanish (e.g.,morphology, syntax, and semantics/pragmatics). Exploration of context-appropriate language use. Interpret experiences with language from different perspectives. Examination of complexities of cross-cultural communication. In Spanish.
Prerequisite(s): SPAN 3106
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3514 - Spanish for Medical Professions (3 credits)
Specialized course applying knowledge of the Spanish language and its cultures to the medical professions. Contextualized use of specific vocabulary, idiomatic expressions, grammar structures, and cultural practices in real-world situations and written formats. Cross-cultural discussions on healthcare issues in the Hispanic world. Analysis of medical topics related to Spanish-speaking populations in a global context. Examination of Hispanic cultural artifacts such as film and narrative that explore issues of cultural and linguistic diversity in the medical professions. Analysis of political and cultural history of the Hispanic and Latino populations in the US. Taught in Spanish.
Prerequisite(s): SPAN 3106
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3524 - Introduction to Spanish Translation (3 credits)
Introduction to the translation of various types of texts, such as literature, business correspondence, commercial advertising, and legal documents. Includes translation from English to Spanish and from Spanish to English, as well as a thorough review of Spanish grammar and idiomatic language. Taught in Spanish.
Prerequisite(s): SPAN 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3534 - Spanish for Business Professions (3 credits)
Specialized course applying knowledge of the Spanish language and its cultures to the business professions. Contextualized use of specific vocabulary, idiomatic expressions, grammar structures, and cultural practices in real-world situations and written formats such as cover letters and business memos. Discussion on cultures of business in the Hispanic world. Analysis of business topics related to Spanish-speaking populations in a global context. Examination of Hispanic cultural artifacts such as film and narrative that explore issues of cultural and linguistic diversity in the business professions. Analysis of economic and political history of Spanish-speaking populations. Taught in Spanish.
Prerequisite(s): SPAN 3106
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3544 - Sounds of Spanish (3 credits)
Provides students with an overview of phonetics and phonology in Spanish and familiarizes students with the articulatory descriptions of vowels and consonants of Spanish. Compares and contrasts the sound systems of Spanish and English. Analyzes the sound system using theories and methods in linguistics. Explores the social meaning of the phonetic variation that exists throughout the Spanish-speaking world. Taught in Spanish.
Prerequisite(s): SPAN 3106
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3554 - Teaching Spanish (3 credits)
Examination of theories and approaches to second-language and heritage-language learning and teaching. Discussion of technological resources and authentic materials that promote language teaching and individual differences that affect language learning. Analysis of pedagogical materials for the Spanish-language classroom. Hands-on experience with lesson-plan design for teaching Spanish. Taught in Spanish.
Prerequisite(s): SPAN 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3564 - Community through Service: Latino NRV (3 credits)
A service-learning course in Spanish. Exploration of Latino cultures in the U.S.; weekly service with members of local Latino communities who have requested help; reflection on community work and student citizenship; exploration of cultural factors involved in the construction of community, including the challenges of immigration, multiculturalism, and multilingualism within the U.S.; analysis of literary readings, films, and works of art from U.S. Latino communities; discussion of readings on Hispanic migrations and border studies, as well as articles on social privilege, service-learning, education, health care, language, and language learning. Taught in Spanish.
Prerequisite(s): SPAN 3106
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3574 - Spanish for Legal Professions (3 credits)
Specialized course applying knowledge of the Spanish language and its cultures to the legal professions. Contextualized use of specific vocabulary, idiomatic expressions, grammar structures, and cultural practices in real-world situations and written formats. Cross-cultural discussions on legal issues in the Hispanic world. Analysis of legal topics and concepts related to Spanish-speaking populations in a global context. Examination of Hispanic cultural artifacts such as film and narrative that explore issues of cultural, ethical, and linguistic diversity in the legal professions. Analysis of political and cultural history of the Hispanic and Latino populations in the US. Taught in Spanish.
Prerequisite(s): SPAN 3106
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

SPAN 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPAN 4104 - Advanced Grammar and Style (3 credits)
Analysis of and practice with advanced grammatical and stylistic concepts, including idiomatic and colloquial usage. Intended to help advanced students achieve high levels of proficiency in writing and speaking Spanish.
Prerequisite(s): SPAN 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 4114 - Topics in Spanish Linguistics (3 credits)
Variable content course that surveys linguistic concepts and methods as related to the Spanish language. Topics may include the study of the phonology, morphology, syntax, and semantics of Spanish; the pedagogical application of these language systems; the psychological and social context of language; and the development of Spanish from its origins to its modern form. May be repeated for credit with different content.
Prerequisite(s): SPAN 3494 or SPAN 3544
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 4124 - Spanish Translation: Theory and Technique (3 credits)
Introduction to translation theories and application of these theories to different types of texts, including literature, business correspondence, commercial advertising, and legal documents. Includes translation from English to Spanish and from Spanish to English, as well as a thorough review of Spanish grammar and idiomatic language.
Prerequisite(s): SPAN 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 4304 - Topics in Early Modern Literature and Culture (3 credits)
Variable topics in Hispanic and/or Latin American literature and culture of the Early Modern period. Texts and/or cultural artifacts selected for aesthetic value, historical importance and thematic significance. Related scholarly criticism representing a variety of approaches. Emphasis on historical, social and cultural context. May be repeated twice for credit with different content. Taught in Spanish.
Prerequisite(s): SPAN 3404 or SPAN 3414 or SPAN 3444 or SPAN 3464 or SPAN 3474 or SPAN 3484
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

SPAN 4314 - Studies in 18th and 19th Century Literature (3 credits)
A variable content course devoted to Hispanic literature of the 18th and 19th centuries. The texts selected are studied not only for their aesthetic value but also in terms of their historical and cultural significance. May be taken twice for credit with different content. Taught alternate years. I
Prerequisite(s): SPAN 3414 or SPAN 3404 or SPAN 3444 or SPAN 3464 or SPAN 3474 or SPAN 3484
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 4324 - Studies in 20th and 21st Century Hispanic Literature (3 credits)
A variable content course devoted to Hispanic literature of the 20th and 21st centuries. Offers an in-depth literary exploration of a significant historical period, cultural movement, theme, or genre. Focuses on literary and cultural analysis from a variety of perspectives. Practices advanced Spanish oral and writing skills. Examines texts that have aesthetic value and historical and cultural significance. May be taken up to three times for credit with different content.
Prerequisite(s): SPAN 3404 or SPAN 3414 or SPAN 3444 or SPAN 3464 or SPAN 3474 or SPAN 3484
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 3 credit hours

SPAN 4334 - Special Topics in Hispanic Life, Literature, and Language (3 credits)
Broad central themes of Hispanic culture as manifested in creative and historical literature, music, art, film, etc., or in language, such as the history of the Spanish language, translation techniques, or the staging of dramatic works in Spanish. Historical and/or national boundaries are crossed whenever the nature of the topic permits. May be repeated for credit with different content. Taught alternate years.
Prerequisite(s): SPAN 3404 or SPAN 3414 or SPAN 3444 or SPAN 3464 or SPAN 3474 or SPAN 3484
Instructional Contact Hours: (3 Lec, 3 Crd)

SPAN 4344 - Hispanic Literature and the Representation of History (3 credits)
Focuses on the relationship between history and literature in the Hispanic world through an interdisciplinary lens. Examines different geographical regions of the Hispanic world, theoretical readings, and the ways that authors have used various literary styles to portray, re-write, subvert, and even contradict their countries official history. Examines texts that have aesthetic value and historical and cultural significance. Practices advanced Spanish oral and writing skills. This variable topics course may be repeated up to three times if topics are different.
Prerequisite(s): SPAN 3404 or SPAN 3414 or SPAN 3444 or SPAN 3464 or SPAN 3474 or SPAN 3484
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

SPAN 4794 - Senior Tutorial in Spanish Studies (1 credit)
Individual or small group sessions which give the student the opportunity to hone special language skills, with a focus on post-graduation application of these skills. May concentrate on areas such as technical or business language, linguistics, translation, interpreting, creative writing, specialized literary, or cultural studies. May be taken twice for credit with different content. Must be pre-arranged three weeks before end of previous semester. One 4000 level Spanish course required. Restricted to Seniors. Restricted to Spanish majors. Consent of Spanish Section required.
Instructional Contact Hours: (1 Lec, 1 Crd)

SPAN 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPAN 4964H - Field Study (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

SPAN 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPAN 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPAN 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPAN 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

SPAN 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Total Credits	**120**

[1] May also count toward Pathways. Taught in English.
[2] May be taken twice for 6 credits.
[3] May be double-counted with another core concept.

Satisfactory Progress Toward Degree

By the time a student majoring in Arabic has completed 72 semester credits (including transfer, advanced placement, advanced standing, and course withdrawal), the student must have completed satisfactorily the following courses in Arabic: ARBC 3105 Advanced Arabic, ARBC 3106 Advanced Arabic, and ARBC 3124 Arabic for Oral Proficiency. Satisfactory completion means a C or better (in each required course in the major).

- Some courses required for this major have pre-/co-requisite and/or enrollment requirements. Please refer to Undergraduate Course Catalog or consult your advisor for information about pre-/co-requisite and enrollment requirements.

Graduation Requirements

GPA Requirements

Students must have a 2.0 in-major GPA in Arabic and earn a C or better in each course for it to count towards the major.

Total Hours Required: 120 credit hours required for graduation

Transfer Credit

- Students may transfer no more than 18 of the last 45 cr. of course work. Study Abroad falls under this rule if it is not VT credit.
- A form for "Authorization to Take Courses Elsewhere" must be filled out and signed by the student, the department representative, and the Director of the Global Education Office before the student departs on the study abroad program.
- A maximum of 50% of the required credits for a degree may be earned at a two-year college.

Free Electives:

- Complete remaining credit hours needed to satisfy degree 120 credit hour requirement.

Additional Graduation Requirements

As a major in Arabic, you will have completed the Foreign Language (FL) requirement at Virginia Tech:

- Students who completed 3 years of a single FL in high school have completed the requirement.
- Students who did not complete 3 years of a single FL in high school may complete the requirement as follows:
  - Complete 2 years of a single language in high school, plus 1106 or equivalent in college (these 3 hours count toward the 120 required for graduation) **or**
  - Complete 1105-1106 or equivalent in college (these 6 hours do not count toward the 120 required for graduation)

Total Credits		**120**

1 Student may take two LAT 3004 or one of each.

2 May be repeated for credit with different content.

3 Approved courses in this section may also count toward Pathways. Some courses listed on this checksheet may have prerequisites; please consult the University Course Catalog or check with your advisor. All courses on this checksheet are three credits.

4 When the topics pertain to Classical Studies, the following courses may also be included in the Classical Studies Major. Consult your advisor for Classical Studies.

Satisfactory Progress Toward Degree

In addition to university policies regarding satisfactory progress:

1. Completion of the Curriculum for Liberal Education or Pathways appropriate for the term and year of entrance.

2. Completion of 15 hours of the major upon having completed 72 hours.

Graduation Requirements

GPA Requirements

Students must maintain a 2.0 GPA in the Classical Studies major. The in-major GPA is calculated as the GPA in all courses a student takes for the Classical Studies major. A minimum grade of C (2.0) must be earned by Classical Studies majors in all courses taken to satisfy the Classical Studies major. No course taken Pass/Fail can be included in a Classical Studies Major.

Total Hours Required

Students must complete a minimum of 120 hours in order to graduate.

Satisfactory Progress Toward Degree

In addition to university policies regarding satisfactory progress:

1. Completion of the Curriculum for Liberal Education or Pathways appropriate for the term and year of entrance.

2. Completion of 15 hours of the major upon having completed 72 hours.

Independent Study (2974 or 4974), Special Study (2984 and 4984), or Undergraduate Research (4994) in any department, including LAT or GR, may be substituted *if the topic is fitting*; consult the Classical Studies advisor. All substitutions must be approved by the Classical Studies advisor.

Acceptable Substitutions

Independent Study (2974 or 4974), Special Study (2984 and 4984), or Undergraduate Research (4994) in any department, including LAT or GR, may be substituted *if the topic is fitting*; consult the Classical Studies advisor. All substitutions must be approved by the Classical Studies advisor.

Foreign Language Requirement

High School Language Requirement: Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Total Credits		**120**

1 Most students also take FR 3125 French for Oral Proficiency.
2 May be repeated for credit with different content.
3 May also count toward Pathways.

Satisfactory Progress Toward Degree

FR 3105 Composition, Conversation and Grammar, FR 3106 Composition, Conversation and Grammar, and FR 3304 Introduction to French Literature will need to be completed satisfactorily (with a C or better in each required course in the major) by the time a student majoring in French has completed 72 semester credits (including transfer, advanced placement, advanced standing, credit by examination, and course withdrawal).

Graduation Requirements

Total Hours Required

120 credit hours required for graduation.

GPA Requirements

Students must earn a 2.0 or better in all of the courses in the Core Degree Requirements and Major Requirements (except those offered P/F only).

Pre-/Co-Requisite

Some courses required for this major have pre-/co-requisite and/or enrollment requirements. Please refer to Undergraduate Course Catalog or consult your advisor for information about pre-/co-requisite and enrollment requirements.

Transfer Credit

Although students may transfer no more than 18 of the last 45 cr. of coursework a waiver may be requested for students participating in study abroad programs. A form for “Authorization to Take Courses Elsewhere” must be filled out and signed by the student, the departmental representative, and the Director of the Office of Education Abroad before the student departs on the study abroad program.

Those who are transferring to Virginia Tech from a two-year school must complete at least 50% of the required graduation credit at Virginia Tech.

Students with transfer credit for the French major must earn at least 25% from Virginia Tech.

AP and IB Credit

Please see a French advisor to inquire about the appropriate substitution for this credit.

Total Hours Required in French

Students must earn 36 credit hours for the French major regardless of initial course placement.

Satisfactory Progress Toward Degree

FR 3105 Composition, Conversation and Grammar, FR 3106 Composition, Conversation and Grammar, and FR 3304 Introduction to French Literature will need to be completed satisfactorily (with a C or better in each required course in the major) by the time a student majoring in French has completed 72 semester credits (including transfer, advanced placement, advanced standing, credit by examination, and course withdrawal).

1. Students who do not place into or out of GER 3126 (https://catalog.vt.edu/search/?P=GER%203126) German Oral Proficiency are strongly advised to take GER 3125 (https://catalog.vt.edu/search/?P=GER%203125) German Oral Proficiency, which is designed to enable students to achieve the level of oral proficiency required for entry into GER 3126 (https://catalog.vt.edu/search/?P=GER%203126) German Oral Proficiency. For most students, the hours represented by GER 3125 (https://catalog.vt.edu/search/?P=GER%203125) German Oral Proficiency will be in addition to the minimum of 33 hours required for the major.
2. These courses required for the German major have prerequisites. Please refer to the Undergraduate Course Catalog or consult your advisor for information about prerequisites.
3. Major elective credit for GER courses taught in English (e.g., GER 3474 (https://catalog.vt.edu/search/?P=GER%203474) Topics in German Cinema) may be awarded with the approval of the instructor and the German advisor. A maximum of two such courses may be counted for major credit.
4. Variable-content courses; may be repeated for credit with different content.
5. May also count toward Pathways Area 1.
6. May also count toward Pathways Area 2.

Satisfactory Progress Toward Degree

By the time a student majoring in German has completed 72 semester credits (including transfer, advanced placement, advanced standing, credit by examination, and course withdrawal), the student must have completed satisfactorily (a "C" or better in each required course in the major) the following courses in German: GER 3105 Grammar, Composition and Conversation or GER 3106 Grammar, Composition and Conversation, GER 3204 Culture of the German-Speaking Countries, GER 4154 Advanced Composition and Stylistics (if not offered in senior year) and one of the following: GER 3305 Topics in German Culture and Literature, GER 3306 Topics in German Culture and Literature.

Graduation Requirements

Graduation Requirements and Notes

- **Total Credit Hours Required:** 120 credit hours are required for graduation.
- **Total Overall GPA Required:** Overall GPA requirement to graduate is 2.0.
- **In-Major Credit Hours Required:** Students must earn 33 credit hours for the German major regardless of initial course placement.
- **In-Major Grade and GPA Required:** All courses listed above under “Common Degree Core” and “Major Requirements” are considered in-major courses. A minimum grade of “C” is required in each of these courses and an average of 2.0 in all in-major courses is required for graduation.
- **AP, IB, and Study Abroad Credit:** AP placement exam credit, IB diploma credit, or study abroad credit may be used to satisfy certain requirements for the major; please see your German advisor.
- **Courses not Counting towards the Major:** GER 3125 German Oral Proficiency and GER 4964 Field Study.

Transfer Credit

- Although students may transfer no more than 18 of the last 45 credits of coursework, a waiver may be requested for students participating in study abroad programs. A form for "Authorization to Take Courses Elsewhere" must be filled out and signed by the student, the departmental representative, and the Director of the Office of Education Abroad before the student departs on the study abroad program.
- Those who are transferring to Virginia Tech from a two-year school can transfer only 50% of the required graduation credits to Virginia Tech.
- Students may transfer all German credit earned abroad, but at least 25% of the German major (a minimum of 3 courses), including one of these five courses: GER 4154 Advanced Composition and Stylistics, GER 4304 Age of Goethe, GER 4314 Studies in 19th-Century Literature, GER 4324 Studies in 20th-Century Literature, and GER 4334 Special Topics in German Life, Literature, and Language, must be taken at Virginia Tech.

Satisfactory Progress Toward Degree

By the time a student majoring in German has completed 72 semester credits (including transfer, advanced placement, advanced standing, credit by examination, and course withdrawal), the student must have completed satisfactorily (a "C" or better in each required course in the major) the following courses in German: GER 3105 Grammar, Composition and Conversation or GER 3106 Grammar, Composition and Conversation, GER 3204 Culture of the German-Speaking Countries, GER 4154 Advanced Composition and Stylistics (if not offered in senior year) and one of the following: GER 3305 Topics in German Culture and Literature, GER 3306 Topics in German Culture and Literature.

Foreign Language Requirement

Language Study Requirement

As a major in German, you will have completed the Foreign Language (FL) requirement at Virginia Tech:

- Students who completed 3 years of a single FL in high school have completed the requirement.
- Students who did not complete 3 years of a single FL in high school may complete the requirement as follows:
  - Complete 2 years of a single language in high school plus GER 1106 Elementary German or equivalent in college (these 3 hours count toward the 120 required for graduation) **or**
  - Complete GER 1105 Elementary German and GER 1106 Elementary German or equivalent in college (these 6 hours do not count toward the 120 required for graduation)

1 Course requires pre-requisite.
2 May be repeated for credit with different content.
3 May also count toward Pathways.

Satisfactory Progress

By the time a student majoring in Russian has completed 72 semester credits (including transfer, advanced placement, advance standing, credit by examination, and course withdrawal), the student must have completed satisfactorily the following courses in Russian: RUS 3105 Grammar, Composition and Conversation, RUS 3106 Grammar, Composition and Conversation, and RUS 3304 Survey of Nineteenth-Century Russian Literature in Translation. Satisfactory completion means a C or better.

Graduation Requirements

As a major in Russian, you will have completed the Foreign Language (FL) requirement at Virginia Tech

Additional Information on Requirements

Courses for the major or Pathways cannot be taken Pass/Fail, except for RUS 3124 Russian for Oral Proficiency. Courses taken in the major may count toward meeting the Pathways requirements.

Pre-/Co-Requisite

Some courses required for this major have pre-/co-requisite and/or enrollment requirements. Please refer to Undergraduate Course Catalog or consult your advisor for information about pre-/co-requisite and enrollment requirements.

Transfer Credits

Students may transfer no more than 18 of the last 45 credits of coursework. Study Abroad credits fall under this rule if they are not VT-sponsored study abroad programs. At least 25% of the 120 hours required for the degree and 25% of the credit hours required for the major must be completed at VT. A form titled "Authorization to Take Courses Elsewhere" must be filled out and signed by the student, the student's Russian advisor, and the Director of the Office of Education Abroad before the student departs on the study abroad program.

- In-major courses: All of the above are considered in-major courses
- Students must earn 36 credit hours for the Russian major regardless of initial course placement.
- Students must have a 2.0 in-major GPA in Russian and earn a C or better in each course (except those offered P/F only) for it to count towards the major.

Foreign Language Requirement

As a major in Russian, you will have completed the Foreign Language (FL) requirement at Virginia Tech

Total Credits		**120**

[1] May not count toward Pathways.
[2] Requires an oral exam for admission.
[3] Requires consent of the Spanish Program for admission.
[4] May count toward Pathways.

Satisfactory Progress Toward Degree

By the time a student majoring in Spanish has completed 72 semester credits (including transfer, advanced placement, advanced standing, and course withdrawal), the student must have completed satisfactorily the following courses in Spanish: SPAN 3105 Grammar, Composition and Conversation, SPAN 3106 Grammar, Composition and Conversation, SPAN 3304 Introduction to Hispanic Literature, and one of the following: SPAN 3404 Early Peninsular Culture and Literature, SPAN 3414 Topics in Modern Cultures of Spain, SPAN 3444 Topics in Early Spanish American Cultures, SPAN 3464 Topics in Modern Mexican and Central American Cultures, SPAN 3474 Topics in Modern Hispanic Caribbean Cultures, SPAN 3484 Topics in Modern Andean and Southern Cone Cultures, SPAN 3494 Introduction to Hispanic Linguistics, SPAN 3514 Spanish for Medical Professions, SPAN 3524 Introduction to Spanish Translation, SPAN 3534 Spanish for Business Professions, SPAN 3544 Sounds of Spanish, SPAN 3554 Teaching Spanish, SPAN 3564 Community through Service: Latino NRV. Satisfactory completion means a C or better in each required course in the major.

Graduation Requirements

Additional Notes

- Total hours required: 120 credit hours required for graduation
- All courses are 3 credits.
- Free electives: Complete remaining credit hours needed to satisfy degree requirement of 120 credits.
- Students must earn 36 credit hours for the Spanish major regardless of initial course placement.
- If you have AP or IB Spanish credit, see your Spanish Advisor.
- GPA requirements: A minimum grade of "C" is required in each of these courses. A minimum overall GPA of 2.0 as well as an in-major GPA of 2.0 are required. All courses listed above are considered in-major courses.
- Priority is given to Spanish majors and minors for registration in Spanish courses.
- Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to

meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Transfer Credit

- Students may transfer no more than 18 of the last 45 credits of coursework. Study Abroad credits fall under this rule if they are not VT-sponsored study abroad programs.
- At least 25% of the 120 hours required for the degree and 25% of the required hours for the major must be completed at VT.
- A form titled "Authorization to Take Courses Elsewhere" must be filled out and signed by the student, the student's Spanish Advisor, and the Director of the Office of Education Abroad before the student departs on the study abroad program.
- A maximum of 50% of the required credits for a degree may be earned at a two-year college.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Naval ROTC

Our Website (https://liberalarts.vt.edu/rotc/navy.html)

Overview

The Naval Reserve Officers Training Corps (NROTC) offers eligible young men and women the opportunity to earn commissions in the Navy or Marine Corps. NROTC midshipmen are required to complete the naval science curriculum and attend weekly laboratory sessions. During summer vacations, midshipmen participate in active duty at-sea or shore-based training facilities for periods of approximately four weeks. Students may enroll in the NROTC Program at the start of college or at the beginning of their sophomore year. Two-, three-, and four-year scholarships may be available for those who demonstrate outstanding potential. Upon completion of university degree requirements and the naval science program, qualified midshipmen are commissioned as Ensigns in the Navy (Navy-option) or Second Lieutenants in the Marine Corps (Marine-option).

Students may join NROTC through any one of the following three programs.

Four-Year National Scholarship Program

Students enter the NROTC Four-Year Scholarship Program through a national competition as high school seniors. Students selected to receive the National NROTC Scholarship attend New Student Indoctrination (NSI) during the summer before starting at Virginia Tech. NSI is a physically demanding two-and-a-half-week indoctrination course in basic military instruction and is held at the Recruit Training Command in Great Lakes, IL.

Students must be accepted into the Virginia Tech and the Virginia Tech Corps of Cadets, as well as meeting Naval eligibility requirements, and attend the VTCC New Cadet Week before Fall classes begin. Once these requirements are met the students are appointed as Midshipmen in the Naval Reserve.

While they are enrolled and in good standing, the government provides tuition, fees, uniform allowance, book allowance, and a monthly stipend to scholarship students. Students complete Naval Science courses and participate in up to three summer training periods (known as Summer Cruise) of up to four weeks each. Upon graduation the midshipmen are commissioned with an obligation to serve on active duty for at least five years.

College Program

Students are enrolled in the College Program upon acceptance by the Professor of Naval Science. Naval Science textbooks and a partial uniform allowance are provided. Students may compete for two- and three-year scholarships as well as Advanced Standing. If accepted into Advanced Standing, juniors and seniors receive a monthly stipend in addition to naval science textbooks and a uniform allowance. Advanced Standing students are obligated to complete the prescribed naval science curriculum, attend one summer cruise training period, accept a commission in the Naval Reserve or Marine Corps Reserve upon graduation, and serve on active duty after graduation.

Two- and Three-Year NSTC Controlled Scholarship Program

Students enrolled in the NROTC College Program and in good standing may be nominated by the Commanding Officer/Professor of Naval Science for a limited number of two- and three-year scholarships awarded by the Naval Service Training Command (NSTC). If selected and found medically qualified, these students receive the same benefits and incur the same obligations as the Four-Year Scholarship Program.

Requirements for All Candidates

Qualifications for acceptable candidates for the Scholarship Programs or the College Programs include, but are not limited to: U.S. citizenship; membership in the Virginia Tech Corps of Cadets; fulfillment of physical examination requirements; and willingness to participate in required summer training periods and to qualify for and accept the appropriate commission in the Navy, Marine Corps, Naval Reserve, or Marine Corps Reserve when offered.

If not included in the requirements of their majors or the Curriculum for Liberal Education and college core curriculum, NROTC Navy-option scholarship students must complete the following: one year of college calculus through differential and integral calculus of one real variable; one year of calculus-based physics; one semester of American military affairs or national security policy; one year of English; and an Area 2 class approved by your NROTC advisor.

During NROTC enrollment, each midshipman will be required to pass semiannual physical fitness tests and to qualify as a swimmer before going on summer cruise.

Emerging Leader Scholarship Program

The University, in conjunction with the Virginia Tech Corps of Cadets Alumni Association, is offering a scholarship to incoming freshmen who are enrolled in an ROTC program and become members of the Corps of Cadets. Contact the Virginia Tech Corps of Cadets for more information.

Minor in Naval Leadership

The minor in Naval Leadership focuses on leadership development, both with regard to improving skills and personal character, with an emphasis on ethical professionalism as a warrior and national ambassador in a global context. The twelve (12) credit hours of required courses and nine (9) credit hours of elective courses are geared toward students actively seeking a commission in the United States naval services, but can also be appealing to students working in other disciplines throughout the university.

Head: Steven W. Antcliff, CAPT, USN
Professor: S.W. Antcliff
Associate Professor: M.R. Koop
Assistant Professors: W.T. Bloomer, Z.R. Crete, K.F. Davis, J.C. Graves
Professors of Practice: K.A. Ford, C.R. Stark

Undergraduate Course Descriptions (MN)

MN 1004 - Introduction to Naval Science (3 credits)
A basic introduction to the Naval profession and concept of sea power. Explores the role of the commissioned officer and covers uniform regulations, the Uniform Code of Military Justice, Naval terminology, the Oath of Office, the Navy Ethos, and customs and courtesies. Also covers basic communication and the importance of training and qualification. The relationship to sea power and maritime strategy explained through the missions of the Navy and Marine Corps, briefly touching on the mission of other branches. Explains how directives are revised and published, as well as possible threats against platforms. Basic shipboard damage control covered with an emphasis on combating naval casualties.
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 1014 - Naval Fitness (1 credit)
Reflects a culture on physical fitness as way of life within the United States Navy & the United States Navy Reserve Officer Training Corps (NROTC). Structured to motivate members to participate and implement year-round physical fitness conditioning program emphasizing total-body wellness to demonstrate expeditionary mission requirements. Prepares midshipmen to demonstrate competency in fitness programs upon entering active duty. Class is limited to students currently enrolled in the Virginia Tech NROTC program. Comprised of evolving content and may be repeated 9 times for a maximum of 10 credit hours. Pre: Enrollment in the Virginia Tech Naval ROTC program.
Instructional Contact Hours: (3 Lab, 1 Crd)
Repeatability: up to 10 credit hours

MN 1104 - Naval Ships Systems I: Engineering (3 credits)
Ship characteristics and types. Includes ship design, hydrodynamic forces, stability, main propulsion, electrical and auxiliary systems, interior communications, ship control, and damage control. One semester of college level science required.
Prerequisite(s): MN 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MN 2004 - Naval Ships Systems II: Weapons (3 credits)
Theory and employment of naval weapons systems. Includes threat detection, evaluation, weapon selection, delivery systems, guidance, and warhead design. Elements of command, control, and communications.
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 2104 - Seapower and Maritime Affairs (3 credits)
A survey of naval history from the American Revolution to the present with emphasis on major developments in strategy, tactics, and technology. Discussion of the geopolitical theory of Alfred Thayer Mahan. Explores present concerns in seapower and maritime affairs, including the economic and political dimensions of ocean commerce, the Law of the Sea, a comparison of U.S. and Soviet maritime strategies, and current naval affairs.
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MN 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MN 3005 - Navigation and Naval Operations (3 credits)
3005: An in-depth study of the theory and practice of piloting and introduction to celestial navigation. Students develop practical skills in the use of charts, visual and electronic aids. A study of the International Rules of the Nautical Road. 3006: Relative motion, vector-analysis theory, and ship employment. Includes an introduction to naval operations, ship characteristics, shiphandling, and afloat communications. I
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 3006 - Navigation and Naval Operations (3 credits)
3005: An in-depth study of the theory and practice of piloting and celestial navigation. Students develop practical skills in the use of charts, visual and electronic aids. 3006: A study of the International Rules of the Nautical Road, relative motion, vector-analysis theory, and ship employment. Includes an introduction to naval operations, ship characteristics, shiphandling, and afloat communications. II
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 3204 - Evolution of Warfare (3 credits)
Development of warfare focusing on impact of major military theorists, strategists, and technicians. Ancient times to present. I
Prerequisite(s): MN 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 4005 - Leadership and Management/Ethics (3 credits)
4005: Examines leadership skills, strategies, and contexts as interpreted through the lenses of the leader, the follower, and the situation. Contrasts the roles of leader and manager within diverse constructs. Focuses on building and sustaining high-performance teams through transformational, charismatic and servant leadership. Challenges students to develop individual leadership skill development programs. Introduces general ethical theories and moral reasoning skills in the context of ethical decision making case studies, dark side trait analysis, and associated mitigation strategies. 4006: Explores philosophical schools of ethical thought in the context of targeted/representative case studies, both historical and contemporary in nature. Applies theoretical approaches to moral reasoning specifically as they pertain to ethical dilemmas within the rubrics of distributive justice and just war theory. Analyzes moral obligations as entailed by a voluntary oath of service. Examines strategies for mentorship, behavior reinforcement, and disciplinary options to optimize organizational success. Pre: Sophomore Standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

Philosophy

Our Website (https://liberalarts.vt.edu/departments-and-schools/department-of-philosophy.html)

Overview

Courses in philosophy aim at critical understanding and rigorous evaluation of the concepts underlying our views concerning the nature of reality, what sorts of things there are, what can be known, what is of value, and what people ought to do and to aim at. The department offers both B.A. and M.A. degrees. Philosophy majors receive a strong liberal arts education and are prepared for careers that require a broad perspective and independent judgment. They are prepared for graduate work in a variety of scholarly and professional fields. An undergraduate philosophy major is especially appropriate for the student considering law school, medical school, or other professional schools. In addition, philosophy may be chosen as a minor.

Philosophy majors must complete the college core and the Curriculum for Liberal Education or Pathways. Students entering fall 2018 must complete Pathways and successfully complete at least 36 hours in philosophy, including two courses in the History of Philosophy, PHIL 3505 Modern Logic and Its Development (Symbolic Logic), two Core Analytic Philosophy courses, two Value Theory courses, and an additional 15 credit hours of philosophy courses currently offered by the Department of Philosophy. Students must take at least six Philosophy courses at the 3000-4000 level for fulfillment of the "Philosophy Major Requirements".

The department has recently added a new Philosophy, Politics, and Economics (PPE) major in Philosophy. See Philosophy Department website for specific details. A double major is possible with any of several other curricula.

Philosophy minors must complete at least 18 hours of philosophy, including one of PHIL 1504 Critical Thinking or PHIL 3505 Modern Logic and Its Development, two courses at the 3000-4000 level, an additional course from either the 3000-4000 level or in the history sequence (PHIL 2115 Ancient Through Medieval Philosophy, PHIL 2116 Ancient Through Medieval Philosophy, PHIL 2125 History of Modern Philosophy, PHIL 2126 History of Modern Philosophy), and two elective courses in Philosophy (at any level).

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the General Education (Curriculum for Liberal Education) (see "Academics (p. 9)") and toward the degree in philosophy.

- Philosophy Major (p. 1070)
- Philosophy Major with Pre-Medical Professions Option (p. 1071)
- Philosophy, Politics, and Economics Major (p. 1072)

Head: K. Trogdon
Professors: J. C. Klagge, D. Lind, L. Patton, W. Parker
Associate Professors: B. Jantzen, and K. Trogdon
Assistant Professors: M. Corredor, G. Hersch, D. Hoek, J. MacKenzie, R. Sud, and P. Yaure
Collegiate Assistant Professors: J. Horn, G. Novak
Full-time Instructor: H. Wildman Short[2]
Emeritus: R. Burian, J. Pitt, H. B. Miller, and D. Mayo

Undergraduate Course Descriptions (PHIL)

PHIL 1204 - Knowledge and Reality (3 credits)
Examines historical and contemporary approaches to such issues as: the nature of reality and the self, the relationship between mind and body, the existence of God, the nature of knowledge and illusion. Application to ethical questions about the fear of death, and the meaning of life.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 1304 - Morality and Justice (3 credits)
A critical survey of theories concerning human nature, the meaningful life, and the moral evaluation of actions, persons, and institutions. Theories will be applied to such issues as abortion, justice, and moral problems faced by professionals.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 1504 - Critical Thinking (3 credits)
Introduction to critical thinking, the examination of the reasons (grounds, evidence) for claims on any subject matter. Mastery of central concepts of critical thinking: argument, claim, validity and invalidity, strength and weakness, deduction and induction, fallacy, objection and response. Techniques for critical reconstruction and evaluation of arguments, including ethical ones. Formal logic techniques for evaluation of truth-functional and categorical arguments, akin to mechanical computation or derivation. Application of techniques to arguments appearing in ordinary language passages.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 1604 - How Science Works (3 credits)
Introduction to scientific methods and reasoning. Foundation for interpreting scientific information and conducting research across a range of fields, especially natural sciences. Topics: use of theories, experiments and models; hypothesis testing and confirmation; deductive, inductive and abductive reasoning; descriptive and inferential statistics; causation; influence of societal values on science; diversity and objectivity in science. Examples from physics, astronomy, geology, environmental science and other fields.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 1984B - Special Study (1-19 credits)
Pathway Concept Area(s): 2 Critical Thinking Humanities
Instructional Contact Hours: Variable credit course

PHIL 2115 - Ancient Through Medieval Philosophy (3 credits)
A critical survey and analysis of the history of Western philosophical thought from its beginnings through the Medieval Period. Addresses and assesses historical theories about issues involving the nature of justice, virtue, ethics, knowledge, and reality. Key concepts analyzed include that of the soul, human flourishing, form and matter, the human function and God. 2115: Presocratics, Socrates, Plato, Aristotle, and the Stoics; 2116: late Greek and Roman philosophy, St. Augustine, St. Thomas Aquinas, and William of Ockham.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2116 - Ancient Through Medieval Philosophy (3 credits)
A critical survey and analysis of the history of Western philosophical thought from its beginnings through the Medieval Period. Addresses and assesses historical theories about issues involving the nature of justice, virtue, ethics, knowledge, and reality. Key concepts analyzed include that of the soul, human flourishing, form and matter, the human function and God. 2115: Presocratics, Socrates, Plato, Aristotle, and the Stoics; 2116: late Greek and Roman philosophy, St. Augustine, St. Thomas Aquinas, and William of Ockham.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2125 - History of Modern Philosophy (3 credits)
Philosophical thought from the seventeenth to the nineteenth century, integrating intercultural analysis and comparisons. 2125: Global traditions in 17th and 18th century natural philosophy, including theories of mind, value, and knowledge. 2126: Global traditions in 18th and 19th century philosophy, including theories of science, knowledge, and value.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2126 - History of Modern Philosophy (3 credits)
Philosophical thought from the seventeenth to the nineteenth century, integrating intercultural analysis and comparisons. 2125: Global traditions in 17th and 18th century natural philosophy, including theories of mind, value, and knowledge. 2126: Global traditions in 18th and 19th century philosophy, including theories of science, knowledge, and value.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2304 - Global Ethics (3 credits)
Ethical issues in international context. Application of the principles of moral theory to such issues as the obligations of richer nations toward poorer ones, cultural and other forms of relativism, emigration and immigration, nationalism, war, deterrence, intervention, environmental degradation, preservation of natural diversity, and responsibilities toward future generations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2314 - Philosophy of Sex, Gender, and Race (3 credits)
Critical survey of contemporary themes in the philosophy of race and feminist philosophy in the United States. Topics in metaphysics (what is race? what is sex? what is gender?), ethics and political philosophy (oppression, solidarity, and social justice), and epistemology (narrative, standpoint, and white ignorance). Emphasis on situating contemporary philosophical views in social and historical contexts.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2504 - Logic and Language (3 credits)
Introduction to logic, the systematic analysis of expressions and reasoning in natural languages (like English) by means of simplified, formal languages. Foundational to philosophy, linguistics, law and computer science; useful in any discipline in the sciences or humanities where sustained reasoning and argumentation are central. Core semantic concepts: truth and meaning, synonymy, ambiguity, consistency, entailment, truth conditions. Core syntactic concepts: expression, sentence, connective, scope, predicate, term, quantifier. Core deductive reasoning concepts: argument, validity, soundness, proof. Formal languages for propositional logic and predicate logic. Translation between these formal languages and natural language sentences and arguments. Application of formal logic to evaluate natural language argumentation. Moral language and ethical reasoning.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2605 - Reason and Revolution in Science (3 credits)
Study of philosophical approaches to understanding and justifying modes of human reasoning both in science and everyday life. 2605: nature of theory confirmation and falsification; 2606: justifying changing paradigms of human inquiry.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2606 - Reason and Revolution in Science (3 credits)
Study of philosophical approaches to understanding and justifying modes of human reasoning both in science and everyday life. 2605: nature of theory confirmation and falsification; 2606: justifying changing paradigms of human inquiry.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 3015 - Political Theory (3 credits)
Analysis of the fundamental ideas in the history of political theory. 3015: The thought and ethical implications of philosophers from the ancient Greeks to early modern times. Analysis of writings from Plato through medieval theorists to those of the Seventeenth Century. 3016: The thought and ethical implications of philosophers from the late Seventeenth Century to the present. Analysis of key concepts in the thought of theorists from the early modern period until the present.
Prerequisite(s): PSCI 2014
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3015

PHIL 3016 - Political Theory (3 credits)
Analysis of the fundamental ideas in the history of political theory. 3015: The thought and ethical implications of philosophers from the ancient Greeks to early modern times. Analysis of writings from Plato through medieval theorists to those of the Seventeenth Century. 3016: The thought and ethical implications of philosophers from the late Seventeenth Century to the present. Analysis of key concepts in the thought of theorists from the early modern period until the present.
Prerequisite(s): PSCI 2014
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PPE 3016, PSCI 3016

PHIL 3024 - Topics in Philosophical Movements (3 credits)
Focus on the assumptions, methods and ethical dimensions of one or more contemporary or historically important philosophical movement, such as Pragmatism, Feminism, Existentialism, Islamic Philosophy, Philosophy and African-American Thought, or Philosophy and Literature. May be repeated 2 times with different content for a maximum of 9 credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

PHIL 3314 - Ethical Theory (3 credits)
Careful examination of some important historical or contemporary ethical theories. Includes coverage of such topics as the assessment of character and action, the foundations of ethical theories, their justification, their relationship to scientific theories, and their objective or subjective status. 3 Philosophy credits required.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PPE 3314

PHIL 3324 - Biomedical Ethics (3 credits)
Philosophical analysis of ethical issues in medicine and biotechnology, such as problems arising in connection with the relations between physicians and patients, the challenges of cultural diversity, practices surrounding human and animal research, decisions about end of life care, embryonic stem cell research, genetic engineering, biotechnological human enhancement, and social justice in relation to health-care policy.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 3334 - Ethical Perspectives on Artificial Intelligence (3 credits)
Critical examination of ethical concepts and theories, such as utilitarianism, deontology and virtue theory, applied to issues that arise in artificial intelligence, including applications in smart design & construction, energy, ubiquitous mobility, and robotics & autonomous systems. Addresses questions such as: How much should privacy be protected in the digital future? How can energy be equitably transported and consumed in relation to poor regions and future generations? Who should autonomous vehicles be programmed to protect or sacrifice in emergency situations? How should we evaluate the effects on family and society of smart technology? Should we fear that robots will take over?
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 3414 - Aesthetics (3 credits)
Critical survey and analysis of key concepts in aesthetics and the philosophy of art. Historical and contemporary theories concerning natural beauty, aesthetic experience and properties, the nature and interpretation of artworks, their representational and expressive features, the relationship between artistic value, the value that attaches to nature, and moral value.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 3454 - Philosophy of Religion (3 credits)
A consideration of religious belief and its justification with attention to such philosophical issues as the nature and existence of the Judeo-Christian-Muslim God, proofs for the existence of God, the problem of evil, a religious basis for ethics, the nature of faith, and the variety of religious beliefs.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3454

PHIL 3505 - Modern Logic and Its Development (3 credits)
Logic and logical theory and the history of its development. 3505: Validity of arguments. Syllogistic logic from Aristotle to modern times. Deductive methods in truth functional and quantificational logic through the theory of identity. Translation from English into symbolic form. 3506: Metalogic and the history and philosophy of modern logical theory. Decidability and undecidability, completeness and incompleteness of formal systems. Developments from Cantor to Goedel. Must have 3505 to take 3506.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 3614 - Philosophy of the Environment (3 credits)
Philosophical issues in environmental science and policy. Foundational concepts in the environmental sciences, epistemic challenges of environmental research and decision-making, and ethical questions about conservation policy and climate justice. Topics include: the wilderness ideal; biodiversity; effectiveness of different ecosystem restoration techniques; environmental modeling; decision-making under scientific uncertainty; indigenous environmental justice; ethics of de-extinction; values in environmental science; climate change; ethics of geoengineering; and public participation in conservation.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 3884 - Topics in Philosophy, Politics, and Economics (3 credits)
Topics-based course in philosophy, politics, and economics (PPE). Discussion of important topics and thinkers in PPE with historical and practical relevance. Focus on interdisciplinary analysis and methods. Topics include: limits of markets; well-being theory, science, and policy; socioeconomic justice; economic and political institutions; and global poverty. May be repeated 1 time with different content for a maximum of six credits hours. Pre: 3 credit hours in PPE, PHIL, PSCI, or ECON.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: ECON 3884, PPE 3884, PSCI 3884

PHIL 4014 - Special Topics in Philosophy (3 credits)
Critical examination of special issues or figures of current philosophical interest at an advanced level. Sample topics: Philosophy and Race; Ludwig Wittgenstein; Origins of Analytic Philosophy; and Animals, Minds and Morality. May be repeated 2 times with different content for a maximum of 9 credits. Pre: 3 Philosophy credits required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

PHIL 4204 - Philosophy of Mind (3 credits)
Current issues in the philosophy of mind such as relation of mind and body, status of the mental, knowledge of ones own and other minds, personal identity, consciousness, mentality of animals and machines, topics in the philosophy of psychology. 3 Philosophy credits required.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4214 - Metaphysics (3 credits)
Critical survey and analysis of key concepts in metaphysics, the study of what kinds of entities exist and what their most fundamental and general features are like. Historical and contemporary theories concerning existence, abstract entities, material objects, time, persistence, possibility and necessity, causation, free will and determinism, and social ontology. Pre: Requires the completion of 3 credits Philosophy course.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4224 - Epistemology (3 credits)
Theory of knowledge. Is all knowledge based on experience? Does knowledge have a foundation? Can knowledge of the present and the nearby give us reasons for beliefs about the future, the past, or about events far away? 3 Philosophy credits required.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4304 - Political Philosophy (3 credits)
Study of fundamental topics in political philosophy, such as distributive justice, equality, individual rights, constitutional government, and the justification of political authority. 3 Philosophy credits required.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PPE 4304

PHIL 4324 - Business and Professional Ethics (3 credits)
An inquiry into the fundamental norms of conduct in business and other professions and their justification in relation to the most important ethical theories. Special attention will be given to moral problems such as the ethics of hiring and firing, bribery, and professional responsibility to society.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MGT 4324

PHIL 4334 - Jurisprudence (3 credits)
An examination of the nature of law and legal systems with attention to traditional theories of law and to such topics as judicial decision and discretion, law and morality, the justification of legal coercion. 3 Philosophy credits required.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4514 - Special Topics in Logic (3 credits)
Topics that build upon a knowledge of classical deductive logic: extensions of classical logic, alternatives to classical logic, philosophy of logic, and philosophy of language. Topics to be announced each semester course is offered.
Prerequisite(s): PHIL 3505
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4604 - Philosophy of Biology (3 credits)
This course is designed primarily for students of biology or philosophy students with a strong interest in biology. Topics vary from year to year, but include the changing character of biology as a science, the special character of biological explanations and methods, and the place and value of reduction (e.g., of Mendelian to molecular genetics) in biology.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4614 - Philosophy of Science (3 credits)
An examination of the structure and methodology of science as well as key concepts such as explanation, confirmation, realism, and instrumentalism. One year of science and 3 philosophy credits required.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Select three hours in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Integrative Learning Outcomes		
Ethical Reasoning (This learning outcome can be combined with other Pathways courses and requires no additional credit hours)		
Intercultural and Global Awareness (This learning outcome can be combined with other Pathways courses and requires no additional credit hours)		
Subtotal		45
Total Credits		**120**

Eligibility for continued enrollment: Checksheet requirements adhere to the "Satisfactory Progress" toward degree policy of the university (Policy 91).

Graduation Requirements

General Philosophy Major Requirements and Guidelines

1. Departmental prerequisites and corequisites for all courses must be satisfied. Please consult the University Catalog for the latest statement of these requirements.
2. Any Philosophy course taken to fulfill one of the 15 credits of Major Requirements and that has Pathways credit can be "double counted" (Pathways and Philosophy Major Requirements credit). In accordance with University Guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of degree (e.g. CLE, Pathways, etc.).
3. Students must take at least six Philosophy courses at the 3000-4000 level for fulfillment of their "Philosophy Major Requirements"

4. All courses to fulfill the "Philosophy Major Requirements" must be taken A/F and be completed with a minimum GPA of 2.0. Students must also maintain an overall GPA of 2.0.
5. A minimum of 120 semester credit hours is required for graduation.

Foreign Language Requirement

Foreign language requirement: Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Philosophy, Politics, and Economics Major

Our Website (https://ppe.liberalarts.vt.edu/)

Head: Michael Moehler
Professor: M. Moehler
Associate Professor: G. Hersch
Assistant Professors: D. Gibbs, M. Miller, F. Wendt

PPE Student Advisor: H. Furrow
Undergraduate Coordinator: H. Belcher

The Kellogg Center for Philosophy, Politics, and Economics (PPE) oversees two highly interdisciplinary, research-driven undergraduate degree programs, a major and minor in PPE. The degree programs provide students with the tools, methods, and knowledge to develop comprehensive solutions to complex interdisciplinary decision-making problems, solutions that are not only economically sound, but also socially, ethically, and politically informed. The degree programs prepare students to become leaders in the fast-changing and complex social world of the 21st century.

Due to its analytical rigor, combination of normative and empirical analyses, and emphasis on the development of transferable skills, PPE prepares students for a wide variety of careers in the private and public sectors. PPE graduates have successful careers in management, marketing, consulting, industry, investment banking, finance, business administration, law, journalism, government, public administration, public policy, think tanks, health care, international affairs, international development, and non-profit organizations. In addition, PPE prepares students exceptionally well for academic programs, especially for law school, medical school, business school, and master's and doctoral programs in philosophy, political science, and economics, as well as related social sciences.

To enrich its undergraduate curriculum and allow students to develop professional skills, the Kellogg Center organizes research-focused events (https://ppe.liberalarts.vt.edu/events/), in particular a research speaker series, research fellow panels, conferences, workshops, and public lectures. In addition, it offers student-centered events and activities (https://ppe.liberalarts.vt.edu/student-involvement/), such as an undergraduate journal, reading groups, discussion colloquia, and a PPE Club. The Center's programming fosters dialogue among faculty, students, and the public and supports the integration of research and teaching.

Degree Requirements

The graduation requirements in effect during the academic year of admission to Virginia Tech apply. Requirements for graduation are listed on checksheets. Students must satisfactorily complete all requirements and university obligations for degree completion. The university reserves the right to modify requirements in a degree program.

Please visit the University Registrar's website at https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html for degree requirements.

Major in Philosophy, Politics, and Economics (PPE)

The PPE major allows students to study systematically some of the most important social, ethical, economic, and political problems that our contemporary societies face. It offers a highly interdisciplinary curriculum with distinct learning outcomes centered on an undergraduate research project. The PPE major is structured around four central integration courses and an optional complementary internship course:

1. The PPE First-Year Experience Course (PPE 1004) introduces students to important classic and contemporary texts in PPE. The course acquaints students with basic principles of research and writing as well as helps students to adjust to university life.

2. The PPE Gateway Course (PPE 2894) integrates the quantitative techniques, conceptual tools, and core principles of philosophy, political science, and economics.

3. Led by a faculty expert, the PPE Topics Course (PPE 3884) allows students to discuss an interdisciplinary topic in PPE in depth.

4. The PPE Capstone Course (PPE 4884) allows students to work on an advanced research project of their choice at the intersection of philosophy, politics, and economics and its application to the real world.

Minor in Philosophy, Politics, and Economics (PPE)

The PPE minor trains students to apply knowledge in the humanities and social sciences to related fields, and thus to examine the world from multiple perspectives and integrate knowledge across disciplines. The PPE minor requires 18 credit hours to be obtained from the PPE Gateway Course, the PPE Capstone Course, and four elective courses that include one applied area course. The PPE minor is an approved as a Pathways minor (https://www.pathways.prov.vt.edu/minors/showcase/ppe.html) at Virginia Tech. Relatedly, it is worth stressing that Virginia Tech is currently the only top engineering school that integrates engineering courses into its PPE curriculum. The PPE minor allows engineering students to create synergies between their engineering studies (https://enge.vt.edu/undergraduate/explore_engineering.html) and the humanities and social sciences.

Study Abroad

The Kellogg Center encourages students to participate in study abroad programs as part of their educational experience. PPE students have recently studied in continental Europe and the U.K., among other places. In general, if coordinated in advance, coursework completed abroad can count towards the PPE major and PPE minor.

The Kellogg Center has also established an international partnership with the PPE Program (https://www.ppe.hhu.de/en/) at the Heinrich Heine University Düsseldorf (HHU) in Germany. The partnership allows selected PPE students at Virginia Tech to spend a semester abroad, taking courses in PPE and related departments at HHU while exploring Europe. The courses will contribute to students' PPE degree programs at Virginia Tech.

For further details, please refer to the program description, including application details, on the Global Education Office (https://sa.globaleducation.vt.edu/?FuseAction=Programs.ViewProgramAngular&id=12496) website. The application cycle for the spring semester for the following year opens in mid-March.

To learn more, go to the Virginia Tech's German Program website (https://liberalarts.vt.edu/departments-and-schools/department-of-modern-and-classical-languages-and-literatures/academic-programs/german-major.html) or contact Dr. Esther Bauer (https://liberalarts.vt.edu/departments-and-schools/department-of-modern-and-classical-languages-and-literatures/faculty/esther-bauer.html). Please see also here for a program flyer (https://ppe.liberalarts.vt.edu/wp-content/uploads/2024/04/German-Program.pdf).

Experiential Learning

Internships and related paraprofessional activities can serve as valuable opportunities for students to apply and further engage with the skills and concepts they acquire in the classroom. They also serve as means to gain valuable professional experience, which may be particularly useful to students when pursuing career opportunities or graduate study. Please work closely with your advisor to discuss possibilities.

Participating in Virginia Tech's Bridge Experience (https://teaching.vt.edu/bridgeexperiences1.html) initiative, the Kellogg Center provides students the opportunity to enroll in PPE 3900, a 0-credit hour, self-selected, and Center approved experiential learning opportunity aligned with post-graduation goals using research-based learning processes often in the form of undergraduate research, internships, study abroad, co-ops, and other place-based experiences in the context of their PPE degree program.

The Kellogg Center also offers students the possibility to receive credit for internships, field studies, and practicums in the context of the PPE 4964 Field Work/Practicum course. Before considering this option, students should have completed PPE 2894 PPE Gateway Course. For more information concerning experiential learning opportunities offered by the Kellogg Center, please reach out to the internship coordinator Holly Belcher (hollymb2@vt.edu).

Advising

The Kellogg Center's faculty and staff work closely with students to provide a personalized learning experience. However, before you speak with PPE advising personnel, please read carefully the PPE Student Handbook (https://ppe.liberalarts.vt.edu/student-handbook/) that provides a detailed overview of the PPE degree programs and other relevant student information, including information about degree requirements, study abroad, internships, PPE events, careers and placement, and professional opportunities.

For **all PPE advising** matters, including setting up an advising appointment, please contact: Heath Furrow (hafurrow@vt.edu)

For **general questions** concerning the PPE undergraduate degree programs, please contact Holly Belcher (hollymb2@vt.edu).

[1] See list of approved electives.

[2] Note that PPE 1004 Introduction to Philosophy, Politics, and Economics, PPE 2894 PPE Gateway Course, and PPE 4884 PPE Capstone Course fulfill Pathways requirements and may double count towards Major Requirements. Transfer credits may reduce the number of elective credit hours depending on the total number of transfer credits awarded.

Eligibility for continued enrollment: Program requirements adhere to the “Satisfactory Progress” toward degree policy of the university (Policy 91).

Graduation Requirements

General PPE Major Requirements and Guidelines

1. Departmental prerequisites and corequisites for all courses must be satisfied. Please consult the University Catalog for the latest statement of these requirements.
2. In accordance with University Guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of degree (e.g. Pathways).
3. No more than 50% of the graded course credits required for the PPE Major may be double-counted by a student also enrolled in a Philosophy, Political Science, or Economics major.
4. All courses to fulfill the PPE major requirements must be taken A/F and be completed with a minimum GPA of 2.0. Students must also maintain an overall GPA of 2.0.
5. A minimum of 120 semester credit hours is required for graduation.

Foreign Language Requirement

Foreign language requirement: Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses

taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Undergraduate Course Descriptions (PPE)

PPE 1004 - Introduction to Philosophy, Politics, and Economics (3 credits)
Discussion of classic and contemporary texts in philosophy, politics, and economics (PPE) with historical and current relevance. Core concepts, ideas, and topics include: history of moral, political, and economic thought; political economy; justice, equality, fairness, and democracy; socioeconomic status, power, class, and diversity; the human condition and its cultural evolution and experience in the United States and abroad. Course introduces students to basic principles of research and writing. First-Year Experience course.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PPE 1214 - Economic History of Diversity and Inclusion (3 credits)
Economic analysis of topics concerning diversity and inclusion. Emphasis on Virginia and surrounding states. Introduction to the basic principles of economic analysis and economic history, with a special emphasis on models of institutional change, economic growth, discrimination, inequality, migration, and indigenous economic systems. Impact of institutions, environment, and technological change on labor markets, asset markets, and standard of living. Consideration of the role of data in understanding diversity and related ethical issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 1214

PPE 2024 - Research Methods in Political Science (3 credits)
Introduction to research in political science; formulation of theory, operationalization and measurement, gathering, analysis and interpretation of data.
Prerequisite(s): (PSCI 1014 or PSCI 1014H) and (PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 2024

PPE 2894 - PPE Gateway Course (3 credits)
Integrated study of philosophy, politics, and economics. Trains students to make decisions that are not only economically sound, but also socially, ethically, and politically informed. Core concepts, topics, and ideas include: models of human nature, rational choice theory, social cooperation, distributive justice, markets, and democracy. Pre: Sophomore standing.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PPE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PPE 3016 - Political Theory (3 credits)
Analysis of the fundamental ideas in the history of political theory. 3015: The thought and ethical implications of philosophers from the ancient Greeks to early modern times. Analysis of writings from Plato through medieval theorists to those of the Seventeenth Century. 3016: The thought and ethical implications of philosophers from the late Seventeenth Century to the present. Analysis of key concepts in the thought of theorists from the early modern period until the present.
Prerequisite(s): PSCI 2014
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 3016, PSCI 3016

PPE 3024 - Economic Justice (3 credits)
This course explores how different assumptions regarding the basis of claims for access to economic resources lead to different outcomes. Students will explore a variety of theories and examine their own beliefs about economic justice.
Prerequisite(s): (ECON 2005 or ECON 2025H) and (ECON 2006 or ECON 2026H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 3024

PPE 3314 - Ethical Theory (3 credits)
Careful examination of some important historical or contemporary ethical theories. Includes coverage of such topics as the assessment of character and action, the foundations of ethical theories, their justification, their relationship to scientific theories, and their objective or subjective status. 3 Philosophy credits required.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 3314

PPE 3884 - Topics in Philosophy, Politics, and Economics (3 credits)
Topics-based course in philosophy, politics, and economics (PPE). Discussion of important topics and thinkers in PPE with historical and practical relevance. Focus on interdisciplinary analysis and methods. Topics include: limits of markets; well-being theory, science, and policy; socioeconomic justice; economic and political institutions; and global poverty. May be repeated 1 time with different content for a maximum of six credits hours. Pre: 3 credit hours in PPE, PHIL, PSCI, or ECON.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: ECON 3884, PHIL 3884, PSCI 3884

PPE 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

PPE 4304 - Political Philosophy (3 credits)
Study of fundamental topics in political philosophy, such as distributive justice, equality, individual rights, constitutional government, and the justification of political authority. 3 Philosophy credits required.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 4304

PPE 4884 - PPE Capstone Course (3 credits)
Discussion of advanced concepts, methods, and ideas at the intersection of philosophy, politics, and economics. Focus on utility theory, game theory, social choice theory, public choice theory, markets, justice, and democracy. Senior research project. Senior standing required.
Prerequisite(s): PPE 2894 or PHIL 2894 or PSCI 2894 or ECON 2894
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PPE 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

PPE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PPE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Political Science

Our Website (http://www.psci.vt.edu)

Overview

The department offers courses leading to degrees in Political Science and International Studies. These courses provide understanding of political systems, forms of government, international relations and other political processes throughout the world. Political science courses also offer preparation for careers in government, business, nonprofit/ nongovernemnt organizations, law, politics, and education.

General Option for the B.A. Degree

The general option encourages students to take courses in all of the subfields of political science, including political theory, comparative politics and government, U.S. politics and government, international relations, and research methodologies and methods. This permits students to describe, analyze, and evaluate governments, public policies, and political processes, systems, and behaviors, locally, nationally and globally. Students choosing this option pursue careers in government, nongovernmental organizations, business, education, law, policy analysis, and politics.

Legal Studies Option for the (LS) B.A. Degree

The Legal Studies option allows students to explore values, ideas, and reasoning linked to public law, its design, and its impact, preparing them for law school, graduate work in public policy fields, and a range of endeavors in and outside of governments. The option is not intended to be a pre-law program, although students hoping to attend law school may enroll for the option and may well benefit from its achievement.

National Security Option (NSEC) for the B.A. Degree

This option is intended to help students understand policy making in relation to the national security of the United States. Students are directed toward courses in foreign and military policy and the presidential and congressional branches of U.S. government.

Social and Political Justice (SPJ) Option for the B. A. Degree

This option allows students to think critically about rights, inequality, justice, interests, and exploitation. Students link courses in political theory, public policy, and politics to social justice in government, corporate, and civil society settings.

Applied Public Policy Studies (APPS) Option for the B. A. Degree

This option allows students to engage in more vocationally-labelled training in Political Science with an emphasis on policy studies. Students can apply their knowledge and skills to jobs in different government agencies as well as in graduate programs in Political Science, Public Administration and Policy, Public and International Affairs, or law.

Minors

The requirements to earn a minor in Political Science, International Studies, International Public Policy, International Relations, National Security and Foreign Affairs, Global Engagement, or Integrated Security can be found on the specific checksheets available on the University Registrar's website.

Regarding Double Majors

The Department of Political Science offers majors in Political Science, International Studies, International Relations, International Public Policy, and National Security and Foreign Affairs. Courses for the majors overlap significantly. Therefore, students majoring in Political Science may not double major in International Studies, International Relations, International Public Policy, or National Security and Foreign Affairs.

Advising

The department provides advisors to help students understand and meet degree requirements. Career counseling also is available in the department, as is advising for students interested in attending graduate or law school after graduation from Virginia Tech.

Internships

The department arranges academic credit for internships in state, local, and federal governments, nonprofit organizations, and other appropriate settings. The department's internship program offers students a chance to gain career-related experience in a wide variety of organizations. Information on these opportunities can be obtained from the internship director.

Student Organizations

To provide opportunities for informal association of faculty and students, the department sponsors the Political Science Club; a chapter of Phi Alpha Delta, the pre-law honor society; a chapter of Pi Sigma Alpha, the national honor society in political science; the International Relations

Organization, and other student organizations such as Model United Nations. Information about these activities, as well as about any other aspect of the department, may be obtained from the department chair, advisors, or the department office.

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the Curriculum for Liberal Education (see Academics chapter in this catalog), toward the department's general education requirements, and toward the degree in Political Science.

Satisfactory progress toward the B.A. in political science requires completion of PSCI 1014 Introduction to United States Government and Politics, PSCI 1024 Introduction to Comparative Government and Politics, and PSCI 2024 Research Methods in Political Science within the first 60 credit hours attempted. Students must also maintain an in-major GPA of 2.0 and must achieve a minimum grade of C in both PSCI 1014 Introduction to United States Government and Politics and PSCI 1024 Introduction to Comparative Government and Politics.

Study Abroad

Virginia Tech offers a variety of study abroad programs.

Honors

Departmental Honors Courses are occasionally offered by the Political Science Department. Political Science majors are encouraged to apply for the Honors College if they meet Honors College application eligibility requirements. Visit www.honorscollege.vt.edu (http://www.honorscollege.vt.edu) for more information.

- Applied Public Policy Studies Major Option (https://catalog.vt.edu/undergraduate/liberal-arts-human-sciences/political-science/applied-public-policy-studies/)
- Political Science Major (p. 1090)
- Political Science Major with Legal Studies Option (p. 1092)
- Political Science Major with National Security Studies Option (p. 1093)
- Political Science Major with Social and Political Justice Option (p. 1095)

Chair: Timothy W. Luke
University Distinguished Professor: T. W. Luke
Edward S. Diggs Professor in the Social Sciences: E. Weisband
Professors: F. Debrix, K. M. Hult, F. Jalalzai, B. Koch, M. Moehler, I. Stivachtis, and L. Zanotti
Associate Professors: P. C. Avey, A. F. Brantly, M. Caraccioli, C. Daggett, P. Dixit, C. E. Jewitt, K. E. Kitchens, D. J. Milly, W. D. Moore, S. G. Nelson, B. Pula, and A. J. Scerri
Assistant Professors: B. S. Binev, L. Frost, D. A. Gibbs, B. Gill, N. Goedert, D. Poets, A. Reeves, C. Suong, and F. Wendt
Collegiate Assistant Professors: B. S. Faulkner and C. I. P. Thomas
Academic and Professional Faculty: C. A. Hankinson and J. A. Hanratty
Emeritus Faculty: R.C. Rich, R.D. Shingles, C.L. Taylor, and C.E. Walcott
Postdoctoral Associate: B. Barros
Internship Directors: C. I. P. Thomas (231-2855)

Undergraduate Course Descriptions (PSCI)

PSCI 1XXX3 - GEN ED REASONING SOCIAL SCI (3 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

PSCI 1004 - Nations and Nationalities (3 credits)
Introduction to world and American ethnic and indigenous cultures and to social constructions of human and group identity, nationalism and extreme ethno-nationalism. History of the political, economic, and cultural transition from primordial communities to sovereign states. Introduction to the rise of racism, sexism, ethnicism, classism, nativism, xenophobia, etc. in modern societies and episodes of mass political violence including ethnic cleansing and genocide.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 1004

PSCI 1014 - Introduction to United States Government and Politics (3 credits)
Introduction to government and politics of the United States, the Constitution, and various institutional designs and structures. Focus on political culture, interest groups, voting franchise, political parties, and elections. Roles and responsibilities of Congress, bureaucracy, Presidency, and federal courts; Discussion of selected current policy issues and implications of diversity of elected representatives.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 1014H - Honors Introduction to United States Government and Politics (3 credits)
Introduction to government and politics of the United States, the Constitution, and various institutional designs and structures. Focus on political culture, interest groups, voting franchise, political parties, and elections. Roles and responsibilities of Congress, bureaucracy, Presidency, and federal courts; Discussion of selected current policy issues and implications of diversity of elected representatives.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 1024 - Introduction to Comparative Government and Politics (3 credits)
Government and politics of selected countries in the world: the necessity for government; the nature of politics and governmental systems; specific types of political systems; the effects and consequences of institutional designs; linkages of people and governments through political parties, interest groups, and social movements; current political issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 1024

PSCI 1024H - Honors Introduction to Comparative Government and Politics (3 credits)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 1034 - Introduction to International Studies and Political Science (3 credits)
Introduces students to the fields of International Studies and Political Science and their respective subfields. Familiarizes students with the undergraduate programs in International Studies and Political Science and emphasizes student preparation for careers in the respective fields. Focuses on inquiry, problem-solving, and integration of ideas and experiences with a focus on International Studies and Political Science. Familiarizes students with the basic principles of the research and writing principles.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 1034

PSCI 1084 - Food Studies (3 credits)
Interdisciplinary introductory course explores how food shapes and is shaped by culture and society. Examines how people use food to express meanings (e.g., via foodways, story, art, architecture, religion, ethical codes), how food options, practices, and inequities are shaped by social structures (e.g. cultural and legal norms regarding race, class, and gender), and how the material properties of food (e.g., chemical, ecological, technological) are linked to identities, ideological commitments, and historical moments.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 1084, RLCL 1084, SOC 1084

PSCI 1114 - Introduction to Transatlantic Studies (3 credits)
Multidisciplinary analysis of core issues and topics in transatlantic studies. Origins and evolution of transatlantic interactions. Historical, political, economic, cultural (including language and literature), civilizational, religious, and societal ties binding Europe and the Americas. Basic research techniques and evaluation of sources.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 1114

PSCI 1204 - Topics in Global Dialogues (1 credit)
Examination of the impact of culture in world politics. Topics under examination include: culture and global diversity; culture, identity, and order in world politics; international conflict and intercultural relations. Extensive use of case studies. May be repeated twice with different content for a maximum of three (3) credits.
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours
Course Crosslist: IS 1204

PSCI 2014 - Introduction to Political Theory (3 credits)
Examines central themes involved in the practices of normative political theory. Topics will include critical review of the historical origins, established traditions, and major themes in normative political thinking.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 2024 - Research Methods in Political Science (3 credits)
Introduction to research in political science; formulation of theory, operationalization and measurement, gathering, analysis and interpretation of data.
Prerequisite(s): (PSCI 1014 or PSCI 1014H) and (PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PPE 2024

PSCI 2034 - Geography of Global Conflict (3 credits)
Geographical dimensions of global conflicts, international management of conflicts, conflicts of differences, historical, ideological, failed states and resources will be examined. Background to conflicts, current status of conflicts, different points of view in conflict. Topics in the course will change as the geography of global conflict changes.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2034, IS 2034

PSCI 2044 - Food, War and Conflict (3 credits)
Explores the history of food production and processing relative to the commencement or continuation of conflict. Examines why and how wars have been fought over economic policies, food trade and control of food supplies. Examines efforts to protect food and water supplies from intentional contamination and acts of terrorism. Focus on food products and the preservation, processing and distribution technologies that arose from war and conflict.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FST 2044, IS 2044

PSCI 2054 - Introduction to World Politics (3 credits)
An introduction to the prevalent methods and theories in the study of world politics. Topics include: historical context of contemporary world politics, global actors and power relations, conflict and conflict resolution, international law, and contemporary global issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2054, IS 2054

PSCI 2064 - The Global Economy and World Politics (3 credits)
Introduction to theories and methods in the study of global political economy. Topics include: historical origins, comparative advantage, the factor endowment trade theory, the gold standard, economic nationalism, the Great Depression, the Bretton Woods System, Keynesianism, the Nixon shocks, international organizations, monetary governance, the Great Recession, poverty and underdevelopment, and contemporary challenges of income inequality within and among economies.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2064, IS 2064

PSCI 2074 - Law and Politics (3 credits)
Explores the roles of law and legal institutions within the United States. Focuses on structures and procedures of government from a constitutional perspective; the politics of law-making and law-enforcement by legislative, executive, and judicial institutions; and relationships between law and society.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 2084 - The Evolution of World Order (3 credits)
A historical and comparative study of states systems (i.e, ancient, medieval, modern, and contemporary states system). Emphasis on the globalization of the European states system, its various aspects (political, economic, cultural, religious, civilizational, and technological) and its implications for contemporary world order (i.e., the question of human equality and the impact of colonialism and post-colonialism on the question of social, political, and economic justice).
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2084

PSCI 2104 - Europe Country Analysis (3 credits)
Examination of the politics, economics, culture, society, population patterns, and history of individual European countries. Impact of individual European states' domestic affairs on their respective European sub-regions and Europe as a whole. Analysis of intra-European regional developments. Examination of differing country perspectives on European integration.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2104

PSCI 2114 - Transatlantic Political Frameworks (3 credits)
Examination of transatlantic political, security and economic institutions, such as the Organization for Economic Cooperation & Development (OECD), the North Atlantic Treaty Organization (NATO), and the Organization for Security & Cooperation in Europe (OSCE). Impact of domestic politics and external policies on the operation of transatlantic institutions. US-European relations and their impact on transatlantic institutions and European security. Bilateral political links between European and North America States (i.e., the UK-US- Canada, and France-Canada) and their impact on transatlantic relations and European security.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2114

PSCI 2134 - Geog of the Global Economy (3 credits)
Geographical dimensions of the global economy since World War II. Globalization and the emergence of a new international division of labor. The relative decline of the United States and the growth of Japan, East Asia and the European Union. Changing geographies of foreign direct investment location. Places and regions in geo-economic discourse. Population and resources issues in the early twenty-first century.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2134, IS 2134

PSCI 2164 - Foundations of Contemporary Security Environments (3 credits)
Introduction to multiple analytical perspectives on contemporary security environments, including political, legal, ethical, technical, environmental and historical and cultural perspectives relative to the conception, design and implementation of security solutions, practices, and policies. Emphasizes applying and analyzing the effectiveness of diverse procedures, tools and policies used in security and privacy solutions, decision-making, risk management and operational policy to mitigate local, national, international and global threats.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIT 2164, CS 2164

PSCI 2224 - Geography of Europe (3 credits)
Europe: as an idea, as a place, as a space, and as a political entity. Basic knowledge of Europe's historical physical environments, political geography, population distribution, varied cultures, and economic development. Cultural variations and their implications on settlement patterns, political divisions, and economic patterns and processes.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2224, IS 2224

PSCI 2484 - Religion and Politics (3 credits)
Investigation of religion and politics as distinct categories in different times and places. Analysis of episodes from both past and present in which religion and politics have come together, or have been kept apart. Examination of the roles religion and politics play in the modern world and how they impact the lived experience of diverse populations both in the United States and throughout the world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2484, RLCL 2484

PSCI 2954C - Study Abroad (1-19 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences
Instructional Contact Hours: Variable credit course

PSCI 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 3004 - Professionalism and Careers in Political Science and International Studies (3 credits)
Designed to teach students how to synthesize skills and information learned in their Political Science and International Studies classes. Exploration of various career options, graduate school options, and proper procedures for seeking and applying for employment and graduate school. Introduction to professionalism in the workplace and professional development in the area of political science and international studies. Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3004

PSCI 3015 - Political Theory (3 credits)
Analysis of the fundamental ideas in the history of political theory. 3015: The thought and ethical implications of philosophers from the ancient Greeks to early modern times. Analysis of writings from Plato through medieval theorists to those of the Seventeenth Century. 3016: The thought and ethical implications of philosophers from the late Seventeenth Century to the present. Analysis of key concepts in the thought of theorists from the early modern period until the present.
Prerequisite(s): PSCI 2014
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 3015

PSCI 3016 - Political Theory (3 credits)
Analysis of the fundamental ideas in the history of political theory. 3015: The thought and ethical implications of philosophers from the ancient Greeks to early modern times. Analysis of writings from Plato through medieval theorists to those of the Seventeenth Century. 3016: The thought and ethical implications of philosophers from the late Seventeenth Century to the present. Analysis of key concepts in the thought of theorists from the early modern period until the present.
Prerequisite(s): PSCI 2014
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 3016, PPE 3016

PSCI 3034 - The CIA: Its Capabilities in Todays Geo-Political World (3 credits)
Role of the discipline of geography in the origins, procedures, and history of CIA. Role of the CIA in providing national intelligence at both strategic and operational levels. Origins and changes to the CIA since WWII. Capabilities to support both policy-makers and national security entities. Case studies illustrating the CIAs operations in different regions of the world.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 3034, IS 3034

PSCI 3044 - The Politics of Internet Governance (3 credits)
Introduces students to theoretical, technological, and policy debates in Internet governance. Topics include multistakeholder governance, cybersecurity and cybercrime, network investigative techniques, data protection, vulnerability disclosure, use of anonymity-granting technologies, network neutrality, virtual currencies, big data, algorithmic bias and decision-making, politics of the domain name system, privacy, free expression, cross-border dispute resolution, data ownership, and challenges to state authority.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3044

PSCI 3054 - The Dark Web and Threat Analytics (3 credits)
Introduction to dual-use anonymity-granting technologies such as the Dark Web. Covers open source threat intelligence as a technique to assess trends and trajectories in anonymous online content. Substantive topics include the use of Dark Web technologies for political expression in repressive regimes, anonymity and privacy protection in an age of big data as well as the misuse of these tools for doxing, trolling, and the creation of illegal markets for drugs, guns, malicious software, human trafficking, and child abuse imagery. Junior Standing
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3054

PSCI 3064 - Food Politics (3 credits)
Focuses on how scholars, pundits, citizens, and policymakers think about food on local, national, and global scales. Explores various ways of producing, distributing, and consuming food and how they are implicated in specific organizations of power and possibility. Examines how food, and the discourses surrounding food, help structure understandings of a variety of issues, such as identity, property, labor, gender, race, responsibility, and death.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3064

PSCI 3104 - Security Studies: Theories and Concepts (3 credits)
Introduces the various theoretical approaches to security. Examines key concepts in the field of Security Studies, such as uncertainty, polarity, war, coercion, terrorism, intelligence, genocide, crimes against humanity, ethnic conflict, and human security.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3104

PSCI 3114 - Global Security (3 credits)
Explores various theoretical approaches to security and discusses traditional and non-traditional security issues. Focuses on global, international and regional security challenges and examines alternative strategic and tactical solutions for addressing them.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3114

PSCI 3115 - Selected World Problems (3 credits)
Selected world problems and how they affect various countries and regions. Each semester, a topic will be chosen. 3115: World problems in a global or regional context. 3116: World problems in a European context. 3115 and/or 3116 may be repeated for a combined maximum of 9 credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 3115

PSCI 3116 - Selected World Problems (3 credits)
Selected world problems and how they affect various countries and regions. Each semester, a topic will be chosen. 3115: World problems in a global or regional context. 3116: World problems in a European context. 3115 and/or 3116 may be repeated for a combined maximum of 9 credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 3116

PSCI 3125 - Intelligence and National Security (3 credits)
Introduces students to the field of Intelligence Studies. Focuses on the structure, role and capabilities of the U.S. intelligence community and investigates the relationship between intelligence and national security strategy. Addresses topics pertaining to data collection and intelligence analysis, covert operations and counterintelligence. 3125: Intelligence and National Security. 3126: The Intelligence Process.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3125

PSCI 3126 - Intelligence and National Security (3 credits)
Introduces students to the field of Intelligence Studies. Focuses on the structure, role and capabilities of the U.S. intelligence community and investigates the relationship between intelligence and national security strategy. Addresses topics pertaining to data collection and intelligence analysis, covert operations and counterintelligence. 3125: Intelligence and National Security. 3126: The Intelligence Process.
Prerequisite(s): IS 3125 or PSCI 3125
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3126

PSCI 3134 - Global Conflict and War (3 credits)
Focuses on the causes, legal and moral constraints, impacts, and consequences of conflict and war. Explores historical and contemporary cases of conflict and war and investigates the role of state and non-state actors in these conflicts. Examines the impact of technology, religion, culture and identity on the present and future of war.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3134

PSCI 3135 - Strategies of Modern Warfare (3 credits)
3135: Analyzes the theory and practice of conventional warfare and investigates how strategic thought has influenced and shaped modern warfare. 3136: Examines the theory and practice of irregular warfare and focuses on the theory and practice of counterinsurgency and counterterrorism.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3135

PSCI 3136 - Strategies of Modern Warfare (3 credits)
3135: Analyzes the theory and practice of conventional warfare and investigates how strategic thought has influenced and shaped modern warfare. 3136: Examines the theory and practice of irregular warfare and focuses on the theory and practice of counterinsurgency and counterterrorism.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3136

PSCI 3144 - Global Governance and Public Policy (3 credits)
Examines the norms, institutions, practices and processes developed by the international community to address global problems such as poverty, pandemics, global warming, displaced persons and transnational crim. Utilizes theories of decision- and policy-making and investigates the role of states, international governmental and non-governmental organizations, coalitions and corporations in global public policy-making.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3144

PSCI 3154 - Topics in Global Public Policies (3 credits)
Examines in depth selected global public policies pertaining to health, energy, development, education, refugees or labor. May be repeated with different content for a maximum of nine (9) credits.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 3154

PSCI 3164 - Global Trade: Structures and Policies (3 credits)
Focuses on the operations of global trading system and its structure, theories of trade in international political economy, world trading powers and international and regional trade international organizations such as the World Trade Organization (WTO), the European Union (EU), the United States-Mexico-Canada Agreement (USMC), European Union (EU), United Nations Conference on Trade and Development (UNCTAD), the United Nations Industrial Development Organization (UNIDO) and the World Intellectual Property Organization (WIPO) and their policies.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3164

PSCI 3165 - Global Economic Governance and Policy (3 credits)
3165: International Trade - Focuses on the operations of global and regional international organizations such as the World Trade Organization (WTO), the European Union (EU), the United Nations Conference on Trade and Development (UNCTAD), the United Nations Industrial Organization (UNIDO) and the World Intellectual Property Organization (WIPO) and examines their policies and regulations. 3166: International Finance- Focuses on the operations of global and regional international organizations such as the International Monetary Fund (IMF) and World Bank, the European Union (EU), the Organization for Economic Cooperation and Development (OECD) and examines their policies and regulations.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3165

PSCI 3166 - Global Economic Governance and Policy (3 credits)
3165: International Trade - Focuses on the operations of global and regional international organizations such as the World Trade Organization (WTO), the European Union (EU), the United Nations Conference on Trade and Development (UNIDO), and the World Intellectual Property Organization (WIPO) and examines their policies and regulations. 3166: International Finance- Focuses on the operations of global and regional international organizations such as the International Monetary Fund (IMF) and World Bank, the European Union (EU), the Organization for Economic Cooperation and Development (OECD) and examines their policies and regulations.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3166

PSCI 3174 - Monetary Foundations of the World Economy (3 credits)
Focuses on the evolution the operations of global and structure of regional international organizations such as the International Monetary Fund (IMF) and World Bank, the global financial and monetary order. Theories of the global and monetary system in international political economy, the structure of world finance, international financial institutions, the rise of new financial powers in the world economy, central banking, monetary and financial regulation and financial crises and policy responses.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3174

PSCI 3175 - Global Development (3 credits)
3175: The Politics of Development - Examines issues and politics of the developing world and investigates the forces that promote or cut off economic development in low-income countries. Discusses development issues in various world regions. 3176: Economic Development - Emphasizes economic development and focuses on domestic and international policies aiming at addressing poverty in the developing world.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3175

PSCI 3176 - Global Development (3 credits)
3175: The Politics of Development - Examines issues and politics of the developing world and investigates the forces that promote or cut off economic development in low-income countries. Discusses development issues in various world regions. 3176: Economic Development - Emphasizes economic development and focuses on domestic and international policies aiming at addressing poverty in the developing world.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3176

PSCI 3184 - Human Security (3 credits)
Introduces the field of human security and examines the conceptual, theoretical and methodological issues surrounding it. Identifies the relevant human security actors, explores the tools of human security, and discusses the application of human security. Investigates the implications of human security and discusses its future.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3184

PSCI 3194 - Nuclear Strategy & Politics (3 credits)
Examines the fundamentals of nuclear strategy and investigates the politics associated with the acquisition and proliferation of nuclear weapons. Focuses on nuclear doctrines and policies and explores international efforts associated with nuclear arms control and disarmament. Analyzes the nuclear postures of various nuclear states.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3194

PSCI 3214 - Political Participation (3 credits)
Levels and types of political participation; reasons for participation; who participates and why; effects of political activity on political processes.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3224 - Public Opinion (3 credits)
Sources and distribution of public opinion; measurement of public opinion; relationships between public opinion and public policy; institutions linking public opinion to government decisions.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3234 - Voting and Elections (3 credits)
Voting, elections, and support for political parties and party leaders in the United States and other Western democracies; impact of economic conditions on political support and patterns of realignment and dealignment.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3244 - Political Communication (3 credits)
Distribution of political information; elite-mass communication; alternative models of political communication; communication and telecommunications policy.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JMC 3244

PSCI 3254 - Media and Politics (3 credits)
Explore the role of the mass media in contemporary American politics by examining the development of media as sources of social and political influence. Study of news organizations, their coverage of electoral and issue campaigns, and their impact on candidates and voters. Includes the role of new technologies in campaigns. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JMC 3254

PSCI 3255 - The Politics of Race, Ethnicity and Gender (3 credits)
Studies the status and political behavior of selected political minorities. 3255: compares African-, Mexican- and Native-Americans. 3256: examines diverse political responses to traditional gender roles, current gender issues, and the unique gender problems facing people of color.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3256 - The Politics of Race, Ethnicity and Gender (3 credits)
Studies the status and political behavior of selected political minorities. 3255: compares African-, Mexican- and Native-Americans. 3256: examines diverse political responses to traditional gender roles, current gender issues, and the unique gender problems facing people of color.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3274 - Political Parties (3 credits)
Development, organization, activities, and personnel of political parties; citizens partisan attitudes and behavior; origins, characteristics, stability, and changes of party systems.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3314 - Congress (3 credits)
Congressional structure; organization and procedure; characteristics of members of Congress; Congressional elections; decision-making and external influences; change and reform.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3324 - The Presidency (3 credits)
Election, institutionalization, staffing, relations with Congress, and the bureaucracy; initiation and implementation of public policy.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3334 - Judicial Process (3 credits)
Structure and functions of American legal institutions; participants in the process, impact of legal institutions on society.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3344 - Global Environmental Issues: Interdisciplinary Perspectives (3 credits)
Critical examination of major global environmental problems from a humanities perspective, including international community responses to global environmental problems such as global warming, atmospheric ozone depletion, acid rain, tropical deforestation, toxic waste. Actions by key actors in the international community to develop solutions. Relationship of justice, fairness, equality, and diversity to political questions of power or authority. Pre: 3 credits of Critical Issues in a Global Context.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3344, UAP 3344

PSCI 3354 - Constitutional Law: Structures and Relationships (3 credits)
Power and authority of president, Congress, and courts; division of powers between states and federal government.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3364 - Constitutional Law: Civil and Political Rights (3 credits)
Civil rights and liberties; rights of criminal defendants; competing conceptions of constitutional rights.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3374 - The Politics of Energy (3 credits)
Critical and humanistic perspectives of energy and its global problems. Politics and ethics of fuel extraction, distribution, and consumption across cultures and histories. Energy narratives, discourses, and aesthetics in the formation of political identities. Energy and the rise of modern democracy and global capitalism, with an emphasis on the energy dimensions of climate justice. Pre: Junior Standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3374

PSCI 3384 - Politics of Global and Comparative Migration (3 credits)
Theories and politics of international migration. How policies in destination, transit, and origin countries influence migration. Why governments adopt the migration policies they do. Impacts of global, regional, and national politics and policies on migration among countries.
Prerequisite(s): PSCI 1024 or IS 1024 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064 or PSCI 2084 or IS 2084
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3384

PSCI 3394 - Comparative Politics of Immigrant Inclusion (3 credits)
Theories of citizenship applied across levels of government. Comparative policies for political, social, and military inclusion. Explanations for variations in policies supporting citizenship and inclusion across countries. Explanations for differences among immigrants' political inclusion across countries.
Prerequisite(s): PSCI 1024 or IS 1024 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064 or PSCI 2084 or IS 2084
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3394

PSCI 3414 - Public Administration (3 credits)
The role and context of public administration in the contemporary United States, administrative organization and decision-making, public finance, human resources administration, and program implementation.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 3434

PSCI 3424 - State and Local Government (3 credits)
Institutions, functions, and policies of state, county, and municipal governments in the U.S.; issues confronting these governments in the federal system.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3434 - Urban Politics (3 credits)
Basic concepts of urban politics; governmental structures, policy processes, and political conflicts in U.S. cities, policy options for coping with urban problems.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3444 - Administrative Law and Policy (3 credits)
The legal context of the exercise of discretion by public administrators in the United States. Adjudication and rule- making; access to administrative processes and information; legislative and judicial control of administration.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 3444

PSCI 3514 - Latin American Government and Politics (3 credits)
Introduction to the political systems of Latin American countries, including legislative-executive relations, interest groups, political parties, electoral systems, political violence, and socio-political development.
Prerequisite(s): PSCI 1014H or PSCI 1014 or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3514

PSCI 3515 - European Political Systems (3 credits)
The government and politics of selected European states and of the European Union. 3515: normally includes the United Kingdom. 3516: normally includes Germany and Hungary.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3515

PSCI 3516 - European Political Systems (3 credits)
The government and politics of selected European states and of the European Union. 3515: normally includes the United Kingdom. 3516: normally includes Germany and Hungary.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3516

PSCI 3524 - Politics of Post-Communist Systems (3 credits)
Institutions, party structures, political economy, elite politics, ethnic conflicts, leadership dynamics, and mass political behavior in Russia and other post-communist political systems.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3524

PSCI 3534 - African Government and Politics (3 credits)
Survey of major concepts and themes in the study of African politics and development: analyses of the state, political institutions, social forces, democratization, sustainable development, issues of contemporary African politics.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3534

PSCI 3544 - The State of Israel: A Political History (3 credits)
This course provides a survey on the political history of the State of Israel and highlights major themes uniquely characterizing the specific events surrounding its establishment and its first 50 years of existence. Additionally, the course will add a comparative dimension by using the political history of Israel as a case study to discuss major themes in political science such as democracy, government, political economy, etc.
Prerequisite(s): PSCI 1024 or PSCI 1024H or JUD 2134
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 3544, RLCL 3544

PSCI 3554 - Comparative Political Economy (3 credits)
Economic policies and collective choice processes of pre-industrial, industrializing, and advanced industrial states; problems and crises of industrial development, economic distribution, and technological transfer in the transition from an agrarian to advanced industrial society.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3554

PSCI 3564 - Violent Political Change (3 credits)
Historical origins, political processes, and institutional outcomes of violent political change, rising from mass protest movements, revolutionary organization, military coups, and radical political parties.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3574 - Government and Politics of Japan (3 credits)
Introduction to governmental institutions, patterns of political organization and behavior, and key policies of the Japanese political system.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3574

PSCI 3584 - Governments and Politics of Asia (3 credits)
Introduction to governmental institutions, political behavior, and social and economic policy approaches of China and other selected countries in the Asian region.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3584

PSCI 3594 - Topics in Middle East Politics and International Relations (3 credits)
Government and politics of Middle Eastern states. Religion, culture and society in the Middle East. Nationalism and Middle East politics. Regional conflicts and regional security. International relations of the Middle East. Great powers and Middle East politics. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 1024 or PSCI 1024 or IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3594

PSCI 3615 - International Relations (3 credits)
Structure and development of the modern international system; theories of international politics; international law; international organizations.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3615

PSCI 3616 - International Relations (3 credits)
Structure and development of the modern international system; theories of international politics; international law; international organizations.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3616

PSCI 3624 - Foreign Policy and Diplomacy (3 credits)
Focuses on actors, issues, and processes pertaining to foreign policy formulation and implementation. Examines theoretical and historical perspectives on foreign policy analysis. Investigates the national security, foreign policy, and diplomacy nexus. Discusses types of diplomacy and diplomatic methods.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3624

PSCI 3625 - US-Russia Foreign Policies (3 credits)
3625: Formulation of American foreign policy; roles of the President, Congress, press, public, and bureaucracy; central themes, issues, and problems of American diplomacy; 3626: Development and operational practices of Russian foreign policy decision-making in the international environment; party and state political institutions; Marxist-Leninist ideology.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3625

PSCI 3626 - US-Russia Foreign Policies (3 credits)
3625: Formulation of American foreign policy; roles of the President, Congress, press, public, and bureaucracy; central themes, issues, and problems of American diplomacy; 3626: Development and operational practices of Russian foreign policy decision-making in the international environment; party and state political institutions; Marxist-Leninist ideology.
Prerequisite(s): PSCI 1024 or PSCI 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3626

PSCI 3634 - Human Rights: Global Issues (3 credits)
Identification, articulation and clarification of the relationship between human rights and other contemporary international phenomena, issues, events, and processes that affect human rights. Detailed consideration of the diverse traditions and cultural interpretations of human rights.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H or PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3634

PSCI 3684 - Indigenous Peoples and World Politics (3 credits)
A survey of the historical and contemporary struggles of indigenous peoples throughout the world. Examines the dynamics of colonialism (internal and external), identity construction, gender, cultural integrity, and the ongoing global indigenous rights discourse. In addition to covering broad global processes/theoretical approaches, comparative case studies of particular indigenous groups, such as the Maasai (Kenya, Tanzania) and Mayans (Mexico, Guatemala, Belize), are used to highlight the global, regional and intra-community diversity among contemporary indigenous peoples.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 3684

PSCI 3694 - Far-right Violence in the United States (3 credits)
Assessment of theoretical and conceptual foundations to understand the rise of far-right violence in the United States. Identification of causes of radicalization into the far-right. Comparison of case studies of historical and contemporary far-right violence. Evaluation of differences and similarities in historical and contemporary case studies. Appraisal of successful responses to far-right violence.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3694

PSCI 3704 - National Security Strategy (3 credits)
Focuses on the causes of war and the conditions of peace. Examines the logic, levels, and outcomes of strategy and investigates the impact of international law and politics on the use of force. Explores contemporary strategic theory and discusses current issues in grand strategy.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3704

PSCI 3714 - The U. S. Policy Process (3 credits)
Description and analysis of the processes and institutions involved in the making and implementation of public policy in the United States, with a primary focus on domestic and economic policy. Empirical and normative models of the process of public policy making in the U.S.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 3714

PSCI 3724 - Poverty and Welfare Policy (3 credits)
Public policies regarding the poor, impact of current policies; future policy options.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3734 - National Security (3 credits)
Post-1945 strategic problems, policies, and security commitments of major participants in international politics, especially the United States and Russia; effects of security policies on international and domestic political economies.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3734

PSCI 3744 - Public Policy Analysis (3 credits)
Methods and approaches used in the analysis and evaluation of public policy; strengths and limitations of various analytic tools; normative issues in the practice of policy analysis.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 3744

PSCI 3754 - American Political Theory (3 credits)
American political theory from the pre-Revolutionary era to the present. American contribution to the understanding of freedom, equality, political community, constitutionalism, political dissent, and the welfare state.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3764 - Contemporary Democratic Theory (3 credits)
History and critiques of classical theories of democracy; contradictions within and contemporary problems facing democracy; future of democracy according to conservative, liberal, and radical theoretical perspectives.
Prerequisite(s): PSCI 2014 and (PSCI 3015 or PHIL 3015 or PSCI 3016 or PHIL 3016)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3774 - Marxian Political Analysis (3 credits)
Contemporary uses of Marxian concepts and theories to study the world economy, business structure, current social issues, modern ethical values, and alienation.
Prerequisite(s): PSCI 2014 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 3774

PSCI 3784 - Origins of the State (3 credits)
Theories of the origins of politics and government; evidence of state formation in prehistoric societies; political behavior in contemporary pre-literate societies as precursor to state formation.
Prerequisite(s): PSCI 2014 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064 or PSCI 2084 or IS 2084
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3795 - Global Terrorism and Counterterrorism (3 credits)
Evaluation of theories and concepts used to analyze terrorism and counterterrorism. Identification and analysis of origins, causes, and consequences of terrorism globally. Comparison of historical and contemporary terrorism and counterterrorism. Appraisal of how histories of colonialism and the growth of new media affect terrorism and responses to terrorism. Identification of successful counterterrorism methods, strategies and practices. Evaluation of ethics and human rights in global counterterrorism. 3795: histories, origins, and spread of terrorism; 3796: strategies and practices of counterterrorism.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3795

PSCI 3796 - Global Terrorism and Counterterrorism (3 credits)
Evaluation of theories and concepts used to analyze terrorism and counterterrorism. Identification and analysis of origins, causes, and consequences of terrorism globally. Comparison of historical and contemporary terrorism and counterterrorism. Appraisal of how histories of colonialism and the growth of new media affect terrorism and responses to terrorism. Identification of successful counterterrorism methods, strategies and practices. Evaluation of ethics and human rights in global counterterrorism. 3795: histories, origins, and spread of terrorism; 3796: strategies and practices of counterterrorism.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3796

PSCI 3804 - European Integration (3 credits)
Analysis of the process of industrial, political, legal, economic, social and cultural integration of states in Europe as a whole or within a European sub-region. History and theories of European integration. Examination of various European organizations whose actions reflect different approaches to and different degrees of integration in Europe.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3804

PSCI 3814 - The European Union: Institutions and Policies (3 credits)
Evolution, organizational structure, political dynamics, and decision-making mechanisms of the European Union. Major internal and external EU policies such as foreign, security and defense policy, economics, Single Market, and monetary union.
Prerequisite(s): IS 3804 or PSCI 3804
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3814

PSCI 3824 - European Union's Foreign and Security Policy (3 credits)
The European Union (EU) as an actor in the foreign, security and defense policy fields. The external relations of the EU and its role in world affairs. The institutional arrangements of EU external relations and EU activity in policy areas including human rights, peacekeeping, environmental governance, trade, and economic development.
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3824

PSCI 3825 - European Union's Foreign Relations (3 credits)
The global strategy and foreign policy objectives of the European Union and the evolving relations between the EU and the rest of the world. EU's role in world affairs. 3825: EU's global strategy and its relations with major world powers, such as the United States, Russia, and China. 3826: EU's global strategy and its relations with countries in various world regions as well as global multilateral organizations, such as the United Nations (UN) and the World Trade Organization (WTO).
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3825

PSCI 3826 - European Union's Foreign Relations (3 credits)
The global strategy and foreign policy objectives of the European Union and the evolving relations between the EU and the rest of the world. EU's role in world affairs. 3825: EU's global strategy and its relations with major world powers, such as the United States, Russia, and China. 3826: EU's global strategy and its relations with countries in various world regions as well as global multilateral organizations, such as the United Nations (UN) and the World Trade Organization (WTO).
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3826

PSCI 3834 - European Security Governance (3 credits)
Structure and function of major European security organizations, such as the North Atlantic Treaty Organization (NATO), the European Union (EU), the Organization for Security and Cooperation in Europe (OSCE), and the Collective Security Treaty Organization (CSTO). In-depth analysis of those organizations' role in the European security architecture. Examination of inter-organizational cooperation in addressing European security issues and conflicts.
Prerequisite(s): IS 3804 or PSCI 3804
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3834

PSCI 3844 - European Geopolitics (3 credits)
Impact of Geography on European politics and economics. Significance of territorial, identity, networking and environmental geopolitics. Theoretical debates in the fields of political and population geography. Current culture and demographic challenges and geopolitical disputes within Europe and particularly between the European Union (EU) and its neighboring world regions.
Prerequisite(s): GEOG 2224 or IS 2224 or PSCI 2224
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 3844, IS 3844

PSCI 3854 - European Political Economy (3 credits)
The European Union's major institutions and policies relating to economic and monetary union and trade. Monetary integration, fiscal and economic policy cooperation, financial integration (including the banking union), the single market and the common commercial policy, the common agricultural policy and the EU's regional policy. The internal structure and organization of the European political economy and the external dimension of Europe and its impact on global economics, ranging from the World Trade Organization to EU enlargement and the Developing World.
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3854

PSCI 3874 - The European Business Environment (3 credits)
Political, legal, economic, socio-cultural, technological and environmental issues and policies affecting the operation and strategies of foreign companies in Europe. Business operations inside and outside the European Union. Impact of EU policies and the EU legal framework on business strategies and policies of non-EU companies. Business strategy for the European market, marketing and human resources management in Europe, and corporate governance and control in Europe. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3874, MGT 3874

PSCI 3884 - Topics in Philosophy, Politics, and Economics (3 credits)
Topics-based course in philosophy, politics, and economics (PPE). Discussion of important topics and thinkers in PPE with historical and practical relevance. Focus on interdisciplinary analysis and methods. Topics include: limits of markets; well-being theory, science, and policy; socioeconomic justice; economic and political institutions; and global poverty. May be repeated 1 time with different content for a maximum of six credits hours. Pre: 3 credit hours in PPE, PHIL, PSCI, or ECON.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: ECON 3884, PHIL 3884, PPE 3884

PSCI 3894 - Transatlantic Relations Since 1945 (3 credits)
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3894

PSCI 3914 - European Economics (3 credits)
Microeconomics, macroeconomics and economic policies of the European Union. EU economic law, institutions, decision-making, and budgeting. Historic and current influences on regional economic development. Monetary and fiscal policies. Economic research methods, analysis, and reporting.
Prerequisite(s): ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 3914, IS 3914

PSCI 3924 - Theories of Transatlantic Relations (3 credits)
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3924

PSCI 3934 - NATO & European Security (3 credits)
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3934

PSCI 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 4024 - Seminar in Diplomacy and Security (3 credits)
In-depth analysis of selected topics in diplomacy, strategy, and national security including issues pertaining to international conflict and cooperation; dimensions of national power; objectives of national policy and implementation of national strategy; diplomatic negotiations; and conflict resolution. Senior Standing.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4024

PSCI 4034 - Topics in Diplomacy Lab (3 credits)
Examines the fundamentals of policy analysis and formulation and emphasizes research and writing on topics pertaining to diplomacy, security, and foreign policy. Focuses on policy analysis and evaluation and concentrates on policy design. Emphasizes preparation and presentation of policy reports. May be taken three times for credit with different policy topics. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 4034

PSCI 4054 - Seminar in Global Political Economy (3 credits)
Examines theoretical and historical approaches to global political economy and assesses their practical implications. Focuses on issue areas such as production, trade, money, finance and investment and analyzes their implications for the global economic and political order. Investigates issues pertaining to economies of development and in transition. Senior Standing.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4054

PSCI 4064 - Seminar in Global Development (3 credits)
Examines how economic and political forces interact in the developing world, discusses the history of these interactions from the pre-colonial period to the present and explores how colonialism shaped the developing worlds economic and political trajectories. Utilizes case studies, historical analysis and development economies to better understand the economic and political condition of countries in the developing world. Senior Standing.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4064

PSCI 4074 - The Politics of Cybersecurity (3 credits)
Analyses the politics of cybercrime, cyberwar, and the challenges of producing effective cybersecurity. Topics include the economics of cybersecurity, the cross-border nature of global cybercrime, encryption and anonymity-granting technologies, targeting critical national infrastructure, network investigative techniques, cybersecurity measurement, politics of zero-day vulnerabilities, and the process of providing effective cybersecurity at the individual, organizational, subnational, and national levels.
Prerequisite(s): PSCI 3044 or IS 3044
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4074

PSCI 4104 - Topics in European Studies (3 credits)
Selected issues pertaining to European Studies, such as racism in Europe, European art and society, religion and society in Europe, gender politics, and demographic trends in Europe. May be repeated twice with different content for a maximum of nine (9) credits. Pre: Senior Standing.
Prerequisite(s): IS 1104
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 4104

PSCI 4144 - Topics in Transatlantic Relations (3 credits)
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 4144

PSCI 4154 - Topics in Transatlantic Studies (3 credits)
Research and analysis of selected issues pertaining to transatlantic studies. Topics under examination include: religion and the transatlantic world; the political economy of the transatlantic slave trade; and the role of culture, language, and literature in cementing transatlantic ties. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 4154

PSCI 4164 - Future of Security: Integrative Solutions for Complex Security Systems (3 credits)
Identification and analysis of complex, real-world security problems and threats to people, organizations, and nations across multiple domains, roles and future scenarios. Crisis communication, decision making tools, ethical principles and problem-solving methods to respond, assess options, plan, scope, and communicate before, during and after conflicts, disasters and attacks. Use of an experiential learning facility, and participation in a reality-based team simulation of cascading security and disaster events.
Prerequisite(s): PSCI 2164 or BIT 2164 or CS 2164
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIT 4164, CS 4164

PSCI 4174 - Climate Change and the International Policy Framework (3 credits)
Science, causes and impacts of climate change. Mitigation and adaptation measures to address the causes and impacts of climate change. International climate change policy, with attention to the policy making process, in particular the role of the United Nations Framework Convention on Climate Change and climate negotiations. Science and diplomacy in climate negotiations to achieve successful outcomes. The ethical and social implications of climate change policies.
Pathway Concept Area(s): 1A Discourse Advanced, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 4174, IS 4174

PSCI 4184 - Capstone Project Transatlantic Studies (3 credits)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4184

PSCI 4214 - Senior Seminar in Political Behavior (3 credits)
Political behavior: socialization, voting, opinion formation and expression, decision-making in government, as explained by personality, rationality, culture, class, and institutional roles. Topics vary from semester to semester as announced. Senior standing.
Prerequisite(s): PSCI 3214 or PSCI 3224 or PSCI 3234 or PSCI 3244 or PSCI 3264 or PSCI 3274
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 4314 - Senior Seminar in Political Institutions (3 credits)
Selected topics in political institutions, including decision-making, types and structures of political institutions, internal and external influences on institutional behavior. Topics vary from semester to semester. Senior standing.
Prerequisite(s): PSCI 3314 or PSCI 3324 or PSCI 3334 or PSCI 3515 or PSCI 3516 or PSCI 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 4324 - Senior Seminar in Constitutional Law (3 credits)
Cases, law review articles, and related materials containing describing, or commenting on major decisions of the U.S. Supreme Court. Topics vary from semester to semester as announced. Senior standing.
Prerequisite(s): PSCI 3354 or PSCI 3364
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 4414 - Senior Seminar in Public Administration (3 credits)
Selected topics in public administration, including norms of practice, government personnel, administrative process, administrative law, privatizing, and contracting. Topics vary from semester to semester as announced. Must have senior standing.
Prerequisite(s): PSCI 3414 or PSCI 3424 or PSCI 3444
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 4514 - Senior Seminar in Comparative Politics (3 credits)
Selected topics in the comparative analysis of political behavior, processes, and institutions; cross-national institutional and aggregate data analysis. Topics vary from semester to semester as announced. Must have senior standing.
Prerequisite(s): PSCI 3515 or PSCI 3516 or PSCI 3524 or PSCI 3554 or PSCI 3564 or PSCI 3514 or PSCI 3534 or PSCI 3544 or PSCI 3574 or PSCI 3584
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 4614 - Senior Seminar in International Relations (3 credits)
Selected topics in international relations, including objectives of national policy, dimensions and components of national power, comparative diplomacy, international conflict and cooperation, instruments for conflict resolution. Topics vary from semester to semester as announced. Must have senior standing and any two of the prerequisites.
Prerequisite(s): PSCI 3615 or PSCI 3616 or IS 3615 or IS 3616 or PSCI 3625 or PSCI 3626 or PSCI 3734 or IS 3626 or IS 3734
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4614

PSCI 4624 - The Washington Semester: Seminar in American Politics and Public Policy (3 credits)
This seminar is the integrative forum for the principal elements of the Washington Semester experience. The course explores both the role of political institutions in policy formation and implementation and the primary managerial and leadership challenges that arise for implementing organization managers in American democratic public policy-making. Pre: Junior standing or instructor consent and acceptance into the Washington Semester program.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 4624

PSCI 4644 - Washington Semester: Politics, Policy and Administration in A Democracy (3 credits)
This course is part of the Washington Semester. Explores the relationship between the imperatives of democratic mobilization, policy choices and organizational choices through intensive study of the operating context of a selected public or nonprofit organization. Examines implications of policy-maker choices for implementing institution dynamics and challenges. Pre: Junior standing and acceptance into the Washington Semester program required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 4644

PSCI 4714 - Senior Seminar in Policy Analysis (3 credits)
Theoretical, analytical, and methodological approaches used to assess government activities and public policy. Topics vary from semester to semester as announced. Must have senior standing.
Prerequisite(s): PSCI 3724 and PSCI 3734
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4714

PSCI 4724 - Senior Seminar in Political Theory (3 credits)
Selected topics in analytic political philosophy, contemporary ideologies, and democratic theory. Topics vary from semester to semester as announced. Senior standing required. Must have senior standing and any two of the prerequisites.
Prerequisite(s): PSCI 3015 or PHIL 3015 or PSCI 3016 or PHIL 3016 or PSCI 3754 or PSCI 3764 or PSCI 3774 or UAP 3774
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 4734 - Theories and Practices of International Conflict Management (3 credits)
Examines alternative perspectives on peace, security, and international intervention and their implications for policy. Focuses on the role international organizations and other actors in conflict resolution and peace-building and explores issues pertaining to humanitarian intervention, human security, and state-building. Utilizes case studies in peacekeeping and peace building to highlight the link between theory and practice.
Prerequisite(s): PSCI 3616 or IS 3616
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4734

PSCI 4735 - Topics in Multilateral Diplomacy Workshop (3 credits)
Simulation of diplomatic practice in major global and regional international organizations. Diplomatic strategies and tactics. Effects of decision-making and policy-making structures and processes on diplomatic outcomes. Crisis management and conflict resolutions mechanisms. Diplomatic negotiations and diplomatic resolutions. Extensive use of simulations. 4735: Multilateral diplomacy in global organizations: United Nations (UN) and World Trade Organization (WTO). May be repeated once with different content for a maximum of six (6) credits. 4736: Multilateral diplomacy in sub-global/regional organizations: European Union (EU), North Atlantic Treaty Organization (NATO), and Organization for Security & Cooperation in Europe (OSCE). May be repeated once with different content for a maximum of six (6) credits. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: IS 4735

PSCI 4736 - Topics in Multilateral Diplomacy Workshop (3 credits)
Simulation of diplomatic practice in major global and regional international organizations. Diplomatic strategies and tactics. Effects of decision-making and policy-making structures and processes on diplomatic outcomes. Crisis management and conflict resolutions mechanisms. Diplomatic negotiations and diplomatic resolutions. Extensive use of simulations. 4735: Multilateral diplomacy in global organizations: United Nations (UN) and World Trade Organization (WTO). May be repeated once with different content for a maximum of six (6) credits. 4736: Multilateral diplomacy in sub-global/regional organizations: European Union (EU), North Atlantic Treaty Organization (NATO), and Organization for Security & Cooperation in Europe (OSCE). May be repeated once with different content for a maximum of six (6) credits. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: IS 4736

PSCI 4744 - Intelligence Analysis Workshop (3 credits)
Examines the impact of historical experience and bureaucratic structures on intelligence analysis. Discusses the contents of the intelligence agenda and explores issues pertaining to intelligence analysis. Focuses on the intelligence process and offers a target-centric approach to intelligence analysis. Emphasizes and evaluates the use of structured analytic techniques in intelligence analysis.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4744

PSCI 4754 - Internship Program (1-19 credits)
Qualified students are placed in an administrative or legislative staff position under the combined supervision of a faculty member and a responsible supervisor in the employing agency. Detailed reports on the internship experience and a specific project will be required of each intern. (Variable credit to maximum of 6 credits for a full-time position over an entire semester). Three hours of appropriate advanced American government courses, Junior standing, a screening interview, GPA of 3.00 or better and consent required.
Instructional Contact Hours: Variable credit course

PSCI 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 29843 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Political Science Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
Required Political Science Courses		
PSCI 1034	Introduction to International Studies and Political Science	3
PSCI 2014	Introduction to Political Theory	3

Subtotal		36
Total Credits		**120**

1 Limit on Repeatable Courses: No more than six credit hours in any one of the following courses may contribute toward the 54 hours required by the major: internship (PSCI 4754 (https://catalog.vt.edu/search/?P=PSCI%204754) Internship Program), undergraduate research (PSCI 4994 (https://catalog.vt.edu/search/?P=PSCI%204994) Undergraduate Research), independent study (PSCI 4974 (https://catalog.vt.edu/search/?P=PSCI%204974) Independent Study).

2 12 hours at the 3000 or 4000 level in one of the following departments: Agriculture & Applied Economics, Communication, Economics, Education, English, Geography, History, Philosophy, Psychology, Religion and Culture, Science and Technology Studies, Sociology, Urban Affairs & Planning, or a single Foreign Language.

3 PSCI majors (all options) must complete the requirements for the Pathways to General Education. More details and course listings can be found at the following link: https://www.pathways.prov.vt.edu.

Satisfactory Progress

To proceed satisfactorily toward a degree, a student must complete PSCI 1014 Introduction to United States Government and Politics, PSCI 1024 Comp Gov & Politics, and PSCI 2024 Research Methods in Political Science by the end of the semester in which 60 hours have been attempted; must maintain an overall GPA of at least 2.0 and must maintain an in major GPA of 2.0.

Graduation Requirements

Hours Requirement

A total of 120 hours is required to graduate with a Political Science degree.

In Major GPA

All of the courses in the Degree Core Requirements, Major Requirements, And Option Requirements are included in the in-major GPA. The overall and in-major GPAs required for graduation are 2.0.

Free Electives

Hours not required by the Curriculum for Liberal Education or the major are “free electives” and may be taken anywhere in the university.

Prerequisites

Some courses required for this major have pre-/co-requisite and/or enrollment requirements. Please refer to Undergraduate Course Catalog or consult your advisor for information about pre-/co-requisite and enrollment requirements. These courses are noted with Footnote 1.

Regarding Double Majors and Minors

The Department of Political Science offers majors in Political Science, International Studies, International Relations, National Security and Foreign Affairs, and International Public Policy as well as minors in Political Science, International Studies, International Relations, National Security and Foreign Affairs, and International Public Policy. Courses for the majors and minors overlap significantly. Therefore, Political Science majors may not pursue multiple majors and/or minors within the department.

Acceptable Substitutions

SOC 3204 for PSCI 2024

Foreign Language Requirements

Foreign Language

- Students who completed 3 years of a single foreign, classical, or sign language in high school have completed the requirement.
- Students who did not complete 3 years of a single foreign, classical, or sign language in high school may complete the requirement as follows:
  - Complete 2 years of a single foreign, classical, or sign language in high school plus an 1106 foreign language (e.g., FR, GR, SPAN) or

the equivalent in college (these 3 hours do count toward the 120 required for graduation and calculate into the GPA) **or**

- Complete an 1105-1106 foreign language (e.g., FR, GR, SPAN) grouping or the equivalent in college (these 6 hours do **not** count toward the 120 required for graduation)

Subtotal		66
Total Credits		**120**

[1] Limit on Repeatable Courses: No more than six credit hours in any one of the following courses may contribute toward the 54 hours required by the major: internship (PSCI 4754 Internship Program), undergraduate research (PSCI 4994 Undergraduate Research), independent study (PSCI 4974 Independent Study).

[2] PSCI majors (all options) must complete the requirements for the Pathways to General Education. More details and course listings can be found at the following link: https://www.pathways.prov.vt.edu.

Satisfactory Progress

To proceed satisfactorily toward a degree, a student must complete PSCI 1014 Introduction to United States Government and Politics, PSCI 1024 Comp Gov & Politics, and PSCI 2024 Research Methods in Political Science by the end of the semester in which 60 hours have been attempted; must maintain an overall GPA of at least 2.0 and must maintain an in major GPA of 2.0

Graduation Requirements

Hours Requirement

A total of 120 hours is required to graduate with a Political Science degree.

In Major GPA

All of the courses in the Degree Core Requirements, Major Requirements, and Option Requirements are included in the in-major GPA. The overall and in-major GPAs required for graduation are 2.0.

Free Electives

Hours not required by the Curriculum for Liberal Education or the major are “free electives” and may be taken anywhere in the university.

Prerequisites

Some courses required for this major have pre-/co-requisite and/or enrollment requirements. Please refer to Undergraduate Course Catalog or consult your advisor for information about pre-/co-requisite and enrollment requirements. These courses are noted with Footnote 1.

Regarding Double Majors and Minors

The Department of Political Science offers majors in Political Science, International Studies, International Relations, National Security and Foreign Affairs, and International Public Policy as well as minors in Political Science, International Studies, International Relations, National Security and Foreign Affairs, and International Public Policy. Courses for the majors and minors overlap significantly. Therefore, Political Science majors may not pursue multiple majors and/or minors within the department.

Acceptable Substitutions

SOC 3204 for PSCI 2024

Foreign Language Requirement

- Students who completed 3 years of a single foreign, classical, or sign language in high school have completed the requirement.
- Students who did not complete 3 years of a single foreign, classical, or sign language in high school may complete the requirement as follows:
  - Complete 2 years of a single foreign, classical, or sign language in high school plus an 1106 foreign language (e.g., FR, GR, SPAN) or the equivalent in college (these 3 hours do count toward the 120 required for graduation and calculate into the GPA) **or**
  - Complete an 1105-1106 foreign language (e.g., FR, GR, SPAN) grouping or the equivalent in college (these 6 hours do **not** count toward the 120 required for graduation)

Religion and Culture

Our Website (http://liberalarts.vt.edu/rlcl/)

Overview

The Department of Religion and Culture critically investigates religion, culture, and their relationships by problematizing what is commonly considered self-evident, especially since these subjects are intrinsic to understanding the human condition both locally and globally. In our research, teaching, and engagement, we seek to craft and apply new forms of critical inquiry that advance integrative intellectual thought. These paths of inquiry inform our engagement with students, who become well prepared to understand complex transformations throughout their lives, whether they pursue graduate studies or other life trajectories.

The department offers undergraduate degrees in Religion and Culture (RLCL) and Humanities for Public Service (HPS) and minors in American Studies, Appalachian Cultures and Environments, Judaic Studies, Medieval and Early Modern Studies, Middle East Studies, Popular Culture, and Religion.
