TABLE OF CONTENTS

UNDERGRADUATE

Welcome to the 2024-2025 Undergraduate Course Catalog.

While navigating our catalog and exploring course and program offerings, please note that our catalog is designed to display program requirements for the incoming class of students or those who have formally changed their catalog year to 2024-2025. In other words, students pursuing the 2024-2025 academic year requirements should utilize this catalog edition for their program requirements. Students pursing other academic year requirements should reference that corresponding year's catalog. Please see the below definitions for additional information.

Catalog Year: the specific graduation requirements a student is pursuing. The catalog year can be updated for a student in consultation with their academic advisor and with the approval of both the academic dean and Office of the University Registrar within the confines of policy. A student's catalog year may be altered by the university due to a period of non-enrollment.

Catalog Rights: A student has the right to pursue the curriculum associated with the year they begin attending Virginia Tech or a subsequent year as policy allows. Students who defer their attendance forfeit their initial catalog rights.

Admissions Information

Academic Credentials (Minimum First-year Entrance)

Academic preparation for admission to Virginia Tech is best achieved by sustaining an academically rigorous course selection throughout high school. Specifically, students must complete:
18 units of high school coursework, including:

- 4 units of English
- 3 units of math
- 2 units of laboratory science (chosen from biology, chemistry or physics)
- 2 units of social science (one must be history)
- 3 additional academic units (foreign language is highly recommended)
- 4 elective units

By the time they graduate from the university, students must meet a language study requirement. The minimum requirement may be met in middle/high school by completing 2 years of a single foreign or classical language. Some majors in the College of Liberal Arts and Human Sciences and the College of Science may require 3 years. The requirement also may be met after admission by earning 6 semester hours of college-level foreign or classical language credit. American Sign Language will satisfy this requirement.

Complete applications will be reviewed holistically by the Admissions Committee. Factors that are considered in the application review process include:

Academic review:

- Rigor of academic program within context of school
- Grades in courses, including trends over time
- Standardized test scores (if applicable; test-optional for students entering through Fall 2025)
- Major requested on the application (we review by major at Virginia Tech)

Personal review (in alphabetical order, not reflective of order of importance):

- Activities outside of the classroom like jobs, clubs, sports, family responsibilities, service, research, etc.
- Disciplinary record (Virginia Tech reserves the right to deny admission to students who have been dismissed or suspended for academic or disciplinary reasons or to those convicted of a felony or serious misdemeanor.)
- First-generation college student status
- Interest in the Corps of Cadets
- Participation in Virginia Tech pipeline programs
- Personal statements submitted through the Ut Prosim Profile
- Residency
- Veteran status

Recommendation letters and art portfolios are not considered for admissions review.

Competitive freshman applicants will have A/B grades in a rigorous curriculum and strong SAT or ACT scores (if the student chooses to submit scores).

Students who intend to compete in intercollegiate athletics are also required to meet all NCAA and ACC requirements for admission.

Prospective music students must schedule an audition with the music department. Applicants to the music major will receive a form for preferred audition date/time selection or video submission.

Admission (Contact Information and Visitation)

Prospective students and their families are welcome to visit the campus any time the university is in session. The Office of Undergraduate Admissions is open Monday-Friday from 8:00 a.m. to 5:00 p.m. Admission information sessions and student-led walking tours are offered regularly; reservations are required and should be made in the 'Visit' section at https://vt.edu/admissions (https://vt.edu/admissions/) for up-to-date schedule information. Virginia Tech neither requires nor schedules personal interviews for undergraduate admission.

Information on undergraduate admission may be obtained by contacting:

Office of Undergraduate Admissions (https://vt.edu/admissions.html)
Virginia Tech
Blacksburg VA 24061
Phone: 540-231-6267
Fax: 540-231-3242
E-mail: admissions@vt.edu
Web: https://vt.edu/admissions (https://vt.edu/admissions/)

Admission (Freshman Process)

When applying for admission as a freshman, the applicant must send the following materials to the Office of Undergraduate Admissions prior to the deadlines:

1. Official online application and application fee (non-refundable): $60 for first-year, transfer, and non-degree students; $70 for international students. **Please note:** *we expect students to apply online via the Common App; instructions at https://vt.edu/admissions.*
2. Applicants who have only attended high school in the US are required to submit self-reported grades and test scores through the online application process.
3. A final official transcript is requested after admission is offered and the student accepts the offer.
4. Official SAT/ACT scores if student does not apply "test-optional".
5. Discharge certificate (DD214) if the applicant is a veteran.
6. Domicile supporting documents (upon request) if the student is requesting in-state status.

An Early Action option is available to all first-year applicants. The deadline for Early Action application is November 15. Notification of admissions decision for this group is in late February.

First-year applicants applying for Regular Decision must submit a completed application by January 15 and will receive a notification of the admission decision in mid-March. If offered admission, the applicant will receive further instructions to complete the enrollment process. Applicants will have until the national deadline of May 1 to notify Virginia Tech of their decision to accept or decline their admission offer.

Admission (International Applicants)

International applicants for undergraduate admission should apply using the Common App. International student applicants must complete the following courses: 3 units of math (includes algebra and algebra II), 2 units of laboratory science (choose from biology, chemistry, or physics), and additional academic units (foreign language is highly recommended).

International first-year applicants are not required to submit SAT or ACT scores. In addition, international students whose native language is not English must document proficiency in the English language by submitting a TOEFL (Test of English as a Foreign Language) score, IELTS (International English Language Testing System) score, Pearson Tests of English PTE, or Duolingo score. Official copies of all scores must be submitted to the Office of Undergraduate Admissions.

English language requirements and exceptions can be found at https://www.vt.edu/admissions/international/requirements.html. Transfer applicants who have completed two semesters or terms of a non-ESL English composition course with above-average grades at an accredited U.S.-based college or university are not required to submit an English proficiency exam.

Students who have attended high school outside the US for any amount of time may submit the self-reported academic record (SRAR) or transcripts. Non-English transcripts and documents must be submitted in their original form, accompanied by a certified English translation. Unofficial documents and documents without accompanying English translations will not be accepted. Transfer applicants who attended a college or university outside of the US must submit their transcripts for admission review.

All university-level work completed outside the United States must be evaluated by a professional educational credential evaluation service. (A listing of credential evaluators is available at https://transferguide.registrar.vt.edu/Transfer-Requirements.html.) Financial aid is not available for international students at the undergraduate level. All undergraduate international applicants must certify that they have sufficient funds to pay for their education at Virginia Tech prior to being issued an I-20.

All international students holding F-1 and J-1 visas must purchase health and accident insurance.

The Cranwell International Center (https://international.vt.edu/) provides a full range of services to international students at Virginia Tech. Such services include an orientation program especially designed to meet the needs of new international students, as well as immigration counseling and counseling for personal and financial problems. The center also coordinates a variety of cross-cultural programs designed to facilitate interaction between American and international students.

Admission (Non-Degree-Seeking Students)

Virginia Tech makes every effort to provide educational opportunities to individuals who are not seeking a degree from the university, but who wish to continue their education by taking courses at Virginia Tech for college credit or, in some cases, degree credit. Such students include, but are not limited to, students enrolled in other colleges or universities and senior citizens. Non-degree applicants must be in good standing from all previously attended educational institutions with no serious disciplinary infractions. Students will not be competitive for admission if their most recent work is below a 2.0 or their cumulative GPA is below a 2.0.

Students who enroll at Virginia Tech under this program may not be considered candidates for degrees unless they apply formally for regular undergraduate or graduate admission. At that time, minimum requirements must be met and the applicant's academic and disciplinary record at Virginia Tech and all other colleges and universities attended would be reviewed within the context of the current competition for regular admission.

Applying as a Non-Degree-Seeking Student

When applying as a non-degree-seeking student, the applicant must send the following materials to the admissions office:

- Official online application for admission as a non-degree-seeking student (available at https://www.vt.edu/admissions/undergraduate/apply/non-degree-checklist.html) plus a $60 application fee (non-refundable).
- Unofficial transcripts from all colleges and/or universities attended.

The application should be submitted by the published deadline for the term selected (May 1 for Summer, August 1 for Fall, December 1 for Spring). If accepted, the applicant will receive an official notice of admission via e-mail along with other related instructions.

Restrictions on Non-Degree-Seeking Students

- Students who have been denied admission to Virginia Tech as freshmen or transfer students for the same term will not be eligible for reconsideration as non-degree-seeking students.
- Non-degree-seeking students will be able to register on a space-available basis only. Until the deadline for adding classes, such

students may be required to drop a class if the number of degree-seeking students exceeds the number of available spaces in a particular class.
- Non-degree-seeking students will be permitted to attempt up to 30 hours at Virginia Tech, not to exceed 11 hours in any one term during the academic year or 5 hours in either summer school term.
- Non-degree-seeking students are required to maintain an overall GPA of at least 2.0 for continued enrollment.
- Non-degree-seeking students are not eligible for financial aid, scholarships or on-campus housing.
- Students who have previously been enrolled at Virginia Tech may not reapply as non- degree-seeking students. Former students who left the university in good standing may register for classes through Hokie SPA (http://www.hokiespa.vt.edu (http://www.hokiespa.vt.edu/)).

Admission (Transfer Process)

Admission is offered on a competitive basis to transfer applicants with the strongest academic records and with completed courses needed in their intended major.

Competitive applicants will achieve mostly Bs or better. In majors where applications exceed available space, the competitive grades will be considerably higher. Architecture and industrial design are not available for transfer applicants. The most important factors considered for admission are: completion or substantial progress toward completing required, strongly recommended, and recommended courses as stated in our Transfer Admission Roadmaps; and overall GPA in college course work. Transfer Admission Roadmaps are available at: https://www.vt.edu/admissions/transfer/roadmaps.html.

The applicant's overall grade point average and the quality of the student's former academic program are critical factors in admissions considerations. Most transfer applicants who are offered admission have a minimum GPA of 3.0 (on a 4.0 scale). Prospective applicants from the Virginia Community College System will find information about guaranteed admissions agreements at https://vt.edu/admissions/transfer/vccs.html.

Transfer applicants must send the following application materials to the Office of Undergraduate Admissions:

- Official online application and application fee (non-refundable): $60 for first-year, transfer, and non-degree students; $70 for international students. **Please note:** *we expect students to apply online via the Common App; instructions at https://vt.edu/admissions.*
- Applicants are required to submit self-reported grades and test scores through the online application process.
- A final official transcript is requested after admission is offered and the student accepts the offer.
- Discharge certificate (DD214) if the applicant is a veteran.
- Domicile supporting documents if the student is requesting in-state status.

Completed applications are considered and decisions are made by the Admissions Committee. If offered admission, the applicant will receive an official notice of admission and related forms.

Transfer applications for summer/fall admission are due March 1, and students will receive notification of the admissions decision by mid-April. Students offered admission must respond to the offer by June 1 (May 15 for summer entry). Transfer applications for spring admission are due October 1, decisions are posted by mid-November, and responses are due December 1.

Advanced Placement

Through Advanced Placement examinations administered in May of each year by the College Entrance Examination Board, students receiving required scores may be considered for Advanced Placement credit in certain subjects in which they show proficiency. Final determination of credit will be made after the test results have been evaluated by the university. Students must have scores sent directly to the Office of the University Registrar at Virginia Tech (school code 5859) from the College Entrance Examination Board. If scores were not directed to the University Registrar at the time of the examination, contact the College Board at (888) 308-0013.

Credits allowed for advanced placement are shown as transfer hours on Hokie SPA, and may not exceed 38 credit hours. Refer to the Office of the University Registrar's website at https://www.registrar.vt.edu/Transferable-Credit.html for information and to view the AP Credit Table. Questions about Advanced Placement credit should be directed to the Office of the University Registrar at transfercredit@vt.edu.

Advanced Standing

Conditional Advanced Standing refers to an arrangement that permits a student, based on SAT or ACT scores, to place in a course without completing the prerequisite. This process also awards credit for the prerequisite after successful completion of the course. Virginia Tech offers Conditional Advanced Standing for specific English and Math courses based upon the fulfillment of the corresponding requirements. In order to be eligible for advanced standing a student must present SAT or ACT scores. Placement will display on the demographic information page of Hokie Spa prior to orientation.

Advanced standing without credit will be allowed for satisfactory completion of one to five years of study in a foreign language in a secondary school.

Advanced standing with credit will be awarded for students who qualify and meet the criteria as established by university policy. The criteria for the validating courses is it must be the first attempt and a grade of "C-" or better must be earned at Virginia Tech, or a "C" or better in transfer credit. Credit will be awarded automatically at the completion of each semester.

Applying to Graduate School

Students interested in working toward an advanced degree at Virginia Tech should contact the Graduate School for an application (http://www.graduateschool.vt.edu).

Undergraduate Students Enrolling in Graduate Programs or Courses
Virginia Tech offers the opportunity to outstanding undergraduate students (Seniors/Juniors) nearing the end of their bachelor's degree program to enroll and receive credit for coursework taken to apply toward a future graduate program. Seniors with a GPA of 3.0 or better may apply to be admitted to the Dual Student Status for their last semester to take graduate-level courses. Juniors with a GPA of 3.3 or better may apply for admission in the Accelerated Undergraduate/Graduate Degree Program to take graduate courses during the senior year. Please check with your department to check for specific admissions requirements. Information about these programs is available on the Graduate School website (http://www.graduateschool.vt.edu (http://www.graduateschool.vt.edu/))

Undergraduate Students Enrolling in Graduate Programs or Courses

Virginia Tech offers the opportunity to outstanding undergraduate students (Seniors/Juniors) nearing the end of their bachelor's degree program to enroll and receive credit for coursework taken to apply toward a future graduate program. Seniors with a GPA of 3.0 or better may apply to be admitted to the Dual Student Status for their last semester to take graduate-level courses. Juniors with a GPA of 3.3 or better may apply for admission in the Accelerated Undergraduate/Graduate Degree Program to take graduate courses during the senior year. Please check with your department to check for specific admissions requirements. Information about these programs is available on the Graduate School website (http://www.graduateschool.vt.edu)

Taking Graduate-Level Courses

Undergraduate students wishing to enroll in graduate-level courses may do so. You should review any restrictions listed for the course in the Timetable of classes and speak with the faculty member teaching the course to obtain permission. Please note that enrollment in a graduate-level course will not allow you to receive graduate credit for the course if you become a master's or doctoral degree-seeking student without first being admitted to either the Dual or Accelerated Undergraduate/Graduate Degree Program.

Applying to Summer Sessions

Virginia Tech offers the option of two summer sessions of approximately six weeks each or one full twelve-week session. Credit courses on other than the regular time schedule, including intensive courses for teachers, are also offered. The summer sessions program features a comprehensive offering of courses and special programs, including online courses, study abroad programs, and a few undergraduate courses in Northern Virginia.

Enrolled Virginia Tech students, as well as visiting students, are invited to participate in summer sessions. Enrolled students follow the same registration procedure for summer courses as they would for fall and spring. New or visiting students may enroll in summer sessions in either a degree or non-degree status. Such students should visit www.summer.vt.edu (https://www.summer.vt.edu/) for information. Entering freshmen and transfer students should contact the Office of Undergraduate Admissions to be cleared for summer entry. Freshman and transfer applicants wishing to change term of entry to summer should e-mail appchange@vt.edu. Entering graduate students should contact the Graduate School (http://www.graduateschool.vt.edu/).

On-campus housing is available in the summer. For more information, contact 540-231-6207 or housing@vt.edu, or go to www.housing.vt.edu (http://www.housing.vt.edu/).

Summer students have access to most university academic, athletic, and recreational facilities and programs, including the Horticulture Gardens and miles of cycling and walking trails. In addition, the Summer Arts Festival (https://www.performingarts.vt.edu/summer-arts-festival.html) provides free movies, concerts, and exhibits.

Additional information is available at www.summer.vt.edu (http://www.summer.vt.edu/)

Entrance Tests

SAT/ACT scores are optional for all first-year applicants entering through Fall 2025. Tests should be taken such that scores are available before the materials deadline listed at https://www.vt.edu/admissions/undergraduate/apply/dates-and-deadlines.html. The tests are given at centers in Virginia, in all other states, and in many foreign countries. Domestic students will self report their test scores on the self-reported academic record after submitting the online application. International students and students who've attended high school outside the US who wish to report SAT/ACT scores can either self-report or have scores sent directly from the testing agency (SAT: 5859; ACT: 4420). Once offered admission and the applicant accepts the offer, an official test score must be sent directly to the admissions office by the testing agency. Virginia Tech's CEEB number for reporting test scores is 5859. The ACT code is 4420.

International and domestic applicants whose native language is not English are required to provide English proficiency scores from one of the options listed at https://www.vt.edu/admissions/international/requirements.html.

Equal Opportunity / Affirmitative Action Statement

Virginia Tech does not discriminate against employees, students, or applicants on the basis of age, color, disability, gender, national origin, political affiliation, race, religion, sexual orientation or veteran status. Discrimination or harassment on any of these bases is prohibited by Policy 1025 (https://policies.vt.edu/1025.pdf), "Anti-Discrimination and Harassment Prevention Policy."

The university is subject to Titles VI and VII of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, Sections 503 and 504 of the Rehabilitation Act of 1973, the Americans with Disabilities Act of 1990, the Age Discrimination in Employment Act, the Vietnam Era Veterans' Readjustment Assistant Act of 1974, the Federal Executive Order 11246, Virginia's State Executive Order Number Two, and all other rules and regulations that are applicable.

Those having questions or concerns about Policy 1025, any of these regulations, or related issues should contact:

Virginia Tech Human Resources
Office for Equity and Access
South Gate Center, Ste. 179 (0319)
Blacksburg, VA 24061
(540) 231-9331

International Baccalaureate

Virginia Tech recognizes the International Baccalaureate (IB) diploma or certificate by awarding credit in accordance with institutional policies. The university encourages completion of the IB diploma. Students must have transcripts sent directly to the Office of the University Registrar at Virginia Tech from the IB Board. If scores were not directed to the University Registrar upon completion of the diploma or certificate, refer to the IB website at http://www.ibo.org (http://www.ibo.org/) for information on how to have the results sent.

Score requirements to receive credit may be viewed at https://www.registrar.vt.edu/Transferable-Credit.html

With the IB Diploma, credit is awarded for Higher Level (HL) courses based on minimum scores shown in the HL Credit Table. Credit for only one Standard Level (SL) course is awarded provided the minimum score

shown in the SL Credit Table is earned. A maximum of 38 hours may be awarded.

With the IB Certificate, credit is awarded for Higher Level (HL) courses based on minimum scores shown in the HL Credit Table. No credit is awarded for Standard Level (SL) courses. In addition, no credit is awarded for Theory of Knowledge or Extended Essay. A maximum of 30 hours may be awarded.

Questions about IB credit should be directed to the Office of the University Registrar at transfercredit@vt.edu.

New Student Programs

New Student Programs creates transitional opportunities to prepare new students for academic and co-curricular experiences at Virginia Tech through cultivating an environment that embraces learning, diversity, inclusion, and welcoming of all new Hokies.

Orientation

Orientation at Virginia Tech is a hybrid program that combines virtual experiences and in-person events so students can engage in a variety of ways. During virtual orientation, entering students (first-year, transfer, and international) will complete virtual orientation modules, learn about academics, campus resources, policies, and next steps in their transition to Virginia Tech. Orientation is designed to give incoming Hokies and their guests the information they need to feel confident and comfortable about a collegiate career at Virginia Tech.

Spring Orientation: Students who will enter Virginia Tech in the spring semester will receive information via email regarding the required virtual orientation, where entering spring students will learn about academics, support services, and their next steps in the transition to Virginia Tech.

Information is available at https://students.vt.edu/transition/virtual_orientation.html

Weeks of Welcome

Weeks of Welcome (WoW) is part of the extended orientation and transition experience- and the official start of the Virginia Tech academic experience for new Hokies. Signature events include college and academic sessions (including College Social), residential well-being community days, Living-Learning programming for students residing in an LLC, Hokie Hi spirit rally, transfer student luncheon, international student orientation. Event details are available on the Hokies on Track app.

New Student and Family Programs | 540-231-3284 | https://students.vt.edu/transition.html | orientation@vt.edu

Requirements (Computer)

Virginia Tech requires that entering students have a laptop or tablet computer and strongly recommends the computer meets (or exceeds) the university baseline specifications. Each spring, the university establishes baseline specifications for students entering in the fall of the next academic year. Transfer students are subject to the requirements that were in place for students at the same class level into which they enter. University baseline requirements are listed under the University Studies (undecided) major. If you have declared a major, review the list of specifications for your major. Some majors recommend a different configuration than the minimum outlined by the university. Complete information about the computer requirement can be found online at compreq.vt.edu (https://www.compreq.vt.edu/).

Student Health History

Each student entering Virginia Tech must furnish a health history form, completed by a home physician, for the University Student Health Services. The form will be available online to applicants who accept the offer of admission. Failure to meet Health Services standards may result in dismissal from the university. Information is available at http://www.healthcenter.vt.edu (http://www.healthcenter.vt.edu/).

Transfer Student Credentials Evaluation

For new incoming students, official final academic transcripts from all colleges previously attended should be submitted to the Office of Undergraduate Admissions. Courses from another institution in which a grade of "C-" or lower was earned, and courses taken on a pass/fail or audit basis, are not acceptable for transfer credit. Only grades of "C" or higher in courses consistent with those offered at Virginia Tech are certified for transfer credit. Grades in transfer courses do not transfer or appear on a student's record at Virginia Tech, and are not included in a student's Virginia Tech GPA computation. Credit will be awarded based on Virginia Tech policies.

AP, IB, Cambridge, and CLEP scores should be sent directly to the University Registrar at Virginia Tech from the testing services. Credit will not be awarded from high school transcripts or another institution's transcripts. Refer to the Office of the University Registrar's website at https://www.registrar.vt.edu/Transferable-Credit.html for contact information for testing services and to view the AP, IB, Cambridge, and CLEP Credit Tables.

From two-year colleges (like community college) students can transfer a maximum of 50% of their intended VT degree--which in many cases is 60 credits. From a four-year institution, students can transfer up to 75% of their intended VT degree worth of transferable credit. AP credit has a different "cap" of 38 credits maximum. To receive transfer credit, official academic transcripts from all colleges previously attended should be received in the Office of the University Registrar no later than the end of the first term of the student's first enrollment at Virginia Tech. Class standing will be based upon the number of credits designated as acceptable for meeting graduation requirements. All transfer credits are used in the computation of academic eligibility.

International transfer students are required to submit additional documentation. For a list of required documentation for Admissions see https://vt.edu/admissions/undergraduate/apply/checklists.html. The Office of the University Registrar requires documentation in addition to what is needed for Undergraduate Admissions, in order to evaluate. For the required information please see https://transferguide.registrar.vt.edu/Transfer-Requirements.html

Transfer Policy of Virginia Community College Students

Admission preference shall be given to transfer students who have completed a transferrable A.A., A.S., or A.A.S. (Associate in Arts and Sciences) at the Virginia Community College System or Richard Bland College. While some courses from the Associate of Applied Science degree from a Virginia Community College or Richard Bland College may transfer to Virginia Tech, the Associate of Applied Science degree does not transfer.

Per *State Policy on Transfer*, students who receive their associate degrees from transfer programs at a Virginia Community College or Richard Bland College, based upon a baccalaureate-oriented sequence of courses

appropriate for their major, and are offered admission to Virginia Tech will be granted junior level status upon admission. Additionally, these students will have fulfilled the requirements of the Curriculum for Liberal Education (CLE) or Pathways to General Education, except for departments with specific general education requirements. However, it may take such students longer than two years to complete the baccalaureate degree at Virginia Tech because of major prerequisites and other circumstances or requirements. Transfer students shall have the same opportunities as other students in areas of dining programs, registration, and scholarships and financial aid.

Complete Virginia Tech Transfer Guide (https://www.tranguide.registrar.vt.edu/)

University of Cambridge International Examinations

Cambridge International exams, commonly known as A levels or AS levels, are administered by the University of Cambridge. Virginia Tech recognizes and awards credit for University of Cambridge International Exams based upon the receipt of an official transcript. Students must request an official transcript directly from Cambridge International Examinations or other designated testing agency (Edexcel, etc.) and have this sent to the Office of the University Registrar. Credit will not be considered based on a high school transcript. Credit can be viewed on Hokie SPA under the grades menu. A maximum of 38 credit hours may be awarded.

Refer to the Office of the University Registrar's website at https://www.registrar.vt.edu/Transferable-Credit.html for information and to view the Cambridge Credit Table.

Questions about Cambridge credit should be directed to the Office of the University Registrar at transfercredit@vt.edu

Aerospace and Ocean Engineering (AOE)

AOE 2024 - Thin-Walled Structures (3 credits)
Basic structural elements of stringer-stiffened thin-walled structures, forces, moments, stresses, and deformation of segmented bars/beams, flexure stress and deflection of beams principal plane, plane of bending and plane of loading for beams with asymmetric cross sections, stresses, and twist due to torsion, shear flow and shear center in open and closed stiffened thin-walled structures, stiffened multicell beams, materials properties and selection.
Prerequisite(s): (ESM 2104 and ESM 2204) or ESM 2114 and (MATH 2224 or MATH 2224H or MATH 2204 or MATH 2204H or MATH 2406H)
Corequisite(s): MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 2054 - Electronics for Aerospace and Ocean Engineers (3 credits)
Electrical circuits. Discrete passive and active electrical components. Phasors and impedence. AC power analysis. Digital electronics. Electronics for autonomous and piloted aerospace and ocean systems. Electronics for vehicle navigation, guidance, and control. Instrumentation and data acquisition systems.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 2074 - Computational Methods (2 credits)
Solving engineering problems using numerical methods and software, truncation and round-off error, root finding, linear and polynomial regression, interpolation, splines, numerical integration, numerical differentiation, solution of linear simultaneous equations. A grade of C- or better is required in the prerequisite.
Prerequisite(s): (ENGE 1216 or ENGE 1434 or ENGE 1414) and (CS 1044 or CS 1064 or CS 1114)
Instructional Contact Hours: (1.5 Lec, 1.5 Lab, 2 Crd)

AOE 2104 - Introduction to Aerospace Engineering and Aircraft Performance (3 credits)
Overview of aerospace engineering from a design perspective; introductory aerodynamics, lift, drag, and the standard atmosphere; aircraft performance, stability, and control; propulsion; structures; rocket and spacecraft trajectories and orbits.
Prerequisite(s): PHYS 2305
Corequisite(s): ESM 2104 or ESM 2114.
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 2114 - Fundamentals of Flight Training AOE (3 credits)
Foundational course to prepare students with knowledge of basic aeronautics to take the Federal Aviation Administration Knowledge Exam, a requirement for the award of a private pilots license. Explores airplane systems and functions, flight operations, weather, aeronautical navigation, communications, human factors, and federal aviation regulations.
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 2204 - Introduction to Ocean Engineering (3 credits)
Introduction to the design of ocean vehicles and offshore structures. Buoyancy. Hull geometry, body plan drawing, coefficients of form. Hydrostatic calculations. Intact and damaged stability of ocean vehicles and offshore structures. Large angle stability. Stability criteria for design and related rules and regulations. Marine economics.
Prerequisite(s): PHYS 2305
Corequisite(s): MATH 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 2664 - Exploration of the Space Environment (3 credits)
This introductory course covers a broad range of scientific, engineering, and societal aspects associated with the exploration and technological exploitation of space. Topics covered include: science of the space environment, space weather hazards and societal impacts, orbital mechanics and rocket propulsion, spacecraft subsystems, applications of space-based technologies.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 2164

AOE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 3014 - Fluid Dynamics for Aerospace and Ocean Engineers (3 credits)
Fundamentals of fluids: stress, statics, viscosity, laminar and turbulent flow. Conservation of mass and momentum. Vorticity, circulation, and lift. Navier-Stokes equations. Ideal flow in two dimensions, streamlines, stream function, velocity potential, superposition. Thin airfoil theory. Physics of laminar and turbulent boundary layers and of transition. Boundary layer equations and basic tools for boundary layer calculation. Collaborative problem solving.
Prerequisite(s): (AOE 2104 or AOE 2204) and (MATH 2214 or MATH 2214H or MATH 2406H) and ESM 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3034 - System Dynamics and Control (3 credits)
Free and forced response of first, second, and higher order linear, time-invariant (LTI) systems in frequency and time domains. Modeling of low-order mechanical systems. Transmission and absorption of vibrations. Transient and steady state performance specifications. Introduction to closed-loop control using proportional-integral-derivative (PID) feedback. Closed-loop stability analysis using root locus method.
Prerequisite(s): ESM 2304 and (MATH 2214 or MATH 2214H or MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3044 - Boundary Layer and Heat Transfer (3 credits)
Concepts of viscous flows and physical properties equations of laminar motion with heat and mass transfer; exact and approximate solutions; finite-difference methods; transition to turbulence; analysis in turbulent flows. Conduction and convective heat transfer.
Prerequisite(s): AOE 3014 and (AOE 3164 or AOE 3264 or ME 2134 or ME 3134) and MATH 4564
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3054 - Experimental Methods (3 credits)
Fundamental terminology of experimental work and testing in aerospace and ocean engineering. Flow quantities, displacement, and strain measurements of simple structures in both static and dynamic settings. Analog and digital instrumentation. Data acquisition systems and appropriate software. Through teamwork design, prepare, and conduct an experiment, and document its results and findings. Ethics of technical reporting, through proper external source citation and honestly describing procedures and reporting data. Statistical concepts.
Prerequisite(s): AOE 2024 and AOE 2054 and AOE 3014 and AOE 3034
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 3114 - Aerodynamics & Compressibility (3 credits)
Inviscid aerodynamics. Wings and wing theory for low speed flight. How and when compressibility becomes important. Integral form of the conservation equations and thermodynamics. One-dimensional steady compressible flow, nozzle flows. Compressible flow with heat addition. Oblique shock waves and Prandtl-Meyer expansions. Supersonic airfoils. Aerodynamics at subsonic and transonic speeds.
Prerequisite(s): AOE 3014
Corequisite(s): AOE 3164
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3124 - Aerospace Structures (3 credits)
Inertia loads on aerospace structures, introduction to 3D elasticity including strain-displacement relations, stress-strain relations, stress transformation, and equations of equilibrium, plane stress and plane strain elasticity, stress concentration factors, aerospace materials and failure criteria, margins of safety analysis, plate bending, structural stability.
Prerequisite(s): AOE 2024 or AOE 3024
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3134 - Air Vehicle Dynamics (3 credits)
Nonlinear kinematic and dynamic equations of aircraft motion; estimation of stability derivatives from aircraft geometry; determination of steady motions; linearization; longitudinal and lateral-directional small perturbation equations; static and dynamic stability of equilibrium flight.
Prerequisite(s): AOE 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3144 - Space Vehicle Dynamics (3 credits)
Attitude representations and equations of rotational motion for rigid and multibody spacecraft; attitude determination; linearization and stability analysis of steady motions; effect of the gravity gradient; torque thrusters and momentum exchange devices.
Prerequisite(s): AOE 3034 and AOE 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3154 - Astromechanics (3 credits)
This course teaches the application of Newtons Laws to the dynamics of spaceflight. Topics include the two-body problem equations of motion, Keplers Laws, classical orbital elements, energy and time-of-flight relations, orbit specification and determination, orbital maneuvering and orbit transfers, patched conic approximations, and relative motion.
Prerequisite(s): ESM 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3164 - Aerothermodynamics and Propulsion Systems (3 credits)
The fundamental principles of aerothermodynamics applied to aerospace propulsion system performance analysis and design. Foundations of thermodynamics, heat transfer, compressible fluid mechanics, and combustion. Applications of principles to air-breathing and rocket engines.
Prerequisite(s): AOE 3014
Corequisite(s): AOE 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3214 - Ocean Wave Mechanics (3 credits)
Introduction to theory of wave in deep and shallow water, including wave generation and propagation. Description of wave statistics and spectral representation for realistic ocean conditions. Introduction to ocean acoustics.
Corequisite(s): 3014, MATH 4564
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3224 - Ocean Structures (3 credits)
Overview of surface ship, submarine and offshore structural systems, materials and loadings. Application of beam and plate bending and buckling theories. Frame structural analysis. Fatigue analysis.
Prerequisite(s): AOE 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3234 - Ocean Vehicle Dynamics (3 credits)
Nonlinear kinematic and dynamic equations of rigid vessel motion in water; hydrostatic and hydrodynamic forces in calm water; motion response to regular and irregular waves; single, multiple and coupled motions degrees of freedom; spectral analysis of response of random seas; statistical analysis of extreme motion response; impact of seakeeping criteria on ocean vehicles design; principles of hydroelasticity; principles of maneuvering of surface and underwater vehicles.
Prerequisite(s): AOE 3014 and AOE 3034 and AOE 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3264 - Thermodynamics and Marine Propulsion (3 credits)
Fundamental thermodynamics and power cycles; marine propulsion plants and transmission systems; methods of estimating resistance of ocean vehicles; propulsion devices and their efficiencies; introduction to propeller theory; cavitation.
Prerequisite(s): AOE 2204 and AOE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3354 - Avionics Systems (3 credits)
A systems approach to avionics architecture for both civil and military aircraft. Emphasis on system architecture, accepted development processes, sensors, navigation, and certification. Evolution of communications, data models, and sensors required to support autonomous flight as well as the exposures to physical cyber security threats faced by flight management, navigation, and data interchange systems.
Prerequisite(s): AOE 2054 or ECE 2054
Corequisite(s): AOE 3034 or ME 3534 or ME 4504
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3564 - Principles of Project Design and Management (3 credits)
Fundamental principles of model-based project design. Creation of plans for successful development of complex systems such as air, space, and ocean vehicles. Understanding of engineering project performance including emergent scope, cost, and schedule. Systems thinking and systems engineering methods applied to engineering projects as systems: stakeholders, scope, dependence and teamwork dynamics; cost and schedule tradespace; risk assessment and mitigation strategies; and choices in project architecture and organization. Basics of effective teamwork, team building, leadership, and management. Basic understanding of ethical reasoning and conflict management aspects. Oral presentations for design reviews. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 3804 - Special Topics in Aircraft Systems (3 credits)
Advanced undergraduate topics in aircraft systems. Covers technical, environmental, and economic challenges and opportunities in contemporary and future aircraft. Function and integration of propulsion, airborne auxiliary power, navigation, flight controls, cargo, landing gear, cabin systems, fuel, and other subsystems. May be repeated with different content for a maximum of 9 credits.
Prerequisite(s): AOE 2104
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

AOE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 4004 - State-Space Control (3 credits)
Control design and analysis for linear, state-space system models. Properties of linear, time-invariant control systems: Input/output stability, internal stability, controllability, and observability. Performance and robustness measures. State feedback control design methods: pole placement, linear-quadratic control. State observers and output feedback control. Applications to control of mechanical systems including ocean, atmospheric, and space vehicles.
Prerequisite(s): AOE 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4024 - An Introduction to the Finite Element Method (3 credits)
The finite element method is introduced as a numerical method of solving the ordinary and partial differential equations arising in fluid flow, heat transfer, and solid and structural mechanics. The classes of problems considered include those described by the second-order and fourth-order ordinary differential equations and second-order partial differential equations. Both theory and applications of the method to problems in various fields of engineering and applied sciences will be studied.
Prerequisite(s): (CS 3414 or MATH 3414 or AOE 2074 or ESM 2074) or (MATH 2224 or MATH 2224H or MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4734

AOE 4034 - Introduction to Mechanical and Structural Vibrations (3 credits)
Free and forced vibrations of single-degree-of-freedom systems, multi-degree-of-freedom systems, and continuous systems. Natural frequencies and mode shapes. Proportional and nonproportional damping. Response to harmonic, periodic, and nonperiodic excitations. Boundary-value problem for continuous systems. Eigenvalue problem for rods, beams, and plates. Vibration response of system in modal coordinates. Approximate methods including Assumed Modes, the Rayleigh-Ritz method, and Method of Weighted Residuals.
Prerequisite(s): AOE 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4054 - Stability of Structures (3 credits)
Introduction to the methods of static structural stability analysis and their applications. Buckling of columns and frames. Energy method and approximate solutions. Elastic and inelastic behavior. Torsional and lateral buckling. Use of stability as a structural design criterion.
Prerequisite(s): AOE 2024 or AOE 3024 or CEE 3404
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4444

AOE 4064 - Fluid Flows in Nature (3 credits)
Course designed to build upon and broaden a basic traditional engineering knowledge of fluid flows into areas concerning a variety of natural occurrences and phenomena that involve fluid motions in important ways. Drag of sessile systems and motile animals, gliding and soaring, flying and swimming, internal flows in organisms, low Reynolds number flows, fluid-fluid interfaces, unsteady flows in nature and wind engineering.
Prerequisite(s): AOE 3014 or CEE 3304 or ESM 3024 or ME 3404 or ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4065 - Air Vehicle Design (3 credits)
Fundamental principles of innovative air vehicle design. Qualitative and quantitative decision-making tools. Multidisciplinary design teams with emphasis on ethics and professionalism. Project risks and mitigation plans. Oral presentations for design reviews. Written engineering design report. 4065: Proven conceptual design process. Tradeoff studies. Air vehicle weight estimation. Air vehicle concepts feasibility assessment; 4066: Preliminary design tools and processes. Efficient and light-weight air vehicles. Air vehicle design validation.
Prerequisite(s): AOE 2104 and AOE 3054 and AOE 3114 and AOE 3124 and AOE 3134 and AOE 3164
Corequisite(s): AOE 4105
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4066 - Air Vehicle Design (3 credits)
Fundamental principles of innovative air vehicle design. Qualitative and quantitative decision-making tools. Multidisciplinary design teams with emphasis on ethics and professionalism. Project risks and mitigation plans. Oral presentations for design reviews. Written engineering design report. 4065: Proven conceptual design process. Tradeoff studies. Air vehicle weight estimation. Air vehicle concepts feasibility assessment; 4066: Preliminary design tools and processes. Efficient and light-weight air vehicles. Air vehicle design validation.
Prerequisite(s): AOE 4065
Corequisite(s): AOE 4106
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4084 - Engineering Design Optimization (3 credits)
Use of mathematical programming methods for engineering design optimization including linear programming, penalty function methods, and gradient projection methods. Applications to minimum weight design, open-loop optimum control, machine design, and appropriate design problems from other engineering disciplines.
Prerequisite(s): MATH 2224 or MATH 2204 or MATH 2204H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4084

AOE 4105 - Experiments for Aerospace Design (1 credit)
Methods for the planning, implementation, assessment and use of experiments in aerospace design problems. 4105: Experiment design, advanced sensor systems, additive manufacturing, uncertainty, data analysis and reporting. 4106: Application of experiments as an integral component of engineering design. Co: 4066 or 4166 for 4106.
Prerequisite(s): AOE 3054
Corequisite(s): 4065 or 4165 for 4105. 4066 or 4166 for 4106.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

AOE 4106 - Experiments for Aerospace Design (1 credit)
Methods for the planning, implementation, assessment and use of experiments in aerospace design problems. 4105: Experiment design, advanced sensor systems, additive manufacturing, uncertainty, data analysis and reporting. 4106: Application of experiments as an integral component of engineering design. Co: 4066 or 4166 for 4106.
Prerequisite(s): AOE 4105
Corequisite(s): 4065 or 4165 for 4105. 4066 or 4166 for 4106.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

AOE 4114 - Applied Computational Aerodynamics (3 credits)
Development of computational methods for application to wing aerodynamic problems. Incompressible airfoil codes. Panel methods and vortex lattice methods. Finite difference techniques. Transonic and supersonic applications.
Prerequisite(s): AOE 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4124 - Configuration Aerodynamics (3 credits)
Aerodynamic design of flight vehicles, with emphasis on nonlinear flowfields and configuration concepts. Aerodynamic analysis and design for transonic, supersonic, hypersonic flows, and low speed high alpha flight. Includes case studies of classic configurations and aerodynamic design papers.
Prerequisite(s): AOE 3014 and AOE 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4140 - Spacecraft Dynamics and Control (3 credits)
Space missions and the way pointing requirements affect attitude control systems. Rotational kinematics and attitude determination algorithms. Modeling and analysis of the attitude dynamics of space vehicles. Rigid body dynamics, effects of energy dissipation. Gravity gradient, spin, and dual spin stabilization. Rotational maneuvers. Environmental torques. Impacts of attitude stabilization techniques on mission performance.
Prerequisite(s): AOE 3034 and (AOE 4134 or AOE 3154)
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4165 - Space Vehicle Design (3 credits)
Fundamental principles of innovative space vehicle design. Qualitative and quantitative decision-making tools. Multidisciplinary design teams with emphasis on collaboration, ethics, and professionalism. Project risks and mitigation plans. Oral presentations for design reviews. Written engineering design report. 4165: Proven conceptual design process. Parametric analyses. Space vehicle mass estimation. Space vehicle concepts feasibility assessment; 4166: Preliminary design tools and processes. Efficient and light-weight space vehicles. Space vehicle design validation.
Prerequisite(s): AOE 2104 and AOE 3054 and AOE 3114 and AOE 3124 and AOE 3144 and AOE 3154 and AOE 3164
Corequisite(s): AOE 4105
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4166 - Space Vehicle Design (3 credits)
Fundamental principles of innovative space vehicle design. Qualitative and quantitative decision-making tools. Multidisciplinary design teams with emphasis on collaboration, ethics, and professionalism. Project risks and mitigation plans. Oral presentations for design reviews. Written engineering design report. 4165: Proven conceptual design process. Parametric analyses. Space vehicle mass estimation. Space vehicle concepts feasibility assessment; 4166: Preliminary design tools and processes. Efficient and light-weight space vehicles. Space vehicle design validation.
Prerequisite(s): AOE 4165
Corequisite(s): AOE 4106
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4174 - Spacecraft Propulsion (3 credits)
Spacecraft propulsion systems and their applications in orbital, interplanetary, and interstellar flight. Rocket propulsion fundamentals; advanced mission analysis; physics and engineering of chemical rockets, electrical thrusters, and propellantless systems (tethers and sails); spacecraft integration issues.
Prerequisite(s): AOE 3164 or AOE 4234 or ME 4234
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ME 4174

AOE 4205 - Experiments for Ocean Vehicle Design (1 credit)
4205: Facilities, instrumentation, and experiments pertinent to ocean engineering in the field of flow measurements and resistance and propulsion tests of surface and underwater vehicles. Analysis and communication of experimental data through technical report writing. 4206: Assessment of ocean system design through experiments, data analysis, and technical report writing.
Prerequisite(s): AOE 3054
Corequisite(s): AOE 4265
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

AOE 4206 - Experiments for Ocean Vehicle Design (1 credit)
4205: Facilities, instrumentation, and experiments pertinent to ocean engineering in the field of flow measurements and resistance and propulsion tests of surface and underwater vehicles. Analysis and communication of experimental data through technical report writing. 4206: Assessment of ocean system design through experiments, data analysis, and technical report writing.
Prerequisite(s): AOE 3054
Corequisite(s): AOE 4266
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

AOE 4224 - Atmospheric and Ocean Vehicle Model Identification (3 credits)
Atmospheric and ocean vehicle dynamic modeling from experimental data including: experiment design; model structure determination; parameter and state estimation; and data analysis methods. Regression and maximum likelihood approaches. Time and frequency domain formulations. Applications to airplanes, rotorcraft, surface vessels, and undersea vehicles.
Prerequisite(s): AOE 3134 or AOE 3234
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4234 - Aerospace Propulsion Systems (3 credits)
Design principles and performance analysis of atmospheric and space propulsion engines and systems. Application of thermodynamics, compressible fluid flow and combustion fundamentals to the design of gas turbine and rocket engines and components, including inlets, turbomachines, combustors, and nozzles. Matching of propulsion system to vehicle requirements.
Prerequisite(s): AOE 3114 and (AOE 3164 or AOE 3264) or ME 3414 and ME 2134
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ME 4234

AOE 4244 - Naval and Marine Engineering Systems Design (3 credits)
Concepts, theory and methods for the design, integration, and assessment of naval and marine engineering systems considering energy conservation, ship arrangements, system deactivation diagrams, reliability, maintenance, system power, shock and weapons effects, machinery sizing, and system vulnerability. Physics-based mechanical, electrical, thermal, sensor, control, weapon systems, hullform and engine (diesel and gas turbine) models are used to predict total system performance. Linear programming methods and flow-based models are used to optimize systems architecture and size components.
Prerequisite(s): AOE 3264
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4264 - Principles of Naval Engineering (3 credits)
This course studies naval engineering systems and systems engineering processes with particular emphasis on: naval missions; combat system performance including radar; underwater acoustics and sonar; ballistics; weapon propulsion and architecture; weapons effects; ship survivability including underwater explosion and shock waves; surface ship and submarine balance and feasibility analysis; and total ship integration. Senior Standing required.
Prerequisite(s): (MATH 2224 or MATH 2204 or MATH 2204H) and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4265 - Ocean Vehicle Design (3 credits)
Study and application of systems engineering process and ocean engineering principles to the concept exploration, design and development of ocean vehicles including ships, submarines, surface and subsurface autonomous vehicles, boats and yachts. 4265: Emphasis on hullform, power and propulsion, synthesis, balance, metrics and design optimization. 4266: Emphasis on topside/external arrangements, internal arrangements, machinery arrangements, human systems, structural design, and final assessments of intact and damage stability, weights, space, seakeeping, cost, risk, overall balance and feasibility. Most of the work is done in teams.
Prerequisite(s): AOE 2204 and AOE 3214 and AOE 3224 and AOE 3234 and AOE 3264
Corequisite(s): AOE 4205
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4266 - Ocean Vehicle Design (3 credits)
Study and application of systems engineering process and ocean engineering principles to the concept exploration, design and development of ocean vehicles including ships, submarines, surface and subsurface autonomous vehicles, boats and yachts. 4265: Emphasis on hullform, power and propulsion, synthesis, balance, metrics and design optimization. 4266: Emphasis on topside/external arrangements, internal arrangements, machinery arrangements, human systems, structural design, and final assessments of intact and damage stability, weights, space, seakeeping, cost, risk, overall balance and feasibility. Most of the work is done in teams.
Prerequisite(s): AOE 4265
Corequisite(s): AOE 4206
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4274 - Intermediate Ship Structural Analysis (3 credits)
Analysis of plate bending, buckling, and ultimate strength using computational tools and methods. Calculation of elastic buckling of stiffened panels. Eigenvalue methods for buckling and vibration. Incremental plastic collapse; other progressive collapse. Ultimate strength of large structural modules due to combined loads. Introductory level finite element analysis.
Prerequisite(s): AOE 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4324 - Energy Methods for Structures (3 credits)
Work and energy relationships in structures, flexibility and stiffness influence coefficients, Maxwell and Betti-Rayleigh reciprocal theorems, strain energy and complementary strain energy for thin-walled structures, Castigliano's first and second theorems for trusses and frames, unit action and unit displacement states, direct stiffness method, principles of minimum total potential energy and total complementary energy for bars, beams, and plates, Ritz method, finite element method for bars and beams.
Prerequisite(s): AOE 2024 and (AOE 3124 or AOE 3224)
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4334 - Ship Dynamics (3 credits)
Analysis of motions of rigid body vehicles in water, including influence of added mass and buoyancy. Seakeeping motion responses in waves, wave-induced structural loads, random response analysis via spectral analysis, and extreme response analysis. Introduction to hydroelasticity and maneuvering.
Prerequisite(s): AOE 3014 and AOE 3034 and (AOE 3214 or AOE 4214) and MATH 4564
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4344 - Dynamics of High-Speed Marine Craft (3 credits)
Introduction to the dynamics of high-speed craft, including surface effect ships, hydrofoil vessels, semi-displacement monohulls and catamarans, and planing vessels.
Prerequisite(s): AOE 3264
Corequisite(s): 4334 or 3234.
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4365 - Launch Vehicle Design (3 credits)
Fundamental principles of innovative launch vehicle design. Qualitative and quantitative decision-making tools. Multidisciplinary (e.g., propulsion, structures, orbital mechanics, economics, or aerodynamics) design teams with emphasis on ethics and professionalism. Project risks and mitigation plans. Oral presentations for design reviews. Written engineering design report. 4365: Proven conceptual design process. Tradeoff studies. Launch vehicle weight estimation. Launch vehicle concepts feasibility assessment; 4366: Preliminary design tools and processes. Efficient and light-weight launch vehicles. Launch vehicle design validation. Launch vehicle operation.
Prerequisite(s): AOE 2104 and AOE 3054 and AOE 3114 and AOE 3124 and (AOE 3134 or AOE 3144) and AOE 3164
Corequisite(s): AOE 4105
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4366 - Launch Vehicle Design (3 credits)
Fundamental principles of innovative launch vehicle design. Qualitative and quantitative decision-making tools. Multidisciplinary (e.g., propulsion, structures, orbital mechanics, economics, or aerodynamics) design teams with emphasis on ethics and professionalism. Project risks and mitigation plans. Oral presentations for design reviews. Written engineering design report. 4365: Proven conceptual design process. Tradeoff studies. Launch vehicle weight estimation. Launch vehicle concepts feasibility assessment; 4366: Preliminary design tools and processes. Efficient and light-weight launch vehicles. Launch vehicle design validation. Launch vehicle operation.
Prerequisite(s): AOE 4365
Corequisite(s): AOE 4106
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

AOE 4404 - Applied Numerical Methods (3 credits)
Interpolation and approximation, numerical integration, solution of equations, matrices and eigenvalues, systems of equations, approximate solution of ordinary and partial differential equations. Applications to physical problems. A student can earn credit for at most one of 3414 and MATH 4404.
Prerequisite(s): MATH 4564 and (ESM 2074 or AOE 2074)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MATH 4404

AOE 4414 - Computer Aided Space Mission Analysis (3 credits)
Advanced space mission design, requirements development, and analysis. Analyses of current and future space systems and missions, space platform and payload concepts. Orbital mechanics; coverage; space-to-ground and space-to-space communications; remote sensing; disaggregation; infrastructure; terrain modeling; space vehicle and payload performance constraints, dynamics, and degradation; homogeneous and heterogeneous constellations; launch; the space environment; space mission environmental and economic impact; and mission modeling and simulation for Earth orbit, interplanetary, and CisLunar regimes.
Prerequisite(s): (AOE 2074 or ESM 2074 or ECE 2504) and (AOE 2664 or ECE 2164 or AOE 3154)
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4434 - Introduction to Computational Fluid Dynamics (3 credits)
Euler and Navier-Stokes equations governing the flow of gases and liquids. Mathematical character of partial differential equations. Discretization approaches with a focus on the finite difference method. Explicit and implicit solution techniques and their numerical stability. Introduction to verification, validation, and uncertainty quantification for computational fluid dynamics predictions.
Prerequisite(s): MATH 2214
Corequisite(s): AOE 3044 or ME 3404 or ESM 3016.
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4454 - Spacecraft Position/Navigation/Timing and Orbit Determination (3 credits)
Position/Navigation/Timing (PNT) measurements and optimal batch filter estimation methods for spacecraft with emphasis on orbit determination; GPS position/velocity/time point solutions; linearized state transition matrices; batch least-squares filter Orbit Determination (OD) solutions from a time series of observations; precision and accuracy assessment using covariance and overlap statistics; one-way and two-way radio range and range-rate observations; optical bearings observations; non-Keplerian orbital effects.
Prerequisite(s): AOE 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4464 - Introduction to Global Positioning System (GPS) Theory and Design (4 credits)
Fundamental theory and applications of radio navigation with the Global Positioning System GPS. Satellite orbit theory, GPS signal structure and theory, point positioning with pseudoranges and carrier phases, selective availability, dilution of precision, differential GPS, atmospheric effects on GPS signals.
Prerequisite(s): ECE 3105 or AOE 4134
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: ECE 4164

AOE 4474 - Propellers and Turbines (3 credits)
Theory, numerical methods, and experimental techniques for analysis and design of propellers and turbines. Geometry description and creation of computer models. Analysis of inflow from wakes and atmospheric boundary layers. Performance characteristics including open-water and multi-quadrant operation, scale effects, and standard series data. Theoretical analysis and selection of airfoil and hydrofoil sections. Theory and numerical methods for propellers and turbines, including computational fluid dynamics (CFD) simulation. Design of wake-adapted propellers. Design of wind-turbine rotors in steady wind. Structural analysis of propeller and turbine blades. Wind- and water-tunnel testing for thrust and torque.
Prerequisite(s): AOE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4514 - Nonlinear Dynamics and Chaos (3 credits)
Motion of systems governed by differential equations: stability, geometry, phase planes, bifurcations, Poincare sections, point attractors, limit cycles, chaos and strange attractors, Lyapunov exponents. Forced, nonlinear oscillations: jump phenomena, harmonic resonances, Hopf bifurcations, averaging and multiple-scales analysis. Systems governed by discrete maps: return maps, cobweb plots, period-multiplying bifurcations, intermittency, delay coordinates, fractal dimensions.
Prerequisite(s): (ESM 2304 or PHYS 2504) and (MATH 2214 or MATH 2214H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4114

AOE 4604 - Booster Design, Fabrication, and Operation (3 credits)
Theory, design, operations, and fabrication methodologies employed to manufacture boosters. The rocket equation, solid, liquid, and hybrid propellant systems, combustion chamber design, vehicle structures, telemetry, guidance and navigation, launch operations, and failure modalities.
Prerequisite(s): AOE 2074 and AOE 3124 and AOE 3154 and AOE 3164
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4614 - Aerospace Materials and Modeling Techniques (3 credits)
Aircraft, spacecraft structural and engine materials. Mechanical, thermal properties and chemical stability of metallic materials. Aluminum, iron, nickel and titanium -based alloys. Atomistic structure, elastic properties, elastic anisotropy and microscopic origins. Plasticity, dislocations, and strengthening mechanism. Liquid-solid and solid-state phase transformation in alloys. Facture, creep and fatigue. Oxidation and corrosion. Simulating materials behaviors using molecular dynamics techniques.
Prerequisite(s): CHEM 1035 and PHYS 2305
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4624 - Foundations of Aero and Hydroacoustics (3 credits)
Fundamental background to the field of aero/hydroacoustics. Quantifying sound levels, acoustic intensity, the acoustic wave equation, and linear acoustics. Fluid dynamics, turbulence, and thermodynamics in aeroacoustics. Lighthill's equation, and Curle's equation. Characterization and identification of aeroacoustic sources. Leading and trailing edge noise. Basics of aeroacoustic wind tunnel testing.
Prerequisite(s): AOE 3014 and AOE 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4634 - Wind Turbine Technology and Aerodynamics (3 credits)
Aerodynamics and elastic behavior of a modern wind turbine. Internal and aerodynamic loads of wind turbines. Locating wind turbines with respect to fatigue, annual power and noise productions. Aeroelastic behavior of wind turbine blades. Generators, transformers and power converters used in wind energy. Historical, economic, political, and innovation issues related to wind energy and power grid integration.
Prerequisite(s): AOE 3014 and (AOE 3124 or AOE 3224)
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4654 - Space Weather: The Solar Wind and Magnetosphere (3 credits)
Solar-terrestrial interactions and space weather: the sun, solar wind, and interplanetary magnetic field; space plasma physics and magnetohydrodynamics; Earths magnetosphere and ionosphere; geomagnetic storms and auroral substorms; societal impacts of space weather; planetary magnetospheres; space science instrumentation.
Prerequisite(s): ECE 3105 or AOE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4154

AOE 4674 - Upper Atmosphere/Ionosphere Space Weather (3 credits)
Interaction of Earth's upper atmosphere and space environment with spacecraft: processes that affect atmospheric density relevant to spacecraft orbit decay; basic composition and structure; radiation and radiative transfer; atmospheric energy balance; atmospheric chemistry and ion production/loss mechanisms; fundamental concepts of Solar-terrestrial physics including ionospheric Chapman theory; atmospheric energy/mass transport; ionospheric electrodynamics; ionospheric storms; planetary atmospheres/ionospheres; instrumentation.
Prerequisite(s): AOE 3014 or ECE 3105
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4174

AOE 4804 - Special Topics in Dynamics, Control, and Estimation (3 credits)
Advanced undergraduate topics in dynamics, control, and estimation related to a particular class of aerospace and ocean engineering systems. Sample course topics include navigation and guidance, aircraft flight control, and ocean vessel motion control. May be repeated 2 times with different content for a maximum of 9 credits.
Prerequisite(s): AOE 4004
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

AOE 4814 - Special Topics in Propulsion (3 credits)
Advanced undergraduate topics in propulsion for aerospace and ocean vehicles. Covers technical, environmental, and economic challenges and opportunities in contemporary and future propulsion concepts. Comparative analyses of conventional and advanced propulsion systems and propulsion/vehicle integration concepts based upon first principles. Topics include distributed propulsion, green propulsion and propulsion/airframe integration. May be repeated with different content for a maximum of 6 credits.
Prerequisite(s): AOE 3164 or AOE 3264
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

AOE 4824 - Special Topics in Energy and the Environment (3 credits)
Advanced undergraduate topics in energy and the environment related to aerospace and ocean engineering systems. Sample course topics include renewable energy and energy management.
Prerequisite(s): AOE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

AOE 4864 - Special Topics in Space Engineering (3 credits)
Advanced undergraduate topics in space engineering. Covers technical, environmental, and economic challenges and opportunities in contemporary and future space systems and space missions. Comparative analyses of current and future space systems and missions, and space platform and payload concepts. Topics may include remote sensing, disaggregation, infrastructure, and mission modeling and simulation. May be repeated with different content for a maximum of 6 credits.
Prerequisite(s): AOE 3154
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

AOE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

AOE 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Agr, Leadership, & Comm. Ed. (ALCE)

ALCE 2094 - Introduction to Metal Fabrication (1 credit)
Introduction to metal working tools, equipment/operation and safety practices. Including the fundamentals of Oxy-Acetylene (OA) gas welding, Shielded Metal Arc Welding (SMAW) and Gas Metal Arc Welding (GMAW).
Instructional Contact Hours: (3 Lab, 1 Crd)

ALCE 2294 - Animal Structures and Environment (3 credits)
Functional considerations in facilities development for production agriculture. Concepts of farmstead planning and system development. Techniques for providing safe and efficient animal production environments, especially for confinement facilities.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALCE 2414 - Identity and Inclusion in Agricultural and Life Sciences (3 credits)
Examines histories of persons representing different social identities, statuses, space, place, and traditions in agricultural and life sciences. Explores how differences influence experiences individuals may have in agricultural and life sciences. Apply ethical reasoning practices to recognize and addresses critical issues surrounding inclusion of diverse populations within agricultural and life sciences education and leadership.
Prerequisite(s): ENGL 1106
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 2414

ALCE 2484 - Engine and Power Train Technology (3 credits)
Engine and power train technology with an emphasis on the fundamentals of internal combustion engines, electrical systems, power transmission systems and maintenance practices.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ALCE 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ALCE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ALCE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ALCE 3004 - Educational Programs in Agricultural and Life Sciences (3 credits)
Offers a foundation for student engagement and exploration of educational programs within agricultural and life sciences. Formal and non-formal learning contexts in local community programs. Opportunities include fieldwork assignments.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALCE 3014 - Leadership Effectiveness for Professionals in Agricultural Organizations (3 credits)
Leadership theory and skills required to perform effectively in leadership positions within agricultural organizations and communities. Leadership skills, personal development, teamwork, and social responsibility in agriculture industry.
Prerequisite(s): LDRS 1015 or LDRS 1414
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALCE 3084 - Agricultural Metal Fabrication (3 credits)
Introduction to metal working tools, equipment, and processes. Fundamentals of hot and cold metal working, plumbing, and welding applications, including inert gas welding processes. Junior standing or consent of instructor is required.
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

ALCE 3494 - Advanced Welding Technology (1 credit)
Techniques in metal work and welding that include tool maintenance, Oxy-Acetylene (OA), Shielded Metal Arc Welding (SMAW), Gas Metal Arc Welding (GMAW), Gas Tungsten Arc Welding (GTAW). Design of welded structures, fundamentals of heat treatment, plastic welding and Plasma Arc Cutting (PAC). Pre: Junior standing.
Instructional Contact Hours: (3 Lab, 1 Crd)

ALCE 3624 - Communicating Ag and Life Sciences in Writing (3 credits)
Communication skills necessary to carry out work with the general public and audiences in the food, agriculture, and natural resources fields. Professional writing for diverse audiences, assessing best written communication practices, and on creation of a portfolio, utilizing multiple platforms of written communication. Pre: Junior standing.
Prerequisite(s): ENGL 1106
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALCE 3634 - Communicating Ag and Life Sciences in Speaking (3 credits)
Strategies and techniques for effective oral communication in professions related to food, agriculture, and natural resources. Oral, visual, and interpersonal communication, ethical framing of complex problems, group leadership, and meeting management.
Prerequisite(s): ENGL 1106
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ALCE 3814 - Life Sciences Communication & Public Engagement (3 credits)
Identifying principles of inclusive and culturally responsive public engagement. Creating life sciences communication strategies and community-centered approaches that maximize public engagement. Evaluating effects of life sciences communication strategies on public engagement.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALCE 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

ALCE 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ALCE 4004 - Teaching Adults in Agriculture (2 credits)
Organizing classes, developing programs of instruction and teaching techniques applicable to out-of-school groups in Agriculture.
Instructional Contact Hours: (2 Lec, 2 Crd)

ALCE 4014 - Introduction to Cooperative Extension (3 credits)
An overview of the Cooperative Extension Service as it applies to non-formal education for citizens and communities. Major areas discussed include history, organization, functional areas, responsibilities of local agents, employment in extension, and educational program planning.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALCE 4024 - Managing Agricultural Supervised Occupational Experience Project (2 credits)
Major emphasis will be given to the agricultural teachers responsibility for supervision of the Supervised Occupational Experience Program (SOEP). The course will emphasize the ownership project, the cooperative placement project, maintaining record books, and supervising the SOEP.
Instructional Contact Hours: (2 Lec, 2 Crd)

ALCE 4034 - Methods of Planning Education Programs for Agriculture (3 credits)
Course examines the procedures involved in the development of courses, curriculum, and instructional materials for education programs in agriculture.
Prerequisite(s): ALCE 3004
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: EDCT 4034

ALCE 4044 - Agricultural Sciences Seminar (3 credits)
A senior capstone course addressing issues of importance for majors in Agricultural Sciences. The course will emphasize a synthesis of research results from collected data and information on contemporary problems in agriculture and related fields and a sharing of the results. It will emphasize the development of skills in critical analysis. Senior Standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALCE 4054 - Internship in Coop Extension (1-16 credits)
Off-campus participation experience for those preparing to become extension agents in the Cooperative Extension Service. Variable Credit; 6-16 credits.
Instructional Contact Hours: (1-16 Lec, 1-16 Crd)

ALCE 4064 - Ag Mechanical Lab Management (3 credits)
Plan, organize, and manage secondary school mechanics laboratories. Management of the instructional program, facility, equipment, inventory, safety, liability, personnel, material control, and student customer work.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ALCE 4234 - Curriculum for Career and Occupational Education (3 credits)
Provides current and prospective career and occupational education teachers with research bases, resources, and available curricula for teaching content in the respective disciplines. Develops the ability to plan, manage, develop, and evaluate curricula. The prerequisite EDCT 2604 will be waived for Agricultural Education students. Pre: Junior Standing
Prerequisite(s): EDCT 2604
Instructional Contact Hours: (3 Lec, 3 Crd)

ALCE 4244 - Teaching and Training Methods in Agricultural and Life Sciences (3 credits)
Survey of strategies for design, implementation, and evaluation of instruction and training practices in agricultural life sciences. Applications of principles in formal and non-formal educational settings, including schools, extension, and industry. Pre: Junior standing
Instructional Contact Hours: (3 Lec, 3 Crd)

ALCE 4254 - Adult Vocational&Technical Ed (3 credits)
Theory, practices, and procedures involved in planning, developing, implementing, managing, and evaluating adult education programs in Vocational and Technical Education. Completion of, or concurrent enrollment in, courses in teaching methods and curriculum required.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALCE 4304 - Community Education and Development (3 credits)
Comprehensive examination of community education and development. Community/sustainable community development, strategies for mobilizing social change in/with communities. Explore participatory, popular, and community-based education from rural and urban settings. Globalization, sustainability, and social movement discourse with emphasis on agricultural, health, and food system examples. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALCE 4744 - Methods, Materials and Practices in Instruction (1-6 credits)
Planning, using, evaluating classroom procedures; selection and organization of subject content and materials in vocational and technical education. Maximum credit: 6 Consent required.
Corequisite(s): EDCT 4754
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)

ALCE 4754 - Internship in Education (1-16 credits)
Planned program of clinical practice in education under the direction and supervision of a university supervisor and a selected practitioner. Recommendation of program area and successful completion of Professional Studies required.
Instructional Contact Hours: (1-16 Lec, 1-16 Crd)

ALCE 4884 - Youth Program Management (3 credits)
Organizational design of educational youth programs such as 4-H and FFA, including administrative planning, human resource development, recruitment, marketing, and budgeting.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: EDCT 4884

ALCE 4964 - Field Study/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

ALCE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ALCE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ALCE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Agricultural and Applied Econo (AAEC)

AAEC 1005 - Economics of the Food and Fiber System (3 credits)
1005: How the individual economic actor makes rational choices as: consumer, producer, firm/farm, saver, investor, employee, employer, manager, trader. Economic principles that underlie exchange in business, government and household transactions. Utility maximization in the U.S. and global food and fiber system under conditions of scarcity. Evaluation of policy issues important to society. 1006: Overview of economic systems: capitalism versus communism, socialism, feudalism, mercantilism. Interrelationships of U.S. economic fiscal and monetary institutions and policies regarding agricultural productivity, business vitality, sustainable development, and human capital formation. Affordability, safety and security of food and fiber, cultural dynamics, consumer welfare, industrial profitability, natural resources conservation, rural economic infrastructure, international trade, and social justice.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 1006 - Economics of the Food and Fiber System (3 credits)
1005: How the individual economic actor makes rational choices as: consumer, producer, firm/farm, saver, investor, employee, employer, manager, trader. Economic principles that underlie exchange in business, government and household transactions. Utility maximization in the U.S. and global food and fiber system under conditions of scarcity. Evaluation of policy issues important to society. 1006: Overview of economic systems: capitalism versus communism, socialism, feudalism, mercantilism. Interrelationships of U.S. economic fiscal and monetary institutions and policies regarding agricultural productivity, business vitality, sustainable development, and human capital formation. Affordability, safety and security of food and fiber, cultural dynamics, consumer welfare, industrial profitability, natural resources conservation, rural economic infrastructure, international trade, and social justice.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 2104 - Personal Financial Planning (3 credits)
Survey of fundamental personal financial planning needs and decisions of young professionals. Introduction to the personal financial planning needs that special household circumstances or non-traditional household situations may precipitate. Application of cash, credit, and debt management principles to household scenarios. Completion of federal income tax forms for individuals. Managing the household's risk exposure. Introduction to investment decisions, particularly related to retirement accounts. Overview of basic estate planning tools and principles. Discussion of the ethical issues related to financial products and decisions.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 2434 - Foundations of Agribusiness (3 credits)
Introduction to the primary management tools as they relate to farm production enterprises and agribusinesses. Principles and concepts of preparing farm and agribusiness financial statements and their analysis. Application of budgeting and risk management.
Prerequisite(s): AAEC 1005
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AAEC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AAEC 3004 - Agricultural Production and Consumption Economics (3 credits)
The economic principles of production. Applications to decision-making and the allocation of resources for the agricultural firm. Consumer behavior and demand for agricultural products.
Prerequisite(s): (AAEC 1005 or ECON 2005) and (MATH 1025 or MATH 1225)
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 3014 - Analytical Methods in Applied Economics (3 credits)
Quantitative methods used in applied empirical economic analysis including simple and multiple regression, estimation and application of elasticity, decision analysis, economic simulations, linear programming, and risk analysis. Analysis using spreadsheets stressed.
Prerequisite(s): STAT 3005 or BIT 2405 or STAT 3615
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 3015 - Internship in Agricultural and Applied Economics (1 credit)
Preparation for, and follow-up to, a practical experience in a selected agricultural, resource, or governmental enterprise, which takes place under the direct supervision of an owner, manager, or supervisor. 3015: offers the student a broad management horizon on understanding the value and the process of setting goals and objectives, and provides methods for evaluating ones abilities, interests, and desires for making career-path choices. 3016: provides a forum for students to share work experiences, discuss human resource issues, and apply the problem solving process to a problem or concern witnessed during the internship.
Instructional Contact Hours: (1 Lec, 1 Crd)

AAEC 3024 - Monetary and Global Issues in Applied Economics (3 credits)
Economics of an open economy and its impact on agricultural and natural resource markets. History of the monetary system, national accounts, balance of payments, fiscal and monetary policy, foreign exchange determinants, trade deficits, international finance, globalization and economic growth. Linkages to agricultural policy and commodity markets stressed.
Prerequisite(s): AAEC 1005 and AAEC 1006
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 3204 - International Agricultural Development and Trade (3 credits)
Examination of the role of agriculture in less developed countries and how that role is affected by public policies. Dimensions of world food, population, and income problems; theories of economic development and the role of agriculture; traditional agricultural systems and their evolution; agricultural modernization strategies; interactions among natural resources, biofuels, food prices, and sustainable agriculture; the impacts of international trade and aid; and the effects of international development on U.S. agriculture.
Prerequisite(s): AAEC 1005 or ECON 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 3314 - Environmental Law (3 credits)
Principles of law involved in environmental issues, survey of environmental litigation, legislation and administrative rulings. Law topics include natural resources, water pollution, private land use, air pollution, toxic substance, food, drug, pesticides, and biotechnology.
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 3324 - Environment and Sustainable Development Economics (3 credits)
Sustainable development through an exploration of hard and soft green schools of thought. Hard Green Strategies – reliance on markets, technology, property rights, human ingenuity to increase production efficiency versus Soft Green Strategies-adoption of simpler lifestyles, government subsidies, natural design of buildings (biomimicry), and urban infrastructure to locate public transportation hubs nearest to densely populated neighborhoods to decrease consumption of natural resources. Connecting the influence of place in personal and group identity. Interdisciplinary examination of environmental justice among poor and minority U.S. communities. Social equity distribution of the economic costs and benefits of natural resources management policies. Roles of property rights, economic incentives, religious values, and political power in determining local communities' capacity to control their environmental destiny.
Prerequisite(s): AAEC 1005 or AAEC 1006 or ECON 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 3424 - Value-Based Management in Agribusiness (3 credits)
Focus on finance concepts in the agricultural and environmental sectors. Apply the value-based management principles and financial analysis to industry-related cases. Estimate cost of capital, free cash flow and net present value. Team-based approach on a real-world valuation case.
Prerequisite(s): AAEC 1005 and AAEC 1006 and ACIS 2115
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 3454 - Small Business Management and Entrepreneurship (3 credits)
Characteristics of small business and entrepreneurs, and their economic importance. Development and operation of a small business, including concepts and principles such as franchising, business plans, capital acquisition, venture capital, financial and administrative control, marketing, human resource and operations management. Taxation, legal, insurance and ethics in small business.
Prerequisite(s): AAEC 2434 or ACIS 2115 or MGT 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 3504 - Marketing Agricultural Products (3 credits)
Structure of the agricultural marketing system with emphasis on factors determining farm level prices. Emphasis on how markets coordinate consumer desires and producer costs through marketing channels. Impact of market structure, grades, information, product form, and advertising on farm prices. International trade impacts on producers, consumers, agribusiness, and government.
Prerequisite(s): AAEC 1005 and AAEC 1006
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 3514 - Agricultural Futures and Options (3 credits)
The role of agricultural futures and options in risk management strategies for producers and agribusiness firms and in the price discovery process. Fundamental supply-demand and technical analysis of the markets and pricing processes. Development and applications of effective price risk management strategies.
Prerequisite(s): AAEC 1005 and AAEC 1006 and AAEC 2434
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 3604 - Agricultural Law (3 credits)
Legal problems of farm and agribusiness management. Practical application of principles of contracts, negligence, debt instruments and commercial transactions of the farm and agribusiness organization. Selected state and federal laws regulating the farm and agribusiness sector; basic animal laws including state and federal regulation of agricultural sector.
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

AAEC 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

AAEC 3974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AAEC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AAEC 4135 - International Economics (3 credits)
4135 International Trade: Factor mobility and commercial policy (tariffs, quotas, export licensing). 4136 International Finance: Liquidity, exchange rates, comparative international living standards, foreign aid.
Prerequisite(s): ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 4135

AAEC 4136 - International Economics (3 credits)
4135: International Trade: Factor mobility and commercial policy (tariffs, quotas, export licensing). 4136: International Finance: Liquidity, exchange rates, comparative international living standards, foreign aid.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 4136

AAEC 4204 - Food and Agricultural Policy (3 credits)
Examination of the role of agriculture in developed economies and how agriculture is affected by policy decisions in the public sector. Emphasis will be placed on the economic impacts of policies on the producers and consumers of agricultural products: price supports, food stamps, tariffs and quotas.
Prerequisite(s): AAEC 1005 and AAEC 1006
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 4314 - Environmental Economic Analysis and Management (3 credits)
Quantitative methods and computer-aided tools used in the economic analysis of environmental/natural resource issues. Economic concepts and analytical tools will be applied to realistic, problem-solving situations. Topics include cost effectiveness analysis, benefit-cost analysis, economic simulations, and statistical analysis.
Prerequisite(s): AAEC 3324 or ECON 4014 or FREC 4014
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 4324 - Rural and Regional Development Policy (3 credits)
Description of rural areas, their economic structure, and conditions for broad-based economic development. Emphasis on the role of markets in the development process. Introduction to tools to evaluate policies and programs, identify distributional impacts, identify appropriateness for long-term sustainable development, and analyze tradeoffs between policy goals. Alternatives to public financing in rural areas.
Prerequisite(s): AAEC 1005 and AAEC 3004
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 4334 - Applications Rural Development (1 credit)
Evaluation of policy alternatives and programs for the development of rural areas. Intensive use of analytical techniques, including spreadsheet analysis of trends and changes over time, shift-share analysis of economic change, creation of indices of distribution and poverty for rural areas, creation and use of economic base multipliers, construction, use and interpretation of input-output models.
Prerequisite(s): AAEC 1005 and AAEC 3004
Corequisite(s): AAEC 4324
Instructional Contact Hours: (1 Lec, 1 Crd)

AAEC 4344 - Sustainable Development Economics (3 credits)
Sustainable development concepts are critically explored particular emphasis on implications for domestic and international sustainable development agriculture and for economic development. Students investigate case studies illustrating problems of sustainable development and potential policy solutions.
Prerequisite(s): AAEC 3324 or AAEC 3004 or ECON 4014
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 4354 - Energy Economics (3 credits)
Theoretical and quantitative economic analyses of individual, regional, and global demand and supply of renewable and nonrenewable energy. Markets examined include solar, wind, oil, natural gas, electricity, and nuclear. Policies reviewed include those used to regulate energy prices, tax carbon emissions, and promote technology adoption. Countries studied include the U.S., Europe, and Asia, encompassing both developed and developing nations. Pre: Junior Standing.
Prerequisite(s): AAEC 1005 or AAEC 1006 or ECON 2005 or ECON 2006 or MATH 1025 or MATH 1225
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 4404 - Agricultural Management and Problem-solving (3 credits)
Capstone course for students interested in agribusiness management. Application of concepts, tools, and principles including management, finance, marketing, economic theory, and quantitative methods to applied agricultural decisions. Application of knowledge on selected agricultural projects that enhance team-building, written, and oral communication skills. Senior Standing required.
Prerequisite(s): AAEC 2434
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 4414 - Applied Economic Problem-Solving (3 credits)
Application of economic training and skillsets to real-world needs identified by clientele. Team problem-solving of financial, marketing, production, legal and regulatory, and human resources issues unique to the agriculture sector. Facilitated experiential learning environment focused on student-motivated solutions to economic risk management. This course may be repeated once.
Prerequisite(s): AAEC 1005
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 4424 - Ag Financial Management (3 credits)
Principles and concepts of preparing agricultural financial statements. Analysis of these statements following professional farm financial guidelines. Economic concepts applied to management of agricultural enterprises. Leasing, purchasing, borrowing, and lending decisions in agriculture. Agricultural applications of budget, risk management and mitigation, and loan structuring.
Prerequisite(s): AAEC 1005 and AAEC 2434 and (FIN 3104 or AAEC 3424)
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 4434 - Commodity Investing by Students (2 credits)
Students make real world investment decisions in agricultural and energy commodities, execute trades, evaluate their performance and report to the VT Foundation. This student-run organization provides leadership opportunities as well as collaboration and networking experiences. Restricted to COINS members. May be repeated with different content up to 8 credit hours. This course is Pass/Fail.
Prerequisite(s): AAEC 4504
Instructional Contact Hours: (2 Lec, 2 Crd)
Repeatability: up to 8 credit hours

AAEC 4464 - Water Resources Policy and Economics (3 credits)
Economic theory and methods to explain water use decisions. Efficiency, equity, and ethical considerations in U.S. water policy. Analysis of water markets, climate change, and environmental flows from diverse stakeholder perspectives.
Prerequisite(s): AAEC 1005 or ECON 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 4464, WATR 4464

AAEC 4484 - Applied Economic Forecasting (3 credits)
Forecasting economic, agricultural and environmental data using basic linear and non-linear time series models. Programming and computational implementation of time series forecasting model selection techniques and practical applications.
Prerequisite(s): (AAEC 1005 or AAEC 1006) and (STAT 3005 or STAT 3604 or STAT 3615 or BIT 2405)
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 4504 - Agricultural Price and Market Analysis (3 credits)
Estimation of agricultural supply, demand, and price relationships. Determination of market potential for new products. Students identify problem, collect data, estimate statistical relationship(s), interpret results, and write research report. Use of probability distribution in marketing strategy development.
Prerequisite(s): AAEC 3004 and STAT 3005 or STAT 3615 or BIT 2405
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 4514 - Advanced Agribusiness Marketing (1-4 credits)
Applying concepts, principles, and analytical tools in developing a marketing plan for an existing or new agricultural product or service. Students will define the market, perform competitive marketing analysis, outline market assumptions and objectives, and perform a three-year financial evaluation of the action plan. Course can be repeated once.
Prerequisite(s): AAEC 2434 and AAEC 3504
Corequisite(s): 3504 or 3004.
Instructional Contact Hours: (1-4 Lec, 1-4 Crd)
Repeatability: up to 4 credit hours

AAEC 4804 - Elementary Econometrics (3 credits)
Economic applications of mathematical and statistical techniques: regression, estimators, hypothesis testing, lagged variables, discrete variables, violations of assumptions, simultaneous equations.
Prerequisite(s): AAEC 1005 and (STAT 3615 or STAT 3005 or STAT 3604 or BIT 2405)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STAT 4804

AAEC 4814 - Food and Health Economics (3 credits)
Microeconomics of food, nutrition, and health. Overview of nutrition, nutrition recommendations, and implications for economics based decisions. Individual and household food consumption and health production models. Farm to consumer market linkage models with nutrition and health implications Effectiveness of food and nutrition interventions and policies. Cost-benefit and cost-effectiveness analysis of health interventions. Pre: Senior Standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

AAEC 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AAEC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AAEC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AAEC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Agriculture and Life Sciences (ALS)

ALS 1004 - Agriculture, the Arts and Society (1 credit)
Interpretive strategies applied to agriculture and the visual arts. Artistic representations of agriculture, farming, rural livelihoods, and agrarian landscapes. Exploration of global agricultural challenges balancing the production of food, fiber, and fuel. Apply principles of design and art using photography medium.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 1 Crd)

ALS 1014 - Gardens as Art (1 credit)
Interpretive strategies applied to agriculture and gardening design. Artistic representations of agriculture and landscaping. Exploration of global agricultural challenges balancing the production of food, gentrification, and location. Application of principles design and elements of visual art using gardening medium.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 1 Crd)

ALS 1024 - Digitized Agriculture (1 credit)
Interpretive strategies applied to agricultural art and design. Artistic representations of agriculture and nature. Agriculture through digital art (narrative art, stories, and data visualization). Exploration of global agricultural challenges balancing the production of food, fiber, fuel- and location. Elements, methods of interpreting, and principles and application of art and design using a narrative medium.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 1 Crd)

ALS 1034 - The Aesthetics of Food (1 credit)
Food as a method of study for art and design. Taste, smell, color, shape, presentation, memory, and packaging of food related to human cultural experience. Food presentation, marketing, and food choices in global context influence how people experience food.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 1 Crd)

ALS 1234 - CALS First Year Seminar (1 credit)
Exploration of topics related to the College of Agriculture and Life Sciences (CALS) from a multidisciplinary perspective with a focus on communication and teamwork, problem-solving, inquiry, and integration. Students explore resources to promote academic success, investigate careers and academic areas, and develop a comprehensive plan of study. Freshman and transfer students only.
Instructional Contact Hours: (1 Lec, 1 Crd)

ALS 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ALS 1984L - Special Study (1-19 credits)
Pathway Concept Area(s): 6D Critique & Prac in Design
Instructional Contact Hours: Variable credit course

ALS 2204 - Sustainable Food Systems (3 credits)
Introduction to the economic, social, and ecological foundations of civic agriculture. Topics include industrialization, localized food systems, and citizen participation in civic agriculture. Emphasis will be given to a range of civic agriculture models, strategies, and hands-on approaches to establish, retain and strengthen community-based food and agriculture systems, locally- nationally-globally.
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALS 2304 - Comparative Animal Physiology and Anatomy (4 credits)
Comparative anatomy and physiology of domestic mammals and birds including cell neural, musculoskeletal, respiratory, cardiovascular, urinary, and endocrine systems.
Prerequisite(s): BIOL 1106
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

ALS 2404 - Biotechnology in A Global Society (3 credits)
Introduction to the world-wide impact of biotechnology and molecular biology, including applications to plants, animals, and microorganisms. Explores basic concepts of genetic engineering, scientific and ethical issues, and public concerns related to biotechnology. Topics include: environmental release of genetically engineering organisms, bioremediation, safety of genetically engineered food products, transgenic plants and animals, gene therapy, and genetic screening.
Prerequisite(s): (BIOL 1015 and BIOL 1016) or (BIOL 1105 and BIOL 1106) or (BIOL 1205H and BIOL 1206H) and (CHEM 1015 and CHEM 1016)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIOL 2404

ALS 2504 - Animals in Society (3 credits)
Animal well-being and behavior, human-animal interactions, ethical responsibilities to animals, animal care, behavior, disease, and pain recognition. Current topics concerning companion animals, domestic animals, and wildlife.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALS 2604 - Intro to Interdisciplinary Research Practices (3 credits)
Introduction to formal undergraduate research and basic research methods. Engagement in interdisciplinary collaboration via team research projects. Exploration of scholarly literature, topic development, information evaluation, citation and data management, research ethics, and scientific communication. Connections to advanced information and digital literacy topics such as research impact and digital repositories. Formal proposal development and presentation.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ALS 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ALS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ALS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ALS 2984L - Special Study (1-19 credits)
Pathway Concept Area(s): 6D Critique & Prac in Design
Instructional Contact Hours: Variable credit course

ALS 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ALS 3104 - Animal Breeding and Genetics (3 credits)
Principles of genetics applied to improvement of domestic animals: factors affecting genetic improvement of economically relevant traits, estimation of breeding values, heritability, genetic correlations, relationships, inbreeding, crossbreeding, genetic abnormalities, genomic selection, and gene editing; ethical reasoning in animal breeding decisions.
Prerequisite(s): BIOL 1105 and (STAT 2004 or STAT 3005 or STAT 3615) and (APSC 1454 or DASC 2474 or DASC 2484)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ALS 3204 - Animal Nutrition and Feeding (3 credits)
Characteristics, sources, digestion, absorption, and metabolism of water, carbohydrates, lipids, proteins, vitamins, and minerals. Feeding systems for livestock, poultry and companion animals.
Prerequisite(s): ALS 2304 and (CHEM 1036 or CHEM 1036H or CHEM 1016)
Instructional Contact Hours: (3 Lec, 3 Crd)

ALS 3304 - Physiology of Reproduction (3 credits)
Physiological mechanisms that control and affect reproductive processes in domestic species. Investigation of the anatomy and physiology of the reproductive systems from cellular to whole-body levels with a particular emphasis on implications for reproductive function.
Prerequisite(s): ALS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

ALS 3314 - Physiology of Reproduction Lab (1 credit)
Investigation of the structure and function of reproductive systems of domestic species. Practical application of this knowledge is then taught through demonstrations, hands-on experiences and assignments exploring current farm-animal production systems.
Corequisite(s): ALS 3304
Instructional Contact Hours: (0 Lec, 3 Lab, 1 Crd)

ALS 3404 - Ecological Agriculture: Theory and Practice (3 credits)
Presents an overview of historic and modern agricultural practices. Surveys the principles of ecology in the context of managed ecosystems, civic agriculture, and food systems. Explores ecologically based practices and their use in holistic and integrated agricultural systems.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ALS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ALS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ALS 4204 - Concepts in Community Food Systems (3 credits)
Examination of the economic, political, socio-cultural, health and environmental issues related to community food systems and agricultural practices. Topics include local, regional and global food systems development, food production and biotechnology, food sovereignty and security, and population and environmental health. Analyze models, strategies, and policies within local, national and global food systems.
Prerequisite(s): ALS 2204
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALS 4214 - Capstone: Civic Agriculture and Food Systems (3 credits)
Multidisciplinary, experiential community-based course focusing on civic agriculture-food systems. Work in partnership with community stakeholders to propose viable solutions to real world issues revolving around civic agriculture and food systems. Connect with communities locally, regionally or globally.
Prerequisite(s): ALS 2204 and ALS 3404 and ALS 4204
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ALS 4224 - Food, Agriculture, and Society Capstone Seminar (1 credit)
Explore the interplay between food, agriculture, and society from interdisciplinary perspectives. Engage in student-led discussions, presentations, and critical thinking and synthesizing of capstone experiences embedded within the Food, Agriculture, and Society Pathways minor curriculum. Integrate research, study abroad, internships, or other experiential learning initiatives to gain practical insights toward a more just and sustainable food system. Pre: (ALS 2204 and HIST 1084) and any Study Abroad, Independent Study, or Undergraduate Research course regardless of subject designator.
Instructional Contact Hours: (1 Lec, 1 Crd)

ALS 4244 - Global Food Security and Health Capstone Experience (3 credits)
Food security and its relationship to human and global health challenges. Role of geography, economics, climate, politics, trade, and culture. Ethical issues and challenges to improving global food security and health. Creatively analyze, synthesize, and evaluate learned knowledge. Participate in successful discourse related to global food security and health.
Prerequisite(s): CSES 2244 and AAEC 3204
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ALS 4554 - Neurochemical Regulation (3 credits)
Neurochemical transmission within the vertebrate brain will be examined. Emphasis will be placed on the chemical coding underlying the control of various behaviors and how these systems can be modified by various drugs or diet.
Prerequisite(s): (ALS 2304 or BIOL 3404) and CHEM 2535
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIOL 4554

ALS 4574 - Social Behavior of Birds and Mammals (3 credits)
This course examines origins, influences and implications of social behavior in a variety of avian and mammalian species. Emphasis is placed on understanding group organization and dynamics in inter and intra-species situations. Experimental data from several disciplines (e.g., genetics, physiology, biochemistry) are reviewed to demonstrate their associations with behavioral adaptive mechanisms. Avian and mammalian species living in wild, zoo, agricultural, companion and laboratory settings are discussed.
Prerequisite(s): ALS 3104 or BIOL 2004 and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIOL 4574

ALS 4614 - Watershed Assessment, Management, and Policy (2 credits)
Multidisciplinary perspectives of assessment, management and policy issues for protecting and improving watershed ecosystems. Topics include: monitoring and modeling approaches for assessment, risk-based watershed assessment geographic information systems for watershed analysis, decision support systems and computerized decision tools for watershed management, policy alternatives for watershed protection, urban watersheds, and current issues in watershed management. Pre: Two 4000 level courses in environmental/natural resource science, management, engineering, and/or policy in BSE, CEE, FOR, FREC, GEOL, LAR, CSES, ENT, BIOL, GEOG, AAEC, UAP or equivalent.
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: WATR 4614

ALS 4714 - Global Seminar (1 credit)
Student-centered internet-based course including text and real-time video conferencing among students at collaborating institutions in the United States and Canada. Focus is contemporary North American environmental sustainability issues based on student-prepared case studies. Pre-requisite: Junior or Senior Standing required.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: HORT 4714

ALS 4814 - Nutritional Neuroscience (3 credits)
Concepts in nutritional aspects of neuroscience. Energy metabolism in central nervous system and brain regulating ingestive behavior. Communication with peripheral organs, regulation of whole body energy homeostasis, brain physiology and pathology on molecular and cellular level. Role of appetite neurocircuitry in formulation of practical solutions to societal problems such as nutrition, eating disorders, and obesity.
Prerequisite(s): NEUR 2026 or ALS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NEUR 4814

ALS 4964 - Field Study/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

ALS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ALS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ALS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ALS 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

American Indian Studies (AINS)

AINS 1104 - Introduction to American Indian Studies (3 credits)
Introduction to the historical richness and complexity of American Indian societies. Examination of American Indian identities, worldviews, past and present sustainability practices, experiences with and resistance to colonial domination and policies, and cultural interchanges with non-Indians.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

AINS 2104 - Oral Traditions and Culture (3 credits)
Examination of the worlds great oral traditions, both ancient and contemporary. Emphasis on performance contexts, relationships among multicultural traditions, including American Indian oral traditions, and the relationships among orality, literacy, technology, media, and culture.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 2104

AINS 2414 - Identity and Inclusion in Agricultural and Life Sciences (3 credits)
Examines histories of persons representing different social identities, statuses, space, place, and traditions in agricultural and life sciences. Explores how differences influence experiences individuals may have in agricultural and life sciences. Apply ethical reasoning practices to recognize and addresses critical issues surrounding inclusion of diverse populations within agricultural and life sciences education and leadership.
Prerequisite(s): ENGL 1106
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALCE 2414

AINS 2804 - Contemporary Native American Literatures (3 credits)
This course offers a sampling of fiction, poetry, and non-fiction by the most influential American Indian writers since 1970, authors such as Momaday, Silko, Deloria, Welch, Harjo, and Alexie. Students will also learn about those aspects of cosmology and storytelling traditionally shared by all American Indian Nations, as well as about those aspects specific to the individual tribal traditions from which the authors and their characters come.
Prerequisite(s): ENGL 1106 or ENGL H1204 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 2804

AINS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AINS 3174 - Native American History (3 credits)
The Native experience in North America or Latin America from 1491 to present. Emphasis on social diversity and organization, resistance to colonization, leadership and cultural change, and political sovereignty among indigenous peoples. Methods for interpreting a variety of primary sources, including texts, material culture, and archaeological findings. Engagements with shifting historiographical perspectives and political movements for recognition of Native sovereignty.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3174

AINS 3184 - Food Sovereignty (3 credits)
Food sovereignty, the right to produce and consume culturally relevant food, as a set of practices and as a social movement through comparative case studies. Origins of food sovereignty in response to effects of colonialism, the green revolution, and the global corporate food system on peasant and Indigenous subsistence livelihoods and the concept's transformation through dialogue with indigenous agricultural knowledge and poor peoples' environmentalism. Food sovereignty's challenge to the dominant food system and conceptions of development, how groups implement this vision of democratized social and productive relations through projects of agroecology and land reform, and its potential in the context of ecological calamity.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3184

AINS 3304 - The Languages of Native America (3 credits)
Study of the structures of the native languages of the Americas; their interrelationships; their use in individual speech communities; contact with other languages; the interrelationships of linguistic structure, culture, and thought; their future survival.
Prerequisite(s): ENGL 1106 or ENGL H1204 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 3304

AINS 3684 - Indigenous Peoples and World Politics (3 credits)
A survey of the historical and contemporary struggles of indigenous peoples throughout the world. Examines the dynamics of colonialism (internal and external), identity construction, gender, cultural integrity, and the ongoing global indigenous rights discourse. In addition to covering broad global processes/theoretical approaches, comparative case studies of particular indigenous groups, such as the Maasai (Kenya, Tanzania) and Mayans (Mexico, Guatemala, Belize), are used to highlight the global, regional, and intra-community diversity among contemporary indigenous peoples.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3684

AINS 4004 - Topics in American Indian Studies (3 credits)
A variable topics course in which students will engage an interdisciplinary methodology to pursue a critical and in-depth examination of various topics concerning and pertinent to American indigenous peoples. This course is repeatable for up to 6 hours credit with different topics. Must meet prerequisite or have permission of the instructor.
Prerequisite(s): AINS 1104
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

AINS 4114 - Indigenous Foodways (3 credits)
Examines American Indian worldviews and human-Nature relationships within the context of a dominant non-Indigenous society, through land-based learning including foraging and cultivation. Introduces and contrasts Traditional Ecological Knowledge (TEK) and Scientific Ecological Knowledge (SEK). Encourages the equitable inclusion of Indigenous peoples' practices in the human and environmental sustainability of our collective future, with attention to decolonization and global Indigenous struggles for justice. Student engagement opportunities in hands-on foraging, seed saving, cultivation, and projects around food sovereignty, food security, and revitalization of traditional foodways, in collaboration with local Native communities.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

AINS 4754 - Internship (1-19 credits)
Instructional Contact Hours: Variable credit course

AINS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AINS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AINS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AINS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Animal and Poultry Sciences (APSC)

APSC 1454 - Introduction to Animal and Poultry Science (3 credits)
Survey of systems of livestock and poultry production including: concepts and terminology pertaining to management and marketing; types and breeds of livestock and poultry; and an introduction to nutrition, genetics, physiology, and management of beef cattle, horses, sheep, swine and poultry.
Corequisite(s): APSC 1464
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 1464 - Animal and Poultry Science Laboratory (1 credit)
Management practices and concepts related to efficient livestock and poultry production and marketing are taught through demonstrations and hands-on experience.
Corequisite(s): APSC 1454
Instructional Contact Hours: (3 Lab, 1 Crd)

APSC 1504 - Animal and Poultry Sciences First Year Experience (1 credit)
Orientation course for freshman and transfer APSC students providing skills, resources and fundamental knowledge to enhance learning experiences and support success. Skills, resources, opportunities, curriculum, and career planning. Emphasis on inquiry, problem-solving skills, critical thinking and integration of ideas and experiences to encourage life-long learning.
Instructional Contact Hours: (1 Lec, 1 Crd)

APSC 1524 - Beginning Equitation (1 credit)
Beginning work in equitation, the science of horseback riding. The five natural aids of the rider and rein aides. Secure positions of the rider's leg and seat at the walk, trot, and canter. Basic leg and seat position for jumping. Concepts of horse welfare, health, behavior, and communication pertaining to horseback riding. The German training scale, including rhythm, relaxation, connection, impulsion, straightness, and collection of the horse. Use of small cavaletti obstacle courses to improve horse strength and straightness. Grooming techniques, hoof care, and tack conditioning for equitation horses. Position emphasis will be on the forward riding seat and elementary dressage movements. COURSE FEE $1,500
Instructional Contact Hours: (3 Lab, 1 Crd)

APSC 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 2004 - Animal and Poultry Sciences Seminar (1 credit)
Identification of primary and secondary career objectives for Animal and Poultry Science majors; planning for completion of a capstone learning experience in the major. Identification of curricular and extracurricular activities to increase career opportunities. Improvement of professional and technical writing skills applicable to the animal sciences field.
Prerequisite(s): APSC 1504
Instructional Contact Hours: (1 Lec, 1 Crd)

APSC 2104 - Poultry Laboratory (1 credit)
Anatomy and physiology of birds including species-specific specializations in anatomical structure and body composition, musculoskeletal, respiratory, reproductive, endocrine, digestive and urinary systems. Relationship of these concepts to growth and egg production. Includes handling live birds.
Prerequisite(s): APSC 1454 and APSC 1464
Corequisite(s): ALS 2304
Instructional Contact Hours: (3 Lab, 1 Crd)

APSC 2114 - Livestock Management and Handling (1 credit)
Safety in livestock handling; animal behavior; care, housing, and managerial practices related to beef cattle, sheep, and swine taught through experiential activities.
Prerequisite(s): APSC 1454 and APSC 1464
Instructional Contact Hours: (3 Lab, 1 Crd)

APSC 2124 - Horse Handling Practicum (2 credits)
Stable management, haltering and leading horses, equine vital signs, and hoof care. Identification of horses by coat colors and markings. Breed characteristics of horses. Equine behaviors. Types and amounts of feed and forages commonly fed to horses. Anatomical parts of the horse. Careers in the horse industry and sports in which horses participate. Involvement with daily management and handling of the campus equitation and breeding horses.
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

APSC 2164 - Companion and Laboratory Animal Care and Handling (1 credit)
Brief history of companion and laboratory animals. Outline of the major anatomical and physiological characteristics, first aid and basic care. Principles of husbandry and handling techniques. Institutional Animal Care and Use Committee training.
Prerequisite(s): APSC 1454 and APSC 1464
Instructional Contact Hours: (2 Lab, 1 Crd)

APSC 2424 - Introduction to the Equine Industry (3 credits)
Introduction to the horse and equine industry. Survey of breeds and conformation; breeding, management, equipment, facilities, and marketing of the successful horse operation.
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 2524 - Intermediate Equitation (1 credit)
Intermediate work in horseback riding with special emphasis on development of the forward seat and skills required for jumping. Elementary dressage movements. COURSE FEE: $1,500.
Prerequisite(s): APSC 1624
Instructional Contact Hours: (4 Lab, 1 Crd)

APSC 2574 - Domesticated Animal Behavior (3 credits)
Behavioral systems, social behavior, learning, and cognition of domesticated animals. Ethological and psychological approaches to, and ultimate and proximate methods of, studying behavior. Evolutionary processes and natural selection, genetics and epigenetics, and neural and physiological mechanisms of behavior.
Prerequisite(s): APSC 1454 or BIOL 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 2624 - Beginning Equitation Over Fences (1 credit)
Introduction of jumping skills for the unskilled as well as review of jumping skills for experienced riders. Rider should have skills at trot and canter. COURSE FEE: $1,500.
Prerequisite(s): APSC 2524
Instructional Contact Hours: (4 Lab, 1 Crd)

APSC 2714 - Design of Precision Animal Agricultural Systems (3 credits)
Design methods, interpretation, and historical context of precision animal agriculture systems, including technologies, networking, sensors, and data analytics. Elements of animal production systems designed with precision animal agriculture technologies. Advantages and disadvantages of traditional and technology-enhanced production systems. Impacts of precision system design on economics and environmental impacts of animal agriculture and wellbeing. Data acquisition, pipelines, and analytics that link data with decision making. Design of connected systems.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 2824 - Equine Conformation and Biomechanics (2 credits)
Evaluation of equine conformation as related to locomotion, athletic performance and soundness. Basic understanding of breed standards, gaits, and rules and regulations pertaining to various equine sports disciplines, from both domestic and global perspectives. Investigation of current scientific literature regarding equine conformation and biomechanics.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

APSC 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 3024 - Equine Science and Management (3 credits)
Management of horses at maintenance, in light work, and breeding stock. Conformation, forages and concentrate requirements, common diseases and health conditions, health maintenance, vaccination and deworming protocols, behavioral modification and training practices, facility management, breeding practices, and welfare. Career paths in the horse industry. Emphasis on application and analysis of case studies.
Prerequisite(s): APSC 2124
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

APSC 3064 - Companion and Laboratory Animal Science (3 credits)
Comparative aspects of companion and laboratory animals including physiology, anatomy, nutrition, genetics and reproduction. Normal behaviors along with techniques of behavior modifications.
Prerequisite(s): ALS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 3134 - Animal Agriculture and the Environment (3 credits)
Environmental issues associated with animal agriculture. Nutrient contamination of water resources, odor emission from livestock farms, environmental regulations affecting animal agriculture, and management practices to reduce the impacts of livestock farms on air and water quality.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: DASC 3134

APSC 3214 - Principles of Meat Science (3 credits)
Muscle biology and biochemistry, fresh meat processing, meat merchandising, processed meats, food safety, meat cookery, and regulations.
Prerequisite(s): ALS 2304 and CHEM 1036
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FST 3214

APSC 3224 - Meat Science Laboratory (1 credit)
Harvesting of livestock, carcass fabrication into wholesale and retail cuts, fresh meat processing and cookery. Handling, processing and displaying fresh and processed beef, pork, and lamb. Applications of Hazard Analysis Critical Control Point (HACCP) and food safety concepts to meat processing environments.
Corequisite(s): APSC 3214
Instructional Contact Hours: (3 Lab, 1 Crd)

APSC 3254 - Animal Products (3 credits)
Products obtained from animals (meat, eggs, dairy, by-products). Effect of production and processing of food animals upon product safety and quality.
Prerequisite(s): ALS 2304
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

APSC 3334 - Animal Welfare and Bioethics (3 credits)
Historical overview of animal welfare and bioethics. Animal welfare issues in farm and companion animals with respect to their use and treatment in the United States and in the global community. The influences of animal protection organizations, consumer groups, politicians, the scientific community, and other stakeholders on the development and enforcement of policies. Pre: Junior Standing.
Prerequisite(s): APSC 1454 and ALS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 3434 - Host Microbe Interactions (3 credits)
Microbes and their physiology in animal production. Host-microbe interactions at a cellular/system level. Microbial pathogenesis, microbiome, and metabolism in animal health. Cellular responses to microbe colonization of its animal host. Relate microbial metabolism with diet and animal growth and development. Examine the underlying mechanism behind disease or health resulting from microbe interactions.
Prerequisite(s): ALS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 3504 - Poultry Science and Health (3 credits)
Avian embryology and physiological systems, poultry genetics, microbiome, diseases, biotechnology, health and welfare. Social and economic issues facing the poultry industry.
Prerequisite(s): APSC 1454 and APSC 1464
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 3524 - Intermediate Equitation Over Fences (1 credit)
Establishment of sound jumping skills. Continuation of more advanced flat work. Study of hunter courses and cross country jumping. COURSE FEE: $1,500.
Prerequisite(s): APSC 2624
Instructional Contact Hours: (4 Lab, 1 Crd)

APSC 3624 - Advanced Equitation Over Fences (1 credit)
Advanced methods and techniques for jumping and precision riding. COURSE FEE: $1,500.
Prerequisite(s): APSC 3524
Instructional Contact Hours: (4 Lab, 1 Crd)

APSC 3684 - Special Topics in Animal and Poultry Sciences (1,2 credits)
An advanced, variable-content course which explores a topic in the animal sciences such as a significant contemporary issue; an emerging research area of interest to undergraduates; or a semester-long project involving a small group of students. May be repeated for up to three credits, no more than two credits per term.
Prerequisite(s): ALS 2304
Instructional Contact Hours: (1,2 Lec, 1,2 Crd)
Repeatability: up to 3 credit hours

APSC 3754 - Principles of Livestock Evaluation (2 credits)
Selection of market and breeding animals based on subjective and objective methods of evaluation. Basic understanding of evaluation principles, form-to-function, expected progeny differences, and performance records of beef cattle, swine, and sheep. Involves accurate decision making and oral reason presentations.
Prerequisite(s): APSC 1454
Instructional Contact Hours: (6 Lab, 2 Crd)

APSC 3764 - Livestock Merchandising (2 credits)
A comprehensive study of the principles and activities involved in successfully promoting and merchandising livestock. A livestock auction (Hokie Harvest Sale) is held at the conclusion of the course to provide experiences in advertising, salesmanship, livestock photography, facility development, sale management, and budgeting. Pre: Junior standing or consent.
Instructional Contact Hours: (2 Lec, 2 Crd)

APSC 3824 - Equine Training and Marketing (2 credits)
Application of fundamental behavioral concepts and principles to the training of horses in routine handling and groundwork. Preparation, marketing and presentation of horses for show and sale.
Prerequisite(s): APSC 2124
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

APSC 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 3974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 4004 - Contemporary Issues in the Animal Sciences (3 credits)
Applying critical thinking, ethical reasoning and problem solving in order to make ethical decisions in regard to important contemporary issues in animal agriculture and other areas of the animal sciences; discourse through oral and written communication.
Prerequisite(s): APSC 2004
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 4054 - Genomics (3 credits)
A contemporary analysis of the development, utility and application of high-resolution methods for the study and manipulation of the complete genomes of organisms. The use of new techniques for genomic, metabolic and protein engineering (functional genomics), including high-throughput methods and nanotechnology, will be emphasized.
Prerequisite(s): BCHM 3114 or BCHM 4116 or BIOL 3774
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BCHM 4054

APSC 4064 - Issues in Companion Animal Management (3 credits)
Comparative aspects of companion animals including physiology, anatomy, nutrition, genetics, reproduction and well-being. Normal and aberrant behaviors along with techniques of behavior modification and pharmacological intervention. Critical evaluation of current legal and ethical issues in the companion animal industry. Limited to dogs, cats and caged birds. Pre-requisite: Junior Standing required Pre-requisites may be waived with permission of instructor.
Prerequisite(s): APSC 2464 and ALS 3104 and ALS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 4124 - Equine Health and Disease (4 credits)
Application of principles needed to effectively monitor and manage equine herd health. Focus on information synthesis, situation assessment and decision-making skills to develop preventative care protocols and treat illness. Practical application of horse health care techniques for routine and minor emergency situations.
Prerequisite(s): ALS 2304
Instructional Contact Hours: (2 Lec, 4 Lab, 4 Crd)

APSC 4204 - Advanced Equine Nutrition and Feeding (3 credits)
Analysis, formulation, and improvement of diets fed to horses in different physiological stages and metabolic statuses. Nutrient digestion, absorption, and utilization of nutrients. Computer-based ration formulation for horses. Applying economic principles to ration formulation and communicate equine nutrition concepts.
Prerequisite(s): ALS 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 4224 - Equine Exercise Physiology (3 credits)
Comprehensive study of conditioning the equine athlete using the principles of exercise physiology, energetics, kinetics, and sports medicine. Anatomy and physiology as it relates to exercise, conditioning and fitness assessment; exercise intolerance; performance nutrition; and medical practices used to support equine athletics.
Prerequisite(s): ALS 2304 and APSC 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 4264 - Companion and Exotic Animal Nutrition (3 credits)
Idiosyncrasies and conformities of digestive systems and metabolic characteristics of cats, dogs, reptiles, small mammals, birds, and fish. Nutrient requirements by life-stage of cats, dogs, reptiles, small mammals, birds, and fish. Food ingredients, software-based pet food formulations, pet food labels, and regulatory frameworks. Modifications of pet food formulations for life stage and physiological conditions. Attributes of food ingredients that impact quality and nutritional value. Pet food packaging nutritional claims. Evaluation of newly emerging information and scientific literature regarding nutritional requirements of cats, dogs, reptiles, small mammals, birds, and fish.
Prerequisite(s): ALS 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 4304 - Principles and Practices of Bovine Reproduction (2 credits)
Principles and techniques in reproductive physiology and herd management related to health, record keeping, estrus detection and synchronization, uterus and ovary condition. Ovarian function and superovulation, semen handling, artificial insemination and pregnancy detection are also considered.
Prerequisite(s): ALS 2304
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)
Course Crosslist: DASC 4304

APSC 4324 - Equine Reproduction and Neonatal Care (4 credits)
Principles and techniques in equine reproductive physiology and endocrinology. In-depth examination of equine reproduction strategies combined with practical techniques leading to synthesis and evaluation of breeding decisions. Anatomy and physiology of the mare and stallion, estrus detection and manipulation, artificial insemination, semen handling and processing, parturition and early care of neonates will be covered. Other topics will include selection of breeding stock and mating decisions.
Prerequisite(s): ALS 2304
Instructional Contact Hours: (2 Lec, 4 Lab, 4 Crd)

APSC 4404 - Commercial Poultry Enterprise Management (4 credits)
Production, management, and reproduction of meat- and egg-type chickens and turkeys. Emphasis is on the application of basic poultry science principles as they relate to commercial poultry enterprises. Advanced topics of economic analysis, program management, and problem solving used in decision making processes in integrated poultry operations.
Prerequisite(s): APSC 2104 and ALS 3104 and ALS 3204 and ALS 3304
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

APSC 4414 - Beef and Sheep Production and Industry (4 credits)
Study of the commercial and purebred beef cattle and sheep industries. Principles and applications for successful and profitable beef and sheep production.
Prerequisite(s): APSC 2114 and ALS 3104 and ALS 3204 and ALS 3304
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

APSC 4424 - Horse Production and Management (4 credits)
Reproduction, genetics, nutrition, herd health, planning and economics of private and commercial horse farms, and current issues in the horse industry.
Prerequisite(s): APSC 2124 and APSC 2424 and ALS 3104 and ALS 3204 and ALS 3304
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

APSC 4444 - Swine Production (3 credits)
Principles for commercial and seedstock swine production; current management practices, housing and marketing; issues and challenges in the swine industry. Experience in husbandry, research, and other management techniques obtained during laboratory.
Prerequisite(s): APSC 2114 and ALS 3104 and ALS 3204 and ALS 3304
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

APSC 4464 - Companion and Laboratory Animal Health and Management (4 credits)
Animal health, management, well-being, and government regulation in the maintenance, use and enjoyment of companion and laboratory animals.
Prerequisite(s): APSC 2164 and APSC 3064 and ALS 3104 and ALS 3204 and ALS 3304
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

APSC 4514 - Animal Growth and Development (3 credits)
Meat animal growth and development processes, micro and gross anatomy, stem cell biology and growth, body and carcass composition with application to animal and carcass evaluation.
Prerequisite(s): ALS 2304 and ALS 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 4554 - Advanced Livestock Enterprise Management (3 credits)
Application of principles needed to manage profitable and sustainable beef cattle, sheep, and swine enterprises. Use of techniques to develop and evaluate strategies resulting in sound livestock enterprise management decisions. Focus on advanced animal management protocols, enterprise analysis, resource allocation, marketing options and risk management.
Prerequisite(s): APSC 4414 or APSC 4444
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

APSC 4624 - Topics in Equine Science (2 credits)
Review and critique of scientific literature related to equine science. Focus on creative and critical thinking. Principles and practice of information analysis, synthesis and evaluation through discourse and technical writing. Practical application of research and communication skills.
Prerequisite(s): ALS 2304
Instructional Contact Hours: (2 Lec, 2 Crd)

APSC 4774 - Nutrition and the Animal Brain (3 credits)
Relationship of diet and nutrients to animal behavior and neurobiology. Nervous system control of feeding behavior and metabolism to regulate whole body energy homeostasis in companion, livestock, and poultry species. Interactions of dietary formulations and nutrients affecting brain physiology and pathology.
Prerequisite(s): ALS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

APSC 4954 - Capstone Experience in Animal and Poultry Sciences (1-19 credits)
Student-defined learning experience that utilizes knowledge and skills already learned to acquire new skills, synthesize information and solve problems in the animal sciences. Requires approval from the department before commencement of the experience, and a final report at its conclusion. Open to APSC majors only. Completion of 75 credits towards the APSC degree required.
Prerequisite(s): APSC 2004
Instructional Contact Hours: Variable credit course

APSC 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

APSC 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Appalachian Studies (APS)

APS 1704 - Introduction to Appalachian Studies (3 credits)
Introduces students to the history of the Appalachian region from European contact to the present. Traces the idea of Appalachia by tracing ways in which Americans have imagined the region over time. Explores humanistic problems of cultural identity, race and ethnicity, place and globalization, and impacts of natural resource extraction.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 1704

APS 2124 - Music Traditions in Appalachia (3 credits)
Survey and study of music traditions in Appalachia. Investigation of the formal elements of this music, including instruments and musical terms and forms. Exploration of style as a reflection of many cultural influences. Study of the impact and development of these traditions in contemporary musical practices.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MUS 2124

APS 2404 - Folk Cultures in Appalachia (3 credits)
Examination of the expressive genres and cultural processes of communities in Appalachia. Documentation of art and skill in everyday life, including material culture (e.g., foodways, architecture), customary behavior (e.g., music, ritual, occupational practice), and verbal art (e.g., narrative, speechplay), and analysis of how people have used these forms to shape social identities, physical spaces, and power relations.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 2404

APS 2434 - The Cultural Politics of Music in Appalachia (3 credits)
Examines cultural, political, and social aspects of music in, of, and about Appalachia, including such commercialized and increasingly globalized products as “old-time,” “bluegrass,” and “country.” Ways in which music contests and reproduces social relations of race, class, and gender. Role of migration and racial diversity in formation of Appalachian music. Economic significance of music, such as Virginia’s The Crooked Road as a regional touristic undertaking.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

APS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 2974H - Independent Study (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

APS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 3124 - Societal Health in North America (3 credits)
Study of human health within and across a variety of geographic contexts in North America. Describe the health consequences of inequity and injustice within and across American contexts. Consider the roles of collectives, social movements, mutual aid, interdisciplinary thinking, power and social justice in addressing pathologies of power and working towards human well-being. Advocate a biosocial lens that considers the dynamic relationships between biology and environmental, social, geographic, and historical contexts.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 3124

APS 3214 - History of Appalachia (3 credits)
Early settlement, religion, the pre-industrial economy, the coming of the coal and lumber industries, labor activism, politics, migration, and regional identity.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3214

APS 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AHRM 3464, GEOG 3464, HD 3464, HUM 3464, SOC 3464, UAP 3464

APS 3624 - Appalachian Literature (3 credits)
Appalachian literature from the region’s beginnings to the present, including such diverse voices as women, Native American, Affrilachian, LGBTQ, and Latinx populations. Literary perspectives on the relationships between self, family, and community; place and displacement; and humans and the natural world. Analysis of stereotypes that have perpetuated inequity and displacement of power, as well as consideration of regional efforts to reclaim equity, power, place, and identity.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 3624

APS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 4034 - Appalachian Languages and Cultures (3 credits)
An empirical examination of how Appalachian speech both reflects and constitutes regional cultures. Emphasis is on applying sociological and anthropological methods and theories to the study of language in use.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 4054

APS 4094 - Appalachian Community Research (3 credits)
Undergraduate participatory community research as applied to issues of cultural heritage, sustainability, and identity. Students engage in projects defined by community groups and organizations as being critical to their well-being, continuity, or growth. Emphasis is on developing concepts of civic professionalism and developmental democracy.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHS 4094, SOC 4094

APS 4414 - Issues in Appalachian Studies (3 credits)
Research conducted by students on issues relevant to local or regional sustainability in contemporary Appalachia on contemporary environmental and community issues. Focus on environmental justice ethical issues expressed in or created by various forms of discourse.
Prerequisite(s): HUM 1704 or APS 1704
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 4414

APS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 4974H - Independent Study (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

APS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 4994H - Undergraduate Research (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

Apparel, Housing, & Resour Mgt (AHRM)

AHRM 1014 - Design and Art for Consumers (3 credits)
Overview of art and design principles and elements with a focus on their application in the creation and promotion of apparel, housing, and residential technology products for diverse consumers. Review of historical art and design trends and theories in relation to these products. Interpretative strategies and methodologies in visual art and design. Exploration of the design process, including examinations of human factors and user needs.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

AHRM 1104 - Introduction to AHRM and Student Resources (1 credit)
Introduction to the Department of Apparel, Housing, and Resource Management (AHRM), majors and curriculum requirements. Introduces students to experiential learning opportunities, undergraduate research, and career opportunities. Exploration of programs and services to enhance awareness of opportunities and support systems available for student success.
Instructional Contact Hours: (1 Lec, 1 Crd)

AHRM 2014 - Design for Consumers Studio (3 credits)
Exploration and application of design principles and elements in two-dimensional and three-dimensional designs that support the development and promotion of products for diverse consumers, including apparel, housing, residential technologies. Application of skills, tools, and methods to the creation of design. Utilization of the design process to develop plans for consumer products for diverse users. Design Lab/ Studio.
Prerequisite(s): AHRM 1014
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (0 Lec, 5 Lab, 3 Crd)

AHRM 2404 - Consumer Rights (3 credits)
Role of consumers in society and in national and international markets. Consumer rights, responsibilities, policies, regulations and redress. Consumer decision making and planned buying. Current consumer issues such as: product safety, food, health care, housing, environmental impact, banking, credit and insurance from an intercultural perspective.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

AHRM 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 3464, GEOG 3464, HD 3464, HUM 3464, SOC 3464, UAP 3464

AHRM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Arabic (ARBC)

ARBC 1105 - Elementary Arabic (3 credits)
Fundamentals of Arabic with emphasis on developing proficiency for communication through reading, writing, speaking, listening, and cultural competence. ARBC 1105 is for students with no prior knowledge of the language.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 1106 - Elementary Arabic (3 credits)
Fundamentals of Arabic with emphasis on developing proficiency for communication through reading, writing, speaking, listening, and cultural competence. ARBC 1106 is for students who have completed ARBC 1105 or the equivalent. Completion of 1106 meets the university language requirement.
Prerequisite(s): ARBC 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 1114 - Accelerated Elementary Arabic (6 credits)
Proficiency-oriented approach to Elementary Arabic, designed for learners who wish to progress rapidly through the beginning stages of language learning. Develops speaking, listening comprehension, reading comprehension, writing, and cultural competency at the novice-high level. Duplicates 1105 and 1106. Not recommended for Native Speakers.
Instructional Contact Hours: (6 Lec, 6 Crd)

ARBC 2105 - Intermediate Arabic (3 credits)
2105: First course in the intermediate-level sequence in Arabic. Review of grammar with increasing emphasis on reading, writing, cultural competency, and oral communication.
Prerequisite(s): ARBC 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 2106 - Intermediate Arabic (3 credits)
2106: Second course in the intermediate-level sequence in Arabic. Reinforcement of reading, writing, speaking, listening, and cultural competency skills, allowing students to consolidate and expand on their previous knowledge and preparing them for third-year Arabic. Not recommended for native speakers.
Prerequisite(s): ARBC 2105
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 2774 - Arab Culture and Civilization (3 credits)
Overview of Arab culture and civilization, with an emphasis on the modern Middle East. Familiarizes students with the geography, history, politics and sociology of the Arab world and identifies the cultural forces that shape current events in the region. Explores the impact of colonialism, war, religion, gender relations, and media technologies in the Arab world. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARBC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARBC 3105 - Advanced Arabic (3 credits)
3105: First course in the advanced-level sequence in Arabic. Practice in communication skills in Arabic both orally and in writing, including review of grammar, directed composition, and conversation, with an emphasis on pronunciation, cultural competency, and oral expressions. Not recommended for native speakers. 3106: Second course in the advanced-level sequence in Arabic. Reinforcement of oral proficiency, reading, grammar, and writing skills, allowing students to explore a broad range of texts of general and professional interest. Not recommended for native speakers.
Prerequisite(s): ARBC 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 3106 - Advanced Arabic (3 credits)
3106: Second course in the advanced-level sequence in Arabic. Reinforcement of oral proficiency, reading, grammar, and writing skills, allowing students to explore a broad range of texts of general and professional interest. Not recommended for native speakers.
Prerequisite(s): ARBC 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 3124 - Arabic for Oral Proficiency (3 credits)
Devoted to the acquisition of spoken dialect and the enhancement of cultural competency. Provides students with the skills necessary to modify the pronunciation and grammar rules of Modern Standard Arabic in order to speak and comprehend conversational Arabic at the intermediate level. Emphasis on speaking, listening comprehension, daily-life experiences, body-language, and cultural knowledge. Not recommended for native speakers.
Prerequisite(s): ARBC 2105
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 3274 - War and Arab Culture (3 credits)
Cultural production related to war and violent conflict in the Arab world. Cultural, intellectual, and historical contexts of war in the Arab world. Arab cultural production as a reflection of political, economic, and social change in modern Arab societies, and representations of war in the Arab world in Western cultural production. Explores themes including trauma and memory, displacement, political propaganda, nationalism, and religious and ideological conflict as represented in various genres, including literature, music, and visual art. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 3304 - Modern Arabic Literature in Translation (3 credits)
Familiarizes students with the cultural, intellectual, and historical contexts of major Arabic literary texts. Provides students with skills necessary to analyze the rhetorical devices and literary techniques of the texts under study. Texts from major literary genres include poems, short stories and realist and experimental novels. Explores topics including postcolonialism, resistance, war, romance, tradition, religion, feminism, and pop culture. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 3474 - Topics in Arab Cinema (3 credits)
Examination of the cultural, intellectual, and historical contexts of Arab cinematic works. Exploration of the ways in which Arab cinema reflects the dynamics of political, economic, and social change in modern Arab societies, as well as how the Arab world is represented in Western films. Variable topics such as war and conflict, terrorism, postcolonialism and movements for national independence, feminism, gender and sexuality, and globalization. Taught in English. Variable content. May be repeated 2 times with different content for a maximum of 6 credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ARBC 3514 - Media Arabic (3 credits)
Reading and listening comprehension, analysis, writing, translation, and cultural conventions pertaining to Arabic print and broadcast media.
Prerequisite(s): ARBC 2105
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 3644 - Religion in the Middle East (3 credits)
Critical issues in religion in the Middle East. Competing methods for analyzing religion in the Middle East. Key concepts relating to religion and inter-religious relations in the Middle East such as minority, majority, tolerance, citizenship, and family law. Critical thinking about the relationship between Islam and other religions with particular reference to Muslim-Jewish and Muslim-Christian relations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3644, RLCL 3644

ARBC 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ARBC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARBC 4104 - Advanced Grammar, Conversation, and Cultural Competency (3 credits)
Focus on enhancing students' conversational skills in formal and colloquial usage, analysis and application of advanced grammatical and stylistic devices, reading and listening comprehension and cultural competence in norms and social practices in the Arab world.
Prerequisite(s): ARBC 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 4154 - Advanced Composition and Stylistics (3 credits)
Intensive work in written Arabic. Devoted to enhance the grammar, stylistics, writing, and cultural competency of Arabic students at the advanced level. Emphasis on analyzing and writing personal, academic, and professional texts, with attentiveness to the cultural conventions common to each genre.
Prerequisite(s): ARBC 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 4334 - Research in Arab Culture (3 credits)
Interpretation of sources about Arab culture. Examination of the historical, intellectual, and cultural contexts of major cultural productions. Integration of authentic Arabic language texts into research. Analysis of the impact of gender, race, and class on cultural productions in the Arab world. Taught in English.
Prerequisite(s): ARBC 2105 and ARBC 2774
Instructional Contact Hours: (3 Lec, 3 Crd)

ARBC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARBC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARBC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Architecture (ARCH)

ARCH 1004 - Understanding Community through your Campus (2 credits)
The Virginia Tech campus as both a place and an idea. Explore the physical campus and learn how to recognize its elements. Determine where you are physically, as a community, and as part of an academic tradition. Identification of campus landmarks and navigational exploration. Measure and assess the campus and its spaces and objects, both real and virtual. Place this campus in relation to wider campus ideal and Virginia Tech history. Discussion of custodianship of land by indigenous people and history of black communities in Blacksburg and surrounding areas. Discussion of how and to whom the campus is accessible. Analysis of its buildings, spaces, and branded artifacts in verbal, digital, and drawn representation of the images, forms, and spaces students have observed. Recognition and analysis of both explicit and implicit messages in buildings, objects, and spaces. Come to an understanding of how human-made structures act as stage sets or active frameworks in which we can act out our roles of as members of communities of various kinds and at various scales.
Instructional Contact Hours: (2 Lec, 2 Crd)

ARCH 1015 - Foundation Design Laboratory (6 credits)
Foundation Design Lab is an immersive, interactive learning environment focused on inquiry, experimentation, discovery, and synthesis for students studying architecture, landscape architecture, interior design, and industrial design. The design lab develops self-reliance and self-critique, opens intellectual horizons, and challenges students to continually expand and deepen their aesthetic judgement and critical understanding. Course contact to credit hour structure: Lecture (1H,1C), Lab (6L, 2C), Design Lab/Studio (5L,3C).
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

ARCH 1016 - Foundation Design Laboratory (6 credits)
Foundation Design Lab is an immersive, interactive learning environment focused on inquiry, experimentation, discovery, and synthesis for students studying architecture, landscape architecture, interior design, and industrial design. The design lab develops self-reliance and self-critique, opens intellectual horizons, and challenges students to continually expand and deepen their aesthetic judgement and critical understanding. Course contact to credit hour structure: Lecture (1H,1C), Lab (6L, 2C), Design Lab/Studio (5L,3C).
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

ARCH 1024 - Innovative Design Thinking (3 credits)
Engages students in learning environment of the design laboratory, which is interactive inquiry, experimentation, discovery, and synthesis. Develops thinking and making skills in 2D and 3D across multiple scales. Advances abilities to solve problems through exploring strategies with viable consequences. Engages students in a series of iterative drawing, and modeling exercises relevant to architecture and design education. ARCH 1024 is restricted to incoming freshmen.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 1034 - Seeing Design: Transforming Observations (3 credits)
Introduces students to ways of perceiving, and recording the built and natural environment in Southwest Virginia. Introduces students to travel studies as an essential part of their architecture and design education. Transforms students observational skills. Employs photography and sketching as means of documenting findings. Employs screenprinting and digital technologies as a way to transform documentation. Prepares students for an exhibition of their work, including oral presentations. ARCH 1034 is restricted to incoming freshmen.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 1044 - Life in the Built Environment (3 credits)
Development of the human-made environment has shaped our social relations, culture, and identity. Discussion of how the imposition of built form has served both to define a shared culture and as a means of exclusion and injustice. Study of equity and ethics as evidenced and continued in planning, construction, and public space. Learn how the knowledge of these past structures might shape the future of the built environment in the United States in ways that are more equitable, inclusive, and sustainable.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SPIA 1044

ARCH 1115 - Qualifying Design Laboratory (3 credits)
1115: An immersive, interactive course focused on inquiry, experimentation, discovery, and synthesis. Employs a series of iterative drawing and modeling exercises, at a beginners level, in two and three dimensions across multiple scales. Develops self-reliance and self-critique, which opens intellectual horizons. Challenges expand and deepen aesthetic judgment and critical understanding. Develops fundamental thinking and making skills that advance their abilities to solve problems by exploring strategies toward viable consequences. Restricted to students transferring into the School of Architecture + Design and changing their major to architecture, landscape architecture, interior design, or industrial design. 1116: An immersive, interactive course focused on inquiry, experimentation, discovery, and synthesis. Employs a series of iterative drawing and modeling exercises, at an intermediate level, in two and three dimensions across multiple scales. Develops self-reliance and self-critique, which opens intellectual horizons. Challenges expand and deepen aesthetic judgement and critical understanding. Advances foundational thinking and making skills that develop their abilities to solve problems by exploring strategies toward viable consequences. Restricted to students transferring into the School of Architecture + Design and changing their major to architecture, landscape architecture, interior design, or industrial design.
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

ARCH 1116 - Qualifying Design Laboratory (3 credits)
An immersive, interactive course focused on inquiry, experimentation, discovery, and synthesis. Employs a series of iterative drawing and modeling exercises, at an intermediate level, in two and three dimensions across multiple scales. Develops self-reliance and self-critique, which opens intellectual horizons. Challenges expand and deepen aesthetic judgement and critical understanding. Advances foundational thinking and making skills that develop their abilities to solve problems by exploring strategies towards viable consequences. Restricted to students transferring into the School of Architecture + Design and changing their major to architecture, landscape architecture, interior design, or industrial design.
Prerequisite(s): ARCH 1115
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

ARCH 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARCH 2004 - Architecture and Culture: Buildings, Equity and Climate (3 credits)
Interdisciplinary and cross-cultural study of architecture and its context - fundamental architectural ideas, how and why buildings are built, how spaces are occupied and by whom, and how external forces (such as social, political, economic, and environmental) inform architecture's construction and occupation. Examine key buildings from cultures around the world through architectural artifacts, texts, and drawings, employing both disciplinary and interdisciplinary perspectives. Analyze how these buildings operated within diverse cultures to investigate the mutual influence between architecture and its context over time. Develop coherent, evidence-based arguments, drawing on insights from both discipline-specific and interdisciplinary approaches. Develop recommendations for inclusive, equitable, and climate-responsive architecture.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 2015 - Architecture II (7 credits)
Introduction to the theory and practice of architecture. Discipline-specific investigations into how architecture concentrates and conveys natural and cultural influences. Focus on building design as a comprehensive activity balancing numerous concerns including aesthetic, history, materiality, tectonics, and spatial expression. Examination of the relationship between the built and natural environments, including the effects of construction and environmental factors. Qualitative approaches to how architecture contributes to human wellbeing. Identification of relevant areas of interest and modes of inquiry to enrich current work and serve as a basis for self-directed learning. Immersion in the design laboratory ('studio') learning environment. 2015: How architecture concentrates and expresses natural and cultural influences, as well as how it addresses the well-being of individuals and society, through design investigations of varied scales and complexity. Identifying and connecting the fundamentals that comprise the multidimensional wholeness of a work of architecture. Selecting, describing, and analyzing relevant precedents. How architecture and the arts are similar and different, as well as how different fields of knowledge relate to architecture as a cultural and technological production. Discipline-specific modes of communication. 2016: Continued exploration of the dynamic between built and natural environments, including site, environmental forces, and construction impacts; how architecture contributes to human wellbeing. Speculation, development, and communication of architectural proposals. Developing creative source materials by examining a problem from various disciplinary and cultural perspectives. Increasingly complex design work. Hybrid Lecture (2H, 2C), Lab (12L, 4C), Design Lab/Studio (2L, 1C) (2H,14L,7C)
Prerequisite(s): ARCH 1016
Instructional Contact Hours: (2 Lec, 14 Lab, 7 Crd)

ARCH 2016 - Architecture II (7 credits)
Introduction to the theory and practice of architecture. Discipline-specific investigations into how architecture concentrates and conveys natural and cultural influences. Focus on building design as a comprehensive activity balancing numerous concerns including aesthetic, history, materiality, tectonics, and spatial expression. Examination of the relationship between the built and natural environments, including the effects of construction and environmental factors. Qualitative approaches to how architecture contributes to human wellbeing. Identification of relevant areas of interest and modes of inquiry to enrich current work and serve as a basis for self-directed learning. Immersion in the design laboratory ('studio') learning environment. 2015: How architecture concentrates and expresses natural and cultural influences, as well as how it addresses the well-being of individuals and society, through design investigations of varied scales and complexity. Identifying and connecting the fundamentals that comprise the multidimensional wholeness of a work of architecture. Selecting, describing, and analyzing relevant precedents. How architecture and the arts are similar and different, as well as how different fields of knowledge relate to architecture as a cultural and technological production. Speculation, development, and communication of architectural proposals. Developing creative source materials by examining a problem from various disciplinary and cultural perspectives. Increasingly complex design work. Hybrid Lecture (2H, 2C), Lab (12L, 4C), Design Lab/Studio (2L, 1C) (2H,14L,7C)
Prerequisite(s): ARCH 2015
Instructional Contact Hours: (2 Lec, 14 Lab, 7 Crd)

ARCH 2034 - Art of Building (2 credits)
Introduction to architecture identifying the fundamental considerations that contribute to the complex totality of a work of architecture. Interrelationships of context, structure, materiality, and technology toward accommodation and advancement of human activities and well-being. Context as preexisting factors and forces of any given site of architecture, not limited to cultural, historical, geographical, and environmental, including topography and climate. Contemporary precedents emphasizing the diversity of cultural practices and values around the globe.
Prerequisite(s): ARCH 1016
Corequisite(s): ARCH 2015
Instructional Contact Hours: (3 Lab, 2 Crd)

ARCH 2044 - Building Materials (2 credits)
Introduction to the attributes of materials with which buildings are built such as masonry, reinforced concrete, steel, stone, timber, glass and insulation; introduction of the impact of soil, vegetation, watersheds and other natural conditions on buildings and their material fabrication.
Prerequisite(s): ARCH 1015
Instructional Contact Hours: (2 Lec, 2 Crd)

ARCH 2114 - Sustainability by Design (3 credits)
Design decision-making in complex contexts. Ethical issues underlying design for sustainability. Evaluation of design in systems, products, places, and modes of living using the Framework for Strategic Sustainable Development (FSSD). Historical and cultural underpinnings of design and sustainability.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 2114

ARCH 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARCH 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARCH 3015 - Architecture III (7 credits)
Architectural design principles, technical concepts, applications, and measures of quality. Ongoing development of key professional skills such as modes of inquiry, problem structuring, drawing and modeling, workflows, and critique. Site, program, structural, regulatory, and environmental influences addressed in architectural formulations. Development of independent interests, research pursuits, and modes of working. 3015: Various materials and techniques of building design. The technical language of describing designed structures. Human experience, health & wellness, user needs, and regulatory standards in the built environment at multiple scales. Analysis of programmatic and site variables that influence design decisions and resource and environmental stewardship objectives. How fundamental design concepts (idea, movement, structure) and human occupation (context, program, experience) intersect with technical constructive knowledges (assembly, materials, building systems). Subjective measures of quality in design. 3016: Continued studies in materials and techniques of building design. Building assemblies documented in technical drawing, modeling, and writing. Interweaving of fundamental design concepts, human occupation, and technical constructive knowledges. How subjective and measurable (resource, environmental stewardship) criteria impact design decisions. Hybrid Lecture (2H, 2C), Lab (12L, 4C), Design Lab/Studio (2L, 1C) (2H,14L,7C)
Prerequisite(s): ARCH 2016
Corequisite(s): ARCH 3065
Instructional Contact Hours: (2 Lec, 14 Lab, 7 Crd)

ARCH 3016 - Architecture III (7 credits)
Architectural design principles, technical concepts, applications, and measures of quality. Ongoing development of key professional skills such as modes of inquiry, problem structuring, drawing and modeling, workflows, and critique. Site, program, structural, regulatory, and environmental influences addressed in architectural formulations. Development of independent interests, research pursuits, and modes of working. 3015: Various materials and techniques of building design. The technical language of describing designed structures. Human experience, health & wellness, user needs, and regulatory standards in the built environment at multiple scales. Analysis of programmatic and site variables that influence design decisions and resource and environmental stewardship objectives. How fundamental design concepts (idea, movement, structure) and human occupation (context, program, experience) intersect with technical constructive knowledges (assembly, materials, building systems). Subjective measures of quality in design. 3016: Continued studies in materials and techniques of building design. Building assemblies documented in technical drawing, modeling, and writing. Interweaving of fundamental design concepts, human occupation, and technical constructive knowledges. How subjective and measurable (resource, environmental stewardship) criteria impact design decisions. Hybrid Lecture (2H, 2C), Lab (12L, 4C), Design Lab/Studio (2L, 1C) (2H,14L,7C)
Prerequisite(s): ARCH 3015
Corequisite(s): ARCH 3066
Instructional Contact Hours: (2 Lec, 14 Lab, 7 Crd)

ARCH 3054 - Building Analysis (2 credits)
Study of exemplary built works of architecture through analysis of design documents, interviews, and inspection of actual construction. Course is completed as a group project resulting in both an oral presentation and a written document.
Prerequisite(s): ARCH 3015
Corequisite(s): ARCH 3016, ARCH 3046
Instructional Contact Hours: (2 Lec, 2 Crd)

ARCH 3065 - Building Materials and Assemblies (3 credits)
Study of what buildings are made of and how buildings are made, in support of architectural design decisions. Attributes of building materials informing their selection and use in buildings. Design and representation of building assemblies, systems, and details, including primary and secondary structural systems, the building envelope, and sub-assemblies, as influenced by formal design ideas, geometry, structure, construction processes, weather resistance, human health and well-being, and environmental impact and sustainability. 3065: Focus on wood, masonry, concrete, and steel construction systems; subsurface conditions and foundations; building codes, life-safety, and accessibility; and basic principles of building envelope systems. 3066: Review of wood, masonry, concrete, and steel construction. Focus on design of building envelope/enclosure wall systems and roofs, including consideration of water resistance, thermal insulation, air infiltration, and vapor control; building cost considerations; and appropriate modes of representation for detailed design decisions.
Prerequisite(s): ARCH 2016
Corequisite(s): ARCH 3015
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 3066 - Building Materials and Assemblies (3 credits)
Study of what buildings are made of and how buildings are made, in support of architectural design decisions. Attributes of building materials informing their selection and use in buildings. Design and representation of building assemblies, systems, and details, including primary and secondary structural systems, the building envelope, and sub-assemblies, as influenced by formal design ideas, geometry, structure, construction processes, weather resistance, human health and well-being, and environmental impact and sustainability. 3065: Focus on wood, masonry, concrete, and steel construction systems; subsurface conditions and foundations; building codes, life-safety, and accessibility; and basic principles of building envelope systems. 3066: Review of wood, masonry, concrete, and steel construction. Focus on design of building envelope/enclosure wall systems and roofs, including consideration of water resistance, thermal insulation, air infiltration, and vapor control; building cost considerations; and appropriate modes of representation for detailed design decisions.
Prerequisite(s): ARCH 3065
Corequisite(s): ARCH 3016, ARCH 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 3115 - Histories of Architecture (3 credits)
Disciplinary study of architecture across time (pre-history to present) and across continents (Eastern, Western, Northern, and Southern hemispheres). Histories, principles, and factors grounding architecture's expression, form, and methods. Architecture as a cultural production reflective of its social, political, artistic, intellectual, technological, and environmental context. Exploration through artifacts, texts, drawings. ARCH 3115: emphasis on artifacts and architecture between 25000 BCE and 1600 CE; ARCH 3116: includes architectural productions from 1600 CE to present.
Prerequisite(s): ARCH 1015
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 3116 - Histories of Architecture (3 credits)
Disciplinary study of architecture across time (pre-history to present) and across continents (Eastern, Western, Northern, and Southern hemispheres). Histories, principles, and factors grounding architecture's expression, form, and methods. Architecture as a cultural production reflective of its social, political, artistic, intellectual, technological, and environmental context. Exploration through artifacts, texts, drawings. ARCH 3115: emphasis on artifacts and architecture between 25000 BCE and 1600 CE; ARCH 3116: includes architectural productions from 1600 CE to present.
Prerequisite(s): ARCH 3115
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 3204 - Topics Modules in Architecture History & Theory (1 credit)
Discrete topics in design theory, history, criticism, research methods, and representation. How historic, social, political, technological, and/or economic factors shape the built environment. Historical and contemporary significance of architectural productions within cultural dimensions of human history. How discrete modes of verbal, textual, visual, graphic, or spatial representation influence and reflect understanding relative to architectural form and ideas. May be repeated 2 times with different content for a maximum of 3 credit hours.
Prerequisite(s): ARCH 1016
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

ARCH 3214 - Topic Modules in Building Science and Technology (1 credit)
Focused topics in building technology, systems, materials, construction, assembly and details. Develop scientific expertise that couples quantitative and qualitative dimensions using tools, methods, science, processes of the given field through study, reflection, and application. Utilize empirical knowledge, including building performance, environmental responsibility, and occupant well-being, to advance design excellence. May be repeated 2 times with different content for a maximum of 3 credit hours.
Prerequisite(s): ARCH 2015
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

ARCH 3224 - Topics Modules in Architectural Media and Methods (1 credit)
Properties and uses of media, materials and processes as tools for analysis, documentation, and presentation of the designed environment. Media properties and processes. Selection of workflows. Appropriate use and maintenance of tools. Iterative design and evaluating outcomes. May be repeated 2 times with different content for a maximum of 3 credit hours. Design Lab/Studio (2L, 1C)
Prerequisite(s): ARCH 1016
Instructional Contact Hours: (2 Lab, 1 Crd)
Repeatability: up to 3 credit hours

ARCH 3234 - Topics Modules in Architecture and Praxis (1 credit)
Specialized topics in the practice of architecture related to designing, planning, and managing the built environment. Factors that inform and impact both design processes and outcomes, such as environmental justice, professionalism, sustainability, inclusivity, and technology. Established and emerging frameworks of architectural practice in fostering the continuous improvement of the discipline. How architects and architecture can contribute to a variety of academic and professional contexts. Teamwork and leadership. May be repeated 2 times with different content for a maximum 3 credit hours.
Prerequisite(s): ARCH 2015
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

ARCH 3304 - Topics in Architecture History & Theory (3 credits)
Discrete topics in architecture theory, history, criticism, research methods, and representation. How historic, social, political, technological, and economic factors shape the built environment. Historical and contemporary significance of architectural productions within cultural dimensions of human history. The works and ideas of architects, urban planners, historians, theorists, and educators in the context of contemporary architecture. Critical discourse and inquiry. May be repeated 2 times with different content for a total of 9 credit hours.
Prerequisite(s): ARCH 3116
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ARCH 3404 - Topics in Building Science and Technology (3 credits)
Focused topics in building technology, systems, materials, construction, assembly and details. Develop scientific expertise that couples quantitative and qualitative dimensions using empirical and design-based tools, methods, science, processes of the given field through study, reflection, and application. Research methods. Representing and communicating research objectives and findings. Using findings to inform decision-making in design. May be repeated 2 times with different content for a maximum of 9 credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ARCH 3504 - Topics in Architectural Media and Methods (3 credits)
Topics in properties and uses of media, materials, and processes as tools for craft, analysis, documentation, and presentation of the designed environment. Media properties, materials and processes. Selection of workflows. Appropriate use and maintenance of tools. Interplay between media properties and workflows. Iterative design and evaluating outcomes. Parallel practices, techniques, and structures of thinking and making. May be repeated 1 time with different content for a maximum of 6 credit hours. Design Lab/Studio (1H, 3L, 3C)
Prerequisite(s): ARCH 1016
Instructional Contact Hours: (1 Lec, 3 Lab, 3 Crd)
Repeatability: up to 6 credit hours

ARCH 3604 - Topics in Architecture and Praxis (3 credits)
Specialized topics in the practice of architecture related to designing, planning, and managing the built environment. Develop professional expertise with the knowledge, tools, and processes of the given topic through study, use, and reflection. Existing and emerging theories and frameworks that govern the practice of architecture and its outcomes in the constructed environment. Tools, methods, and practices towards the design of responsive, inclusive, and sustainable works of architecture. Position taken on an individual level within the profession of architecture. May be repeated 1 time with different content for a maximum of 6 credit hours.
Prerequisite(s): ARCH 2015
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ARCH 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

ARCH 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ARCH 3974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARCH 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARCH 4004 - Architecture IV - Option Lab (7 credits)
Advanced architecture laboratory with specialized design options, off-campus domestic and study abroad opportunities, technical research, and professional internships. Role of design processes in shaping the built environment in response to multiple factors and across diverse contexts. Immersion in professional or specialized settings to contextualize the student's position in the discipline. Development of student-driven course of action for pursuing ongoing professional interests through engagements with, and contributions to, disciplinary research and discourse. Engagement of new territories of inquiry and representation in design work. Critical professional skills in documentation of technical and discursive dimensions of architectural works. Hybrid Lecture (2H, 2C), Lab (12L, 4C), Design Lab/Studio (2L, 1C) (2H,14L,7C)
Prerequisite(s): ARCH 3016
Instructional Contact Hours: (2 Lec, 14 Lab, 7 Crd)

ARCH 4014 - Architecture IV - Integrative Design (8 credits)
Integration of site, program, constructive systems, and regulatory and environmental frameworks to develop conceptually sound and technically feasible architectural works. Application of design research, including precedent analysis and case studies of existing works. Advanced representation techniques including written, graphic, and physical artifacts. Criticism and dialogue. Individual growth in areas of ongoing interest, research, and modes of study in architectural practice. Repeatable one time, Max. 16 cr. Hybrid Lecture (2H, 2C), Lab (15L, 5C), Design Lab/Studio (2L, 1C) (2H, 17L, 8C)
Prerequisite(s): ARCH 3016 and ARCH 3054
Instructional Contact Hours: (2 Lec, 17 Lab, 8 Crd)
Repeatability: up to 16 credit hours

ARCH 4034 - Building Cities (3 credits)
Analytical studies in the historical evolution of cities, towns and villages. Comparative studies of urban form in relation to their constructive and imaginative means with an emphasis on modern construction processes. Specific case studies in designing and building cities.
Corequisite(s): ARCH 4016
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 4044 - Professional Practice in Architecture (3 credits)
Role and responsibilities of the profession on the environment, public health, and social welfare. Professional ethics. Contributions to policymaking and the building enterprise through leadership, advocacy, and civic engagement. Issues of equity, diversity, and inclusion in the profession, the environments where we practice, and the places we design. Roles, responsibilities and viewpoints of the commissioning, design, and construction ensemble. Contracts, compliance, and risk management. Starting, running, and maintaining a profitable architecture practice to achieve design goals. Methods and technologies for delivering projects. Leadership and professional communication skills, including oral, written, and visual presentations, negotiations and conflict resolution, and interpersonal communication in collaborative teams, interviews, and public meetings. Pursuing licensing, specialization, and/or nontraditional career trajectories. Change and future practice forms.
Prerequisite(s): ARCH 3016
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 4055 - Environment and Building Systems (3 credits)
A design oriented study of environmental forces, environmental impacts of the built environment, and related building environmental control, life safety and service systems, with concern for the human psycho-physical impacts of building form and systems performance.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 4056 - Environment and Building Systems (3 credits)
A design oriented study of environmental forces, environmental impacts of the built environment, and related building environmental control, life safety and service systems, with concern for the human psycho-physical impacts of building form and systems performance.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 4075 - Building Structures (3 credits)
Building structures in steel, timber, and reinforced concrete; design of typical components: beams, slabs, columns, beam-columns, connections, and foundations; design of retaining walls; the resistance of buildings to gravity and lateral force action; building stability; floor/roof framing systems; design of simple buildings.
Prerequisite(s): ESM 3704
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 4076 - Building Structures (3 credits)
Building structures in steel, timber, and reinforced concrete; design of typical components: beams, slabs, columns, beam-columns, connections, and foundations; design of retaining walls; the resistance of buildings to gravity and lateral force action; building stability; floor/roof framing systems; design of simple buildings.
Prerequisite(s): ESM 3704
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 4114 - Ideas, Concepts, and Representations of Architecture (3 credits)
Disciplinary study of ideas, concepts, and representations that have shaped architecture across time (Common Era). Emphasis on ideational constructs and their varied modes of transmission (from textual to oral communications, drawings to images, buildings to models) in relation to the projecting of architecture. Architectural theories and their transmission as cultural productions reflective of societal, ethical, intellectual, environmental, and technological contexts. Presentation and reflection upon architectural discourse itself through written and oral communication.
Prerequisite(s): ARCH 3015 and ARCH 3116
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 4124 - Advanced Topics in Architecture History & Theory (3 credits)
Advanced design theory, history, critique, study, and representation. How history, politics, technology, and economics affect architecture and the built environment. Architectural significance. Architectural social, economic, and cultural content. Direct observation, reading, and discourse in architectural criticism. Course may be repeated with different content 2 times for a maximum of 9 credit hours.
Prerequisite(s): (ARCH 3204 or ARCH 4114) and ARCH 3304
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ARCH 4144 - Advanced Building Structures I (3 credits)
Study of long-span building structures. Introduction to geometry, form, and structure of folded and bent surfaces. Study of space grid geometry, close-packing systems, and cellular tensegrity. Approximate design of folded plate structures, single and double curvature shells, single and double layer space frames, suspension roofs, tents, and pneumatic structures.
Prerequisite(s): ARCH 4075 and ARCH 4076
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 4154 - Advanced Building Structures II (3 credits)
Study of highrise structures ranging from building slabs and blocks, terraced buildings, and skyscrapers to towers. The complexity of load action including wind, earthquake, and hidden loads. The effect of building height, form, and proportion on force action; considerations of stability and redundancy. Preliminary design of masonry buildings, core structures, suspension buildings, braced skeletons, rigid frames, interstitial systems, staggered truss buildings, tubes and hybrid structures.
Prerequisite(s): ARCH 4075 and ARCH 4076
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 4224 - Advanced Topics in Building Science and Technology (3 credits)
Advanced topics in building technology, systems, materials, construction, assembly and details. Develop expertise that couples quantitative and qualitative dimensions using tools, methods, science, processes of the given field through study, reflection, application and dissemination of findings. Norms of communicating findings. Applying research findings to design. May be repeated 1 time with different content for a maximum of 6 credit hours.
Prerequisite(s): ARCH 3404
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ARCH 4324 - Advanced Topics in Architectural Media and Methods (3 credits)
Advanced topics in architectural media, materials, and processes as tools for analysis, documentation, and presentation of the designed environment. Relationship between media characteristics and processes, applied to a wide range of media types and areas of study. Selection of appropriate tools and workflows. Managing and maintaining toolsets and workspaces. Forms of design research and innovation. Iterative design and evaluating outcomes. Creative practice and discourse. May be repeated 1 time with different content for a maximum of 6 credit hours. Design Lab/Studio (1H, 3L, 3C).
Prerequisite(s): ARCH 3504
Instructional Contact Hours: (1 Lec, 3 Lab, 3 Crd)
Repeatability: up to 6 credit hours

ARCH 4414 - Advanced Environment Building Systems (3 credits)
Advanced studies of environment and building systems, including development in building systems, urban systems, service systems, construction systems, materials and component systems, psycho-physical considerations, systems analysis, and computer technology. May be repeated for a maximum of 9 credit hours in varied options offered.
Prerequisite(s): ARCH 4055 and ARCH 4056
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Repeatability: up to 9 credit hours

ARCH 4424 - Advanced Topics in Architecture and Praxis (3 credits)
Advanced topics in the practice of architecture related to designing, planning, and managing the built environment. Innovative knowledge, frameworks, and models for an increasingly just, adaptable, and built environment and profession. Alternative approaches to defining, creating, and value for clients, communities, and employees. May be repeated 1 time with different content for a maximum of 6 credit hours.
Prerequisite(s): ARCH 4044
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ARCH 4434 - Architectural Lighting Design (3 credits)
Advanced level lecture course focused on lighting. Impact on, need for and measurement of light for humans and the built and natural environments. Selection of color, light sources, equipment and controls. daylight integration. Lighting design, visualization and calculations through hand and digital methods. Evaluation of lighting system energy efficiency and cost. Presentation of lighting design.
Prerequisite(s): ARCH 4055 and ARCH 4056
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 4514 - Thesis Inquiry (3 credits)
Student-led, design thesis project research articulated by an aggregated, reflective record of the first semester design work of ARCH 4515-4516 (Architecture V) through an appropriate array of representational means, such as writing, models, images, and drawings. Schematic, critical compilation of ideational and physical process includes critique, evaluation, and presentation of historical, contextual, professional, ethical, and aesthetic considerations; conceptual and theoretical foundations; development of the project's parameters and its design. Course contact to credit hour structure: Lecture (1H, 1C), Lab (3L, 1C), Design Lab/Studio (1.5L, 1C).
Prerequisite(s): ARCH 4004 and ARCH 4014
Corequisite(s): ARCH 4515
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Lab, 3 Crd)

ARCH 4515 - Architecture V (6 credits)
Advanced design and research to produce an architectural project. Demonstration of a conceptual and professional position through a work of architecture. 4515: Student-led focus on identifying research field; probing professional interests; developing conceptual and project parameters; proposing and evaluating design through varied means of public dialogue, critique, and self-reflection. 4516: Emphasis on resolution of project, formal documentation and presentation of work, communication of conceptual position, and assertion of professional trajectory. Hybrid Lecture (1H,1C), Lab (12L, 4C), Design Lab/Studio (2L, 1C) (1H,14L,6C)
Prerequisite(s): ARCH 4004 and ARCH 4014
Corequisite(s): ARCH 4514
Instructional Contact Hours: (1 Lec, 14 Lab, 6 Crd)

ARCH 4516 - Architecture V (6 credits)
Advanced design and research to produce an architectural project. Demonstration of a conceptual and professional position through a work of architecture. 4515: Student-led focus on identifying research field; probing professional interests; developing conceptual and project parameters; proposing and evaluating design through varied means of public dialogue, critique, and self-reflection. 4516: Emphasis on resolution of project, formal documentation and presentation of work, communication of conceptual position, and assertion of professional trajectory. Hybrid Lecture (1H,1C), Lab (12L, 4C), Design Lab/Studio (2L, 1C) (1H,14L,6C)
Prerequisite(s): ARCH 4514 and ARCH 4515
Corequisite(s): ARCH 4524
Instructional Contact Hours: (1 Lec, 14 Lab, 6 Crd)

ARCH 4524 - Thesis Documentation (3 credits)
Formal documentation of the architectural design thesis, a terminal design project with a conceptual and professional position in the final, fifth year of the professional degree program. Thesis project, process, concept, research, and ethical position presented through drawings, images, and writings. Preparation of portfolio quality document demonstrating architectural ability within discipline and profession. Course contact to credit hour structure: Lecture (1H, 1C), Lab (3L, 1C), Design Lab/Studio (1.5L, 1C).
Prerequisite(s): ARCH 4514 and ARCH 4515
Corequisite(s): ARCH 4516
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ARCH 4705 - Qualifying Design Seminar (3 credits)
Exploratory overview of selected theories and issues relevant to the design and use of the environment. 4705: Emphasis on history, human behavior, and environmental context as it relates to architecture. 4706: Presentation and discussion of the nature of principal construction materials in relation to building design. Characteristics of primary structural materials: wood, steel, concrete, masonry; environmental control systems; supporting technologies. Not for credit for majors holding a first professional degree in architecture.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 4706 - Qualifying Design Seminar (3 credits)
Exploratory overview of selected theories and issues relevant to the design and use of the environment. 4705: Emphasis on history, human behavior, and environmental context as it relates to architecture. 4706: Presentation and discussion of the nature of principal construction materials in relation to building design. Characteristics of primary structural materials: wood, steel, concrete, masonry; environmental control systems; supporting technologies. Not for credit for majors holding a first professional degree in architecture.
Instructional Contact Hours: (3 Lec, 3 Crd)

ARCH 4715 - Qualifying Design Laboratory (9 credits)
4715: Design laboratory in which student and faculty teams explore the nature of problems and potentials with which architecture is concerned, and experimentally develop methods and process through which existing contexts are transformed into new conditions. 4716: Provides introduction to basic concepts of building structures, materials, and enclosure systems, and appropriate site and climate responses. Not for credit for majors holding a first professional degree in architecture.
Instructional Contact Hours: (3 Lec, 18 Lab, 9 Crd)

ARCH 4716 - Qualifying Design Laboratory (9 credits)
4715: Design laboratory in which student and faculty teams explore the nature of problems and potentials with which architecture is concerned, and experimentally develop methods and process through which existing contexts are transformed into new conditions. 4716: Provides introduction to basic concepts of building structures, materials, and enclosure systems, and appropriate site and climate responses. Not for credit for majors holding a first professional degree in architecture.
Instructional Contact Hours: (3 Lec, 18 Lab, 9 Crd)

ARCH 4904 - Professional Studies (1 credit)
Instructional Contact Hours: (1 Lec, 1 Crd)

ARCH 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ARCH 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARCH 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARCH 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARCH 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ARCH 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ARCH 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Architecture, Arts, and Design (AAD)

AAD 1004 - Exploring Architecture, Arts, and Design (2 credits)
First-Year Experience course for Explore AAD majors. Overview of the college and its degrees, majors and minors, and career opportunities available to CAUS graduates. Presents college and university resources and services that support student success. Introduces students to the basic principles of the research process by focusing on inquiry, problem-solving, and integration of ideas and experiences within the fields in the College of Architecture, Arts, and Design.
Instructional Contact Hours: (2 Lec, 2 Crd)

AAD 1204 - Thinking Globally (1 credit)
Seminar for first-year students enrolled in Rhizome Living-Learning Community. Introduction to systems thinking. Simple and complex systems. Systems approach to sustainable development. International perspectives on, and goals for, sustainable development. Considers United Nations Sustainable Development Goals (SDGS), SDGs History, global progress towards SDGs and Criticisms of SDGs and United Nations. Exploration of Rhizome LLC yearly theme.
Instructional Contact Hours: (1 Lec, 1 Crd)

AAD 1214 - Acting Locally (2 credits)
Course for first-year students enrolled in Rhizome Living-Learning Community. Project-based learning through student-client collaborations. Applies systems thinking concepts and United Nations Sustainable Development Goals. Introduces design thinking as a model for problem solving, including problem definition and iteration. Student presentations, proposal development, exhibition, client feedback and peer critiques.
Prerequisite(s): AAD 1204
Instructional Contact Hours: (2 Lec, 2 Crd)

AAD 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AAD 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AAD 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AAD 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

AAD 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

AAD 3974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AAD 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AAD 3984L - Special Study (1-19 credits)
Pathway Concept Area(s): 6D Critique & Prac in Design
Instructional Contact Hours: Variable credit course

AAD 3984M - Special Study (3 credits)
Pathway Concept Area(s): 6A Critique & Practice in Arts
Instructional Contact Hours: (3 Lec, 3 Crd)

AAD 4234 - Capstone Collaborations: Cross-Disciplinary Teams (3 credits)
Collaborative cross-disciplinary research teams support discipline-specific capstones. Analyzes the interactive relationships between place, space, identity, and community in the United States and beyond. Engages in iterative research processes through reflective teamwork addressing complex problems in senior capstone projects. Synthesizes multiple, complex sources and creates coherent arguments including ethical analyses.
Prerequisite(s): ENGE 2094 and PHIL 3334
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

AAD 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

AAD 5954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

Art and Art History (ART)

ART 1004 - Topics in Studio Art for Non-Majors (3 credits)
Variable introductory topics on practice-based studio art, ranging from 2D, 3D and Digital Imaging concentrations. Multiple projects with emphasis on media specific creations using introductory studio practices, practice-based technical and conceptual knowledge to achieve expressive communication. Analyze and critique creative works within historical and cultural context. May be repeated with different topics, for a maximum of 12 credit hours. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). COURSE FEE: $60.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 12 credit hours

ART 1104 - Language of Visual Arts (3 credits)
Introduces key formal structures across the broad variety of disciplines in the visual arts and built environment, including: architecture, painting, sculpture, photography, and film. Considers global objects and sites from an intercultural perspective, examining how various formal elements impact our experience and function to construct meaning for audiences. Writing informed arts criticism grounded in local and regional cultural resources. RESOURCE CHARGE.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 1204 - Principles of 2D Art and Design (3 credits)
Elements and methods fundamental to two-dimensional art and design. Investigates formal elements and principles of two-dimensional design including shape, color, balance, rhythm, hierarchy, and unity. Exploration of analog and digital strategies in image making through iterative, hands-on processes. Interpretation of historical and contemporary two-dimensional art and design from around the globe to discover communication strategies in an intercultural context. Application of formal analysis and interpretive strategies through critique. Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE. (1H,5L,3C)
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 1214 - Principles of 3D Art and Design (3 credits)
Elements and methods fundamental to three-dimensional art and design. Investigates formal elements and principles of three-dimensional design including line, plane, form, mass, space, scale and surface. Exploration of analog and digital strategies in three-dimensional object making through iterative, hands-on processes. Interpretation of historical and contemporary three-dimensional art and design from around the globe to discover communication strategies in an intercultural context. Application of formal analysis and interpretive strategies through critique. Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE. (1H,5L,3C)
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 1234 - Topics in Visual Communication Design for Non-Majors (3 credits)
Variable introductory topics on visual communication design, ranging from contemporary issues in design to development of formal design skills. Multiple projects with emphasis on problem-solving with an awareness of target audiences from various backgrounds, historical and cultural contexts, and STEEP (Social, Technological, Economical, Environmental, and Political) principles. Explores knowledge of design principles and vocabulary using a range of materials and methodologies. Examines needs of diverse users, applied via digital translations and appropriate software. May be repeated for up to a maximum of 12 credit hours with varying or different topics. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C).
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 12 credit hours

ART 1304 - Gateway to Art and Design (1 credit)
First Year Experience course for students seeking entry into BFA degree program. Developing a successful path of study in the School of Visual Arts BFA degree using advising resources; introduction to professional and ethical visual arts practices through presentations with local and regional artists; visits to local and regional galleries; presentations by university faculty and staff related to the BFA. Introduction to visual thinking using the Virginia Tech Common Book and preparation for portfolio review. Art History majors are not required to take the course.
Corequisite(s): ART 1204, ART 1404, ART 1604
Instructional Contact Hours: (1 Lec, 1 Crd)

ART 1334 - Themes in Visual Arts and Cultures (3 credits)
Introduction to thematic topics spanning historical and contemporary world cultures through the lens of the visual arts and material culture. Ten themes to be addressed each semester, each approached through a range of different periods, cultures, media, and artistic traditions, and complemented by culture-specific textual sources. Sample themes might include art and political propaganda, art and technology, art and sustainability, art and death, etc. Does not count towards the art history major.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 1404 - Principles of Drawing (3 credits)
Elements, methods and skills fundamental to drawing. Investigates formal elements fundamental to drawing such as line, space, form, value and texture, through drawing tools and methods. Emphasis on controlled use of common drawing media for representational and expressive purposes. Examination of multiple intercultural viewpoints through exercises and discussion investigating topics that vary by semester. Application of formal analysis and interpretive strategies through critique. Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE. (1H,5L,3C)
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 1414 - Drawing II: Life Drawing (3 credits)
Drawing the human figure from life. Emphasis on observation, construction, and anatomy. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE.
Prerequisite(s): ART 1404 and ART 1204 and ART 1604
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 1504 - Contemporary Art and Practice (3 credits)
Methods and practices fundamental to the making of contemporary visual art. Non-discipline-specific investigation of self-expression, meaning, and content through iterative, practice-based exercises. Development of personal artistic practice through the lens of contemporary art and its historical precedents. Exploration of various processes such as representation, abstraction, assemblage, performance, installation, mark making, digital, and time-based, or interactive experiences as means to self-expression and interpretation of meaning. Examination of multiple worldviews and global challenges addressed in contemporary art. Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). (1H, 5L, 3C)
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 1604 - Principles of 4D Art & Design (3 credits)
Elements and methods fundamental to digital art and design as well as time-based media. Investigation of formal elements specific to four-dimensional design including time, motion, and sound and skills sets in vector and raster graphics and video editing. Exploration of iterative process in digital image making. Interpretation of historical and contemporary digital art and time-based media from around the globe to discover communication strategies in an intercultural context. Examination of multiple worldviews and global challenges addressed in and relevant to digital art and time-based media such as surveillance and questions of privacy. Application of formal analysis and interpretive strategies through critique. Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE. (1H, 5L, 3C)
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 1614 - Principles of Visual Communication Design (3 credits)
Introduction to design theory, practice, and visual communication skills. Projects, applied problem solving, reading assignments, and open critiques incorporate graphic competencies and vocabulary specific to the field of visual communication design. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C).
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ART 1984M - Special Study (1-19 credits)
Pathway Concept Area(s): 6A Critique & Practice in Arts
Instructional Contact Hours: Variable credit course

ART 2385 - Survey of the History of Western Art (3 credits)
Survey of the visual arts and architecture from prehistoric times to the present day with emphasis on Western Europe including functions of visual arts and architecture, terms of visual literacy and methods of formal visual analysis. 2385: Focus on prehistoric time to the thirteenth century including Paleolithic, Neolithic, Ancient Near Eastern, Egyptian, Aegean, Greek, Roman, Byzantine, medieval and early Gothic art. 2386: Focus on late Gothic through present day including Renaissance, Baroque, 19th (Romanticism to Post-Impressionism) and 20th centuries (cubism to postmodernism).
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 2386 - Survey of the History of Western Art (3 credits)
Survey of the visual arts and architecture from prehistoric times to the present day with emphasis on Western Europe including functions of visual arts and architecture, terms of visual literacy and methods of formal visual analysis. 2385: Focus on prehistoric time to the thirteenth century including Paleolithic, Neolithic, Ancient Near Eastern, Egyptian, Aegean, Greek, Roman, Byzantine, medieval and early Gothic art. 2386: Focus on late Gothic through present day including Renaissance, Baroque, 19th (Romanticism to Post-Impressionism) and 20th centuries (cubism to postmodernism).
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 2434 - Introduction to Creative Code (3 credits)
Introduction to computer programming tools within a critical aesthetic context. Tools may include software such as Processing and Unity. Application of foundational programming techniques to artwork creation. Consideration of computational and quantitative technologies and processes ethically, culturally, and artistically. Algorithmic thinking, and examination of existing computer-generated artworks to infer algorithmic basis. Consideration of the ethics of algorithmic systems in our culture and media. Course contact to credit hour structure: Design Lab/Studio.
Prerequisite(s): ART 1604
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (5 Lab, 3 Crd)

ART 2514 - Drawing Concepts (3 credits)
Exploration of drawing practices that reflect expansions in the discipline through examination of the work of contemporary artists and discussion of recent historical precedents. Examination of multiple viewpoints through readings and discussion investigating notions of identity, culture, and social reality. Development of personalized visual language and content through iterative drawing processes. Application of formal analysis and interpretive strategies through critique. Includes traditional and experimental techniques; representational, abstract, and nonobjective approaches to drawing. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab Studio (2L,1C). RESOURCE CHARGE.
Prerequisite(s): ART 1404
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 2524 - Introduction To Painting (3 credits)
Exploration of painting practices within a studio-focused environment as they relate to art and design in contemporary culture as well as historical methods. Development of foundational painting skills and an understanding of various painting media. Deliberate practice of visual language and formal ideas using painting media with a focus on material, line, shape, color, and two-dimensional composition. Interpretation of visual culture through the application of critical analysis methods. Encompasses observation-based techniques, experimental processes, and abstract approaches. Lecture (1H,1C), Lab (3L, 1C), Design Lab/Studio (2L, 1C). (1H, 5L, 3C). RESOURCE CHARGE: $75
Prerequisite(s): ART 1204 or ART 1404 or ART 1414
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 2554 - Introduction To Sculpture (3 credits)
Introduction to the tools, techniques, and concepts of sculpture. Development of visual style, three-dimensional composition and communication through iterative assignments. Application of formal analysis and interpretive strategies through critique. Exploration of genres and practices of sculpture by analyzing contemporary examples and historical precedents. Examination of diverse viewpoints through readings and discussions on the role of sculpture in identity, culture, and politics. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L, 1C), Design Lab/Studio (2L, 1C). (1H, 5L, 3C). RESOURCE CHARGE.
Prerequisite(s): ART 1214
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 2565 - Typography (3 credits)
Foundational study of Typography as it relates to Visual Communication Design including historical and contemporary context. Study of the formal principles of typographic design of both printed and digital matter. Overall focus on letterforms, design structures, and grid systems. Pre: Admittance to Visual Communication Design Program. 2566: Intermediate study of Typography as it relates to Visual Communication Design including advanced file management used with a variety of projects involving Typographic Composition. Pre: 2565. 2565: I, II. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C).
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 2566 - Typography (3 credits)
Intermediate study of Typography as it relates to Visual Communication Design including advanced file management used with a variety of projects involving Typographic Composition. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C).
Prerequisite(s): ART 1614 and ART 2565
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 2566H - Typography (3 credits)
Intermediate study of Typography as it relates to Visual Communication Design including advanced file management used with a variety of projects involving Typographic Composition.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 2575 - Introduction to Graphic Design (3 credits)
Introduction to the theory and practice of graphic design as a means of visual communication, exploring problem-solving as applied to design concepts and execution. Studio assignments relating to society, industry, community, and commerce, with emphasis on digital/electronic applications. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE.
Prerequisite(s): ART 1614 and ART 2565
Corequisite(s): ART 1414
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 2576 - Introduction to Graphic Design (3 credits)
Introduction to the theory and practice of graphic design as a means of visual communication, exploring problem-solving as applied to design concepts and execution. Studio assignments relating to society, industry, community, and commerce, with emphasis on digital/electronic applications. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE.
Prerequisite(s): ART 1614 and ART 2565 and ART 2566 and ART 2575
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 2604 - Introduction to Creative Technologies (3 credits)
Introduction to the formal elements, skills, tools and methods of productions used in Creative Technologies to make art/media works. These art works/media works include: sound, video narratives/short films, 2D animation, code/procedural artworks that exhibit meaning and relevance to contemporary society. Integrate, articulate and defend positions on ethical issues to make work that is relevant to the world we live in. Design Lab/Studio.
Prerequisite(s): ART 1604
Pathway Concept Area(s): 6A Critique & Practice in Arts, 10 Ethical Reasoning
Instructional Contact Hours: (5 Lab, 3 Crd)

ART 2664 - Introduction to Photography (3 credits)
Introduction to the tools, techniques, and concepts of digital photography. Development of visual style, two-dimensional composition, and visual communication through iterative assignments. Application of formal analysis and intercultural interpretation of photographs through class critique as well as historical and contemporary examples. Examination of diverse viewpoints through readings and discussions on the role of photography in identity, culture, and politics. Course contact hour structure: Lecture (1H,1C), Lab (3L, 1C), Design Lab/Studio (2L, 1C). (1H, 5L, 3C). RESOURCE CHARGE.
Prerequisite(s): ART 1204 or ART 1604
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 2704 - 3D Computer Animation (3 credits)
ntroduction to the basic principles of 3d-computer animation including modeling, texture mapping, lighting, and motion. Course contact to credit hour structure: Design Lab/Studio (5L, 3C) RESOURCE CHARGE.
Prerequisite(s): ART 1604
Instructional Contact Hours: (5 Lab, 3 Crd)

ART 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ART 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ART 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ART 3004 - Topics in Art History (3 credits)
Rotating topics from all periods of art history with a particular emphasis on non-Western art, such as Japanese, Chinese, pre-Columbian, sub-Saharan, Native American, or Islamic art and architecture. Lecture and/or undergraduate seminar format. May be repeated for credit with different content for a maximum of 9 credits.
Prerequisite(s): ART 2385 or ART 2386
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ART 3024 - History of Global Print Culture (3 credits)
Global print culture with an emphasis on visual arts and design forms across geographies in cultural contexts. Compares diverse print cultures from their inceptions through today, across historical traditions of East Asia, Mexico, United States, the Islamic world, and Europe. History, social meaning, issues of equity, race, and identity. Print culture's inception through today connects contemporary digital world to its conceptual and material origins.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3034 - Survey of Latin American Art and Architecture (3 credits)
A broad chronological survey of the visual arts and architecture of Latin America with a focus on South, Central, and North America from the rise of ancient indigenous cultures through today. Pre-Columbian iconography, styles, and cultural contexts of Olmec, Inca, Maya, and Aztec societies. European contact and colonial influence in South and Central Americas of the New World. Modern and contemporary art in these regions, with an emphasis on Latinx diaspora visual culture in the United States.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3044 - Art and Architecture of India (3 credits)
Survey of the arts, architecture, and contributions to design history from the subcontinent of India. Iconography and visual elements of Jain, Hindu, Buddhist, Islamic, and Sikh traditions in terms of key works of art, architecture, and design. Interpreted within contexts of religion, historical events, social status, patronage, race, and colonialism. Considers the influence of India's art, architecture, and design histories from antiquity through diasporas today, including US South Asian communities.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3054 - Islamic Art and Architecture (3 credits)
Survey of the visual arts and material culture produced in Islamic cultures from its origins in the 7th century CE (Common Era) through the contemporary period. Focus on analyzing transnational exchanges and influences that shape the visual and material culture of Islamic regions including architecture, the graphic arts, painting, ceramics, and textiles within cultural, geographic, political, and religious contexts. Includes artifacts and architecture from Iraq, Iran, the Arabian Peninsula, Egypt, Turkey, India, Spain and notable sites from North Africa and Central Asia.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3064 - Arts of China and Japan (3 credits)
An introduction to Chinese and Japanese art from the Neolithic to the present. The influence of philosophy, religion and social organizations on the development of the visual arts in China and Japan. Considers a range of media including painting, sculpture, calligraphy, ceramics, prints, and architecture in contexts of Imperial and post-Imperial patronage.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3074 - Egyptian Art and Architecture (3 credits)
Introduction to Egyptian art and architecture from the Predynastic through the Late Period with emphasis on the major monuments of Egyptian sculpture, painting and architecture. Emphasis on Egyptian art in the context of the unique landscape of the Nile River and surrounding desert, the art of contemporary cultures in the eastern Mediterranean world, and the history of archaeological exploration within the region.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3084 - Greek Art and Architecture (3 credits)
Painting, sculpture, and architecture of the Greeks, ca. 1000-31 B.C. Emphasis on correlation of archaeological remains with literary sources, and on the development of the arts in relation to cultural environments of the archaic, classical, and Hellenistic periods.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3114 - Creative Coding for Creativity and Innovation (3 credits)
Introduction to computer programming tools within a critical aesthetic context. Creation and analysis of generative and algorithmic artwork as well as consideration of how works derived from logical rulesets, algorithms, and the artful application of randomness can communicate human feelings and ideas. Consideration of ethics of algorithmic systems in our culture and media, and creating art works to address those issues and influence opinion. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L, 1C), Design Lab/Studio (2L, 1C).
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 3174 - Introduction to Archaeology (3 credits)
Introduction to archaeology focusing on a history of the discipline of archaeology with an emphasis on Mesopotamia and the Mediterranean world. Evolution of field inquiry and techniques in the context of major historical personages and excavations in Egypt, Greece, Italy and Syro-Palestine, as well as contemporary global and ethical issues surrounding the preservation and protection of archaeological artifacts, particularly with regards to the role they serve and their use and misuse as non-renewable global objects of cultural heritage and cultural identity.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3184 - Roman Art and Architecture (3 credits)
Survey of Roman art including painting, sculpture and architecture from ca. 750 BCE to 350 CE. Emphasis on diverse artistic themes connecting visual and material culture with contemporary political and cultural circumstances and the impact of Roman imperial expansion on regional cultures. Historical impact of Roman artistic achievements and activities.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3284 - Medieval Art and Architecture (3 credits)
Artistic traditions of the medieval world from the fourth to fifteenth centuries with a focus on diverse cultural exchanges between Byzantine east and Latin west, along with Islamic contact. Stylistic, thematic, and formal developments in sculpture, painting, textiles, metalwork, architecture, book arts within social, political, and religious contexts.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3384 - Renaissance Art and Architecture (3 credits)
A chronological survey of Renaissance art analyzing painting, sculpture, the graphic arts, and architecture. Develops visual literacy through an evaluation of major stylistic and thematic trends within the study of historical context, artistic techniques and processes, iconography, patronage, economy, religion, political structures, and emerging sciences.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3484 - Baroque and Rococo Art and Architecture (3 credits)
Art and architecture of the seventeenth-century Baroque and eighteenth-century Rococo with with an emphasis on form, style, and cultural contexts for painting, sculpture, and architecture. A study of major artists, themes, styles, and technical artistic processes in Italy, Spain, Flanders, Holland, England, France in contexts of global expansion. Seventeenth-century visual culture in its historical, religious, economic, social, and ethical contexts.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3504 - Topics in Digital Art and Design (3 credits)
Rotating topics that explore the computer as an artistic medium and design tool. Intermediate level. The student will encounter as interdisciplinary approach to the use of the computer, as aesthetic ideas are presented and various digital techniques are applied. Stresses use and manipulation of original images created by the student, employing a combination of digital and traditional methods. May be repeated with different content for a maximum of 12 credits. Course contact to credit hour structure: Design Lab/Studio (5L, 3C) Resource Charge.
Prerequisite(s): ART 2604
Instructional Contact Hours: (5 Lab, 3 Crd)
Repeatability: up to 12 credit hours

ART 3514 - Topics In Drawing (3 credits)
Rotating topics in drawing media, approaches, and theories. All topics will be devoted to promoting individual student creativity, mastery of drawing means and techniques, and further understanding of graphic concerns. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). May be repeated for a maximum of 9 hours with different topics. RESOURCE CHARGE.
Prerequisite(s): ART 2514
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 9 credit hours

ART 3524 - Topics In Painting Media (3 credits)
Rotating topics in painting techniques, disciplines, and theory emphasizing individual creative development and skilled approaches to technical problem-solving in visual art and design. Intermediate level. May be repeated for a maximum of 12 credits. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C).
Prerequisite(s): ART 2524
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 12 credit hours

ART 3554 - Topics In Sculpture (3 credits)
Rotating topics that will focus on specific technical processes and applications of three dimensional problem solving in the visual arts. The course will stress techniques and issues found in contemporary 3D art and design. Emphasizes intensive studio practice through a series of individual projects related to the topics. FEES REQUIRED. May be repeated for a maximum of 12 credits. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C).
Prerequisite(s): ART 2554
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 12 credit hours

ART 3564 - Topics in Photography (3 credits)
Rotating topics in photographic materials, methods and philosophies. All topics promote individual students creativity, master of photographic techniques and further understanding of the medium. May be repeated with different topics for a maximum of 12 credits. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE.
Prerequisite(s): ART 2664
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 12 credit hours

ART 3565 - Intermediate Graphic Design I and II (3 credits)
Intermediate design layout, technical and concept development, and communication skills. First semester emphasizes advanced and new software relevant to the design, advertising, and printing industry. Second semester focuses on typography, professional pre-press, electronic printing and color separation processes. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE.
Prerequisite(s): ART 1614 and ART 2565 and ART 2566 and ART 2575 and ART 2576
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 3566 - Intermediate Graphic Design II (3 credits)
Intermediate design layout, technical and concept development, and communication skills. First semester emphasizes advanced and new software relevant to the design, advertising, and printing industry. Second semester focuses on typography, professional pre-press, electronic printing and color separation processes. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). FEE REQUIRED.
Prerequisite(s): ART 1614 and ART 2565 and ART 2566 and ART 2575 and ART 2576 and ART 3565
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 3574 - Topics In Graphic Design (3 credits)
Rotating topics in graphic design, for the intermediate level student. This course will encourage visual problem-solving, conceptual development, clarity and individuality of expression. May be repeated for a maximum of 12 credits. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C).
Prerequisite(s): ART 2576
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 12 credit hours

ART 3584 - Nineteenth Century European Art: Neoclassicism to Post-Impressionism (3 credits)
European art and material culture of the nineteenth-century. A chronological study of the major artists, artistic movements and styles from neoclassicism to post-impressionism. Analysis of works using key critical and philosophical texts. Emphasis on the role of gender, race, ethnicity and colonialism in the production of art and material culture.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3604 - Topics in New Media Art (3 credits)
Rotating topics explore the computer as an artistic medium and design tool. An interdisciplinary approach to the use of a computer. Aesthetic ideas and application of digital techniques. Use and manipulation of original images created by the student, employing a combination of digital and traditional methods. May be repeated for a maximum of 12 credits. Course contact to credit hour structure: Design Lab/Studio (5L, 3C). RESOURCE CHARGE.
Prerequisite(s): ART 2604
Instructional Contact Hours: (5 Lab, 3 Crd)
Repeatability: up to 12 credit hours

ART 3674 - History of Photography (3 credits)
A chronological history of photography, from its invention in the nineteenth-century to the emergence of digital technology. Emphasis on historical, sociological, cultural, and global contexts. Addresses terminology and visual analysis, inventions, individual photographers, famous photographs, and issues of inclusion and critical discourse.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3684 - African-American Art (3 credits)
African-American art and material culture, from its beginnings in the tribal traditions of Africa to its contemporary manifestations. A chronological study of the major artists, movements and styles. Analysis of works using key critical and philosophical texts. Emphasis on the role of gender, race, and ethnicity in the production of art and material culture.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3704 - Topics in Computer Animation (3 credits)
Rotating topics that explore the artistic and design potential of computer animation. Using current digital techniques and methods, focus is on the creation and manipulation of virtual character designs. Students will use an interdisciplinary aesthetic approach to investigate computer animation concepts. May be repeated for credit maximum of 12 credits. Course contact to credit hour structure: Design Lab/Studio (5L, 3C). RESOURCE CHARGE.
Prerequisite(s): ART 2704
Instructional Contact Hours: (5 Lab, 3 Crd)
Repeatability: up to 12 credit hours

ART 3774 - History of Modern Graphic Design (3 credits)
A chronological survey of the history of modern graphic design, from the mid-19th century to 1980.
Prerequisite(s): ART 2386
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3784 - European and American Art Since 1900 (3 credits)
European and American Art since 1900. A chronological survey of painting and sculpture from neo-impressionism through post-modernism.
Prerequisite(s): ART 2386
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3854 - Professional Studio Practices (3 credits)
An overview of professional studio art practices, concepts, marketing strategies and promotional materials. The international exhibition system and current educational opportunities, employment and career options in the visual arts are presented. Preparing of written materials and documenting artwork, building a professional portfolio for presentation to potential employers, art galleries and exhibitions are stressed. Pre: Bachelors of Fine Arts (BFA) majors only.
Prerequisite(s): ART 1504
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3884 - American Art to 1914 (3 credits)
American art and material culture from Pre-Columbian past to the early 20th century. A chronological study of the major artists, artistic movements, and styles. Analysis of works using key critical and philosophical texts. Emphasis on the role of gender, race, and ethnicity in the production of art and material culture.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

ART 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ART 3954B - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ART 3984 - Special Study (19 credits)
Instructional Contact Hours: (19 Lec, 19 Crd)

ART 4014 - History Lab: Creative Technologies, Hidden Histories, Informal Learning (3 credits)
Application of creative technologies to visualize hidden histories in transdisciplinary experiential learning projects. Training in creative technologies, informal learning techniques, interpretation of marginalized histories, and digital cultural heritage design. Consideration of ethical questions involving the representation of diverse social identities, traditions, and histories. Pre: Sophomore Standing.
Pathway Concept Area(s): 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: EDCI 4014, HIST 4014

ART 4104 - Interpretation of Visual Arts (3 credits)
Capstone seminar for the Pathways Minor in the Visual Arts and Society. Introduces methodologies, theories, and interpretive strategies commonly used to analyze the visual arts and architecture. Focuses on various critical case studies of global objects and sites ranging from the prehistoric to contemporary periods in the fields of: painting, sculpture, architecture, photography, and film. Assignments explore regional arts resources in these media and develop discursive skills employed in written and oral presentations. Considers ethical and political issues surrounding interpretation of art, as well as attendant epistemological challenges. Pre: Six credits of social sciences from Pathways Minor in the Visual Arts and Society checksheet.
Prerequisite(s): ART 1104
Pathway Concept Area(s): 1A Discourse Advanced, 6A Critique & Practice in Arts, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 4184 - Museum Studies: Theory and Practice (3 credits)
Examines the history, theory and practice of museums. Explores the role of the museum in society and traces the foundations upon which these public, cultural, and educational institutions are built. Focus on contemporary museum management, administration, interpretation, collection policy, as well as how museums pertain to historic preservation and public cultural exhibitions.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 4284 - Museum Ethics and Cultural Preservation (3 credits)
Advanced art history elective. Role of ethics in institutions that preserve cultural heritage. Practical and philosophical dilemmas and controversies relevant to contemporary problems in cultural preservation. Ethical challenges of governance, acquisition, collecting, audience, copyright, conservation, the politics of display, and censorship, among current topics.
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 4384 - Topics in Art History (3 credits)
Advanced art history elective. Rotating topics from all periods of art history, selected to complement offerings at the 3000-level. Topics such as Greek Sculpture, Roman Painting, Renaissance and Baroque Sculpture, Cubism, and Fauvism indicated by timetable. Lecture and/or undergraduate seminar format. May be repeated for credit for a maximum of 18 credits.
Prerequisite(s): ART 2385 or ART 2386
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 18 credit hours

ART 4484 - Topics in Art Criticism and Methodology (3 credits)
Advanced art history elective. Rotating topics in the criticism of art and the methodology of art history and criticism, selected to complement offerings at the 3000-level. Topics such as the History of Art Criticism from Baudelaire to the Present, New Methods in Renaissance and Baroque Art History, and the Theory of Art from various periods, indicated by timetable. Lecture and/or undergraduate seminar format. May be repeated for credit with different content to a maximum of 9 credits.
Prerequisite(s): ART 2385 or ART 2386
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ART 4504 - Topics in Multimedia Studio (3 credits)
This studio course investigates computer-based multimedia in the visual arts and applied design. Video, photography, computer art and design may be used with traditional media and communication vehicles. May be repeated for a maximum of 9 credits. Two 3000-level courses required. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C).
Prerequisite(s): ART 2576 or ART 2604 or ART 3564
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 9 credit hours

ART 4514 - Interarts Studio (3 credits)
This studio course will investigate new approaches to art-making and new genres, such as performance art and site-specific installation. Interdisciplinary basis for course may incorporate traditional studio practices and media in the visual arts, music and theatre arts, and appropriate technology in computer, video, and film. May be repeated for a maximum of 12 credits with different topics. 3000-level course in Studio or Art History or departmental approval. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 12 credit hours

ART 4524 - Pictorial Arts Studio (3 credits)
Rotating topics in the two dimensional arts, at an advanced level. All topics will challenge the student to develop stronger, independently generated work of portfolio quality. May be repeated for a maximum of 9 credits with different topics. 3000-level Painting or Drawing course required. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE
Prerequisite(s): ART 3524 or ART 3514
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 9 credit hours

ART 4534 - Topics in Applied Art and Design Studio (3 credits)
Rotating topics about functional art and design. Students will use appropriate materials, tools, and processes in the creation of functional artworks, such as furniture, tiles, tableware, etc. Function and design aesthetics emphasized. May be repeated for a maximum of 9 credits with different topics. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE
Prerequisite(s): ART 3544
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 9 credit hours

ART 4544 - Computer Animation Studio (3 credits)
Advanced animation course focusing on the creation of short films, demo reels, and expressive computer animated films. Students enrolled in this course are expected to complete one large project during the semester. May be repeated with different course content for up to nine credit hours. Course contact to credit hour structure: Design Lab/Studio (5L, 3C)
Prerequisite(s): ART 3704
Instructional Contact Hours: (5 Lab, 3 Crd)
Repeatability: up to 9 credit hours

ART 4554 - Spatial Arts Studio (3 credits)
Advanced level, rotating topics in the three dimensional arts. All topics will challenge the student to develop stronger, independently generated work of portfolio quality. May be repeated for a maximum of 9 credits with different topics. 3000-level Ceramics, Sculpture or Applied Art course required. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE
Prerequisite(s): ART 3554
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 9 credit hours

ART 4564 - Exhibition Design And Display (3 credits)
This course will focus on the display and presentation of visual art, for student-designed exhibitions. Provides experience in the public art arena, and practical k arena, and practical knowledge about planning, designing, and mounting an exhibition. Pre: 3000-level Studio or Art History course required.
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 4574 - Advanced Visual Communications (3 credits)
A further refinement of design theory and practice, and communication skills. Emphasis on the conceptual development of expanded project formats, and individual creativity. This class will provide a principal opportunity for building a viable portfolio. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C). RESOURCE CHARGE 6 credits of Art 3574 required.
Prerequisite(s): ART 4504
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 4575 - Advanced Visual Communication Design (3 credits)
Refinement of design theory, practice, and communication skills. Emphasis placed on methodologies and strategies for developing a personal identity, website, and/or multimedia portfolio. Development of professional brand identity through web design, design of business cards, letterhead, envelopes, and electronic media. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C).
Prerequisite(s): ART 1614 and ART 2565 and ART 2566 and ART 2575 and ART 2576 and ART 3565 and ART 3566 and ART 4584
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 4576 - Advanced Visual Communication Design (3 credits)
Refinement of design theory, practice, and communication skills. Emphasis placed on methodologies and strategies for developing a personal identity, website, and/or multimedia portfolio. Development of professional brand identity through web design, design of business cards, letterhead, and electronic media. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C).
Prerequisite(s): ART 1614 and ART 2565 and ART 2566 and ART 2575 and ART 2576 and ART 3565 and ART 3566 and ART 4584 and ART 4575
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 4584 - Advanced Typography (3 credits)
Advanced study of Typography as it relates to Visual Communication Design including historical and contemporary context. Terminology and advanced applications of Typography, complex grid systems, experimental typographic methods, and material studies. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C).
Prerequisite(s): ART 1614 and ART 2565 and ART 2566 and ART 2575
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)

ART 4684 - Topics in Museums and Collections (3 credits)
Advanced art history elective. Variable topics related to the study of museums and collections from a global perspective. Topics such as the Natural History Museum, Introduction to Curatorial Studies, Conservation and Collections Management, Race and Colonialism in Museum Exhibitions, and Censorship in Cultural Institutions, indicated by timetable. Lecture and/or undergraduate seminar format. May be repeated 2 times with different content for a maximum of 9 credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ART 4754 - Internship (1-19 credits)
Instructional Contact Hours: Variable credit course

ART 4804 - New Media Art Theory (3 credits)
Exploration of new media theory in relationship to contemporary arts practice. Overview and application of new media art aesthetics, strategies, trends, and socio-cultural aspirations. The course will examine theoretical writings and creative work from prevailing technologically-based disciplines.
Prerequisite(s): ART 2385 and ART 2386
Instructional Contact Hours: (3 Lec, 3 Crd)

ART 4894 - Senior Studio (3 credits)
Preparation and presentation of concentrated studio work under faculty supervision, culminating in solo exhibition and/or formal portfolio. May be extended over two semesters with final grade assigned on completion. Or may be repeated for a total of 6 credits at a maximum of 3H, 3C per semester. Senior standing and consent of department head required. Course contact to credit hour structure: Lecture (1H,1C), Lab (3L,1C), Design Lab/Studio (2L,1C).
Instructional Contact Hours: (1 Lec, 5 Lab, 3 Crd)
Repeatability: up to 6 credit hours

ART 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ART 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ART 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ART 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ART 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ART 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Behavioral Decision Science (BDS)

BDS 2005 - Fundamentals of Behavioral Decision Science (3 credits)
Introduction to the major scientific models of decision making and applications to real-life situations. Economic models highlighting optimal choices and psychological models highlighting decision making tendencies. 2005: Emphasis on individual decision making in non-strategic choice settings. Probabilistic reasoning and economic model of rationality. Violations of the rational choice model, and psychological, physiological, and statistical models that accommodate this behavior. Applications to social settings and longer periods of time. Common ethical dilemmas and making ethical choices as an individual. 2006: Individual decision making in interactive and strategic choice settings as well as group decision making. Simultaneous, sequential, dynamic, repeated, and incomplete information games. Preferences for fairness, reciprocity, and cultural differences in interactions. Limitations when making group decisions. Ethical reasoning and computational analysis of strategy. Applications to voting, negotiations, and cooperation.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BDS 2006 - Fundamentals of Behavioral Decision Science (3 credits)
Introduction to the major scientific models of decision making and applications to real-life situations. Economic models highlighting optimal choices and psychological models highlighting decision making tendencies. 2005: Emphasis on individual decision making in non-strategic choice settings. Probabilistic reasoning and economic model of rationality. Violations of the rational choice model, and psychological, physiological, and statistical models that accommodate this behavior. Applications to social settings and longer periods of time. Common ethical dilemmas and making ethical choices as an individual. 2006: Individual decision making in interactive and strategic choice settings as well as group decision making. Simultaneous, sequential, dynamic, repeated, and incomplete information games. Preferences for fairness, reciprocity, and cultural differences in interactions. Limitations when making group decisions. Ethical reasoning and computational analysis of strategy. Applications to voting, negotiations, and cooperation.
Prerequisite(s): BDS 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BDS 3134 - Choice and Behavior (3 credits)
Theories of rational choice, utility, and revealed preference. Intertemporal decision problems and choice under uncertainty with applications to insurance and investments. Behavioral regularities and evidence of violations of rational choice theory. Behavioral models that accommodate this behavior. Applications of behavioral models to economic problems, ethical questions, policy, and organization design. Pre: Sophomore standing.
Prerequisite(s): ECON 2005 or BDS 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 3134

BDS 4184 - The Science of Giving (3 credits)
Overview of the science of giving, altruism, helping, cooperation, and prosocial behaviors and decision making. Exploration of the personality contextual, cognitive, and affective factors that move people to help others in need. Application of psychological and behavioral principles necessary to craft interventions such as nudges to increase giving with emphasis on public policy. Methodological issues related to laboratory and field experiments. Ethical considerations in persuasion and influence.
Prerequisite(s): PSYC 1094 or HD 3014 or SOC 3204
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSYC 4184

BDS 4194 - Predicting Social Behavior (3 credits)
Overview of the process of predicting human choices, preferences, and actions in social contexts. Applications of measurement theory to data preparation, formatting, and scaling. Implications of psychological biases for data transformation and cleaning. Theory-guided predictor variable selection and development. Applications of machine learning to social settings. Evaluating prediction quality, bias, and generalizability. Developing predictive models in software. Ethical and societal implications of predicting human behavior.
Prerequisite(s): (PSYC 1094 or ECON 3254) and (BIT 2405 or STAT 2004 or STAT 3604 or STAT 3005 or STAT 3615)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSYC 4194

BDS 4864 - Developing Behavioral Science Policies and Interventions (3 credits)
Senior-level capstone course to apply theories and models from behavioral decision science to real world problems on topics from education, organizations, health, crime, environment, and volunteerism. Utilize behavioral science theories, data and analytical frameworks from research papers to define and analyze problems or unintended consequences resulting from individual decision-making. Emphasis on identifying specific problems, formulating behavioral policies or interventions to improve performance, and designing experiments and randomized controlled trials to test their effectiveness.
Prerequisite(s): BDS 3134 or ECON 3134
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 4864

Biochemistry (BCHM)

BCHM 1014 - Biochemistry First Year Experience (1 credit)
Academic and career planning for biochemistry majors and students considering biochemistry as a major. Topics discussed: academic success, careers, diversity and inclusion, graduate school, professional health opportunities, library resources, wellness, undergraduate research, internships, study abroad, and service-learning opportunities. Introduction to biochemistry discipline and faculty. Development of a comprehensive academic plan of study and opportunity for self-awareness/reflection.
Instructional Contact Hours: (1 Lec, 1 Crd)

BCHM 1024 - Introductory Experience in Biochemistry Research Skills (1 credit)
Introduction of foundational knowledge on the central tenets of biochemistry and research skills. Development of critical thinking skills and professional development through networks. Collection, analysis, and interpretation of data. Evaluation of literature, use of citation management programs, and development of scientific writing and presentation skills. Data management, visualization, and ethics in the context of biochemistry. Emphasis on teamwork, literature reading, and scientific communication skills.
Instructional Contact Hours: (1 Lec, 1 Crd)

BCHM 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BCHM 2024 - Concepts of Biochemistry (3 credits)
Short course in fundamentals of the chemistry of living systems. Introduction to major categories of biochemical substances, metabolic pathways, and principles of biochemical information transfer. (No credit for majors).
Prerequisite(s): CHEM 2514 or CHEM 2535
Instructional Contact Hours: (3 Lec, 3 Crd)

BCHM 2114 - Biochemical Calculations (2 credits)
Fundamental mathematical relationships in biochemistry. Calculations central to the investigation of biochemical phenomena including aqueous chemistry, spectrophotometry, enzyme kinetics and thermodynamics. Introduction to the core calculations used in experimental biochemistry and the strategies employed for solving biochemical problems.
Prerequisite(s): CHEM 2535 or CHEM 2565
Instructional Contact Hours: (2 Lec, 2 Crd)

BCHM 2354 - Biochemical Techniques (3 credits)
Fundamental aspects of biochemical laboratory measurements. Properties of biomolecules and methods for their isolation, separation, detection and quantification. Calculations required to provide quantitative biomolecular data. Common instrumentation in biochemical laboratories, their principles of operation, and their roles in biochemical assays and measuring biochemical interactions. Overview of on-line resources for biochemical information.
Prerequisite(s): CHEM 2514 or CHEM 2535 or CHEM 2565
Instructional Contact Hours: (3 Lec, 3 Crd)

BCHM 2364 - Biochemical Techniques Laboratory (1 credit)
Operation of key equipment found in a biochemistry/molecular biology laboratory (e.g., enzyme kinetics, PCR); analyzes, interpretation and presentation of data acquired in laboratory-based protocols; report of results of experiments; use of laboratory automation for biochemical measurements.
Corequisite(s): BCHM 2354
Instructional Contact Hours: (3 Lab, 1 Crd)

BCHM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BCHM 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

BCHM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BCHM 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BCHM 3114 - Biochemistry for Biotechnology and the Life Sciences (3 credits)
Survey presentation of the basic principles of biochemistry as they apply to biotechnology. Topics covered include protein structure, enzymology, cellular organization, and biochemical regulation. Special emphasis will be given to gene structure, transcription, and translation, cellular organization, and cloning, sequencing, modification and expression of recombinant DNA. Examples will be given of agricultural/medical/industrial applications of cellular and molecular biochemical knowledge. Non-majors only.
Prerequisite(s): CHEM 2536 or CHEM 2566
Instructional Contact Hours: (3 Lec, 3 Crd)

BCHM 3634 - Analysis of Biochemical Literature (3 credits)
Analysis of primary scientific literature using recently published biochemical research articles. Application of the CREATE model (Consider, Read, Elucidate and generate a hypothesis, Analyze and interpret the data, and Think of next Experiment) as a conceptual framework. Evaluation of article data, limitations and broader impacts. Impact of scientific philosophy, experimental design, and peer review in scientific research and publishing. Pre: Junior standing.
Prerequisite(s): (BIOL 2134 or BIOL 2604) and CHEM 2535
Instructional Contact Hours: (3 Lec, 3 Crd)

BCHM 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

BCHM 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BCHM 4054 - Genomics (3 credits)
A contemporary analysis of the development, utility and application of high-resolution methods for the study and manipulation of the complete genomes of organisms. The use of new techniques for genomic, metabolic and protein engineering (functional genomics), including high-throughput methods and nanotechnology, will be emphasized.
Prerequisite(s): BCHM 3114 or BCHM 4116 or BIOL 3774
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APSC 4054

BCHM 4074 - Career Orientation (1 credit)
Examination of various career opportunities for biochemists in industry, academia, medicine and related health sciences. Introduction to resources for locating career opportunities, resume preparation and interview skills. Restricted to biochemistry majors. Junior standing required. I
Corequisite(s): BCHM 4115
Instructional Contact Hours: (1 Lec, 1 Crd)

BCHM 4115 - General Biochemistry (4 credits)
Metabolism and chemistry of carbohydrates, proteins, lipids, and nucleic acids with emphasis on interactions and comparative aspects of microbial, plant, and animal forms. For students in the biochemistry curriculum and other students interested in a foundation course. (Students are required to have at least a C- in both CHEM 2535 and 2536 to be admitted to BCHM 4115).
Prerequisite(s): (CHEM 2536 or CHEM 2566) and (BCHM 2114 or CHEM 2154)
Instructional Contact Hours: (4 Lec, 4 Crd)

BCHM 4116 - General Biochemistry (3 credits)
Metabolism and chemistry of carbohydrates, proteins, lipids, and nucleic acids with emphasis on interactions and comparative aspects of microbial, plant, and animal forms. For students in the biochemistry curriculum and other students interested in a foundation course. (Students are required to have at least a C- in both CHEM 2535 and 2536 to be admitted to BCHM 4115). I,II
Prerequisite(s): BCHM 4115
Instructional Contact Hours: (3 Lec, 3 Crd)

BCHM 4124 - Laboratory Problems in Biochemistry and Molecular Biology (6 credits)
Presentation of major analytical techniques of importance to biochemistry and molecular biology, including spectrophotometry, electrophoresis, chromatography. Lab study of selected principles and methods used in biochemistry and molecular biology.
Prerequisite(s): BCHM 4115 and (CHEM 2114 and CHEM 2124) or (CHEM 3114 and CHEM 3124)
Corequisite(s): BCHM 4116
Instructional Contact Hours: (3 Lec, 9 Lab, 6 Crd)

BCHM 4354 - Biochemical Communication (3 credits)
Exploration of how chemical signals are produced, transported, and influence microbes (Bacterial and unicellular organism (chemotaxis), plants, and animals (olfactory neuroethology). Applications to cell biology, neurobiology, and ecology. Analysis of the interaction between biochemical communication systems and health (diseases). Management, statistical analysis, and interpretation of large datasets related to biochemical communication, using computational approaches.
Prerequisite(s): (BCHM 3114 or BCHM 4115) and (STAT 2004 or STAT 3615)
Instructional Contact Hours: (3 Lec, 3 Crd)

BCHM 4554 - Biophysics for Biochemistry (3 credits)
Thermodynamics, quantum mechanics, and statistical mechanics in biological systems, with emphasis on theoretical understanding of experimental biophysical methods. Fundamental concepts in protein and nucleic acid folding, dynamics from bond vibrations to kinetics and diffusion, molecular orbital theory, protein-ligand interactions and associated molecular visualization tools. Computational modeling, calculations, and simulation using both quantum and classical mechanics.
Prerequisite(s): BCHM 3114 or BCHM 4115
Instructional Contact Hours: (3 Lec, 3 Crd)

BCHM 4754 - Internship (1-19 credits)
Instructional Contact Hours: Variable credit course

BCHM 4784 - Applications in Molecular Life Science (3 credits)
Synthesis and application of biochemistry, cell biology, genetics, genomics, physiology, immunology concepts and techniques to address medical and agricultural problems. Gene characterization and manipulation, protein-based drugs, diagnostics, vaccines, transgenic plants/animals. Analysis, critique, application of research in molecular life science.
Prerequisite(s): (BCHM 3114 and BCHM 3124 and BIOL 3774 and BIOL 4774) or (BCHM 4116 and BCHM 4124)
Instructional Contact Hours: (3 Lec, 3 Crd)

BCHM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BCHM 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

BCHM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BCHM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BCHM 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Biological Sciences (BIOL)

BIOL 1004 - Biology Orientation Seminar (1 credit)
An introduction to academic and career planning for majors in Biology and students who may be considering Biology as a major.
Instructional Contact Hours: (1 Lec, 1 Crd)

BIOL 1014 - Introduction to Biology (3 credits)
Introductory biology for non-life science majors. Topics covered include the hierarchy of living systems, cell structure, physiology, and reproduction, Mendelian genetics, molecular genetics, evolution, microbial diversity, plant anatomy and physiology, animal anatomy and physiology, and ecological systems. Ethical aspects of current research in these areas. Partially duplicates 1005, 1006, 1105, 1106.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1024 - Cancer: Causes, Treatments, Costs (3 credits)
Introduction to risk factors and biological mechanisms associated with cancer. Current approaches to cancer prevention, diagnosis, and treatment. Personal, socioeconomic, and global aspects of cancer.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1034 - Biology of Sex (3 credits)
Sexual reproduction in living organisms from a scientific perspective including morphology, physiology, behavior, development and evolution. Biological basis and ethical considerations of human societal issues including contraception, homosexuality, and gender/sex.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1054 - Human Biology: Concepts and Current Issues (3 credits)
Survey of human biology, including physiology, genetics, evolution, and ecology. Focus on homeostasis, including factors and choices that disrupt homeostasis and health. Examination of technological advances and ethical issues associated with the biology of humans. Personal and societal choices that impact human ecology.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1064 - Plants and Civilization (3 credits)
Survey of basic plant biology. Critical roles of plants as food, drugs, textiles, other products. Examination of the global, historical, and cultural links between plants and humans. Discussion of current topics, including biotechnology, global change, biodiversity loss, nutrition and drug addiction.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1074 - How Animals Think (3 credits)
Overview of scientific research on animal cognition and behavior from perspectives in biology, psychology, and neuroscience. Study and application of scientific approaches to the study of animal cognition and behavior in the context of personal, political, and societal decision making. Considers the influence of animal cognition and animal ethics on decisions about human-animal interactions at a personal and societal scale ranging from decisions about food supply to conservation. Provides the framework to evaluate animal personality, emotion, consciousness, and rights. Addresses how cultural, social and political views influence scientific research on animal cognition. Consideration of bidirectional effects of human-animal interactions on One Health and animal welfare.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1105 - Principles of Biology (3 credits)
Introduction to the science of biology. 1105: living systems; biological molecules; cell structure, function, and reproduction; cellular energetics and metabolism; expression and inheritance of genetic information; evolution; ethical implications of research and discovery in these areas. 1106: animal and plant anatomy and physiology, ecology, and animal behavior; ethical implications of research and discovery in these areas. (1105 duplicates 1005, 1014; 1106 duplicates 1006, 1014. Credit for 1014 will be disallowed if 1105 or 1106 are taken after earning credit for 1014)
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1106 - Principles of Biology (3 credits)
Introduction to the science of biology. 1105: living systems; biological molecules; cell structure, function, and reproduction; cellular energetics and metabolism; expression and inheritance of genetic information; evolution; ethical implications of research and discovery in these areas. 1106: animal and plant anatomy and physiology, ecology, and animal behavior; ethical implications of research and discovery in these areas. (1105 duplicates 1005, 1014; 1106 duplicates 1006, 1014. Credit for 1014 will be disallowed if 1105 or 1106 are taken after earning credit for 1014).
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1115 - Principles of Biology Laboratory (1 credit)
Emphasizes biological principles through investigative exercises and collaborative learning. 1115: cell chemistry, physiology and reproduction and genetics; 1116: plant and animal form and function, and ecology. Primarily for students majoring in the life sciences. (Duplicates 1015 1016, 1125, 1126).
Corequisite(s): BIOL 1105
Instructional Contact Hours: (3 Lab, 1 Crd)

BIOL 1116 - Principles of Biology Laboratory (1 credit)
Emphasizes biological principles through investigative exercises and collaborative learning. 1115: cell chemistry, physiology and reproduction and genetics; 1116: plant and animal form and function, and ecology. Primarily for students majoring in the life sciences.
Corequisite(s): BIOL 1106
Instructional Contact Hours: (3 Lab, 1 Crd)

BIOL 1135 - Phage Hunters (2 credits)
Isolation, identification, and characterization of bacteriophages from environmental sources. 1135: Bacteriophage DNA purification, genomic analysis, imaging, and sequencing. 1136: Bioinformatic characterization and annotation of sequenced bacteriophage genomes, comparative genomic analysis, submission of bacteriophage sequence data to public databases.
Instructional Contact Hours: (6 Lab, 2 Crd)

BIOL 1136 - Phage Hunters (2 credits)
Isolation, identification, and characterization of bacteriophages from environmental sources. 1135: Bacteriophage DNA purification, genomic analysis, imaging, and sequencing. 1136: Bioinformatic characterization and annotation of sequenced bacteriophage genomes, comparative genomic analysis, submission of bacteriophage sequence data to public databases.
Prerequisite(s): BIOL 1135
Instructional Contact Hours: (6 Lab, 2 Crd)

BIOL 1214 - Careers in Medicine (1 credit)
For students considering a career in health care. Investigation of various health care professions, including requirements for additional education and the professional and personal expectations characteristic of these professions. Introduction to biomedical ethics and health policy. Options for financing professional school. How to become a competitive applicant.
Instructional Contact Hours: (1 Lec, 1 Crd)

BIOL 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 2004 - Genetics (3 credits)
Mendelian transmission, chromosome behavior and organization, gene and chromosome mutation, genetic properties of nucleic acids, gene expression and development, DNA technology.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106 and (CHEM 1036 or CHEM 1056 or CHEM 1056H or CHEM 1016 or ISC 2105)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 2124 - Cell and Molecular Biology for Engineers (2 credits)
Composition, structure and function of cells; fundamentals of gene expressions, cell physiology, cellular movement and reproduction; stem cells and tissue formation; synthetic biology and applied cell and molecular biology. Not for Biological Sciences majors.
Prerequisite(s): ENGR 2164 or COS 2164
Instructional Contact Hours: (2 Lec, 2 Crd)

BIOL 2134 - Cell Function and Differentiation (3 credits)
Fundamental mechanisms essential for cell function. Methods used to study cells. Cellular structure and physiology, energy production, cell survival and reproduction. Cell interactions and communication, stem cells, cell differentiation, tissue formation.
Prerequisite(s): BIOL 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 2304 - Plant Biology (3 credits)
Introductory botany. Form, growth, function, reproduction, and ecological adaptations of major groups of plants.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HORT 2304

BIOL 2404 - Biotechnology in A Global Society (3 credits)
Introduction to the world-wide impact of biotechnology and molecular biology, including applications to plants, animals, and microorganisms. Explores basic concepts of genetic engineering, scientific and ethical issues, and public concerns related to biotechnology. Topics include: environmental release of genetically engineering organisms, bioremediation, safety of genetically engineered food products, transgenic plants and animals, gene therapy, and genetic screening.
Prerequisite(s): (BIOL 1005 and BIOL 1006) or (BIOL 1105 and BIOL 1106) or (BIOL 1205H and BIOL 1206H) and CHEM 1015 and CHEM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALS 2404

BIOL 2504 - General Zoology (3 credits)
Morphology, features, adaptations, and ecology of major animal groups, emphasizing major patterns of evolutionary change.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 2604 - General Microbiology (3 credits)
Microbial structure, function, metabolism, genetics and ecology. The role of microorganisms in host/parasite relationships will be emphasized.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106 and (CHEM 1036 or CHEM 1056 or CHEM 1056H or ISC 2105)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 2614 - General Microbiology Laboratory (1-2 credits)
Introduction to microbiological techniques and procedures. Aseptic technique and safe handling. Culture, characterization, and identification of microorganisms.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106 and (CHEM 1036 or CHEM 1056 or CHEM 1056H or ISC 2105)
Corequisite(s): BIOL 2604
Instructional Contact Hours: (2-4 Lab, 1-2 Crd)

BIOL 2704 - Evolutionary Biology (3 credits)
Evolutionary mechanisms, systematic principles, and theories of the origin and evolution of life.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 2804 - Ecology (3 credits)
Fundamental interaction of organisms with the biotic and abiotic components of ecosystems. Topics will include: physical environment and organismic interactions, concepts of population ecology and community ecology, ecosystems interactions, and environmental problems.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

BIOL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 2984D - Special Study (1-19 credits)
Pathway Concept Area(s): 4 Reasoning in Natural Sci.
Instructional Contact Hours: Variable credit course

BIOL 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 3014 - Insect Biology (2 credits)
Insect biology provides an introduction to the science of entomology. The course covers the diversity of insects, their biology and behavior, the importance of insects and insect control programs in agriculture, and the effects that insects have had on human history and culture. Laboratory (3024) is optional.
Prerequisite(s): (BIOL 1005 and BIOL 1006) or (BIOL 1105 and BIOL 1106) or (BIOL 1205H and BIOL 1206H)
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: ENT 3014

BIOL 3024 - Insect Biology Laboratory (2 credits)
Taxonomy and ecology of insects commonly encountered. Identification of all orders and many common families. Ecological attributes of each taxon, including food, habitat, life cycle, and behavior. An insect collection is required.
Prerequisite(s): (BIOL 1005 and BIOL 1006) or (BIOL 1105 and BIOL 1106) or (BIOL 1205H and BIOL 1206H)
Corequisite(s): BIOL 3014
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)
Course Crosslist: ENT 3024

BIOL 3104 - Cell and Molecular Biology Laboratory (1 credit)
Introduction to methods used to study prokaryotic and eukaryotic cells. Recombinant DNA, protein expression and purification, the polymerase chain reaction, bioinformatics, and microscopy.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lab, 1 Crd)

BIOL 3134 - Human Genetics (3 credits)
Principles of genetic analysis in humans with emphasis on genetic diseases of humans; methods of karyotyping human chromosomes; methods of pedigree and genetic analysis of humans; principles, techniques, and analysis of twin studies in humans; techniques used to identify and characterize normal and abnormal chromosomes; principles and methods of DNA fingerprint analysis of humans.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 3204 - Plant Taxonomy (3 credits)
Systematic survey of vascular plants, emphasizing identification, terminology, classification, evolutionary relationships.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BIOL 3254 - Medical and Veterinary Entomology (3 credits)
An introduction to the roles of insects and other arthropods in the direct causation of disease in humans and animals, and as vectors in the transmission of disease organisms. The epidemiology and replication cycles of vector-borne pathogens with major medical and veterinary importance will be examined. Information will be provided on the biology and behavior of disease vectors and external parasites, and on the annoying and venomous pests of humans and animals. Mechanisms of control will be discussed
Prerequisite(s): (BIOL 1005 and BIOL 1006) or (BIOL 1105 or (BIOL 1205H and BIOL 1206H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENT 3254

BIOL 3264 - Medical and Veterinary Entomology Laboratory (1 credit)
Taxonomy and anatomy of insects and arthropods of medical and veterinary importance. Examination of feeding behavior and ecology. Emphasis on the mechanism of injury or pathogen transmission by each group.
Prerequisite(s): (BIOL 1105 and BIOL 1106) or (BIOL 1005 and BIOL 1006) or (BIOL 1205H and BIOL 1206H)
Corequisite(s): BIOL 3254
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: ENT 3264

BIOL 3404 - Introductory Animal Physiology (3 credits)
A comparative systems level approach to the physiology of animals, emphasizing vertebrates: metabolic, temperature, osmotic, and ionic regulation; function of respiratory, circulatory, digestive, muscle, nervous, and locomotory systems; endocrine regulation and biological rhythms. Must have prerequisites or instructors permission.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 3454 - Introductory Parasitology (4 credits)
Ecology, taxonomy, morphology, life cycles, pathogenesis, and host-parasite relationships of parasitic eukaryotes.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BIOL 3514 - Introduction to Histology (3 credits)
Overview of tissue structure and function in the human body; microscopic examination of tissue sections; organization of tissues in different organ systems; histopathology of tissues and organs.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BIOL 3604 - Food Microbiology (4 credits)
Role of microorganisms in foodborne illness, food quality, spoilage, and preservation. Control of microorganisms in foods. Methods to enumerate, identify, and characterize microorganisms in foods.
Prerequisite(s): BIOL 2604 and BIOL 2614
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: FST 3604

BIOL 3764 - Careers in Microbiology (3 credits)
Contemporary research topics in microbiology, methods of research data analysis, the research publication process, research presentation and interview skills, career paths for microbiology graduates, preparation for graduate school, preparation for entry into the job market.
Prerequisite(s): BIOL 2604
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 3774 - Molecular Biology (3 credits)
Advanced study of the molecular biology of prokaryotic and eukaryotic cells, including mechanisms of gene expression and regulation, relative merits of experimental model systems, and practical applications in agriculture and medicine.
Prerequisite(s): BIOL 2134 or ALS 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 3804 - Principles of Biology Teaching Assistant (2 credits)
For undergraduate teaching assistants (UTAs) facilitating BIOL 1105 or 1106 class sections that utilize active-learning pedagogies and require facilitation of in-class learning activities. Content and practice of teaching strategies and professionalism in the classroom. Supervision by departmental faculty or staff. Selection by Principles of Biology instructional team. May be repeated four times with different content for a maximum of eight credits. Junior Standing, overall minimum GPA of 3.0.
Prerequisite(s): BIOL 1105 and BIOL 1106
Instructional Contact Hours: (6 Lab, 2 Crd)
Repeatability: up to 8 credit hours

BIOL 3814 - Careers In Biological Sciences (1 credit)
Exploration of career opportunities in the biological sciences, including employment and further education. Professional development activities, including resumes, career fairs, networking, preparation for interviews, ethics, and assessment and comparison of job offers. Does not count for Biological Sciences or Microbiology elective credit. Pre: junior standing
Instructional Contact Hours: (1 Lec, 1 Crd)

BIOL 3954 - Study Abroad (1-6 credits)
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)

BIOL 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 4004 - Freshwater Ecology (4 credits)
Interactions of physical, chemical, and biological properties of freshwater ecosystems.
Prerequisite(s): BIOL 2804 or BIOL 2804H
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BIOL 4014 - Environmental Toxicology (2 credits)
Discussion of ecotoxicological and philosophical issues in the development of standards for control of toxic chemicals in freshwater, including site-specific examples, application of current control methods, recovery of damaged ecosystems, and government regulations.
Prerequisite(s): BIOL 2804
Instructional Contact Hours: (2 Lec, 2 Crd)

BIOL 4104 - Developmental Biology (3 credits)
Morphological, physiological, and molecular events in embryological and developmental systems, including regulation at the level of transcription, translation, and enzyme or hormone activation.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4114 - Global Change Ecology (3 credits)
Effects of human alteration of climate, landscapes and biogeochemical cycling on ecological structure and functioning at the global scale. Influence of global changes on ecosystem processes and biodiversity with paleo- and contemporary examples. Current and future potential feedbacks between biological systems and the global environment.
Prerequisite(s): (BIOL 2704 or BIOL 2704H) and BIOL 2804
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4134 - Evolutionary Genetics (3 credits)
Genetic variation, Hardy-Weinberg equilibrium, agents of change in gene frequencies, molecular evolution, mechanisms of speciation. Comparison of theoretical models with natural and laboratory populations.
Prerequisite(s): BIOL 2004 and (BIOL 2704 or BIOL 2704H)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4164 - Environmental Microbiology (3 credits)
Ecology, physiology, and diversity of soil and aquatic microorganisms; incorporates the significance of these topics within the context of environmental applications such as bioremediation, wastewater treatment, control of plant- pathogens in agriculture, and pollution abatement in natural systems. The laboratory portion of the course will stress methodology development, isolation and characterization of microorganisms from natural and engineered systems, and examination of the roles of microorganisms in biogeochemical cycling.
Prerequisite(s): BIOL 2604
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: ENSC 4164

BIOL 4204 - Advanced Principles of Biology Teaching Assistant (3 credits)
For experienced Principles of Biology Undergraduate Teaching Assistants (UTAs) facilitating instruction of BIOL 1105 or 1106 class sections that utilize active-learning strategies. Collaboratively plan, present, and run activities to train first-time UTAs in the skills needed to support student success in the Principles of Biology classroom. Prepare first-time UTAs to guide active learning exercises, facilitate student teamwork, communicate scientific information, respond to student questions, provide feedback on student activities, and promote student engagement. Model professional and ethical conduct. Enrollment requires approval of Principles of Biology instructional team. May be repeated three times with different content for a maximum of nine credits. Pre: Senior standing.
Prerequisite(s): BIOL 3804
Instructional Contact Hours: (9 Lab, 3 Crd)
Repeatability: up to 9 credit hours

BIOL 4314 - Plant Ecology (4 credits)
Introduction to ecology of terrestrial plants including major plant functional types, ecophysiological aspects of functional types, molecular plant ecology, behavior of populations, responses of plant communities to disturbance, and vegetation analysis. Laboratory covers methods for measuring and analyzing natural vegetation, and setting up field and greenhouse experiments.
Prerequisite(s): (BIOL 2304 or BIOL 2804 or FOR 3314) or HORT 2304
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BIOL 4334 - Chemical Ecology (3 credits)
Chemical interactions between organisms with emphasis on the plant biosphere. Fundamental concepts, theories, and general methodology of chemical ecology: mechanisms of chemically- mediated interactions; and engineering of natural chemical defenses in sustainable agriculture.
Prerequisite(s): (BIOL 2304 or BIOL 2804 or FOR 2314 or BCHM 4115) and CHEM 1035
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4354 - Aquatic Entomology (4 credits)
Biology and taxonomy of insects and other macroinvertebrates most commonly encountered in freshwater environments. Selected aspects of biology, such as habitat, feeding, locomotion, and life history. Identification of individual taxa, mostly at family and genus level. Significance of these organisms in aquatic ecology, pollution monitoring, and natural resource management.
Prerequisite(s): (BIOL 1005 and BIOL 1006) and (BIOL 1015 and BIOL 1016) or (BIOL 1105 and BIOL 1106 and BIOL 1115 and BIOL 1116)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: ENT 4354

BIOL 4404 - Ornithology (4 credits)
Biology of birds, including functional anatomy, systematics, evolutionary history, behavior, and ecology. Laboratory on systematics, anatomy, and field experience in the areas of behavior and ecology.
Prerequisite(s): BIOL 2804
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BIOL 4454 - Invertebrate Zoology (4 credits)
Identification, morphology, evolutionary relationships, and natural history of free-living invertebrates, excluding insects.
Prerequisite(s): BIOL 2504
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BIOL 4474 - Ethology (3 credits)
An evolutionary and ecological approach to animal behavior, drawing on behavioral genetics, endocrinology, neurophysiology, and behavioral ecology to explain how and why the behavior of an organism is adapted to its environment.
Prerequisite(s): BIOL 2504
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4484 - Freshwater Biomonitoring (4 credits)
Concepts and practices of using macroinvertebrates and fish to monitor the environmental health of freshwater ecosystems. Effects of different types of pollution and environmental stress on assemblages of organisms and underlying ecological principles. Role of biological studies in environmental regulation. Study design, field and laboratory methods, data analysis and interpretation, verbal and written presentation of results.
Prerequisite(s): (BIOL 2804) and (BIOL 4004 or BIOL 4354 or ENT 4354 or FIW 4424 or FIW 4614)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: ENT 4484, FIW 4484

BIOL 4554 - Neurochemical Regulation (3 credits)
Neurochemical transmission within the vertebrate brain will be examined. Emphasis will be placed on the chemical coding underlying the control of various behaviors and how these systems can be modified by various drugs or diet.
Prerequisite(s): (ALS 2304 or BIOL 3404) and CHEM 2535
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALS 4554

BIOL 4564 - Infectious Disease Ecology (3 credits)
Principles of infectious disease dynamics from ecological and evolutionary perspectives. Examines a variety of wildlife hosts and disease-causing agents (bacteria, viruses, and parasites) using the framework of agent-host- environment interactions. Selective coverage of specific host and pathogen models to illustrate underlying principles of wildlife disease emergence, maintenance, and spread, as well as connections between wildlife and human health.
Prerequisite(s): (BIOL 2704 or BIOL 2704H) and (BIOL 2804 or BIOL 2804H)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4574 - Social Behavior of Birds and Mammals (3 credits)
This course examines origins, influences and implications of social behavior in a variety of avian and mammalian species. Emphasis is placed on understanding group organization and dynamics in inter and intra-species situations. Experimental data from several disciplines (e.g., genetics, physiology, biochemistry) are reviewed to demonstrate their associations with behavioral adaptive mechanisms. Avian and mammalian species living in wild, zoo, agricultural companion and laboratory settings are discussed.
Prerequisite(s): BIOL 1106 and ALS 3104 or BIOL 2004
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALS 4574

BIOL 4594 - Ecology, Evolution, and Behavior Senior Seminar (3 credits)
Review and discussion of contemporary research areas and global challenges addressed in publications in ecology, evolution, and behavior, the research process, methods for communicating science to professional and non-professional audiences, professional development for careers in ecology, evolution, and behavior, diversity and equity in the sciences.
Prerequisite(s): BIOL 2704 and BIOL 2804
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4624 - Microbial Genetics (3 credits)
Molecular genetics of bacteria and their associated plasmids and phages.
Prerequisite(s): BIOL 2004 and (BIOL 2604 or BIOL 2604H)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4634 - Microbial Physiology (3 credits)
The study of the structure, function and metabolic activities of prokaryotic microorganisms. Topics covered included cell composition and growth, metabolic unity and diversity, patterns of regulation, transport mechanisms, environmental sensing and response and cellular differentiation processes. (BIOL 4624 is recommended, but not required.)
Prerequisite(s): BIOL 2134 and (BIOL 2604 or BIOL 2604H) and BIOL 2614
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4644 - Microbial Molecular Genetics and Physiology Laboratory (3 credits)
Introduction to classical and molecular methods used for the study of bacterial genetics and physiology. Laboratory exercises cover analysis of patterns of gene regulation; assay of enzymatic activities; mutagenesis followed by selection, screening, and physiological characterization of mutant strains; genome database utilization; and large scale fermentation.
Prerequisite(s): BIOL 2134 and (BIOL 2604 or BIOL 2604H) and BIOL 2614
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

BIOL 4664 - Virology (3 credits)
Classification, structure, pathogenesis, host response, and replication strategies of viruses of bacteria, plants, and animals, stressing mechanisms elucidated by molecular biological techniques.
Prerequisite(s): BIOL 2134 and (BIOL 2604 or BIOL 2604H) and BIOL 2614
Instructional Contact Hours: (2 Lec, 1 Lab, 3 Crd)

BIOL 4674 - Pathogenic Bacteriology (3 credits)
Characteristics of bacteria that cause human disease, nature of infectious processes, virulence factors, epidemiology, resistance, immunization.
Prerequisite(s): BIOL 2134 and (BIOL 2604 or BIOL 2604H) and BIOL 2614
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4684 - Microbiomes (3 credits)
Landmark and current research on human microbiomes. Factors that influence the gut microbiome, and the role of the gut microbiome in disease. Other microbiomes of the human body. Bacteriophages and the ecology of microbiomes. Application of technologies to engineer microbiomes.
Prerequisite(s): BIOL 2004 and BIOL 2604 and (BCHM 3114 or BCHM 4115)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4704 - Immunology (3 credits)
Immunochemistry of antigens and antibodies, serological reactions, chemistry of complement, control of immunity, immune response of an intact animal.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4714 - Immunology Laboratory (1 credit)
Serological and immunobiological techniques used to interpret the consequences of an immune response.
Prerequisite(s): BIOL 2134
Corequisite(s): BIOL 4704
Instructional Contact Hours: (3 Lab, 1 Crd)

BIOL 4724 - Pathogenic Bacteriology Lab (2 credits)
Microbiological techniques used to identify and characterize bacteria that cause infectious disease.
Prerequisite(s): BIOL 2134 and (BIOL 2604 or BIOL 2604H) and BIOL 2614
Corequisite(s): BIOL 4674
Instructional Contact Hours: (4 Lab, 2 Crd)

BIOL 4734 - Inflammation Biology (3 credits)
Cellular and molecular pathways controlling human responses to inflammatory challenges. Regulation of immune cells during inflammation. Interaction of host cells and tissues with environmental risk factors that cause inflammation. Pathogenesis of inflammatory diseases including cardiovascular diseases, diabetes, multi-organ failure, aging, neurological diseases and sepsis. Therapeutic intervention of inflammatory diseases.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4774 - Molecular Biology Lab (3 credits)
An introduction to recombinant DNA methods, including restriction endonuclease digestion, gel electrophoresis, cloning, Southern blotting, polymerase chain reaction, sequencing and analysis of reporter gene expression in transgenic organisms. BIOL 3774 may be taken as a corequisite with 4774.
Prerequisite(s): BIOL 3774
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

BIOL 4804 - Prokaryotic Diversity (3 credits)
The study of the vast array of physiological, morphological, and behavioral properties of prokaryotes. Topics include: modern prokaryotic classification, prokaryotic diversity, relationship and importance to cell and molecular biology and biochemistry, application and use in industry and agriculture, and to the maintenance of the biosphere. Must have pre-requisites or consent of the instructor.
Prerequisite(s): (BIOL 2604 or BIOL 2604H) and BIOL 2614 and (BIOL 3124 or BIOL 4634 or BCHM 3114)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4824 - Bioinformatics Methods (3 credits)
Application of bioinformatics methods in biological research. Methods to access bioinformatics data. Theory and methods for analysis of DNA sequences, and analysis of complex data sets including whole genome sequences and gene expression data. Use of standard bioinformatics software and databases.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BIOL 4834 - Practical Analysis of Protein Structure and Function (3 credits)
Application of biophysical and biomechanical methods to characterization of protein structure and function, macromolecular interactions and conformational changes. Strategies, experimental design, practical considerations, troubleshooting, data analysis.
Prerequisite(s): BIOL 2134 and (CHEM 2536 or CHEM 2566) and (PHYS 2206 or PHYS 2306)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BIOL 4844 - Proteomics and Biological Mass Spectrometry (3 credits)
Introduction to mass spectrometry (MS) instrumentation and advanced proteomic methods for systems biology applications. Peptide mass fingerprinting, tandem MS, quantitation, phospho/glyco proteomics, and bioinformatics tools for evaluation and interpretation of mass spectrometry data.
Prerequisite(s): BIOL 2134 and CHEM 2535 and PHYS 2205
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4854 - Cytogenetics (3 credits)
Structure and function of eukaryotic chromosomes, with emphasis on (i) use of model systems to study specific chromosome substructures or functions; (ii) techniques used to identify and classify both normal and aberrant chromosomes; and (iii) diseases caused by defective chromosome structure and/or function.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4864 - Clinical Biology (3 credits)
Biological basis, development and symptoms of selected human diseases. Pharmacological approaches to treating disease. Review and interpretation of clinical cases. Approaches to working with patients: the interview, physical examination and clinical history. Use of diagnostic tests and treatments. Clinical trials of potential therapeutic interventions.
Prerequisite(s): BIOL 2134 and (BCHM 3114 or BCHM 4115)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4874 - Cancer Biology (3 credits)
The molecular and cellular basis of cancer, including viral and cellular oncogenes, tumor suppression mechanics, cellular immortality, genomic integrity, angiogenesis, metastasis, and traditional and developing therapies.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4884 - Cell Biology (3 credits)
Advanced study of the inner workings of eukaryotic cells, including membrane structure and function, protein secretion, the cytoskeleton, cell cycle control and intercellular communication.
Prerequisite(s): BIOL 3774 or BCHM 4116
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

BIOL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

BIOL 29844 - Special Study (1-18 credits)
Pathway Concept Area(s): 4 Reasoning in Natural Sci.
Instructional Contact Hours: (1-18 Lec, 1-18 Crd)

Biological Systems Engineering (BSE)

BSE 1004 - Engineering Biological Systems for the Global Good (1 credit)
Survey of global societal and technological issues that engage biological systems engineers in the areas of health, environment, food and energy. Application of systems-level approaches to meet engineering challenges that intersect with crucial societal issues, including sustainability and equity. Evaluation of key factors that affect the design, communication, and public acceptance of engineered solutions. Analysis of cultural intelligence, with a specific focus on personality and problem solving styles amongst individuals and teams and productive conflict resolution.
Instructional Contact Hours: (1 Lec, 1 Crd)

BSE 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 2004 - Introduction to Biological Systems Engineering (3 credits)
Introduction to the fundamental concepts of Biological Systems Engineering, including statistics and material and energy balances, through applications in protein separation, hydrology, sediment/nutrient transport, and microbial metabolism. Engineering design process. Engineering problem-solving tools and techniques. Resolving ethical dilemmas. Development of oral and written communication skills; introduction to job searching resources; strategies for career development, and the importance of teamwork and ethics in Biological Systems Engineering.
Prerequisite(s): ENGE 1215 or ENGE 1414
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BSE 2304 - Landscape Measurements and Modeling (3 credits)
Introduction to land surveying, computer-aided design, and drafting for land and water resources engineering. Representation of features in two and three dimensions for documentation and visualization of watershed engineering projects. Create plans, cross sections, detail drawings, and three dimensional visualizations using computer-aided design and drafting tools.
Prerequisite(s): MATH 1206 or MATH 1226
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BSE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 3144 - Engineering Analysis for Biological Systems using Numerical Methods (2 credits)
Solving engineering problems related to biological systems using numerical analysis including root finding, numerical integration, differentiation, interpolation and numerical solution of ordinary differential equations. Error analysis and programming with engineering software. Course requirements may be satisfied by taking MATH 2214 prior to or concurrent with course.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (2 Lec, 2 Crd)

BSE 3154 - Thermodynamics of Biological Systems (3 credits)
Description of biological, chemical and mechanical mechanisms of energy storage and conversion to work. Derivation and use of the first and second laws of thermodynamics (energy and entropy) to analyze processes found in biotechnology, ecological engineering, and living systems. Analysis of thermodynamic cycles and their relevance to biological systems. Introduction of Gibbs energy, equilibrium at specified pH, and calorimetry of biological reactions.
Prerequisite(s): CHEM 1036 and PHYS 2305 and (MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 3324 - Small Watershed Hydrology (3 credits)
Precipitation, soil physics, infiltration, evapotranspiration, groundwater hydrology, overland flow, open channel flow, flow routing, hydraulic analysis.
Prerequisite(s): PHYS 2305
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 3334 - Nonpoint Source Pollution Assessment and Control (3 credits)
Erosion prediction and control; transport and fate of sediment, nutrients, and microorganisms; design of nutrient management plans, wetlands, detention facilities and other management practices for rural and urban nonpoint source pollution control.
Prerequisite(s): BSE 3324
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BSE 3504 - Transport Processes in Biological Systems (3 credits)
Introduction to material and energy balances in biological systems. Fundamentals of heat and mass transfer in biological systems. One and two dimensional conduction, convection, and diffusion of thermal energy and mass. Heat and mass transfer rates, steady and unsteady state conduction, convection, diffusion; design of simple heat exchangers. Application of these topics and fluid mechanics to fluid handling, bacterial growth, plant nutrient uptake, enzymatic reactions.
Prerequisite(s): BSE 3154 and ESM 3024 and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 3524 - Unit Operations in Biological Systems Engineering (3 credits)
Description of unit operations for processing biological materials including evaporation, drying, gas-liquid separations, adsorption, membrane separation, and mechanical separation.
Prerequisite(s): BSE 3154 and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 3534 - Bioprocess Engineering (3 credits)
Engineering concepts for biological conversion of raw materials to food, pharmaceuticals, fuels, and chemicals. Metabolic pathways leading to products, enzyme kinetics, cell growth kinetics, and analysis of bioreactors and fermenters.
Prerequisite(s): BSE 3154
Corequisite(s): BIOL 2604, BSE 3504
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 4125 - Comprehensive Design Project (2 credits)
4125: Identify and develop an engineering design project using the team approach; use of literature resources to define project objectives and approach; present project proposal in a professional written and oral manner; engineering ethics, professionalism and contemporary issues. Pre: Completion of 96 hours, overall GPA of 2.0 or better. 4126: Complete a comprehensive design project using the team approach, test approach, test prototype, and prepare and present a professional engineering design report.
Prerequisite(s): BSE 3334 or BSE 3524
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

BSE 4126 - Comprehensive Design Project (3 credits)
4125: Identify and develop an engineering design project using the team approach; use of literature resources to define project objectives and approach; present project proposal in a professional written and oral manner; engineering ethics, professionalism and contemporary issues. Pre: Completion of 96 hours, overall GPA of 2.0 or better. 4126 Complete a comprehensive design project using the team approach, test prototype, and prepare and present a professional engineering design report.
Prerequisite(s): BSE 4125
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

BSE 4204 - Instrumentation for Biological Systems (3 credits)
Introduction to instrumentation and sensors for measurement and control of biological systems. Sensor response dynamics, data acquisition, sensor selection, signal processing and signal conditioning principles. Experimental determination of velocity, pressure, strain, displacement, forces and chemical constituents. Data analysis focused on uncertainty, error and statistical concepts.
Prerequisite(s): PHYS 2306 and ESM 3024
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

BSE 4224 - Field Methods in Hydrology (3 credits)
Site characterization: surveying, channel and floodplain mapping, land use, electronic data acquisition. Techniques for measuring surface and subsurface hydrologic processes: water flow, hydrologic conductivity, precipitation, evaporation. Sampling techniques: surface water, groundwater, and soil pore water sampling. In-situ monitoring: automatic samplers, dataloggers, water quality sondes. Laboratory analyses: good laboratory practices, selection of analytical method, calibration, quality assurance/quality control.
Prerequisite(s): BSE 3324 or FREC 3104 or WATR 3104 or CEE 3314
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BSE 4304 - Introduction to Watershed Modeling (3 credits)
Fundamental modeling principles used to quantifywatershed hydrology, energy budgets,and associated ecosystem functions, such asplant dynamics and biogeochemical processes, at scales ranging from soil poresto watersheds. Code development and model integration to simulate watershed hydrologyandnutrient and sediment transport. Model calibration and performance assessment. Data discovery, acquisition, and processing of data relevant to hydrologic/watershed modeling.
Prerequisite(s): BSE 3334
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BSE 4324 - Applied Fluvial Geomorphology (3 credits)
Introduction to landscape evolution. Influence of geology and climate on stream form and processes. Fundamental river mechanics and sediment transport. Stream surveying and classification. River system response to changes in hydrology and sediment supply. Interactions between ecosystems and fluvial systems. Human impacts on stream systems.
Prerequisite(s): BSE 3324 or CEE 3314 or FREC 3104 or WATR 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 4344 - Geographic Information Systems for Engineers (3 credits)
Conceptual, technical, and operational aspects of geographic information systems as a tool for storage, analysis, and presentation of spatial information. Focus on engineering applications in resource management, site selection, and network analysis. Laboratory work and senior standing required.
Prerequisite(s): BSE 3324 or CEE 3314 or FREC 3104 or WATR 3104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BSE 4394 - Water Supply and Sanitation in Developing Countries (3 credits)
Social, economic and engineering principles of water supply and sanitation in developing countries as affected by climate, cultural and sociological factors, and material and financial resources. Pre: Junior or Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 4524 - Biological Process Plant Design (3 credits)
Engineering principles for design of systems for processing biological materials into primary and secondary products. Delivery, scheduling, storage requirements, economic analysis. Process control and instrumentation of bioprocessing plants.
Prerequisite(s): BSE 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 4534 - Bioprocess Engineering Lab (1 credit)
Unit operations commonly used in processing biological materials, including filtration, heat transfer, ultrafiltration, crystallization, and protein expression by fermentation, purification by chromatography, and characterization by gel electrophoresis.
Prerequisite(s): BSE 3524 and BSE 3534
Instructional Contact Hours: (3 Lab, 1 Crd)

BSE 4544 - Protein Separation Engineering (3 credits)
Concepts, principles and applications of various unit operations used in protein separations. Properties of biological materials, such as cells and proteins, and their influences on process design. Design of processes for protein purification based on the impurities to be eliminated. Concepts and principles of scale-up of unit operations. Case studies in practical protein recovery and purification issues, with a focus on enhanced protein purification by genetic engineering. Protein purification process simulation and optimization using process simulation software.
Prerequisite(s): BSE 3504 or CHE 3144
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CHE 4544

BSE 4554 - Creating the Ecological City (3 credits)
Multidisciplinary, team oriented, problem-solving approaches to creating cities that foster healthy interconnections between human and ecological systems. Analysis of problems from practical and ethical perspectives in the context of the diverse knowledge bases and values of decision-makers. Formation and utilization of integrated design teams to solve complex urban design and planning problems at a variety of scales. Senior standing.
Prerequisite(s): HORT 2134 or FREC 2134
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 4554, HORT 4554, LAR 4554, SPIA 4554

BSE 4564 - Metabolic Engineering (3 credits)
Engineering concepts for analyzing, designing, and modifying metabolic pathways to convert raw materials to food, pharmaceuticals, fuels and chemicals. Cell metabolism, pathway design, bioenergetics, regulatory mechanisms, metabolic modeling, and genetic tools.
Prerequisite(s): BSE 3534 or BCHM 4115 or BIOL 3774
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 4604 - Food Process Engineering (3 credits)
Analysis and design of food processing operations including thermal pasteurization and sterilization, freezing, extrusion, texturization, and mechanical separation.
Prerequisite(s): BSE 3504 and BSE 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

BSE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BSE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Biomed & Veterinary Sciences (BMVS)

BMVS 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 4014 - Animal Domestication and Genetic Resources (1 credit)
Considers the process, history, sociology and geography of animal domestication. Includes behavioral, physiologic and morphological changes incurred by domesticated stocks. Examines genetic variability of domestic species, considers breed groups and uniquely adapted breeds. Considers reasons for erosion of genetic variability and mechanisms to counteract such erosion. International in scope. Pre: senior status or enrollment in veterinary professional curriculum.
Instructional Contact Hours: (1 Lec, 1 Crd)

BMVS 4024 - Diseases of Poultry (2 credits)
Biology control and prevention of poultry diseases. Taught alternate years.
Instructional Contact Hours: (2 Lec, 2 Crd)

BMVS 4054 - Laboratory Animal Management (3 credits)
This course involves a study of the principles of laboratory animal science, providing the student with a basic understanding of the laws and regulations governing the care and use of animals, husbandry and surgery of a variety of lab animal species, and variables which can adversely affect animal research. Through formal lectures, discussions, and laboratory sessions, the course is designed to complement graduate studies in biological, biomedical, and life sciences which involve the use of animals in research.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BMVS 4074 - Pharmacology (3 credits)
A basic course in the science of pharmacology, intended to provide an understanding of the mechanisms of action and physiological systemic effects of major classes of drugs of biological, agricultural, social, and medical importance. Must have prerequisites or equivalent.
Prerequisite(s): CHEM 2514 or CHEM 2535 or ALS 2304 or BIOL 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

BMVS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 4994H - Undergraduate Research (1-19 credits)
Honors section
Instructional Contact Hours: Variable credit course

Biomed Sci & Pathobiology (BMSP)

BMSP 2135 - Human Anatomy & Physiology (3 credits)
Structure and function of the human body for students preparing for professions in the health fields. 2135: body plan and organization, homeostasis, cell structure and function, histology, integumentary system, skeletal system, muscular system, nervous system and special senses. 2136: endocrine system, circulatory & cardiovascular system, lymphatic system and immunity, respiratory system, digestive system, metabolism, excretion, reproduction, and development. BMSP 2135-2136 duplicates BIOL 2405-2406; may not receive credit for both.
Prerequisite(s): (BIOL 1005 or BIOL 1006) or (BIOL 1105 or BIOL 1106) or (BIOL 1205H or BIOL 1206H)
Instructional Contact Hours: (3 Lec, 3 Crd)

BMSP 2136 - Human Anatomy and Physiology (3 credits)
Structure and function of the human body for students preparing for professions in the health fields. 2135: body plan and organization, homeostasis, cell structure and function, histology, integumentary system, skeletal system, muscular system, nervous system and special senses. 2136: endocrine system, circulatory & cardiovascular system, lymphatic system and immunity, respiratory system, digestive system, metabolism, excretion, reproduction, and development. BMSP 2135-2136 duplicates BIOL 2405-2406; may not receive credit for both.
Instructional Contact Hours: (3 Lec, 3 Crd)

BMSP 2145 - Human Anatomy and Physiology Laboratory (1 credit)
Laboratory exercises investigating the structure and function of the human body for students preparing for professions in the health fields. 2145: body plan and organization, homeostasis, cell structure and function, histology, integumentary system, skeletal system, muscular system, nervous system and special senses. 2146: endocrine system, circulatory & cardiovascular system, lymphatic system and immunity, respiratory system, digestive system, metabolism, excretion, reproduction, and development. BMSP 2145-2146 duplicates BIOL 2414; may not receive credit for both.
Corequisite(s): BMSP 2135
Instructional Contact Hours: (3 Lab, 1 Crd)

BMSP 2146 - Human Anatomy and Physiology Laboratory (1 credit)
Laboratory exercises investigating the structure and function of the human body for students preparing for professions in the health fields. 2145: body plan and organization, homeostasis, cell structure and function, histology, integumentary system, skeletal system, muscular system, nervous system and special senses. 2146: endocrine system, circulatory & cardiovascular system, lymphatic system and immunity, respiratory system, digestive system, metabolism, excretion, reproduction, and development. BMSP 2145-2146 duplicates BIOL 2414; may not receive credit for both.
Corequisite(s): BMSP 2136
Instructional Contact Hours: (3 Lab, 1 Crd)

BMSP 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMSP 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Biomedical Engr & Sciences (BMES)

BMES 2004 - Concussion Perspectives: Medical, Scientific and Societal Perspectives (3 credits)
Broad, multidisciplinary description of concussion as it relates to variety of fields including: medicine, psychology, injury biomechanics, technology, equipment design, ethics, and law. Concussion modeling, animal models, diagnosis, neurocognitive testing, and treatment. Testing and instrumentation. Research efforts, credibility and conflicts of interest. Ethical considerations in sports, medicine, and science. Legal implications.
Pathway Concept Area(s): 1A Discourse Advanced, 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 2014 - Biomedical Engineering Professional Practice (1 credit)
Topics selected to foster professional development of the Biomedical Engineering (BME) student, including training for experiential learning opportunities, such as research, internships, co-ops, and design. Overview of BME specialization and research areas, career pathways, and preparation for interactions with industry, including the regulatory approval process associated with medical device development. Emphasis on teamwork, communication, employment opportunities, the development of a professional portfolio, ethical considerations, additive manufacturing, and engineering documentation using real-world examples and a design sprint/challenges.
Instructional Contact Hours: (1 Lec, 1 Crd)

BMES 2024 - ESTEEMED Program Seminar (1 credit)
Professional development seminar series for National Institutes of Health (NIH) Enhancing Science, Technology, EnginEering, and Math Educational Diversity (ESTEEMED) program scholars. Professional development and construction of professional portfolio. Overview of safety and ethical considerations within biomedical engineering research. Development of scientific literature searching and summarizing skills. Communication skill development of written and oral content. Strategies for mentoring relationships. May be repeated 3 times with different content for a maximum of 4 credit hours. Pre: Only available to students in the ESTEEMED program.
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 4 credit hours

BMES 2074 - Computational Methods in Biomedical Engineering (2 credits)
Numerical methods and software applied to biomedical engineering applications. Structured programming and problem solving within programming environment such as MATLAB. Error estimation, root finding, curve fitting, interpolation, solving linear simultaneous equations, numerical differentiation, numerical integration, and numerical solutions to ordinary differential equations.
Prerequisite(s): MATH 1226 and (ENGE 1215 or ENGE 1414)
Corequisite(s): MATH 2114 or MATH 2114H or MATH 2405H
Instructional Contact Hours: (2 Lec, 2 Crd)

BMES 2104 - Introduction to Biomedical Engineering (3 credits)
Identification, exploration, and evaluation of real-world, complex biomedical engineering problems including safety and ethical considerations. Emphasis on critical thinking, problem solving, group skills, and communication related to the field of biomedical engineering. Literature review and experimental design in biomedical engineering research.
Prerequisite(s): (ENGE 1216 or ENGE 1414) and MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 3004 - Helmet Design: Biomechanics to Health & Social Disparities in Sports (3 credits)
Provides a multidisciplinary description of helmet design with applications to all sports. The biomechanical design parameters for helmets are presented in the broader context of health and social disparities. Through reasoning in the social sciences the class investigates how sex and gender roles have shaped sports and their individual helmet design disparities. A critical analysis of equity relative to race and healthcare is analyzed as it pertains to helmets and concussion treatments and outcomes. Demonstrate the interdisciplinary nature of helmet design and how ethical reasoning and social constructs have shaped the industry.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3024 - BME Cell Engineering Laboratory and Design (2 credits)
Principles of cell engineering, experiment design, quantitative alyses. Laboratory notebook keeping, report writing and oral presentation in a team setting. Measurement of biological molecules such as DNA, RNA, and proteins. Assessment of animal cell viability, migration, mechanics and interactions with biomaterials. Identification of cell phenotypes.
Corequisite(s): BIOL 1105, BMES 2104
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

BMES 3034 - Bioinstrumentation Laboratory and Design for Living Systems (2 credits)
Principles of biomedical sensors and their usage for experimental design. Collection of biological signals using analog signal amplifiication and filters, biopotentials, digital acquisition, digital filtering and processing. Analysis of physiological signals on living systems with focus on neural, cadiovascular, respiratory, and muscular systems using a group problem solving approach. Instrumental regulation and safety considerations.
Prerequisite(s): BMES 2104 and ECE 3054
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

BMES 3114 - Needs Identification in Healthcare (3 credits)
Define open-ended problem statements related to healthcare. Immersive clinical observation and transdisciplinary medical technology innovation. Needs exploration and screening, disease state fundamentals, and evaluation of existing solutions. User-centered research planning, contextual inquiry, data documentation, stakeholder and market analysis, and regulatory and reimbursement basics.
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3124 - Introduction to Biomechanics (3 credits)
Basic principles of biomechanics. Basic musculoskeletal anatomy. Application of classical mechanics to biological systems. Emphasis placed on mechanical behavior (stress and strain), structural behavior, motion, and injury tolerance of the human body. Biomechanics of medical devices and implants. Advances in safety equipment used in automotive, military, and sports applications.
Prerequisite(s): BMES 2104 and ESM 2204 and ESM 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3134 - Introduction to Biomedical Imaging (3 credits)
Introduction to major biomedical imaging modalities. Emphasis on X-rays, computerized tomography (CT), magnetic resonance imaging (MRI), positron emission tomography (PET), ultrasound, and optical imaging. Essential physics and imaging equations of the imaging system. Sources of noise and primary artifacts. Patient safety and clinical application.
Prerequisite(s): BMES 2104 and (MATH 2204 or MATH 2204H) and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3144 - Biomedical Devices (3 credits)
Design and uses of biomedical devices for diagnosis and therapy of human and animal diseases. Disease eiologies, progression, risk factors, and epidemiology. Tissue, organ, and systems dysfunction and failure and relevance to life stages (pediatric, adolescent, adult, aged). Useful characteristics of engineered materials for device fabrication, including biocompatibility. Gaps between medical needs and current medical devices.
Prerequisite(s): BMES 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3154 - Biosignal Processing and Classification (3 credits)
Introduction to the concepts and applications of digital signal processing and machine learning on bioinstrumentation signals from physiologic systems. Emphasis on processing techniques for electrocardiogram (ECG), electromyography (EMG), and speech signals. Apply basic machine learning algorithms for diagnostic classification of biosignals.
Prerequisite(s): BMES 2104 and (CS 1044 or CS 1054 or CS 1064 or CS 1114 or ME 2004 or AOE 2074 or ESM 2074 or BSE 3144 or BMES 2074)
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3164 - Fundamentals of Regenerative Medicine and Tissue Engineering (3 credits)
Fundamentals of cell biology, physiology, and engineering of regenerative medicine. Techniques and technologies of regenerative medicine and tissue engineering. Biomaterial selection and manufacturing techniques for regenerative medicine and tissue engineering applications. Overview of genetic and immuno- therapies. Design criteria and process from bench to clinical implementation of tissue engineering solutions. Ethical implications in regenerative medicine.
Prerequisite(s): BMES 4064
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3184 - Problem Solving in BME (3 credits)
Computational and analytical approaches to analyzing biological systems and solving biomedical engineering problems. Problem formulation and exploration of problem-solving techniques to validate computational solutions. Self-directed inquiry and team-based approaches that use reverse engineering, user-in-mind design, and engineering software tools.
Prerequisite(s): BMES 2104 and (ESM 2074 or BMES 2074) and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3224 - Automobile Safety (3 credits)
Provides multidisciplinary analysis of automobile safety around the world. Illustration of the details about the invention of the wheel and how various cultures advanced the wheel into carts for transportation. Design process of seatbelt systems, frontal airbag and side airbag systems. Analysis of vehicle design parameters to optimize restraint systems. Analysis of the design challenges of protecting all occupants including men, women, children, elderly and pregnant occupants. Ethical analysis of the history of laws, media, and societal norms around seatbelt use and current distracted drivers using cell phones.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 3844 - Computational Neuroscience and Neural Engineering (3 credits)
Introduction to computational and systems neuroscience. Data analysis and signal processing techniques for neural data. Neural modeling to include mean field models, Hodgkin-Huxley models, integrate and fire models. Neural engineering and brain machine interface (BMI) applications.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NEUR 3844

BMES 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

BMES 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 4015 - BME Senior Design and Project (3 credits)
4015: Apply biomedical engineering principles to the design of an approved project using the team approach. Develop design and communication skills. Integrate ethical, global and social issues in engineering. 4016: Apply biomedical engineering principles to develop solutions for an approved design project using a team approach. Complete a project resulting in prototype medical device, circuit, or system. Refine design and communication. Integrate ethical, global, environmental and social issues in engineering. Pre: Senior standing for 4015.
Prerequisite(s): BMES 3034 and BMES 3184
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BMES 4016 - BME Senior Design and Project (3 credits)
4015: Apply biomedical engineering principles to the design of an approved project using the team approach. Develop design and communication skills. Integrate ethical, global and social issues in engineering. 4016: Apply biomedical engineering principles to develop solutions for an approved design project using a team approach. Complete a project resulting in prototype medical device, circuit, or system. Refine design and communication. Integrate ethical, global, environmental and social issues in engineering. Pre: Senior standing for 4015.
Prerequisite(s): BMES 4015
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BMES 4034 - Wearable Bioinstrumentation (3 credits)
Exploration of science, engineering, and data analytics principles behind wearable technology. Non-invasive measurement and assessment of human physiology and behavior. Data processing and analysis of non-invasive biosignals. Data privacy, protection, and ethical considerations of wearable devices.
Prerequisite(s): (CS 1044 or CS 1054 or CS 1064 or CS 1114 or ME 2004 or AOE 2074 or ESM 2074 or BSE 3144 or BMES 2074) and (STAT 3615 or STAT 3704 or STAT 4604) and (ECE 2054 or ECE 3054)
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 4064 - Introduction to Medical Physiology (3 credits)
An introductory to the principles of medical physiology. Designed primarily for (but not limited to), undergraduate students minoring in biomedical engineering, and other related engineering and physical sciences majors with little or no formal background in biological sciences. Basic principles and concepts of human physiology. Special emphasis on the interactions of human systems biology in their entirety rather than individual genes and pathways. Pre: Junior standing or permission of instructor.
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 4134 - Global, Societal, and Ethical Considerations in Biomedical Engineering (3 credits)
Overview of contemporary technological advances to improving human health. Comparison of healthcare systems, problems, and existing solutions throughout the developed and developing world. Consideration of legal and ethical issues associated with developing and implementing new medical technologies. Recognition and definition of gaps between medical needs and current methods and therapies between developed and developing countries. Conceptually design a novel technology.
Prerequisite(s): BMES 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 4154 - Commercialization of BME Res (3 credits)
Commercialization process applied to translational research. Regulatory aspects of biomedical engineering products and technologies (e.g. devices, diagnostics, drugs, biologics). Intellectual property, technology transfer processes, clinical trial design, commercialization of university research, modeling of development costs (e.g. cash flow and revenue projections). Small business startup approaches.
Prerequisite(s): BMES 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

BMES 4234 - Mechanics of Biological Systems (3 credits)
Anatomy and physiology of biological systems such as cells, tissues, and organs. Experimental techniques for determining the mechanical behavior of biological systems. Simplified mechanics-based mathematical models of biological systems. Specific biological systems include cells, tissues, and organs of the musculoskeletal, cardiovascular, integumentary system, and reproductive systems.
Prerequisite(s): ESM 2204 and MATH 2214 and MATH 2114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4234

BMES 4574 - Biomaterials (3 credits)
Materials for biomedical applications. Basic material types and properties, functional uses of materials in medical applications, and tissue response mechanisms. Integrated design issues of multicomponent material design in prosthetic devices for hard and soft tissues, orthopedics , cardiovascular, and drug delivery applications.
Prerequisite(s): MSE 2034 or MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MSE 4574

BMES 4614 - Probability-Based Modeling, Analysis, and Assessment (3 credits)
Uncertainty analysis of engineering data, parameters estimation, probability concepts, random variables, functions of random variables, probability-based performance functions and failure modes, risk and reliability functions, probability of failure and safety index, random sequences and stochastic processes, correlation functions and spectral densities, return period and extreme values, failure rates, performance monitoring and service life prediction.
Prerequisite(s): ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4614

BMES 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 4984A - Special Study (1-19 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: Variable credit course

BMES 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BMES 29844 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Building Construction (BC)

BC 1014 - Building A Strong Foundation for Success (2 credits)
Exploration of career options within the built environment and construction industry. Professional development, digital literacy, which will include creation of media and “personal brand” identity. Exploration of ideas from multiple viewpoints and perspectives. Oral, written, and visual presentation of ideas such as resume development. Introduction to ethical considerations. Reflection on “Self-as-Learner.” Critical-Thinking skills as they apply to construction projects. Development of group roles as they apply to construction projects. Identification of universities resources, policies, procedures, academic and social engagement opportunities.
Instructional Contact Hours: (2 Lec, 2 Crd)

BC 1114 - Introduction to Building Construction (3 credits)
Introduction to construction with understanding of different market sectors, specializations, career path opportunities, industry stakeholders, and processes. Comprehension of quality assurance, control, project delivery systems, basic estimating, and scheduling. Application of communication skills to professional settings and use of basic calculations to solve construction math problems.
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 1124 - Construction Documents and Safety (2 credits)
Role of construction drawings and specifications. Interpretation of construction documents and creation of basic project documentation. Health, safety, and environmental hazards encountered in the construction industry. Design Lab Studio (1H, 2L, 2C)
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

BC 1214 - Introduction to Building Construction I (3 credits)
Introduction to construction with an overview of construction drawings and specifications, construction terminology, building codes and building systems, cost estimating and bidding, construction management processes, construction documents, load paths and foundations, construction health and safety, and hands-on experiential learning through lab exercises. Strategic career success factors and introduction to ethical decisions in construction management.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 1224 - Introduction to Building Construction II (3 credits)
Overview of the important areas of contracting and the workings of the construction industry. Application of construction management theory, processes, and terminology including, definable building systems, building code interpretations, the reading and preparing of basic construction drawings and integrating construction details and project specifications to derive safe construction means and methods, equipment section, cost estimates and time schedules.
Prerequisite(s): BC 1214 or BC 1114
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 2004 - Construction Surveying (1 credit)
Surveying in context of the construction process, basic surveying methods, equipment, emerging technologies, topographic surveying, and application to construction layout.
Prerequisite(s): BC 1124
Instructional Contact Hours: (1 Lec, 1 Crd)

BC 2014 - Construction Principles I (3 credits)
Fundamentals of the construction technology and process emphasizing project management/operations, materials and methods. Utilization of industry-specific technology/software applications, techniques and sequences/project loading for the construction of buildings in compliance with Construction Specifications Institute (CSI) Divisions 00-05, 31, 32, 33. Planning, scheduling, materials cost analysis, job-appropriate equipment and labor requirements, masonry applications, concrete and formwork. Site preparation and utilization, use of construction industry-specific software, interpretation of project drawing documents. Integration of project safety and health issues. Quantity surveying for the management of construction resources, according to current principles and industry standards.
Prerequisite(s): BC 1224 or BC 1124
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 2024 - Construction Principles II (3 credits)
Continuation of the fundamentals of construction technology and process emphasizing materials, methods, techniques and sequences for the construction of buildings using Construction Specifications Institute (CSI) Divisions 01, 06-14, 21. Interpretation of construction details relevant to a construction project. Cost impact of building codes and inspections. Development of presentation skills using project-based learning. Planning, scheduling, labor needs, and quantity surveying for the management of construction resources. Development of safety and quality assurance plans, including building systems for fire suppression.
Prerequisite(s): BC 2014
Corequisite(s): BC 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2044 - Construction Materials (3 credits)
Introduction to the life cycle, properties, behaviors, and sustainability impacts of common construction materials including wood, insulation, asphalt, ferrous and nonferrous metals, aggregate, concrete, masonry, glass, and plastics. Theory of materials including material properties; behavior under physical, thermal, and environmental loads; and interfaces between dissimilar materials. Methods and criteria for material comparison and selection for sustainable construction. Preparation of professional written reports as a team and individually; Project management for materials selection/application.
Corequisite(s): BC 2214
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 2064 - Integrated Construction I (3 credits)
Application of construction means, materials and methods related to quantity take-off, cost management, scheduling, resource management, document drawing, building information modeling in support of a selected project. Project cost impact of building code requirements. Emphasis on structural components of selected project.
Prerequisite(s): BC 2014 and BC 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2104 - Building Effective Construction Teams (3 credits)
Introduction to leadership behavior styles and their impact on construction management team performance, including analysis of how ethical behavior and individual strengths support positive relationship-building. Development of management strategies to maximize positive conflict outcomes through trust-building between construction project stakeholders. Identification of the role that implicit bias plays in decision-making within diverse project teams. Development of presentation skills for a construction audience.
Prerequisite(s): BC 1224 or BC 1124
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2114 - Information Technology in Design and Construction (3 credits)
Building delivery and project management improvements through the use of information technology (IT) are explored, including scheduling software, building information modeling (BIM) tools, and virtual design and construction (VDC) simulation software and their corresponding theories and concepts that integrate design and construction. Use BIM/VDC tools for graphical presentations, databases, and spreadsheets.
Prerequisite(s): BC 1224 or CEM 2104 or BC 1124
Corequisite(s): BC 2014
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2134 - Construction Data Analysis (2 credits)
Identification and use of various types and sources of construction market data and the tools for analyzing construction data to support managerial decision making. Different forms of applying mathematics to the construction market for better productivity and processes across the construction industry. Develop insights to inform management and investment decisions. Use of cost-benefit analysis as applied to construction management in determining feasibility of projects.
Prerequisite(s): MATH 1025 or MATH 1225
Instructional Contact Hours: (2 Lec, 2 Crd)

BC 2214 - Why Buildings Stand Up (3 credits)
Overview of fundamental principles explaining why structures remain stable under various loading conditions. Explores different types of structures and applied loads and analyzes both determinate and indeterminately supported structures. Calculation of shear, bending moments, deflections in beams, and buckling. Discussion of ethical impacts on user safety and hazard avoidance, in project design and construction methods, materials, etc. Explores different types of soil composition and their strength properties.
Prerequisite(s): (BC 1224 or BC 1124) and (MATH 1025 or MATH 1225)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2354 - Residential Construction Technologies (3 credits)
Identify and evaluate conventional construction materials, methods, building systems, and products to less-familiar, innovative technological alternatives for a specific residential construction project. Compare innovative technological alternatives with material and cost estimates. Overview of conventional materials, equipment, designs, and processes in residential construction. Investigate recent literature on emerging technologies to determine best practices. Strengthen understanding of the primary building systems in residential construction applications.
Prerequisite(s): BC 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 3014 - Building Physics and Environmental Systems (3 credits)
Theory and analysis methods relative to performance of envelope systems and the design and integration of mechanical and electrical building systems. Topics covered include: envelope systems and performance metrics, conceptual and technical design theory, operational principles, and maintenance issues, all necessary for determining the selection of passive and active environmental control systems within a building including: envelope system, heating, ventilation, air conditioning, lighting, and acoustical systems.
Prerequisite(s): PHYS 2205 and PHYS 2215 or PHYS 2305
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 3064 - Integrated Construction II (3 credits)
Application of construction means, materials and methods as they relate to quantity take-off, cost management, scheduling and resource management, document drawing, building information modeling in support of a selected project. Emphasis on building systems components of selected project.
Prerequisite(s): (BC 2064 or CEM 2104) and (PHYS 2205 and PHYS 2215 or PHYS 2305)
Corequisite(s): BC 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 3114 - Building Systems Technology (3 credits)
Emphasis is placed on the integration and physical installation of passive and active environmental control systems including: heating, ventilation, air conditioning, lighting, acoustics, plumbing, and fundamentals of thermal loads.
Prerequisite(s): BC 2024 and (PHYS 2305 or PHYS 2205 and PHYS 2215) or (CEM 2104 and PHYS 2305)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BC 3134 - Temporary Structures in Construction (3 credits)
Introduction to temporary structure systems used to support construction operations. Concrete formwork, scaffolding systems, excavation shoring systems, dewatering techniques, and hoisting operations. Assessment of systems, cost, quality, safety, sustainability, and schedule impacts.
Prerequisite(s): (BC 2044 and BC 2024 and BC 2214) or CEE 3684
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CEM 3134

BC 3954 - Study Abroad (1-19 credits)
Study abroad in Spain.
Instructional Contact Hours: Variable credit course

BC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 4024 - Estimating, Production, and Cost Engineering (3 credits)
Interpretation of plans and specifications, preparation of construction estimates, and cost control. Methods analysis, resource requirements, and resource costs in building systems, including system components, and in large-scale civil engineering works such as highways, bridges, and hydraulic structures.
Prerequisite(s): CEE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CEE 4014

BC 4064 - Integrated Construction III (3 credits)
Application of construction means, materials and methods as they relate to quantity take-off, cost management, scheduling and resource management, document drawing, building information modeling in support of a selected project. Emphasis on administrative/general contractor functions (such as project safety, budget development, and permitting) of the selected project.
Prerequisite(s): BC 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4114 - Building Information Modeling in Design and Construction (3 credits)
Introduction to means and methods to enrich the geometric information of a building model with semantic data such as, material, structural and performance values. Concept of interoperability in architecture, engineering and construction industry. Overview of approaches to information modeling such as Standard for the Exchange of Product model data (STEP), Industry Foundation Classes (ifc), Construction Operations Building Information Exchange (COBie) and Green Building XML (gbXML). Key concepts of object-oriented modeling and programming.
Prerequisite(s): BC 2114 or (ENGE 1215 and ENGE 1216)
Corequisite(s): CS 1014
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4124 - Digital Construction & Manufacturing (3 credits)
Explore working principles, design projects, & experiment with construction digital information modeling, computer numerical control (CNC), and computer aided manufacturing (CAM) processes. Fundamentals of digital prototyping. Analysis of the industry tools such as 3D scanners, 3D printers, CNC manufacturing techniques, and others, used to provide familiarity with technologies & provide understanding of their benefits & limitations.
Prerequisite(s): BC 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4164 - Production Planning and Process Design for Construction (3 credits)
The course deals with the planning and design of construction processes. Course topics include production systems, behavior of construction systems and workers, the relationships between subsystems in the construction process, queuing systems, process modeling and simulation. The major emphasis is on production and productivity. Production problems that typically occur in construction systems are discussed. The course also explores recent innovations in construction system design such as lean construction and agile construction.
Prerequisite(s): BC 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4264 - Fundamentals of Construction Management (6 credits)
Practical construction management methods within the built environment. Construction materials, document drawings, management activities, fundamentals of construction scheduling and planning. Quality, quantity, and cost of materials necessary to complete a construction project. Construction information technology tools. Partially duplicates BC 2014 and 2114. Pre: Junior Standing.
Instructional Contact Hours: (6 Lec, 6 Crd)

BC 4314 - Building Performance and Energy Management (3 credits)
Fundamentals of building performance mandates for the built environment. Practical means and methods for evaluating building performance metrics within integrated design including acoustic performance, visual performance, and indoor air quality and management. Specific focus on energy resources consumed by thermal, hygrothermal, lighting, and other environmental building systems. Assessment of building energy consumption and analysis of retrofit scenarios through performance evaluation over the entire building life cycle.
Prerequisite(s): BC 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4324 - Innovation in Residential Construction (3 credits)
Mechanisms of historical and current innovations in the residential construction industry. Theory and application within the realms of innovation, diffusion, technology, adoption, new product development, housing innovation literature, supply chain management, sustainability, information technology, commercialization, and housing policy. Innovation theories and applications to residential construction through the analysis and utilization of data-driven hypotheses typical to the industry.
Prerequisite(s): BC 2354 and BC 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4334 - Sustainable Building Performance Management (3 credits)
Introduction to means and methods for managing the sustainability of buildings and their performance over the life cycle. Best practices for sustainable projects in the areas of planning/development, site design, project management, energy and water conservation and green building assessment tools and methods; Leadership in Energy and Environmental Design (LEED) rating system; economic analysis of green building alternatives; and implementation planning.
Prerequisite(s): BC 3064 and BC 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4364 - Lifecycle BIM for Facility Management (3 credits)
BIM (Building Information Modeling) concepts and tools that are critical for facility operation and maintenance. Identifying, capturing, analyzing, exporting and exchanging facility lifecycle data. Spreadsheet-based and BIM based facility management platforms. Case studies and real-life application for understanding mechanical, electrical, and plumbing systems from an owner or facility manager perspective. Workflow processes for data exchange.
Prerequisite(s): BC 2114 and BC 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4374 - Residential Housing and Land Development (3 credits)
Application of means, methods, and strategies for delivering single and multi-family residential housing in urban and suburban contexts. Project planning, including market analysis to determine highest and best use of an identified property, marketing and sales strategies, site and product design and procurement, infrastructure requirements, zoning and government agency regulations, financial analysis and feasibility study, financing strategies, and delivery control systems. Roles of developer and project team in preparing formal proposals for a housing development to be submitted for financing. Identification and application of interfaces with project stakeholders. Overview of contemporary topics such as green development and affordable housing.
Prerequisite(s): BC 2354 and BC 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4434 - Construction Practice I (3 credits)
Explores advanced business and management practices and applications to vertical construction projects. Topics include scope, planning and scheduling, assemblies estimating, cash flow controls. Creation of work breakdown structure, application of concepts of assemblies estimating and general conditions to interpret insurance and contract requires along with digital construction practices.
Prerequisite(s): BC 3064 and BC 3114 and BC 3134
Corequisite(s): BC 4064
Instructional Contact Hours: (3 Lec, 3 Crd)

BC 4444 - Construction Practice II (4 credits)
This course explores and applies the business and construction practices related to operation of a construction company to a capstone experience. Construction operation is examined as it relates to construction, financial and personnel management. Project management topics studied in this course are applied in the corequisite lab. This course is formally designated as a writing intensive course. Formal written and edited and oral presentations are presented and critiqued by the BC faculty team, the writing resource center, students and industry professionals.
Prerequisite(s): BC 4434
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BC 4754 - Internship (1-3 credits)
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

BC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Business (BUS)

BUS 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BUS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BUS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

BUS 3974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Business Information Tech (BIT)

BIT 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIT 2104 - Careers in Business Information Technology (1 credit)
Career opportunities and job search strategies in the business information technology and operations fields with reference to the BIT courses that best help the student identify a career in his/her selected field. Includes career skills development and resume writing. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

BIT 2164 - Foundations of Contemporary Security Environments (3 credits)
Introduction to multiple analytical perspectives on contemporary security environments, including political, legal, ethical, technical, environmental and historical and cultural perspectives relative to the conception, design and implementation of security solutions, practices, and policies. Emphasizes applying and analyzing the effectiveness of diverse procedures, tools and policies used in security and privacy solutions, decision-making, risk management and operational policy to mitigate local, national, international and global threats.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 2164, PSCI 2164

BIT 2405 - Introduction to Business Statistics, Analytics, and Modeling (3 credits)
Introduction to basic statistical (inference) tools, analytics techniques, and modeling necessary in managerial decision-making. The decision-making aspect of the course, while utilizing quantitative/computational thinking, will emphasize ethical reasoning. Topics include, but are not limited to, descriptive statistics, elementary probability theory, sampling and sampling distributions, portfolio management, hypothesis testing, regression analysis, analysis of variance, big data, and data analytics.
Prerequisite(s): MATH 1524 or (MATH 1225 and MATH 1226)
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 2406 - Introduction to Business Statistics, Analytics, and Modeling (3 credits)
Overview of analytic models and solution techniques in decision science. Discussion of descriptive and predictive analytics goals and methods. In addition to overview of mathematical modeling and solution techniques, discussions will include considerations of adapting analytics methods to various global and ethical business applications. Students should develop skills and appreciation of the use of data and analytics for problem solving.
Prerequisite(s): BIT 2405 or (STAT 3005 and STAT 3006) or STAT 3604 or (STAT 3615 and STAT 3616) or STAT 4604
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 2554 - Linux, Shell Scripting, and Securing the OS for Business (3 credits)
Build foundational knowledge of the Linux operating system and file system concepts necessary for cybersecurity business professionals. Discuss the purpose, use, architecture, and navigation of the Linux file system. Build skill using a command line operating system for system administration and security management tasks. Employ file and directory management, process management, text manipulation, and permissions in the Linux operating system. Create shell scripts for process automation, configuration and process management, and security applications. Hands-on experience securing and hardening the Linux operating system.
Prerequisite(s): BIT 2405
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 2954 - Business Study Abroad (1-19 credits)
This course provides students with an international business experience. It is only offered as part of a program outside of the United States. Students will learn from the structured educational experience developed by the faculty leader. This course is intended for students who want to develop information technology or operations management related free electives. Pre: Instructors consent and the completion of 24 semester hours with a minimum GPA of 3.0 or departmental consent.
Instructional Contact Hours: Variable credit course

BIT 3414 - Operations and Supply Chain Management (3 credits)
Study of the process directly related to the creation and distribution of goods and services. Increasingly, these operations are taking place outside the boundaries of a traditional enterprise. This course teaches students how to analyze processes, ensure quality, create value, and manage the flow of information, products and services across a network of customers, enterprises and supply chain partners.
Prerequisite(s): BIT 2406 and ACIS 2116 and ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3424 - Introduction to Business Analytics Modeling (3 credits)
Introduction of modeling of problems encountered in business analytics. Statistical and optimization modeling, computer solution, and analysis of business problems. Uses spreadsheet and database software to facilitate the modeling and solution of these problems.
Prerequisite(s): BIT 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3434 - Advanced Modeling for Business Analytics (3 credits)
Study of selected, advanced topics in decision modeling and business analytics. Emphasis on model formulation, solution techniques, interpretation of results and comprehensive approaches to problem-solving. Integer, multi-criteria, and non-linear programming as well as network analysis and heuristics. Includes case studies and use of Excel as the primary analytical tool.
Prerequisite(s): BIT 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3444 - Advanced Business Computing and Applications (3 credits)
Study of selected advanced topics in business computing. Construction of business applications using an advanced application development environment such as Visual Studio.net. Coverage of computer terminology, HTML, and Internet applications. The course builds computer literacy and strong programming skills. Junior standing required.
Prerequisite(s): BIT 3424 and (CS 1054 or CS 1064 or CS 1114)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3454 - Business Process Improvement (3 credits)
Examines the technical aspects of business process improvement focusing on improvement strategies, quality control, data analysis and mining, and maturity models. Emphasizes analytical techniques for business process design, control, and improvement.
Prerequisite(s): BIT 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3464 - Enterprise Planning and Control Systems (3 credits)
The study of the design, analysis and implementation of enterprise-wide resource planning and control systems. The course examines decision support models for production planning, master scheduling, inventory control, shop floor control and related topics in planning and control. The course emphasizes the application of information technologies such as ERP, MRPII, CIM to operations planning and control.
Prerequisite(s): BIT 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3474 - Data Management and Business Analytics in Python (3 credits)
Python for data wrangling and data analysis to support business decisions. Illustrate proficiency in Python, basic skills such as variables, functions, conditionals, loops, libraries, and data structures. Leverage Python skills to learn how to manage data. Learn how to clean, transform, and augment data, as well as how to use Python to obtain data, in particular to work with application programming interfaces (APIs) and do web scraping. Learn how to use Python to conduct data analysis and for plotting and visualization of data. Apply Python for time series data analysis and data modeling using libraries.
Prerequisite(s): CS 1064 and BIT 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3484 - Advanced Business Analytics in Python and R (3 credits)
Python and R for advanced data analysis, including predictive analytics and machine learning, to support business decisions. Use Python and R to conduct exploratory data analysis. Learn how to handle data, sampling distributions, statistical experiments, and significance testing in Python and R. Apply simple and multiple linear regression and related concepts such as confidence intervals, dummy variables, correlation, multicollinearity, confounding variables, interactions and main effects, and outliers. Learn how to apply classification, specifically NaÏve Bayes, discriminant analysis, and logistic regression. Learn how to apply model evaluation techniques such as ROC curves, AUC, and lift. Introduction to and application of machine learning, including k-nearest neighbors, tree models, principal component analysis, and hierarchical clustering.
Prerequisite(s): BIT 3474
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3514 - Systems Analysis (3 credits)
Study of the current technologies for designing and developing computer-based business systems. Topics will include process, structural, behavioral, and conceptual data modeling methodologies such as Uniform Modeling Language (UML) and important design-related issues such as data flows and system capabilities. Design issues will be explored through class projects. This course duplicates BIT 4524.
Prerequisite(s): CS 1054 or CS 1064 or CS 1114
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3524 - Database Management and Design (3 credits)
Study of the design of databases and data structures for supporting business applications. Basic database structure and design, structured query language, database management systems, integration of backend database servers, data warehousing and mining, on-line analytical processing, and database application, security, and management. This course duplicates BIT 4514.
Prerequisite(s): BIT 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3554 - Networks, Telecommunications and Security (3 credits)
Provides an introduction to computer networks and data communications in business. Topics include mechanisms for reliable data transfer, network topologies and technologies, and a comprehensive treatment of inter-networking. Additional topics include packet switching, and cloud, edge, and advanced networking. Security issues related to using computer networks are discussed, along with network design issues, and methodologies for network applications. Duplicates BIT 4554.
Prerequisite(s): BIT 2405 or ACIS 3504 or BIT 2164 or CS 2164 or PSCI 2164
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ACIS 3554

BIT 3614 - Election Security (3 credits)
Election system and historical voting in the U.S., their inherent vulnerabilities, and how to locate and prepare against poor election security practices. Trust and cultural significance of voting in a democratic America. The election system security standards and regulations including the Virginia Department of Elections Voting Systems Security Policies, Standards, Guidelines, and Locality Election Security Standards (LESS). Threats, vulnerabilities, and attacks on election infrastructures and how they may be evaluated and mitigated. Security controls for voting systems, voter registration databases, and associated IT infrastructure and systems used to manage elections while exploring cybersecurity careers in the public sector. Prepares selected students for a summer internship supporting the Cyber Navigator Program with a specific Virginia Locality. Primarily designed for students majoring or minoring in cybersecurity, the course is open to all students of any major.
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3664 - Cybersecurity Management I (3 credits)
Focuses on building general cybersecurity knowledge with an emphasis on cybersecurity management. This course will teach students about the categories of security controls. Students will be introduced to the necessity of cybersecurity through an introduction to cybersecurity concepts (e.g., threats, vulnerabilities, risk) and using basic tools to identify cybersecurity weaknesses (security assessments, passive and active reconnaissance, and vulnerability scanning). Students will learn about security policies and risk assessments and will perform a risk assessment. Students will be introduced to types of social engineering and malware tools and techniques. This class will introduce the legal and ethical aspects of security and privacy and the tools used to protect data privacy. Students will also learn to develop policies and procedures to manage hosts and explore how to harden one. This course will also introduce students to the management of internet of things (IOT) and cloud technologies, human resources security, incident response and forensics, physical and infrastructure security, and cybersecurity resilience.
Prerequisite(s): BIT 2554 and (BIT 3554 or ACIS 3554)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3674 - Cybersecurity Management II (3 credits)
Focuses on building general cybersecurity knowledge with an emphasis on the management and implementation of technical cybersecurity controls. This course will build knowledge of and teach students how to implement symmetric and asymmetric encryption. Students will learn about authentication and access controls and how to implement them, as well as understand and implement the network security protocols, standards, and applications that help support them. The course will also teach students how about database security practices and how to implement them, as well as build their understanding of firewalls, intrusion detection and prevention, buffer overflows, software security, wireless network security, and mobile security.
Prerequisite(s): BIT 3664
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

BIT 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIT 4164 - Future of Security: Integrative Solutions for Complex Security Systems (3 credits)
Identification and analysis of complex, real-world security problems and threats to people, organizations, and nations across multiple domains, roles and future scenarios. Crisis communication, decision making tools, ethical principles and problem-solving methods to respond, assess options, plan, scope, and communicate before, during and after conflicts, disasters and attacks. Use of an experiential learning facility, and participation in a reality-based team simulation of cascading security and disaster events.
Prerequisite(s): PSCI 2164 or BIT 2164 or CS 2164
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4164, PSCI 4164

BIT 4424 - Business Information Visualization and Analytics (3 credits)
Basic perception and design principles and techniques for information visualization, with an emphasis on the application of visualization software for data exploration and the development of analytical skills for business. Includes hands-on exposure to information visualization and statistical software.
Prerequisite(s): BIT 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 4434 - Computer Simulation in Business (3 credits)
In-depth study of the application of computer simulation techniques to business decision making and process improvement. The theory of computer simulation and statistical analysis of results are included. Attention is focused on using simulation software stressing application to specific problems.
Prerequisite(s): BIT 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 4444 - Web-Based Decision Support Systems (3 credits)
Study of current technologies for designing and constructing interactive, Internet-based systems for supporting business decisions. Topics may include the operation of the Internet, server-side programming, client-side programming, server-side scripting, XML, XHTML, database integration, COM, CGI, and others. Design issues will be explored through a class project.
Prerequisite(s): BIT 3444
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 4454 - Business Analysis Seminar in IT (3 credits)
Comprehensive treatment of Decision Support Systems (DSS) as managerial tools, particularly in an e-commerce environment. Emphasis is at the builder and user level. A primary emphasis is on problem solving through the integration of various quantitative techniques as well as on IT concepts. The course includes a comprehensive project using state-of-the-art software.
Prerequisite(s): BIT 3434 and BIT 4444 and BIT 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 4464 - Advanced Supply Chain Management (3 credits)
Advanced study of efficient methods for streamlining the production and delivery of products and services across functions, enterprises and global boundaries. Topics include the facilities, functions, technologies, and activities involved in creating and delivering products and services, especially in a digital marketplace. Designing and managing a network of suppliers across enterprises is discussed, along with the information systems, risk management and planning issues involved.
Prerequisite(s): BIT 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 4474 - Global Operations and Information Technology (3 credits)
This course includes concepts and issues critical in the globalization of business operations and information technology. Topics covered include the organization of global operations, cultural and national comparisons, planning global operations, facilities location, product development, technology transfer, global communication links, transborder data flow, international information systems, and other emerging operations and information technology issues.
Prerequisite(s): BIT 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 4484 - Project Management (3 credits)
Study of efficient methods for planning and controlling projects. Topics include project management and scheduling tools, project quality assurance, risk and cost control, resource constrained scheduling, definition and requirements analysis, task integration, and managing alliances. The application of information technology to project management and control is emphasized throughout the course.
Prerequisite(s): BIT 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 4544 - Artificial Intelligence, Machine Learning, and Deep Learning in BIT (3 credits)
Learn concepts and techniques related to artificial intelligence (AI), machine learning (ML), and deep learning (DL). Learn the fundamentals of AI, ML, and DL algorithms and how to apply them to problems of interest to majors in the business information technology (BIT) department. Understand and apply supervised (classification, regression) and unsupervised (clustering) machine learning, and applications of these techniques in business. Apply deep learning, for example, recurrent neural networks (RNN), generative adversarial networks (GAN), and convolutional neural networks (CNN).
Prerequisite(s): BIT 3484
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 4604 - Data Governance, Privacy and Ethics (3 credits)
Examination of data analytics and automated decision making issues, across multiple technology contexts, through the lens of the humanities and ethics. Privacy, autonomy, data ownership, equality, and accountability. Decision making and exploration of questions of data ethics and data fairness throughout the data life cycle.
Prerequisite(s): BIT 2405 or CMDA 2014 or CS 1114 or CS 1054 or CS 1064
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 4624 - Cybersecurity Analytics for Business (3 credits)
Application of advanced analytics to cybersecurity in a business setting. Categorization of cyber threats and solutions. Data mining, visualization and machine learning applied to large data sets for anomaly detection, threat prediction, and incident response analysis. Investigation of adversarial machine learning. Selection of appropriate analytics techniques and security platforms. Consideration of business and ethical issues.
Prerequisite(s): BIT 3674 or BIT 4614 or CS 4264
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 4644 - Digital Forensics and Incident Response Management (3 credits)
Focuses on building knowledge about the field of digital forensics and incident response. Students will learn about cybercrime and the digital forensics process. The course will build knowledge of, and teach students how to implement, digital forensics techniques and tools. Students will learn about file systems, and how to work with Windows, Linux, and Macintosh file systems and forensic tools to acquire and analyze forensic evidence. Students will learn how to apply forensic tools and techniques to network, mobile, internet of things (IOT), cloud, email, social media, and dark web data and services. The course will also build knowledge about how to manage incident response capabilities such as computer security incident response teams (CSIRTs), incident response planning, guidance for processing crime and incident scenes, and how to compile forensic reports and integrate forensically obtained knowledge into future incident response planning.
Prerequisite(s): BIT 3674
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 4654 - Penetration Testing and Ethical Hacking for Business (3 credits)
Focuses on building competence in penetration testing for business. This course will teach principles of ethical hacking, such as system reconnaissance, enumeration, vulnerability scanning, and exploitation. Students will learn how to find and exploit vulnerabilities in web applications, operating systems, wireless networks, as well as perform social engineering and physical security assessments. Students will also perform penetration tests and learn to write reports for managerial audiences.
Prerequisite(s): BIT 3674
Instructional Contact Hours: (3 Lec, 3 Crd)

BIT 4854 - Analytics in Action (3 credits)
Problem-solving framework and analytic techniques for solving messy, unstructured, high-impact, real-world organizational/societal problems within an interdisciplinary, intercultural, experiential learning context. Definition of problem scope, objectives, need for change, ethical concerns, and diversity and inclusion issues; identification of stakeholders and their values; evaluation of decision tradeoffs; problem decomposition and hypothesis formulation; project planning and administration; data versus user requirements, ethical and inclusive decision making, data collection, preparation, and analysis; team roles and management; professional communication of insights, policy and action recommendations.
Corequisite(s): BDS 2005, CMDA 2014
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MGT 4854

BIT 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

BIT 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIT 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIT 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Career and Technical Education (EDCT)

EDCT 1474 - Computer Information Systems (3 credits)
Fundamentals of Information Technology. Social and individual impact of technology. Software and hardware technologies. Networking, programming, and development.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCT 2604 - Introduction to Career and Technical Education (3 credits)
Philosophies, history, legislation, context, administration and delivery systems of the various licensure areas included in Career and Technical Education.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCT 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCT 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCT 4004 - International Trends in Workforce Development (3 credits)
Trends in international workforce development including global talent supply and demand; portable skills and workforce readiness; social, economic and employment issues; worker values; impact of technology, and workplace communication skills for effective writing, speaking, reading, and listening.
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCT 4034 - Methods of Planning Educational Programs in Agriculture (3 credits)
Course examines the procedures involved in the development of courses, curriculum, and instructional materials for education programs in agriculture.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALCE 4034

EDCT 4624 - Managing a Career and Technical Education Program (3 credits)
Responsibilities of a Career and Technical Education teacher. Managing CTE program based on operational polices, promoting program to in-school and external stakeholders, implementing work-based learning, advising program student organizations, and creating a community-based program.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCT 4634 - Student Assessment in Career and Technical Education (3 credits)
Assessment of standards-based outcomes of learning in workforce development and career and technical education programs. Focus on work-based learning, hands-on competencies, Cognitive Learning Targets, and performance assessment. Pre: Senior standing.
Prerequisite(s): EDCT 2604 and EDCT 2964
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCT 4754 - Internship in Education (1-16 credits)
Planned program of clinical practice in education under the direction and supervision of a university supervisor and a selected practitioner. Pre: Recommendation of program area and successful completion of Professional Studies requirement.
Instructional Contact Hours: (1-16 Lec, 1-16 Crd)
Repeatability: up to 16 credit hours

EDCT 4884 - Youth Program Management (3 credits)
Organizational design of educational youth programs such as 4-H and FFA, including administrative planning, human resource development, recruitment, marketing, and budgeting.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALCE 4884

EDCT 4964 - Field Study/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCT 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Chemical Engineering (CHE)

CHE 2004 - Chemical Engineering Sophomore Seminar (1 credit)
Career opportunities and current topics of interest in the Chemical Engineering profession.
Instructional Contact Hours: (1 Lec, 1 Crd)

CHE 2114 - Mass and Energy Balances (3 credits)
Stoichiometric and composition relationships, behavior of gases, vapor pressures, solubility, mass balances, recycling operations, energy balances, first law of thermodynamics, thermophysics, thermochemistry, fuels and combustion, application to chemical operations.
Prerequisite(s): MATH 1226 and (CHEM 1036 or CHEM 1036H or CHEM 1056 or CHEM 1056H)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 2164 - Chemical Engineering Thermodynamics (3 credits)
First and Second Laws, properties of fluids, properties of homogeneous mixtures; phase equilibria, chemical-reaction equilibria. Grade of C- or better required in prerequisite CHE 2114.
Prerequisite(s): CHE 2114 and MATH 2204 and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 3015 - Process Measurement & Control (3 credits)
3015: Common process measurements; applications to theory and practice of automatic control of chemical processes; 3016: Design and laboratory practice underlying the automatic computer control of chemical processes.
Prerequisite(s): MATH 2214 and CHE 3114
Corequisite(s): 3124, (3184 or 3185), (3044 or 3154) for 3015
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 3044 - Heat Transfer (2 credits)
One and two dimensional conduction, convection, and diffusion of thermal energy; heat transfer rates, steady state and unsteady state conduction, convection; design of heat exchangers; forced and free convection boiling and condensation.
Prerequisite(s): CHE 2164 and CHE 3114 and MATH 4564
Instructional Contact Hours: (2 Lec, 2 Crd)

CHE 3114 - Fluid Transport (3 credits)
Fluid statics, surface tension, fluid dynamics, Newtons Law of viscosity, momentum transport, laminar and turbulent flow, velocity profiles, flow in pipes, flow around objects, non-Newtonian fluids, design of piping systems, pumps and mixing.
Prerequisite(s): CHE 2114 and PHYS 2305 and MATH 2204
Corequisite(s): MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 3124 - Chemical Engineering Simulations and Process Modeling (3 credits)
Development of strategies to pose and numerically solve sets of algebraic and differential equations that describe chemical engineering systems and processes. Iterative root finding and optimization approaches to solving non-linear equations, analyze data, and determine best-fit model parameters. Numerical strategies to integrate and differentiate models and data. Approaches to solve ordinary and partial differential equations that describe reaction kinetics, process control, and transport of momentum, heat and mass. Algorithm development, coding, and graphical representation of solutions. (3H,3C)
Prerequisite(s): CHE 2114 and MATH 2214
Corequisite(s): CHE 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 3134 - Separation Processes (3 credits)
Binary separations and multicomponent separations, distillation, batch distillation, extraction, absorption, McCabe-Thiele and Ponchon Savaret methods, short cut methods, design of plate columns, plate and column efficiencies.
Prerequisite(s): CHE 2114 and MATH 2204 and PHYS 2306
Corequisite(s): CHE 2164 2164
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 3144 - Mass Transfer (3 credits)
Multidimensional molecular diffusion and convection of single and multi-component systems; mass transfer rates; steady state, quasi-steady state and transient mass transfer; effect of reactions on mass transfer; convective mass transfer coefficients; design of stage and continuous gas/liquid contractors, membrane, liquid-liquid and liquid-solid separation processes, artificial kidney and drug delivery systems.
Prerequisite(s): CHE 3114 and CHE 2164 and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 3154 - Heat Transfer Analysis (3 credits)
Principles of conduction, convection, and radiation of thermal energy through one or more phases; analytical and numerical methods for modeling multi-dimensional and unsteady-state conduction; analysis of forced and free convection in conduits and around submerged bodies; design of heat exchangers; radiative heat transfer; boiling and condensation.
Prerequisite(s): CHE 2164 and CHE 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 3185 - Chemical Reactor Analysis and Design (2 credits)
Introduction to mathematical frameworks for analysis and modeling of chemical reactions within different reactor configurations. 3185: Reaction equilibria, power-law rate expressions, Arrhenius law, rate constants, analysis of kinetic data, design of single and multiple isothermal reactors. 3186: Reaction mechanisms, multiple reactions, selectivity, non-isothermal reactors, catalytic reactions and design of catalytic reactors.
Prerequisite(s): CHE 2114 and (MATH 2214 or MATH 2214H)
Corequisite(s): CHE 2164, CHE 3114
Instructional Contact Hours: (2 Lec, 2 Crd)

CHE 3186 - Chemical Reactor Analysis and Design (2 credits)
Introduction to mathematical frameworks for analysis and modeling of chemical reactions within different reactor configurations. 3185: Reaction equilibria, power-law rate expressions, Arrhenius law, rate constants, analysis of kinetic data, design of single and multiple isothermal reactors. 3186: Reaction mechanisms, multiple reactions, selectivity, non-isothermal reactors, catalytic reactions and design of catalytic reactors.
Prerequisite(s): CHE 3185 and CHE 3114 and CHE 3144 and (CHE 3044 or CHE 3154)
Instructional Contact Hours: (2 Lec, 2 Crd)

CHE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 4014 - Chemical Engineering Laboratory (4 credits)
Practical experience in the planning of experimentation, gathering of experimental data, interpretation of data, and the preparation of written and oral reports. Use of small-scale processing equipment, automatic control, and data acquisition. Emphasis on teamwork, safety, engineering judgment, and professional behavior. Applications include fluid flow, mixing, filtration, and distillation, process control, heat transfer, mass transfer, and chemical reaction kinetics. Consideration of ethical choices in engineering practice and societal impacts of engineering solutions. In-major GPA of 2.0 or better.
Prerequisite(s): CHE 2164 and CHE 3015 and CHE 3114 and CHE 3124 and CHE 3134 and CHE 3144 and (CHE 3044 or CHE 3154) and CHE 3185 and ENGL 3764
Instructional Contact Hours: (12 Lab, 4 Crd)

CHE 4015 - Chemical Engineering Unit Operations Laboratory (2 credits)
Practical experience in the planning of experimentation, gathering of experimental data, interpretation of data, and the preparation of written and oral reports. Use of small-scale processing equipment, automatic control, and data acquisition. Emphasis on teamwork, safety, engineering judgment, and professional behavior. 4015: Applications include fluid flow, mixing, filtration, distillation, and chemical reaction kinetics. Consideration of ethical choices in engineering practice. 4016: Applications in process control, heat transfer, mass transfer, and catalysis. Consideration of the societal impacts of engineering solutions. In-major GPA of 2.0 or better.
Prerequisite(s): CHE 2164 and CHE 3114 and CHE 3124 and CHE 3134 and (CHE 3184 or CHE 3185) and ENGL 3764
Instructional Contact Hours: (6 Lab, 2 Crd)

CHE 4016 - Chemical Engineering Unit Operations Laboratory (2 credits)
Practical experience in the planning of experimentation, gathering of experimental data, interpretation of data, and the preparation of written and oral reports. Use of small-scale processing equipment, automatic control, and data acquisition. Emphasis on teamwork, safety, engineering judgment, and professional behavior. 4015: Applications include fluid flow, mixing, filtration, distillation, and chemical reaction kinetics. Consideration of ethical choices in engineering practice. 4016: Applications in process control, heat transfer, mass transfer, and catalysis. Consideration of the societal impacts of engineering solutions. In-major GPA of 2.0 or better.
Prerequisite(s): CHE 3015 and (CHE 3044 or CHE 3154) and CHE 3124 and CHE 3134 and CHE 3144 and (CHE 3184 or CHE 3185) and ENGL 3764
Instructional Contact Hours: (6 Lab, 2 Crd)

CHE 4024 - Unit Operations and Scale-Up (1 credit)
Research of a chemical process unit, design of experiments, analysis and interpretation of experimental data, and scale-up of the unit to meet specific objectives. Teamwork, oral communication, and appropriate use of published information. Consideration of safety, and the societal and environmental impacts of an engineering design. Pre: In-major GPA of 2.0 or better is required.
Prerequisite(s): CHE 3015 and CHE 3044 and CHE 3124 and CHE 3134 and CHE 3144 and CHE 3184 and ENGL 3764
Instructional Contact Hours: (1 Lec, 1 Crd)

CHE 4104 - Process Materials (3 credits)
Basics of materials science as it relates to the interest of the chemical engineer. The course emphasizes the three fundamental areas of material science being polymer materials, metallics, and ceramic/inorganic glasses. The general molecular structure property - application behavior of each area will be presented but with a focus when possible on topics related to the field of chemical engineering.
Prerequisite(s): CHE 2164 and (CHEM 2535 or CHEM 2565)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 4114 - Energy and Climate Change Solutions (3 credits)
Fundamentals of energy production technologies, alternative and renewable energy sources, electrochemical energy storage, direct carbon capture technologies, negative emissions technologies, and chemical process that use CO2 as a feedstock. Fundamentals of water purification technologies, the water cycle, and the impact of climate change on water resources and demands. Discussion of carbon and water economics, and how geographical, societal, and environmental factors affect energy and water management policies. Techno-economic analysis of solutions based on chemical technologies, and the communication of those solutions in the context of policy development.
Prerequisite(s): CHE 3144 and CHE 3185
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 4144 - Business and Marketing Strategies for the Process Industries (3 credits)
Business strategies and industrial marketing concepts, and their application in the chemical, pharmaceutical and related process industries. The course is designed for engineers and other students planning a career in the process industries. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MKTG 4144

CHE 4185 - Process and Plant Design (4 credits)
Chemical process synthesis and plant design, economic analysis of alternative processes, process equipment design and specifications, computer-aided process design and simulation, design case studies, application of scientific and engineering knowledge to practical design problems. Grade of C- or better in all CHE prefix courses and in-major GPA of 2.0 or better is required.
Prerequisite(s): CHE 3015 and (CHE 3044 or CHE 3154) and CHE 3124 and CHE 3134 and CHE 3144 and (CHE 3184 or CHE 3185) and ENGL 3764
Instructional Contact Hours: (4 Lec, 4 Crd)

CHE 4186 - Process and Plant Design (4 credits)
Chemical process synthesis and plant design, economic analysis of alternative processes, process equipment design and specifications, computer-aided process design and simulation, design case studies, application of scientific and engineering knowledge to practical design problems. Grade of C- or better in all CHE prefix courses and in major GPA of 2.0 or better is required.
Prerequisite(s): CHE 4185
Instructional Contact Hours: (4 Lec, 4 Crd)

CHE 4214 - Introduction to Polymer Materials (3 credits)
Basics of polymeric materials including description and categorization of macromolecules; characterization; mechanical properties; rubbery, glassy, crystalline, and viscous flow behavior.
Prerequisite(s): CHEM 2536 and CHE 2164
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 4224 - Introduction to Polymer Processing (3 credits)
Basic principles of momentum and heat transfer applied to the analysis of polymer processing operations. Introduction to polymer rheology.
Prerequisite(s): CHE 3144 and (CHE 3044 or CHE 3154)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 4304 - Biological Transport Phenomena (3 credits)
Engineering analysis and predictive modeling of heat and mass transport in biological systems (e.g., tissues, organs, organisms, and biomedical devices). Examination of processes that involve conduction, convection, diffusion, generation/ consumption. Application of analytical and computational methods to solve differential equations that describe unsteady and/or multi-dimensional transport. Topics include oxygen transport, pharmacokinetic analysis, kidney function, blood perfusion, burns, and cryopreservation.
Prerequisite(s): (CHE 3114 and CHE 3044 and CHE 3144) or (ME 3304 and ME 3404)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ME 4344

CHE 4334 - Introduction to Colloidal and Interfacial Science (3 credits)
Properties and behavior of colloidal systems, primarily in liquid environments. Size characterization and description, Brownian motion, interparticle forces, dispersion stability, and experimental techniques for characterizing these systems.
Prerequisite(s): CHEM 3615 or CHE 2164
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 4404 - Machine Learning in Chemical Sciences and Engineering (3 credits)
Development and application of data-driven computational models. Focus on applications in chemical sciences and engineering (e.g., materials discovery, property prediction, anomaly detection, process optimization). Preprocessing, data management and visualization, clustering, classification, and regression algorithms, and common pitfalls and practices in training and evaluation of data-driven models. Pre: 3124
Prerequisite(s): CHE 3124
Instructional Contact Hours: (3 Lec, 3 Crd)

CHE 4544 - Protein Separation Engineering (3 credits)
Concepts, principles and applications of various unit operations used in protein separations. Properties of biological materials, such as cells and proteins, and their influences on process design. Design of processes for protein purification based on the impurities to be eliminated. Concepts and principles of scale-up of unit operations. Case studies in practical protein recovery and purification issues, with a focus on enhanced protein purification by genetic engineering. Protein purification process simulation and optimization using process simulation software.
Prerequisite(s): BSE 3504 or CHE 3144
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BSE 4544

CHE 4904 - Project and Report (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CHE 4994H - Undergraduate Research (1-19 credits)
Honors course
Instructional Contact Hours: Variable credit course

Chemistry (CHEM)

CHEM 1004 - First Year Experience in Chemistry (1 credit)
Orientation to the Chemistry Department and to the discipline of chemistry for chemistry majors and for individuals considering CHEM as a major, including transfer students. Resources for success, both generally as a college student and specifically as a chemistry major. Opportunities for mentoring, individual research and community involvement across the university and within the Chemistry Department. Exploration of career pathways for chemistry majors. Interconnections among professional practice, disciplinary progress, accepted standards for ethical use of information, principles of diversity and inclusion, and individual or personal value systems. Scientific communication, professional networking, and chemistry in the public eye.
Instructional Contact Hours: (1 Lec, 1 Crd)

CHEM 1014 - Calculations in Chemistry (3 credits)
Mathematical problem solving skills required for success in general chemistry. Manipulation of symbolic algebraic formulas. Dimensional analysis and narrative mathematical exercises. Application of problem solving techniques to chemical processes and reactions. Generation and interpretation of graphs using computer software. Elementary features of atoms, molecules, and the periodic table of the elements. Molar quantities, chemical nomenclature, reaction stoichiometry, and introductory solution chemistry.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 1015 - Chemistry in Context (3 credits)
Survey of chemistry across areas of specialization for students enrolled in curricula other than science and engineering. History and fundamental concepts and theories of chemistry, including the consequences of changes in parameters on chemical systems. Impact of chemistry in the context of areas of public concern and policy, including best practices for sustainability, rational decision-making, ethical use of scientific information, product and process stewardship. Chemistry as a basis for decision-making in the context of individual values and beliefs, and the roles of values and beliefs in the progress of chemistry as a human endeavor. The foregoing to be based on the concepts of chemistry as follows: 1015: Periodicity and atomic structure; nuclear chemistry; chemical bonding and reactivity; organic chemistry, polymer chemistry, and medicinal chemistry. 1016: Chemical stoichiometry including conservation of matter and energy; acid-base and oxidation-reduction chemistry of solutions; stoichiometry and thermodynamics, agricultural and environmental chemistry, chemistry of household and personal care products
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 1016 - Chemistry in Context (3 credits)
Survey of chemistry across areas of specialization for students enrolled in curricula other than science and engineering. History and fundamental concepts and theories of chemistry, including the consequences of changes in parameters on chemical systems. Impact of chemistry in the context of areas of public concern and policy, including best practices for sustainability, rational decision-making, ethical use of scientific information, product and process stewardship. Chemistry as a basis for decision-making in the context of individual values and beliefs, and the roles of values and beliefs in the progress of chemistry as a human endeavor. The foregoing to be based on the concepts of chemistry as follows: 1015: Periodicity and atomic structure; nuclear chemistry; chemical bonding and reactivity; organic chemistry, polymer chemistry, and medicinal chemistry. 1016: Chemical stoichiometry including conservation of matter and energy; acid-base and oxidation-reduction chemistry of solutions; stoichiometry and thermodynamics, agricultural and environmental chemistry, chemistry of household and personal care products
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 1025 - Introduction to Chemistry Laboratory (1 credit)
Virtual laboratory exercises and reading and writing assignments designed to accompany 1015 and 1016, as applicable. Illustrates and elaborates on principles addressed in lecture, including history and fundamental concepts, theories, contexts, with an emphasis on sustainability issues and ethical consequences of decision- making in chemistry. Students will identify foundational concepts in chemistry, enumerate parameters likely to influence the outcome of an experiment, analyze the ways that values and beliefs influence progress in the discipline and communicate chemical concepts to a lay audience.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 1026 - Introduction to Chemistry Laboratory (1 credit)
Virtual laboratory exercises and reading and writing assignments designed to accompany 1015 and 1016, as applicable. Illustrates and elaborates on principles addressed in lecture, including history and fundamental concepts, theories, contexts, with an emphasis on sustainability issues and ethical consequences of decision- making in chemistry. Students will identify foundational concepts in chemistry, enumerate parameters likely to influence the outcome of an experiment, analyze the ways that values and beliefs influence progress in the discipline and communicate chemical concepts to a lay audience.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 1034 - General Chemistry Recitation (1 credit)
A companion course for students needing supplemental help with mathematical and problem-solving skills required for CHEM 1035 General Chemistry. Manipulation of algebraic formulas. Application of problem-solving techniques to chemical processes and reactions. Quantitative methods applied to unit conversions, reaction yields, energy of reactions, and gas properties. Examination of atomic structure, periodicity, and molecular bonding. May not count towards degree requirements; consult advisor. Pass/Fail only.
Corequisite(s): CHEM 1035
Instructional Contact Hours: (1 Lec, 1 Crd)

CHEM 1035 - General Chemistry (3 credits)
First chemistry course for students in science curricula. Applications of reasoning in the natural sciences using chemical laws in an applied context and in the student's own discipline. Overview of the universal aspects of chemistry and of application of chemistry to address global challenges. 1035: Problem-solving, elements and periodic table, stoichiometry of chemical reactions, gas phase of matter, energy flow and chemical change, atomic structure, and theories of chemical bonding. 1036: Properties of the three states of matter alone and in mixtures, kinetics, aqueous equilibrium, thermodynamics, electrochemistry. (Duplicates 1015-1016.) Students may bypass prerequisites for 1035 through testing alternatives listed in the Registrar's Timetable.
Prerequisite(s): CHEM 1014 or MATH 1014 or MATH 1025 or MATH 1536 or MATH 1225 or MATH 1214 or MATH 1524
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 1036 - General Chemistry (3 credits)
First chemistry course for students in science curricula. Applications of reasoning in the natural sciences using chemical laws in an applied context and in the student's own discipline. Overview of the universal aspects of chemistry and of application of chemistry to address global challenges. 1035: Problem-solving, elements and periodic table, stoichiometry of chemical reactions, gas phase of matter, energy flow and chemical change, atomic structure, and theories of chemical bonding. 1036: Properties of the three states of matter alone and in mixtures, kinetics, aqueous equilibrium, thermodynamics, electrochemistry. (Duplicates 1015-1016.) Students may bypass prerequisites for 1035 through testing alternatives listed in the Registrar's Timetable.
Prerequisite(s): CHEM 1035 or CHEM 1055 or CHEM 1055H
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 1045 - General Chemistry Laboratory (1 credit)
Hands-on, real-world activities that illustrate and elaborate on concepts taught in general chemistry lecture (1035-1036), including acids and bases, heat capacity, ideal gases, states of matter, concentration, mixtures, energy flow and spontaneity in processes, equilibrium, kinetics, colligative properties, and electrochemistry. Use of instrumentation to analyze water and soil contaminants, biofuel mixtures, nanoparticles, and polymer properties. Laboratory safety, chemical hygiene, hazard mitigation, waste management, and the influence of procedure on experimental outcomes. Global challenges, including recycling and sustainable energy sources, water resource management, global warming, and environmentally friendly reagents in chemical contexts. Use of computers in data analysis, collaboration, and report-writing.
Prerequisite(s): CHEM 1014 or MATH 1014 or MATH 1025 or MATH 1536 or MATH 1225 or MATH 1214 or MATH 1524
Corequisite(s): CHEM 1035
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 1046 - General Chemistry Laboratory (1 credit)
Hands-on, real-world activities that illustrate and elaborate on concepts taught in general chemistry lecture (1035-1036), including acids and bases, heat capacity, ideal gases, states of matter, concentration, mixtures, energy flow and spontaneity in processes, equilibrium, kinetics, colligative properties, and electrochemistry. Use of instrumentation to analyze water and soil contaminants, biofuel mixtures, nanoparticles, and polymer properties. Laboratory safety, chemical hygiene, hazard mitigation, waste management, and the influence of procedure on experimental outcomes. Global challenges, including recycling and sustainable energy sources, water resource management, global warming, and environmentally friendly reagents in chemical contexts. Use of computers in data analysis, collaboration, and report-writing.
Prerequisite(s): CHEM 1045 or CHEM 1065
Corequisite(s): CHEM 1036
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 1055 - General Chemistry for Chemistry Majors (4 credits)
In depth treatment of chemical bonding, thermodynamics, chemical equilibrium, reaction kinetics, descriptive chemistry of the elements, acid-base chemistry, chemistry of gases, liquids and solids, and other topics. This class is restricted to chemistry and biochemistry majors. Other students may request consent of instructor.
Prerequisite(s): CHEM 1014 or MATH 1014 or MATH 1025 or MATH 1536 or MATH 1225 or MATH 1214
Instructional Contact Hours: (4 Lec, 4 Crd)

CHEM 1056 - General Chemistry for Chemistry Majors (4 credits)
In depth treatment of chemical bonding, thermodynamics, chemical equilibrium, reaction kinetics, descriptive chemistry of the elements, acid-base chemistry, chemistry of gases, liquids and solids, and other topics. This class is restricted to chemistry and biochemistry majors. Other students may request consent of instructor.
Prerequisite(s): CHEM 1055 or CHEM 1055H
Instructional Contact Hours: (4 Lec, 4 Crd)

CHEM 1065 - General Chemistry for Chemistry Majors Lab (1 credit)
Accompanies 1055-1056. Selected experiments illustrate principles taught in lecture. This class is restricted to chemistry and biochemistry majors. Other students may request consent of instructor.
Prerequisite(s): CHEM 1014 or MATH 1014 or MATH 1025 or MATH 1536 or MATH 1225 or MATH 1214
Corequisite(s): 1055 or 1055H.
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 1066 - General Chemistry for Chemistry Majors Lab (1 credit)
Accompanies 1055-1056. Selected experiments illustrate principles taught in lecture. This class is restricted to chemistry and biochemistry majors. Other students may request consent of instructor.
Prerequisite(s): CHEM 1065
Corequisite(s): 1056 or 1056H.
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 2114 - Analytical Chemistry (3 credits)
A first course in analytical chemistry. Topics covered include volumetric and gravimetric analysis, and elementary spectroscopy.
Prerequisite(s): CHEM 1036 or CHEM 1056 or CHEM 1056H
Corequisite(s): CHEM 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2124 - Analytical Chemistry Laboratory Techniques and Practice (1 credit)
Practical introduction to wet methods of quantitative chemical analysis based on fundamental chemical principles. Prior credit for OR concurrent registration of 2114 lecture is required for 2124 lab.
Prerequisite(s): CHEM 1046 or CHEM 1066
Corequisite(s): CHEM 2114
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 2154 - Analytical Chemistry for Chemistry Majors (4 credits)
A one-semester course in analytical chemistry emphasizing the principles of equilibrium with examples from acid-base, complexation, solubility, and redox chemistry. The course also introduces the principles of spectroscopic, electrochemical, and chromatographic instrumentation.
Prerequisite(s): CHEM 1036 or CHEM 1056 or CHEM 1056H or ISC 1106
Corequisite(s): CHEM 2164
Instructional Contact Hours: (4 Lec, 4 Crd)

CHEM 2164 - Analytical Chemistry for Chemistry Majors Lab (1 credit)
A one-semester laboratory course in analytical chemistry that provides practical training in wet chemical methods, atomic and molecular spectroscopy, electrochemistry, and separations.
Prerequisite(s): CHEM 1046 or CHEM 1066 or ISC 1116
Corequisite(s): CHEM 2154
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 2424 - Descriptive Inorganic Chemistry (3 credits)
Application of fundamental principles in a systematic study of bonding and reactivity of the elements and their compounds.
Prerequisite(s): CHEM 1036 or CHEM 1056 or CHEM 1056H
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2514 - Survey of Organic Chemistry (3 credits)
Short course in fundamentals of organic chemistry with emphasis on nomenclature, isomerism, and properties of organic compounds. Compounds of importance to biology and biochemistry stressed. (Prior credit for 2535 precludes credit for this course.) One year of Chemistry required.
Prerequisite(s): (CHEM 1035 or CHEM 1055 or CHEM 1055H) and (CHEM 1036 or CHEM 1056 or CHEM 1056H)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2535 - Organic Chemistry (3 credits)
Structure, stereochemistry, reactions, and synthesis of organic compounds.
Prerequisite(s): CHEM 1036 or CHEM 1056 or CHEM 1056H or ISC 1106 or ISC 1106H
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2536 - Organic Chemistry (3 credits)
Structure, stereochemistry, reactions, and synthesis of organic compounds. Pre: One year of chemistry, including lab.
Prerequisite(s): CHEM 2535 or (CHEM 2565 or CHEM 2565H)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2545 - Organic Chemistry Laboratory (1 credit)
The laboratory accompanies lectures in organic chemistry 2535 and 2536.
Prerequisite(s): CHEM 1046 or CHEM 1065 or ISC 1116
Corequisite(s): CHEM 2535, CHEM 2565
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 2546 - Organic Chemistry Laboratory (1 credit)
The laboratory accompanies lectures in organic chemistry 2535 and 2536.
Prerequisite(s): CHEM 2545
Corequisite(s): CHEM 2536
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 2555 - Organic Synthesis and Techniques Lab (2 credits)
Synthesis and characterization of organic compounds using modern laboratory techniques.
Prerequisite(s): CHEM 1045 or CHEM 1065
Corequisite(s): CHEM 2565
Instructional Contact Hours: (6 Lab, 2 Crd)

CHEM 2556 - Organic Synthesis and Techniques Lab (2 credits)
Synthesis and characterization of organic compounds using modern laboratory techniques.
Prerequisite(s): CHEM 2555
Corequisite(s): CHEM 2566
Instructional Contact Hours: (6 Lab, 2 Crd)

CHEM 2564 - Problem-Solving in Organic Chemistry (1 credit)
Writing organic reaction mechanisms; rationalizing and predicting organic reaction outcomes; selecting reagents for organic reactions; designing syntheses of several elementary steps; visualizing molecular stereochemistry.
Corequisite(s): CHEM 2565
Instructional Contact Hours: (1 Lec, 1 Crd)

CHEM 2565 - Principles of Organic Chemistry (3 credits)
Organic chemistry for chemistry majors. Structure and reactions of organic compounds, with emphasis on fundamental principles, theories, synthesis, and reaction mechanisms. The subject matter partially duplicates that of 2535-2536; no credit will be given for the duplicated courses.
Prerequisite(s): CHEM 1035 or CHEM 1055 or CHEM 1035H or CHEM 1055H
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2566 - Principles of Organic Chemistry (3 credits)
Organic chemistry for chemistry majors. Structure and reactions of organic compounds, with emphasis on fundamental principles, theories, synthesis, and reaction mechanisms. The subject matter partially duplicates that of 2535-2536; no credit will be given for the duplicated courses.
Prerequisite(s): CHEM 2565
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

CHEM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 3004 - Bridge to the Future (1 credit)
Exploration and development of post-baccalaureate career options, including non-traditional options, for chemistry students. Opportunities in the government, private and academic sectors. Career planning. Managing application processes for graduate school, professional school, and employment. Development of materials (resumes, cover letters, portfolios, and personal statements) needed for applications. Fellowships and scholarships for graduate study. Opportunities for career-relevant experience before graduation. Integrity in career development. Open to majors in Chemistry, Medicinal Chemistry, and Polymer Chemistry.
Instructional Contact Hours: (1 Lec, 1 Crd)

CHEM 3054 - Postconsumer Materials (3 credits)
Chemistry and global impacts of postconsumer materials including trash, biodegradable, recyclable, and reusable materials. Waste management of metals, ceramics, and polymers in the context of their chemical properties. Reliability and accuracy of information sources on postconsumer materials. Complex contemporary issues involving disposal and repurposing of postconsumer materials including health impacts, energy, cost, water quality, return value, and environmental and cultural considerations.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 3615 - Physical Chemistry (3 credits)
Principles of thermodynamics, kinetics, and quantum mechanics applied to chemical equilibria, reactivity, and structure. Partly duplicates 4615, cannot receive credit for both 3615 and 4615.
Prerequisite(s): (CHEM 1035 or CHEM 1055 or CHEM 1055H) and (CHEM 1036 or CHEM 1056 or CHEM 1056H) and (MATH 2204 or MATH 2204H or MATH 2224)
Corequisite(s): PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 3616 - Physical Chemistry (3 credits)
Principles of thermodynamics, kinetics, and quantum mechanics applied to chemical equilibria, reactivity, and structure. Partly duplicates 4616, cannot receive credit for both 3616 and 4616.
Prerequisite(s): MATH 2214 and (CHEM 3615 or CHEM 3615H)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 3625 - Physical Chemistry Laboratory (1 credit)
Laboratory study of selected physico-chemical principles and methods. Data acquisition, data analysis, and report writing are stressed.
Prerequisite(s): CHEM 3615 or CHEM 3615H or CHEM 4615 or CHE 2164
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 3626 - Physical Chemistry Laboratory (1 credit)
Laboratory study of selected physico-chemical principles and methods. Data acquisition, data analysis, and report writing are stressed. I
Prerequisite(s): (CHEM 3616 or CHEM 3616H or CHEM 4616) and CHEM 3625 and CHEM 4014
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 3684 - Quantum Software I (2 credits)
Organization of quantum information (assemblies of bits) for quantum-computing applications in chemistry, physics, biology, and computer science. Numerical methods for quantum software, emphasizing spin lattices and simulations such as quantum games. Best practices for programming, including techniques for quantum-coding (in Python or Julia), structuring a software product for quantum-computational science use, version control, and cloud-based documentation and code-sharing (via Github). Classical/quantum translation.
Prerequisite(s): MATH 2114 or MATH 2114H or MATH 3144
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: PHYS 3684

CHEM 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

CHEM 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 4014 - Survey of Chemical Literature (1 credit)
Use of the chemical literature as an aid to professional activities. Pre: Junior Major Standing.
Instructional Contact Hours: (1 Lec, 1 Crd)

CHEM 4034 - Capstone Laboratory for BA Chemistry Majors (2 credits)
A senior-level laboratory course that integrates previous laboratory and lecture experiences to illustrate the interconnectedness of the curriculum leading to the BA in Chemistry. Modern experimental methods and instrumentation, including chromatographic separations, nuclear magnetic resonance, infrared spectrometry, and mass spectrometry. Independent experimental design and execution of an experimental synthetic reaction in chemistry, including scaling, selection of reagents and solvents, and development of a procedure for completing the reaction, isolating the product, and characterizing it for structure and bulk purity. Best practices in lab safety, chemical hygiene, note-keeping, and professional report-writing. Principles of green chemistry. Pre: Senior standing.
Prerequisite(s): CHEM 2164 and (CHEM 2546 or CHEM 2566)
Instructional Contact Hours: (6 Lab, 2 Crd)

CHEM 4074 - Laboratory in Polymer Science (2 credits)
Experimental techniques used in the synthesis of various linear polymers, copolymers, and crosslinked networks. Determination of polymer molecular weights and molecular weight distribution. Methods used in the thermal, mechanical, and morphological characterization of polymeric systems.
Prerequisite(s): CHEM 4534 and CHEM 3625 and (CHEM 3615 or CHE 2164)
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)
Course Crosslist: MSE 4544

CHEM 4114 - Instrumental Analysis (3 credits)
Principles of instrumental methods including data analysis, phase equilibrium, spectroscopy, and electrochemistry. Applications of modern instrumentation to chemical analyses using chromatography, electrophoresis, atomic and molecular spectroscopy, potentiometry, and voltammetry. Note: Graduate students will not be expected to take the corequisite lab 4124.
Prerequisite(s): CHEM 2154
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4124 - Instrumental Analysis Laboratory (1 credit)
Hands-on experience with modern instrumental methods of analysis. Experiments use spectroscopy, electrochemistry, and separations.
Prerequisite(s): CHEM 4114
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 4404 - Physical Inorganic Chemistry (3 credits)
A study of spectroscopic, bonding, and structural properties of inorganic compounds.
Prerequisite(s): (CHEM 3616 or CHEM 3616H) and CHEM 2424
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4414 - Inorganic Chemistry Lab (2 credits)
Synthesis and characterization of inorganic compounds using modern laboratory techniques.
Prerequisite(s): CHEM 2424 and (CHEM 3616 or CHEM 3616H) and CHEM 4404
Corequisite(s): CHEM 3616, CHEM 4424
Instructional Contact Hours: (6 Lab, 2 Crd)

CHEM 4424 - Polysaccharide Chemistry (3 credits)
Structure, properties, and applications of natural polysaccharides. Natural sources and methods of isolation. Synthetic chemistry and important polysaccharide derivatives. Relation of structure and properties to performance in critical applications including pharmaceuticals, coatings, plastics, rheology control, and films. Conversion by chemical and biochemical methods of polysaccharide biomass to fuels and materials.
Prerequisite(s): CHEM 2536 or CHEM 2566
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SBIO 4424

CHEM 4434 - Organometallic Chemistry (3 credits)
Synthesis, structure, properties, and reactivity patterns of main-group and transitionmetal organometallic compounds. Applications of organometallic compounds in chemical synthesis and catalysis.
Prerequisite(s): CHEM 2424 and CHEM 2565 and CHEM 2566 and CHEM 4404
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4444 - Bioinorganic Chemistry (3 credits)
Principles underpinning the study of metal ions in biological systems. Review of basic coordination chemistry. Evolution of the distribution of metal ions in biology. Uptake of metal ions from the environment into living organisms. Regulation of metal ion concentrations in cells. Central functions of metal ions in biological systems including modulation of structure, electron transfer reactions, substrate binding and activation, and selective transfer of atoms and groups. Roles of biopolymers in the binding, regulation, and function of metal ions. Physical methods of analysis relevant to bioinorganic chemical research questions. Senior standing.
Prerequisite(s): (CHEM 2566 or BCHM 4115) and BIOL 1105 and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4514 - Green Chemistry (3 credits)
Sustainability, waste prevention, conservation of energy resources, avoidance of toxins, pollutants, and hazards in chemical processes and products. Life-cycle analysis applied to case studies involving process development and product stewardship. Applications in chemical industry, process and product design, and public policy.
Prerequisite(s): CHEM 2536 or CHEM 2566
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4524 - Identification of Organic Compounds (3 credits)
Structure determination of organic compounds by spectroscopic methods. Interpretation of 1H and 13C nuclear magnetic resonance (NMR) spectra including two-dimensional (2D) spectra. Mass spectrometric (MS) techniques including tandem MS. Selection and application of minor organic-analytical techniques for structure elucidation. Formatting of spectroscopic data for publication. Course credit will not be awarded for both CHEM 4524 and CHEM 5524G.
Prerequisite(s): (CHEM 2536 or CHEM 2566) and (CHEM 3616 or CHEM 4616)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4534 - Organic Chemistry of Polymers (3 credits)
Structure, synthesis, and basic characteristics of the major classes of polymerization reactions including step-growth (condensation) and chain growth (addition), free radical, and ionic mechanisms.
Prerequisite(s): CHEM 2536 or CHEM 2566
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4544 - Medicinal Chemistry Capstone Laboratory (2 credits)
Laboratory experience tracing a standard pathway that potential drug targets follow in many medicinal chemistry laboratories. Synthesis of potential drug compounds and verification of their purity and structural identity primarily using mass spectrometry and nuclear magnetic resonance (NMR) spectroscopy. Optimization of conditions for a biochemical assay and verification of its reproducibility. Use of an optimized assay to measure the potency of potential drug compounds to achieve a desired biochemical effect. Application of structure-activity relationships to propose new chemical structures that might show further improvements in potency. Best practices in laboratory safety, chemical hygiene, note-keeping, and professional report-writing. Senior standing.
Prerequisite(s): CHEM 4584 and BIOL 1105 and BIOL 1106
Instructional Contact Hours: (6 Lab, 2 Crd)

CHEM 4554 - Drug Chemistry (3 credits)
Structure, synthesis, and physiological effects of major classes of pharmaceutical agents including CNS depressants and stimulants, analgesics, anesthetics, cardiovascular agents, chemotherapeutic drugs, and oral contraceptives.
Prerequisite(s): CHEM 2536 or CHEM 2566
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4584 - Bioorganic Chemistry (3 credits)
The organic chemistry underlying the structure and properties of amino acids, peptides, and nucleic acids. Mechanisms of enzyme catalysis and coenzyme-mediated reactions. Mechanisms and thermodynamics of catabolism and anabolism of fats, carbohydrates, and proteins, and of other key biological reactions. Principles of solid-phase synthesis applied to peptides and nucleic acids. Biosynthesis of lipids, sugars, and terpenoids.
Prerequisite(s): CHEM 2536 or CHEM 2566
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4615 - Physical Chemistry for the Life Sciences (3 credits)
Principles of thermodynamics, chemical kinetics, and chemical bonding for students in the life sciences. 4615: Laws and applications of thermodynamics. 4616: Chemical kinetics and chemical bonding including spectroscopy. Partly duplicates 3615, cannot receive credit for 3615 and 4615.
Prerequisite(s): ISC 2106H or (CHEM 1036 or CHEM 1056 or CHEM 1056H) and (MATH 1026 or MATH 1226)
Corequisite(s): PHYS 2206 or PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4616 - Physical Chemistry for the Life Sciences (3 credits)
Principles of thermodynamics, chemical kinetics, and chemical bonding for students in the life sciences. 4615: Laws and applications of thermodynamics. 4616: Chemical kinetics and chemical bonding including spectroscopy. Partly duplicates 3616, cannot receive credit for both 3616 and 4616.
Prerequisite(s): ISC 2106H or (CHEM 1036 or CHEM 1056 or CHEM 1056H) and (MATH 1026 or MATH 1226) and (PHYS 2206 or PHYS 2306)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4624 - Materials Chemistry in Energy Sciences (3 credits)
Fundamental principles of solid-state materials chemistry in energy sciences. Thermodynamics and kinetics of electron and ion transport in solid materials. Application of electrochemical and photochemical principles to batteries, fuel cells, solar cells, and other energy devices. Analytical tools and characterization methods for elucidating mechanisms within electrochemical and photoelectrochemical cells, with an emphasis on using electrochemical principles to evaluate battery chemistry. Solid-liquid interfacial mechanisms in energy devices. Critical analysis of relevant primary literature. Formulation of hypotheses and experimental design for improving device performance. Pre: Senior standing.
Prerequisite(s): CHEM 3615 or CHEM 4615
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4634 - Polymer and Surface Chemistry (3 credits)
Physical chemical fundamentals of polymers and surfaces including adhesives and sealants.
Prerequisite(s): CHEM 3615 or CHEM 4615
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4684 - Quantum Software II (1 credit)
Modern software collaboration techniques and tools including collaborative code repositories and cloud-based documentation. Application of structure and version control to software and documentation. Developing code with industry-standard quantum-software modules. Hands-on scientific coding for quantum problems. Project management skills including proposal development and technical presentation delivery.
Prerequisite(s): CHEM 3684 or PHYS 3684
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: PHYS 4684

CHEM 4734 - Environmental Soil Chemistry (3 credits)
Chemistry of inorganic and organic soil components with emphasis on environmental significance of soil solution-solid phase equilibria, sorption phenomena, ion exchange processes, reaction kinetics, redox reactions, and acidity and salinity processes.
Prerequisite(s): CSES 3114 or ENSC 3114 or GEOS 3614 and CSES 3124 or ENSC 3124 or GEOS 3624 and CHEM 2514 or CHEM 2535 and CHEM 2114 and (MATH 1026 or MATH 1226)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENSC 4734

CHEM 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

CHEM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Chinese (CHN)

CHN 1105 - Elementary Chinese (3 credits)
Fundamentals of the Chinese language with emphasis on developing proficiency in practical language use and cultural competency. 1105 is for students with no prior knowledge of the language; 1106 is for students who have completed 1105, or more than one year, but less than three years of high school Chinese.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 1106 - Elementary Chinese (3 credits)
Fundamentals of the Chinese language with emphasis on developing proficiency in practical language use and cultural competency. 1105 is for students with no prior knowledge of the language; 1106 is for students who have completed 1105, or more than one year, but less than three years of high school Chinese.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 1114 - Accelerated Elementary Chinese (6 credits)
Proficiency-oriented approach to Elementary Chinese, designed for learners who wish to progress rapidly through the beginning stages of language learning. Speaking, listening comprehension, reading comprehension, writing, and cultural competency at the novice-high level. Duplicates 1105 and 1106. For students with no prior knowledge of the language.
Instructional Contact Hours: (6 Lec, 6 Crd)

CHN 2105 - Intermediate Chinese (3 credits)
Emphasizes comprehension of written and spoken Mandarin Chinese, communication in Chinese; study of some literature and culture of the Chinese people. 2105 is for students who have completed 1105 and 1106 or equivalent. 2106 is for students who have completed 2105 or equivalent.
Prerequisite(s): CHN 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 2106 - Intermediate Chinese (3 credits)
Emphasizes comprehension of written and spoken Mandarin Chinese, communication in Chinese; study of some literature and culture of the Chinese people. 2105 is for students who have completed 1105 and 1106 or equivalent. 2106 is for students who have completed 2105 or equivalent.
Prerequisite(s): CHN 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 2734 - Chinese Culture and Civilization (3 credits)
Survey of Chinese culture and civilization through interactions between major political and historical events, social and artistic movements in China. Chinese literature, art, architecture, film, and theater in the context of Chinese cultural history. Aesthetic and rhetorical strategies. Interpretation of intercultural experiences from different vantage points. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 3105 - Advanced Chinese (3 credits)
3105: Practice in communication skills in Chinese both orally and in writing, including review of grammar, directed composition, and conversation, with an emphasis on pronunciation, cultural competency, and oral expressions. Not recommended for native speakers. 3106: Reinforcement of oral proficiency, reading, grammar, and writing skills, allowing students to explore a broad range of texts of general and professional interest. Not recommended for native speakers.
Prerequisite(s): CHN 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3106 - Advanced Chinese (3 credits)
3106: Reinforcement of oral proficiency, reading, grammar, and writing skills, allowing students to explore a broad range of texts of general and professional interest. Not recommended for native speakers.
Prerequisite(s): CHN 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3124 - Chinese for Oral Proficiency (3 credits)
Formal conversation, business Chinese, and enhanced cultural competency. Discuss current topics and perform daily transactions. Not recommended for native speakers.
Prerequisite(s): CHN 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3304 - Chinese Literature in Translation (3 credits)
Familiarization with the historical, intellectual, and cultural contexts of major Chinese literary genres. Identification of major cultural movements and concepts in Chinese literature and analysis of literary texts. Examination of aesthetic and rhetorical strategies employed in literary works. Intercultural experiences from different vantage points. The impact of globalization on Chinese literature. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3474 - Topics in Chinese Cinema (3 credits)
Critical issues in the history of modern and contemporary China through cinema. Interactions between major political and historical events and social and cultural movements in China. Chinese cinema in the broader contexts of Chinese cultural history and Chinese society. Interpretation of intercultural experiences from different vantage points. Variable topics such as national identity, social realities during the Republican era, the modernization of China, economic conditions and political responses, gender politics, the reform and opening-up of China, and the impact of globalization on Chinese cinema. Instruction in English. May be repeated once with different content for a maximum of 6 credit hours.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

CHN 3514 - Modern China through the Media (3 credits)
Acquisition of media Chinese through comprehending and analyzing various forms of mass media. Topics of community, national, or international interest. Language used in both formal and informal settings. Enhancement of societal and cultural knowledge through the mass media. Not recommended for native speakers.
Prerequisite(s): CHN 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3524 - Introduction to Chinese Translation (3 credits)
Introduction to the translation of a variety of real-world materials from Chinese into English with the aid of online translation tools. Acquisition of relevant skills to analyze Chinese sentences into phrasal constituents, critique the quality of existing translated works, and create a portfolio of translation work.
Prerequisite(s): CHN 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3534 - Business Chinese (3 credits)
Preparation for the business world in contemporary Modern Standard Chinese-speaking communities. Contextualized usage of specific vocabulary, idiomatic expressions, grammar structures, and cultural practices in spoken and written formats such as business correspondence, formal and informal reports, business documents, and business proposals. Taught in Chinese. Not recommended for native speakers.
Prerequisite(s): CHN 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3544 - Introduction to Classical Chinese (3 credits)
Essentials of classical Chinese vocabulary and grammar. Simple texts in classical Chinese, translation of classical Chinese texts into idiomatic English, and recitations of selected short passages in the language. Not recommended for native speakers. Taught in Chinese.
Prerequisite(s): CHN 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3604 - Chinese Language and Society (3 credits)
Examination of the complex interaction between linguistic practices and social and cultural stratifications in Chinese speaking communities (e.g., Mandarin speakers). Identification of fundamental concepts in the field of sociolinguistics, explanation of the ways in which language expresses different social meanings, analysis of how identity is constructed through language and how belief systems about different identities influence human behavior and social relationships, identification of issues of diversity and inclusion, and interpretation of language behavior from different sociocultural contexts. Taught in English.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 4614 - Teaching Chinese (3 credits)
Focus on practical activities of language learning, from a variety of learners' perspectives. Development of the ability to explain and apply activities for learning Chinese characters, sounds, vocabulary, and sentence patterns; ability to design conversation-based practice tasks.
Prerequisite(s): CHN 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

CHN 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CHN 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Cinema (CINE)

CINE 2054 - Introduction to Cinema (3 credits)
Introduction to cinema as a medium for artistic communication. Interpretation and analysis of films to understand designs, ideas and values in artistic and cultural contexts. Basic elements of cinema structure and cinema terminology, phases of cinema production, cinema style of individual directors, creative work of cinematography, production design, and editing, ideological and social meaning in cinema, demographics of visual representation, cinemas economic marketplace. Ethical values and conflicts as found in given films, and ethical reasoning as part of the analysis of cinema.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

CINE 2064 - Introduction to Cinema Production (3 credits)
Introductory filmmaking course. Thematic conception and story construction, writing, producing, directing, cinematography, sound recording, and editing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CINE 3184 - Cinema Production Topics (1-9 credits)
Rotating topics in cinema production. Designed for majors in the Department of Theatre and Cinema who have foundational training in areas of cinema production. May be repeated for credit with different course content up to a maximum of nine credit hours.
Prerequisite(s): CINE 3214 or CINE 3224
Instructional Contact Hours: (1-9 Lec, 1-9 Crd)
Repeatability: up to 9 credit hours

CINE 3214 - Fiction Cinema Production (3 credits)
Intermediate-level fiction film production course. Foundational cinema production skills, dramatic storytelling techniques, intermediate directing, team- based ownership and responsibility, and project management.
Prerequisite(s): CINE 2054 and CINE 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

CINE 3224 - Documentary Cinema Production (3 credits)
Intermediate-level, non-fiction, film production course for students seeking non-fiction documentary film production skills and experience. Emphasizes the application and advancement of foundational skills, the ethics of documentary filmmaking, story development and project management.
Prerequisite(s): CINE 2054 and CINE 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

CINE 3444 - African American Images in Film (3 credits)
Explores race and representations of African American images in film, from multiple disciplinary perspectives. Focuses on the social, political, economic, and historical milieu in which black film emerged and evolved. Examines gender issues in filmmaking. Reviews different genres, including race films, colorblind representations, and black exploitation films, and the appropriation of black representation and black images in film in the United States and elsewhere. Includes methods of film analysis, such as historical, master narrative structure, and archival research.
Prerequisite(s): AFST 1714
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 3444

CINE 3514 - American Cinema Genres (3 credits)
Close visual and cultural study of classic film genres with emphasis on cinematic styles and narrative conventions which unify the genre and which are found in representative films; exploration of genre films as symbols of American culture and society. Specific thematic content is variable. Course may be repeated with different course content for up to 9 credits.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

CINE 3524 - The Cinema Director (3 credits)
Close thematic and visual analysis of the films of prominent cinema directors; emphasis on cinematic structure and development and evolution of their work. Specific thematic content is variable. Course may be repeated with different course content for up to 9 credits.
Prerequisite(s): TA 2054 or CINE 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

CINE 3534 - Avant-Garde Cinema (3 credits)
Close visual and cultural study of the avant-garde and experimental tradition in the first half-century of American and European cinemas; emphasis on interrelations of cinema with avant-garde movements in other arts, including literature, music, dance, theatre, painting, and photography
Prerequisite(s): CINE 2054
Instructional Contact Hours: (3 Lec, 3 Crd)

CINE 3544 - Literature and Cinema (3 credits)
Works of literature and the films into which they have been transformed; emphasis on differences between media.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 3544

CINE 4084 - Cinema History (3 credits)
Aesthetic, economic, social and technological history of world cinema; film theory as it relates to the history of cinema. Junior standing required.
Prerequisite(s): CINE 2054
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

CINE 4144 - Topics in Cinema Studies (3 credits)
Critical issues in cinema. Aesthetic, social, political, and economic contexts for films that embody or critique assumptions of historical periods. Analysis of ethnocentric and cultural biases in cinema. Identifying issues of identity and equity in films. Theories and ethics of representation. May be repeated 2 times with different content for a maximum of 9 credits.
Prerequisite(s): CINE 2054
Pathway Concept Area(s): 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

CINE 4534 - Underground Cinema and Culture (3 credits)
Close visual and cultural study of underground cinema and culture from the 1940s through the 1970s; emphasizes the interrelations of cinema with countercultural movements in other arts, including literature, music, dance, theatre, painting, and photography; focuses on the post-war avant-garde, the emergence of film societies, the neorealist and new wave cinemas, challenges to censorship laws, and the emergence of cult and midnight movies.
Prerequisite(s): CINE 2054
Instructional Contact Hours: (3 Lec, 3 Crd)

Civil and Environmental Engineering (CEE)

CEE 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 2804 - Introduction to Civil and Environmental Engineering (3 credits)
Overview of the specialty areas within the civil engineering profession, professional engineer licensing, and engineering ethics. Includes recognizing contemporary issues in civil engineering, civil engineering work in the surrounding community, and the impact of civil engineering solutions on society. Emphasizes successful personal business practices for civil engineering professionals, to include the fundamentals of effective oral, written, and visual communication skills for the Civil Engineer. Introduction to engineering library resources. For Pathways Advanced Discourse credit, must complete combination of CEE 2804, CEE 3304, CEE 4804
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 2814 - Geomatics (4 credits)
Introduction to data measurement issues in the civil and environmental engineering sub disciplines. Collection techniques, analysis, errors, statistical description and visualization. Spatial measurements such as leveling, distance and angles, mapping and topographic surveys, the Global Positioning System, LiDAR, terrain models, earthwork methods, construction surveying, coordinate systems, and Geographic Information Systems. Non-CEE students are exempt from the CEE 2834 corerequisite.
Prerequisite(s): ENGE 1216 or ENGE 1414
Corequisite(s): CEE 2834
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

CEE 2834 - Civil Engineering Drawings and Virtual Modeling (3 credits)
Introduction to the use of Computer-Aided Drafting, Building Information Modeling and Geographic Information Systems software. Interpretation of civil engineering drawings. Creation of civil engineering plans and two- and three- dimensional visualizations. Professional collaboration tools. Basemap creation. Basic analysis tools utilizing Geographic Information Systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 3014 - Construction Management (3 credits)
Introduction to the fundamental elements involved in managing construction projects. Project lifecycle, delivery methods and contracts, equipment and labor productivity, scheduling, and cost estimating and control. Pre: Junior standing
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3104 - Introduction to Environmental Engineering (3 credits)
Overall view of environmental engineering with emphasis on hazardous waste management, water treatment, wastewater treatment, air pollution and its control, solid waste management, groundwater pollution and environmental regulations.
Prerequisite(s): CHEM 1035 and CHEM 1045 and (MATH 1026 or MATH 1206 or MATH 1206H or MATH 1226 or MATH 2016 or MATH 2024) and (PHYS 2305 or PHYS 2205)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3274 - Introduction to Land Development Design (3 credits)
An introduction to the land development design process including site selection and feasibility, environmental considerations, utility layout, grading, stormwater management and integrating planning with the design of infrastructure to support residential and commercial development.
Prerequisite(s): CEE 2814 and (CEE 2824 or CEE 2834)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3304 - Fluid Mechanics for Civil and Environmental Engineering (4 credits)
Introductory course in fluid mechanics. Includes concepts and measurements of fluid properties; computing hydrostatic and hydrodynamic forces on hydraulic structures; computing fluid pressures, discharges, and velocities; and determining energy losses in pipe flows. Course includes conducting hydraulic laboratory experiments and demonstrations, analyzing and interpreting collected data, and preparing technical laboratory reports. Emphasizes the fundamentals of effective interpersonal, written, and visual communication skills for technical civil engineering reports. Design Lab/Studio. For Pathways Advanced Discourse credit, must complete combination of CEE 2804, CEE 3304, CEE 4804
Prerequisite(s): ESM 2104 and CEE 2804
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3314 - Water Resources Engineering (4 credits)
Open channel flow; hydrology; hydraulic modeling; hydraulic machinery and structures; laboratory experiments and demonstrations. Design Lab/Studio.
Prerequisite(s): CEE 3304
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3404 - Introduction to Structural Engineering (3 credits)
Introduction to structural engineering as an art and science and its fundamental tenets; description of structural systems, structural loads, and load paths; structural models, case studies of successful and unsuccessful structural designs; calculations of forces and deformation for simple determinate structures (trusses, beams and simple frames) and indeterminate structures using virtual work, use of stiffness methods in computer programs.
Prerequisite(s): ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3424 - Reinforced Concrete Structures I (3 credits)
Behavior and design of reinforced concrete members based on ultimate strength. Uncertainty, load and resistance factors. Load paths in framing systems. Beams, columns and slabs in flexure and shear. Deflections and crack control. Design of reinforced concrete members. Columns under axial forces, shear and flexure.
Prerequisite(s): (CEE 3404 or BC 2214) and (CEE 3684 or BC 2044)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3434 - Design of Steel Structures I (4 credits)
Properties and behavior of structural steel. Design of steel members and connections using American Institute of Steel Construction specifications. Consideration of loads, structural safety, and serviceability. Design of members to resist tension, compression, and bending. Design of basic steel connections including tension connections, bearing plates, and base plates. Team-based design project to design a simple steel framed building. Design Lab/Studio.
Prerequisite(s): (CEE 3404 or BC 2214) and (CEE 3684 or ESM 3054 or BC 2044)
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3514 - Introduction to Geotechnical Engineering (4 credits)
Introduction to soil as an engineering material for construction and infrastructure support. Geological processes, soil classification, phase relations, geostatic and applied stresses, permeability, seepage effects, settlement, and strength. Laboratory testing, interpretation, and presentation of results. Application of geotechnical principles to civil and environmental engineering problems. Design Lab/Studio.
Prerequisite(s): ESM 2204 and GEOS 2104
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3604 - Introduction to Transportation Engineering (3 credits)
Planning, design and operation of transportation systems with emphasis in multimodal transportation techniques and unified system engineering theories to analyze large scale transportation problems. Discussion of Intelligent Vehicle Highway Systems (IVHS) and hands on experience in computer models in transportation operations and planning. Interactions between transportation infrastructure and environmental engineering planning. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3684 - Civil Engineering Materials (4 credits)
Fundamental nature and performance of civil infrastructure materials, including metals, portland cement concrete, asphalt concrete, polymers, and wood. Material properties, microstructure, and mechanical behavior. Laboratory experimental procedures and standardized testing, property variability, durability, sustainability and resilience. Design of cementitious and asphalt mixtures, experimental design, non-destructive testing. Design lab/studio.
Prerequisite(s): CHEM 1045 and CHEM 1035 and ESM 2204 and GEOS 2104 and (CEE 2814 or CEM 2824)
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

CEE 3804 - Computer Applications for Civil and Environmental Engineers (3 credits)
Introduction to computer applications in civil and environmental engineering. Integration of quantitative analysis for design, data management, computer programming and problem solving skills with computer tools and techniques. Topics include systems analysis, numerical methods, optimization, data mining, computer programming and data queries. Analysis and interpretation of a global data set. Pre: Junior Standing.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3814 - Analytical Tools in Civil and Environmental Engineering (3 credits)
Computer programming and data analysis for civil and environmental engineering projects. Acquiring, cleaning and pre-processing data sets. Probability distributions, hypothesis testing, and regression modeling. Time series and frequency analysis. Data visualization.
Prerequisite(s): CEE 3804
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

CEE 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 4014 - Estimating, Production, and Cost Engineering (3 credits)
Interpretation of plans and specifications, preparation of construction estimates, and cost control. Methods analysis, resource requirements, and resource costs in building systems, including system components, and in large-scale civil engineering works such as highways, bridges, and hydraulic structures.
Prerequisite(s): CEE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BC 4024

CEE 4024 - Construction Control Techniques (3 credits)
Techniques used to plan, schedule, and control the Construction Process. Emphasizes manual and computer-based approaches. Focuses on an analytical approach towards the construction process whereby good technical methodologies and solutions are converted to reality through construction practices. A grade of C- or better required in prerequisite.
Prerequisite(s): CEE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4034 - Smart Sustainable Infrastructure (3 credits)
Challenges and barriers to sustainable infrastructure. Effects of a changing planet and society on current infrastructure systems. Technology and data use for engineering. Infrastructure data interpretation. Data-driven engineering solutions.
Prerequisite(s): CEE 3804
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4074 - Construction Engineering: Means and Methods (3 credits)
Construction means, methods, and equipment used to transform a particular design concept into a completed usable structure or facility. Selection and optimization of individual units as well as the systems needed to produce the required work to the required quality on time and on budget.
Prerequisite(s): CEE 3014 or CEM 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4104 - Water and Wastewater Treatment Design (3 credits)
Design of municipal water and wastewater treatment plants. Emphasis on characterization of water and wastewater and physical, chemical, and biological treatment methods. Sludge processing advanced treatment methods and treatment plant hydraulics are considered. A grade of C- or better required in prerequisites.
Prerequisite(s): CEE 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4114 - Fundamentals of Public Health Engineering (3 credits)
Public health engineering principles for protection against biological and chemical health hazards. Emphasis on major communicable diseases that plague mankind, organisms that cause them, routes of transmission, and engineering methods of control. Appropriate control methods for rural areas and developing countries.
Prerequisite(s): CEE 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4134 - Environmental Sustainability - A Systems Approach (3 credits)
Quantitative methods to evaluate environmental sustainability using a sytems approach. Sustainability assessment frameworks, oreintors and indicators, indicators of sustainable development, green-house gas emissions, renewable energy systems, whole-system design, economic systems and input-outpur techniques, system dynamics models, emergence and agent-based models. Class project requiring integration of environmental, economic and social systems using system dynamics and agent-based models. Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4144 - Air Resources Engineering (3 credits)
Effects, regulation, sources, and control of air pollution. Application of engineering calculations and models to estimate emissions, predict pollutant concentrations, and design pollution control equipment. Senior standing required. A grade of C- or better required in prerequisites.
Prerequisite(s): CEE 3104 or ENGR 3124 or GEOS 3114 or ENSC 3634
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4174 - Solid and Hazardous Waste Management (3 credits)
Introduction to the problems, regulations and techniques associated with the management of solid and hazardous waste. Composition, volume and characterization of the wastes. Design of collection and disposal systems, including landfills, solidification/stabilization and incineration. A grade of C- or better required in pre-requisite 3104.
Prerequisite(s): CEE 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4254 - Municipal Engineering (3 credits)
An introduction to the field of municipal engineering. Infrastructure, capital projects, financing, sustainability, disaster planning and response, and plan review for development projects. Senior standing required.
Prerequisite(s): CEE 3274
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4264 - Sustainable Land Development (3 credits)
An introduction to the modern techniques for developing land while maintaining a focus on long-term sustainability. Topics include site layout, stormwater impact, air quality and microclimate, living resources, LEED and EarthCraft development standards. Pre-requisite: Senior Standing required
Prerequisite(s): CEE 3274
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4274 - Land Development Design (3 credits)
Overview of land development projects including construction practices, legal issues, and government policies. Feasibility study, engineering evaluation. Grading and roadway design, layout design of lots, buildings, streets, sewers, and stormwater control. Interactive graphics and automated drafting.
Prerequisite(s): CEE 3274
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4284 - Advanced Land Development Design (3 credits)
Advanced course in land development design focusing on site grading and parking, stormwater management, and erosion control. Reviews project design criteria and applicable municipal and state guidelines. Uses CAD software for design and deliverables. Senior/Graduate standing required.
Prerequisite(s): CEE 3274
Corequisite(s): CEE 4274
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4304 - Hydrology (3 credits)
Precipitation, evaporation, consumptive use, infiltration; stream flow, flood routing; statistical analysis of hydrologic data, flood and drought forecasting, risk analysis, subsurface flow, well hydraulics, introduction to urban drainage design. A grade of C- or better required in pre-requisite.
Prerequisite(s): CEE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4314 - Groundwater Resources (3 credits)
Fundamentals of groundwater hydrology; flow through porous media, both saturated and unsaturated; flow to wells in both confined and unconfined aquifers; seepage of groundwater to canals and field drains; analysis of aquifer test data to quantify flow and storage parameters; contaminants in groundwater, basic introduction to groundwater modeling. A grade of C- or better required in pre-requisite 3304.
Prerequisite(s): CEE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4324 - Open Channel Flow (3 credits)
Mechanics of open channel flow, including uniform flow, gradually varied flow, channel transitions, and unsteady flow.
Prerequisite(s): CEE 3314
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4334 - Hydraulic Structures (3 credits)
Hydraulic analysis and design of engineering structures for water control, including reservoirs, dams, spillways, spilling basins, drainage structures, and hydraulic models.
Prerequisite(s): CEE 3314
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4344 - Water Resources Planning (3 credits)
Analysis of the water resources planning process and the institutional framework for water resources management. Criteria and procedures for evaluating management alternatives are examined, with emphasis on assessment of economic and environmental impacts. Senior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4384 - Coastal Engineering (3 credits)
Basic wave mechanics principles, surf-zone processes, littoral and sediment processes, shoreline features, astronomical tides, coastal hazards, and functional design of coastal structures. Field trips.
Prerequisite(s): CEE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4394 - Urban Water Sustainability (3 credits)
Coupled socio-hydrologic feedback loops and implications for water systems resilience. Urban water transitions theory and the evolution of water systems through time. Water productivity and the soft path for water. Ecosystem services. Urban water system challenges, including climate change, urbanization, equity and environmental justice, and water security. Centralized and distributed drinking water, stormwater, and wastewater treatment systems. Statistical analysis of urban water systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4404 - Intermediate Structural Analysis (3 credits)
Analysis of statically indeterminate 2D and 3D beam, truss and frame structures by the force and displacement methods. Computer implementation of force method. Influence lines and approximate methods of analysis.
Prerequisite(s): CEE 3404
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4454 - Masonry Structural Design (3 credits)
Masonry materials, material testing, material specifications. Structural behavior and design of masonry elements (walls, beams, and columns) and systems used in structures. Construction techniques and the details of masonry construction. Building codes relating to analysis and design of masonry structures.
Prerequisite(s): CEE 3684 and CEE 3424
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4514 - Methods in Geotechnical Engineering (3 credits)
Principles and techniques for characterizing earth materials (soil and rock) for civil engineering projects in various regional environments; with emphasis on the interdisciplinary approach to field exploration and site description through soil mechanics theory, geologic correlations, geophysical methods, in site testing and sampling. A grade of C- or better required in pre-requisite 3514.
Prerequisite(s): CEE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4534 - Earth Pressures and Foundation Structures (3 credits)
Earth pressure theories and their applications to the design of retaining structures, anchors, and excavation bracing. Bearing capacity and settlement of shallow foundations. Types and capacity of deep foundations.
Prerequisite(s): CEE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4544 - Design of Earth Structures (3 credits)
Application of geotechnical engineering principles in the design and construction of earth structures. Subsurface models, shear strength of soil, slope stability, earth fills, earth retention, ground improvement, sustainability considerations, geotechnical reporting. Team-based design project.
Prerequisite(s): CEE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4554 - Natural Disaster Mitigation and Recovery (3 credits)
Causes, mechanics, classifications, and forces associated with tornadoes, hurricanes, floods, earthquakes, and landslides. Resistance evaluation for existing ground, facilities and structures. Hazard-resistant design of new facilities. Risk and reliability assessment and decision analysis. Strategies and designs for natural disaster risk mitigation. Emergency response for protection of life and property and restoration of lifelines. Includes an interdisciplinary team project. Prerequisite: Senior Standing Required
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4564 - Introduction to Coastal and Marine Geotechnics (3 credits)
Geotechnical aspects of coastal and marine engineering. Introduction to the coastal zone as a working environment. In-situ geotechnical methods and complementary techniques for investigation. Survey strategies. Local field trips for demonstrating methods, practice and design. A grade of C- or better is required in prerequisite 3514.
Prerequisite(s): CEE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4604 - Traffic Engineering (3 credits)
Study of traffic and parking characteristics; application of traffic control devices; principles and techniques used to improve the efficiency and safety of traffic flow systems. A grade of C- or better required in pre-requisite 3604.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4610 - Mechanics of Composite Materials (3 credits)
Introduction to the deformation, stress, and strength analysis of continuous-fiber-polymer-matrix laminated composites. Fabrication, micromechanics of stiffness and expansional coefficients, classical lamination theory (CLT). Environmentally induced stresses. Computerized implementation and design
Prerequisite(s): ESM 2204 or AOE 2024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4044

CEE 4614 - Concrete Materials (3 credits)
Fundamental properties of portland cement concretes. Concrete mixture design procedures. Testing of fresh and hardened properties of concrete. Durability and degradation mechanisms. Condition assessments, forensic materials engineering, and repair strategies.
Prerequisite(s): CEE 3684 or BC 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4624 - Planning Transportation Facilities (3 credits)
Transportation planning process; urban and regional studies, surveys, data analysis, model development and testing; transportation management, administration, finance, system evaluation, implementation, and integration.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4634 - Infrastructure Condition Assessment (3 credits)
Infrastructure components and assessment needs; physical and chemical properties of construction materials; deterioration causes, assessment methods, nondestructive evaluation techniques, infrastructure management systems, performance models, service-life-cycle estimates.
Prerequisite(s): CEE 3684
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4654 - Geometric Design of Highways (3 credits)
Functional design of highways; curves, intersections, interchanges, drainage, and other features involved in highway safety and traffic efficiency.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4664 - Pavement Design (3 credits)
Principles underlying methods for the design of various elements of flexible and rigid pavements for highways and airports; climate and traffic effects; pavement management systems. A grade of C- or better required in pre-requisite 3684.
Prerequisite(s): CEE 3684
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4674 - Airport Planning and Design (3 credits)
Airport planning and economic justification, site selection, configuration, development and design of terminal areas, demand forecasting, access, traffic control. A grade of C- or better required in pre-requisite 3604.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4684 - Transportation Safety (3 credits)
Basic principles associated with transportation safety related to humans, vehicles and infrastructure as well as principles of design for safety and practices of empirical evaluation of safety. Principles and practices of accident investigation and injury epidemiology as well as safeguards and control practices. A grade of C- or better required in prerequisite.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4694 - Freight Operations (3 credits)
Introduction to the operation of modal and intermodal freight facilities. Impact of goods movement on the multi-modal transportation system. Role of privately owned and operated goods movement on public sector transportation operations, management, and decision making. Communication of impacts.
Prerequisite(s): CEE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4804 - Professional and Legal Issues in Civil Engineering (3 credits)
An overview of civil engineering professional practice, including business etiquette, professional development, leadership, and lifelong learning. Emphasizes the importance of registration for civil engineers. Compares and contrasts common project delivery methods, processes, key players, and management topics for the design and construction industry. Incorporates analyses of legal and ethical aspects of civil engineering practice. Analyzes contemporary issues and public policies that impact the civil engineering profession, and the impacts of civil engineering solutions on society. Emphasizes effective written, oral, and visual professional communication for the civil engineering professional. For Pathways Advanced Discourse credit, must complete combination of CEE 2804, CEE 3304, CEE 4804
Prerequisite(s): CEE 2804
Corequisite(s): CEE 3304
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4814 - Risk and Reliability Analysis in Civil and Environmental Engineering (3 credits)
Risk assessment and reliability analysis as applied to civil engineering applications. Identification and modeling of non-deterministic problems in civil engineering design and decision making. Application of probability and statistics to performance analysis. Development of probabilistic engineering safety assessments.
Prerequisite(s): CEE 3804
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4824 - Introduction to Forensic Engineering (3 credits)
Basic processes in engineering failure investigations: response, data gathering, testing, modeling, and reporting. Origins of natural and man-made disasters, role of building codes and material specifications, standard of care, ethical standards and legal issues as related to forensic engineering.
Prerequisite(s): CEE 3684 and ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4834 - Cyber-Physical and Remote Sensing Methods in Civil Engineering (3 credits)
Cyber-physical systems and remote sensing methods in civil engineering. Electrodynamics and fundamental physical operating principles. Sensing and sensor deployment strategies. Data acquisition and reduction. Signal and image processing techniques. Data interpretation, management, and curation.
Prerequisite(s): CEE 3814 or BSE 3144
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4844 - Building Information Modeling and Integrated Practices (3 credits)
Introduction to Building Information Modeling (BIM). Architectural modeling, custom parametric object creation, virtual structural modeling. Constructability and construction management analysis. Reality capturing technologies. Virtual reality and immersive virtual environments. Contemporary topics and new directions for BIM technologies. Pre: Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CEE 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Classics (CLA)

CLA 1134 - The Ancient Mediterranean World (3 credits)
Ancient cultures of the Mediterranean world with a focus on their embodiments in the arts, literature, history, philosophy, and religion. Emphasis on Greek, Hellenistic and Roman cultures, their interrelationships with each other and their historical, cultural, material and intellectual encounters with contemporary Mediterranean cultures as their influence on later and modern cultures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 1134

CLA 2224 - Ancient Greek and Roman Women (3 credits)
Examines the history of ancient Greek and Roman women from ninth century BCE to the fall of the Roman Empire. Analyzes contributions of women to each civilization. Studies construction of and contemporary debates about women's ascribed social, political, and cultural roles.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2224

CLA 2234 - Classics in the Modern World (3 credits)
Examines the influences, traditions, and receptions of the ancient Greeks and Romans in the modern world, especially in the United States. Explores the re-interpretation of the ancient Greek and Roman world across mediums, and by leaders and governments in diverse societies. Discusses contexts and ideologies of re-makings of the ancient Greek and Roman world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2234

CLA 2244 - Cities of Rome (3 credits)
Examines the building development of the ancient city of Rome and selected Roman cities; investigates how social, political, and cultural aspects of private and public architecture in these physical cities both create meaning and preserve memory. Explores the ways in which later cultures, especially through literature, have engaged with the pervasive and persistent influence of ancient Rome, not just as a physical place, but also as a cultural construct.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2244

CLA 2434 - Fairytale, Folklore, and Magic: Popular Literature in Ancient Greece and Rome (3 credits)
Survey of ancient Greek and Roman popular literature. Introduces students to a wide array of texts, ranging from the ancient novel, popular compilations (e.g. books of marvels, fables, and jokes), ritual texts, funerary inscriptions, and folklore/fairytales. Examination of how scholars define popular literature as a category and introduction of contemporary approaches to it. Exploration of the connection of ancient Greek and Roman tales to international ones from different cultures and perspectives. Special attention to the depiction of private rituals in Greek and Latin literature. In English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CLA 2444 - Ancient Greek and Roman Mythology (3 credits)
Surveys ancient Greek and Roman mythology. Provides students with an introduction to selected myths from ancient Greek and Roman literature, including appropriate historical background information. Familiarizes students with how theories of myth have been applied to individual stories and how such mythological tales have been received by authors and artists in subsequent cultures. Explores the interaction and interdependence of mythological tales from different cultures and perspectives. In English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 2444, RLCL 2444

CLA 2454 - Topics in Ancient Greek and Latin Literature (3 credits)
Examines canonical and non-canonical ancient Greek and Latin literary texts in translation and subsequent uses, adaptations and interpretations of these texts in various cultures. Examines concepts common to the humanities. Investigates the interaction and interdependence of literary texts with philosophy, art, music, history, and society. Identifies the uses, influences, and interpretation of these literatures. Examines significance of ancient Greek and Latin literature even though distant from our own space, time and experience. Identifies instances of cultural diversity and inclusion in these works. Taught in English. May be repeated 2 times with different content for a maximum of 9 credit hours.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

CLA 2464 - Mythology, Philosophy and Video Games (3 credits)
Examines how both ancient texts and modern games convey fundamental concepts of the humanities such as community, communication, agency, archetypes, the monomyth, morality, ethics, gender issues, environmental issues, aesthetic experience, xenophobia, and xenophilia. Evaluates the interaction of philosophy, art, technology, mythology, society and entertainment, and combines uses of modern technology and functions of ancient mythology across cultures and communities. Demonstrates the integration of concepts of the humanities as presented in video games.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CLA 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CLA 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

College of Science (COS)

COS 1004 - Explore Science Seminar (2 credits)
Overview of the college and its degrees as well as the various career opportunities available to College of Science graduates. Introduction to University resources that aid in strategic academic and career planning. Intended for first-year Explore Science majors in the College of Science.
Instructional Contact Hours: (2 Lec, 2 Crd)

COS 1015 - Successful Starts in Science: Curie and Da Vinci Living Learning Communities (1 credit)
First year experience course for students living in the Curie or Da Vinci Living Learning Communities at Virginia Tech. Provides resources and fundamental skills to enhance learning experiences and support academic success in the sciences. Engages students with professional and academic development activities both in the classroom and within a science-themed residence hall. Uses a learn by doing approach to blending technical know-how with leadership, ethical, interpersonal and professional skills fundamental to the practice of science. Requires teamwork to envision, design, and implement research projects while using innovative discipline-specific technology. Provides first-year students with support through a weekly peer mentoring program. 1015: Emphasis on scientific inquiry, curriculum planning, career planning in the sciences, skills to promote academic success, awareness of academic and career resources and opportunities. 1016: Emphasis on collaborative problem-solving skills using innovative discipline-specific technology, critical thinking; Integration of ideas and experiences to encourage life-long learning through service work related to their academic/ career interests.
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 1016 - Successful Starts in Science: Curie and Da Vinci Living Learning Communities (1 credit)
First year experience course for students living in the Curie or Da Vinci Living Learning Communities at Virginia Tech. Provides resources and fundamental skills to enhance learning experiences adn support academic success in the sciences. Engages students with professional and academic development activities both in the classroom and within a science-themed residence hall. Uses a learn by doing approach to blending technical know-how with leadership, ethical, interpersonal and professional skills fundamental to the practice of science. Requires teamwork to envision, design, and implement research projects while using innovative discipline-specific technology. Provides first-year students with support through a weekly peer mentoring program. 1015: Emphasis on scientific inquiry, curriculum planning, career planning in the sciences, skills to promote academic success, awarenenss of academic and career resources and opportunities. 1016: Emphasis on collaborative problem- solving skills using innovative discipline-specific technology, critical thinking; Integration of ideas and experiences to encourage life-long learning through service work related to their academic/career interests.
Prerequisite(s): COS 1015
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 2015 - Professional Leadership in Science: Curie and Da Vinci LLC Leadership Course (1 credit)
Leadership and professional development course for sophomore science majors in the Curie and Da Vinci Living Learning Communities (LLCs). Applied experience in fundamental leadership and project management skills associated with practice of science, gained through service learning within the LLC. 2015: Academic peer mentoring, application and development of leadership and communication skills; application and development of project planning, organizational and collaboration skills; emphasis on written communication skills. 2016: Application of team mentoring and project management skills, including project planning and coordination, leadership strategies, collaboration, communication, conflict resolution, understanding group dynamics and the importance of diversity, and facilitating group discussion on scientific problem solving; emphasis on verbal communication skills.
Prerequisite(s): COS 1016
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 2016 - Professional Leadership in Science: Curie and Da Vinci LLC Leadership Course (1 credit)
Prerequisite(s): COS 2015
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 2164 - Introduction to Scieneering (1 credit)
Seminar-based course providing a survey of current interdisciplinary science and engineering research problems; introduction to interdisciplinary thinking and communication; issues related to interdisciplinary research teams.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: ENGR 2164

COS 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 3015 - Applications of Leadership in the Orion Science Living Learning Community (1 credit)
Applications of science leadership for sophomore through senior students in the Orion Science Living Learning Community (LLC). Students learn leadership skills while mentoring and designing activities to help younger students develop skills needed to succeed in college and future science careers. 3015: Recognize the needs of first- and second-year college students: help students find their own solutions; cooperatively plan and run activities that help first- and second-year college students develop professional skills and meet learning objectives; practice communication and motivation skills; model professional and ethical conduct; assess self as a learner and a leader. 3016: Coach teams and manage projects: help first- and second-year college students to apply their existing knowledge to a new project; identify problem-solving strategies and propose solutions; facilitate teamwork; communicate scientific information to the public in writing and orally; articulate the relationship between service to others and effective leadership.
Prerequisite(s): COS 1016 or COS 2016
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 3016 - Applications of Leadership in the Orion Science Living Learning Community (1 credit)
Applications of science leadership for sophomore through senior students in the Orion Science Living Learning Community (LLC). Students learn leadership skills while mentoring and designing activities to help younger students develop skills needed to succeed in college and future science careers. 3015: Recognize the needs of first- and second-year college students: help students find their own solutions; cooperatively plan and run activities that help first- and second-year college students develop professional skills and meet learning objectives; practice communication and motivation skills; model professional and ethical conduct; assess self as a learner and a leader. 3016: Coach teams and manage projects: help first- and second-year college students to apply their existing knowledge to a new project; identify problem-solving strategies and propose solutions; facilitate teamwork; communicate scientific information to the public in writing and orally; articulate the relationship between service to others and effective leadership.
Prerequisite(s): COS 3015
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 4015 - Supervision in Science: Orion Living Learning Community (1 credit)
Supervision in Science is a course for junior through senior students in the Orion Living Learning Community (LLC). Students learn more advanced management and supervisory skills while working closely with Orion LLC faculty and staff to build on previously learned mentorship, leadership, and lesson/event planning skills to help younger students develop skills needed for success in college and future science careers. 4015: Recognize the needs and manage activities of first, second, and third year college students: assess self as a peer supervisor; develop an individual development plan (IDP) for peer supervisors with Orion LLC Directors; model professional and ethical conduct; effectively and positively motivate teams of first, second, and third year students to meet learning objectives and develop professional skills; help first, second, and third year college students effectively and professionally communicate needs. 4016: Apply supervisory skills to managing and coaching student teams toward completion of program activities and projects: reassess and revise individual development plan (IDP) for peer supervisory role with Orion LLC Directors; help second and third year college students effectively motivate and guide first year students toward the completion of a group research project; help younger students communicate scientific information to the public orally and in writing; facilitate conflict resolution; promote professional and timely communication for second and third year college students; articulate the role of supervision as an aspiring science professional.
Prerequisite(s): COS 3016
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 4016 - Supervision in Science: Orion Living Learning Community (1 credit)
Supervision in Science is a course for junior through senior students in the Orion Living Learning Community (LLC). Students learn more advanced management and supervisory skills while working closely with Orion LLC faculty and staff to build on previously learned mentorship, leadership, and lesson/event planning skills to help younger students develop skills needed for success in college and future science careers. 4015: Recognize the needs and manage activities of first, second, and third year college students: assess self as a peer supervisor; develop an individual development plan (IDP) for peer supervisors with Orion LLC Directors; model professional and ethical conduct; effectively and positively motivate teams of first, second, and third year students to meet learning objectives and develop professional skills; help first, second, and third year college students effectively and professionally communicate needs. 4016: Apply supervisory skills to managing and coaching student teams toward completion of program activities and projects: reassess and revise individual development plan (IDP) for peer supervisory role with Orion LLC Directors; help second and third year college students effectively motivate and guide first year students toward the completion of a group research project; help younger students communicate scientific information to the public orally and in writing; facilitate conflict resolution; promote professional and timely communication for second and third year college students; articulate the role of supervision as an aspiring science professional.
Prerequisite(s): COS 4015
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 4064 - Scieneering Capstone (3 credits)
A capstone experience centered around an open-ended, faculty-advised senior project involving the design of a process, material, or technique for solving an interdisciplinary problem. Pre: Enrollment in Interdisciplinary Engineering and Science Minor.
Prerequisite(s): ENGR 2464 or BIOL 2124
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGR 4064

COS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Communication (COMM)

COMM 1004 - First-Semester Experience in Communication (1 credit)
Introduction to areas of research, ethical behaviors, and career paths in the discipline. Consideration of strategies for learning, accessing advising, and locating resources.
Instructional Contact Hours: (1 Lec, 1 Crd)

COMM 1014 - Introduction to Communication (3 credits)
Survey of the communication discipline across areas of specialization from interpersonal to mediated and mass communication, including history and fundamental concepts, theories, contexts. Emphasis on ethical human behavior and message analysis.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 1015 - Communication Skills (3 credits)
Introduction to oral and written communication. 1015: Focus on oral and written communication in interpersonal, small group, and public contexts. Special emphasis on the writing process, listening, interviewing, conflict resolution, critical analysis, and communication in digital and visual media. 1016: Continued Study in oral and written communication skills for small group and public contexts. Focus on practical applications in ethical research and information gathering, audience analysis and adaptation, message development, and oral, written, and visual presentations by individuals and groups.
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 1016 - Communication Skills (3 credits)
Introduction to oral and written communication. 1015: Focus on oral and written communication in interpersonal, small group, and public contexts. Special emphasis on the writing process, listening, interviewing, conflict resolution, critical analysis, and communication in digital and visual media. 1016: Continued Study in oral and written communication skills for small group and public contexts. Focus on practical applications in ethical research and information gathering, audience analysis and adaptation, message development, and oral, written, and visual presentations by individuals and groups.
Prerequisite(s): COMM 1015
Pathway Concept Area(s): 1F Discourse Foundational, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2004 - Public Speaking (3 credits)
Strategies and practice for speaking to specific audiences. Ethical considerations for message preparation, development, presentation, and evaluation. Pre: Sophomore standing.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2014 - Communication Principles of Teamwork (3 credits)
Behavior of people working in groups. Theories and models of communication, types of groups, principles of effective teamwork. Intrapersonal and interpersonal communication and values related to group behavior, relationships, and problem solving. Ethical issues associated with group work. Pre: Sophomore standing required.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2024 - Media Writing (3 credits)
Writing and information gathering skills including news, features, press releases, and advertising copy for broadcast, print and public relations media. Sophomore Standing Required.
Prerequisite(s): COMM 1016 or ENGL 1106 or ENGL 1204H
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2084 - Media and Society (3 credits)
An examination of media influence on society. Emphasis on impact of media (such as newspapers, film, social networks, and video games) on diverse audiences and cultures. Considerations of the evolution of media; social institutions and trends related to the media; domestic, global, ethical, and legal questions posed by the media; intercultural communication; and new technologys influence on society.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2094 - Communication and Issues of Diversity (3 credits)
Study of communication theory and practice related to diversity and the media. Analysis of ethical implications of media influences on workplace communication across disciplines. Development of a personal understanding of diversity and identity by examining media producers, audiences, workforces, outlets, and content.
Prerequisite(s): COMM 1016 or ENGL 1106
Pathway Concept Area(s): 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2124 - Introduction to Communication Research (3 credits)
Study of approaches to research in the discipline, including identification and analysis of existing research; procedures for conducting and reporting basic research in communication. Sophomore Standing required.
Prerequisite(s): COMM 1016 or ENGL 1106 or ENGL 1204H
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2754H - Topics in Single Medium Communication About Technology Innovation (1 credit)
Study of discovery, analysis, creation, and evaluation of single medium - written or spoken or visual - presentations of ideas related to collaborative technology innovation for societal impact. Analysis of how race, class, gender, and age shape written, oral, or visual expression in the United States and vice versa. Special attention to single medium communications with stakeholders in business, government agencies, nonprofit organizations, and universities. Ethical dimensions of written, spoken, or visual communication about collaborative technology innovation for societal impact. May be repeated 2 times with different content for a maximum of 3 credits.
Prerequisite(s): COMM 1016 or ENGL 1105
Pathway Concept Area(s): 1F Discourse Foundational, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

COMM 2764H - Topics in Multimedia Communication About Technology Innovation (1 credit)
Study of the discovery, analysis, creation, and evaluation of multimedia presentation of ideas related to collaborative technology innovation for societal impact. Analysis of how race, class, gender, and age shape multimedia expression and vice versa. Special attention to communicating across disciplinary, organizational, and cultural differences in the workplace. Ethical dimensions of multimedia communication about collaborative technology innovation for societal impact. May be repeated 2 times with different content for a maximum of 3 credits.
Prerequisite(s): COMM 2754H
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

COMM 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

COMM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 4024 - Communication Law (3 credits)
Study freedom of speech and the press and how these freedoms apply to the press, public relations, advertising and personal speech. Consideration of First Amendment theories and jurisprudence; related ethical issues. Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 4204 - Communication Internship (1-6 credits)
Placement in a communication industry for practical internship under supervision by a departmental advisor and a professional in the field. May be repeated for credit up to a maximum of 6 hours credit. Pre: Junior standing and consent required.
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)
Repeatability: up to 6 credit hours

COMM 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Communication Studies (CMST)

CMST 2034 - Visual Media (3 credits)
Planning and production of visual messages for delivery through print, photography, videography, websites, social media, and mobile applications. Theories and principles of visual communication important to individuals working in communication jobs. COURSE FEE $59. Pre: Sophomore standing
Prerequisite(s): COMM 1016 or ENGL 1106 or ENGL 1204H
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 2064 - The Tradition of Rhetoric and Societal Change (3 credits)
Key theories and figures in rhetoric over the past 2,500 years. Evolution of rhetorical and critical perspectives in communication. Dynamic, critical nature of persuasive communication. Methodological approaches to rhetorical criticism, ethics of message creation, communication contexts, emerging perspectives, and impact of changing culture/society on rhetorical theory.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3024 - Digital Publishing (3 credits)
Study and contemporary practices in digital publishing aimed at multichannel distribution for diverse audiences. Principles, standards, workflows, technologies, and strategies for ethical and accessible design and automation of content for Web, mobile, print, multimedia, and voice environments.
Prerequisite(s): COMM 2034
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3044 - Oral Communication Center Practicum (1 credit)
Focus on peer pedagogy in a communication center to support development of oral communication competence among students across disciplines. Emphasis on oral communication theory applied to one-on-one support for students oral presentations. May repeat 1 time.
Prerequisite(s): COMM 1016 or COMM 2004
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 2 credit hours

CMST 3064 - Persuasion (3 credits)
Theoretical foundations of persuasion; techniques of persuasion; contemporary persuasive practice and campaigns; persuasive media strategies. Junior standing required.
Prerequisite(s): COMM 1014
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3074 - Persuasive Public Speaking (3 credits)
Advanced critical analysis, preparation and presentation of persuasive speeches. Study of advanced rhetorical principles with emphasis on policy speeches and the use of proofs to convince, strengthen beliefs, and motivate listeners to overt action. Advanced focus on approaches to research, audience analysis, effective organization and extemporaneous delivery.
Prerequisite(s): COMM 1016 or COMM 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3124 - Interpersonal Communication (3 credits)
Basic theories and processes of person-to-person communication; interpersonal perception; verbal and nonverbal communication; establishment of relationships in the family and work situation. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3134 - Public Advocacy (3 credits)
Practical reasoning and argumentation about questions of community significance, emphasizing critical thought, rhetorical strategies, and advocacy. Junior standing required.
Prerequisite(s): COMM 2004 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3164 - Group Processes and Presentations (1 credit)
Study of group theory and its application to a group project, including team dynamics and leadership, conflict resolution, project management, and team presentation strategies.
Instructional Contact Hours: (1 Lec, 1 Crd)

CMST 3214 - Professional Communication (3 credits)
Theory and contemporary practice of professional oral communication, including interpersonal interaction, small group problem-solving, and public presentations. Emphasis on ethical exchanges in traditional or virtual workshops settings.
Prerequisite(s): COMM 1016 or COMM 2004
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3264 - Communication and Gender (3 credits)
Examines how verbal, nonverbal, and visual communication create, sustain, and challenge the meaning of gender and cultural structures and practices. Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3274 - Social Dimensions of Games, Simulations, and Virtual Environments (3 credits)
Social impacts, key issues, and research findings related to video games, simulations, and virtual environments. Ethical, policy, and social dimensions in society; industry data and research. Prerequisite: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 4174 - Digital Advocacy Campaigns (3 credits)
Study of advocacy campaigns with digital components. Rhetorical considerations in message construction, analysis of persuasive techniques, ethical standards, and strategies for campaign development. Senior standing required.
Prerequisite(s): (COMM 1016 or COMM 2004) and COMM 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 4214 - Web Content Management Strategies (3 credits)
Methodologies, tools, and strategies for managing workflow of communication projects for Web distribution. Software tools for Web-based communication. Quantitative and qualitative methods for usability and readability of Web content. Web analytics and content metrics to support decision making.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 4224 - Topics in Media Criticism (3 credits)
Selected topics in media criticism. Offered on demand. Senior standing and consent required.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 4244 - Topics in Communication (3 credits)
Selected topics in communication. Application of theory and research in selected context. Ethical and social dimensions of communication issues, policies, and effects. May be repeated with different content for a maximum of 6 credit hours. Pre: Junior standing.
Prerequisite(s): COMM 1014
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

CMST 4284 - Communication for Training and Development (3 credits)
Communication principles and practices for training and development. Communication roles, strategies, and products for learning in workplace environments.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 4714 - Senior Seminar in Communication (3 credits)
In-depth study of an issue or theme in communication. Communication theories, issues, policies, effects, and contexts. Research and presentation of research. Pre: Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

Comp Modeling & Data Analytics (CMDA)

CMDA 1634 - Discovering Computational Modeling and Data Analytics (3 credits)
An introduction to the practice and profession of Computational Modeling and Data Analytics. Acquaints students with foundational computational tools, solving problems with modeling and data, visualization, ethical considerations in data science, professional opportunities in the field, and advising resources at Virginia Tech.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 2005 - Integrated Quantitative Sciences (6 credits)
2005: Integrated topics from quantitative sciences that prepare students for advanced computational modeling and data analytics courses. Topics include: probability and statistics, infinite series, multivariate calculus, linear algebra. 2006: Intermediate linear algebra, regression, differential equations, and model validation.
Prerequisite(s): MATH 1226
Corequisite(s): MATH 2114 or MATH 2114H or MATH 2405H
Instructional Contact Hours: (6 Lec, 6 Crd)

CMDA 2006 - Integrated Quantitative Sciences (6 credits)
2005: Integrated topics from quantitative sciences that prepare students for advanced computational modeling and data analytics courses. Topics include: probability and statistics, infinite series, multivariate calculus, linear algebra. 2006: Intermediate linear algebra, regression, differential equations, and model validation.
Prerequisite(s): CMDA 2005 and (MATH 2114 or MATH 2114H or MATH 2405H)
Instructional Contact Hours: (6 Lec, 6 Crd)

CMDA 2014 - Data Matter (3 credits)
This course develops fundamental analytical and programming skills to complete the "analytic pipeline", including specifying research questions, selecting/collecting data ethically and responsibly, processing and summarizing datasets, and stating findings, while considering all assumptions made. Students will identify vulnerabilities in analyses, including sources of bias and ethical implications. Some programming skills recommended, but not required. Some prior use of data recommended, but not required.
Prerequisite(s): MATH 1014
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 2984E - Special Study (1-19 credits)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv.
Instructional Contact Hours: Variable credit course

CMDA 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 3274 - Introduction Sports Analytics (3 credits)
Introduction to sports analytics, sources of sports analytics data and data collection methods, visualization techniques, game performance statistics, inferential statistics and predictive modeling techniques for sports data. Role and applications of data analytics in the sports industry.
Prerequisite(s): CMDA 2006 or STAT 3006
Corequisite(s): CMDA 3654 or CS 3654 or STAT 3654.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STAT 3274

CMDA 3605 - Mathematical Modeling: Methods and Tools (3 credits)
3605: Mathematical modeling with ordinary differential equations and difference equations. Numerical solution and analysis of ordinary differential equations and difference equations. Stochastic modeling, and numerical solution of stochastic differential equations. 3606: Concepts and techniques from numerical linear algebra, including iterative methods for solving linear systems and least squares problems, and numerical approaches for solving eigenvalue problems. Ill-posed inverse problems such as parameter estimation, and numerical methods for computing solutions to inverse problems. Numerical optimization. Emphasis on large-scale problems.
Prerequisite(s): (CS 1114 or CS 1064 or MATH 1454) and (MATH 2114 or MATH 2114H or MATH 2405H) and (MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005) and (MATH 2214 or MATH 2214H or MATH 2406H or CMDA 2006)
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 3606 - Mathematical Modeling: Methods and Tools (3 credits)
3605: Mathematical modeling with ordinary differential equations and difference equations. Numerical solution and analysis of ordinary differential equations and differencee equations. Stochastic modeling and numerical solution of stochastic differential equations. 3606: Concepts and techniques from numerical linear algebra, including iterative methods for solving linear systems and least squares problems, and numerical approaches for solving eigenvalue problems. III-posed inverse problems such as parameter estimation, and numerical methods for computing solutions to inverse problems. Numerical optimization. Emphasis on large-scale problems.
Prerequisite(s): CMDA 3605
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 3634 - Computer Science Foundations for Computational Modeling & Data Analytics (3 credits)
Survey of computer science concepts and tools that enable computational science and data analytics. Data structure design and implementation. Analysis of data structure and algorithm performance. Introduction to high-performance computer architectures and parallel computation. Basic operating systems concepts that influence the performance of large-scale computational modeling and data analytics. Software development and software tools for computational modeling. Not for CS major credit.
Prerequisite(s): CS 2114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 3634

CMDA 3654 - Introductory Data Analytics and Visualization (3 credits)
Basic principles and techniques in data analytics; methods for the collection of, storing, accessing, and manipulating standard-size and large datasets; data visualization; and identifying sources of bias.
Prerequisite(s): (CS 1114 or CS 1044 or CS 1054 or CS 1064) and (MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005) and (STAT 3006 or STAT 4105 or STAT 4705 or STAT 4714 or CMDA 2006)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 3654, STAT 3654

CMDA 4274 - Sports Analytics Statistical Research (3 credits)
Statistical analysis of sports data. Game performance statistics and expected scores. Analysis of player performance, player tracking, team performance, and sports betting. Bayesian methods and prediction models applied to sports data. Decision-making. Assessing sports analytics research and literature.
Prerequisite(s): (STAT 4214 and STAT 4444) or (CMDA 4654 or CS 4654 or STAT 4654) or (STAT 3274 or CMDA 3274)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STAT 4274

CMDA 4314 - Big Data Economics (3 credits)
Applied econometrics dealing with big data. Theoretical, computational, and statistical underpinnings of big data analysis. The use of econometric models and deep machine learning algorithms to analyze the high-dimensional data sets. Implications in research focusing on economic questions that arise from rapid changes in data availability and computational technology. Materials are hands-on tutorials that come with Python codes and real-world data sets.
Prerequisite(s): ECON 3254 or ECON 4304 or CMDA 3654 or STAT 3006
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 4314

CMDA 4604 - Intermediate Topics in Mathematical Modeling (3 credits)
Introduction to partial differential equations, including modeling and classification of partial differential equations. Finite difference and finite elements methods for the numerical solution of partial differential equations including function approximation, interpolation, and quadrature. Numerical solution of nonlinear systems of equations. Uncertainty quantification, prediction.
Prerequisite(s): CMDA 3606
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 4634 - Scalable Computing for Computational Modeling and Data Analytics (3 credits)
A focused study of concepts and tools that accelerate computational and data science at scale. Design, analysis, optimization, and modeling of application-driven algorithms suitable for state-of-the-art scalable computing platforms. Software development and engineering for scalable computational science.
Prerequisite(s): (CMDA 3634 or CS 3634 or CS 4234) and (CMDA 3654 or CS 3654 or STAT 3654) and (CMDA 3605 or CS 3414 or MATH 3414 or MATH 4445)
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 4654 - Intermediate Data Analytics and Machine Learning (3 credits)
A technical analytics course. Covers supervised and unsupervised learning strategies, including regression, generalized linear models, regularization, dimension reduction methods, tree-based methods for classification, and clustering. Upper-level analytical methods shown in practice: e.g., advanced naive Bayes and neural networks.
Prerequisite(s): (STAT 3654 or CMDA 3654 or CS 3654) and (CMDA 2006 or STAT 3104 or STAT 4106 or STAT 4706) and (MATH 2114 or MATH 2114H or MATH 2405H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4654, STAT 4654

CMDA 4664 - Computational Intensive Stochastic Modeling (3 credits)
Stochastic modeling methods with an emphasis in computing are taught. Select concepts from the classical and Bayesian paradigms are explored to provide multiple perspectives for how to learn from complex, datasets. There is particular focus on nested, spatial, and time series models.
Prerequisite(s): (STAT 4106 or CMDA 3605) and (CS 1114 or CS 1064 or STAT 2005)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STAT 4664

CMDA 4864 - Computational Modeling and Data Analytics Capstone Project (3 credits)
Capstone research project for Computational Modeling and Data Analytics majors. Cultivates skills including reviewing the literature, creative problem solving, teamwork, critical thinking, and oral, written, and visual communications. Quantitative and computational thinking, informed throughout by ethical reasoning.
Prerequisite(s): CMDA 3605 and CMDA 3634 or CS 3634 and CMDA 3654 or CS 3654 or STAT 3654
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Computer Science (CS)

CS 1014 - Introduction to Computational Thinking (3 credits)
An exploration of basic ideas of computational thinking focusing on the perspectives, thought processes, and skills that underlie computational approaches to problem formulation and problem solving. Applications of computational tools to investigate complex, large-scale problems in a variety of knowledge domains. Basic introduction to algorithms and a practical programming language. Examination of the societal and ethical implications of computational systems.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 1044 - Introduction to Programming in C (3 credits)
Fundamental concepts underlying software solutions of many problems. Structured data, statement sequencing, logic control, input/output, and functions. The course will be taught using a structured approach to programming. Partially duplicates 1344.
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 1054 - Introduction to Programming in Java (3 credits)
An introduction to object-oriented programming using the Java language. Fundamental concepts underlying programming and software solutions to many problems. Structured data, statement sequencing, logic control, classes, objects, methods, instantiation of classes, sending messages to objects. The impact of computing on issues of diversity and inclusion.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 1064 - Introduction to Programming in Python (3 credits)
Introduction to programming in Python contextualized with scientific and engineering problems. Computational problem-solving skills and software solutions in addition to Python language fundamentals. The basics of control flow with loops and conditionals, state tracing and manipulation, simple and complex types, organization of code using functional and object-oriented coding strategies, and data processing. Create, interpret, and debug programs. Ethically debate important issues in computing culture.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 1114 - Introduction to Software Design (3 credits)
Fundamental concepts of programming from an object-oriented perspective. Basic software engineering principles and programming skills in a programming language that supports the object-oriented paradigm. Simple data types, control structures, array and string data structures, basic algorithms, testing and debugging. A basic model of the computer as an abstract machine. Modeling and problem-solving skills applicable to programming at this level. Partially duplicates 1054, 1124, and 1705.
Corequisite(s): MATH 1225
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

CS 1944 - Computer Science First Year Seminar (1 credit)
An introduction to academic and career planning for computer science majors.
Prerequisite(s): CS 1114 or CS 2064 or ECE 2514
Instructional Contact Hours: (1 Lec, 1 Crd)

CS 2064 - Intermediate Programming in Python (3 credits)
Advanced uses of control flow and data processing, data structures, computational techniques, object-oriented programming, and modern data science pipelines. Creating, interpreting, and debugging complex programs. Problems and projects contextualized for scientists and engineers. Implementation of Python programs in data science and production environments, production of object-oriented solutions to complex problems, and ethical implications of technological change.
Prerequisite(s): CS 1064
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 2104 - Introduction to Problem Solving in Computer Science (3 credits)
This course introduces the student to a broad range of heuristics for solving problems in a range of settings that are relevant to computation. Emphasis on problem-solving techniques that aid programmers and computer scientists. Heuristics for solving problems in the small (classical math and word problems), generating potential solutions to real-life problems encountered in the profession, problem solving through computation, and problem solving in teams.
Prerequisite(s): (MATH 1205 or MATH 1225 or MATH 1526) and (CS 1114 or CS 2064 or ECE 2514)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 2114 - Software Design and Data Structures (3 credits)
A programming-intensive exploration of software design concepts and implementation techniques. Builds on knowledge of fundamental object-oriented programming. Advanced object-oriented software design, ethics in computing, algorithm development and analysis, and classic data structures. Includes a team-based software project.
Prerequisite(s): CS 1114 or CS 2064
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

CS 2144 - Competitive Problem Solving I (3 credits)
Fundamentals of algorithms, data structures, and implementation techniques, taught in a setting that combines collaborative practice with competitive exercise. Students practice to solve problems using a computer, which are judged by automated evaluation software for correctness and efficiency. Practice with data structures including arrays, lists, maps, and trees, as well as algorithmic strategies including recursion, divide-and-conquer, dynamic programming, search and traversal algorithms, graph representations, and computational geometry. Macro- and micro optimization techniques to improve efficiency are emphasized.
Prerequisite(s): CS 1114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 2164 - Foundations of Contemporary Security Environments (3 credits)
Introduction to multiple analytical perspectives on contemporary security environments, including political, legal, ethical, technical, environmental and historical and cultural perspectives relative to the conception, design and implementation of security solutions, practices, and policies. Emphasizes applying and analyzing the effectiveness of diverse procedures, tools and policies used in security and privacy solutions, decision-making, risk management and operational policy to mitigate local, national, international and global threats.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIT 2164, PSCI 2164

CS 2304 - Topics in Programming Systems (1 credit)
Guided self-study in a specific programming system, its syntax and applications. Based on prior knowledge of the programming process and experience in programming with some high-level language. Systems include JavaScript, C++, CUDA, Ruby, SQL, FORTRAN, UNIX, etc. May be taken three times for credit with different system each time. May be taken only twice for CS major or minor credit.
Prerequisite(s): CS 2114
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

CS 2505 - Introduction to Computer Organization (3 credits)
An introduction to the design and operation of digital computers. Works up from the logic gate level to combinational and sequential circuits, information representation, computer arithmetic, arithmetic/logic units, control unit design, basic computer organization, relationships between high level programming languages and instruction set architectures. A grade of C or better is required in CS prerequisite. Corequisites: MATH 2534 or MATH 3034.
Prerequisite(s): CS 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 2506 - Introduction to Computer Organization (3 credits)
An introduction to the design and operation of digital computers. Instruction formats and construction, addressing modes, instruction execution, memory hierarchy operation and performance, pipelining, input/output, and the relationships between high level programming languages and machine language. A grade of C or better is required in CS pre-requisite 2505 and 2114.
Prerequisite(s): (CS 2114 or ECE 3514) and (CS 2505 or ECE 2564) and (MATH 2534 or MATH 3034)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 2984E - Special Study (1-19 credits)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv.
Instructional Contact Hours: Variable credit course

CS 3114 - Data Structures and Algorithms (3 credits)
Advanced data structures and analysis of data structure and algorithm performance. Sorting, searching, hashing, and advanced tree structures and algorithms. File system organization and access methods. Ethical issues in the context of data analysis and software performance. Course projects require advanced problem-solving, design, and implementation skills.
Prerequisite(s): (CS 2114 or ECE 3514) and (CS 2505 or ECE 2564) and (MATH 2534 or MATH 3034)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3214 - Computer Systems (3 credits)
Introduction to computer systems as they are relevant to application programmers today, with emphasis on operating system principles. Operating system design and architectures; processes; threads, synchronization techniques, deadlock; CPU scheduling; system call interfaces, system level I/O and file management; shell programming; separate compilation, loading and linking; inter-process communication (IPC); virtual and physical memory management and garbage collection; network protocols and programming; virtualization; performance analysis and optimization. A grade of C or better is required in CS pre-requisites 2506 and 2114.
Prerequisite(s): (CS 2506 and CS 2114) or (ECE 2564 and ECE 3574)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3274 - Software Reverse Engineering (3 credits)
Theory and practice of software reverse engineering, static and dynamic analysis techniques and tools, reverse engineering of malware, obfuscated binaries, communications and command and control analysis, reverse engineering of non-binary software.
Prerequisite(s): (CS 2114 and CS 2506) or (ECE 2534 and ECE 3514)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3304 - Comparative Languages (3 credits)
This course in programming language constructs emphasizes the run-time behavior of programs. The languages are studied from two points of view: (1) the fundamental elements of languages and their inclusion in commercially available systems; and (2) the differences between implementations of common elements in languages. A grade of C or better required in CS prerequisite 3114.
Prerequisite(s): CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3314 - Programming Language Theory and Practice (3 credits)
Theoretical basis of programming languages, including formal languages, computability theory, type theory, and programming language design. Standard syntax notations. Fundamental programming language features for control flow and data representation. Language implementation strategies. Unsolvable problems in the context of programming languages and computing.
Prerequisite(s): CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3414 - Numerical Methods (3 credits)
Computational methods for numerical solution of non-linear equations, differential equations, approximations, iterations, methods of least squares, and other topics. A grade of C or better required in CS prerequisite 1044 or 1705. A student can earn credit for at most one of 3414 and MATH 4404.
Prerequisite(s): (CS 1044 or CS 1705 or CS 1114 or CS 1124) and MATH 2406H or (CMDA 2005 and CMDA 2006) or (MATH 2214 or MATH 2214H) and (MATH 2204H or MATH 2204)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MATH 3414

CS 3604 - Professionalism in Computing (3 credits)
Studies the ethical, social, and professional concerns of the computer science field. Covers the social impact of the computer, implications and effects of computers on society, and the responsibilities of computer professionals in directing the emerging technology. The topics are studied through case studies of reliable, risk-free technologies, and systems that provide user friendly processes. Specific studies are augmented by an overview of the history of computing, interaction with industrial partners and computing professionals, and attention to the legal and ethical responsibilities of professionals. This is a web-supported course, incorporating writing intensive exercises, making extensive use of active learning technologies. A grade of C or better required in CS prerequisite 3114.
Prerequisite(s): CS 1944 and (CS 2114 or ECE 3514) and (COMM 2004 or COMM 2014)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3634 - Computer Science Foundations for Computational Modeling & Data Analytics (3 credits)
Survey of computer science concepts and tools that enable computational science and data analytics. Data structure design and implementation. Analysis of data structure and algorithm performance. Introduction to high-performance computer architectures and parallel computation. Basic operating systems concepts that influence the performance of large-scale computational modeling and data analytics. Software development and software tools for computational modeling. Not for CS major credit.
Prerequisite(s): CS 2114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 3634

CS 3654 - Introductory Data Analytics and Visualization (3 credits)
Basic principles and techniques in data analytics; methods for the collection of, storing, accessing, and manipulating standard-size and large datasets; data visualization; and identifying sources of bias.
Prerequisite(s): (CS 1114 or CS 1044 or CS 1054 or CS 1064) and (MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005) and (STAT 3006 or STAT 4105 or STAT 4705 or STAT 4714 or CMDA 2006)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 3654, STAT 3654

CS 3704 - Intermediate Software Design and Engineering (3 credits)
Explores the principles of software design in detail, with an emphasis on software engineering aspects. Includes exposure of software lifecycle activities including design, coding, testing, debugging, and maintenance, highlighting how design affects these activities. Peer reviews, designing for software reuse, CASE tools, and writing software to specifications are also covered. A grade of C or better required in CS prerequisite 3114.
Prerequisite(s): CS 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3714 - Mobile Software Development (3 credits)
Technologies and concepts underlying software development for mobile devices (handheld computers). Mobile computing platforms, including architecture, operating system, and programming environment. Software design patterns and structuring for mobile applications. Network-centric mobile software development. Data persistence. Programming for mobile device components such as cameras, recorders, accelerometer, gyroscope and antennas. Location-aware software development. A grade of C or better required in CS prerequisite.
Prerequisite(s): CS 2114 or ECE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3724 - Introduction to Human-Computer Interaction (3 credits)
Survey of human-computer interaction concepts, theory, and practice. Basic components of human-computer interaction. Interdisciplinary underpinnings. Informed and critical evaluation of computer-based technology. User-oriented perspective, rather than system-oriented, with two thrusts: human (cognitive, social) and technological (input/output, interactions styles, devices). Design guidelines, evaluation methods, participatory design, communication between users and system developers. A grade of C or better required in CS prerequisite 2114.
Prerequisite(s): CS 1114 or CS 1044 or CS 1054 or CS 1064
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3744 - Introduction to GUI Programming and Graphics (3 credits)
Design and implementation of object-oriented graphical user interfaces (GUI) and two-dimensional computer graphics systems. Implementation methodologies including callbacks, handlers, event listeners, design patterns, layout managers, and architectural models. Mathematical foundations of computer graphics applied to fundamental algorithms for clipping, scan conversion, affine and convex linear transformations, projections, viewing, structuring, and modeling. A grade of C or better is required in CS pre-requisite 2114.
Prerequisite(s): (CS 2114 or ECE 3514) and (MATH 1114 or MATH 2114) and (MATH 1224 or MATH 2204)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3754 - Cloud Software Development (3 credits)
Fundamentals of cloud software development, including design patterns, application programming interfaces, and underlying middleware technologies. Development of distributed multi-tiered enterprise software applications that run on a server computer and are accessed using a web browser over the Internet on a network-connected computer such as desktop, laptop, or handheld computer (tablet, smartphone, or mobile device. A grade of C or better is required in prerequisite.
Prerequisite(s): CS 2114 or ECE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3824 - Introduction to Computational Biology and Bioinformatics (3 credits)
Introduction to computational biology and bioinformatics (CBB) through hands-on learning experiences. Emphasis on problem solving in CBB. Breadth of topics covering structural bioinformatics; modeling and simulation of biological networks; computational sequence analysis; algorithms for reconstructing phylogenies; computational systems biology; and data mining algorithms. Pre-requisite: Grade of C or better in CS 3114.
Prerequisite(s): CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

CS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 4014 - Algorithms & Society (3 credits)
This course focuses on social perspectives of algorithms and implications to factors such as class, gender, race, ethnicity, geography, and disability status. Students will be guided to think critically about the impacts of computing in society, as well as the role of social values in their design. Topics will focus on computing technologies involved in critical contemporary and global concerns including machine learning, privacy, and the infrastructure that describes the social and technical context for algorithms. Pre: Junior Standing
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 4014

CS 4104 - Data and Algorithm Analysis (3 credits)
Data structures and algorithms from an analytical perspective. Theoretical analysis of algorithm efficiency. Comparing algorithms with respect to space and run-time requirements. Analytical methods for describing theoretical and practical bounds on performance. Constraints affecting problem solvability. A grade of C or better is required in CS prerequisite 3114.
Prerequisite(s): CS 3114 and (MATH 3034 or MATH 3134)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4114 - Introduction to Formal Languages and Automata Theory (3 credits)
The course presents a study of formal languages and the correspondence between language classes and the automata that recognize them. Formal definitions of grammars and acceptors, deterministic and nondeterministic systems, grammar ambiguity, finite state and push-down automata, and normal forms will be discussed.
Prerequisite(s): MATH 3134 or MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4124 - Theory of Computation (3 credits)
Theoretical analysis of the computational process; fundamental concepts such as abstract programs, classes of computational machines and their equivalence, recursive function theory, unsolvable problems, Churchs thesis, Kleenes theorem, program equivalence, and generability, acceptability, decidability will be covered.
Prerequisite(s): MATH 3134 or MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4134 - Quantum Computation and Information Processing (3 credits)
Quantum states and quantum phenomena. Quantum communication concepts such as superdense coding, teleportation, and complexity. Classical and quantum circuits and gate sets for computation. Quantum algorithms and comparison to classical algorithms. Quantum computational complexity theory and complexity classes. Quantum information concepts such as density operators, measurements, and quantum channels. Error correction, the stabilizer formalism, and fault-tolerance. The adiabatic theorem and adiabatic quantum computation. Entanglement and entanglement measures.
Prerequisite(s): MATH 2114 or MATH 2114H
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4144 - Competitive Problem Solving II (3 credits)
Deeper treatment of advanced algorithms, data structures, and implementation techniques, taught in a setting that combines collaborative practice with competitive exercise. Students practice to solve problems using a computer, which are judged by automated evaluation software for correctness and efficiency. Practice with advanced searching and graph algorithms, advanced dynamic programming, linear programming techniques, computational geometry, and numerical algorithms. Problems are drawn from multiple areas in computer science. Macro- and micro optimization techniques to improve efficiency are emphasized.
Prerequisite(s): CS 2114 and CS 2144
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4164 - Future of Security: Integrative Solutions for Complex Security Systems (3 credits)
Identification and analysis of complex, real-world security problems and threats to people, organizations, and nations across multiple domains, roles and future scenarios. Crisis communication, decision making tools, ethical principles and problem-solving methods to respond, assess options, plan, scope, and communicate before, during and after conflicts, disasters and attacks. Use of an experiential learning facility, and participation in a reality-based team simulation of cascading security and disaster events.
Prerequisite(s): PSCI 2164 or BIT 2164 or CS 2164
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIT 4164, PSCI 4164

CS 4204 - Computer Graphics (3 credits)
Hardware and software techniques for the display of graphical information. 2D and 3D geometry and transformations, clipping and windowing, software systems. Interactive graphics, shading, hidden surface elimination, perspective depth. Modeling and realism.
Prerequisite(s): CS 3744
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4214 - Simulation and Modeling (3 credits)
Overview of discrete-event digital computer simulation and modeling. Fundamentals of model development, Monte Carlo simulation, the life cycle of a simulation study, input and output data analysis, world views and time control, random number and variate generation, credibility assessment of simulation results, simulation languages, applications of simulation using the General Purpose Simulation System (GPSS). A grade of C or better required in CS prerequisite 2114.
Prerequisite(s): CS 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4224 - Linux Kernel Programming (3 credits)
Design and internal organization of the Linux operating system kernel. Kernel subsystems, boot process, memory management, process and thread model, scheduling, interrupt and exception handling, virtual file system and the concrete file system, block I/O and I/O scheduler, network stack, and device drivers. Modification of existing kernel code. Design, implementation, test and evaluation of new kernel modules. Kernel and full software stack debugging techniques, and virtualization as an aid for operating system development and debug. Software engineering techniques to analyze, modify and run a large, complex open-source code base.
Prerequisite(s): ECE 3574 or CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4414

CS 4234 - Parallel Computation (3 credits)
Survey of parallel computer architectures, models of parallel computation, and interconnection networks. Parallel algorithm development and analysis. Programming paradigms and languages for parallel computation. Example applications. Performance measurement and evaluation. A grade of C or better required in CS prerequisite 3214.
Prerequisite(s): CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4244 - Internet Software Development (3 credits)
Key technology underlying the World-Wide Web. Web architecture, including client and server design, network protocols, and related standards. Static and dynamic content, caching, state management, fault tolerance, error handling. Programming systems and abstractions, e.g., sockets, remote procedures, Web services, frameworks and component models. Document representations and processing. Security. Entrepreneurial issues and emerging technologies. A grade of C or better required in CS 3214 prerequisite.
Prerequisite(s): CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4254 - Computer Network Architecture and Programming (3 credits)
Introduction to computer network architecture, and methods for programming network services and applications (e.g. DNS, Email and MIME, http, SNMP, multimedia). Wired, wireless, and satellite network architectures. OSI protocol model, with an emphasis on upper layers. Congestion control, quality of service, routing. Internet protocol suite (e.g. IP, TCP, ARP, RARP). Server design (e.g. connectionless, concurrent). Network programming abstractions (e.g. XDR, remote procedure calls, sockets, DCOM). Case studies (e.g. TELNET). A grade of C or better required in CS prerequisite 3214.
Prerequisite(s): CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4264 - Principles of Computer Security (3 credits)
Survey of computer problems and fundamental computer security design principles and models for software systems. Cryptographic models and methods. Modern cyber security techniques for robust computer operating systems, software, web applications, large-scale networks and data protection. Privacy models and techniques. Contemporary computer and network security examples. A grade of C or better is required in prerequisites.
Prerequisite(s): CS 3214 or (ECE 3504 and ECE 3574)
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4274 - Secure Computing Capstone (3 credits)
Advanced topics in cybersecurity and secure computing. Threat modeling through identification and analysis of security threats. Reasoning about the efficacy, complexity, cost, and ethical tradeoffs of computer security systems. Team-based approach to solving open-ended computer security problems. Designing, implementing, documenting, and presenting advanced computer systems.
Prerequisite(s): CS 3114 and CS 3214
Corequisite(s): CS 4264
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4284 - Systems & Networking Capstone (3 credits)
Advanced topics in computer systems & networking, e.g. distributed and parallel processing, emerging architectures, novel systems management & networking design, fault- tolerance, and robust and secure data management. Team- based approach to solving open-ended computer systems & networking problems. Designing, implementing and documenting advanced computer/networking systems. A grade of C or better required in CS prerequisites.
Prerequisite(s): CS 3114 and CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4304 - Compiler Design and Implementation (3 credits)
This course includes the theory, the design, and the implementation of a large language translator system. Lexical analysis, syntactic analysis, code generation, and optimization are emphasized. A grade of C or better required in CS prerequisite 3214.
Prerequisite(s): CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4414 - Issues in Scientific Computing (3 credits)
Theory and techniques of modern computational mathematics, computing environments, computational linear algebra, optimization, approximation, parameter identification, finite difference and finite element methods and symbolic computation. Project-oriented course; modeling and analysis of physical systems using state-of-the-art software and packaged subroutines.
Prerequisite(s): (MATH 2214 or MATH 2214H or MATH 2406H or CMDA 2006) and MATH 3214 and (CS 1114 or MATH 1454)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: MATH 4414

CS 4504 - Computer Organization (3 credits)
Overview of the structure, elements and analysis of modern enterprise computers. Performance evaluation of commercial computing. Past and emerging technology trends. Impact of parallelism at multiple levels of computer architecture. Memory and storage. Fundamental computer system descriptions, Amdahls Law, Flynns Taxonomy. A grade of C or better required in prerequisites.
Prerequisite(s): ECE 2500 or CS 3214 or ECE 3504
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4504

CS 4570 - Wireless Networks and Mobile Systems (3 credits)
Multidisciplinary, project-oriented design course that considers aspects of wireless and mobile systems including wireless networks and link protocols, mobile networking including support for the Internet Protocol suite, mobile middleware, and mobile applications. Students complete multiple experiments and design projects.
Prerequisite(s): CS 4254 or ECE 4564
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4570

CS 4604 - Introduction to Data Base Management Systems (3 credits)
Emphasis on introduction of the basic data base models, corresponding logical and physical data structures, comparisons of models, logical data design, and data base usage. Terminology, historical evolution, relationships, implementation, data base personnel, future trends, applications, performance considerations, data integrity. Senior standing required. A grade of C or better required in CS prerequisite 3114.
Prerequisite(s): CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4624 - Multimedia, Hypertext and Information Access (3 credits)
Introduces the architectures, concepts, data, hardware, methods, models, software, standards, structures, technologies, and issues involved with: networked multimedia information and systems, hypertext and hypermedia, networked information videoconferencing, authoring/electronic publishing, and information access. Coverage includes how to capture, represent, link, store, compress, browse, search, retrieve, manipulate, interact with, synchronize, perform, and present: text, drawings, still images, animations, audio, video, and their combinations (including in digital libraries).
Prerequisite(s): CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4634 - Design Of Information (3 credits)
Survey of the higher-order properties that allow data to become information, that is, to inform people. The course focuses on the analysis of user needs, user comprehension and local semantics; the design of information organization; and the design of information display appropriate to use and setting. A grade of C or better is required in CS prerequisites 3114 and 3724.
Prerequisite(s): CS 3114 and CS 3724
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4644 - Creative Computing Studio (3 credits)
Capstone computer science course at the intersection of arts and technology. Intensive immersion in different approaches to digital arts such as game design, interactive art, digital music, and immersive virtual reality. Students work in teams to conduct an end-to-end integrative design project. A grade of C or better is required in prerequisite CS 3724.
Prerequisite(s): CS 3724
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4654 - Intermediate Data Analytics and Machine Learning (3 credits)
A technical analytics course. Covers supervised and unsupervised learning strategies, including regression, generalized linear models, regulations, dimension reduction methods, tree-based methods for classification, and clustering. Upper-level analytical methods shown in practice: e.g., advanced naive Bayes and neural networks.
Prerequisite(s): (STAT 3654 or CMDA 3654 or CS 3654) and (CMDA 2006 or STAT 3104 or STAT 4106 or STAT 4706)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 4654, STAT 4654

CS 4664 - Data-Centric Computing Capstone (3 credits)
Advanced, project-based course on deriving valuable insights from real-world data collected from a variety of sources. Team-based end-to-end projects explore the entire data science workflow: problem statement, formulating the research questions, collecting preparing and cleaning data, alternating between analyzing data and interpreting results, and synthesizing results into a written report and an interactive executable codebase.
Prerequisite(s): CS 3114 and CS 3654 or CMDA 3654 or STAT 3654
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4704 - Software Engineering Capstone (3 credits)
Senior project course integrating software engineering knowledge and skills acquired in previous courses. Team- based approach to problem formulation, requirements engineering, architecture, design, implementation, integration, documentation and delivery of software system that solves a real-world problem. Pre: A grade of C or better in CS 3704.
Prerequisite(s): CS 3704 or CS 3714 or CS 3754
Instructional Contact Hours: (3 Lec, 0 Lab, 3 Crd)

CS 4774 - Human-Computer Interaction Design Experience (3 credits)
Project-based design course in human-computer interaction. Team-based, end-to-end, integrative interface design project drawn from interdisciplinary areas of student expertise, e.g., virtual reality, augmented reality, embodied cognition, visualization, semiotic engineering, game design, personal information management, mobile computing, design tools, educational technology, and digital democracy. Not for CS major credit. Senior standing.
Prerequisite(s): CS 3724 and (HIST 2604 or SOC 2604 or STS 2604) and COMM 2084
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4784 - Human-Computer Interaction Capstone (3 credits)
Advanced, project-based course in Human-Computer Interaction. Team-based, end-to-end, integrative interface design project drawn from area of expertise in the department, e.g., virtual reality, augmented reality, embodied cognition, visualization, semiotic engineering, game design, personal information management, mobile computing, design tools, educational technology, and digital democracy. Pre-requisite: Senior Standing required. A grade of C or better is required in CS pre-requisite 3724 and 3744
Prerequisite(s): CS 3724 and CS 3744
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4804 - Introduction to Artificial Intelligence (3 credits)
Overview of the areas of problem solving, game playing, and computer vision. Search trees and/or graphs, game trees, block world vision, syntactic pattern recognition, object matching, natural language, and robotics. Senior standing required. A grade of C or better required in CS prerequisite 3114.
Prerequisite(s): CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4824 - Machine Learning (3 credits)
Algorithms and principles involved in machine learning; focus on perception problems arising in computer vision, natural language processing and robotics; fundamentals of representing uncertainty, learning from data, supervised learning, ensemble methods, unsupervised learning, structured models, learning theory and reinforcement learning; design and analysis of machine perception systems; design and implementation of a technical project applied to real-world datasets (images, text, robotics). A grade of C- or better in prerequisites.
Prerequisite(s): (ECE 3514 or CS 2114) and (STAT 3704 or STAT 4105 or STAT 4604 or STAT 4705 or STAT 4714 or CMDA 2006)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4424

CS 4884 - Computational Biology and Bioinformatics Capstone (3 credits)
Advanced topics in computational biology and bioinformatics (CBB). Team-based approach to solving open-ended problems in CBB. Projects drawn from areas of expertise in the department, e.g., algorithms for CBB, computational models for biological systems, analysis of structure-function relationships in biomolecules, genomic data analysis and data mining, computational genomics, systems biology. Design, implementation, documentation and presentation of solutions. A grade of C or better required in CS prerequisite 3824.
Prerequisite(s): CS 3824
Instructional Contact Hours: (3 Lec, 3 Crd)

CS 4894 - Special Topics in Computer Science (3 credits)
Advanced undergraduate topics in the design, development, use, and impact of computer science solutions or software systems. Topics may include blockchain systems, DevOps, new programming languages, social media software, software as a service, micro-services, and end user programming systems. May be repeated 2 times with different content for a maximum of 9 credits.
Prerequisite(s): CS 2114 and CS 2505
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

CS 4944 - Seminar (1 credit)
Prerequisite(s): CS 3604
Instructional Contact Hours: (1 Lec, 1 Crd)

CS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Construction Engineering & Mgt (CEM)

CEM 1974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEM 2104 - Introduction to Construction Engineering and Management (3 credits)
Overview of the construction engineering and management profession specialty areas. Introduction to the undergraduate program of study. Fundamentals of effective oral, written and visual communication skills. Professionalism, ethics, and legal issues relating to the industry. Contemporary issues facing the industry. Engineering library resources. Project drawings, computer aided design (CAD), and responding to Requests for Proposals (RFPs).
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 2404 - Construction Project Documents (1 credit)
Interpret design documents for construction projects. Analyze project documents to select appropriate construction engineering methods. Quantify materials using appropriate methods and technology. Review and comparison of construction documentation in various industry sectors. Identify information required for construction that is missing or ambiguous in the design documentation. Create and analyze a request for information (RFI) to modify and update the project documentation.
Corequisite(s): CEM 2104
Instructional Contact Hours: (3 Lab, 1 Crd)

CEM 2714 - Construction Safety Systems (3 credits)
Introduction to construction safety and the importance of safety, health, and wellness in the construction industry. Identify systematic safety issues and safety management systems, evaluation of safety systems through MEAD (MacroErgonomic Analysis and Design) methodology to recommend safety management systems to improve safety outcomes on construction operations. Assess health, safety, and wellness initiatives for construction worker safety and well-being. Pre: Sophomore Standing
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 2824 - Construction Site Analysis (3 credits)
Geospatial information, Global Positioning Systems (GPS), surveying, and aerial photography for condition assessment, solving construction engineering problems, and managing construction control processes. Topographic survey methodology for field layout and stakeout processes in construction. Geospatial data collection techniques for construction risk analysis. Document existing site conditions. Use of software, and custom program tools. Individual and team projects and presentations.
Corequisite(s): 2104 or BC 1224 or CEE 2834.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

CEM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEM 3024 - Construction Estimating and Scheduling (3 credits)
Introduction to estimating and scheduling of construction operations using construction documents. Quantity takeoff, resource and crew enumeration, network logic, activity durations, Critical Path Method (CPM) and Location-Based Management System (LBMS). Bid assembly with markups. Construction decisions based on ethical principles. A grade of C- or better is required in prerequisite.
Prerequisite(s): CEM 2104 or BC 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 3064 - Intro to Lean Construction (3 credits)
Introduction to Lean Construction thinking, principles, and practices, definitions, history, theory, and fundamentals related to project production systems. Operating system, organization practices, commercial terms. Pull planning and Last Planner System, teh Big Room concept, and Integrated Form of Agreement (IFOA). Conventional Lean practices A3 problem solving, 5 Whys Root Cause Analysis, and 5s Methadology. Continuous improvement, respect for people, elimination of waste, reducing variability and increasing plan reliability.
Prerequisite(s): CEM 2104 or BC 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 3074 - Global Design and Construction for Sustainable Development (3 credits)
A collaborative approach for applying engineering systems and design to global issues. Design, engineering, and construction focused on social responsibility in the global village. Multi-disciplinary teamwork requiring identification of client needs and design considerations, development of site layouts, selection of resources, management of schedule, cost, materials, personnel, quality, and jobsite safety. Applied conflict handling skills and self-reflection on social responsibility, service, intercultural global awareness, and evaluating the success of sustainable projects. May be repeated one time with different content for a maximum of six credits. Multi-day field trip required. Pre: Junior Standing.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

CEM 3084 - Construction Economy (3 credits)
Engineering economics, accounting, finance, and entrepreneurship. Construction financial management and financial decision-making. Construction financial risk, estimation, and generation of financial statements. Construction company creation and business plan development. Assessment of construction project delivery methods and impacts of retainage, bonding, and taxation.
Prerequisite(s): CEM 2104 or BC 2024
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 3134 - Temporary Structures in Construction (3 credits)
Introduction to temporary structure systems used to support construction operations. Concrete formwork, scaffolding systems, excavation shoring systems, dewatering techniques, and hoisting operations. Assessment of systems, cost, quality, safety, sustainability, and schedule impacts.
Prerequisite(s): (BC 2044 and BC 2024 and BC 2214) or CEE 3684
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BC 3134

CEM 3154 - Smart Construction (3 credits)
Introduction to smart construction, definitions, principles and practices. Exploration of inefficiencies associated with the traditional approaches to construction. Intelligence requirements of the building lifecycle. Smart planning and contracting practices, and facilitating technologies. Smart design principles, techniques, technologies, strategies for involving down-stream stakeholders in the design of buildings for constructability and maintainability. Overview of digital infrastructure, types, selection and role in integrating the design and construction phases.
Prerequisite(s): BC 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 3164 - Construction Health and Safety (3 credits)
Introduction to fundamentals of Occupational Health and Safety (OHS) for the construction industry. History of OHS regulation and specific governmental regulations, standards and laws. Health, safety, and environmental hazards identification. Methods of quantifying exposure and estimating risk. Design and prioritization of control solutions to mitigate hazards. Contemporary issues and theoretical frameworks in the field of OHS management relevant to the industry. Prevention through Design, behavior-based safety, different construction project delivery methods, safety climate and culture, control banding, and systems safety.
Corequisite(s): CEM 2104 or BC 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 3714 - Controlling Construction Safety Hazards (3 credits)
Perceive, recognize (cognitive recall), and examine/classify (decision making) construction safety hazards and their underlying energy sources. To control hazards, the construction hierarchy of controls guides a safety by design methodology. Accident investigation or forensic processes using design-based arguments to determine root causes of incidents. Pre: Sophomore Standing
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEM 4024 - Construction Law and Contract Administration (3 credits)
Application of contract law, torts, and statutory law in construction. Legal context, parties, interpreting contracts and specifications, contract changes, differing site conditions, delays, disruptions, and acceleration. Dispute avoidance and resolution. Ethics and risk management. Pre: Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4314 - Design of Wood Structures (3 credits)
Analysis and design of wood structures comprised of solid wood and/or composite wood products. Evaluation of mechanical properties of wood materials. Design of individual tension, compression and bending members, and wood-steel dowel connections. Lateral loading design of diaphragms and shearwalls.
Prerequisite(s): SBIO 3314 or CEE 3404
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SBIO 4314

CEM 4445 - CEM Capstone (3 credits)
4445: Preliminary design of infrastructure, planning and scheduling of design and construction, cost estimating and budgeting, life cycle cost analysis, application of technology to support construction, maintenance, and facilities operation, and project risk management. Collaboration-based course utilizing design-build project delivery methodology. Design and construction considerations include public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. Underpinning themes include safety and constructability by design, sustainability, resilience, and reliability. 4446: Final design of infrastructure, planning and scheduling of design and construction, cost estimating and budgeting, life cycle cost analysis, application of technology to support construction, maintenance, and facilities operation, and project risk management. Collaboration-based course utilizing design-build project delivery methodology. Design and construction considerations include public health, safety, and welfare, as well as global, cultural, social, ethical, environmental, and economic factors. Underpinning themes include safety and constructability by design, sustainability, resilience, and reliability. The final deliverable includes a comprehensive written proposal and oral presentation. Pre: Senior standing.
Prerequisite(s): CEM 3024
Corequisite(s): CEM 3134
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4446 - CEM Capstone (3 credits)
4445: Preliminary design of infrastructure, planning and scheduling of design and construction, cost estimating and budgeting, life cycle cost analysis, application of technology to support construction, maintenance, and facilities operation, and project risk management. Collaboration-based course utilizing design-build project delivery methodology. Design and construction considerations include public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. Underpinning themes include safety and constructability by design, sustainability, resilience, and reliability. 4446: Final design of infrastructure, planning and scheduling of design and construction, cost estimating and budgeting, life cycle cost analysis, application of technology to support construction, maintenance, and facilities operation, and project risk management. Collaboration-based course utilizing design-build project delivery methodology. Design and construction considerations include public health, safety, and welfare, as well as global, cultural, social, ethical, environmental, and economic factors. Underpinning themes include safety and constructability by design, sustainability, resilience, and reliability. The final deliverable includes a comprehensive written proposal and oral presentation. Pre: Senior standing.
Prerequisite(s): CEM 3084 and CEM 4445 and CEM 3134
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4624 - Construction Robotics and Automation (3 credits)
Automation and its application in construction. Automated problem-solving methodologies in Building Information Modeling (BIM) and data interoperability solutions. Robotics and the application of robotic technologies in construction considering safety and technical operation requirements in construction environments and robot programming and controls. Unmanned Aerial Vehicles (UAVs) or drones in construction projects. Emerging areas of research in the field of construction automation and robotics. No programming background is required.
Prerequisite(s): BC 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4634 - Data Analysis and Visualization for Construction and Facilities Management (3 credits)
Introduction to data analysis and visualization theories and techniques applied in the construction and facilities management domain. Data collection, processing, storage, analysis, and visualization methods in the context of construction and building management. Data-driven decision making.
Prerequisite(s): (CEM 2104 or BC 2024 or CEE 3014) and (BC 2114 or CEE 3804)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4644 - Artificial Intelligence for Design, Construction, and Operations (3 credits)
Evaluate the basic concepts and computational tools of artificial intelligence (AI), machine learning, and deep learning in the architecture, engineering, and construction (AEC) industry. Appraise the history and potential to improve automation, digitalization, and diversity and inclusion in the industry. Develop practical expertise in formulating, deploying, and evaluating deep learning models, including convolutional neural networks, pretrained computer vision models, sequential models, and generative AI, through hands-on projects such as infrastructure health monitoring, safety management, and building energy consumption prediction. Foster real-world application of knowledge through project-based learning.
Prerequisite(s): (MATH 2114) and (ENGE 1215 or CS 1014 or ENGE 1414 or CS 1054 or CS 1064 or CS 1114)
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4714 - Construction Safety Culture (3 credits)
Examination of construction safety culture and climate and the role of organizational leadership in ethical safety practices. Analyze safety cultures within the construction industry for recommendations of change to shape safety practices.
Prerequisite(s): CEM 2104 or CEM 2714 or BC 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4724 - Construction Industry Futures: Safety, Health, and Wellness (3 credits)
Evaluate the future of the construction industry dynamics (trends, drivers, and disruptors) relative to their impacts on safety, health, and wellness. Compare global construction safety performances and practices. Design adaptable safety, health, and well-being management systems of the future based on technology-human interfaces, climate change, and globalization in construction.
Prerequisite(s): CEM 2104 or CEM 2714 or BC 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

CEM 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

CEM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CEM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Consumer Studies (CONS)

CONS 2304 - Consumer and Family Finances (3 credits)
Overview of consumer and family finances, including budgeting, goal setting, cash management, credit, insurance, taxes, housing, investment alternatives, and retirement plans. Fundamental tools for financial decision making through the coverage of time value of money, calculations for consumer loans, and tools for financial decisions across the lifecycle. Explore ethical issues surrounding financial decisions.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 2964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 2974H - Indepdendent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 3404 - Consumer Education Strategies (3 credits)
Analysis of the role of effective consumer education strategies in consumer decision-making. Planning, developing, testing, and evaluating consumer education programs using a variety of strategies, including social marketing, for selected community partners and operating the Consumer Education Laboratory.
Prerequisite(s): AHRM 2404 and CONS 2304
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

CONS 3504 - Resource Management for Individuals and Families (3 credits)
Introduction to resource management concepts and theories with application to personal and family life goals. Discussion of values, goals, decision making, planning, and communication in relation to the management process. Application of the management process to the use of resources, time, finances, stress, and the environment.
Prerequisite(s): CONS 2304 and AHRM 2404
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 4304 - Advanced Consumer Family Finances (3 credits)
Advanced financial topics for consumers and families. Identification of employee benefit components including health care, incentive plans, insurance, and retirement. Analysis of consumers insurance needs. Discussion and comparison of retirement and investment tools used by consumers, including public and private retirement components. Interpretation of research directions and policy influences related to employee benefits, insurance, investments, and retirement saving. Investigation of special topics in retirement. Pre: Senior Standing.
Prerequisite(s): CONS 2304 and AHRM 2404
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 4314 - Debtor-Creditor Relationships (3 credits)
Examination of legal and operational aspects of debtor-creditor relationship from the perspective of businesses and debtors. Overview of the types of credit, access to credit, factors contributing to debt problems, and alternatives available for resolution. Focus on collection processes of federal and state bankruptcy laws and regulations.
Prerequisite(s): CONS 2304 and AHRM 2404
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 4324 - Financial Counseling (3 credits)
Examination of debt and budgeting problems affecting families. Utilizes a problem-solving approach. Includes financial counseling strategies for coping with financial crises and becoming proactive in family financial management.
Prerequisite(s): AHRM 2404 and CONS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 4404 - Consumer Protection (3 credits)
Analysis of the effectiveness of consumer protection efforts. Examination of government laws, regulations, and agencies at the federal, state, and local levels, as well as the effectiveness of both business and private consumer protection efforts.
Prerequisite(s): AHRM 2404 and CONS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 4414 - Professionalism in Consumer Affairs (3 credits)
Roles, functions and responsibilites of consumer affairs professionals employed in business, government, and non-profit public/consumer interest organizations. Professional advocacy within employing organizations, managing consumer complaint handling systems and major consumer and career issues are analyzed.
Prerequisite(s): AHRM 2404 and CONS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

CONS 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 4964H - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 4984H - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CONS 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Cooperative Education Program (CEP)

CEP 3084 - University Internship (0 credits)
To be used of Cooperative Education Program - University Internships. No Credit.
Instructional Contact Hours: (0 Crd)

CEP 4084 - Cooperative Education Program (0 credits)
To be used for co-ops in industry. No credit.
Instructional Contact Hours: (0 Crd)

Criminology (CRIM)

CRIM 1054 - Virginia Tech Prison Book Project (1 credit)
A one-hour course with the Virginia Tech Prison Book Project. Students will complete a learning module about carceral institutions in the United States and the impact of educational opportunities on the lives of incarcerated people. They will then participate in a service learning event where they match individual requests from incarcerated readers to books and prepare the books for shipping.
Instructional Contact Hours: (1 Lab, 1 Crd)
Course Crosslist: HUM 1054, RLCL 1054

CRIM 2504 - Crime and Punishment in American History (3 credits)
Analyzes changing understandings of crime and punishment from the Colonial Era to the Age of Mass Incarceration. Considers how factors of race, ethnicity, class, and gender intersected with changing ideas of criminality and punishments.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2504

CRIM 2754 - Internship (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 2964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 3124 - Murder in American History (3 credits)
Considers how the definition of murder as a crime has changed from the colonial period to the present day. Uses murder cases to study the dynamics of American society in condemning, condoning, or celebrating murder. Asks how cultural factors, including racial prejudice, gender stereotypes, beliefs about sexuality, and class status affected the act of killing, media coverage of the event, societal reactions, and the execution of justice. Topics covered include abortion, lynching, vigilante justice, and the evolution of the legal system.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3124

CRIM 3414 - Criminology (3 credits)
Principles of criminology and contemporary theories of criminal behavior, focusing on the extent and distribution of crime in the United States.
Instructional Contact Hours: (3 Lec, 3 Crd)

CRIM 3434 - Systems of Justice (3 credits)
Analyzes the systems of justice in the United States, from a sociological perspective. Focuses on law enforcement, courts, and corrections. Evaluates the effectiveness of social policies related to systems of justice. Explores the structural, community, and individual level factors that influence different stages of justice systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

CRIM 3474 - Women and Crime (3 credits)
Focuses on women as victims and perpetrators of crime, with particular attention to race and class. Analyzes how social, cultural, and economic factors influence victimization and participation in crime. Includes adolescent girls involvement with crime, including juvenile gangs. Evaluates theoretical explanations of why women commit crime. Examines womens experiences with the criminal justice system.
Prerequisite(s): CRIM 3414 or SOC 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

CRIM 4224 - Victimology (3 credits)
An in-depth exploration of the multifaceted field of victimology. A scientific study of victims and the aftermath of victimization, which delves into the physical, emotional, and psychological consequences victims endure. Provides insights into the historical context of victim studies, various theoretical frameworks, and the evolving role of the criminal justice system concerning victims' rights and advocacy. Additionally, this course examines the societal consequences of victimization and explores preventive, interventionist, and compensatory mechanisms to support victims and mitigate the impact of crimes.
Prerequisite(s): CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSVP 4224

CRIM 4424 - Juvenile Delinquency (3 credits)
Examination of juvenile delinquency. Includes methods of data collection and the extent and distribution of delinquency. Detailed coverage of theories of delinquent behavior. Examines the juvenile justice system and treatment and prevention of delinquency. Utilizes current empirical research on delinquency in the U.S. and internationally.
Prerequisite(s): SOC 3414 or CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

CRIM 4454 - Topics in Criminology (3 credits)
A variable topics course in criminology. In-depth examination of topics such as capital punishment, women and criminology, racial profiling, terrorism, white collar crime, law enforcement, international gangs, political crime, the prison system, cybercrime, and rape. May be repeated 2 times with different content for a maximum of 9 credits. Junior standing.
Prerequisite(s): CRIM 3414 or SOC 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

CRIM 4474 - Cyber Criminology (3 credits)
Empirical patterns and consequences of cybercrimes. Emphasis on applying criminological theories of crime and victimization to cyberspace. Cybercrime prevention strategies and tactics. Examination of ethical issues of privacy, security, and social control. Pre: Junior standing.
Prerequisite(s): CRIM 3414 or SOC 3414
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CRIM 4484 - Hate Crimes (3 credits)
Focuses on the causes, manifestations, and consequences of hate crimes in the United States. Includes theories of prejudice and biased behavior, the context of perpetration, the individual and community-level effects on the victims, and the political, historical, and social significance of such crimes. Considers broad questions of bias compared to hate, the recognition and prosecution of hate crimes compared to non-bias crimes, the impacts of hate crimes at the individual and community levels, and responses by law enforcement and communities.
Prerequisite(s): CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSVP 4484

CRIM 4504 - Family and Crime (3 credits)
Focuses on the ways in which involvement in the criminal justice system affects families and family systems. Analyzes the antecedents and consequences of parental incarceration, including an investigation as to how social policies influence this phenomenon. Includes how offenders and their families are embedded in the criminal justice system and learn to navigate periods of incarceration and reentry—which includes family members' secondary prisonization. Examines the emotional and financial costs of incarceration and reentry on families, as families serve as informal safety nets.
Prerequisite(s): CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

CRIM 4754 - Internship (1-3 credits)
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

CRIM 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Crop and Soil Environmental Science (CSES)

CSES 2224 - Foundations of Precision Agriculture (3 credits)
Integrated technologies in the plant and environmental sciences including: global positioning systems (GPS), geographic information systems (GIS), remote and proximal sensing, variable rate technology (VRT) and decision support systems (DSS). Application to site-specific nutrient, water, weed and disease management.
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 2244 - Agriculture, Global Food Security and Health (3 credits)
Agriculture and food security within the larger context of applied agronomy, gender role, cultural and political aspects of food production, food policy, production contraints, and global population growth. Emphasis on gender iniquity and globalized food systems will be made. Service learning experience both local and global to promote career opportunity in international development.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 2434 - Crop Evaluation (2 credits)
Identification of more than 200 crops, weeds, seeds and crop diseases. Seed testing for purity according to the rules of the Association of Official Seed Analysts. Crops graded according to the official USDA grain grading standards.
Instructional Contact Hours: (6 Lab, 2 Crd)

CSES 2444 - Agronomic Crops (3 credits)
An introduction to crop production in Virginia, presenting basic climatic, crop, and soil characteristics and their relation to cropping systems. Introduces basic mechanical, chemical, and managerial tools of crop production and examines feed quality and seed and forage storage.
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 2564 - Turfgrass Management (3 credits)
Growth, development, adaptation, and selection of the major turfgrass species. Principles of establishment, mowing, nutrition, irrigation, cultivation, and pest control of lawns and utility turfs.
Corequisite(s): BIOL 1105
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

CSES 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CSES 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CSES 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CSES 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CSES 3114 - Soils (3 credits)
Characterization of soils as a natural resource emphasizing their physical, chemical, mineralogical, and biological properties in relation to nutrient availability, fertilization, plant growth, land-use management, waste application, soil and water quality, and food production. For CSES, ENSC, and related plant-and earth-science majors. Partially duplicates 3134.
Prerequisite(s): CHEM 1036
Corequisite(s): CSES 3124
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOS 3614

CSES 3124 - Soils Laboratory (1 credit)
Parent materials, morphology, physical, chemical, and biological properties of soils and related soil management and land use practices will be studied in field and lab. Partially duplicates 3134.
Corequisite(s): CSES 3114
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: GEOS 3624

CSES 3144 - Soil Description and Interpretation (3 credits)
Describing, classifying, evaluating, and interpreting soil and site properties in the class and field. Local field trips supplement lecture and laboratory studies. Required for students interested in attending soil judging contests.
Corequisite(s): CSES 3114, CSES 3124
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

CSES 3304 - Geomorphology (3 credits)
Examines the variety of landforms that exist at the earths surface. Detailed investigation of major processes operating at the earths surface including: tectonic, weathering, fluvial, coastal, eolian, and glacial processes. Field excursion.
Prerequisite(s): GEOG 1104 or GEOS 1004 or GEOS 2104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 3304, GEOS 3304

CSES 3564 - Golf and Sports Turf Management (3 credits)
Principles of turfgrass science and culture required for successful establishment and management of intensely utilized fine golf and sports turf surfaces. Pre: CSES 3564 or equivalent turfgrass science fundamentals course from transfer institution.
Prerequisite(s): CSES 2564
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 3614 - Soil Physical and Hydrological Properties (3 credits)
Soil physical and mechanical properties and the physical processes controlling soil water retention and flow in agronomic and natural settings. Grain size distribution, weight-volume relationships, specific surface, electrical charge density, consistency, stress, compaction, rainfall runoff, water retention, steady/non-steady water flow in saturated/unsaturated soil, infiltration, bare soil evaporation, and soil water balance.
Prerequisite(s): (CSES 3114 and CSES 3124) or (GEOS 3614 and GEOS 3624)
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

CSES 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CSES 4064 - Soil Microbiology (3 credits)
Soil microbes as determinants of plant growth, sustainable agricultural systems, and global nutrient cycles. Environmental controls of soil microbes and relationship to soil decomposition. Soil as a micro-habitat. Application to soil management and plant growth, plant-microbe mutualisms, probiotics, biocontrol, composting, ecosystem restoration, and disease suppression.
Prerequisite(s): BIOL 1105 and (CSES 3114 or ENSC 3114 or GEOS 3614) or (CSES 3134 or ENSC 3134)
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 4134 - Soil Genesis and Classification (3 credits)
Formation of soils across landscapes, soil-forming factors and processes, applied soil geology/geomorphology, applied soil biochemistry, soil hydrology, diagnostic horizons and characteristics used in Soil Taxonomy; soil classification and mapping. Three outdoor lectures and one 3-day field trip are mandatory.
Prerequisite(s): (CSES 3114 and CSES 3124) or (ENSC 3114 and ENSC 3124) or (GEOS 3614 and GEOS 3624) or CSES 3134 or ENSC 3134
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

CSES 4144 - Plant Breeding and Genetics (3 credits)
Genetic variation in plants and its importance in plant breeding, and comparisons of theories and procedures in breeding of self-pollinated versus cross-pollinated plants.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

CSES 4174 - Soil Evaluation and Sampling (3 credits)
Naming, describing, classifying, sampling, and interpreting soil and site properties in the field to assess environmental impacts and suitability under specific land use scenarios. Selecting and evaluating sites of representative soil resources across the landscape using accepted professional protocols, simulating workplace responsibilities and performance. Local and regional field trips and sampling projects provide professional skill development evaluated by practitioners and potential employers.
Prerequisite(s): CSES 3114 or CSES 3144
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

CSES 4214 - Soil Fertility and Management (3 credits)
Soil productivity and nutrients required for crop growth; fertilizer sources and nutrient reactions in soil; methods of fertilizer nutrient placement in major tillage systems; and interpretation of soil tests and plant analyses for determining crop nutrient requirements.
Prerequisite(s): CSES 3114 or CSES 3134
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 4224 - Applied Concepts in Precision Agriculture (3 credits)
Advanced applications of core components and technologies used for integrated plant and environmental studies. Global Navigation Satellite Systems (GNSS), remote sensing technologies, Geographic Information Systems (GIS), soil sampling, yield monitoring, and analysis and decision-making systems applied for site specific management of production agriculture resources.
Prerequisite(s): CSES 2224
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 4234 - Agro Data Integration (3 credits)
Data science applications in the agricultural sciences. Data pipelines and modern Linux, cluster and cloud-based computing environments. Command line interface and shell scripting. Programming and data processing in Python programming language. Data analysis and visualization in R programming language. Agronomic data analysis and data mining.
Prerequisite(s): CSES 2224 and CS 1014
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 4324 - Water Quality Laboratory (1 credit)
Teach students a variety of laboratory chemical and biological techniques for water quality analysis. Complementary to ENSC/CSES 4314.
Prerequisite(s): CHEM 1046
Corequisite(s): CSES 4314, ENSC 4314
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: ENSC 4324

CSES 4334 - Principles and Practice of Agroforestry (3 credits)
Biological, social, economic, and technical aspects of agroforestry, training and technology transfer techniques, and application of forestry and agriculture principles. Roles of animals and fish, trees, and agricultural crops in agroforestry systems. Community involvement in planning and implementation of agroforestry projects.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 4334

CSES 4344 - Crop Physiology and Ecology (3 credits)
Developmental and ecological processes important in cropping situations: seed physiology, root and canopy development, flowering, water stress, energy flow, competition; emphasis on physiological adaptations, limitations to yield, and yield-optimizing strategies.
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 4354 - Advanced Agronomic Crops (3 credits)
Survey of major agronomic crops grown in the Eastern US and their production including: corn, soybean, wheat, barley, cotton, peanut, tobacco and alfalfa. Covers impact of environmental conditions and management on crops, resource requirements for productivity, and effects on soil resources.
Prerequisite(s): CSES 2444
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 4444 - Managed Ecosystems, Ecosystem Services, and Sustainability (3 credits)
Description and interactions of climate, soils, and organisms within intensively managed ecosystems used to produce food, fiber, bioenergy, fresh water, recreation, cultural, and other ecosystems services essential for human well-being. Ecological concepts applied to agricultural, grassland, and urban/turf ecosystems. Ecologically-based principles for sustainably managed ecosystems. Regional and global significance of managed ecosystems in context of sustainable food systems, and the Millennium Ecosystem Assessment. Pre-Requisite: Junior Standing required.
Prerequisite(s): CSES 3114 or CSES 3134
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENSC 4444

CSES 4524 - Drone Applications in Ag Systems (3 credits)
Unmanned Aerial Systems (UAS) or drones as an advanced remotely sensed technology to collect ultra-high spatial resolution images. Components of drones and sensors. UAS operational concepts, and legal requirements, principles of drone data collection and drone platforms. Overview of data processing software and generation of land maps from drone photogrammetry. Image analysis to make recommendations for water, nutrient and pesticide applications.
Prerequisite(s): CSES 2224
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 4534 - Internet of Things (IoT) for Smart Farming (3 credits)
Internet of Things (IoT) technology in the plant and environmental sciences and applications to smart-farming ecosystems and agricultural industry. IoT platforms and systems used in smart farming programs related to field equipment management, IoT components, data management, and cybersecurity. Applying wireless sensors, controllers, computers, actuators, and software via wireless network devices.
Prerequisite(s): CSES 2224
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 4544 - Forage Crop Ecology (3 credits)
Species adaptation interrelated with soil, climatic, and biotic factors as associated with establishment, production, utilization, and nutritional value of forages.
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 4644 - Land-based Systems for Waste Treatment (3 credits)
Soils as a medium for waste treatment; potential for environmental degradation from biologicals and chemicals added to soils; development of land-based treatment and utilization systems for solid and liquid wastes; issues and concerns relating to large-scale applications of municipal and industrial wastes to land.
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 4854 - Wetland Soils and Mitigation (3 credits)
Wetland soils as components of natural landscapes: biogeochemistry, hydrology, geomorphology, hydric soil indicators, and wetlands functions under various land uses. Soil and hydrologic factors important to wetland delineation and jurisdictional determination. Mitigation of wetland impacts with emphasis on restoration and creation. Outdoor lectures at local wetlands and a two-day long field trip to observe and identify wetland soils are mandatory.
Prerequisite(s): (CSES 3114 and CSES 3124) or (ENSC 3114 and ENSC 3124) or (GEOS 3614 and GEOS 3624) or CSES 3134 or ENSC 3134
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

CSES 4864 - Capstone: Crop & Soil Sciences (3 credits)
Experiential and discussion-based learning that utilizes prior knowledge gained in the major to synthesize information, and prepare a written comprehensive work plan that is defended orally. Review available careers in the crop and soil sciences. Compose and critique resumes and cover letters. CSS majors only. Pre: Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CSES 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CSES 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CSES 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CSES 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Dairy Science (DASC)

DASC 1464 - Dairy Cattle Handling (1 credit)
Safety in dairy cattle handling; animal behavior; care, housing, and managerial practices related to dairy cattle. Experiential activities. Herding, sorting, halter training, health scoring, and milking.
Instructional Contact Hours: (3 Lab, 1 Crd)

DASC 1574 - Dairy Science First Year Experience (1 credit)
The scope of the dairy science undergraduate program, preparation for careers in dairy and related industries. Hands-on experience working with dairy cattle. Inquiry, problem solving, and integration of ideas and experiences with a focus on the dairy industry.
Instructional Contact Hours: (1 Lec, 1 Crd)

DASC 2204 - Entrepreneurship in Animal Agriculture (3 credits)
Impact of animal entrepreneurship on the US agricultural economy. Innovative products and services for the dairy and livestock industries. Strategic planning, human resources, production scheduling, marketing, and financial management for animal enterprises. Capital acquisition. Sensitivity analysis for key planning assumptions. Contingency planning and risk management. Identification of non-traditional career paths in the animal industry. Pre: Sophomore Standing.
Prerequisite(s): AAEC 1005
Instructional Contact Hours: (3 Lec, 3 Crd)

DASC 2474 - Dairy Science and Industry (3 credits)
Sustainable production, processing, and marketing of milk and milk products domestically and globally. Biology of dairy cattle with emphasis on genetics, reproduction, lactation, and nutrition. Management of dairy herds.
Instructional Contact Hours: (3 Lec, 3 Crd)

DASC 2484 - Dairy Cattle Evaluation (2 credits)
Critical appraisal of dairy cattle conformation and experience in linear trait scoring, linear trait relationships to profitability, competitive judging; written and oral justification; organization and conduct of shows and contests; showmanship. II.
Instructional Contact Hours: (6 Lab, 2 Crd)

DASC 2664 - Professional Discourse and Career Development (1 credit)
Emphasis on writing and speaking skills for livestock industry or post-baccalaureate education. Self-marketing, job acquisition, press relations, and conduct of meetings and labor management techniques.
Instructional Contact Hours: (1 Lec, 1 Crd)

DASC 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

DASC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

DASC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

DASC 3134 - Animal Agriculture and the Environment (3 credits)
Environmental issue associated with animal agriculture. Nutrient contamination of water resources, odor emission from livestock farms, environmental regulations affecting animal agriculture, and management practices to reduce the impacts of livestock farms on air and water quality.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APSC 3134

DASC 3274 - Applied Dairy Cattle Nutrition (3 credits)
Application of basic principles of nutrition in developing rations for dairy herds. Emphasis is placed on appropriate use of forages, ration formulation techniques, development of profitable rations, and ration delivery.
Corequisite(s): ALS 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

DASC 3474 - Dairy Information Systems (3 credits)
Development, function, and use of dairy information systems including computerized performance testing programs for dairy cattle improvement and dairy herd management. Dairy management software applications. Precision dairy farming. Whole herd evaluation. Pre: Junior standing.
Prerequisite(s): DASC 2474
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

DASC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

DASC 4174 - Applied Dairy Cattle Genetics (3 credits)
Application of genetic principles to dairy cattle improvement. Setting goals for genetic improvement, characteristics of traits included in selection, current methods of estimating breeding values, the role of artificial insemination and breed associations in genetic improvement, cattle genetics.
Prerequisite(s): ALS 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

DASC 4274 - Dairy Ration Formulation (1 credit)
Develop entry level professional animal nutritionist skills; use customer and feed databases, use optimization algorithms to formulate least cost diets and feed mixes, simultaneous consideration of diet cost, animal product return, and environmental constraints; further develop intergrative thinking and problem solving skills.
Corequisite(s): DASC 3274
Instructional Contact Hours: (0 Lec, 3 Lab, 1 Crd)

DASC 4304 - Principles and Practices of Bovine Reproduction (2 credits)
Principles and techniques in reproductive physiology and herd management related to health, record keeping, estrus detection and synchronization, and ultrasonography. Ovarian function and superovulation, semen handling, artificial insemination and pregnancy detection are also considered.
Prerequisite(s): ALS 2304
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)
Course Crosslist: APSC 4304

DASC 4374 - Physiology of Lactation (3 credits)
Anatomy of the mammary gland and physiology of lactation in domestic and laboratory mammals with emphasis on dairy cattle. Mammary gland health and factors affecting lactation. Principles and techniques in dairy herd milking management.
Prerequisite(s): ALS 2304
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

DASC 4384 - Mammary Immunology (3 credits)
This course is designed to provide students with basic knowledge of immunology as related to diseases of the mammary gland. Concepts of mammary gland immunity, disease etiology, immunopathology, diagnosis and therapy will be covered with a focus on ungulate species. Host pathogen interactions, solving problems, writing intensive, literature search.
Prerequisite(s): ALS 2304 and ENGL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

DASC 4474 - Advanced Dairy Management Evaluation (2 credits)
Students will learn to critically evaluate all aspects of dairy farm management on working farms. The assessment and recommendations will be developed using information gathered from herd production records and financial statements, visual observations at the farm, and an interview of the farm owner and workers. Data assessed will include milk, growth, health, reproduction, and culling records; cash flow and profit loss statements; nutrition and nutrient management records; and labor management structure. The assessments and reports will further develop integrative thinking, oral communication, and written communication skills.
Prerequisite(s): DASC 3474 and ALS 3204 and ALS 3304
Corequisite(s): DASC 4475
Instructional Contact Hours: (6 Lec, 0 Lab, 2 Crd)

DASC 4475 - Dairy Enterprise Management (3 credits)
Decision strategies for modern dairy businesses. 4475: Emphasis on relationships of enterprises and techniques for evaluation of business alternatives, efficiency of production, and profit. Use of microcomputer software to support management decisions. 4476: Concentration on herd replacements, personnel, facilities and issues of management associated with rapidly changing national and international markets, environmental regulations, and computer applications. Group projects and hands-on management of university dairy herd.
Prerequisite(s): DASC 2474
Instructional Contact Hours: (3 Lec, 3 Crd)

DASC 4476 - Dairy Enterprise Management (3 credits)
Decision strategies for modern dairy businesses. 4475: Emphasis on relationships of enterprises and techniques for evaluation of business alternatives, efficiency of production, and profit. Use of microcomputer software to support management decision. 4476: Concentration on herd replacements, personnel, facilities and issues of management associated with rapidly changing national and international markets, environmental regulations, and computer applications. Group projects and hands-on management of university dairy herd. Pre-requisite may be waived with permission of instructor.
Prerequisite(s): (DASC 4475 or AAEC 3454) and DASC 3474
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

DASC 4664 - Translating Dairy Science (1 credit)
Analysis and interpretation of peer-reviewed literature in dairy science. Focus on dairy industry issues discussed in social media. Critical reasoning, information synthesis, and oral and written discourse. Paper presentations and discussion. Pre: Senior Standing
Prerequisite(s): DASC 2664
Instructional Contact Hours: (1 Lec, 1 Crd)

DASC 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

DASC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

DASC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

DASC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Dance (DANC)

DANC 2004 - Anatomy for Performers (3 credits)
An experiential course merging the artistic, experiential, and conceptual understanding of the human body, and how all of its elements work together to produce motion and the sense of being. Study of the anatomical structures of the body through an experiential lens of motion and sensory perception. Introduction of the concepts of kinesiology through the study of bone, joint, tissue, muscular, and organ structures. Emphasis on holistic perspectives of the body through active listening, ethical reasoning, healthy self-image, and attention to practices of equitable embodied identity. Lecture, demonstration, and experience-based partnering work that draw from a variety of somatic traditions including yoga, pilates, Body-Mind Centering, release technique, Alexander and Feldenkrais techniques, Gyrotonic/Gyrokinesis, and mediation. Designed for performers in the arts, athletes, martial artists, or any students wishing to study the body from an experiential lens.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

DANC 2014 - Introduction to Dance History (3 credits)
Survey of dance history as an art form with global scope. Language of dance criticism and dance writing practices. International dance forms and the emergence and development of 20th and 21st century modern and post-modern concert dance in the United States from the confluence of European folk and court dances, ballet, African and Caribbean influences, and other American cultural dynamics. Emphasis on ethical and aesthetic modes of viewing dance performance with attention to issues of gender and sexuality, race and ethnicity, ability, class, and identity.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 7 Identity & Equity in U.S., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

DANC 2024 - Introduction to Dance Techniques (3 credits)
Beginner-level studio dance course. Introduction of movement techniques, improvisation/composition, performance, experiential anatomy, and an overview to concepts in dance history. Development of flexibility, strength, coordination, rhythm, and vocabulary in the modern idiom. Concepts of time, space, energy, and choreographic form presented through set movement exercises, improvisation, and a final compositional project. Training in a variety of movement vocabularies including modern/contemporary, ballet, and cultural dance forms. May be repeated once with different content for a maximum of 6 credits. Design Lab/Studio.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (5 Lab, 3 Crd)
Repeatability: up to 6 credit hours

DANC 2104 - Moving Body, Moving Mind (3 credits)
Methods of working intentionally towards cultivating optimal brain states. Mind/body practices to develop connections between contemporary neuroscience, movement, and meditative practices. Studies in the intersection of consciousness, movement, and thought. Introduction to yoga, meditation, authentic movement, experiential anatomy, and somatic work. Emphasis on holistic perspectives of the body through active listening, ethical reasoning, healthy self-image, and attention to the practices of intentional embodiment.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HNFE 2104

DANC 3024 - Intermediate/Advanced Dance Techniques (3 credits)
Intermediate/advanced level course in movement techniques. Training in a variety of movement vocabularies including modern/contemporary, ballet, and cultural dance forms. Improvisation/composition, performance, concepts in anatomy/kinesiology, and 21st century contemporary dance forms. Development of flexibility, strength, coordination, rhythm, vocabulary in the modern idiom, and focused study of partnering concepts from a variety of hybrid forms. Concepts of time, space, energy, and choreographic form presented through set movement exercises and two compositional projects. May be repeated 3 times with different content for a maximum of 9 credits. Design/Lab Studio.
Prerequisite(s): DANC 2024
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (5 Lab, 3 Crd)
Repeatability: up to 9 credit hours

Economics (ECON)

ECON 1004 - First Year Experience Seminar (1 credit)
The course focuses on supporting first-year students and first-semester transfer students to build relationships with faculty, upper class mentors, and each other to prepare them to enter a more significantly diverse and interdisciplinary dependent community. The course also focuses on building skills for students to create personal, academic, and career goals. The course also focuses on resume building opportunities for internships, research experiences, and graduate school.
Instructional Contact Hours: (1 Lec, 1 Crd)

ECON 1104 - Economics of Gender (3 credits)
Economic approach to the causes and consequences of male/female gender differences in economic outcomes. Tools in microeconomic analysis and empirical work. Woman, family choices and labor markets. Gender gap in earnings. Employment and wage policies related to women.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 1204 - Economics of Race (3 credits)
Causes and consequences of racial disparities in economic outcomes including education, health, housing, entrepreneurship, and earnings. Tools in microeconomics and statistics as applied to the study of racial issues. Historical and institutional contexts of racial problems. Change in racial gaps across generations. Impact of public policies to address racial discrimination in labor markets. Does not count toward ECON major.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 1214 - Economic History of Diversity and Inclusion (3 credits)
Economic analysis of topics concerning diversity and inclusion. Emphasis on Virginia and surrounding states. Introduction to the basic principles of economic analysis and economic history, with a special emphasis on models of institutional change, economic growth, discrimination, inequality, migration, and indigenous economic systems. Impact of institutions, environment, and technological change on labor markets, asset markets, and standard of living. Consideration of the role of data in understanding diversity and related ethical issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PPE 1214

ECON 2005 - Principles of Economics (3 credits)
2005: Introduction to microeconomics. The economic approach to decision-making. Model of supply and demand. Elasticities. Consumer behavior. Firm behavior under varying industry structures. Sources and consequences of market failure. Costs and benefits of international trade. The role of government in the economy. Economic, ethical, and social ramifications of issues such as pollution, missing information, and income inequality. 2006: Introduction to macroeconomics. The measurement of economic activity. Macroeconomic problems (such as unemployment and inflation). The monetary system. Effects and limitations of monetary and fiscal policies. International economics. Social and ethical issues related to macroeconomic policy.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 2006 - Principles of Economics (3 credits)
2005: Introduction to microeconomics. The economic approach to decision-making. Model of supply and demand. Elasticities. Consumer behavior. Firm behavior under varying industry structures. Sources and consequences of market failure. Costs and benefits of international trade. The role of government in the economy. Economic, ethical, and social ramifications of issues such as pollution, missing information, and income inequality. 2006: Introduction to macroeconomics. The measurement of economic activity. Macroeconomic problems (such as unemployment and inflation). The monetary system. Effects and limitations of monetary and fiscal policies. International economics. Social and ethical issues related to macroeconomic policy.
Prerequisite(s): ECON 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 2025H - Honors Principles of Economics (3 credits)
2025H: Microeconomics. Consumer behavior and demand, firm behavior and supply, price determination and market equilibrium under varying industry structure. Applications to labor and financial markets. 2026H: Macroeconomics. Measuring aggregate economic activity, macroeconomic problems (such as unemployment and inflation), the monetary system, effects and limitations of monetary and fiscal policies.
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 2026H - Honors Principles of Economics (3 credits)
2025H: Microeconomics. Consumer behavior and demand, firm behavior and supply, price determination and market equilibrium under varying industry structure. Applications to labor and financial markets. 2026H: Macroeconomics. Measuring aggregate economics activity, macroeconomic problems (such as unemployment and inflation), the monetary systems, effects and limitations of monetary and fiscal policies.
Prerequisite(s): ECON 2025H
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

ECON 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 3004 - Contemporary Economic Issues (3 credits)
The economic analysis of current issues and problems. This course may be repeated with different topic.
Prerequisite(s): (ECON 2005 or ECON 2025H) and (ECON 2006 or ECON 2026H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3024 - Economic Justice (3 credits)
This course explores how different assumptions regarding the basis of claims for access to economic resources lead to different outcomes. Students will explore a variety of theories and examine their own beliefs about economic justice.
Prerequisite(s): (ECON 2005 or ECON 2025H) and (ECON 2006 or ECON 2026H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PPE 3024

ECON 3034 - Economics of Poverty and Discrimination (3 credits)
Poverty and inequality in the United States and around the world. Sources of poverty. Antipoverty policies. Definition, empirical evidence, and causes of discrimination. Emphasis on ethical human behavior and policy analysis.
Prerequisite(s): ECON 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3054 - Introduction to Forecasting (3 credits)
Provides an introduction to data-driven forecasting, with applications in economics and in other disciplines - e.g., political science and climatology. Specification, estimation, and validation of time-series regression models; ethical issues arising in model specification and estimation. Forecasting theory and evaluation.
Prerequisite(s): STAT 3005 or BIT 2405
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3104 - Microeconomic Theory (3 credits)
Theories of demand, production, perfectly and imperfectly competitive price determination, and general market equilibrium. Analytic applications.
Prerequisite(s): ECON 2005 and (MATH 1225 and MATH 1226) or ECON 2005 and (MATH 1025 and MATH 1026)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3134 - Choice and Behavior (3 credits)
Theories of rational choice, utility, and revealed preference. Intertemporal decision problems and choice under uncertainty with applications to insurance and investments. Behavioral regularities and evidence of violations of rational choice theory. Behavioral models that accommodate this behavior. Applications of behavioral models to economic problems, ethical questions, policy, and organization design. Pre: Sophomore standing.
Prerequisite(s): ECON 2005 or BDS 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BDS 3134

ECON 3144 - Economics of Regulation (3 credits)
Economics of regulation with a focus on U.S. laws and institutions. Market structures, mergers, antitrust laws, and anticompetitive behavior, including collusion and monopolization. Economic regulation of price, entry, and output. Incentive regulation and alternatives to regulation. Valuing life and other nonmonetary benefits. Regulation of health, safety, and the environment.
Prerequisite(s): ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3154 - Managerial Economics (3 credits)
Applications of economic concepts and models to practical issues. Demand analysis, the law of demand, and different approaches to analyzing consumer behavior (elasticity, consumer surplus, and utility theory). Supply analysis, producer behavior, and theories of firms (diminishing returns, price takers and price searchers). Pricing strategies including segmentation, two-part tariffs, collusion, and predatory pricing. Market imperfections and extensions including signaling, adverse selection, network externalities, and the economics of time. Empirical analysis: formulating economic questions, finding and analyzing relevant data, and presenting findings to non-specialists.
Prerequisite(s): ECON 2006 or BDS 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3204 - Macroeconomic Theory (3 credits)
Theories of the determination of the level of aggregate economy-wide activity. Employment, the price level, aggregate national income, and the interest rate. The roles of money and expectations.
Prerequisite(s): (ECON 2006 or ECON 2026H) and (ECON 3104 or ECON 2025H) and (MATH 1226 or MATH 1526 or MATH 1026)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3214 - Money and Banking (3 credits)
Money and credit. The U.S. monetary system. Monetary theory, monetary policy and economic stabilization.
Prerequisite(s): (ECON 2005 or ECON 2025H) and ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3254 - Analysis of Economic Data (3 credits)
Sources of economic data. Application of spreadsheet and/or statistical software to analysis of economic relationships using graphical and regression techniques. Emphasis is on economic applications rather than statistical theory.
Prerequisite(s): STAT 3005 or STAT 3604 or STAT 3615 or STAT 4604 or STAT 4705 or STAT 4714 or CMDA 2006 or BIT 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3314 - Middle East Economics (3 credits)
Introduction to the economies of the Middle East and North Africa. Application of economic analysis to economic history and modern economic growth of the region. Historical role of a strong state and Islam in shaping the institutions of private property in Middle Eastern societies. The market for oil and the integration of the region into the global economy. The modern economy of the Middle East with focus on human capital development, inequality, and the role of women.
Prerequisite(s): ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3884 - Topics in Philosophy, Politics, and Economics (3 credits)
Topics-based course in philosophy, politics, and economics (PPE). Discussion of important topics and thinkers in PPE with historical and practical relevance. Focus on interdisciplinary analysis and methods. Topics include: limits of markets; well-being theory, science, and policy; socioeconomic justice; economic and political institutions; and global poverty. May be repeated 1 time with different content for a maximum of six credits hours. Pre: 3 credit hours in PPE, PHIL, PSCI, or ECON.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: PHIL 3884, PPE 3884, PSCI 3884

ECON 3914 - European Economics (3 credits)
Microeconomics, macroeconomics and economic policies of the European Union. EU economic law, institutions, decision-making, and budgeting. Historic and current influences on regional economic development. Monetary and fiscal policies. Economic research methods, analysis, and reporting.
Prerequisite(s): ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3914, PSCI 3914

ECON 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 4014 - Environmental Economics (3 credits)
Economic dimensions and aspects of programs designed to impose quality controls upon the environment. Special emphasis on problems of controlling air and water pollution.
Prerequisite(s): ECON 2005 or ECON 2025H
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4044 - Public Economics (3 credits)
Economic rationale of the public sector. Proper size and functions of government. Market failure, Cost-benefit analysis, public goods provision. Pricing of public enterprise services.
Prerequisite(s): ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4054 - Public Finance (3 credits)
The structure and incidence of taxation in the U.S. Effects of taxes on incentives and economic efficiency. Tax Policy.
Prerequisite(s): ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4074 - Labor Economics (3 credits)
Human capital theory, labor supply and demand, discrimination, effects of labor unions and collective bargaining, wage differentials, income distribution.
Prerequisite(s): (ECON 2005 or ECON 2025H) and (ECON 3254 or ECON 4304)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4084 - Industry Structure (3 credits)
The structure and performance of American industry. Dimensions and measures of market structure. Factors affecting market structure. The relationship between structure and performance. Purpose and effects of antitrust policy, regulation, and other public policies toward industry.
Prerequisite(s): ECON 3104 or ECON 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4124 - Growth and Development (3 credits)
Theories of economic growth. Policies to foster growth, and their consequences.
Prerequisite(s): ECON 2006 and (ECON 2025H or ECON 3104)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4135 - International Economics (3 credits)
4135 International Trade: Factor mobility and commercial policy (tariffs, quotas, export licensing). 4136 International Finance: Liquidity, exchange rates, comparative international living standards, foreign aid.
Prerequisite(s): ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AAEC 4135

ECON 4136 - International Economics (3 credits)
4135 International Trade: Factor mobility and commercial policy (tariffs, quotas, export licensing). 4136 International Finance: Liquidity, exchange rates, comparative international living standards, foreign aid.
Prerequisite(s): ECON 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4144 - Economics of China (3 credits)
Evolution of the Chinese economy since 1949. Exposition of alternative economic systems, the commune, incentive problems, and state owned enterprises. Analysis of recent reforms and their effects on economic efficiency; and key issues of economic transition related to Russia and other East European countries.
Prerequisite(s): ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4214 - Economics of Health Care (3 credits)
Effects of medical care on health; cost and production of medical care; demand for medical care and its financing; structure of the health care industry; reorganization for efficiency.
Prerequisite(s): ECON 2005 or ECON 2025H
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4304 - Introduction to Econometric Methods (3 credits)
An introduction to econometric modeling techniques, including regression methods. Particular emphasis on the special problems posed by economic data.
Prerequisite(s): ECON 3254 or STAT 3005 or STAT 4604 or STAT 4705 or STAT 4714 or CMDA 2006
Corequisite(s): ECON 3104, ECON 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4314 - Big Data Economics (3 credits)
Applied econometrics dealing with big data. Theoretical, computational, and statistical underpinnings of big data analysis. The use of econometric models and deep machine learning algorithms to analyze the high-dimensional data sets. Implications in research focusing on economic questions that arise from rapid changes in data availability and computational technology. Materials are hands-on tutorials that come with Python codes and real-world data sets.
Prerequisite(s): ECON 3254 or ECON 4304 or CMDA 3654 or STAT 3006
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 4314

ECON 4404 - Economics of Organizations (3 credits)
Economic theories of organization, with specific attention to their internal structure, and to design of incentive systems. Application to mergers, to the relationship between stockholders and managers, etc. Students with one year of economics, calculus and major in some other social science, by permission of the instructor.
Prerequisite(s): ECON 3104 or ECON 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4424 - The Theory of Games and Economic Behavior (3 credits)
Introduction to games and solution concepts, such as prisoners dilemma, noncooperative equilibrium and Nashs bargaining solution. These concepts are applied in analyzing economic problems including bargaining problems, oligopoly and agency.
Prerequisite(s): ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4434 - Experimental Economics (3 credits)
This is a course in the use of laboratory methods to study behavior in economics and the social sciences. Students will study state-of-the-art methodology in experimental economics, including experimental design, laboratory technique, financial incentives, and analysis of data. Students will participate in, design, and conduct experiments in bargaining, auctions, asset markets, public goods and commons situations, and risky decision-making.
Prerequisite(s): ECON 3104 and (BIT 2406 or MSCI 2406 or STAT 2004 or STAT 3005)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4454 - Neuroeconomics (3 credits)
Neural processes related to reward, learning, reflection, delay of gratification, and social interaction. Clinical uses of neuroeconomics research techniques. Implications of neuroeconomics in economics, policy, law and business.
Prerequisite(s): NEUR 2026 or ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NEUR 4454, PSYC 4454

ECON 4514 - Applied Analysis of Banking and Financial Markets (3 credits)
Analysis of economic data with focus on understanding of decision-making in financial markets. Behavior of and optimal outcomes for individuals (consumption, savings, and investment), financial institutions (lending, borrowing, and risk management), regulators, and policy makers. Statistical tools and inference using recent data sets.
Prerequisite(s): ECON 3254 or ECON 4304
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4614 - R Programming in Economics (3 credits)
Using R to combine economic theory and data. Focus on general R programming fundamentals related to data science techniques and economic data (gathering, standardizing and cleaning, analysis, and visualization). Hands-on experience with a variety of data, data sources, and techniques within R. Flaws and limitations of data. Direct application with individual project combining economic theory and data using R.
Prerequisite(s): ECON 2005 and (ECON 3254 or ECON 4304)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4754 - Internship (1-3 credits)
Qualified students are placed in an industry or government position under the combined supervision of a faculty member and a responsible supervisor in the employing agency. Satisfactory evaluation from employer, detailed reports on the internship experience and a specific project will be required of each intern. Pre: Junior standing, QCA of 2.50 or better and consent.
Prerequisite(s): (ECON 2005 or ECON 2025H) and (ECON 2006 or ECON 2026H)
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

ECON 4864 - Developing Behavioral Science Policies and Interventions (3 credits)
Senior-level capstone course to apply theories and models from behavioral decision science to real world problems on topics from education, organizations, health, crime, environment, and volunteerism. Utilize behavioral science theories, data and analytical frameworks from research papers to define and analyze problems or unintended consequences resulting from individual decision-making. Emphasis on identifying specific problems, formulating behavioral policies or interventions to improve performance, and designing experiments and randomized controlled trials to test their effectiveness.
Prerequisite(s): BDS 3134 or ECON 3134
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BDS 4864

ECON 4894 - Law and Economics (3 credits)
Analysis of the economic effects of legal rules, with emphasis on the law of property, contract, liability, and land use.
Prerequisite(s): ECON 2005
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

ECON 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Education, Counseling (EDCO)

EDCO 2004 - Healthy Relationships: Understanding Self and Others (3 credits)
Basic concepts, skills, and theory associated with creating and sustaining healthy relationships in social and professional settings. Self-awareness as it relates to relationship-building. Characteristics and identities of self and others as they relate to relationship-building. Relationship-building skills such as active listening, perspective taking, and empathy.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCO 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Education, Curriculum and Instruction (EDCI)

EDCI 1004 - Introduction to Teacher Education and Licensure (1 credit)
Introduction to the School of Education and teacher education program including majors that lead to teacher licensure, education career exploration, curriculum requirements of licensure programs, and state licensure regulations. Review of academic skills, university programs, and services that support students and promote student development.
Instructional Contact Hours: (1 Lec, 1 Crd)

EDCI 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCI 2004 - Exploring the Teaching Profession- Field Studies in Education (3 credits)
Experiential learning,10 hours per week, in a classroom setting, public or private, exposing students to knowledge, skills, and dispositions of professional educators. Allows for integration of experiential and course-based learning in professional identity formation and classroom management. Introduces students to concepts and terminology necessary for upperlevel educator preparation courses.
Prerequisite(s): EDCI 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 2414 - Design Based Biotechnical Learning (3 credits)
STEM disciplinary content and practice. Design, construction, evaluate, and iterate working biotechnical prototype solutions addressing authentic human needs. Ethical decision-making based on technological solutions appropriate for local and/or global communities.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 2464 - Foundations of Social Studies Education (3 credits)
Introduction to social studies and the study of the social world in all its complexity including the interactions between people, cultures, societies, systems, and ways of being in the world. Exploration of what social studies encompasses, including its purposes and foundational concepts to provide a content-based foundation for future social studies teachers in history, geography, civics, and economics.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 2574 - Social Foundations of Education (3 credits)
History, purpose, and social contexts of education and the PK 12 public education system in the US. Diversity and culturally sensitive approaches to education. Historical, philosophical, social, cultural, and political factors that influence teachers roles and responsibilities and educational practice.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 2614 - The Reading Mind: Learning to read (3 credits)
Survey of theories and research that explain how people learn to read. Brief overview of English written systems. Models of skilled reading, literacy stages, and component processes (e.g., decoding, comprehension). Application of course concepts to self, common myths, media, and products. Analysis of patterns of inequity in reading achievement.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 2674 - Language, Culture, and Learning (3 credits)
This course explores connections between language, culture, and learning. Emphasis on recognizing and critically examining ways that diversity of cultural contexts and social identities influence learning, and challenging students to consider ethical responsibilities in supporting and participating in an equitable society.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 2984 - Special Study (1-19 credits)
Repeatable with different course content.
Instructional Contact Hours: Variable credit course
Repeatability: up to 99 credit hours

EDCI 3004 - Pre-Education Seminar (1-6 credits)
Experiential learning in a PreK through 12th grade setting, public or private, exposing students to knowledge, skills, and dispositions of professional educators. Allows for integration of experiential and course-based learning in professional identity formation and exploration of education careers. NOT student teaching. May be repeated for elective credit up to a maximum of 12 credit hours. Pre: Junior standing.
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)
Repeatability: up to 12 credit hours

EDCI 3024 - Issues of Schooling in the United States (3 credits)
Exploration of U.S. education, purposes, and roles. Impacts of historic, social, political, economic, religious, cultural, global, and curricular issues. Analysis of equal educational opportunity. Role of the teaching profession in educational reforms.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3074 - Elementary Curriculum: Methods in Teaching (3 credits)
Instructional approaches in elementary education curriculum with a focus on: family engagement, collaboration, teaching strategies, behavior and classroom management, assessment, and differentiation. Design and implementation of lesson plans for elementary school students. Professional educator standards.
Corequisite(s): EDCI 3964
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3144 - Education of Exceptional Learners (3 credits)
Introduction to the historical, ethical, legal, and economic models relevant to understanding students with disabilities and meeting their needs to increase their potential for success throughout their lives. Addresses research in early intervention, K-12 instruction, post-secondary education, and transition into work settings.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HD 3144

EDCI 3234 - Foundations of Reading Instruction (PK-6) (3 credits)
Theoretical, practical, and research-based foundations in the science of reading instruction for grades PK-6. Phonics, phonological awareness, fluency, vocabulary, and comprehension instruction. Assessment-informed instruction, classroom organization, reader-text matching.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3244 - Curriculum and Instruction in Elementary Mathematics, PK-3 (3 credits)
Key concepts in curriculum and instruction in grades PK-3 mathematics: mathematical thinking, number and number sense, computation and estimation, geometry and measurement, mathematical discourse within elementary classrooms, teaching methods in grades PK-3, and the role of mental arithmetic. Teaching mathematics through problem solving, reasoning, and communication to support the learning process for all elementary students.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3254 - Elementary Methods in Science (3 credits)
Study and analysis of approaches to elementary science instruction; assessment for learning; instructional design and methods; content integration in lesson plans; inquiry based science investigations; planning science investigations; needs of students; and inclusiveness of learners.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3334 - Teaching Language Arts in the Elementary Classroom (4 credits)
Implementation and assessment of curriculum and instruction in elementary language arts. The six focus areas of writing, speaking, listening, reading, visual representation, and viewing are the core components and the role of childrens literature in language learning.
Instructional Contact Hours: (4 Lec, 4 Crd)

EDCI 3354 - STEM in Elementary Schools (3 credits)
STEM education for pre-service elementary education teachers. Equity in elementary science education. Inquiry as a process in society. Integration of inquiry-based practices and engineering design. STEM activities that mirror real-world problem solving and innovation. Next Generation Science and VDOE standards and engineering models, including 5E Instructional Model, in instructional design.
Prerequisite(s): EDCI 3254
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3464 - Elementary Social Studies Teaching Methods (3 credits)
Emphasizes foundational concepts of curriculum in Social Studies for preservice teachers to effectively utilize state and federal standards to guide instructional strategies and assessments in the elementary classroom (PK-6). Functions of Virginia state and local governments. Exploration of alternative approaches with instructional strategies.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3474 - Assessment and Diagnosis in Elementary Mathematics Classroom (3 credits)
Research in assessment and diagnosis in PK-5 mathematics classroom. Comparison of evaluation and assessment methods and development of assessment models appropriate for use in PK-5 mathematics classrooms. This course involves the exploration of formative and summative assessment tools, formal and informal assessment strategies, and critical issues in assessment practices.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCI 3954G - Study Abroad (1-19 credits)
Pathway Concept Area(s): 7 Identity & Equity in U.S.
Instructional Contact Hours: Variable credit course

EDCI 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCI 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCI 4014 - History Lab: Creative Technologies, Hidden Histories, Informal Learning (3 credits)
Application of creative technologies to visualize hidden histories in transdisciplinary experiential learning projects. Training in creative technologies, informal learning techniques, interpretation of marginalized histories, and digital cultural heritage design. Consideration of ethical questions involving the representation of diverse social identities, traditions, and histories. Pre: Sophomore Standing.
Pathway Concept Area(s): 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ART 4014, HIST 4014

EDCI 4024 - Humanizing the K-12 Classroom (3 credits)
Social, political, economic and historic structures maintaining power and privilege in the K-12 education system that disadvantage students of different racial, ethic, socioeconomic, class, and cultural groups. Classroom environmental design to support equity and social justice. Impact of teacher and student identity development on student learning. Twenty hours of experiential learning in educational setting. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4074 - Culturally Responsive Teaching in the Elementary Classroom (3 credits)
In-depth, extensive, and reflective understandings of diversity regarding individual students, families, communities, and schooling contexts. Classroom instructional and management strategies that are responsive to cultural and linguistic differences.
Corequisite(s): EDCI 4964
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4244 - Curriculum and Instruction in Middle School Mathematics (4-8) (3 credits)
Key concepts in curriculum and instruction in grades 4-8 mathematics to meet diverse learning needs. Algebraic structure of the rational numbers as it relates to childrens understanding of fractions, decimals, and percents, algebraic and proportional reasoning, and probability and data analysis. Childrens mathematical thinking and learning from a psychological perspective. Teaching mathematics through problem solving, reasoning, and communication to promote an inclusive community of learning based on appropriate educational theories.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4264 - Intro to Reading Instruction for Elementary Students: A Clinical Course (3 credits)
Overview of reading theory, terminology, and development in grade K-5. Introduction to reading assessment, text selection, lesson planning, and instructional strategies. Supervised clinical setting instructing K-5 learner. Pre: Junior or senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4274 - Curriculum and Instruction in Middle School Mathematics (3 credits)
Key concepts in curriculum and instruction in middle school mathematics to meet diverse learning needs. Algebraic structure of the rational numbers as it relates to understanding of fractions, decimals, and percents, algebraic and proportional reasoning, and probability and data analysis. Mathematical thinking and learning from a psychological perspective. Teaching mathematics through problem solving, reasoning, and communication to promote an inclusive community of learning based on appropriate educational theories.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4454 - Engr. Leadership/Mgmt (3 credits)
Introduction to management and mentoring skills associated with the application of the engineering design process. Course covers skills necessary for leading diverse teams of people through a technical design project. Managing teams of local high school students through an authentic technical design experience associated with design competitions. Course addresses the practical applications of science, math and engineering, while building and managing teams of people to meet technical project goals. Prerequisite: ME 4015 or similar team-based design experience, or by permission of instructor.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: ME 4454

EDCI 4554 - Educating Exceptional Learners (3 credits)
Analysis of purpose, rationale, and foci of educational programs, and related services for individuals with special needs. Identification of characteristics associated with each exceptionality covered by the Individuals with Disabilities Education Act. Review of procedures for assessment, eligibility decisions, and the development of individualized educational programs. Overview of selected instructional strategies, environmental adaptations, and special materials. Examination of findings concerning program efficacy. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4724 - Secondary School Teaching Methods I (3 credits)
Methods for designing and implementing instruction in specific middle and high school content area classrooms (CTE, English, history, social sciences, mathematics, and music) in conjunction with a field experience course. Lesson planning, assessment, differentiation, technology, standards, and adolescent learning development. Reflectivity and collaboration for continuous improvement.
Corequisite(s): 3964, or EDCT 3964, or EDTE 6964
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4734 - Adolescent Literacy and Reading (3 credits)
Challenges to adolescent literacy. Basic processes related to reading, comprehension, vocabulary development, and conceptual knowledge; diverse adolescent readers. Effective plans and teaching strategies for comprehending and using information in disciplinary texts in middle and high school content area classrooms. (Career and Technical, English, history, math, music, and science).
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4744 - Secondary School Teaching Methods II (3 credits)
Methods for designing and implementing a variety of instructional approaches in specific middle and high school content area classrooms (CTE, English, history, social sciences, mathematics, and music) in conjunction with student teaching internship. Emphasis on planning and implementation of instructional design, research inquiry, classroom management, integration of technology. Unit plan development and evaluation.
Prerequisite(s): EDCI 4724
Corequisite(s): 3964 or EDTE 3964
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCI 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCI 4984 - Special Study (1-19 credits)
Repeatable with different content.
Instructional Contact Hours: Variable credit course
Repeatability: up to 99 credit hours

EDCI 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Educational Psychology (EDEP)

EDEP 2374 - Educational Psychology for PK-12 Teachers (3 credits)
Theoretical, empirical, and practical foundations of educational psychology, including human learning, cognitive processes, development, motivation, classroom management, and instructional strategies for diverse students. Emphasis on application of theory to practice.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDEP 2444 - Motivating Yourself and Others (3 credits)
Survey of human motivation research and research methodologies in education, psychology, and neuroscience. Application of this research in diverse populations, including analysis of human motivation and design of motivating activities. (3H,3C)
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDEP 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDEP 3474 - Principles and Practices in PK-12 Assessment (3 credits)
Theoretical, empirical, and practical foundations of assessment in PK-12. Basic test design and measurement principles and practices, the use of assessments in education, the use of assessment data, and critical issues in assessment. Emphasis on creating classroom-level assessment systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDEP 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Electrical & Computer Engineering (ECE)

ECE 1004 - Introduction to ECE Concepts (3 credits)
Introduction to topics that span the field of electrical and computer engineering (ECE). Content presented through the lens of application with accompanying hands-on exercises. Basics of circuits, op-amps, power supplies, computer logic, system decomposition, and coding. Modeling and application of engineering professionalism. Exploration of ECE in society.
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2024 - Circuits and Devices (3 credits)
Analysis and design of passive and active circuits under Direct Current (DC), Alternating Current (AC), and switched excitation. Linear circuit analysis techniques for various circuit topologies. Expressing the transient response of first- and second-order linear circuits using time-domain methods. Calculating the AC steady-state response of linear circuits using phasors and immittances. Characterizing the frequency response of linear circuits. Determining operating point and small signal response of non-linear circuits containing diodes and bipolar transistors. Projects demonstrating circuit design processes adhering to professional practices.
Prerequisite(s): ECE 1004 and (MATH 2114 or MATH 2114H or MATH 2405H)
Corequisite(s): MATH 2214, PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2054 - Applied Electrical Theory (3 credits)
For students in the Mechanical Engineering program or by permission of the ECE Department. Fundamentals of electric circuits; circuit laws and network theorems, operational amplifiers, energy storage elements, response of first and second order systems, AC steady state analysis. Construction, analysis, and characterization of circuits with student-owned Lab-in-a-Box system.
Prerequisite(s): PHYS 2306
Corequisite(s): MATH 2214
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

ECE 2164 - Exploration of the Space Environment (3 credits)
This introductory course covers a broad range of scientific, engineering, and societal aspects associated with the exploration and technological exploitation of space. Topics covered include: science of the space environment; space weather hazards and societal impacts; orbital mechanics and rocket propulsion; spacecraft subsystems; applications of space-based technologies.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 2664

ECE 2214 - Physical Electronics (3 credits)
Fundamentals of electrostatics and magnetostatics, transmission lines, impedance matching networks, electromagnetic (EM) waves, and basic operating principles of diodes and metal-oxide semiconductor field-effect transistors (MOSFETs). Designing MOSFET biasing, and single-ended and differential amplifier circuits. Basic operating principles of complementary metal-oxide semiconductor (CMOS) device and its application as a digital inverter. Electronic circuit design adhering to professional and ethical practices.
Prerequisite(s): ECE 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2274 - Electronic Networks Laboratory I (1 credit)
Principles of operation of electrical and electronic test equipment and applications to measurement of circuit parameters. Transient and steady state response of RLC networks. Applications of laws and theories of circuits. Design, prototyping, and testing of electronic devices and circuits. Must have C- or better in prerequisite.
Prerequisite(s): ECE 2074
Corequisite(s): ECE 2204
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 2514 - Computational Engineering (3 credits)
Software development processes for electrical and computer engineering applications. Modeling, simulation, data analysis, and visualization. Computing abstractions and the use of application programming interfaces. Software design and implementation using a procedural, class-based language. Integrated code development and testing. Team-based development of autonomous system applications reinforcing course topics.
Prerequisite(s): ECE 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2544 - Fundamentals of Digital Systems (3 credits)
Design and analysis of digital systems. Information representations and computer arithmetic. Switch and gate design within digital logic. Combinational logic analysis and synthesis, Hardware Description Languages (HDL), and hierarchical design. Finite-state machines, synchronous sequential logic analysis and design. Hardware specification and documentation. Register transfer level architectures, computer organization, memories, and digital interfacing. Instruction set architecture and assembly language programming. Emphasis on the relationship between software and hardware.
Prerequisite(s): ECE 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2564 - Embedded Systems (3 credits)
Use of microcontroller-based embedded systems as a tool to address digital control and sensing in engineering applications. Modern methodologies for programming microcontrollers including programming under real-time and resource design constraints. Finite-state machine modeling and software implementation. Event-driven programming including polling-based and interrupt-driven input/output. Integration of sensors and actuators, use of standard digital and analog interfaces, and use of hardware peripherals in microcontroller architectures. Design of hardware abstraction layers and software architectures for embedded systems. Integration of hardware peripherals into real-time, software applications. Software toolchains for embedded systems, use of debugger and development and testing methodologies. Professional project management and version control.
Prerequisite(s): ECE 2514 and ECE 2544
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2714 - Signals and Systems (3 credits)
Mathematical methods for the analysis and design of continuous and discrete linear, time-invariant systems. Representation of signals using time-domain and frequency-domain methods and the application of Fourier transforms to linear system design and analysis. Descriptions of systems as signal transformations using block diagrams, differential equations, difference equations, convolution, and transfer functions. Applications to signal filtering, measurement, and control of the physical devices. Formal project documentation adhering to professional practices.
Prerequisite(s): ECE 2024 and (MATH 2214 or MATH 2214H or MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 2804 - Integrated Design Project (2 credits)
Design, implementation, testing, and validation of a hardware and software solution to an open-ended engineering problem integrating both analog and digital components. Using industrial-caliber test and measurement equipment including: oscilloscopes, function generators, power supplies, and digital multi-meters. Technical documentation and oral presentation of design process and solution. Overview of the scope of the electrical and computer engineering profession and issues related to its societal impact and ethical considerations.
Prerequisite(s): ECE 2024 and ECE 2514 and ECE 2544
Corequisite(s): ECE 2214 and (ECE 2564 or ECE 2714)
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

ECE 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 2974 - Independent Study (1-19 credits)
A minimum GPA of 2.0 in all ECE courses is required for enrollment.
Instructional Contact Hours: Variable credit course

ECE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 3004 - AC Circuit Analysis (3 credits)
Application of the basic laws and techniques of circuit analysis to AC circuits. Complex numbers and algebra with an emphasis on phasor representation of circuits. Calculation of the frequency response of circuits with R, L, and C components, independent sources, controlled sources, and operational amplifiers. Analysis of AC steady-state circuits and determination of average power. Magnetically coupled circuits. Laplace and Fourier transforms. Representation of circuits by two-port models. C- or better in prerequisites.
Prerequisite(s): ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3054 - Electrical Theory (3 credits)
For students in curricula other than ECE or ME. Fundamentals of electric circuits and electronic devices. Fundamentals of electric circuits: circuit laws and network theorems, operational amplifiers, energy storage elements, response of first (Resistive-Inductive RL, and Resistive Capacitive RC) and second order (Resistive-Inductive-Capacitive RLC) systems, Alternating Current (AC) steady state analysis. Basic electronic devices: Diodes and Transistors.
Prerequisite(s): PHYS 2306
Corequisite(s): MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3074 - AC Circuit Analysis Laboratory (1 credit)
Construction, analysis, and characterization of circuits with student-owned Lab-in-a-Box system. Experiments include: sinusoids and phasors including impedance, admittance, and Kirchhoffs laws; sinusoidal steady- state including node and mesh analysis, Thevenin and Norton equivalent, and op amps; ac power analysis including instantaneous and average power, power factor, and complex power; magnetically coupled circuits including mutual inductance, energy in a coupled circuit, and transformers; frequency response including transfer functions, Bode plots, resonance, and passive and active filters; and two-port circuits. A C- or better is required for all prerequisites.
Prerequisite(s): ECE 2804
Corequisite(s): ECE 3004
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 3104 - Introduction to Space Systems and Technologies (3 credits)
Introduction to technologies and computational tools used in space-based applications, including techniques for exploring the planets and the near-Earth geospace environment. Overview of orbits, spacecraft, control of spacecraft, electromechanical system requirements for space-based applications, and space environment interactions with spacecraft systems. Understanding the space environment and the engineering approaches required to operate it. A C- or better is required in prerequisites.
Prerequisite(s): ECE 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3105 - Electromagnetic Fields (3 credits)
Maxwells equations and their application to engineering problems. ECE 3105: transmission lines, introductory electrostatics, introductory magnetostatics, Faradays Law, properties of uniform plane waves. ECE 3106: electrostatics and magnetostatics, Maxwells Equations, wave propagation in uniform media, the reflection and transmission of plane waves, guided waves, radiation. A C- or better is required in the prerequisites.
Prerequisite(s): ECE 2214 and (MATH 2204 or MATH 2204H or MATH 2406H) and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3106 - Electromagnetic Fields (3 credits)
Maxwells equations and their application to engineering problems. ECE 3105: transmission lines, introductory electrostatics, introductory magnetostatics, Faradays Law, properties of uniform plane waves. ECE 3106: electrostatics and magnetostatics, Maxwells Equations, wave propagation in uniform media, the reflection and transmission of plane waves, guided waves, radiation. A C- or better is required in the prerequisites.
Prerequisite(s): ECE 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3134 - Introduction to Optoelectronics (3 credits)
Fundamental principles of optoelectronics. The concept of photons, spontaneous emission, and simulated emission. Rate equation analysis of light emitting diodes and lasers. Operation principles and device characteristics of photodetectors and solar cells. Advanced topics such as quantum well and emerging materials.
Prerequisite(s): ECE 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3154 - Space Systems - Design and Validation (2 credits)
Introduction to systems and techniques used in electrical engineering design for space-based applications. Students design, fabricate, and test an electronic system following accepted NASA and industry standards, including functional bench-top tests, thermal testing, vibration testing, and long-duration operational testing. Periodic formal reports will document design approaches and test results.
Prerequisite(s): ECE 3105
Corequisite(s): ECE 3104
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

ECE 3174 - Optoelectronics Laboratory (1 credit)
Characterization of optoelectronic devices such as light emitting diodes, semiconductor lasers, and photodetectors. Characterization and analysis of optical interference, wave propogation in optical fibers, and optical diffraction. Construction of simple optical imaging systems using lenses and bulk optics.
Prerequisite(s): ECE 2804
Corequisite(s): ECE 3134
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 3204 - Analog Electronics (3 credits)
Small signal modeling of transistors. Basic architecture and functionality of linear amplifiers including transistor biasing circuits, current sources, differential amplifier, common emitter amplifier, common source amplifier, emitter follower, source follower, common base amplifier, and common gate amplifier. Frequency response of single stage and multistage amplifiers.
Prerequisite(s): ECE 2214 and ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3214 - Semiconductor Device Fundamentals (3 credits)
Fundamental semiconductor device physics associated with intrinsic and doped semiconductor materials, drift-diffusion of charge carriers, and devices with an in-depth coverage of p-n and Schottky diodes, bipolar junction transistors, and metal-oxide semiconductor and junction field effect transistors.
Prerequisite(s): ECE 2214 or MSE 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3254 - Industrial Electronics (3 credits)
Fundamentals of electronics, including basic device principles. Include digital, operational amplifier, and analog analysis for industrial applications and magnetic circuits. For students in the Mechanical Engineering program or by permission of the ECE Department.
Prerequisite(s): ECE 2054
Instructional Contact Hours: (3 Lec, 0 Lab, 3 Crd)

ECE 3274 - Electronic Circuits Laboratory II (1 credit)
Design, build, and test amplifiers and other electronic circuits to meet specifications. Bipolar and field-effect transistors, diodes, integrated circuits such as operational amplifiers, and passive components are used. Gain, bandwidth, input and output impedance, positive and negative feedback, and circuit stability are implemented in the designs. Digital oscilloscopes, ammeters, voltmeters, function generators, and power supplies are used. A grade of C- or better is required in all pre-requisite courses.
Prerequisite(s): ECE 3074
Corequisite(s): ECE 3204
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 3304 - Introduction to Power Systems (3 credits)
Basic concepts of AC systems, single-phase and three-phase networks, electric power generation, transformers, transmission lines, electric machinery and the use of power. Pre-requisite 3004 with C- or better.
Prerequisite(s): ECE 3004
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3354 - Electric Power Engineering Laboratory (1 credit)
Laboratory experiments based on principles of electric power engineering.
Corequisite(s): ECE 3304
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 3504 - Principles of Computer Architecture (3 credits)
Instruction formats and construction. Addressing modes. Memory hierarchy (cache, main memory and secondary memory) operation and performance. Simple pipelines. Basic performance analysis. Simple Operating System (OS) functions, particularly as they relate to hardware. Virtual memory. Computer Input/Output (I/O) concepts, including interrupt and Direct Memory Access (DMA) mechanisms. Intercomputer communication concepts. Processor design.
Prerequisite(s): ECE 2544
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3514 - Data Structures & Algorithms (3 credits)
Introduction of fundamental data structures, algorithms, and abstract data types. Data structures, arrays, linked lists, stacks, queues, and trees. Algorithms for manipulation, sorting, searching. Tree traversals. Implementation of data structures and algorithms in C++ using good design practices.
Prerequisite(s): ECE 2514
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3524 - Introduction to Unix for ECE (2 credits)
Fundamental concepts of operating systems, emphasizing a hands-on introduction to Unix. User interfaces, Unix shell commands, the Unix file system, task management, common system utilities, the Unix programming environment. Students gain experience with system installation and administration.
Prerequisite(s): ECE 2804
Instructional Contact Hours: (2 Lec, 2 Crd)

ECE 3544 - Digital Design I (4 credits)
Design techniques for combinational and sequential logic. Design of digital circuits using standard integrated circuit chips and programmable logic devices. Computer simulation will be used to validate designs. Prototypes will be constructed to demonstrate design functionality.
Prerequisite(s): ECE 2544
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ECE 3564 - Introduction to Computer Networking (3 credits)
Introduction to computer networking featuring the Internet. Internet architecture and layering. Application layer service models and protocols. Transport layer protocols and congestion control. Internet addressing, routing algorithms and protocols. Multiple access and link layer addressing, wireless local area networks (LANs) and cellular networks.
Prerequisite(s): ECE 2544 and ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3574 - Applied Software Design (3 credits)
An introduction to applied software design methods for use in the writing of efficient, reusable, and modular C++ programs. Introduces the use of the following: classes, inheritance, and polymorphism; design patterns; high-level programming techniques using libraries, generics, and containers; widgets, models, and views; software frameworks for embedded systems; and advanced techniques ranging from multi-threading to reflective programming.
Prerequisite(s): ECE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3604 - Introduction to RF and Microwave Engineering (3 credits)
Introduction to circuits, devices, and systems for radio frequency (RF) and microwave applications. Fundamentals of antennas, propagation, small signal and power amplifiers, frequency conversion, and frequency synthesis. Tools and concepts including s-parameters, design impedance matching, dynamic range, noise figure, and link budget.
Prerequisite(s): ECE 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3614 - Introduction to Communication Systems (3 credits)
Analysis and design of communication systems with an emphasis on digital communications based on time and frequency domain analysis. Fourier transform techniques, linear systems, and filtering are reviewed. Power and energy spectral density of communication signals. Sampling and quantization of analog signals. Baseband and binary bandpass digital modulation including line coding, pulse shaping, and both pulse and carrier modulation techniques. Wireless communication system concepts including link budgets and multiple access. Transmitter and receiver design concepts. Signal-to-noise ratio, bit error rate, and their relationship. Analog techniques such as Amplitude Modulation (AM) and Frequency Modulation (FM) radio will be reviewed for conceptual and comparative purposes.
Prerequisite(s): ECE 2714 and STAT 4714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3704 - Continuous and Discrete System Theory (3 credits)
Continuous- and discrete-time system theory. Block diagrams, feedback, and stability theory. Continuous-time stability, differential equations, Laplace-transforms, transfer functions. Discrete-time stability, difference equations, Z-transforms. Transfer functions and frequency response. Sampling of continuous systems and an introduction to control and filter design. Hands-on projects to illustrate and integrate the various continuous- and discrete-time concepts and tools.
Prerequisite(s): ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3714 - Introduction to Control Systems (3 credits)
Introduction to the design of feedback compensation to improve the transient and steady-state performance of systems. Emphasis is on modeling, analysis and analog compensator design for single-input single-output systems. Modeling techniques, root locus analysis and design, the Nyquist criterion, and frequency domain compensation.
Prerequisite(s): ECE 3704
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 3974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 4104 - Microwave and RF Engineering (4 credits)
Passive and active Radio Frequency and microwave components and circuits for wireless communications; transmission-line theory; planar transmission-lines and waveguides; S-parameters; resonators; power dividers and couplers; microwave filters; sources, detectors, and active devices; modern RF & microwave CAD; measurement techniques. C- or better in prerequisites.
Prerequisite(s): ECE 3106 and ECE 3204
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ECE 4114 - Antennas (3 credits)
Antenna fundamentals, analysis and design principles, and a survey of antenna types including: arrays, wire antennas, broadband antennas, and aperture antennas.
Prerequisite(s): ECE 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4124 - Radio Wave Propagation (3 credits)
Behavior of radiated electromagnetic waves in terrestrial, atmosphere, space, and urban environments; path, frequency and antenna selection for practical communication systems; propagation prediction.
Prerequisite(s): ECE 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4134 - Photonics (3 credits)
Fundamental concepts in photonics technology. Basic principles of optical fibers and components such as Bragg gratings, amplifiers, couplers and modulators used in optical communications and sensing. Propagation, dispersion, bandwidth and nonlinear properties of optical signals in optical waveguides and fibers.
Prerequisite(s): ECE 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4144 - Optical Systems (3 credits)
Fundamental concepts in optical information processing. Ray optics. Optical diffraction. Basic principles and applications of optical imaging using wave optics. Properties of Gaussian Beam. Introduction to Fourier optics, optical spatial filtering, 3D image reconstruction and holography.
Prerequisite(s): ECE 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4154 - Space Weather: The Solar Wind and Magnetosphere (3 credits)
Solar-terrestrial interactions and space weather: the sun, solar wind, and interplanetary magnetic field; space plasma physics and magnetohydrodynamics; Earths magnetosphere and ionosphere; geomagnetic storms and auroral substorms; societal impacts of space weather; planetary magnetospheres; space science instrumentation.
Prerequisite(s): ECE 3105 or AOE 3014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4654

ECE 4164 - Introduction to Global Positioning System (GPS) Theory and Design (4 credits)
Fundamental theory and applications of radio navigation with the Global Positioning System GPS. Satellite orbit theory, GPS signal structure and theory, point positioning with pseudoranges and carrier phases, selective availability, dilution of precision, differential GPS, atmospheric effects on GPS signals.
Prerequisite(s): ECE 3105 or AOE 4134
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: AOE 4464

ECE 4174 - Upper Atmosphere/Ionosphere Space Weather (3 credits)
Interaction of Earth's upper atmosphere and space environment with spacecraft: processes that affect atmospheric density relevant to spacecraft orbit decay; basic composition and structure; radiation and radiative transfer; atmospheric energy balance; atmospheric chemistry and ion production/loss mechanisms; fundamental concepts of Solar-terrestrial physics including ionospheric Chapman theory; atmospheric energy/mass transport; ionospheric electrodynamics; ionospheric storms; planetary atmospheres/ionospheres; instrumentation.
Prerequisite(s): AOE 3014 or ECE 3105
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4674

ECE 4184 - Applied Quantum Mechanics for Engineers (3 credits)
Review of classical mechanics, the simple harmonic oscillator. Schrodinger equation, barrier tunneling, resonant tunneling, and quantum wells. Mathematical foundation of quantum mechanics, Dirac notation and representations, observables, eigenstates and diagonalization. Quantum postulates and its application to two-level systems, harmonic oscillators, creation and annihilation operators. Time evolution of a Hamiltonian. Dynamics of spin and two-level atoms. No cloning theorem and the concept of entanglement.
Prerequisite(s): ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4194 - Engineering Principles of Remote Sensing (3 credits)
Physical principles involved in remote sensing of Earths environment and their implementation in engineering systems: fundamentals of electromagnetic wave propagation, scattering by matter, effects of propagation media, passive and active systems, remote sensing platforms, data processing, systems integration, and introductory concepts important for the design and analysis of remote sensing engineering systems.
Prerequisite(s): ECE 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4205 - Electronic Circuit Design (3 credits)
Stability and response of feedback amplifier, wideband amplifiers, operational amplifier characteristics, waveform generators and wave shaping, nonlinear circuit applications, signal generators, and photolithography. Design of analog electronic circuits, circuit simulation, response characterization, and printed circuit construction. C- or better in prerequisites.
Prerequisite(s): ECE 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4206 - Electronic Circuit Design (3 credits)
Stability and response of feedback amplifier, wideband amplifiers, operational amplifier characteristics, waveform generators and wave shaping, nonlinear circuit applications, signal generators, and photolithography. Design of analog electronic circuits, circuit simulation, response characterization, and printed circuit construction. C- or better in prerequisites.
Prerequisite(s): ECE 4205
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4220 - Analog Integrated Circuit Design (3 credits)
Integrated circuit design in silicon bipolar, MOS (Metal-Oxide-Semiconductor), and BiCMOS (Bipolar Complementary Metal-Oxide-Semiconductor) technologies for communications, sensor, instrumentation, data conversion, and power management applications. Models for active devices in bipolar and MOS technologies; transistor-level amplifiers and output stages (amplifier classifications); transistor-level current mirrors and voltage reference generators, transistor-level operational amplifiers; transistor-level feedback circuits; noise and linearity; layout and simulation of analog integrated circuits with modern VLSI CAD (Very Large Scale Integration- Computer Aided Design) software.
Prerequisite(s): ECE 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4224 - Power Electronics (3 credits)
Switching power converter operation and design; modeling of power converters; power components including power semiconductor devices, inductors, and transformers; control of power converters; select power converter topology for applications such as renewable energy, electric transportation, and telecommunications.
Prerequisite(s): ECE 3204 and ECE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4234 - Semiconductor Processing (3 credits)
Manufacturing practices used in silicon integrated circuit fabrication and the underlying scientific basis for these process technologies. Physical models are developed to explain basic fabrication steps, such as substrate growth, thermal oxidation, dopant diffusion, ion implantation, thin film deposition, etching, and lithography. The overall CMOS integrated circuit process flow is described within the context of these physical models.
Prerequisite(s): ECE 2214
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MSE 4234

ECE 4244 - Intermediate Semiconductor Processing Laboratory (3 credits)
Design, layout, fabricate, and characterize microelectronic devices. Analyze test results to verify performance to the predetermined specifications. Required oral and written reports. A C- or higher is required in all pre-requisite courses.
Prerequisite(s): ECE 4234 or MSE 4234
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

ECE 4254 - Principles of Electronics Packaging (3 credits)
Electrical and thermal design of electronics packaging using finite element analysis software. Materials and process selection guidelines for the fabrication of single- and multi-chip electronics packages. Methods for characterization and testing of electronics packages. Failure mechanisms and design for reliability. Hands-on project experience on electronics packaging.
Prerequisite(s): ECE 2214 or ECE 2054 or ECE 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4284 - Power Electronics Laboratory (1 credit)
Design and testing of electronic power processing systems for commercial and aerospace applications.
Corequisite(s): ECE 4224
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 4314 - Electric Energy Distribution Systems (3 credits)
Fundamentals of electric power distribution systems. Load characteristics. Modeling of distribution system components (line segments, voltage regulators, and transformers). Distribution flow analysis. Capacitor placement. Symmetrical components and calculation of fault currents. Protection of distribution feeders. Automation/control technologies to enhance reliability, resilience, and security.
Prerequisite(s): ECE 3004
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4324 - Microgrids (3 credits)
Microgrid: definitions, components, and modes of operation; steady-state analysis and power quality; control modes and hierarchy; renewable resources and their inverter grid-forming and grid-following modes; protection strategies; emerging topics e.g., DC microgrids and datacenters; cybersecurity.
Prerequisite(s): ECE 3004
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4334 - Power System Analysis and Control (3 credits)
Development of methods for power analysis and control. An analysis and design of systems for steady state, transient, and dynamic conditions. Digital solutions emphasized.
Prerequisite(s): ECE 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4354 - Power System Protection (3 credits)
Protection of power apparatus and systems. Fuses. Voltage and current transducers. Relays. Coordination of relays. Pilot channels. Grounding practices. Surge phenomena. Insulation coordination.
Prerequisite(s): ECE 4334
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4364 - Alternate Energy Systems (3 credits)
Electric energy from alternative energy sources including solar, wind, hydro, biomass, geothermal and ocean. Characteristics of direct conversion, electromechanical conversion, and storage devices used in alternative energy systems. Power system issues associated with integration of small scale energy sources into the electricity grid.
Prerequisite(s): STAT 3704 or STAT 4604 or STAT 4705 or STAT 4714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4414 - Linux Kernel Programming (3 credits)
Design and internal organization of the Linux operating system kernel. Kernel subsystems, boot process, memory management, process and thread model, scheduling, interrupt and exception handling, virtual file system and the concrete file system, block I/O and I/O scheduler, network stack, and device drivers. Modification of existing kernel code. Design, implementation, test and evaluation of new kernel modules. Kernel and full software stack debugging techniques, and virtualization as an aid for operating system development and debug. Software engineering techniques to analyze, modify and run a large, complex open-source code base.
Prerequisite(s): ECE 3574 or CS 3114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4224

ECE 4424 - Machine Learning (3 credits)
Algorithms and principles involved in machine learning; focus on perception problems arising in computer vision, natural language processing and robotics; fundamentals of representing uncertainty, learning from data, supervised learning, ensemble methods, unsupervised learning, structured models, learning theory and reinforcement learning; design and analysis of machine perception systems; design and implementation of a technical project applied to real-world datasets (images, text, robotics). A grade of C- or better in prerequisites.
Prerequisite(s): (ECE 3514 or CS 2114) and (STAT 3704 or STAT 4105 or STAT 4604 or STAT 4705 or STAT 4714 or CMDA 2006)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4824

ECE 4444 - Technological Singularity (3 credits)
True artificial machine intelligence. Societal impact. Historical perspectives. Technological barriers to whole brain emulation. Engineering of superintelligence. Role of consciousness. Cross disciplinary course for students with advanced technical backgrounds, e.g., seniors in engineering, math, physics, biology, or other similar disciplines.
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4454 - Multimedia Signal Processing (3 credits)
Signal processing techniques in multimedia systems: concept and principle of multimedia systems; speech analysis and recognition; audio/image/video compression; scene video analysis & understanding; multimedia applications such as human computer interaction, multimedia communication and multimedia security.
Prerequisite(s): ECE 2704 or (ECE 2714 and ECE 2804)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4504 - Computer Organization (3 credits)
Overview of the structure, elements and analysis of modern enterprise computers. Performance evaluation of commercial computing. Past and emerging technology trends. Impact of parallelism at multiple levels of computer architecture. Memory and storage. Fundamental computer system descriptions, Amdahls Law, Flynns Taxonomy. A grade of C or better required in prerequisites.
Prerequisite(s): ECE 3504 or CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4504

ECE 4514 - Digital Design II (4 credits)
Advanced digital design techniques for developing complex digital circuits. Emphasis on system-level concepts and high-level design representations while meeting design constraints such as performance, power, and area. Methods presented that are appropriate for use with automated synthesis systems. Commercial hardware description language simulation and synthesis tools used for designing a series of increasingly complex digital systems, and implementing those systems using Field Programmable Gate Arrays (FPGAs).
Prerequisite(s): ECE 3544
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ECE 4520 - Digital and Mixed-Signal System Testing and Testable Design (3 credits)
Various topics on testing and testable design for digital and mixed-signal systems are studied: fault modeling, logic and fault simulation, fault modeling, automatic test pattern generation, deterministic ATPG, simulation-based ATPG, delay fault testing, design for testability, built-in-self-test and fault diagnosis.
Prerequisite(s): ECE 2574 and (ECE 3504 or ECE 3544)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4524 - Artificial Intelligence and Engineering Applications (4 credits)
Problem solving methods; problem spaces; search techniques; knowledge representation; programming languages for AI; games; predicate logic; knowledge-based systems; machine learning; planning techniques; reactive systems; artificial neural networks; natural language understanding; computer vision; robotics.
Prerequisite(s): ECE 3514 and STAT 4714
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ECE 4525 - Video Game Design and Engineering (3 credits)
4525: Fundamental concepts in the development and engineering of modern 2-D and 3-D real-time interactive computer video games. Game design and engineering principles, game architecture, game mechanics and interaction, computer graphics, strategy, artificial intelligence (AI), optimization, play testing and fuzzy logic are included. 4526: Advanced concepts in the development and engineering of modern 2-D and 3-D real-time interactive computer video systems. Topics include non-player character (NPC) behavior learning, search and planning, player modeling, procedural content generation, AI-assisted game design.
Prerequisite(s): ECE 3574
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4526 - Video Game Design and Engineering (3 credits)
Prerequisite(s): ECE 4525
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4530 - Hardware-Software Codesign (3 credits)
An introduction to the design of mixed hardware- software systems, focusing on common underlying modeling concepts, the design of hardware-software interfaces, and the trade-offs between hardware and software components. Students will use simulation tools to conduct experiments with mixed hardware- software systems in the area of embedded systems.
Prerequisite(s): (ECE 2534 or ECE 2564) and ECE 3544
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4534 - Embedded System Design (4 credits)
Team-based major design experience. Design and implement embedded computer systems that incorporate appropriate engineering standards to solve complex problems that include multiple realistic constraints. Writing design documents and making oral presentations as part of the design process. C- or better required in prerequisites.
Prerequisite(s): (ECE 2014 and ECE 2534 and ECE 3574) or (ECE 2564 and ECE 2804 and ECE 3574)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ECE 4540 - VLSI Circuit Design (3 credits)
Introduction to the design and layout of Very Large Scale Integrated Circuits (VLSI). Emphasis is placed on digital CMOS circuits. Static and dynamic properties of MOSFET devices, along with integrated circuit fabrication are examined. Computer-aided design tools are used to produce working integrated circuit designs.
Prerequisite(s): ECE 2214 and ECE 2544
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4550 - Real-Time Systems (3 credits)
Theory, algorithmic and protocol concepts, mechanisms, and implementations of real-time computer systems. Introduction to real-time systems, real-time scheduling, real-time synchronization, real-time operating system kernels, and real-time resource management algorithms (e.g., scheduling, synchronization), their implementations in production operating system kernels, experimental studies of those implementations, and real-time application development.
Prerequisite(s): ECE 3574 or CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4554 - Introduction to Computer Vision (3 credits)
Techniques for automated analysis of images and videos. Image formation, detecting features in images, segmenting or grouping image regions and image features, multiple view geometry, object instance and category recognition in images and video processing.
Prerequisite(s): ECE 3574 and (STAT 4705 or STAT 4714)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4560 - Computer and Network Security Fundamentals (3 credits)
This course introduces fundamental security principles and real-world applications of Internet and computer security. Topics covered in the course include legal and privacy issues, risk analysis, attack and intrusion detection concepts, system log analysis, intrusion detection and packet filtering techniques, computer security models, computer forensics, and distributed denial-of-service (DDoS) attacks. Must have C- or better in ECE 4564 or CS 3214.
Prerequisite(s): ECE 3564 or CS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4564 - Network Application Design (3 credits)
Application program interface and network transport services including User Datagram Protocol and Transmission Control Protocol from the Internet Protocol suite. Client-server organization and design of synchronous, asynchronous, and multithreaded client and server applications. Design, implementation, and testing techniques to improve robustness and performance. Partially duplicates CS 4254 and credit will not be allowed for both.
Prerequisite(s): ECE 3564 and ECE 3514
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4570 - Wireless Networks and Mobile Systems (3 credits)
Multidisciplinary, project-oriented design course that considers aspects of wireless and mobile systems including wireless networks and link protocols, mobile networking including support for the Internet Protocol suite, mobile middleware, and mobile applications. Students complete multiple experiments and design projects.
Prerequisite(s): ECE 4564
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4570

ECE 4574 - Large-Scale Software Development for Engineering Systems (3 credits)
Large-scale software implementations of the hierarchy of engineering analysis, design, and decision evaluation. Computer-aided engineering programs with state-of-the-art computer tools and methods. Operator overloading, dynamic polymorphism, graphical user interfaces, generic programming, dynamic link libraries, and multiple threads.
Prerequisite(s): ECE 3574
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4580 - Digital Image Processing (3 credits)
This course provides an introduction to basic concepts, methodologies and algorithms of digital image processing focusing on the two major problems concerned with digital images: (1) image analysis and object restoration for easier interpretation of images, and (2) image analysis and object recognition. Some advanced image processing techniques (e.g., wavelet and multiresolution processing) will also be studied in this course. The primary goal of this course is to lay a solid foundation for students to study advanced image analysis topics such as computer vision systems, biomedical image analysis, and multimedia processing & retrieval.
Prerequisite(s): ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4584 - Robotics Laboratory (1 credit)
Develop, compile, and test algorithms for serial and mobile robots. Robot forward and inverse kinematics, task planning, velocity kinematics, force rendering, control, haptics, mapping and localization, computer vision and path planning.
Corequisite(s): ME 4524 or ECE 4704
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: ME 4584

ECE 4605 - Radio Engineering (3 credits)
Wireless application circuit design for gain and filter control at radio frequencies to interface the baseband processing systems and the antennas of communication systems. 4605: Design of radio transmitter and receiver circuits using scattering-parameter methods. Circuits include oscillators, radio frequency amplifiers and matching networks, mixers and detectors. 4606: Design of amplitude, frequency, and pulse-modulated communication systems, including modulators, detectors, and the effects of noise. Design basics and guidelines for phase-locked loops and several power amplifier configurations.
Prerequisite(s): ECE 3105 and ECE 3204 and ECE 3614
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4606 - Radio Engineering (3 credits)
Wireless application circuit design for gain and filter control at radio frequencies to interface the baseband processing systems and the antennas of communication systems. 4605: Design of radio transmitter and receiver circuits using scattering-parameter methods. Circuits include oscillators, radio frequency amplifiers and matching networks, mixers and detectors. 4606: Design of amplitude, frequency, and pulse-modulated communication systems, including modulators, detectors, and the effects of noise. Design basics and guidelines for phase-locked loops and several power amplifier configurations.
Prerequisite(s): ECE 4605
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4624 - Digital Signal Processing And Filter Design (3 credits)
Analysis, design, and realization of digital filters. Discrete Fourier Transform algorithms, digital filter design procedures, coefficient quantization. Pre: C or better in 3704
Prerequisite(s): ECE 3704
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4634 - Digital Communications (3 credits)
System and signal level analysis and design for digital communications systems. Review of analog-to-digital conversion and digital baseband communications. Detailed analysis of digital carrier modulation formats including assessment of signal-to-noise ratio, bit error rate, and power and bandwidth efficiency for amplitude-shift keying (ASK), phase-shift keying (PSK), frequency-shift keying (FSK), and Quadrature-Amplitude Modulation (QAM). Matched filter receivers and receiver design, link budgets, and multiple access. Additive-white-noise Gaussian channels. A detailed discussion of random variables will be included to supplement prerequisite material. A C- or better is required in prerequisites.
Prerequisite(s): ECE 3614
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4644 - Satellite Communications (3 credits)
Theory and practice of satellite communications. Orbits and launchers, spacecraft, link budgets, modulation, coding, multiple access techniques, propagation effects, and earth terminals.
Prerequisite(s): ECE 3614
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4664 - Analog and Digital Communications Laboratory (1 credit)
Laboratory experiments which deal with the design and measurement of analog and digital communication systems. Concepts include SNR, Modulation Index, PCM, and spread spectrum.
Prerequisite(s): ECE 3614
Corequisite(s): ECE 4634
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 4675 - Radio Engineering Laboratory (1 credit)
Laboratory techniques for radio frequencies including the design of amplifiers, oscillators, and a single-side-band receiver. Associated measurements will be used.
Prerequisite(s): ECE 3106 and ECE 3204
Corequisite(s): ECE 4605
Instructional Contact Hours: (3 Lab, 1 Crd)

ECE 4684 - Network Science (3 credits)
Introduction to modern-day networked technologies such as wireless, social, and economic networks. Analysis of networked technologies using analytical and engineering techniques such as optimization, game/auction theory, graph analysis, and learning as applied to networked technologies. Introduction to the basics of these techniques and their applications in networked systems. Development of a network science for solving practical problems pertaining to various networked systems such as smartphones, Wiki, Facebook, recommendation systems, economic network, or online video/music streaming software.
Prerequisite(s): ECE 2714
Instructional Contact Hours: (3 Crd)

ECE 4704 - Principles of Robotics Systems (3 credits)
Introduction to the design, analysis, control, and operation of robotic mechanisms. Introduction to the use of homogeneous coordinates for kinematics, dynamics, and camera orientation; sensors and actuators, control, task planning, vision, and intelligence. II
Prerequisite(s): ECE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4805 - Senior Design Project (3 credits)
Industry-like two-semester, team-based major design experience applying knowledge and skills acquired in previous coursework. Design and implement solutions to meet multiple realistic constraints; design to incorporate appropriate engineering standards. A specific, complex engineering design problem is taken from problem definition to product realization and testing. Within the design process, topics include written/oral communication, discourse, ethical reasoning, professional development, project management, and working within a team. 4805: Identify, formulate, and define engineering problem. Generate and select design alternatives. Apply design and analysis methods, from previous courses, to develop, evaluate, and communicate detailed project design. 4806: Implement and refine project design from ECE 4805. Test, analyze, document, and deliver the resulting project outcomes. Pre: 2804 (C-), (12 credit hours of C- or better within their declared disciplinary major) or (9 credit hours of C- or better within their declared disciplinary major and 3 credit hours of C- or better within their secondary focus) for 4805; 4805 (C-) for 4806.
Prerequisite(s): ECE 2214 and ECE 2564 and ECE 2714 and ECE 2804 and (ECE 3004 or ECE 3504) and (ECE 3105 or ECE 3514) and (ECE 3106 or ECE 3134 or ECE 3204 or ECE 3214 or ECE 3304 or ECE 3544 or ECE 3564 or ECE 3574 or ECE 3614 or ECE 3704 or ECE 4205 or ECE 4234 or ECE 4254 or ECE 4424 or ECE 4524 or ECE 4540 or ECE 4580 or ECE 4704)
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4806 - Senior Design Project (3 credits)
Industry-like two-semester, team-based major design experience applying knowledge and skills acquired in previous coursework. Design and implement solutions to meet multiple realistic constraints; design to incorporate appropriate engineering standards. A specific, complex engineering design problem is taken from problem definition to product realization and testing. Within the design process, topics include written/oral communication, discourse, ethical reasoning, professional development, project management, and working within a team. 4805: Identify, formulate, and define engineering problem. Generate and select design alternatives. Apply design and analysis methods, from previous courses, to develop, evaluate, and communicate detailed project design. 4806: Implement and refine project design from ECE 4805. Test, analyze, document, and deliver the resulting project outcomes. Pre: 2804 (C-), (12 credit hours of C- or better within their declared disciplinary major) or (9 credit hours of C- or better within their declared disciplinary major and 3 credit hours of C- or better within their secondary focus) for 4805; 4805 (C-) for 4806.
Prerequisite(s): ECE 4805
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECE 4944 - Cybersecurity Seminar (1 credit)
Theory and practice of cybersecurity problems and solutions for building secure computing hardware, software, and networks. Technical, social and legal aspects of secure systems. Historical and ongoing attacks that spawn real-world responses. Ongoing research in cybersecurity defenses. Senior standing.
Prerequisite(s): ECE 2544 or CS 2505
Instructional Contact Hours: (1 Lec, 1 Crd)

ECE 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECE 4974 - Independent Study (1-19 credits)
A minimum in-major GPA of 2.0 is required for enrollment.
Instructional Contact Hours: Variable credit course

ECE 4984 - Special Study (1-19 credits)
A minimum in-major GPA of 2.5 is required for enrollment.
Instructional Contact Hours: Variable credit course

ECE 4984A - Special Study (1-19 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: Variable credit course

ECE 4994 - Undergraduate Research (1-19 credits)
A minimum GPA of 2.0 in all ECE courses is required for enrollment.
Instructional Contact Hours: Variable credit course

Engineering (ENGR)

ENGR 1014 - Engineering Research Seminar (1 credit)
Discussion of current research topics in the College of Engineering by Virginia Tech Faculty. (1C, 1H)
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGR 1034 - First Year Hypatia Seminar (2 credits)
Success strategies that are designed for first-year female engineering students who are residents of the Hypatia learning community are presented. Students are provided information on study skills; resources and academic support for Virginia Tech students; gender issues in engineering; service learning; leadership; technology; and the College of Engineerings departments/majors.
Instructional Contact Hours: (2 Lec, 2 Crd)

ENGR 1054 - First Year Galileo Seminar (2 credits)
Success strategies that are designed for first-year male engineering students who are residents of the Galileo learning community are presented. Students are provided information on study skills; resources and academic support for Virginia Tech students; gender issues in engineering; service learning; leadership; technology; and the College of Engineerings department/majors. (2H, 2C)
Instructional Contact Hours: (2 Lec, 2 Crd)

ENGR 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 2004A - Engineering International Activity (0 credits)
Engineering International Education course reflects academic effort in study abroad settings as defined by the college. No degree applicable credit awarded. Enrollment in this course does not apply toward the definition of full time status. 0 Credits.
Instructional Contact Hours: (0 Crd)

ENGR 2004E - Engineering Experiential Learning (0 credits)
Engineering Experiential course reflects college defined experiential learning experiences for undergraduates. No degree applicable credit is awarded. Enrollment in this course does not apply toward the definition of full time status.
Instructional Contact Hours: (0 Crd)

ENGR 2004R - Engineering Undergraduate Exploratory Activity (0 credits)
Engineering Undergraduate Exploratory Activity course is an undergraduate research experience as defined by the college. No degree applicable credit is awarded. Enrollment in this course will not apply toward the definition of full time status. 0 Credits.
Instructional Contact Hours: (0 Crd)

ENGR 2004S - Engineering Service Learning (0 credits)
Engineering Service Learning course reflects academic effort in service learning settings as defined by the college. No degree applicable credit is awarded. Enrollment in this course will not apply toward the definition of full time status. 0 Credits.
Instructional Contact Hours: (0 Crd)

ENGR 2044 - Second-Year Galileo and Hypatia Seminar (1 credit)
Second-Year Galileo and Hypatia seminar for student leaders. Success strategies designed for second-year engineering students who are participants of the Galileo and Hypatia Living-Learning Community; topics include communication skills, critical thinking skills, diversity, leadership, networking with peers and future employers, and goals associated with academic and professional success.
Prerequisite(s): ENGR 1034 or ENGR 1054
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGR 2164 - Introduction to Scieneering (1 credit)
Seminar-based course providing a survey of current interdisciplinary science and engineering research problems; introduction interdisciplinary thinking and communication; issues related to interdisciplinary research teams.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: COS 2164

ENGR 2464 - Engineering Fundamentals for Scientists (2 credits)
Introduction to the engineering profession and basic engineering skills for students pursuing science majors. Fundamentals of graphing, technical communication, ethics, the design process, project management, and problem solving as applicable to engineering. Partially duplicates ENGE 1024. May not be used for credit towards any degree from the College of Engineering.
Prerequisite(s): ENGR 2164 or COS 2164
Instructional Contact Hours: (2 Lec, 2 Crd)

ENGR 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 2984G - Special Study (1-19 credits)
Pathway Concept Area(s): 7 Identity & Equity in U.S.
Instructional Contact Hours: Variable credit course

ENGR 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 3044 - Third-Year Galileo and Hypatia Seminar (1 credit)
Success strategies designed for third year engineering students who are participants of the Galileo and Hypatia Living-Learning Community; topics include critical thinking skills, diversity, leadership, networking with peers and future employers, and goals associated with academic and professional success.
Prerequisite(s): ENGR 2044
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGR 3124 - Introduction to Green Engineering (3 credits)
Introduction to green engineering and global environmental issues. Impacts of human and engineering activities on the environment, and techniques that can be utilized to minimize adverse environmental impacts with emphasis on environmentally conscious design and manufacturing.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGR 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 4064 - Scieneering Capstone (3 credits)
A capstone experience centered around an open-ended, faculty-advised senior project involving the design of a process, material, or technique for solving an interdisciplinary problem. Pre: Enrollment in Interdisciplinary Engineering and Science Minor.
Prerequisite(s): ENGR 2464 or BIOL 2124
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: COS 4064

ENGR 4134 - Environmental Life Cycle Assessment (3 credits)
Quantification of the environmental impacts for products, processes, and systems across all engineering disciplines. A detailed look at life cycle phases and formal and informal Life Cycle Assessment (LCA) methodologies including ISO standards, stream-lined LCA, green building ratings systems, carbon footprints, and other environmental ratings systems.
Prerequisite(s): ENGR 3124
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGR 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGR 4994H - Undergraduate Research (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

Engineering Education (ENGE)

ENGE 1004 - Explore Engineering (1 credit)
Students will participate in a seminar-style experience guided by representatives from different engineering disciplines to learn more about the programs offered by the College of Engineering at Virginia Tech to aid the change of major process.
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGE 1014 - Engineering Success Seminar (1 credit)
Introduction to opportunities and resources available to College of Engineering students during their undergraduate career at VT. Practice in information gathering skills critical for engineering students. Practice in oral, written, and visual communication. Preparation of an academic plan.
Corequisite(s): ENGE 1215
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGE 1215 - Foundations of Engineering (2 credits)
A first-year sequence to introduce general engineering students to the profession. 1215 (2 credit) data collection and analysis, engineering problem-solving, mathematical modeling, contemporary software tools, professional practices and expectations (e.g. effective communication, working in teams, ethics), and the diversity of fields and majors within engineering. 1216 (2 credits): data collection and analysis, engineering problem-solving, mathematical modeling, design, contemporary software tools, professional practices and expectations (e.g. communication, teamwork, ethics). 1215: Design Lab/Studio (3L, 2C), 1216: Design Lab/Studio (3L, 2C).
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 2 Crd)

ENGE 1216 - Foundations of Engineering (2 credits)
A first-year sequence to introduce general engineering students to the profession. 1215 (2 credit) data collection and analysis, engineering problem-solving, mathematical modeling, contemporary software tools, professional practices and expectations (e.g. effective communication, working in teams, ethics), and the diversity of fields and majors within engineering. 1216 (2 credits): data collection and analysis, engineering problem-solving, mathematical modeling, design, contemporary software tools, professional practices and expectations (e.g. communication, teamwork, ethics). 1215: Design Lab/Studio (3L, 2C), 1216: Design Lab/Studio (3L, 2C).
Prerequisite(s): ENGE 1215
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 2 Crd)

ENGE 1354 - Introduction to Spatial Visualization (1 credit)
Introduction to spatial visualization. Training to improve three-dimensional visualization skills, pictorial sketching, orthographic projection, mental rotation, mental cutting and folding, combining solids.
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGE 1414 - Foundations of Engineering Practice (4 credits)
Introduction to engineering profession for transfer General Engineering students including engineering problem solving and design, contemporary software tools, and professional practices and expectations (e.g., communication, teamwork, ethics). Duplicates 1215-1216. Design Lab/Studio.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (6 Lab, 4 Crd)

ENGE 1644 - Global STEM Practice: Leadership and Culture (3 credits)
Develop global competencies in science, technology, engineering, and math (STEM) contexts and understand how problems and viable solutions vary across contexts and how intercultural communication and global leadership are important in an interconnected global workforce. Integrates semester-long on-campus module with international module following semester exams (Rising Sophomore Abroad Program). International module engages students in local culture during visits with STEM businesses and universities. Participation in both modules required. Enrollment by application.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 1 Lab, 3 Crd)

ENGE 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 2094 - Create!: Ideation & Innovation (3 credits)
Apply problem solving framing strategies as part of problem solving design processes. Consider cultural, economic, social, and other perspectives in customer discovery and design processes in order to ensure problem/solution fit. Ideate possible solutions or approaches to address open- ended problems using a variety of methods. Engage in iterative critiques of strategies, solutions and prototypes using methods drawn from industrial design, engineering and the arts. Collaborate in interdisciplinary and diverse project teams. Communicate deliverables in multiple formats and for different audiences. Identify and address impacts of designed services and products through global perspectives, such as patterns of inclusion and exclusion and effects on localized ecosystems.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGE 2524 - Exploring Service Learning Through STEAM/STEM Educational Outreach (3 credits)
Explore volunteerism, traditional service learning, critical service learning, and social change. Develop intercultural competence by examining social identities, power, and privilege with a focus on preK-12 education systems in the United States. Develop Science, Technology, Engineering, Arts, and Math (STEAM) and STEM educational outreach experiences that meet needs identified by community members in teams. Demonstrate career readiness through experiential learning. Pre: Sophomore standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGE 2524H - Service Learning Edu. Outreach (3 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGE 2634 - Introduction to Restricted Research (1 credit)
Introduction to multi-disciplinary, team-based undergraduate engineering research. Emphasis on Department of Defense (DoD) and Intelligence Community missions and projects. Exposure to current restricted research performed around campus. Guest speakers from national labs. Engineering research methods (tools, research integrity/safety/ethics, and communication of results). Deep dive into International Traffic in Arms Regulations-restricted multi-disciplinary DoD engineering problems, potential careers, and security protocols surrounding restricted research and careers.
Instructional Contact Hours: (1 Lec, 1 Crd)

ENGE 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 2984 - Special Study (1-19 credits)
I
Instructional Contact Hours: Variable credit course

ENGE 2984G - Special Study (1-19 credits)
Pathway Concept Area(s): 7 Identity & Equity in U.S.
Instructional Contact Hours: Variable credit course

ENGE 2984M - Special Study (1-19 credits)
Pathway Concept Area(s): 6A Critique & Practice in Arts
Instructional Contact Hours: Variable credit course

ENGE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 3604 - Introductory Industry Design Experience (3 credits)
Workplace and industry culture and practice, including folkways, mores, and ethics, centered on engineering design. Interaction with industry professionals. Workplace competencies including effective teamwork, project management, presenting technical information. Training with software, tools and skills used in design practice in industry.
Prerequisite(s): ENGE 1215 and ENGE 1216
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGE 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

ENGE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 4094 - Startup: Commercialization of Innovation (3 credits)
Work in interdisciplinary teams in an experiential environment replicating modern innovation environments. Engage in real world innovation commercialization opportunities. Individual experiences and projects involving actual inventions, innovations, technologies, intellectual property (e.g. patents) and market opportunities. Integrate design thinking, scientists, entrepreneurs, advisors and other potential collaborators. Create a representation of a plan for a minimum viable product for an innovative product or service based on customer and market feedback.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IDS 4094, MGT 4094

ENGE 4104 - Applied Explorations in Innovation (3 credits)
Work in interdisciplinary teams to scope and plan an open-ended design project focused on technology commercialization that addresses a need or problem. Model systems and products computationally and quantitatively to address issues of technical and market feasibility and to predict performance under uncertain conditions. Engage in iterative design process that combines computational and quantitative processes with user-centered design and market analysis. Produce viable design that includes technical specifications, market evaluation, and customer discovery results. Communicate with wide range of audiences. Analyze ethical and intercultural and global impacts of innovation. Pre: 3 credits of foundational quantitative and computational thinking.
Prerequisite(s): STS 2254 and ENGE 2094 and (MGT 4094 or ENGE 4094 or IDS 4094)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 6D Critique & Prac in Design, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGE 4735 - Interdisciplinary Design Capstone (3 credits)
Team-oriented, open-ended, interdisciplinary design projects focused on industrially relevant problems. A specific, complex engineering design problem taken from problem definition to product implementation and validation. 4735: Focus on problem identification, development of customer needs, project management, solution validation and selection, solution design, engineering teamwork, documentation and communication. 4736: Focus on design implementation, design validation, ethical and societal impacts of engineering design, communication and teamwork. Students majoring in Material Science and Engineering, Mechanical Engineering, Electrical and Computer Engineering, Industrial and Systems Engineering, and Biomedical Engineering must meet prerequisite and corequisite requirements for their respective in-major capstone courses.
Prerequisite(s): (ME 3024 and ME 3034 and ME 3304 and ME 3524 and ME 3534 and ME 3624 and ME 4005 and MSE 2034) or (MSE 4644 and MSE 3044 and MSE 3054 and MSE 3884 and MSE 4414 and MSE 4554) or (MSE 4644 and MSE 3044 and MSE 3054 and MSE 3884 and MSE 4414 and MSE 3304) or (MSE 4644 and MSE 3044 and MSE 3054 and MSE 3884 and MSE 4414 and MSE 3204) or (MSE 4644 and MSE 3044 and MSE 3054 and MSE 3884 and MSE 4554 and MSE 3304) or (MSE 4644 and MSE 3044 and MSE 3054 and MSE 3884 and MSE 4554 and MSE 3204) or (MSE 4644 and MSE 3044 and MSE 3054 and MSE 3884 and MSE 3304 and MSE 3204) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3106) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3106) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3134) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3134) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3204) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3204) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3214) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3214) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3304) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3304) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3544) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3544) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3564) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3564) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3574) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3574) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3614) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3614) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 3704) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 3704) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4205) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4205) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4234) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4234) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4354) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4354) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4424) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4424) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4524) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4524) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4540) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4540) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4580) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4580) or (ECE 2804 and ECE 3004 and ECE 3105 and ECE 4704) or (ECE 2804 and ECE 3004 and ECE 3514 and ECE 4704) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3106) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3106) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3134) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3134) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3204) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3204) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3214) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3214) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3304) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3304) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3544) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3544) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3564) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3564) or (ECE 2804 and ECE 3504 and ECE 3105 and ECE 3574) or (ECE 2804 and ECE 3504 and ECE 3514 and ECE 3574) or (ECE 2804 and ECE 3504 and ECE 3105

ENGE 4736 - Interdisciplinary Design Capstone (3 credits)
Team-oriented, open-ended, interdisciplinary design projects focused on industrially relevant problems. A specific, complex engineering design problem taken from problem definition to product implementation and validation. 4735: Focus on problem identification, development of customer needs, project management, solution validation and selection, solution design, engineering teamwork, documentation and communication. 4736: Focus on design implementation, design validation, ethical and societal impacts of engineering design, communication and teamwork. Students majoring in Material Science and Engineering, Mechanical Engineering, Electrical and Computer Engineering, Industrial and Systems Engineering, and Biomedical Engineering must meet prerequisite and corequisite requirements for their respective in-major capstone courses.
Prerequisite(s): ENGE 4735
Corequisite(s): (MSE 4055 for MSE majors) or (ISE 4404 for ISE majors).
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGE 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGE 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Engineering Science and Mechanics (ESM)

ESM 2014 - Professnl Dvlpmnt Seminar ESM (1 credit)
Topics designed to foster the professional development of the ESM student. ESM program objectives and outcomes. Professional careers, employment opportunities, expectations to the profession. Technical concentration within the ESM major. Ethical decision-making, safe and life-long learning.
Instructional Contact Hours: (1 Lec, 1 Crd)

ESM 2104 - Statics (3 credits)
Vector mechanics of forces and moments, free-body diagrams, couples, resultants, equilibrium of particles and rigid bodies in two and three dimensions, forces in trusses, frames, and machines, centroids, centers of mass, distributed forces, internal shear forces and bending moments in beams, shear and moment diagrams, friction, belt friction, area of moments of inertia, parallel axis theorem. Course requirements may be satisfied by taking MATH prerequisite prior to or concurrent with course.
Prerequisite(s): MATH 1226
Corequisite(s): MATH 2204 or MATH 2204H or MATH 2406H
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 2114 - Statics & Structures (3 credits)
Vector algebra of forces, movements, couples and resultants. Free-body diagrams. Equilibrium of particles and rigid bodies in two and three dimensions. Friction. Forces in trusses and frames. Centroids, centers of mass, area moments of inertia. Internal axial forces, shear forces, and bending moments in bars in beams. Shear and moment diagrams. Stress and strain in bars in beams.
Corequisite(s): MATH 2204 or MATH 2204H or MATH 2406H.
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 2204 - Mechanics of Deformable Bodies (3 credits)
Concepts of stress, strain, and deformation. Factor of safety. Stress-strain relationships and material properties. Stress concentrations. Area moments of inertia. Axially loaded members, torsionally loaded members, bending of beams. Shear and moment diagrams. Stresses due to combined loading. Thin-walled pressure vessels. Transformation of stress including Mohrs circle. Beam deflections and buckling stability.
Prerequisite(s): (ESM 2104 or ESM 2114) and (MATH 2204 or MATH 2204H or MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 2304 - Dynamics (3 credits)
Vector treatment of the kinematics and kinetics of particles and rigid bodies, Newtons laws, work and energy, impulse and momentum, impact, mass moments of inertia, rotating axes.
Prerequisite(s): (ESM 2104 or ESM 2114) and (MATH 2204 or MATH 2204H or MATH 2406H)
Corequisite(s): MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 3024 - Introduction to Fluid Mechanics (3 credits)
Fluid properties. Hydrostatics. Derivation and application of the mass, momentum, and energy conservation equations. Dimensional analysis and similitude. Introduction to analyses of pipe flows and piping systems, open channel flows, and fluid forces on solid bodies.
Prerequisite(s): PHYS 2305 and ESM 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 3034 - Fluid Mechanics Laboratory (1 credit)
Introduction to experimental fluid mechanics. Dimensional analysis. Experiments on fluid properties, flow measurements, and flow visualization, including manometry, determining hydrostatic forces on submerged surfaces, applications of the impulse-momentum principle, velocity measurements, measuring drag forces, quantifying flow in channels. Modern data acquisition techniques.
Prerequisite(s): ESM 2304 and ECE 3054
Corequisite(s): ESM 3234
Instructional Contact Hours: (3 Lab, 1 Crd)

ESM 3054 - Mechanical Behavior of Materials (3 credits)
Mechanical properties and behavior of solid materials subjected to static, cyclic, and sustained loads resulting from stress states, environments, and stress histories typical of service conditions; multiaxial failure criteria; behavior of cracked bodies; fatigue of materials; creep of materials; microstructure-property relationships; design methodologies.
Prerequisite(s): ESM 2204 and (MSE 2034 or MSE 2044 or MSE 3094 or AOE 3094 or CEE 3684)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MSE 3054

ESM 3064 - Mechanical Behavior of Materials Laboratory (1 credit)
Laboratory experiments on behavior and mechanical properties of solid materials. Tension, compression, bending, hardness, nano-indentation, and impact tests; behavior of cracked bodies; fatigue and crack growth tests; creep deformation; microstructure-property relationships; laboratory equipment, instrumentation, and computers.
Prerequisite(s): ESM 2204
Corequisite(s): ESM 3054
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: MSE 3064

ESM 3114 - Problem Definition and Scoping in Engineering Design (1 credit)
Define open-ended engineering design projects, identify relevant broad social, global, economic, cultural and technical needs and constraints, determine ways in which technical skills contribute to addressing complex engineering design challenges. Identify a capstone project for ESM 4015-4016. Pre-requisite: Junior standing in ESM.
Prerequisite(s): ESM 2014
Instructional Contact Hours: (2 Lab, 1 Crd)

ESM 3124 - Dynamics II- Analytical and 3-D Motion (3 credits)
Review of Newtons Laws, introduction to Lagranges equations, rotating coordinate systems, particle dynamics, systems of particles, rigid-body dynamics, small amplitude oscillations, holonomic and nonholonomic constraints, phase space and energy methods.
Prerequisite(s): ESM 2304 and (MATH 2214 or MATH 2214H or MATH 2406H) and (MATH 2204 or MATH 2204H or MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 3134 - Dynamics III - Vibration and Control (3 credits)
Single-degree-of-freedom vibration, n-degree-of-freedom systems, continuous systems, nonlinear systems, system stability, introduction to the feedback control of dynamic systems.
Prerequisite(s): ESM 3124 and MATH 4564
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 3154 - Solid Mechanics (3 credits)
Introduction to tensors, mathematical description of deformations and internal forces in solids, equations of equilibrium, principle of virtual work, linear elastic material behavior, solution for linear elastic problems including axially and spherically symmetric solutions, stress function solutions to plane stress and strain problems, solutions to 3-D problems, energy methods.
Prerequisite(s): ESM 2204 and (MATH 2214 or MATH 2214H)
Corequisite(s): MATH 4574
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 3234 - Fluid Mechanics I-Control Volume Analysis (3 credits)
Fluid statics. Control volume approach to flow analysis: conservation laws, pipe flows, compressible flow, open channel flow.
Prerequisite(s): ESM 2304 and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 3334 - Fluid Mechanics II-Differential Analysis (3 credits)
Introduction to continuum mechanics for fluid systems. Fluid kinematics. Differential approach to flow analysis: conservation equations, exact solutions, potential flows, viscous flows.
Prerequisite(s): ESM 3234 or ME 3404
Corequisite(s): MATH 4574
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 3444 - Mechanics Laboratory (2 credits)
Concepts in instrumentation, data acquisition, and signal analysis. Measurements of mechanics quantities and phenomena associated with solid, fluid, and dynamical systems. Open-ended problem definition and approach formulation. Application and synthesis of engineering mechanics fundamentals to the modeling and solution of open-ended problems. Group-working skills and effective written and oral communication.
Prerequisite(s): ESM 3234 and ESM 3034 and ESM 3054 and ESM 3064 and ESM 3124 and ECE 3054
Corequisite(s): ESM 3134, ESM 3154, ESM 3334
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

ESM 3704 - Basic Principles of Structures (3 credits)
Static equilibrium of forces and moments, concurrent and nonconcurrent force systems, center of gravity, concentrated and distributed loads. Solution of trusses. Stress and strain, elastic behavior of materials, cables and arches, shear, bending, and deformation in beams, indeterminate structures. Not available to students in engineering.
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4014 - Applied Fluid Mechanics (3 credits)
Analysis of flow over practical configurations, panel methods, Reynolds-averaged Navier-Stokes equations, turbulent boundary layers, flow separation and three-dimensional effects. Unsteady flows, fluid-structure interactions.
Prerequisite(s): ESM 2074 and ESM 3016
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4015 - Creative Design and Project (3 credits)
Capstone senior design project. Synthesis and application of fundamental principles of engineering science and mechanics to an open-ended problem. 4015: Project proposal, including objectives, goals and plans for project. Identification of needs, constraints, and engineering standards with consideration of public health, safety, and welfare, including ethical, global, cultural, societal, environmental, and economic contexts. Proof-of-concept prototyping. Teamwork and communication of design and project progress. 4016: Design specifications with consideration of public health, safety, and welfare, as well as ethical, global, cultural, social, environmental, and economic factors where applicable. Design, test, and analysis of functional prototype. Teamwork and communication of design and project progress. Pre: Senior standing.
Prerequisite(s): ESM 3114
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4016 - Creative Design and Project (3 credits)
Capstone senior design project. Synthesis and application of fundamental principles of engineering science and mechanics to an open-ended problem. 4015: Project proposal, including objectives, goals and plans for project. Identification of needs, constraints, and engineering standards with consideration of public health, safety, and welfare, including ethical, global, cultural, societal, environmental, and economic contexts. Proof-of-concept prototyping. Teamwork and communication of design and project progress. 4016: Design specifications with consideration of public health, safety, and welfare, as well as ethical, global, cultural, social, environmental, and economic factors where applicable. Design, test, and analysis of functional prototype. Teamwork and communication of design and project progress. Pre: Senior standing.
Prerequisite(s): ESM 4015
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4024 - Advanced Mechanical Behavior of Materials (3 credits)
Mechanical behavior of materials, emphasizing solid mechanics aspects and methods for predicting strength and life of engineering components. Plasticity, failure criteria, fracture mechanics, crack growth, strain-based fatigue, and creep. Microstructure-property relationships, and laboratory demonstrations.
Prerequisite(s): ESM 3054 or MSE 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4044 - Mechanics of Composite Materials (3 credits)
Introduction to the deformation, stress, and strength analysis of continuous-fiber-polymer-matrix laminated composites. Fabrication, micromechanics of stiffness and expansional coefficients, classical lamination theory (CLT). Environmentally induced stresses. Computerized implementation and design.
Prerequisite(s): ESM 2204 or AOE 2024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CEE 4610

ESM 4084 - Engineering Design Optimization (3 credits)
Use of mathematical programming methods for engineering design optimization including linear programming, penalty function methods, and gradient projection methods. Applications to minimum weight design, open-loop optimum control, machine design, and appropriate design problems from other engineering disciplines.
Prerequisite(s): MATH 2224 or MATH 2204 or MATH 2204H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4084

ESM 4105 - Engineering Analysis of Physiologic Systems (3 credits)
Engineering analysis of human physiology. Physiologic systems are treated as engineering systems with emphasis input-output considerations, system interrelationships and engineering analogs. 4105 - Mass and electrolyte transfer, nerves, muscles, renal system. 4106 - cardiovascular mechanics, respiratory system, digestive systems, senses.
Prerequisite(s): ESM 2304 and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4106 - Engineering Analysis of Physiologic Systems (3 credits)
Engineering analysis of human physiology. Physiologic systems are treated as engineering systems with emphasis input-output considerations, system interrelationships and engineering analogs. 4105 - Mass and electrolyte transfer, nerves, muscles, renal system. 4106 - cardiovascular mechanics, respiratory system, digestive systems, senses.
Corequisite(s): ME 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4114 - Nonlinear Dynamics and Chaos (3 credits)
Motion of systems governed by differential equations: stability, geometry, phase planes, bifurcations, Poincare sections, point attractors, limit cycles, chaos and strange attractors, Lyapunov exponents. Forced, nonlinear oscillations: jump phenomena, harmonic resonances, Hopf bifurcations, averaging and multiple-scales analysis. Systems governed by discrete maps: return maps, cobweb plots, period-multiplying bifurcations, intermittency, delay coordinates, fractal dimensions.
Prerequisite(s): (ESM 2304 or PHYS 2504) and (MATH 2214 or MATH 2214H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4514

ESM 4154 - Nondestructive Evaluation of Materials (3 credits)
Concepts and methods of nondestructive evaluation of materials. Discussion of techniques and mathematical bases for methods involving mechanical, optical, thermal, and electromagnetic phenomena; design for inspectability; technique selection criteria; information processing and handling; materials response measurement and modeling; signal analysis.
Prerequisite(s): ESM 3054 and (PHYS 2206 or PHYS 2306)
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4194 - Sustainable Energy Solutions for a Global Society (3 credits)
Addresses energy metrics, global and US energy supply and demand, transitional energy sources (natural gas, petroleum, coal, nuclear), sustainable/renewable source (solar, geothermal, hydro, tidal, wind, biofuels), and methods for increasing efficiencies (energy storage, batteries, green building, conservation). Options for transportation, electricity, lighting and heating needs of industry, agriculture, community, and citizens. Production, transmission, storage, and disposal issues considered in the context of global political, economic, and environmental impacts. Senior Standing in major may be substituted for pre-requisite ENGL 3764.
Prerequisite(s): (CHEM 1035 or CHEM 1055) and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ME 4194

ESM 4204 - Musculoskeletal Biomechanics (3 credits)
Skeletal anatomy and mechanics. Muscle anatomy and mechanics. Theory and application of electromyography. Motion and force measuring equipment and techniques. Inverse dynamics modeling of the human body. Current topics in musculoskeletal biomechanics research.
Prerequisite(s): ESM 2304 and (CS 1044 or CS 1064 or CS 1114 or AOE 2074 or ESM 2074 or ME 2004)
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4224 - Biodynamics and Control (3 credits)
Study of human movement dynamics and neuromuscular control of multi-degree-of-freedom systems. Computational simulation of forward-dynamics and state-space linear control of human movement to investigate functional performance and neuromuscular pathology.
Prerequisite(s): ESM 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4234 - Mechanics of Biological Systems (3 credits)
Anatomy and physiology of biological systems such as cells, tissues, and organs. Experimental techniques for determining the mechanical behavior of biological systems. Simplified mechanics-based mathematical models of biological systems. Specific biological systems include cells, tissues, and organs of the musculoskeletal, cardiovascular, integumentary system, and reproductive systems.
Prerequisite(s): ESM 2204 and MATH 2214 and MATH 2114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BMES 4234

ESM 4245 - Mechanics of Animal Locomotion (3 credits)
4245: Mechanical and biological principles of terrestrial animal locomotion, including walking, running, jumping, climbing, burrowing, and crawling. Terrestrial locomotion- based bio-inspired design. 4246: Mechanical and biological principles of animal locomotion in fluids, including active and gliding flight, swimming, jetting, and running on water. Engineering design inspired by fluid based biological locomotion.
Prerequisite(s): ESM 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4246 - Mechanics of Animal Locomotion (3 credits)
Mechanical and biological principles of of animal locomotion in fluids, including active and gliding flight, swimming, jetting, and running on water. Enginneering desgn inspired by fluid-based biological locomotion.
Corequisite(s): ESM 3024 or ESM 3234 or ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4304 - Hemodynamics (3 credits)
Study of the human cardiovascular system and blood flow. Anatomy and physiology of the human heart, vascular system, and its organization. Blood physiology and rheology. Non-Newtonian blood flow models. Steady and pulsatile blood flow in rigid and elastic arteries. Pressure waves in elastic arteries. Three-dimensional blood flow in the aortic arch and flow around heart valves.
Prerequisite(s): ESM 3334 or ME 3404 or ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ESM 4404 - Fundamentals of Professional Engineering (2 credits)
A refresher of basic principles and problem solving techniques involving twelve subject areas most common to all engineering curricula. The topics include those tested by the National Council of Engineering Examiners on the EIT (Engineer in Training) examination, the first requirement, in all fifty states, toward P.E. (Professional Engineer) licensing. Duplicates material of other engineering courses and impracticable for non-engineers, hence not usable for credit toward any degree. Pre: Junior and senior standing in Engineering or in Building Construction or Graduate students in Engineering.
Instructional Contact Hours: (2 Lec, 2 Crd)

ESM 4444 - Stability of Structures (3 credits)
Introduction to the methods of static structural stability analysis and their applications. Buckling of columns and frames. Energy method and approximate solutions. Elastic and inelastic behavior. Torsional and lateral buckling. Use of stability as a structural design criterion.
Prerequisite(s): AOE 3024 or CEE 3404
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4054

ESM 4614 - Probability-Based Modeling, Analysis, and Assessment (3 credits)
Uncertainty analysis of engineering data, parameters estimation, probability concepts, random variables, functions of random variables, probability-based performance functions and failure modes, risk and reliability functions, probability of failure and safety index, random sequences and stochastic processes, correlation functions and spectral densities, return period and extreme values, failure rates, performance monitoring and service life prediction.
Prerequisite(s): ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BMES 4614

ESM 4734 - An Introduction to the Finite Element Method (3 credits)
The finite element method is introduced as a numerical method of solving the ordinary and partial differential equations arising in fluid flow, heat transfer, and solid and structural mechanics. The classes of problems considered include those described by the second-order and fourth-order ordinary differential equations and second-order partial differential equations. Both theory and applications of the method to problems in various fields of engineering and applied sciences will be studied.
Prerequisite(s): (CS 3414 or MATH 3414 or AOE 2074 or ESM 2074) and (MATH 2224 or MATH 2224H or MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4024

ESM 4904 - Project and Report (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ESM 4994H - Undergraduate Research (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

English (ENGL)

ENGL 1EWL - Waiting List for English 1105 (0 credits)
Instructional Contact Hours: (0 Lec, 0 Crd)

ENGL 1004 - Books, Libraries, Archives (3 credits)
First-Year Experience course that introduces students to primary objects and methods of inquiry and invention in English studies. Introduction to library and archival research, ethical inquiry, social and historical function of reading, role of books in society, technologies of publication and reading, and writing effective summaries and critical reflections.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1105 - First-Year Writing (3 credits)
1105: Introduction to rhetorical analysis, visual rhetoric, critical writing, and critical thinking; intensive reading of works in multiple genres; practice in writing and revision; fundamentals of oral presentations. 1106: Continued study in rhetorical analysis and the conventions of various genres; intensive instruction in writing and revision of work that incorporates research; experience in oral presentations.
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1106 - First-Year Writing (3 credits)
1105: Introduction to rhetorical analysis, visual rhetoric, critical writing, and critical thinking; intensive reading of works in multiple genres; practice in writing and revision; fundamentals of oral presentations. 1106: Continued study in rhetorical analysis and the conventions of various genres; intensive instruction in writing and revision of work that incorporates research; experience in oral presentations.
Prerequisite(s): ENGL 1105
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1504 - Introduction to Contemporary Linguistics (3 credits)
Introduction to the sounds of language, processes by which words and sentences are formed, how the meanings of words are established by context, and why languages vary and change over time.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1514 - Language and Society (3 credits)
English language variation considered from social, regional, ethnic, gender, and style perspectives. Emphasis on vernacular varieties of American English. Attention paid to the social evolution of different language varieties and sociolinguistic perceptions of language ideologies. Introduction of methods of data analytics.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1524 - Language and the Mind (3 credits)
Examination of what is unique about human language and the evidence that language affects thought. Investigation of how listeners categorize sounds, parse sentences, and access meaning. Examination of what brain damage and speech errors reveal about language in the brain and mind.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSYC 1524

ENGL 1604 - Introduction to Poetry (3 credits)
Examination of poetry across historical periods, cultural contexts, and geographical areas. Emphasis on poetic forms and conventions, elements of poetic technique, poetic genres, and the vocabulary of poetic craft.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1614 - Introduction to Short Fiction (3 credits)
Analysis of short fiction and novellas from different historical periods and cultures. Emphasis on the structural elements of fiction, on its flexibility as a form for exploring human desires, conflicts, and values, and on its employment by writers from different cultures, ethnicities, and genders.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1624 - Introduction to Detective Fiction (3 credits)
Analysis of classic and modern texts of detective fiction selected from a variety of historical periods and cultural traditions. Emphasis on the structural elements of detective fiction, on its various sub-genres, and on its employment by writers from different cultures, ethnicities, and genders.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1634 - Introduction to Shakespeare (3 credits)
Introduction to Shakespeares drama and poetry, including at least one modern adaptation of a Shakespearean play (play, novel, movie, opera, etc.). Emphasis on the structural elements and conventions of the different genres of Shakespearean plays and poetry and on their representations of gender and ethnicity.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1644 - Introduction to World Literature (3 credits)
World literature in translation. Texts from different time periods, nations, and cultures. Emphasis on close reading, literary elements and conventions, recurring themes, historical and cultural contexts.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1654 - Introduction to Science Fiction and Fantasy (3 credits)
Introduction of literary works within the genres of science fiction and fantasy, focusing on the development and principal characteristics of each genre. Emphasis on the social, cultural, and historical contexts in which particular speculative texts have been produced.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1664 - Introduction to Womens Literature (3 credits)
Introduction to literature written by women, primarily in English. Focus on literary and cultural questions raised in womens writing throughout history and from different social and cultural backgrounds.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1704 - The Harry Potter Phenomenon (3 credits)
Introduction to a millennial childrens literature phenomenon, J.K. Rowlings seven-volume Harry Potter series, and to various critical and cultural responses to the books. Subgenres of fiction used in the series, such as the boarding-school novel and the sports novel; recurring themes in the series; critical concepts such as the Byronic hero and the anti-hero; the role of media in making the series an economic phenomenon; and the relationships of the novels to film versions and fan-fiction spin-offs.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 1714 - True Crime Stories in American Culture (3 credits)
Analysis of true crime stories across various media and genres. Emphasis on the origins of true crime, narrative features and conventions of true crime stories, and the social, political, and ethical issues raised by their production and consumption, particularly in terms of race, gender, class, and other components of identity.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2014 - Food Writing (3 credits)
Introduction to the study, analysis, and production of food writing and food media; applied, iterative writing practices within multiple genres focused on the cultural and humanistic qualities of food.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2034 - Analyzing the Sounds of Language (3 credits)
Examination of the acoustic attributes of vowels and consonants using quantitative techniques. Statistical analysis of acoustical differences between and within speakers, enabling predictions about future language choices and outcomes. Basic introduction to using computational software for data processing and visualization, and to ethical issues that arise in collecting an analyzing data.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2044 - Contemporary African American Theatre (3 credits)
Contributions of U.S. Black theatre artists; intersectional identities; performances spaces and society; critical race theory; dramatic storytelling; cultural behaviors; racial discrimination.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2044, TA 2044

ENGL 2104 - African American Linguistics (3 credits)
Overview of some of the language varieties used by African Americans, including African American English, Black American Sign Language, Gullah, Louisiana Creole, and Afro-Latino varieties of Spanish and English. Focus on historical, contemporary, sociopolitical and linguistic factors impacting language practices at the individual and community level. Examination of African American language styles used in expressive forms of art and politics, but also how language ideologies shape responses to African American language in educational, political, and judicial settings. Uses lens of African American Language to explore key linguistic concepts like phonology, morphosyntax, prosody, language acquisition, language contact, and language change.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2104

ENGL 2434 - Legends of King Arthur (3 credits)
Introduction to legends of King Arthur, including stories, novels, and films from a wide historical timespan. Tales of knights, kings, and fair maidens that have entertained generations and irrevocably shaped cultural values surrounding gender relations, justice, violence, and the use and abuse of power. Analysis of individual texts and broader consideration of the Arthurian tradition during key literary-historical periods from the medieval era to the present.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2434

ENGL 2444 - Ancient Greek and Roman Mythology (3 credits)
Surveys ancient Greek and Roman mythology. Provides students with an introduction to selected myths from ancient Greek and Roman literature, including appropriate historical background information. Familiarizes students with how theories of myth have been applied to individual stories and how such mythological tales have been received by authors and artists in subsequent cultures. Explores the interaction and interdependence of mythological tales from different cultures and perspectives. In English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CLA 2444, RLCL 2444

ENGL 2534 - American Literary History (3 credits)
Introduction to American literary traditions, from the Colonial period through Modernism. Emphases on historical, social, and cultural contexts as these are reflected by representative texts.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2544 - British Literary History (3 credits)
Introduction to British literary traditions, from the Anglo-Saxon period through Modernism. Emphasis on historical, social, and cultural contexts as these are reflected by representative texts.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2604 - Introduction to Critical Reading (3 credits)
A writing intensive introduction to the techniques and theoretical implications of close reading and to the literary genres of poetry, drama, fiction, and, in some sections, non-fiction. The focus is on four primary texts, at least one of which was written before the eighteenth century and one after it, and on criticism of at least one of these. The course emphasizes the analytical skills, basic critical terminology, and conventions of literary criticism essential to advanced English studies. Intended primarily for English majors and minors.
Prerequisite(s): ENGL 1105 or COMM 1015
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2634 - Writing and Social Justice (3 credits)
Study of writings about social justice in various local and global contexts. Critical and rhetorical analysis of discourses in social justice through intersectional approaches.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2644 - Introduction to African-American Literature (3 credits)
An introduction to the principal themes, genres, and historical contexts of African-American literature. Formal elements of both the vernacular and written traditions. Impact of historical and social contexts. Ethical questions raised in the literature.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2644

ENGL 2664 - Being Human: Literature and Human Experience (3 credits)
Depictions of nature, the inhuman, and the superhuman in literature; literary explorations of empathy, technology, race, gender, language, dis/ability, and labor in human experience. Novels, short stories, and poems that explore issues of the human: how to define what is human (recognizing flexible and perhaps permeable boundaries between human and nonhuman), how to defend the human (humans at war with themselves and others), how humans are exploited (labor and human capital), and how humans change (technological development and future human evolution). Imaginative and ethical issues in different genres. Revolving topics course; may be repeated once for credit.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ENGL 2724 - Introduction to Displacement Studies (3 credits)
Examines key concepts, ideas, and technologies in global population displacement, including categorization, distribution and governance of displaced groups. Introduces displacement drivers such as natural disaster, climate change, civil unrest, infectious disease, and forced relocation. Identifies digital infrastructures used for, by, and against displaced populations. Describes experiences of displaced people.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2724, LAHS 2724, STS 2724

ENGL 2744 - Introduction to Creative Writing (3 credits)
A workshop for beginning writers who will identify and apply formal elements of a variety of genres and employ the skills, tools, methods, and iterative processes used by creative writers to produce fully developed works of art.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2804 - Contemporary Native American Literatures (3 credits)
This course offers a sampling of fiction, poetry, and non-fiction by the most influential American Indian writers since 1970, authors such as Momaday, Silko, Deloria, Welch, Harjo, and Alexie. Students also learn about those aspects of cosmology and storytelling traditionally shared by all American Indian Nations, as well as about those aspects specific to the individual tribal traditions from which the authors and their characters come.
Prerequisite(s): ENGL 1106 or ENGL H1204 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 2804

ENGL 2814 - Writing for Podcasts (3 credits)
Analysis of exemplary and diverse podcasts, in both audio and transcribed formats. Application of creative writing and technical skills necessary for the composition of original and diverse audio programs. Implementation of formal podcast elements, such as development, performance, structure, production, and promotion. Exploration of creative projects involving scriptwriting, serialized storytelling, hybridized genres, vocal performance, extemporization.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2844 - Introduction to Professional and Technical Writing (3 credits)
Foundations of professional and technical writing and its functions in workplace settings. Practice with problem solving and decision making, audience analysis, document design, usability, and inclusive and ethical documentation, individually and in teams. Practice writing workplace genres such as proposals, reports, and correspondence. Analyze how writing elements such as design, language choices, and diverse data sources affect a document's usability for different audiences.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 3024 - Religion and Literature (3 credits)
Read works from world literature, guided by selected critical readings. Compare/contrast diverse models of religion and literature. Study how modernity has impacted traditions of religion and culture. Interpret literary texts that draw from multiple religions. Analyze religion-literature controversies in a range of social, cultural, political contexts. Synthesize sources of multiple media, formats, and contexts.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3024

ENGL 3134 - Gender and Linguistics (3 credits)
Exploration of differences--real and imagined--in the speech of men and women, and the relationship between these differences to culture. Exploration of how language can reflect and reinforce gender inequality. Linguistic phenomena covered: pitch, vocabulary, sound change, language ideologies, and discourse strategies and types.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WGS 3134

ENGL 3144 - Language and Ethnicity in the United States (3 credits)
Exploration of how racial and ethnic identity are expressed through the use of different languages and dialects. Examination of how language is related to issues of equality, social opportunity, and discrimination in the United States.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3144, SOC 3144

ENGL 3154 - Literature, Medicine, and Culture (3 credits)
The representation of health and illness in literature and the cultural aspects of medicine as a practice.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3204 - Medieval Literature (3 credits)
This course presents medieval British literature from ca. 700 to 1500 in its representative modes and defining contexts, including the literary influences of pagan antiquity, the native British (Celtic) tradition, Scandinavian and contemporary continental influences, the Crusades, the Byzantine Empire, and the philosophical traditions of neoplatonism and scholasticism. Specific authors and texts will vary, but will include poetry, prose, and drama.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3214 - Renaissance Literature (3 credits)
This course presents Renaissance British literature from 1500-1660 in its representative modes and defining contexts, including the discovery of the Copernican universe and the new world, the rise of Protestantism, the resultant Counter-reformation, the movement from humanism to empiricism, and the institution of Parliamentary democracy. Specific authors and texts will vary, but will include poetry, prose, and drama.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3234 - Romantic Literature (3 credits)
This course presents Romantic literature from the late eighteenth century to 1832 in its representative modes and defining contexts, including the French, American, and Industrial Revolutions, the expansion of the British empire, the rise of the novel, Gothicism, and the intellectual influence of periodical essays. Specific authors and texts will vary, but will include poetry, fictional prose, and non-fictional prose.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3264 - Modernist British Literature (3 credits)
This course presents Modernist British literature from 1918-1945 in its representative modes and defining contexts, including World Wars I and II, the collapse of the British empire, the influence of Darwin, Marx, and Freud, and such literary movements as Modernism, Realism, and Stream of Consciousness. Specific authors and texts will vary, but will include poetry, prose, and drama.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3304 - The Languages of Native America (3 credits)
Study of the structures of the native languages of the Americas; their interrelationships; their use in individual speech communities; contact with other languages; the interrelationships of linguistic structure, culture, and thought; their future survival.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 3304

ENGL 3315 - Playwriting (3 credits)
A workshop course in the craft and art of playwriting which emphasizes the development of craft and the nurturing of vision and art. 3315: primary focus is on the writing of original scripts with additional attention paid to the work of influential playwrights and critics. 3316: primary focus is on the creative process of developing a play with the collaborative influences of a director, actors, designers, and other theatre professionals. Consent of instructor required for 3316.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: TA 3315

ENGL 3324 - Acts of Interpretation (3 credits)
Foundational interpretive approaches in literary and rhetorical studies. Emphasis on broad frameworks and their implications for textual analysis.
Prerequisite(s): ENGL 2604
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3364 - Topics in Literature by Women (3 credits)
This rotating topics course examines literature written by women with different national and ethnic identities and from different historical periods. Specific content varies, but the common focus is on the fundamental issues surrounding womens writing, the critical methodologies commonly employed to analyze this writing, and the historical, social, and literary contexts influencing the particular writing being studied. May be repeated once with different content.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3424 - Topics in Russian Literature in English (3 credits)
Variable-content course devoted to the study of Russian literary classics. From general surveys of nineteenth- and twentieth-century literature to more intensive study of the works of a single major author. Aesthetic and rhetorical strategies. Interactions between literary movements and political, historical, and cultural events. May be repeated once with different content for a maximum of 6 credits. Readings and lectures in English. No knowledge of Russian required.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: RUS 3424

ENGL 3434 - The Works of Vladimir Nabokov (3 credits)
Readings in major works of Vladimir Nabokov from the 1920s through the 1970s. Aesthetic and rhetorical strategies, literary analysis, major themes, immigration and cultural knowledge. Taught in English.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RUS 3434

ENGL 3474 - Rhetoric for Professional Writers (3 credits)
Rhetorical theory and writing in professional, technical, and public contexts. Culture, access, power, and ethics in relation to rhetoric in professional and technical writing. Rhetoric strategies for textual and digital production.
Prerequisite(s): ENGL 1106 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3514 - Ethnic Literature for Children (3 credits)
This course examines the historical contexts of and issues surrounding ethnic literature for children. The course considers the literature in terms of aesthetics, cultural representations, and identity. Ethnic literatures considered may include Native American, African American, Asian American, and Latino/a. The course also introduces other ethnic literary traditions, such as world folk tales, that influence or parallel American ethnic childrens books.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3524 - Literature for Children (3 credits)
General critical and historical survey of traditional and contemporary writing for children: picture books, folk literature, modern fantasy, poetry, drama, modern fiction, historical fiction.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3534 - Literature and the Environment (3 credits)
Study of fiction, poetry, and non-fiction that examine environmental issues, sustainability, and the relationship between the human and natural worlds within a local and global context.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3544 - Literature and Cinema (3 credits)
Works of literature and the films into which they have been transformed; emphasis on differences between media.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CINE 3544

ENGL 3624 - Appalachian Literature (3 credits)
Appalachian literature from the region's beginnings to the present, including such diverse voices as women, Native American, Affrilachian, LGBTQ, and Latinx populations. Literary perspectives on the relationships between self, family, and community; place and displacement; and humans and the natural world. Analysis of stereotypes that have perpetuated inequity and displacement of power, as well as consideration of regional efforts to reclaim equity, power, place, and identity.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 3624

ENGL 3644 - The Postcolonial Novel (3 credits)
A study of novels examining the historical, social, and cultural contexts before, during, and after colonization. Emphasis on major writers (e.g., Achebe, Coetzee, Roy, Phillips) across continents (Africa, Asia, North America) and the significant themes, tropes, and theories of the genre.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3654 - Ethnic American Literature (3 credits)
Variable content course which introduces major American ethnic literatures: African-American, Asian-American, Chicano/a, Arab-American, and Native American. Representative texts from one or two of these categories are examined within the cultural, historical, and geographical matrices within which they are written. May be repeated twice for credit if the content is different.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ENGL 3684 - Literature and the Law (3 credits)
This course introduces students to the representation of the law and lawyers in literature. Emphasis is placed on the cultural and historical contexts that shape our perception of the law and legal practice and on the use of facts, research, interpretation, and rhetoric in legal argument. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3684H - Literature and the Law (3 credits)
This course introduces students to the representation of the law and lawyers in literature. Emphasis is placed on the cultural and historical contexts that shape our perception of the law and legal practice and on the use of facts, research, interpretation, and rhetoric in legal argument. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3694 - Topics in World Novels (3 credits)
Rotating-topics course in world novels, either translated into, or originally written in, English. Emphasis on critical reading of novels written from different historic, intellectual, and cultural contexts. Formal and aesthetic analysis to identify themes, traditions, and values that cross periods and national boundaries. May be repeated once with different topics.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ENGL 3704 - Creative Writing: Fiction (3 credits)
This course is designed for students who want to focus in some depth on the writing of various forms of fiction such as the short story and novella. Emphasis is on the writing the critiquing of original fiction in a workshop/studio environment, and the analysis of exemplary texts which serve as models. Students produce a body of original fiction in draft and revised forms. May be repeated for a maximum of 9 credit hours.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 3714 - Creative Writing: Poetry (3 credits)
This course is designed for students who want to focus in some depth on the writing of poetry. Emphasis is on the writing and critiquing of original poetry in a workshop/studio environment, and the analysis of exemplary poems which serve as models. Students analyze various poetic forms and produce a revised body of original poetry. May be repeated for a maximum of 9 credit hours.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 3724 - Creative Writing: Creative Non-fiction (3 credits)
This course is designed for students who want to focus in some depth on the writing of creative non-fiction in its various forms, including memoir, personal experience writing, the lyrical essay, travel narratives, and nature writing. Emphasis is on the writing and critiquing of original creative non-fiction in a workshop/studio, environment and the analysis of exemplary texts which serve as models. Students produce a body of original non-fiction in draft and revised forms. May be repeated for a maximum of 9 credit hours.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 3734 - Community Writing (3 credits)
Introduction to the theory and practice of managing service- learning writing projects in schools, community centers, retirement communities, and public libraries. Survey of best practices in creative writing pedagogy and in creating sustainable community partnerships.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3734H - Community Writing (3 credits)
Introduction to the theory and practice of managing service- learning writing projects in schools, community centers, retirement communities, and public libraries. Survey of best practices in creative writing pedagogy and in creating sustainable community partnerships.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3744 - Writing Center Theory and Practice (3 credits)
Focus on the theory and practice of teaching writing across the disciplines in the Writing Center setting. Emphasis is on writing center theory applied to one-on-one teaching strategies and on techniques for responding appropriately to student writing. To take this course you must first have the professors consent.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3744H - Writing Center Theory and Practice (3 credits)
Focus on the theory and practice of teaching writing across the disciplines in the Writing Center setting. Emphasis is on writing center theory applied to one-on-one teaching strategies and on techniques for responding appropriately to student writing. To take this course you must first have the professors contest.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3754 - Advanced Writing and Research (3 credits)
Advanced study in critical reading and writing for diverse academic, professional, civic, and/or personal contexts, culminating in a course portfolio; applied practice with audience-specific texts in multiple genres, modes, and styles; advanced instruction in research strategies and writing processes for complex rhetorical environments; emphasis on the influence of social and cultural identities across writing contexts.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3764 - Technical Writing (3 credits)
Principles and processes of effective written communication of technical information. Strategies for analyzing various workplace communication situations, adapting to audiences, evaluating online content, understanding ethical dimensions of research, and composing technical discourse, including organizing visual and verbal information. Practice in writing, individually and collaboratively, instructions and procedures, proposals and reports, correspondence, and presentations. Junior standing.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3774 - Business Writing (3 credits)
Principles and processes of effective communication required to succeed in business in global and intercultural contexts. Strategies for writing effective messages, analyzing workplace communication situations, adapting information to various audiences, conducting ethical research, giving oral presentations. Practice in writing memos, letters, emails, blog posts, proposals, and reports. Junior standing required.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3784 - Screenwriting (3 credits)
A workshop course in the craft and art of screenwriting, acquainting students with the standard format of screenplays and evaluation of dramatic structures of influential screenplays. Emphasis on construction of dramatic situations, employing the use of action in developing character and theme. Employment of scene as a visual unit of composition, and the evaluation of dramatic structures of influential screenplays.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3804 - Technical Editing and Style (3 credits)
Technical Editing and Style explores the art of editing from the initial writing task to the final delivery of the document. In addition to learning document management, students study and practice the roles, responsibilities, and tasks that editors perform. The course also covers the rules that govern the fundamentals of style (correctness, clarity, and propriety) and the principles needed to match the tone and formality to the aim, audience, and occasion of the work. Must have pre-requisites or the consent of the Director of Professional Writing.
Prerequisite(s): ENGL 1106 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3814 - Creating User Documentation (3 credits)
This course prepares students to produce both print and online user documentation that enables people to accomplish a given set of tasks (e.g., user guides, online help, policy and procedure manuals, tutorials, and how-to books). Readings include rhetorical theory and discussions of professional practice. Students learn the principles of user and task analysis, information design, usability testing, and indexing. In addition, they have opportunities for hands-on experience with clients and end-users. Must have pre-requisites or the consent of the Director of Professional Writing.
Prerequisite(s): ENGL 1106 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3824 - Visual Rhetoric and Document Design (3 credits)
Theory and practice of visual rhetoric and document design, including attention to ethical design standards and the sociocultural implications of design. Analysis of rhetorical situations to determine the needs of diverse audiences and make effective and ethical design choices. Application of rhetorical theories and formal design strategies to the production of print and digital artifacts using industry-standard design tools (i.e., Adobe InDesign, Illustrator, and Photoshop). Development of the ability to analyze and critique the work of others and to apply such assessments to improve designs in terms of aesthetics and usability.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3834 - Intercultural Issues in Professional Writing (3 credits)
Intercultural and global dimensions of professional and technical writing, including theoretical perspectives and practical applications. Theories of culture, context, identity, language, and technology as relevant to technical and professional communication. Issues of social equity and justice in the field of professional and technical writing. Approaches to engaging in intercultural communication in practice, including localization, globalization, translation, and designing information for and with communities.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3844 - Writing and Digital Media (3 credits)
Fundamental exercises in the production of digital media for internet-capable devices, such as data visualizations, videos, web design, and more. Introduction to ethical reasoning, and its application to contemporary issues about digital media and writing within the context of broader business, organizational, and political practices to collect and use user data.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

ENGL 3954 - Study Abroad (1-9 credits)
Instructional Contact Hours: (1-9 Lec, 1-9 Crd)
Repeatability: up to 9 credit hours

ENGL 3954B - Study Abroad (1-6 credits)
Pathway Concept Area(s): 2 Critical Thinking Humanities
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)

ENGL 3954M - Study Abroad (1-9 credits)
Pathway Concept Area(s): 6A Critique & Practice in Arts
Instructional Contact Hours: (1-9 Lec, 1-9 Crd)

ENGL 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 4004 - Linguistic Discourse Analysis (3 credits)
Introduction to discourse analysis. This course examines spoken and written discourses of English. Further attention will be paid to how discourse functions in political, legal, medical, and educational contexts.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4054 - History of the English Language (3 credits)
Development of English including both its internal history (sounds, vocabulary, inflections, syntax) and its external history (political, social, and intellectual forces). Indo-European origins through the present, with special emphasis on the English Language in America.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4074 - Syntax (3 credits)
Examination of the systemic organization of sentence patterns in human languages. Formulation of problems and evaluation of competing syntatic analyses at the phrase and sentence levels. Analysis of the architecture of phases and of movement processes for grammatical and pragmatic informational coding.
Prerequisite(s): ENGL 1504
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4084 - Conducting Research in the Language Sciences (3 credits)
Research methodology for the study of linguistic structure, sociolinguistic variation, and cross-field approaches. Ethical research methods, data collection, data processing and analysis, presentation of research.
Prerequisite(s): ENGL 1504 and (ENGL 3134 or WGS 3134 or ENGL 3144 or RLCL 3144 or SOC 3144)
Corequisite(s): ENGL 4074, ENGL 4144
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4114 - Chaucer (3 credits)
Critical analysis of themes, styles, and structures in works of Geoffrey Chaucer. Ethical issues, historical context, and cultural traditions. Structure and vocabulary of Middle English. Influence in literary and critical traditions historically and today.
Prerequisite(s): (ENGL 1106 or ENGL 1204H) or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4124 - Introduction to Old English (3 credits)
Introduction to Old English grammar and reading of Old English poetry and prose. Senior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4134 - Language Development (3 credits)
Survey of theories, mechanisms, and processes in human language development. Empirical overview of phonology, semantics, syntax, and pragmatics. Developmental trajectories of mono-and multilingual children. Cultural constraints on language. Perception of language and production of language, in typical and atypical subpopulations (e.g., hearing impairment). Junior/Senior Standing.
Prerequisite(s): PSYC 1004 or PSYC 2004
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSYC 4134

ENGL 4144 - Phonology (3 credits)
Examination of the systematic organization of sounds in human languages based upon problem-based learning. Analysis of syllables and morae, articulatory features, timing of articulatory gestures, and phonological processes that lead to sound change. Assessment of various theoretical and computational approaches to phonology including Articulatory Phonology, Prosodic Phonology, and Optimality Theory.
Prerequisite(s): ENGL 1504
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4164 - Studies in Shakespeare (3 credits)
Revolving topics in Shakespeares drama and poetry, with emphases on poetic and dramatic genres, historical and cultural contexts, significant themes, and popular reception. Additional attention paid to the critical discourse surrounding Shakespeares work. May be repeated twice with different content for a maximum of nine credit hours.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 4204 - Hybrid Forms (3 credits)
Advanced writing workshop. Focus on the fusion of genres, such as prose poetry and multimedia writing, with special emphasis on anomalous and/or experimental forms, like cronicas/chronicles, manifesto/artist's statement, microfiction, erasure, collage, third person nonfiction, flash nonfiction, and the lyric essay. Skills, tools, methods, and iterative processes essential to the production of works of literary art.
Prerequisite(s): ENGL 3704 or ENGL 3714 or ENGL 3724
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4214 - Milton (3 credits)
Miltons poetry from the early works, including COMUS, LYCIDAS, and the sonnets, to his major late works PARADISE LOST, PARADISE REGAINED, and SAMSON AGONISTES; with some attention to the important prose and to the historical context in which he wrote.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4314 - Narrative Medicine (3 credits)
Introduction to the field of narrative medicine, with attention to narrative competence, the use of narrative in medical education, and the function of narratives in the experience of healing. Includes narrative approaches to biomedical ethics.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 4314

ENGL 4314H - Narrative Medicine (3 credits)
Introduction to the field of narrative medicine, with attention to narrative competence, the use of narrative in medical education, and the function of narratives in the experience of healing. Includes narrative approaches to biomedical ethics.
Prerequisite(s): ENGL 3154 or ENGL 3324
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 4314

ENGL 4434 - The American Novel (3 credits)
Development of the American novel from its beginnings in the late 18th century to 20th century postmodernism. Emphasis on works representative of major authors (e.g., Twain and Morrison), important types (e.g., the romantic novel, the historical novel), and significant American themes (e.g., religion, nature, slavery, the frontier).
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4444 - The British Novel (3 credits)
Development of the British Novel from the mid- eighteenth century to World War II, including works by such novelists as Defoe and Austen (origins through romantic era), Dickens, Hardy, and Stevenson (Victorian and Edwardian era), Joyce, Woolf, and Waugh (modern period). Emphasis on evolution of generic styles and conventions against a changing landscape of historical and cultural change.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4474 - Special Topics in Professional and Technical Writing (3 credits)
Advanced, variable-content course that explores a significant or emergent professional & technical writing issue. Examines relevant theories and historical contexts to analyze relationships among rhetoric, culture, access, and power. Identifies common themes and approaches and applies these themes and approaches, shaped by current theories, to professional and technical writing projects. Individual sections focus on differing areas of professional and technical writing (to be specified in the subtitle of the course). May be repeated twice with different content for a maximum of nine credit hours. Pre: Junior Standing.
Prerequisite(s): ENGL 1106 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 4504 - Modern Poetry (3 credits)
British and American poetry from 1900 to World War II with emphasis on such figures as Pound, Williams, Stevens, Yeats, Plath, Smith, and Eliot.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4514 - Contemporary Poetry (3 credits)
British and American poetry from World War II to the present, with emphasis on such figures as Bishop, Lowell, Ashbery, Heaney, and Hughes.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4624 - Studies in a British Author after 1800 (3 credits)
This course examines the life, work, and critical reception of a single major British author (or pair of closely associated authors) writing after 1800. May be taken up to 3 times with different content. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4634 - Studies in an American Author before 1900 (3 credits)
This course examines the life, work, and critical reception of a single major American author (or a pair of closely associated authors) writing before 1900. May be taken up to three times with different content. Junior standing is required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 4644 - Studies in an American Author after 1900 (3 credits)
This course examines the life, work, and critical reception of a single major American author (or pair of closely associated authors) writing after 1900. May be taken up to three times with different content. Junior standing is required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

ENGL 4664 - Contemporary Fiction (3 credits)
Fiction since 1945 with emphasis upon the most recent two decades: the late modernist narratives of Bellow, Updike, and Percy; the new fiction of Barth, Hawkes, Barthelme; the postmodern fiction of Federman, Carter, Fowles, Katz, Sukenick.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4684 - Special Topics in Literature (3 credits)
An advanced, variable-content course which explores a significant or emergent literary issue or approach, or a body of literature. May be taken twice with different content.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ENGL 4704 - Advanced Creative Writing: Fiction (3 credits)
Designed for senior English majors who have selected the Creative Writing option, this is an intensive, advanced workshop. This capstone course builds on skills students have acquired in creative writing workshops. Primary focus is on the writing and critiquing of original fiction, while paying close attention to the work of established writers who are acknowledged masters of their genres. Students hone their skills as peer reviewers and constructive critics. In the process, they produce a portfolio of their own fiction.
Prerequisite(s): ENGL 3704
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4714 - Advanced Creative Writing: Poetry (3 credits)
Designed for senior English majors who have selected the Creative Writing option, this is an intensive, advanced workshop. This capstone course builds on the skills acquired in previous creative writing workshops. Primary focus is on the writing and critiquing of original poems, while paying close attention to the work of established poets who are acknowledged masters of their genres. Students hone their skills as peer reviewers and constructive critics. In the process, they produce a portfolio of their own poetry.
Prerequisite(s): ENGL 3714
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4724 - Creative Writing: Fiction for Young People (3 credits)
This course is conducted in a workshop setting in which students compose original stories for young people. Elementary techniques of fiction are emphasized, such as plot structure, point of view, setting, characterization, and audience. Must have prerequisites or permission of the instructor.
Prerequisite(s): ENGL 3704
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4744 - Editing an Undergraduate Research Journal: Philologia (3 credits)
A seminar and professional development course on editing and producing a scholarly research journal. Emphasis on the day-to-day production operations of a research journal; the analysis, evaluation, and editing of manuscripts; journal design and layout; website content development; development and distribution of promotional materials; and the production of editorial exchange with authors.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4754 - Editing a Literary Journal (3 credits)
An experiential learning and professional development course on the history and day-to-day operations of literary journal editing with emphasis on composing blog posts and promotional materials, analyzation of the history of print culture, analyzation of current publications, the practice of copyediting and developmental editing, the evaluation of manuscripts for inclusion in a literary journal, the evaluation of job opportunities, and the composition of application materials.
Prerequisite(s): ENGL 1106 and ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4764 - Small Press Publishing (3 credits)
A seminar and professional development course on the history and day-to-day operations of small press culture and production. Emphasis on the design and distribution of promotional materials; the analysis, evaluation, and editing of manuscripts; and practice the art of editorial exchange with authors. Evaluation of job opportunities and composition of application materials. May be repeated 2 times with different content for a maximum of credit hours.
Prerequisite(s): ENGL 2744
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ENGL 4784 - Senior Seminar (3 credits)
Designed for senior English majors, this is a variable topics, in-depth study of a particular issue or theme in language or literature. This capstone course aims to integrate and synthesize previous work in the discipline, focusing especially on close reading, research, and writing skills.
Prerequisite(s): ENGL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ENGL 4804 - Grant Proposals and Reports (3 credits)
This course prepares students to write effective proposals, reports, and informational articles. Students learn to define and write problem statements, program objectives, plans of action, evaluation plans, budget presentations, and summaries. In addition, they sharpen their teamwork, editing, writing, audience awareness, and design skills as they engage in collaborative projects with campus and/or non-profit organizations in the community. Prerequisite or consent of the instructor is required.
Prerequisite(s): ENGL 1106 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4814 - Developing Online Content (3 credits)
Covers the process of creating documents for online environments. Builds on knowledge and skills acquired in foundational Professional Writing courses. Involves production of websites from scratch, starting with low-fidelity mockups and advancing to formatting layouts adaptable to the diverse screen sizes of computers and mobile devices. Focuses on a balance of structure (code), content (information), and format (presentation and design).
Prerequisite(s): ENGL 1106 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4824 - Science Writing (3 credits)
Writing in and about the natural and social sciences. Students will write documents such as abstracts, research proposals, and ethnographies, analyze the development of disciplinary writing practices, and study non-fiction science writing for general audiences. Senior standing or instructor approval required.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4854 - Writing, Research, Study Abroad (3 credits)
Application of academic abroad experience to students disciplinary studies on campus. Conducted after international education abroad experience. Collaborative writing and research projects as well as individual, independent research. Approval of course instructor required. Open to all majors. Pre-requisite: A formal study abroad educational experience; department approval.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4874 - Issues in Professional and Public Discourse (3 credits)
In this course designed for English majors in the Professional Writing Option, students will focus on the ways in which scientific, technical, and professional communication influence, and are influenced by, public discourse. Drawing on strategies of rhetorical criticism, students will gain an understanding of the persuasive value of style, arrangement, and delivery by investigating their professional roles in helping to structure public debate. Pre: Completion of at least 9 credit hours from the following courses: 2844, 3104, 3474, 3804, 3814, 3824, 3834, 3844, 4474, 4804, 4814, 4824.
Prerequisite(s): ENGL 3104 or ENGL 2844
Instructional Contact Hours: (3 Lec, 3 Crd)

ENGL 4954 - Study Abroad: Issues and Texts (1-6 credits)
An advanced, variable-content and multi-disciplinary course that explores global themes and literature(s) during a month-long, faculty-led summer study abroad experience. Pre-requisite: Junior Standing required. Variable credit course, repeatable up to 6 credits.
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)
Repeatability: up to 6 credit hours

ENGL 4954B - Study Abroad (1-6 credits)
Pathway Concept Area(s): 2 Critical Thinking Humanities
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)

ENGL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ENGL 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Entomology (ENT)

ENT 2004 - Insects and Human Society (3 credits)
Past, present, and future role of insects in human society. Insect biology, diversity, and identification of common insects and other arthropods. Effects of insects on disease transmission, global food security, and human health. Management of pests of plants, animals, insects as food, and its effects on environmental pollution. Critique popular science communication and its effect on public policy. Human perceptions of insect conflicts, benefits of insects, and arthropod conservation across the world.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENT 2254 - Bees and Beekeeping (2 credits)
An introduction to honey bee biology, the social organization of the honey bee colony and to modern apiculture, including the use of bees for pollination. Topics on beekeeping include equipment, how to get started, and colony management practices. II
Instructional Contact Hours: (2 Lec, 2 Crd)

ENT 2264 - Bees and Beekeeping Laboratory (1 credit)
A laboratory course which examines the principles and practices of modern apiculture as they relate to honey bee biology. An emphasis is placed on students gaining practical field experience in modern management techniques. II
Corequisite(s): ENT 2254
Instructional Contact Hours: (3 Lab, 1 Crd)

ENT 2804 - Bees: Biology, Diversity, and Sustainability (3 credits)
Foundational introduction to bees. Behavior, communication, and social organization of honey bees; diversity and use of alternative (non honey bee) pollinators; scientific inquiry in ecosystem services management; and current global challenges to and sustainable solutions for pollination in the modern-day agricultural landscape.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENT 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENT 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENT 3014 - Insect Biology (2 credits)
Insect biology provides an introduction to the science of entomology. The course covers the diversity of insects, their biology and behavior, the importance of insects and insect control programs in agriculture, and the effects that insects have had on human history and culture. Laboratory (3024) is optional.
Prerequisite(s): (BIOL 1005 and BIOL 1006) or (BIOL 1105 and BIOL 1106) or (BIOL 1205H and BIOL 1206H)
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: BIOL 3014

ENT 3024 - Insect Biology Laboratory (2 credits)
Taxonomy and ecology of insects commonly encountered. Identification of all orders and many common families. Ecological attributes of each taxon, including food, habitat, life cycle, and behavior. An insect collection is required. I
Prerequisite(s): (BIOL 1005 and BIOL 1006) or (BIOL 1105 and BIOL 1106) or (BIOL 1205H and BIOL 1206H)
Corequisite(s): ENT 3014
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)
Course Crosslist: BIOL 3024

ENT 3254 - Medical and Veterinary Entomology (3 credits)
An introduction to the roles of insects and other arthropods in the direct causation of disease in humans and animals, and as vectors in the transmission of disease organisms. The epidemiology and replication cycles of vector-borne pathogens with major medical and veterinary importance will be examined. Information will be provided on the biology and behavior of disease vectors and external parasites, and on the annoying and venomous pests of humans and animals. Mechanisms of control will be discussed.
Prerequisite(s): (BIOL 1005 and BIOL 1006) or (BIOL 1105 and BIOL 1106) or (BIOL 1205H and BIOL 1206H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIOL 3254

ENT 3264 - Medical and Veterinary Entomology Laboratory (1 credit)
Taxonomy and anatomy of insects and arthropods of medical and veterinary importance. Examination of feeding behavior and ecology. Emphasis on the mechanism of injury or pathogen transmission by each group.
Prerequisite(s): (BIOL 1105 and BIOL 1106) or (BIOL 1005 and BIOL 1006) or (BIOL 1205H and BIOL 1206H)
Corequisite(s): ENT 3254
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: BIOL 3264

ENT 4254 - Insect Pest Management (3 credits)
Principles of insect pest management with application to the major insect pests found in Virginia. Pest management involves the utilization of all effective control practices in a program which is ecologically and economically efficient. This course is intended for all students with an interest in efficient agricultural production and in reducing losses to our most diverse competitor. One year of General Biology required.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ENT 4264 - Pesticide Usage (3 credits)
An interdisciplinary study of pesticides used in urban and agricultural environments. Topics studied will include: classification, toxicology, formulation, application techniques, safety, legal considerations, environmental impact, and research and development of new pesticides.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: PPWS 4264

ENT 4354 - Aquatic Entomology (4 credits)
Biology and taxonomy of insects and other macroinvertebrates most commonly encountered in freshwater environments. Selected aspects of biology, such as habitat, feeding, locomotion, and life history. Identification of individual taxa, mostly at family and genus level. Significance of these organism in aquatic ecology, pollution monitoring, and natural resource management.
Prerequisite(s): (BIOL 1005 and BIOL 1006) and (BIOL 1015 and BIOL 1016) or (BIOL 1105 and BIOL 1106 and BIOL 1115 and BIOL 1116)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: BIOL 4354

ENT 4484 - Freshwater Biomonitoring (4 credits)
Concepts and practices of using macroinvertebrates and fish to monitor the environmental health of freshwater ecosystems. Effects of different types of pollution and environmental stress on assemblages of organisms and underlying ecological principles. Role of biological studies in environmental regulation. Study design, field and laboratory methods, data analysis and interpretation, verbal and written presentation of results.
Prerequisite(s): (BIOL 2804) and (BIOL 4004 or BIOL 4354 or ENT 4354 or FIW 4424 or FIW 4614)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: BIOL 4484, FIW 4484

ENT 4624 - Animal and Plant Biosafety and Biosecurity (3 credits)
A One Health approach to the concept of biosafety and biosecurity. Principles, tools and techniques of disease detection, early warning, and containment of animal and plant pathogens. Regulatory agencies and guidelines that work to protect human, animal, plant, and environmental health and prevent economic and public health disasters. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENT 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENT 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Environmental Science (ENSC)

ENSC 1015 - Foundations of Environmental Science (3 credits)
Interrelationships between human activities and the environment; emphasis on biological, chemical, and physical principles that govern the flow of energy, materials, and information among physical, ecological and human systems.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENSC 1016 - Foundations of Environmental Science (3 credits)
National and global perspective on societal concerns about the environment and human sustenance, including agriculture. Emphasizes the relationship between human systems and natural systems; ecosystem services and land, water and atmospheric resources.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENSC 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENSC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENSC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENSC 3134 - Soils in the Landscape (3 credits)
A study of soils as functional landscape components, emphasizing their physical, chemical, mineralogical, and biological properties in relation to plant growth, nutrient availability, land-use management, and soil and water quality. Primarily for FOR/FIW, LAR, and other plant/earth science related majors. May not be taken by CSES or ENSC majors. Partially duplicates 3114 and 3124. Pre: one year of introductory CHEM or BIOL or GEOS.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ENSC 3604 - Fundamentals of Environmental Science (3 credits)
Interrelationships between human activities and the environment; provides national and global perspective; emphasis is on the physical, chemical, and biological principles and processes that are essential to an understanding of human-environment interactions; the role of energy in human and natural systems; environmental legislation and human behavior.
Prerequisite(s): BIOL 1105 or CHEM 1035
Instructional Contact Hours: (3 Lec, 3 Crd)

ENSC 3634 - Physics of Pollution (3 credits)
Physical processes that control the fate of pollutants in our land, air, and water resources. Types and sources of pollutants, physical processes in the soil-water-atmosphere continuum controlling the dispersion and deposition of pollutants, the movement of pollutants, including radionuclides, by surface and subsurface water flow in soils, and physics of disturbed soils.
Instructional Contact Hours: (3 Lec, 3 Crd)

ENSC 3644 - Plant Materials for Environmental Restoration (3 credits)
Overview of ecological principles related to revegetation and restoration of disturbed sites. Function and species requirements of plants in stabilizing disturbed areas including mines, rights-of-way, constructed wetlands, and for the remediation of contaminated soils.
Prerequisite(s): BIOL 1106
Corequisite(s): CSES 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

ENSC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENSC 4164 - Environmental Microbiology (3 credits)
Ecology, physiology, and diversity of soil and aquatic microorganisms; incorporates the significance of these topics within the context of environmental applications such as bioremediation, wastewater treatment, control of plant- pathogens in agriculture, and pollution abatement in natural systems. The laboratory portion of the course will stress methodology development, isolation and characterization of microorganisms from natural and engineered systems, and examination of the roles of microorganisms in biogeochemical cycling.
Prerequisite(s): BIOL 2604
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: BIOL 4164

ENSC 4244 - Ecological Restoration (3 credits)
Process of assisting the recovery of degraded ecosystems by linking ecological concepts to restoration interventions. Invasive species management, revegetation methods, soil and water quality, faunal restorations. Restoration project design, planning, monitoring and implementation.
Prerequisite(s): BIOL 2804
Instructional Contact Hours: (3 Lec, 3 Crd)

ENSC 4314 - Water Quality (3 credits)
Provide comprehensive information on the physical, chemical, biological, and anthropogenic factors affecting water quality, fate and transport of contaminants in water, water quality assessment and management, and current water quality policies.
Prerequisite(s): MATH 1026 or MATH 1226 and (BIOL 1105 or BIOL 1106) and (CHEM 1035 or CHEM 1036)
Instructional Contact Hours: (3 Lec, 3 Crd)

ENSC 4324 - Water Quality Laboratory (1 credit)
Teach students a variety of laboratory chemical and biological techniques for water quality analysis. Complementary to ENSC/CSES 4314.
Prerequisite(s): CHEM 1046
Corequisite(s): CSES 4314, ENSC 4314
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: CSES 4324

ENSC 4344 - Ecological Restoration Field Practicum (2 credits)
Hands-on experience in planning ecological restoration projects, designing ecological restoration strategies, preparing degraded sites for restoration, managing invasive species in ecological restoration projects, implementing ecological restoration techniques, and monitoring restoration outcomes in degraded sites. Additional topics include adaptive management, stakeholder relationships, effective communication in ecological restoration projects, and challenges and barriers to restoration success.
Prerequisite(s): BIOL 1106
Instructional Contact Hours: (2 Lec, 2 Crd)

ENSC 4414 - Monitoring and Analysis of the Environment (2 credits)
Provides comprehensive hands-on-laboratory-and field-based experience and information on the principles and methods for field monitoring and sampling, as well the physical, chemical, and biological analysis of soil, surface water, groundwater, and solid wastes within the context of regulatory compliance. Optional 40-hour Hazards Materials (HAZMAT) training will be available. Senior standing required.
Prerequisite(s): (ENSC 3604 or ENSC 4314 or CSES 4314 or BIOL 4004) and (MATH 1026 or MATH 2015 and CHEM 1036 and BIOL 1105)
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

ENSC 4444 - Managed Ecosystems, Ecosystem Services, and Sustainability (3 credits)
Description and interactions of climate, soils, and organisms within intensively managed ecosystems used to produce food, fiber, bioenergy, fresh water, recreation, cultural, and other ecosystems services essential for human well-being. Ecological concepts applied to agricultural, grassland, and urban/turf ecosystems. Ecologically-based principles for sustainably managed ecosystems. Regional and global significance of managed ecosystems in context of sustainable food systems, and the Millennium Ecosystem Assessment. Pre-Requisite: Junior or Senior Standing required.
Prerequisite(s): CSES 3114 or CSES 3134
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CSES 4444

ENSC 4734 - Environmental Soil Chemistry (3 credits)
Chemistry of inorganic and organic soil components with emphasis on environmental significance of soil solution-solid phase equilibria, sorption phenomena, ion exchange processes, reaction kinetics, redox reactions, and acidity and salinity processes.
Prerequisite(s): CSES 3114 or ENSC 3114 or GEOS 3614 and CSES 3124 or ENSC 3124 or GEOS 3624 and CHEM 2514 or CHEM 2535 and CHEM 2114 and (MATH 1026 or MATH 1226)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CHEM 4734

ENSC 4764 - Bioremediation (3 credits)
Overview of environmental biotechnology and the use of microbes and other organisms to remove contaminants and improve environmental quality. Topics include treatment of contaminated soils, waters, and wastewaters, as well as remediation of industrial waste streams.
Prerequisite(s): BIOL 2604
Instructional Contact Hours: (3 Lec, 3 Crd)

ENSC 4774 - Reclamation of Drastically Disturbed Lands (3 credits)
Remediation, rehabilitation, revegetation strategies for lands disturbed by mining, construction, industrialization, and mineral waste disposal. Disturbed site characterization and materials analysis procedures. Regulatory and environmental monitoring frameworks for mining sites and other disturbed lands. Prediction and remediation of water quality impacts from acid drainage.
Prerequisite(s): CSES 3114 or ENSC 3114 or GEOS 3614 or CSES 3134 or ENSC 3134 or CSES 3304 or GEOG 3304 or GEOS 3304
Instructional Contact Hours: (3 Lec, 3 Crd)

ENSC 4864 - Captstone: Env Science (1 credit)
Discussion based learning that utilizes prior knowledge gained in the major to synthesize information, and prepare a written comprehensive work plan. The work plan will demonstrate the students understanding of contaminant fate and mobility in different environmental media and will be defended orally. Review and explore available careers in environmental science through seminars and working groups within environmental professionals discussing the role and responsibilities of environmental scientists in industry, consulting, regulatory agencies, and non-profits. ENSC majors only. Senior Standing.
Prerequisite(s): (CSES 3634 or ENSC 3634) and (ENSC 4414) and (CHEM 4734 or CSES 4734 or ENSC 4734) and (CSES 4854 or ENSC 4854)
Instructional Contact Hours: (3 Lab, 1 Crd)

ENSC 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENSC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENSC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ENSC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Family and Consumer Science (FCS)

FCS 2964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

FCS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FCS 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FCS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FCS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

FCS 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

FCS 4964H - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

FCS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FCS 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FCS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FCS 4984H - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FCS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

FCS 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Fashion Merchandising & Design (FMD)

FMD 1204 - Clothing and People (3 credits)
The study of the influence of culture and society on dress and dress practices, similarities and differences in the dress among groups and individuals, and the role of dress in reflecting and shaping intra- and inter-cultural interactions. The analysis of the construction and communication of personal and social identity (based on age, physical disability, gender, sex, sexual identity, race, ethnicity, religion, cultural and group/subcultural affiliations, etc.) through dress (clothing, accessories, body modifications) using fashion and social science theories and the intersection of various identities and positions in shaping human experience related to dress and appearance. Examination of diversity, equity, inclusion, and social justice issues and solutions related to dress and appearance within the United States and the global fashion industry.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 1224 - Introduction to the Fashion Industry (3 credits)
Development, structure and operations of textile and apparel manufacturers, marketers and retailers in the fashion industry and the product types including menswear, womenswear, childrenswear and accessories. Identification of fashion careers and major fashion markets and vendors both domestic and international. Basic processes and principles governing forecasting fashion acceptance, movement and change as influenced by economic, sociological, psychological, political and technological factors. Sources of industry information such as trade journals, industry websites and company publications.
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 2014 - Digital Drawing (3 credits)
Basic principles and methods for digital drawing with consideration toward diverse populations in the global marketplace. Practice and skill development using a variety of computer tools to express design ideas via digital rendering by targeting diverse populations and understanding current global challenges. Hands-on experience via design projects.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FMD 2204 - Introduction to Textiles (3 credits)
Structure, properties and basic production of textiles and textile components: natural and manufactured fibers; yarns; woven, knit, nonwoven fabrics; mechanical and chemical finishes; colorants and coloration methods. Influence on performance of apparel and interior textile products. Sophomore standing and one semester of Pathways Concept 4 (Reasoning in the Natural Sciences) is required.
Corequisite(s): FMD 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 2214 - Apparel Textiles Laboratory (1 credit)
Identification and characterization of textiles and textile components including: fabrics, finishes and coloration. Influence of these structural parameters on performance of apparel textiles. Sophomore standing and one semester of Pathways concept 4 (Reasoning in the Natural Sciences).
Corequisite(s): FMD 2204
Instructional Contact Hours: (3 Lab, 1 Crd)

FMD 2224 - Fashion Presentation Techniques (3 credits)
Basic principles and methods for executing fashion illustrations, proportions of the fashion figure, design details, portfolio development, identifying target markets and fabric renderings with consideration toward diverse populations in the global marketplace. Exploration and practice in color with work in pencil, color pencil, pastel, and watercolor. Practice and skill development using a variety of manual and computer tools to illustrate construction details and create technical flats. Emphasis placed on the use of correct industry terminology.
Prerequisite(s): AHRM 1014
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FMD 2264 - Apparel Product Development (3 credits)
Study of the pre-production stage of product development in the apparel industry, including planning a line based on market, consumer, and product research, forecasting trends in color, style and materials, developing and selecting designs and styles, and wholesale marketing of a line to retail buyers. Also includes the use of diverse inspiration sources for creating a design, application of computer-aided design to design and style development, and identification of career opportunities and qualifications for professional positions in the industry. Sophomore Standing required.
Prerequisite(s): FMD 2224
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

FMD 2964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 3024 - History of Costume (3 credits)
Study of the evolution and development of Western costume for adults and children from ancient times to the present with a focus on historical, socio-cultural, political, economic, and psychological factors/influences on changes in fashion and design style features. Use of terminology to describe each period's fashion and clothing design style features. Evaluation of similarities and differences between fashion and clothing design style features of different time periods. Discussion of theories of fashion change and fashion revival theories that explain the revival/reoccurrence of features of historic costume styles in contemporary fashion and design.
Prerequisite(s): FMD 1204 and FMD 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 3034 - Historic Costume and Textile Collection Management (3 credits)
An active learning approach to managing and digitizing historic costume and textile collections; conserving historic textiles; and designing and curating historic costume and textile exhibitions. Researching, documenting, interpreting, handling and storing artifacts. Mounting and displaying a professional costume and textile exhibit appropriate for general public viewings and sharing via oral or poster presentations. Community-engagement methods. Design Lab/Studio
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

FMD 3104 - Fashion Retailing Concepts (3 credits)
Detailed investigation and analysis of the fundamentals of fashion merchandising concepts emphasizing problem solving at the retail level. Prerequisite: one semester of Pathways Concept 5 (Quantitative and Computational Thinking) required. Pre: Junior Standing.
Prerequisite(s): FMD 1224
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 3204 - Introduction to Textile Evaluation (3 credits)
Analysis of the performance properties of fabrics. Importance of evaluation to product development, quality control, and specification of care requirements.
Prerequisite(s): FMD 2204 and FMD 2214
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FMD 3224 - Apparel Assembly (3 credits)
Systematizing and assembling garment applications for the apparel industry. Conceptual study of simple to complex apparel construction techniques, stitch and seam types, cost-effective measures, applications with manual manipulation, computers, tools, and equipment.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FMD 3234 - Pattern Drafting for Apparel (3 credits)
Apparel product development using basic and advanced flat pattern drafting techniques and skills. Concepts and application of specifications, flat pattern drafting techniques, garment fit and alteration, pattern grading, and marker layout principles used in apparel engineering, product development, and production, along with the development of skill in using a variety of related manual and computer tools.
Prerequisite(s): FMD 3224
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FMD 3244 - Small Business Apparel Retail Development (3 credits)
Comprehensive study of small business concepts as applied to the textile and apparel retail industry. Analysis of the entrepreneurial mindset and strategies for business entry with emphasis on small business development, including concept and opportunity identification, merchandising and management, operations and control, advertising and promotion, and financial planning for a textile and/or apparel retail business.
Prerequisite(s): FMD 2264 and FMD 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 3264 - Draping (3 credits)
Study and application of basic and advanced draping techniques for patternmaking in the apparel industry, including darts in skirts and bodices, princess lines in bodices, yokes, pleats and gores in skirts, and asymmetrical structures for whole garments; selection of fabrics appropriate for garment styles; evaluation of garment fit, design and construction. Includes students design and construction of garments suitable for juried design competitions or exhibitions. Design Lab/Studio. Pre: Junior Standing
Prerequisite(s): FMD 3224
Instructional Contact Hours: (5 Lab, 3 Crd)

FMD 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4014 - 3D Digital Apparel Design (3 credits)
Implement design solutions using technologically advanced software to create styling on avatars with photorealistic 3D rendering. Transform skills acquired in digital illustration and flat pattern drafting courses into comprehensive tools to create real-life simulated garments. Manipulate or create digital assets (flat patterns, fabric, stitching, trim, etc.) to produce an original style for digital portfolio. Design Lab/Studio (2H, 2L,3C)
Prerequisite(s): FMD 2264 and FMD 3234
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

FMD 4024 - Portfolio (3 credits)
The development and production of a professional apparel portfolio in both paper and ePortfolio format. Pre: Senior Standing required; 3234 or permission of the instructor.
Prerequisite(s): FMD 3234 or FMD 3264
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4034 - Historic Costume and Textile Collection Management (3 credits)
An active and experiential learning approach to historic costume and textile collection management, including describing collection scope, policies, and organizational systems, selecting appropriate basic preservation and conservation techniques used for the care of historic clothing and textiles related to controlling the environment, handling and storage, and cleaning, using standard museum practices when accessioning, dating, labeling, cataloging, mounting/mannequin dressing, and photographing textile artifacts, developing methods for community engagement, and designing and installing historic dress exhibitions. Design Lab Studio.
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

FMD 4124 - Clothing Behavior Patterns (3 credits)
Study of clothing behavior of individuals in relationship to their needs, values, attitudes, interests, and self-concepts. Overview of principles and theories related to individuals emotional, mental, and physical activities when obtaining, using, maintaining, and disposing of apparel products so as to satisfy their needs and desires. Application of principles and theories related to clothing behavior to the analysis of consumer and the development of effective merchandising strategies.
Prerequisite(s): FMD 3104 and (PSYC 1004 or SOC 1004)
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4134 - Fashion E-Tailing (3 credits)
Analysis of technologies, consumer trends, and strategies in fashion e-tailing. Identification of merchandising models, major features, challenges, and trends in fashion e-tailing, including big data, virtual and augmented technologies, and mobile- and social-commerce. Development of a strategic plan for an online fashion venture.
Prerequisite(s): FMD 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4214 - Economics of the Textile and Apparel Industry (3 credits)
Study of the various segments of teh textile and apparel industry. Analysis of the market structure and functioning of each segment and of factors currently affecting the industry.
Prerequisite(s): (AHRM 2204 or FMD 2204) and (ECON 2006 or ECON 2006H) or (AAEC 1005 and AAEC 1006)
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4224 - Fashion Analysis and Communication (3 credits)
Functions of fashion analysis, promotions, forecasting, media, and communications in the fashion industry. Assessment of effective promotional activities based on consumer, market, and trend research of fashion products. Development of fashion promotion, forecasting, and communication plans. Pre: Senior standing.
Prerequisite(s): FMD 2264
Instructional Contact Hours: (2 Lec, 1 Lab, 3 Crd)

FMD 4234 - Apparel Quality Evaluation (3 credits)
Study of quality of ready-to-wear apparel and factors that influence variations in the aesthetic and functional performance of the end product, including consumer perceptions and expectations, manufacturing processes and trends, and the physical components of the end product.
Prerequisite(s): FMD 3204 and FMD 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4244 - New York Fashion Study Tour (3 credits)
Integrative study of methods of operating at all levels within the fashion industry. Special emphasis on design, merchandising, and promotional activities. Seminars on campus and at pre-arranged appointments during a five-day stay in New York. AHRM major; Junior standing. Twelve hours of AHRM/FMD courses required.
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4264 - Fashion Merchandising and Design Strategies (3 credits)
Analysis of consumer characteristics as part of a forecast/market study to prepare new fashion merchandise lines based on key findings from forecasts. Formulate a financial merchandise plan using measures of profitability and pricing and devise financially beneficial marketing communications. Compare and contrast career choices through self-evaluation within the fashion apparel industry.
Prerequisite(s): FMD 3104 and FMD 3204 and FMD 3224 and FMD 4224
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4274 - International Sourcing of Apparel Products (3 credits)
Study of international sourcing of apparel products through a simulation of the sourcing production to illustrate the procedures and factors needed to source apparel abroad and interrelationships among suppliers, retailers and consumers in the global apparel supply chain. Examination of social, economic, political, cultural, ethical, and environmental factors, law and trade barriers that influence a sourcing decision of apparel products abroad.
Prerequisite(s): FMD 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

FMD 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4964H - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4984H - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

FMD 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Finance, Insurance, and Business (FIN)

FIN 2114 - Investments and Financial Literacy (3 credits)
Examines budgeting; taxes; long- and short-term borrowing; credit card debt; student loan debt; ethical issues in both lending and investments; insurance; the investment process; the financial markets; investing in common stock, bonds, and mutual funds; major financial decisions, and retirement planning. Coverage of time value of money and risk and return will provide fundamental tools for valuation and financial decision-making.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 2164 - Survey of Finance and Career Planning (1 credit)
Career opportunities and job search strategies in the finance field with reference to the finance courses that best help the student identify a career in his/her selected field. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

FIN 2954 - Business Study Abroad (1-19 credits)
This course provides students with an international business experience. It is only offered as part of a program outside of the United States. Students will learn from the structured educational experience developed by the faculty leader. Pre: Instructors consent and the completion of 30 SH with a minimum GPA of 3.0 or departmental consent.
Instructional Contact Hours: Variable credit course

FIN 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIN 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIN 3054 - Legal and Ethical Environment of Business (3 credits)
This course examines the legal and ethical environment in which businesses operate. Topics include legal systems, dispute resolution, torts, contracts, agency, employment, business forms, property, ethical theories, decision-making and other selected subjects. Emphasis is placed on problem solving through the application of principles and reasoned analysis. Pre: Sophomore Standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 3074 - Legal, Ethical, and Financing Issues for Entrepreneurs (3 credits)
Introduction of key legal, ethical, and financing topics for new ventures. Ethical decision making in entrepreneurial situations. Choosing among legal entities for financing and ownership goals. Company governance. Creating and protecting intellectual property. Identifying and choosing financing options for new ventures. Employment issues for entrepreneurial firms. Basics of contracts. Enterprise risk management and compliance. Exit strategies. Partially duplicates FIN 3054 (Legal and Ethical Environment of Business). Students may not receive credit for both courses. Sophomore Standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 3104 - Introduction to Finance (3 credits)
Overview of financial decision-making process focusing on the creation of wealth. Topics covered include the time value of money, how stocks and bonds are valued, financial decision-making within a firm, an overview of financial markets, and investment banking. The course is designed for finance and non-finance majors.
Prerequisite(s): (ACIS 2115 and ECON 2005 and BIT 2405) or (ACIS 2115 and ECON 2005 and CMDA 2005) or (ACIS 2115 and ECON 2005 and STAT 3005) or (ACIS 2115 and ECON 2005 and STAT 3604) or (ACIS 2115 and ECON 2005 and STAT 3615 and STAT 3616) or (ACIS 2115 and ECON 2005 and STAT 4604) or (ACIS 2115 and ECON 2005 and STAT 4705 and STAT 4706) or (ACIS 2115 and ECON 2025H and BIT 2405) or (ACIS 2115 and ECON 2025H and CMDA 2005) or (ACIS 2115 and ECON 2025H and STAT 3005) or (ACIS 2115 and ECON 2025H and STAT 3604) or (ACIS 2115 and ECON 2025H and STAT 3615 and STAT 3616) or (ACIS 2115 and ECON 2025H and STAT 4604) or (ACIS 2115 and ECON 2025H and STAT 4705 and STAT 4706)
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 3114 - Python/SQL for Data Analytics and Finance (3 credits)
A foundation in Python/SQL and the tools needed to implement a data-driven approach to financial problem solving. Emphasis on accessing external databases, merging databases, manipulating and transforming data, performing operations, generating an output or another dataset, and exporting in a readable or visual form. To prepare students to analyze datasets for making financial decisions.
Prerequisite(s): FIN 3134
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 3124 - Financial Planning for Professionals (3 credits)
Analysis of financial needs, from the context of the individual, household or small business owner, related to financial situation (cash management and use of debt), income taxes, risk management, retirement planning, investment planning, estate planning, and other special needs. Utilizes mathematical and computing skills. FIN 3134 may be taken prior to or concurrent with course. Sophomore Standing required.
Corequisite(s): FIN 3134
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 3134 - Financial Analytics (3 credits)
This course provides an understanding of the theory and practice of making financial decisions for corporations through the understanding of relevant data and applying computational and statistical methodologies to decision making. Topics include the time value of money, risk and return, security valuation, and interest rate determination. Some key concepts and computational and statistical modeling are completed in Excel. Pre: Sophomore standing.
Prerequisite(s): FIN 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 3144 - Investments: Debt, Equity and Derivatives (3 credits)
Risk, return and portfolio modeling theory, knowledge of financial securities and markets and the information and data contained within them. Introduction to mutual funds, financial securities, and markets. Application of financial computation and modeling through portfolio analysis, market efficiency and performance evaluation, bond valuation, term structure of interest rates, interest rate risk, security analysis and stock valuation, options, Black-Scholes option pricing model, and futures. Pre: Sophomore standing.
Prerequisite(s): FIN 3134
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 3154 - Corporate Financial Analytics and Strategy (3 credits)
This course provides the understanding of the types of financial management decisions that firms make, the environment in which decisions are made, the available choices and decision criteria, and valuation consequences of these choices through financial analytical modeling. Determination of a firm's optimal debt- equity ratio, estimation of cost of capital, evaluation of capital investments, payout policies, merger and acquisition decision-making, and sources of financing with emphasis on identifying and mitigating potential agency conflicts. Pre: Sophomore standing.
Prerequisite(s): FIN 3134
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 3174 - Finance Career Strategies (1 credit)
Analysis and research of career opportunities in financial industry. Study of future trends in careers in financial industry. Development of short and long-term career goals. Building and developing a professional network. Identify types of finance interviews. Ethical negotiation of job offers.
Instructional Contact Hours: (1 Lec, 1 Crd)

FIN 3204 - Risk and Insurance (3 credits)
Surveys the concept of risk as it applies to the nuclear family and as a socio-economic force in society. Risk management techniques utilizing social and proprietary insurance to neutralize the effect of risks inherent in daily life: termination or suspension of earnings, liability exposures, and potential losses of real and personal property values. Sophomore Standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 3254 - Credit Risk Analysis (3 credits)
Analysis of the risks inherent in credit/lending decisions. Pricing of loans, appropriate documentation, and monitoring of the creditworthiness of businesses and individuals. Emphasis on making credit decisions and structuring of credit agreements.
Prerequisite(s): FIN 3134 and FIN 3144 and FIN 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

FIN 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIN 4004 - Wills, Trusts, and Estates (3 credits)
Examines the control of assets through the creation and use of trusts, and the control of property through estate planning. The course emphasizes financial planning through estate management both personally and as a part of a business plan.
Prerequisite(s): FIN 3054 or FIN 3074
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4014 - Cyberlaw and Policy (3 credits)
Cyber law, ethics, and policy in a changing world. National and international methods of regulation and protection of fundamental rights. Legal, ethical, and policy issues for Internet governance, speech, privacy, cybersecurity, surveillance, electronic commerce, intellectual property, and cyberwar. Examination of current issues and texts in light of fundamental ethical and legal principles and global discourse. Pre: Junior standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4024 - Legal and Regulatory Aspects of ESG (3 credits)
Examines the legal and regulatory issues raised by Environmental, Social, Governance (ESG) aspects of investments and corporate finance. Specific attention is given to ESG's effect upon traditional corporate law principles, reporting and regulatory frameworks.
Prerequisite(s): (FIN 3054 or FIN 3074) and FIN 3144 and FIN 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4104 - Retirement Planning (3 credits)
Overview of planning needs, products, and strategies used by financial professionals to help businesses, small business owners, and individuals choose and implement an effective retirement plan. Must have prerequisite or permission of instructor.
Prerequisite(s): (FIN 3124 and ACIS 4344) or (FIN 3134 and ACIS 3314)
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4114 - Financial Planning Technology and Modeling (3 credits)
Use of professional software applications that support financial planning analyses, plan preparation, wealth management, and client relationships. Principles of personal investment portfolio research, construction, and performance applied to comprehensive financial planning and wealth management.
Prerequisite(s): FIN 3124 and FIN 3144
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4124 - Client Relationship Management (3 credits)
Investigation of socio-psychological factors and communication/ interviewing strategies that foster trust-based relationships essential to the success of financial advisors and other financial service professionals. Graduate students are expected to have completed AAEC 3104 or FIN 3124 or an equivalent course or may enroll with permission of the instructor.
Prerequisite(s): FIN 3124
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4134 - Financial Planning Applications (3 credits)
Integration of financial planning content in the resolution of client situations in the context of ethical and compliant workplace practices. Utilizes a case analysis approach applying financial planning processes and procedures. Graduate students are expected to have similar background from equivalent courses or professional experience or may enroll by permission of the instructor. ACIS 4344 or FIN 4004 taken simultaneously with the course can be substituted for the prerequisites.
Prerequisite(s): FIN 3124 and FIN 3144 and FIN 3204 and ACIS 4344
Corequisite(s): FIN 4104, FIN 4114, FIN 4004
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4144 - International Financial Management (3 credits)
Explores the environmental challenges facing the financial manager of a multinational corporation and the tools and techniques developed to meet such challenges.
Prerequisite(s): FIN 3104 or FIN 3134
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4154 - Real Estate Finance (3 credits)
This course introduces the fundamentals of both real estate financing and investment. Conventional mortgages as well as more creative financing methods will be analyzed. The secondary market for mortgages and relevant institutional factors also will be examined. Investment analysis of real estate will be viewed in a capital budgeting framework; appropriate tax law will be discussed as it affects real estate cash flows.
Prerequisite(s): FIN 3134
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4204 - Environmental, Social, and Governance Financial Analytics (3 credits)
Environmental, Social and Governance (ESG) factors impacting corporate investment and financing decisions. Analytical tools for incorporating ESG factors into various forms of financial analysis including capital budgeting, capital structure, financing decisions, and investment portfolio management.
Prerequisite(s): (FIN 3054 or FIN 3074) and FIN 3144 and FIN 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4214 - Financial Modeling in Excel (3 credits)
Concepts of finance applied to the construction of models in Excel. Construct models of financial statement to evaluate financial strategies for a firm; design risk/return models for investment portfolio strategies using equity and/or debt securities; build models to optimize bond portfolios including interest rate sensitivities, duration and convexity; develop models to analyze and dynamically hedge option and futures portfolios; assemble binomial tree models on American options; build simulation models to evaluate different types of options.
Prerequisite(s): FIN 3134 and FIN 3144 and FIN 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4224 - Fixed Income Securities: Analysis and Management (3 credits)
Analysis of fixed income securities, including corporate bonds, U.S. Treasury notes and bonds, municipal bonds, money market securities, and home mortgages. The analysis include interest rate risk, credit risk, bond valuation theory, and the valuation of embedded options in the bond contract. Theories of the term structure of interest rates are presented. Must have a grade of C or better in prerequisites of FIN 3144 and 3154.
Prerequisite(s): FIN 3134 and FIN 3144 and FIN 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4225 - Analytics for Fixed Income Securities and Portfolio Management (3 credits)
4225: Management of fixed income securities in an experiential setting. Bond pricing and investment. Credit analysis and portfolio strategies in fixed income. Introduction to advanced analytical techniques in bond and portfolio analytics. Conduct research on individual companies, industries, and countries. Membership in BASIS (Bond And Securities Investing by Students). Must have a B- or better in prereq. Pass/Fail Only.
Prerequisite(s): FIN 3134
Corequisite(s): FIN 4224
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4226 - Analytics Fixed Inc. Port Mgmt (3 credits)
4226: Advanced management of fixed income portfolios in an experiential setting. Advanced credit analysis and modeling. Advanced analytical techniques for bonds and portfolios. Lead research teams. Research macroeconomic and international capital trends. Execute reports for internal and external distribution, especially for the clients. Membership in BASIS (Bond And Securities Investing by Students). Must have a B- or better in prereq. Pass/Fail Only.
Prerequisite(s): FIN 4224 and FIN 4225
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4234 - Venture Capital and Investment Banking (3 credits)
Explores the venture capital cycles of fund-raising, investing in portfolio firms, and exiting the investment. Focuses on the role of investment banking in the exiting of investments by taking the portfolio firms public through initial public offerings. Includes a conceptual component and an applied component in which the case method is used. Must have a grade of C or better in prerequisites of FIN 3144 and 3154.
Prerequisite(s): FIN 3134 and FIN 3144 and FIN 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4244 - Asset Valuation and Corporate Governance (3 credits)
The effect of corporate governance on asset-valuation. Case oriented course focusing on the valuation of non-financial assets such as projects, business units, private and public firms. Topics include method of comparables, discounted cash flow methods and the real options approach to valuation. Examines the external and internal governance mechanisms for preserving and enhancing the value of a firm. Must have a grade of C or better in prerequisites of FIN 3144 and 3154.
Prerequisite(s): FIN 3134 and FIN 3144 and FIN 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4254 - Bank Management and Financial Services (3 credits)
The functions of financial service providers and the risks inherent in the provision of banking and other financial services. Regulatory background and issues. Case oriented course. Must have a grade of C or better in prerequisites of FIN 3144 and 3154.
Prerequisite(s): FIN 3134 and FIN 3144 and FIN 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4255 - Credit Corps Lending Practicum (3 credits)
Credit underwriting of commercial loans in an experiential setting. Project work spans two semesters. 4255: First project and basic management of cash flows on legacy portfolio of loans. Credit analysis of middle market companies leading to recommendations for lending to such companies. Research on individual companies, their industries, or on commercial real estate projects. Research on relative loan pricing, trends in leverage loan markets. Professional-level presentation of loan recommendations. Exhibit the highest ethical standards and confidentiality and maintain a high level of responsibility, initiative, and performance. 4256: Finalization of first 4255 project as needed. Continuation of credit analysis and research applied to companies in different three-digit industry code, advanced credit risk and financial modeling, loan portfolio management on legacy loans including takedown/paydown of revolving lines. Reporting for internal distribution and for sponsor.
Prerequisite(s): FIN 3254 and FIN 4254 or FIN 4244
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4256 - Credit Corps Lending Practicum (3 credits)
Credit underwriting of commercial loans in an experiential setting. Project work spans two semesters. 4255: First project and basic management of cash flows on legacy portfolio of loans. Credit analysis of middle market companies leading to recommendations for lending to such companies. Research on individual companies, their industries, or on commercial real estate projects. Research on relative loan pricing, trends in leverage loan markets. Professional-level presentation of loan recommendations. Exhibit the highest ethical standards and confidentiality and maintain a high level of responsibility, initiative, and performance. 4256: Finalization of first 4255 project as needed. Continuation of credit analysis and research applied to companies in different three-digit industry code, advanced credit risk and financial modeling, loan portfolio management on legacy loans including takedown/paydown of revolving lines. Reporting for internal distribution and for sponsor.
Prerequisite(s): FIN 4255
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4264 - Managing Risk with Derivatives (3 credits)
The types, payoff, and pricing of derivative securities and contracts and their application in managing financial risks faced by corporations. Topics include options, forwards, futures and swaps; managing foreign currency risk, interest rate risk, stock price risk, and commodity price risk; and risk management techniques. Must have a grade of C or better in prerequisites of FIN 3144 and 3154.
Prerequisite(s): FIN 3134 and FIN 3144 and FIN 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4274 - Equity Securities: Analysis and Management (3 credits)
Advanced valuation and analysis of equity securities with case applications. Critical analysis of advanced equity asset pricing models. Analysis of advanced equity portfolio management techniques, equity portfolio performance measurement, and equity portfolio performance attribution analysis. Identification and analysis of market anomalies and recent developments in equity analysis. Must have grade of C or better in prerequisites of FIN 3144 and 3154.
Prerequisite(s): FIN 3134 and FIN 3144 and FIN 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4275 - Analytics for Equity Securities and Portfolio Management (3 credits)
Selection and management of equity securities in an experimental setting. Analysis, selection, and investment in common stocks. Introduction to advanced analytical techniques in equity evaluation and portfolio analytics. Research individual companies, industries, economic sectors, and national and global macroeconomic trends. Use appropriate software to develop financial models. Present buy and sell recommendations for actual execution in the portfolio. Maintain a high level of fiduciary responsibility. Pass/Fail only. Membership in SEED (Student-Managed Endowment for Educational Development).
Prerequisite(s): FIN 3134
Corequisite(s): FIN 4274
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4276 - Analytics for Equity Securities and Portfolio Management (3 credits)
Advanced management of equity portfolios in an experiential setting. Equity valuation and investing in equity securities. Advanced equity valuation analysis and modeling. Conduct and take a leadership role on teams that research individual companies, industries, and sectors. Research macroeconomic and international capital trends. Lead a team to present buy and sell recommendations for the portfolio and/or construct reports on equity topics. Present buy and sell recommendations for actual execution in the portfolio. Exhibit the highest ethical standards. Mentor new SEED analysts. Pass/Fail only. Membership in SEED (Student- Endowment for Educational Development).
Prerequisite(s): FIN 4274 and FIN 4275
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4284 - Free Markets, Individual freedom, and Economic Welfare (3 credits)
Course exposes students to various viewpoints on the role free markets can and do play in promoting individual freedom. Allocation of scarce resources, and in enhancing welfare. Explores the strengths and weaknesses of capitalism by critically evaluating the relationship between the economic efficiency achieved by capitalism and the attainment of welfare objectives. Other topics include current items such as globalization, price controls, income equality, outsourcing, corporate pricing power though monopoly/oligopoly, and government regulation of the economy.
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4294 - Commodity Invt. Portfolios (3 credits)
Application of fundamental commodity analysis and valuation techniques utilized to create a commodity investment portfolio in an experiential setting. Analysis, selection, and advanced analytical techniques in domestic and international agricultural, energy and metal commodities applied to a simulated investment in a commodity portfolio. Maintain a high level of fiduciary responsibility through developing, maintaining, and interpreting portfolio performance on a daily basis.
Prerequisite(s): FIN 3134 and FIN 3144
Instructional Contact Hours: (3 Lec, 3 Crd)

FIN 4314 - Field Projects in Finance (3 credits)
Finance-related business projects with external clients, which will include gathering and analyzing data, understanding relevant financial issues in a business context, formulating recommendations, and presenting analyses and recommendations in oral and written form. May be repeated once with different content for a maximum of 6 credit hours.
Prerequisite(s): FIN 3134 and FIN 3144 and FIN 3154
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

FIN 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

FIN 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIN 4984 - Special Study (1-19 credits)
Special Study
Instructional Contact Hours: Variable credit course

FIN 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

FIN 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Financial Aid (FNAD)

FNAD 3900 - Study Abroad-Consortium Enroll (1-21 credits)
Instructional Contact Hours: (0 Lec, 1-21 Crd)

FNAD 3910 - Travel Activity (0 credits)
Instructional Contact Hours: (0 Lec, 0 Crd)

FNAD 3920 - Domestic Consortium (1-19 credits)
Instructional Contact Hours: Variable credit course

FNAD 3930 - International Autonomous (1-19 credits)
Instructional Contact Hours: Variable credit course

FNAD 3950H - Honors Travel Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

Fine Arts (FA)

FA 2004 - Creativity and the Artistic Experience (3 credits)
Examine how the arts intersect with our daily lives. Compose and create basic examples of abstraction and 20th century modernism. Trace the global influences and roots of our current culture. Explore the science of acoustics and its effect on performing spaces. Discuss the process of an arts performance. Apply themes of improvisation, creativity and how we process beauty. Investigate emerging brain science as it relates to art, beauty and pleasure. Identify the unique ways of knowing embodied in the arts distinct from scientific measurements. No prior knowledge of visual, theatrical or musical arts needed.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

Fish and Wildlife Sciences (FIW)

FIW 2114 - Principles of Fish and Wildlife Conservation (3 credits)
Basic principles, key people, agencies and laws guiding the science-based conservation and management of fish and terrestrial animals. Conservation and management of organisms, habitats, and human users examined in terms of biological, physical, ecological, ethical and sociological theories and practices. Local to global illustration from both recreational and commercial resources.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 2234 - Fish, Fishing, and Conservation (3 credits)
Sensory perception, behavior, and consciousness in fish. Principles, as related to fish and why they matter, fish conservation ethics, food security, recreational fishing, and responsible fishing practices. Ethical reasoning applied to the contemporary issues of conservation and use of fish, such as subsistence fishing, fish farming, marine protected areas, highly migratory fishes, sharks tourism, and ornamental fishes.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 2314 - Wildlife Biology (3 credits)
Summary of biological characteristics of wild birds and mammals, especially relating to management by humans. Physiological, functional, structural, and behavioral adaptations of individuals to their environments and foods.
Prerequisite(s): (BIOL 1105 or BIOL 1205H) and (BIOL 1106 or BIOL 1206H)
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 2324 - Wildlife Field Biology (3 credits)
Systematics, identification, and natural history of common native vertebrates and plants. Exposure to habitats/ecosystems of western Virginia. Observation, collection, and reporting of field data. Self-scheduled field and media lab activities required.
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

FIW 2334 - Urbanization and Biodiversity Conservation (3 credits)
Overview of challenges and opportunities that urban environments create for biodiversity conservation and human wellbeing, with a focus on social sciences theories and approaches. How urbanization is changing people's relationship with their environment and what that means for biodiversity conservation and human wellbeing. Examination of how data collection, analysis, and interpretation occur using social sciences methods applied to biodiversity conservation. Diversity, Equity, and Inclusion in the context of urbanization and conservation.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 2334

FIW 2514 - Fish and Wildlife Conservation Policy (3 credits)
Foundations of U.S. and Virginia fish and wildlife conservation policy (FWC), including international agreements. Ethical, religious, and legal foundations of FWC policy. Roles of values and beliefs in conservation behavior. Constitutional basis for FWC policy in the U.S. How FWC policies are made, implemented, and revised through state and federal agencies. Major conservation policy strategies, particularly the value of stakeholder collaboration for successful policy development, passage, and implementation. Conduct independent and group social science research to identify and present compelling policy solutions for an FWC problem.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 3514 - Fisheries Techniques (3 credits)
Application of field and laboratory methods in fisheries management and research. Experience with fisheries equipment and techniques.
Prerequisite(s): FIW 2114 and STAT 3615
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

FIW 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 3954C - Study Abroad (1-19 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences
Instructional Contact Hours: Variable credit course

FIW 3954D - Study Abroad (1-19 credits)
Pathway Concept Area(s): 4 Reasoning in Natural Sci.
Instructional Contact Hours: Variable credit course

FIW 3964 - Internship Through Directed Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course
Repeatability: up to 12 credit hours

FIW 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 4114 - Biodiversity Conservation (3 credits)
Advanced concepts and practices related to the conservation and enhancement of biological diversity. Understanding and analysis of causes of biological scarcity. Designing actions to mitigate biodiversity loss. Integration of legal, economic, social, and biological principles to develop solutions to conservation of organisms, populations and ecosystems. Cannot be taken for credit by Wildlife Conservation (WLC) majors.
Prerequisite(s): FIW 2114
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4214 - Wildlife Field Techniques (3 credits)
Field research methods for wild vertebrates in terrestrial environments. Application of research methodology including animal capture and marking, determination of sex, age, and condition, radio telemetry and map/compass/GPS orienteering, non-invasive methods of capture, habitat selection, and supervised group research projects. COURSE FEE $299.
Prerequisite(s): FIW 4414 and STAT 3615
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FIW 4244 - Applied Epidemiology of Fish and Wildlife Diseases (3 credits)
Theory and data analyses from veterinary epidemiology applied to fish and wildlife management. Biological sampling methods and data collection in fish and wildlife for epidemiological surveillance in free-ranging populations. Fish and wildlife epidemiology concepts, methods and applications for private, non-profit, academic, state, and federal agencies. Ethically measure, characterize, and forecast epidemics in fish and wildlife.
Prerequisite(s): (BIOL 2704 or BIOL 2704H) and STAT 3615
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4314 - Conservation of Biological Diversity (4 credits)
Principles and practices of conserving biological diversity. Causes, consequences and rates of extinction. Application of philosophical, biological, sociological and legal principles to the conservation of genes, plant and animal species and ecosystems.
Prerequisite(s): FIW 4414 and FIW 4434
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

FIW 4324 - Genetics of Natural and Mangaged Populations (3 credits)
Introductory genetics with an emphasis on evolutionary processes relevant to natural and managed populations of both plant and animal species. Traditional and modern genetics, including quantitative and population genetics, molecular evolution, genomics, and biotechnology.
Prerequisite(s): BIOL 1105 and BIOL 1106 and (STAT 3005 or STAT 3615 or FREC 3214)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 4324

FIW 4334 - Mammalogy (4 credits)
Biology of mammals, including evolution, systematics, anatomy, physiology, ecology, and conservation challenges. Laboratory focus on identification, morphology, and zoogeography.
Prerequisite(s): BIOL 2704 or BIOL 2704H
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

FIW 4344 - Herpetology (4 credits)
Biology of amphibians and reptiles, including evolution, systematics, anatomy, physiology, ecology, and conservation challenges. Laboratory focus on identification, morphology, and zoogeography.
Prerequisite(s): BIOL 2704 or BIOL 2704H
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

FIW 4414 - Population Dynamics and Estimation (3 credits)
Population growth, structure, and regulation of fish and wildlife populations including harvested populations, non-harvested populations, and small or declining populations. Methods of estimating demographic parameters such as population size, survival, and recruitment. Population viability analysis and genetic considerations in population dynamics.
Prerequisite(s): FIW 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4424 - Ichthyology (4 credits)
Morphology and physiology, systematics, zoogeography, and identification of fishes.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

FIW 4434 - Wildlife Habitat Ecology and Management (3 credits)
Relationship of wildlife species to their habitats. Factors influencing distribution and abundance of wildlife populations. Vegetation succession and structure, habitat classification, modeling wildlife habitat relationships and management of habitats in forests, agricultural lands, rangelands, riparian/wetland and urban areas.
Prerequisite(s): FIW 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4454 - Human-Wildlife Conflicts (3 credits)
Current and emerging human-wildlife interactions that lead to conflict; application of knowledge of animal behavior and life history, population dynamics, human dimensions, and ecosystem functions to analyze conflicts and formulate effective resolution; legal statutes and regulatory constraints on resolution; reliance on case studies of existing conflict situations to gain applied experience in diagnosing and solving human-wildlife conflicts using Vertebrate Integrated Pest Management protocols. Pre: Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4464 - Human Dimensions of Fisheries and Wildlife (3 credits)
Values, attitudes, and opinions of people toward fish and wildlife. Social, economic, legal, and political aspects of fisheries and wildlife management. Roles of professionals and the public in fish and wildlife policy processes. Contemporary fish and wildlife policy issues. Senior standing required.
Prerequisite(s): FIW 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4474 - Wildlife Habitat Evaluation (1 credit)
Methods to evaluate habitat quality for selected wildlife species. Determining habitat characteristics important to a selected species. Developing a habitat assessment approach to estimate habitat quality. Measuring and quantifying habitat characteristics. Assessing effects of management actions and habitat alterations on a selected wildlife species. Applying habitat assessment models to guide management and mitigation decisions. Techniques for oral and written presentations. Restricted to Wildlife Conservation Majors.
Corequisite(s): FIW 4434
Instructional Contact Hours: (3 Lab, 1 Crd)

FIW 4484 - Freshwater Biomonitoring (4 credits)
Concepts and practices of using macroinvertebrates and fish to monitor the environmental health of freshwater ecosystems. Effects of different types of pollution and environmental stress on assemblages of organisms and underlying ecological principles. Role of biological studies in environmental regulation. Study design, field and laboratory methods, data analysis and interpretation, verbal and written presentation of results.
Prerequisite(s): (BIOL 2804) and (BIOL 4354 or BIOL 4004 or ENT 4354 or FIW 4424 or FIW 4614)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: BIOL 4484, ENT 4484

FIW 4534 - Ecology and Management of Wetland Systems (3 credits)
Introduction to the variety of wetland systems found in North America, though emphasis will focus on eastern and mid-Atlantic wetland systems. Origin and processes of formation of wetlands, functions and values of wetlands, wetland delineation, wetland classification, regulatory processes affecting wetlands. Objectives of and management techniques used to protect and/or manipulate wetland systems for wildlife and other human needs. Enrollment restricted to junior, seniors and graduate students.
Prerequisite(s): BIOL 3204
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FIW 4614 - Fish Ecology (3 credits)
Interactions of fish with the physical and biological environment. Adaptations of organisms, populations, and communities. Impacts of human activities on major aquatic ecosystems and important fishes. Ecological principles for management of important sport, commercial, and prey fishes.
Prerequisite(s): BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4624 - Marine Ecology (3 credits)
Marine organism, biological, ecological, chemical and physical processes of marine ecosystems in open sea, coastal and benthic environments, research methods and models in marine ecosystem simulation; fisheries in a dynamic ecosystem: human interference and conservation.
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4714 - Fisheries Management (4 credits)
History, theory, and practice of fisheries management. Emphasis on basic strategies used in effective management and setting management objectives. Synthesis of fish population dynamics and manipulation, habitat improvement, and human management to achieve objectives. Case studies of major fisheries.
Prerequisite(s): FIW 3514
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

FIW 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Food Science and Technology (FST)

FST 2004 - Exploring Food Science Careers (1 credit)
Food science specialization areas and career opportunities. Experiential learning opportunities developed through bridge experience platform. Introduction to research, internship, study abroad and individualized learning. Career preparation, job and internship search strategies.
Instructional Contact Hours: (1 Lec, 1 Crd)

FST 2014 - Introduction to Food Science (2 credits)
Fundamentals for food science and technology. Integration of basic principles of food safety, human nutrition, food spoilage, and sensory evaluation with the appropriate technology of food preservation and processing.
Instructional Contact Hours: (2 Lec, 2 Crd)

FST 2024 - From Raw to Burnt: Exploring Science and Society through Foods (3 credits)
Food as a method of studying scientific principles and development of society, including acquiring, preserving, processing and consuming foods. Integration of chemistry, biology and physics of grains; salt and spices; meat, poultry, and fish; dairy and eggs; fruits and vegetables; and fat and oils, with the advancements in and the cost to human civilization from historical and ethical perspectives of food production. Scientific principles demonstrated in food preparation.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FST 2044 - Food, War and Conflict (3 credits)
Explores the history of food production and processing relative to the commencement or continuation of conflict. Examines why and how wars have been fought over economic policies, food trade and control of food supplies. Examines efforts to protect food and water supplies from intentional contamination and acts of terrorism. Focus on food products and the preservation, processing and distribution technologies that arose from war and conflict.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2044, PSCI 2044

FST 2244 - Topics in Food Science and Technology (1-3 credits)
Variable topics in food science and technology such as emerging trends, challenges and regulatory policy. Qualitatively and quantitatively explore relevant and timely issues facing food systems. May be repeated for a maximum of six credits with different topics. Pre: Sophomore standing.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 6 credit hours

FST 2424 - Introduction to Food and Beverage Fermentation (3 credits)
Principles, processes, and applications of fermentation in the context of food and beverage production. Explores various fermentation techniques, the chemical processes and microbiology involved, and the role of fermentation in enhancing flavor, texture, preservation, and nutritional value. Hands-on experience through workshops and sensory evaluation.
Prerequisite(s): CHEM 1036
Instructional Contact Hours: (3 Lec, 3 Crd)

FST 2544 - Functional Foods for Health (3 credits)
Introduction to functional foods (foods with additional value beyond basic nutrition) including development of functional foods, novel sources, and traditional foods with value-added health benefit; regulatory issues; and media messages.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HNFE 2544

FST 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FST 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FST 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

FST 3024 - Principles of Sensory Evaluation (3 credits)
Principles of sensory evaluation including theory, sensory physiology and psychology, experimental methods, applications, and statistical analysis.
Prerequisite(s): STAT 3005 or STAT 3615
Instructional Contact Hours: (3 Lec, 3 Crd)

FST 3114 - Wines and Vines (3 credits)
Development of a working knowledge of world wine styles, wine appreciation, and sensory evaluation of wine. Emphasis on the influences of grape growing and winemaking practices on wine quality, style, economic value, and significance in global food culture. Pre: Must be at least 21 years of age.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HORT 3114

FST 3124 - Brewing Science and Technology (3 credits)
Study of chemical reactions important in brewing of beer and hard cider. Effects of variations in malting, mashing, and other processing steps on characteristics and quality of beer; fruit sugar, acid and fermentation impacts on cider composition and quality. Investigation of reactions that cause flavor deterioration.
Instructional Contact Hours: (3 Lec, 3 Crd)

FST 3214 - Principles of Meat Science (3 credits)
Muscle biology and biochemistry, fresh meat processing, meat merchandising, processed meats, food safety, meat cookery, and regulations.
Prerequisite(s): ALS 2304 and CHEM 1036
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APSC 3214

FST 3514 - Food Analysis (4 credits)
Data analysis, sampling techniques, theory and practice of chemical and physical methods of food analysis for determination of food composition; application of analytical methods of quality control and food laws and regulations.
Prerequisite(s): (STAT 3615 or BIT 2405) and (CHEM 2535 or CHEM 2514)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

FST 3604 - Food Microbiology (4 credits)
Role of microorganisms in foodborne illness, food quality, spoilage, and preservation. Control of microorganisms in foods. Method to enumerate, identify, and characterize microorganisms in foods.
Prerequisite(s): BIOL 2604 and BIOL 2614
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: BIOL 3604

FST 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

FST 4004 - Food Science Experiential Learning Reflection (1 credit)
Reflection of skills and knowledge developed during food science experiential learning process. Analyze curriculum. Development of communication skills to reflect and evaluate their experience.
Instructional Contact Hours: (1 Lec, 1 Crd)

FST 4014 - Concepts of Food Product Development (3 credits)
Application to the food industry of principles and standard practices of research and product development; functionality of food ingredients; students will work in teams to design and develop a new food product.
Prerequisite(s): FST 3604
Corequisite(s): FST 4405, FST 4504
Instructional Contact Hours: (3 Lec, 3 Crd)

FST 4104 - Applied Brewing Science and Engineering (3 credits)
Chemistry, biochemistry, and engineering aspects of brewing operations in the production of beer. Barley, malting, hops, brewing operations, fermentation chemistry, yeast characteristics and finishing operations examined. Calculations of raw materials, brewing and fermentation schedules, and final specifications conducted. Laboratory exercises focused on brewing, brewery engineering, and analysis of intermediate and final products.
Prerequisite(s): FST 3604
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FST 4204 - Advanced Topics in Food Science and Technology (1-3 credits)
Variable advanced topics in food science and technology such as emerging trends, challenges and regulatory policy. Qualitative and quantitative exploration of relevant and timely issues facing food systems. May be repeated for a maximum of six credits with different topics. Pre: Junior standing.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 6 credit hours

FST 4304 - Food Processing (3 credits)
Basic principles of unit operations. Heat and mass transfer. Equipment in commercially important food processing applications. Raw food materials and packaging. Processing methods to ensure food safety and quality.
Prerequisite(s): BIOL 2604 and BIOL 2614 and (MATH 1025 or MATH 1524)
Instructional Contact Hours: (3 Lec, 3 Crd)

FST 4314 - Food Processing Laboratory (1 credit)
Safety and good manufacturing practice of food processing. Operation of key equipment found in the food industry. Collection, analysis and interpretation of data acquired in lab exercises. Documentation and reporting of findings.
Corequisite(s): 4304 or BSE 4604.
Instructional Contact Hours: (1 Lab, 1 Crd)

FST 4414 - Fermentation Process Technology and Instrumentation (2 credits)
Process design considerations for food and beverage fermentations, and other industrial fermentation processes. Critical process parameters, and instrumentation for fermentation process monitoring. Hands-on process instrumentation for fermentation.
Prerequisite(s): FST 4504 or FST 3604
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

FST 4504 - Food Chemistry (3 credits)
Overview of the chemical and functional properties of food components including major (water, proteins, carbohydrates, enzymes and lipids) and minor (vitamins, minerals, flavors, pigments) constituents; chemical, biochemical reactions and physical phenomena occuring during food handling, processing, and storage; their impact on the nutritional and sensorial quality of food.
Prerequisite(s): BCHM 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

FST 4524 - Food Safety and Quality Assurance (3 credits)
Monitoring safety and quality of food as well as compliance with government regulations. Description of regulatory agencies and food regulations. Development of specifications, food standards and safety critical control points. Systems to assure a safe and quality product, including acceptance sampling and statistical process control.
Prerequisite(s): FST 3604 and FST 4304
Instructional Contact Hours: (3 Lec, 3 Crd)

FST 4534 - Food Chemistry Lab (1 credit)
Investigation of functional properties of proteins, carbohydrates, and lipids in processed foods including effect of environmental conditions; solubility, foaming ability and textural properties of proteins, carbohydrate crystallization, ability of polysaccharides to form gels and pastes, lipid absorption and tenderization, characterization of a natural-occurring enzyme.
Corequisite(s): FST 4504
Instructional Contact Hours: (3 Lab, 1 Crd)

FST 4544 - Distillation and Fermentation Analysis (3 credits)
Sampling and analysis of pre-and post-fermentation foods and beverages to determine process termination, efficiency, and formation of desired and non-desired products. Laws and regulations pertaining to fermented foods and beverages. Distillation as an analytical tool and as a production method for food/beverage products.
Prerequisite(s): FST 4504 and FST 3514
Corequisite(s): FST 4104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FST 4634 - Epidemiology Foodborne Disease (3 credits)
Overview of causes, transmission, and epidemiology of major environmental, food, and water borne diseases. Outbreak and sporadic detection, source tracking and control of pathogens. Overview of the impact of foodborne outbreaks on regulatory activities at the national and international level. Corequisite: Enrollment in either FST 3604 or BIOL 4674.
Corequisite(s): BIOL 4674, FST 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

FST 4644 - Fermentation Microbiology (2 credits)
Physiology, biochemistry, and genetics of microorganisms used for production of food ingredients, fermented foods, and beverages. How microorganisms are used in fermentation and the effects of processing and manufacturing conditions on production of fermented foods.
Prerequisite(s): BIOL 2604
Instructional Contact Hours: (2 Lec, 2 Crd)

FST 4654 - Food and Beverage Fermentation (2 credits)
Introduction to the broad range of fermented foods and beverages. Defining quality parameters of fermented foods and beverages. In-depth examination of the processing methods and equipment employed in commercial-scale production of fermented foods and beverages. Historical, cultural, sensory, and nutritional attributes of fermented foods and beverages. Course requirements may be satisfied by taking FST 3604 or FST 4504 prior to or concurrent with course.
Prerequisite(s): FST 4504 or FST 3604
Corequisite(s): FST 4644
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

FST 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FST 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FST 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Foreign Language (FL)

FL 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FL 2774 - Multilingualism and Language Contact (3 credits)
Exploration of multilingualism as a social and linguistic phenomenon. Examination of language practices in multilingual contexts around the world. Analysis of current socio-political policies pertaining to language in situations of language contact. Discussion of linguistic rights, such as economic opportunities, education, and national languages, and their connection to world affairs. Exploration of language revitalization efforts for endangered languages. Taught in English.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FL 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FL 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FL 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FL 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FL 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

FL 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Forest Resources & Eviron Conservation (FREC)

FREC 1004 - Digital Planet (3 credits)
Exploration of innovative geospatial technologies and their impact on the world around us, including how humans interact with the environment and each other. Roles of location-based services, global positioning systems, geographic information systems, remote sensing, virtual globes and web based mapping for environmental applications. Skills and techniques for spatial thinking and environmental decision-making. Ethical implications of the use of geospatial technologies, data, and computational approaches.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 1084

FREC 1044 - Introduction to Environmental Data Science (3 credits)
Application of data science to environmental management. Role of data science, mathematical and statistical modeling, geospatial technology, database management, knowledge integration, and decision science in environmental decision-making. Skills and techniques required to assist scientists and managers with the challenges of collecting, collating, archiving, modeling, analyzing, visualizing, and communicating data in support of natural resource management.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 2004 - Forest Ecosystems (3 credits)
Introduction to forest ecosystem ecology. Global forest cover, types, distribution, and change. Relationships among forest structure, function, and biodiversity. Interactions among rock, soil, water, air, and the organisms that define and inhabit forests around the world. Energy, water, carbon, and nutrient fluxes from leaf to global scales. Connections among forests, society, and global change. Capacity of forests to sustainably provide ecosystem services.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 2114 - Ecology of Appalachian Forests (3 credits)
Introduction to the natural history, tree biology, tree identification, forest ecology, management and forest types of the Appalachian region. Contemporary issues related to forest functions will be discussed including carbon storage, climate change, invasive forest species, wildlife management, fire, biofuels, agroforestry, urban forests, ecosystem restoration, clean water, recreation, and use of renewable resources.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 2124 - Forests, Society & Climate (3 credits)
Role of forest ecosystems on the global carbon cycle, climate, biodiversity and economies. Anthropogenic impacts on forest ecosystems and their ecological function in the face of changing climate. Regional and cultural implications for the state of the forests and deforestation-related policy. Climate-related threats to global forests, including loss of biodiversity, deforestation, forest fires, and invasive species. Sustainable forest management for anticipated future scenarios.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 2134 - Plants and Greenspaces in Urban Communities (3 credits)
Modern concepts of sustainability changing plant use in urban settings. Fundamentals of urban plant systems in the context of urban ecosystem management. Philosophy and critical analysis of sustainability related to green infrastructure, including urban forests, green roofs, urban soils, urban wildlife, urban agriculture, and innovations merging plant and ecosystem functions with building and site engineering. Multi-disciplinary emphasis at site, regional, and global, scales.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HORT 2134

FREC 2214 - Introduction to Land and Field Measurements (3 credits)
Measurement of land and field attributes including geographic position, land distance, direction, area, slope, elevation and boundary attributes. Use and development of maps used in natural resource applications. Use of global positioning systems and geographic information systems in the acquisition and management of land and field measurements. Assessment of vegetation attributes with field plots. Use of computer software to manage and analyze data and present results.
Prerequisite(s): MATH 1025 or MATH 1225 or MATH 1524
Corequisite(s): FREC 2324
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 2254 - Arboriculture Field Skills (1 credit)
Field observation, discussion, and practice of skills employed in the management of urban landscape trees. Hands-on experience with tree pruning, removal, pest control, fertilization, cabling/bracing, lightning protection, and climbing. Emphasis on arborist safety, professional ethics, and best management practices. Guest instruction provided in part by professionals working in the tree care industry.
Instructional Contact Hours: (3 Lab, 1 Crd)

FREC 2314 - Forest Biology and Dendrology (2 credits)
Introduction to the botany, physiology, genetics and silvics of important forest trees of North America.
Prerequisite(s): BIOL 1106
Instructional Contact Hours: (2 Lec, 2 Crd)

FREC 2324 - Dendrology Laboratory (1 credit)
Field identification of trees of North America with particular emphasis on trees native to the Eastern United States.
Instructional Contact Hours: (3 Lab, 1 Crd)

FREC 2414 - Field Experience in Forest Resources and Environmental Conservation (2 credits)
Field exercises to develop skills needed to sustainably manage forest and environmental resources including navigation and mapping, inventory of timber and non-timber resources, soil and water conservation, forest and recreation management, forest operations and timber harvesting. Fee $216.
Instructional Contact Hours: (6 Lab, 2 Crd)

FREC 2514 - Wildland Fire: Ecology and Management (3 credits)
Provide students with basic knowledge on how: fire has an impact on forest environments; the environment and weather influence fire behavior; wildland fires are suppressed; and fire is used as a land and vegetation management tool. The course will also provide students with the knowledge and training to qualify as a basic wildland firefighter (FFT2-Red Card). Extended laboratory sessions will provide practice in fire behavior prediction, prescribed burning techniques, and fire control methodology. COURSE FEE: $110.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 2554 - Leadership for Global Sustainability (3 credits)
Leadership principles and humanities perspectives that help examine and engage global sustainable development challenges such as climate change, food-water-energy nexus, rising middle class, circular economy, and environmental justice. Topics include collaboration, stories, conflict resolution, self-awareness, bias, equity, religion, hubris, globalism, and moral naturalism. Examine trade-offs among economic, environmental, and social dimensions of sustainable development. Integration and application of disciplinary topics including ethics, ecology, evolution, anthropology, economics, religion, aesthetics, and risk management.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: LAR 2554, NR 2554

FREC 2614 - Human-Environment Systems (3 credits)
Social and ecological dynamics of human-environment systems. Effect of complex environmental problems on ecosystems and human well-being. Introduction to systems thinking. History, philosophy, and application of decision making in the field of natural resource management. Pre: Sophomore standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 2784 - Global Forest Sustainability (3 credits)
A socio-economic approach to examining the management and use of the worlds forests, enhance knowledge of global forest resources and products, and understand the roles and relationships of key stakeholders.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SBIO 2784

FREC 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 3044 - Environmental Data Science (3 credits)
Applications of the analysis and modeling of environmental datasets at multiple spatial-temporal scales to study environmental issues of societal importance. Computer programing is used in the acquisition, analysis, visualization, and storage of environmental data. Modeling techniques include regression, classification, and numerical simulation. Ethics and methods of data curation, quality control, analysis, and sharing.
Prerequisite(s): FREC 1044 or CMDA 2014 or CMDA 3654 or CS 3654 or STAT 3654
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 3104 - Principles of Watershed Hydrology (3 credits)
Study of hydrology in watersheds. Qualitative and quantitative principles of physical hydrological processes governing the movement, storage, and transformation of water on the Earths surface as influenced by watershed characteristics, including human modifications. Pre: Junior Standing
Prerequisite(s): MATH 1026 or MATH 1226 or STAT 3005 or STAT 3604 or STAT 3615
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WATR 3104

FREC 3214 - Forest Biometrics (3 credits)
Statistical and mathematical basis for collecting and analyzing data used to make valid inferences and ethical decisions in applications of forest ecosystem science and management. Principles and practices of forest inventory and probability-based sampling. Computational and mathematical tools for analyzing field data. Statistical summarization, estimation, hypothesis testing, and inference from data collected in forest inventories.
Prerequisite(s): FREC 2214 and (MATH 1026 or MATH 1226)
Corequisite(s): FREC 3224
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 3224 - Forest Measurements Field Laboratory (1 credit)
Field practice and computer analysis for collecting and analyzing survey data for use in forest management. Forest inventory and probability-based sampling, stratified sampling, double sampling, regression, and census-based sampling applications. Computer and geospatial tools for analyzing field data. Field assessment of tree and log contents, stand density, and site index. Collection and analysis of growth and yield data.
Prerequisite(s): (FREC 2214 or FOR 2214) and (FREC 2414 or FOR 2414)
Instructional Contact Hours: (3 Lab, 1 Crd)

FREC 3314 - Forest Ecology and Silvics (3 credits)
Environmental factors affecting the establishment, growth, and development of forests; silvical characteristics of trees; forest community structure and function; forest ecosystem analysis. COURSE FEE: $48.
Prerequisite(s): (FREC 2314 or FOR 2314) and (FREC 2214 or FOR 2214)
Instructional Contact Hours: (2 Lec, 4 Lab, 3 Crd)

FREC 3324 - Silviculture Principles and Applications (4 credits)
Theory and practices involved in controlling forest establishment, composition, and growth are developed in a regional context. Formulation of silvicultural systems and the study of reproduction methods, site preparation, intermediate stand manipulations, and reforestation operations.
Prerequisite(s): FREC 3314 or FOR 3314
Instructional Contact Hours: (3 Lec, 4 Lab, 4 Crd)

FREC 3354 - Trees in the Built Environment (3 credits)
Science and practice of tree cultivation, conservation, and management in human-dominated environments along an urban to rural gradient. Holistic study of landscape tree management: planning, planting, inspection, maintenance, removal, and wood waste utilization. Examination of tree responses to urbanization and tree influences on built environments. Emphasis on sustainable, ethical stewardship of landscape trees for the benefit of people and the environment.
Prerequisite(s): (FREC 2314 or BIOL 2304 or HORT 2304) and (FREC 2324 or HORT 3325 or HORT 3326)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HORT 3354

FREC 3364 - Environmental Silviculture (3 credits)
Science and design of sustainable management of forests to meet the needs of a globalized society. Historic and current intercultural and socio-economic factors influencing stakeholder objectives and the shape, value, pattern, composition, structure, and function of forests domestically and abroad. Tools used to design forests and management plans to address global challenges. Design thinking process: gather stakeholder input, brainstorm/analyze ideas, develop potential solutions, test their working hypothesis or prototype in a computer simulation, and iterate/improve toward a sustainable solution.
Prerequisite(s): FREC 2324
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 3454 - Trees in the Built Environment Lab (1 credit)
Hands-on experience in the cultivation, conservation, and management of landscape trees in human-dominated environments along the urban to rural gradient. Field exercises in tree inventory, appraisal, disorder diagnosis, planting, pruning, and protection. Emphasis on use of scientific methods and best management practices to ensure tree health, safety, and functionality for the benefit of people and the environment. Methods of communicating technical information and management recommendations for landscape trees through written media.
Corequisite(s): FREC 3354
Instructional Contact Hours: (3 Lab, 1 Crd)

FREC 3524 - Environmental Interpretation (3 credits)
Interpretation theory and techniques as relevant to natural resource management; culturally appropriate program planning and evaluation; role of interpretation in enhancing visitor experiences and promoting stewardship. Pre: Junior standing.
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 3544 - Outdoor Recreation Planning and Management (3 credits)
Planning and management of nature-dependent outdoor recreation. History, philosophy and benefits of nature-dependent outdoor recreation. Environmental and social impacts of recreational uses. Techniques to manage visitor impact. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 3574 - Environmental Education Service Learning (3 credits)
Introduction to key concepts in environmental education and teaching skills through lecture, discussion, service learning, and reflection. Training in internationally recognized environmental education curricula (e.g. Project Learning Tree, Project Wet), in class management and organization skills and in theory relevant to both teaching and learning. Students develop and conduct after school environmental education programs at local elementary schools
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 3714 - Forest Harvesting (3 credits)
Principles and application of forest harvesting. Terminology, phases, function, and the interrelationships of people, money, machines, and environment. COURSE FEE: $60.
Prerequisite(s): FREC 2214 or FOR 2214
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 3724 - Forest Boundaries and Roads (3 credits)
Application of basic land surveying and forest measurement techniques to the location, establishment, and maintenance of forest boundaries and roads. Consideration of stream crossings, best management practices, and costs. Fee $187.
Prerequisite(s): FREC 2214 or FOR 2214
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 3734 - Forest Fiber Supply (3 credits)
Analysis of the southeastern U.S. forest industry fiber supply process with emphasis on the evolution and dynamics of timber procurement systems, strategies, business principles, ethical dilemmas, and professional practices. Field exercises and case studies to ethically appraise timber sales. Analysis of current industrial operations and practices. Discourse-based project resulting in the writing, presenting, and critiquing of procurement plans. Pre: Junior standing. COURSE FEE: $365
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 3754 - Watersheds and Water Quality Monitoring (3 credits)
Delivery of water quality constituents from watersheds to water bodies (streams, lakes, and estuaries). Field monitoring methods to assess watershed drivers and how they affect water quality and aquatic ecosystem condition. Linkages among water quality, watershed characteristics, land use and management, and climate. Design of watershed monitoring programs to guide watershed management for protecting water quality and ecological condition of aquatic systems.
Prerequisite(s): (BIOL 1106 or BIOL 1006) and CHEM 1035 and (FREC 2004 or FOR 2004 or FREC 2114 or FOR 2114 or FREC 3314 or FOR 3314 or BIOL 2804 or ENSC 3604)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WATR 3754

FREC 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 3964 - Internship Through Directed Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course
Repeatability: up to 12 credit hours

FREC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 4004 - Professional Skills in Natural Resources (1 credit)
Elements of professionalism and principles of success across a wide spectrum of natural resources careers. Skills for ethical and professional interaction including effective communication, advancement of diversity and inclusion, and personal responsibility. Career preparation principles including employer outreach, job seeking, resume writing, and interview preparation. Guest speakers from academia, industry, and government. Pre: Senior standing.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: NR 4004

FREC 4014 - Natural Resources Economics (3 credits)
Examination of domestic and international natural resource use, exploitation, and degradation problems, with special focus on use of economics to understand why potential overuse of natural resources exists, and what policy options are available to correct these problems and ensure sustainable natural resource use over time. Water, forests, fisheries, land and exhaustible resources. Permission of instructor may be substituted for the pre-requisite.
Prerequisite(s): ECON 2005 or AAEC 1005
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NR 4014

FREC 4024 - Forest Resources Management and Business (3 credits)
Forest management and business principles, theory, and methods to support sound decision-making in forestry: from the level of the forest to the business organization as a whole. Capital budgeting methods to prescribe forest harvest schedules and perform forest finance analyses. Forest industry structure, trends, and future performance. Strategic management frameworks (e.g. SWOT (Strengths, Weaknesses, Opportunities, and Threats), PIE (Potential, Importance and Ease) and Porter's Five Forces) and the influence of public policy and regulation on forest business strategy. Ethics, sustainability and corporate social responsibility applied to real forest business problems.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4044 - Environmental Data Science Capstone (3 credits)
Apply environmental data science strategies and techniques to natural resources problems. Capstone experience using spatial and/or temporal environmental data. Integrate multiple concepts and strategies to create a practical solution.
Prerequisite(s): FREC 3004 or FREC 3044
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4114 - Information Technologies for Natural Resource Management (3 credits)
An introduction to computer information systems used in natural resources management. Course will introduce students to the theory and applications of database management systems (DBMS) and geographic information systems (GIS). Uses, challenges, and limitations of these technologies in natural resource management applications will be discussed. Students will receive extensive hand-on instruction in the use of current software packages for DBMS and GIS.
Prerequisite(s): FREC 2214 or FOR 2214 or GEOG 2314
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4134 - Forest Carbon Management and Policy (3 credits)
Importance of forests in the global carbon cycle. Measuring, reporting, and verification (MRV) of forest carbon stocks and fluxes. National, regional and international forest carbon markets. Main national and international forest-based carbon policies and programs, such as REDD +. Impacts of forest management practices by landowners and policies on forest carbon stocks. Economic viability of forest carbon projects. Pre: Junior standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4174 - Climate Change and the International Policy Framework (3 credits)
Science, causes and impacts of climate change. Mitigation and adaptation measures to address the causes and impacts of climate change. International climate change policy, with attention to the policy making process, in particular the role of the United Nations Framework Convention on Climate Change and climate negotiations. Science and diplomacy in climate negotiations to achieve successful outcomes. The ethical and social implications of climate change policies.
Pathway Concept Area(s): 1A Discourse Advanced, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4174, PSCI 4174

FREC 4214 - Forest Photogrammetry and Spatial Data Processing (3 credits)
Films, filters and camera photogeometry; scale; measurement estimation; image processing; flight planning and photo acquisition; geographic information systems; spatial data analysis techniques and applications. Pre: Junior standing.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4244 - Hydroinformatics (3 credits)
Analysis and examination of hydrologic data using basic statistics and computer programming. Calculation and interpretation of flow frequency and duration, hydrologic analysis of geospatial digital terrain data, and implementation and analysis of simple hydrologic models. Advanced methods of temporal and spatial hydrologic data visualization using computer programming.
Prerequisite(s): FREC 3104 or WATR 3104 or FREC 1044
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WATR 4244

FREC 4324 - Genetics of Natural and Managed Populations (3 credits)
Introductory genetics with an emphasis on evolutionary processes relevant to natural and managed populations of both plant and animal species. Traditional and modern genetics, including quantitative and population genetics, molecular evolution, genomics, and biotechnology.
Prerequisite(s): BIOL 1105 and BIOL 1106 and (STAT 3005 or STAT 3615 or FREC 3214 or FOR 3214)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FIW 4324

FREC 4334 - Principles and Practice of Agroforestry (3 credits)
Biological, social, economic, and technical aspects of agroforestry, training and technology transfer techniques, and application of forestry and agriculture principles. Roles of animals and fish, trees, and agricultural crops in agroforestry systems. Community involvement in planning and implementation of agroforestry projects. COURSE FEE: $40.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CSES 4334

FREC 4354 - Forest Soil and Watershed Management (3 credits)
Properties and processes of soil and water in forests. Emphasis on management for the delivery of ecosystem services at local to global scales. Includes analysis and interpretation in field and laboratory.
Prerequisite(s): CSES 3114 or FREC 2004 or GEOS 3614 or ENSC 3134
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4364 - Advanced Silviculture and Forest Vegetation Management (3 credits)
Advanced topics in silviculture with an emphasis on species silvical differences; forest vegetation management and control, herbicides used in forestry, their chemistry, toxicology, application technology; environmental considerations; tree improvement, individual tree growth, and stand dynamics as affected by intermediate silvicultural operations; implications of atmospheric deposition.
Prerequisite(s): FREC 3324 or FOR 3324
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4374 - Forested Wetlands (3 credits)
Classifications, jurisdictional delineation, and management options of forested wetlands. Relationship of hydrology, soils, and vegetation to ecosystem processes, societal values, and management with regard to environmental and legal considerations and best management practices. Emphasis is on forested wetlands in the southern U.S., but national and international wetlands are included. COURSE FEE: $187.
Prerequisite(s): FREC 4354 or CSES 3114 or ENSC 3114 or GEOS 3614 or CSES 3134 or ENSC 3134
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4414 - Advanced Wildland Fire Management (3 credits)
Impacts fire has on forest environments; how the environment influences fire behavior; how computer programs aid fire decision making; and how fire is used as a land and vegetation management tool. Influences of weather on fire behavior. The course will also provide students with the knowledge and training to qualify as an advanced wildland firefighter (Squad Boss) (FFT1 - Red Card) and a Virginia Certified Prescribed Burn Manager.
Prerequisite(s): FREC 2514 or FOR 2514
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4424 - Forest Resources Economics and Management (3 credits)
Application of economics principles and tools to forest decision making from the individual tract to large private and public holdings. Private and public landowner financial incentives and decisions, forest amenities, non-timber forest products, risk, multiple use, management and ownership trends, and sustainability are examined. Prerequisite course or consent of instructor.
Prerequisite(s): FREC 3324 or FOR 3324 or FREC 3364 or FOR 3364
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4434 - Natural Resource Policy (3 credits)
Historical development of U.S. natural resource policy. Application of policy analysis tools to understand the factors driving natural resource policy formation at the federal, state, and local level. Evaluation of the effects of alternative policies on natural resource use and social wellbeing. Overview of existing natural resource policies with applications to forest and timber management, biodiversity, public lands, endangered species, and climate change mitigation and adaptation.
Prerequisite(s): NR 4014 or FREC 4424 or FOR 4424 or ECON 4014 or FREC 4014 or FOR 4014
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4444 - Integrated Forest Management Practicum (3 credits)
Application of accumulated discipline-oriented knowledge and techniques to solve forest resource management problems as a member of a team. Forest resource management and planning, multiple-use concepts to solve forest management problems, design and implement field-based sampling protocol, develop an integrated forest management plan with logical and ethical recommendations based on analysis of sampled data. Pre: Senior standing.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

FREC 4454 - Urban and Community Forestry (3 credits)
Ecological, socioeconomic, and technical aspects of assessing, planning, managing, and conserving urban forests. Examination of historical and contemporary approaches to urban forestry in local, national, and international contexts. Contributions of trees and associated greenspaces to urban sustainability and community well-being. Roles of government, private industry, and community stakeholders in stewarding urban forests. Theory and practice of written and oral communication to effectively exchange ideas and information about urban forests with diverse audiences. Pre: Junior standing.
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4464 - Water Resources Policy and Economics (3 credits)
Economic theory and methods to explain water use decisions. Efficiency, equity, and ethical considerations in U.S. water policy. Analysis of water markets, climate change, and environmental flows from diverse stakeholder perspectives.
Prerequisite(s): AAEC 1005 or ECON 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AAEC 4464, WATR 4464

FREC 4514 - Forest and Tree Pest Management (3 credits)
Identification and ecology of biotic and abiotic influences on forest and landscape tree health. Developing a theoretical and practical understanding for diagnosing and managing pests and stresses of trees in both the forest and landscape setting. Insects and diseases that attack trees.
Prerequisite(s): FREC 3324 or FOR 3324 or HORT 3325 or HORT 3326
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4554 - Creating the Ecological City (3 credits)
Multidisciplinary, team oriented, problem-solving approaches to creating cities that foster healthy interconnections between human and ecological systems. Analysis of problems from practical and ethical perspectives in the context of the diverse knowledge bases and values of decision-makers. Formation and utilization of integrated design teams to solve complex urban design and planning problems at a variety of scales. Senior standing.
Prerequisite(s): HORT 2134 or FREC 2134
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BSE 4554, HORT 4554, LAR 4554, SPIA 4554

FREC 4714 - Harvesting Systems Evaluation (3 credits)
Principles and techniques for evaluating harvesting machines and systems design, application, productivity, and financial performance.
Prerequisite(s): FREC 3714
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4784 - Wetland Hydrology and Biogeochemistry (3 credits)
Water flows creating wetland hydrologic regime. Hydrologic controls on wetland processes. Linkages between hydrology and biogeochemical cycles. Carbon, nitrogen, phosphorus, and other element cycles within and across wetland boundaries. Field methods to assess hydrologic regime and biogeochemical cycles. Ecosystems services from hydrologic and biogeochemical processes. Applications of wetland hydrology and biogeochemistry in wetland restoration, delineation, and creation.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Free Elective (VT)

VT 1XX5F - GEN ED QUANT/COMP THINK FOUND (3 credits)
Pathway Concept Area(s): 5F Quant & Comp Thnk Found.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

French (FR)

FR 1105 - Elementary French (3 credits)
Fundamentals of the French language with emphasis on grammar, reading, composition, and conversation. 1105 for students with no prior knowledge of the language; 1106 for students who have completed 1105 or less than three years in high school.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 1106 - Elementary French (3 credits)
Fundamentals of the French language with emphasis on grammar, reading, composition, and conversation. 1105 for students with no prior knowledge of the language; 1106 for students who have completed 1105 or less than three years in high school.
Prerequisite(s): FR 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 1114 - Accelerated Elementary French (6 credits)
Proficiency-oriented approach to Elementary French, designed for learners who wish to progress rapidly through the beginning stages of language learning. Development of the four language skills (speaking, listening, reading, writing) and basic cultural competency through the study of authentic materials. Duplicates FR 1105 and FR 1106. Taught in French.
Instructional Contact Hours: (6 Lec, 6 Crd)

FR 2105 - Intermediate French (3 credits)
Emphasizes comprehension of written and spoken French, communication in French, literature, and culture of French-speaking world.
Prerequisite(s): FR 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 2106 - Intermediate French (3 credits)
Emphasizes comprehension of written and spoken French, communication in French, literature, and culture of French-speaking world.
Prerequisite(s): FR 2105
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 2114 - Accelerated Intermediate French (6 credits)
Proficiency-oriented approach to intermediate French, designed for learners who wish to progress rapidly through the intermediate stages of language learning. Develops the four language skills (speaking, listening, reading, writing) in a cultural context using authentic materials. Taught in French. Accelerated version of 2105-2106. Duplicates 2105-2106.
Prerequisite(s): FR 1106 or FR 1114
Instructional Contact Hours: (6 Lec, 6 Crd)

FR 2164 - Intermediate Business French (3 credits)
This course emphasizes all four language skills (reading, writing, speaking, and listening) by focusing on various facets of the world of business and technology. It also develops students understanding of French institutions and business practices.
Prerequisite(s): FR 2105
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 2714 - Introduction to French Culture and Civilization (3 credits)
French culture and civilization from prehistoric cave paintings to the present. Interdisciplinary approach to literature, film, art, achitecture, intellectual movements, and lifestyle in the context of French political history, society, and globalization, including elements of French culture that arrived through conquerors, migrants, and immigrants. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 0 Lab, 3 Crd)

FR 2794H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

FR 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 3105 - Composition, Conversation and Grammar (3 credits)
Development of the ability to write and speak through the effective use of French syntax and morphology. Increased reading and listening skills through the study of authentic materials in the target language. Understanding the role of culture in communication. Conducted in French.
Prerequisite(s): FR 2106 or FR 2164
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3106 - Composition, Conversation and Grammar (3 credits)
Development of the ability to write and speak through the effective use of French syntax and morphology. Increased reading and listening skills through the study of authentic materials in the target language. Understanding the role of culture in communication. Conducted in French.
Prerequisite(s): FR 2106 or FR 2164
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3125 - French for Oral Proficiency (3 credits)
For acquisition of measured levels of proficiency in speaking and understanding spoken French. Content-based instruction in small groups. 3125: to achieve an oral proficiency rating comparable to Intermediate-high on the American Council on the Teaching of Foreign Languages Oral Proficiency Interview (ACTFL-OPI) or S -1+ on the Foreign Service Institute (FSI) scale. 3126: to achieve an oral proficiency rating comparable to Advanced on the ACTFL-OPI or a 2 on the FSI scale. Admission by oral exam.
Prerequisite(s): FR 3105 and FR 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3126 - French for Oral Proficiency (3 credits)
For acquisition of measured levels of proficiency in speaking and understanding spoken French. Content-based instruction in small groups. 3125: to achieve an oral proficiency rating comparable to Intermediate-high on the American Council on the Teaching of Foreign Languages Oral Proficiency Interview (ACTFL-OPI) or S -1+ on the Foreign Service Institute (FSI) scale. 3126: to achieve an oral proficiency rating comparable to Advanced on the ACTFL-OPI or a 2 on the FSI scale. Admission by oral exam.
Prerequisite(s): FR 3105 and FR 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3154 - French for the Natural Sciences (3 credits)
Knowledge of the French language and its cultures to the natural sciences. Study of scientific materials in French. Practice in communication skills through contextualized use of specific vocabulary, idiomatic expressions, grammar structures and cultural practices in real-world situations. Discussion on scientific topics and debates of the French-speaking world. Comparison of the practices and world views of scientists and clinicians in French and English-speaking countries. Taught in French.
Prerequisite(s): FR 3106
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3164 - Advanced Business French (3 credits)
In this skills-based course, students learn to use appropriate French technical vocabulary for different business contexts, do translation, write professional correspondence, and read articles related to the worlds of business, economics, and finance. Cross-cultural differences regarding the work place are also a focus of the course.
Prerequisite(s): FR 3105 and FR 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3304 - Introduction to French Literature (3 credits)
Introduction to French literature through analysis and discussion of selected texts from different periods and genres. Methods, terminology, and practice of literary analysis. Intensive writing component.
Prerequisite(s): FR 3105 or FR 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3314 - Introduction to Francophone Studies (3 credits)
Introduction to the literatures and cultures of French-speaking regions outside of France including North Africa, the Caribbean, Sub-Saharan Africa, and Quebec. Examination of thematic and cultural aspects of literatures of those regions within their socio-historical contexts. Exploration of movements and notions as Negritude, postcolonialism, identity, race, and nation as they relate to the legacy of colonial France. Development of research skills such as finding appropriate sources and proper citation, and of intercultural sensitivity through analysis of works outside Western traditions. Taught in French.
Prerequisite(s): FR 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3424 - French Culture from Middle Ages to Renaissance (3 credits)
Overview of major events, currents, ideas, works, and figures in French culture from the Middle Aes to the end of the Renaissance. Emphasis on nation-building and cultural production. Critical reading and writing in French. Analysis of a variety of literary texts and cultural artifacts affects from a chronological and thematic perspective. Taught in French.
Prerequisite(s): FR 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3434 - French Culture from Baroque to Revolution (3 credits)
Overview of major events, currents, ideas, works, and figures in French culture from the Baroque era to the French Revolution (1610-1799). Emphasis on nation-building and cultural production in a European and Global context. Critical reading and writing in French. Analysis of a variety of literary texts and cultural artifacts from a chronological and thematic perspective. Taught in French.
Prerequisite(s): FR 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3444 - French Culture from Romanticism to Belle Epoque (3 credits)
Overview of major events, movements, ideas, works, and figures in French culture from the Romantic period (1800) through the Belle Epoque (1914). Emphasis on literary and cultural works in their social and historical contexts. Critical reading and analysis in French. Study of the impact of French history on French culture. Interpretation of intercultural experiences according to different world views. Taught in French.
Prerequisite(s): FR 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3454 - French Culture from World Wars to Global Present (3 credits)
Overview of major events, currents, ideas, works, and figures in French culture from World War I to the present, a period characterized by colonialism, world conflict, and globalization. Analysis of literary and cultural works in their social and historical contexts, toward an understanding of the French language as a global idiom involving diverse worldviews and cultures. Critical reading and writing in French. Taught in French.
Prerequisite(s): FR 3304
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 4154 - Advanced Composition and Stylistics (3 credits)
Intensive work in written French. Development of the students ability to write clear, correct, and articulate French in a variety of modes (e.g., epistolary style, the formal and informal essay). Writing intensive.
Prerequisite(s): FR 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

FR 4164 - Special Topics in Business French (3 credits)
A variable content course devoted to developing and perfecting highly advanced language skills through the study of special topics in the French and francophone business worlds. Emphasis on a mastery of specialized French for professional settings. May be repeated for credit with different content. Taught even years.
Prerequisite(s): FR 3106 and FR 3164
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 998.99 credit hours

FR 4314 - Studies in French Literature (3 credits)
In-depth study of a selected topic in French literature, such as an author, a group of authors, a literary movement or genre during a specific period of French literary history (i.e., Voltaire, the Pleiade, Romanticism, the nouveau roman). May be repeated for credit with different content.
Prerequisite(s): FR 3304 and (FR 3314 or FR 3424 or FR 3434 or FR 3444 or FR 3454)
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 99 credit hours

FR 4324 - Special Topics in French Life, Literature and Language (3 credits)
In-depth study of a selected topic in French culture or language as manifested in creative and historical literature, music, art, film, etc., such as phonetics, translation techniques, or the staging of dramatic works in French. May be repeated for credit with different content.
Prerequisite(s): FR 3304 and (FR 3314 or FR 3424 or FR 3434 or FR 3444 or FR 3454)
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 99 credit hours

FR 4794 - Senior Tutorial in French Studies (1 credit)
Individual or small group sessions which give the student the opportunity to hone special language skills, with a focus on post-graduation application of these skills. May concentrate on areas such as technical or business language, linguistics, translation, interpreting, creative writing, specialized literary, or cultural studies. May be taken twice for credit with different content. Must be pre-arranged three weeks before end of previous semester. One 4000 level French course, senior standing, French major, and consent of French Section required.
Instructional Contact Hours: (1 Lec, 1 Crd)

FR 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

FR 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Geography (GEOG)

GEOG 1004 - Introduction to Human Geography (3 credits)
Introduction to geography as a social science. Development of a conceptual framework for studying and evaluating human-environment relationships. Through examination of selected regional and global issues and through exploring basic concepts like regions, place, location, human-environment interaction, movement, and accessibility, students will discover how power is spatially expressed and explore how culture shapes the production of space and vice versa. Students will also discover and describe how ethical issues manifest spatially.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 1014 - World Regions (3 credits)
Human and physical patterns and characteristics of major regions of the world including political systems, religions, economies, and physical settings. Concepts and perspectives of geography as a social science; linkages and interdependence of nations and regions; analysis of media coverage of events or global issues; engagement with current and historical global affairs.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 1024 - Survey of Geography (1 credit)
Foundations of geography and subdisciplines. Career pathways for geography-interested students in various workforce sectors and sub-disciplinary specialization areas, including physical geography, GIScience, and human geography. Introduction to campus academic and geography-related career resources to enhance the undergraduate experience. Professional goal reflection and development.
Instructional Contact Hours: (1 Lec, 1 Crd)

GEOG 1084 - Digital Planet (3 credits)
Exploration of innovative geospatial technologies and their impact on the world around us, including how humans interact with the environment and each other. Roles of location-based services, global positioning systems, geographic information systems, remote sensing, virtual globes and web based mapping for environmental applications. Skills and techniques for spatial thinking and environmental decision-making. Ethical implications of the use of geospatial technologies, data, and computational approaches.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 1004

GEOG 1104 - Introduction to Physical Geography (3 credits)
Integrated study of major subsystems of the natural environment: the nature, distribution, and interrelationships of landforms, climate and vegetation.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 1115 - Seeking Sustainability (3 credits)
1115: Strategies to promote sustainability through the identification, description, and analysis of the dominant interconnections within and between environmental, social, and economic systems across local to global scales. 1116: Perceptions of, conditions of, and strategies to analyze processes of change within complex systems, and promote sustainability across local to global scales.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NR 1115

GEOG 1116 - Seeking Sustainability (3 credits)
Prerequisite(s): GEOG 1115 or NR 1115
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NR 1116

GEOG 1504 - Survey of Meteorology (1 credit)
An introductory look into the world of meteorology, including the role of forecasters, broadcast meteorologists, current research, and the prediction and response to significant storm events.
Instructional Contact Hours: (1 Lec, 1 Crd)

GEOG 1514 - Introduction to Meteorology (3 credits)
Foundational properties and processes of Earth's atmosphere. Governing radiative and thermodynamic atmospheric equations. Extratropical weather systems, thunderstorms, hurricanes, and tornadoes. Cultural and societal impacts of extreme weather and climate change. Using meteorological and atmospheric data to construct weather forecasts.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 1524 - Introduction to Earths Climate (3 credits)
An introduction to Earths climate system, including the physical mechanisms responsible for the global climate as well as its spatial and temporal variation; composition and structure of the atmosphere, radiation budget and temperature, precipitation and hydrologic budget, atmosphere and oceanic circulation, weather systems, paleoclimate, future climate; synergistic human-climate relationships, including global warming, climate change.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 2004 - Water, Environment, and Society (3 credits)
Introduction to the hydrologic cycle, water resources, and related environmental issues. Emphasis on ethics and relationships between human needs for and effects upon water including: water quality, water treatment, and wastewater treatment; water for health, energy, and food; water management, laws, economics, and conflict; hydrometeorological hazards and climate change; and potential solutions for these and other critical water issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WATR 2004

GEOG 2014 - Health and Place: Introduction to Health Geography (3 credits)
A survey of the field of health and medical geography. A study of the underlying interconnected processes at global to local scales from ecological and social perspectives that explain geographic patterns related to health, disease, and access to healthcare. Analysis of spatial patterns depicted on maps and connection to explanatory processes related to environmental exposures, demographic change, and the intersection of power, culture, and identity. Development of health-related written and oral content for broad audiences. Assessment and critique of presentation of scientific findings in popular media.
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2034 - Geography of Global Conflict (3 credits)
Geographical dimensions of global conflicts, international management of conflicts, conflicts of differences, historical, ideological, failed states and resources will be examined. Background to conflicts, current status of conflicts, different points of view in conflict. Topics in the course will change as the geography of global conflict changes.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2034, PSCI 2034

GEOG 2054 - Introduction to World Politics (3 credits)
An introduction to the prevalent methods and theories in the study of world politics. Topics include: historical context of contemporary world politics, global actors and power relations, conflict and conflict resolution, international law, and contemporary global issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2054, PSCI 2054

GEOG 2064 - The Global Economy and World Politics (3 credits)
Introduction to theories and methods in the study of global political economy. Topics include: historical origins, comparative advantage, the factor endowment trade theory, the gold standard, economic nationalism, the Great Depression, the Bretton Woods System, Keynesianism, the Nixon shocks, international organizations, monetary governance, the Great Recession, poverty and underdevelopment, and contemporary challenges of income inequality within and among economies.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2064, PSCI 2064

GEOG 2074 - COVID-19: Global Pandemic, Local Impacts (3 credits)
Examination and analysis of COVID-19's diffusion through the population at multiple spatial scales, from global to individual, using theories and methods of social science and medical geography. Critical study of the pandemic as a biological and social phenomenon, place within its cultural, historical, economic, political, and geographic contexts. Development of persuasive logical arguments on COVID-related topics through analyzing country, US state, and local level impacts of the COVID pandemic. Critical analysis of responses to the COVID pandemic. Synthesis of interconnected variables that contribute to differential impacts of COVID on different population groups. Identification of factors that may contribute to future pandemics.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2084 - Principles of Geographic Information Systems (3 credits)
Principles and diverse applications of Geographic Information Systems, geographic coordinate systems, Cartesian map projections, spatial data sources, GIS databases, map representations, and illustrated spatial applications of GIS. Requires regular use of computer systems for geographic data analysis.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2104 - Introduction to Environmental Security (3 credits)
Environmental security concepts, issues, and terminology. Study of emerging issues at the nexus of environmental and climate change and security risks, including homeland, human, national, energy, food, and water securities. Overview of climate-driven conflicts, displacement and migration, and geopolitical instability. Policy and programmatic solutions. Assessment of case studies using methods such as strategy analysis, scenario development, and simulations.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2114 - Introduction to Coastal Regions (3 credits)
Introduction to coastal geomorphology (landforms and processes), climate drivers (sea level rise and storms surge), and natural systems that shape coastal regions. Study of human systems including population growth, built environment, and social vulnerability. Overview of coastal zone management and policy. Discussion of the future of coastlines shaped by complexity, emerging challenges, uncertainty, adaptation, and resilience.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2134 - Geography of the Global Economy (3 credits)
Geographical dimensions of the global economy since World War II. Globalization and the emergence of a new international division of labor. The relative decline of the United States and the growth of Japan, East Asia and the European Union. Changing geographies of foreign direct investment location. Places and regions in geo-economic discourse. Population and resources issues in the early twenty-first century.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2134, PSCI 2134

GEOG 2224 - Geography of Europe (3 credits)
Europe: as an idea, as a place, as a space, and as a political entity. Basic knowledge of Europe's historical physical environments, political geography, population distribution, varied cultures, and economic development. Cultural variations and their implications on settlement patterns, political divisions, and economic patterns and processes.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2224, PSCI 2224

GEOG 2244 - Sustainable Urbanization (3 credits)
Process of urbanization and theories and approaches of urban development. Debates on the meanings of sustainable urbanization and development in cities and how they are measured. Urban sustainability initiatives in the context of urban political economies, land-use practices, urban inequality and diversity, urban nature, and urban policy and politics. Programs and policies designed to enhance sustainable urbanization. Comparative approach and global perspective. Fee $30.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SPIA 2244

GEOG 2314 - Maps and Mapping (3 credits)
Introduction to maps. Fundamentals of reading, analysis, and interpretation of hard copy and digital maps, as they are required to illuminate spatial problems. Influences of maps on attitudes toward and images of the geographic environment.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2505 - Weather Analysis I (3 credits)
Introduction to the operational tools and processes in weather forecasting. Surface data and upper-air sounding analysis, forces producing and directing wind flow, jetstreams, weather chart analysis, and atmospheric moisture including clouds and precipitation.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2506 - Weather Analysis II (3 credits)
Introduction to the operational tools and processes in weather forecasting. Numerical forecast modeling and current operational models, ensemble forecasting and model output statistics, structureand dynamics of fronts and mid-latitude cyclones, development of thunderstorms and tornadoes, and the use of Doppler radar and satellite imagery in short-term forecasting.
Prerequisite(s): GEOG 2505
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2784 - Geography of Tea (3 credits)
Physical and human geographic overview of tea. Biogeography, history, economics, and ceremonial practices of the worlds tea producing regions. Analysis of terroir and processing through tasting exercises and sensory evaluation. Pre: Sophomore standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 3034 - The CIA: Its Capabilities in Todays Geo-Political World (3 credits)
Role of the discipline of geography in the origins, procedures, and history of CIA. Role of the CIA in providing national intelligence at both strategic and operational levels. Origins and changes to the CIA since WWII. Capabilities to support both policy-makers and national security entities. Case studies illustrating the CIAs operations in different regions of the world.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3034, PSCI 3034

GEOG 3104 - Environmental Problems, Population, and Development (3 credits)
Environmental problems in their social, spatial, and global contexts. Impacts of globalization, neoliberalism, and population growth on the environment. Examination of effects of developed and developing countries on the environment. Focus on conceptualizing development, population dynamics, environmental justice, factory farming, energy and renewable energy, global health, disasters, and intercultural and global awareness.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3214 - Africa Together (3 credits)
Strategies to identify, discuss and apply theories of stereotyping, empathy, and scarcity in the context of contemporary Africa. Application of theories to compare and analyze examples of social networks, music, disease, and violence in Africa and the U.S. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3224 - Geography of Appalachia (3 credits)
Appalachia as a region: physical environment, development of internal settlement, cultural, and economic patterns. Human adaptations to environmental change, traditions, and connections to and from external regions.
Prerequisite(s): GEOG 1004 or GEOG 1104 or GEOG 1014 or APS 1704 or HUM 1704
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3234 - Geography of Virginia (3 credits)
Virginia as a region: its physical environment, settlement, cultural, economic, and political patterns. Human adaptation to environmental change, human modification of environments and linkages to external regions. Climate, Biogeography and Water, and Environmental Hazards related to Natural Resources. Pre: 3 credit hours of Geography.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3244 - The U.S. City (3 credits)
The economic, political, and social forces driving urbanization in the United States. The American city in historical context with particular emphasis on the rise of manufacturing, deindustrialization, and suburbanization. Case studies from the manufacturing and sunbelt regions to illuminate key constructs from urban and human geography. Border examples of comparative urbanization from the U.S. -Mexican border, the Caribbean, and Canada.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3254 - Geography of East Asia (3 credits)
A geographical analysis of several modern states in East Asia, specifically China, Japan and the Koreas. Economic, political, and cultural change since the end of World War II. Globalization and the emergence of the China as a demographic and economic giant.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3274 - Polar Environments (3 credits)
Introduction to polar regions emphasizing interdisciplinary concepts, a systems approach, and communication of polar science to non-scientific audiences. Developing and defending arguments on the global significance and geopolitics of polar regions. Feedbacks among biophysical and human processes and resources. Strategies to deliver effective oral presentations, and to defend arguments in writing and group debates on topics including multiculturalism, human-environmental interactions, and climate change impacts in polar regions. Foster understanding of indigenous worldviews using native narratives. Pre: Sophomore standing.
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3304 - Geomorphology (3 credits)
Examines the variety of landforms that exist at the earths surface. Detailed investigation of major processes operating at the earths surface including: tectonic, weathering, fluvial, coastal, eolian, and glacial processes. Field excursion.
Prerequisite(s): GEOG 1104 or GEOS 1004 or GEOS 2104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CSES 3304, GEOS 3304

GEOG 3314 - Cartography (3 credits)
Science and art of cartography including the conceptual framework of the cartographic method. Development of the skills necessary to create maps to be used in the analysis of spatial phenomena. Emphasis on thematic and ethical cartography.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOG 3404 - Mountain Geography (3 credits)
Physical characteristics of mountains, such as steep slopes, climatic extremes, and sharp environmental gradients, and their influences on the ways in which people, animals, and plants interact. Physical processes that operate in high-relief environments, including consideration of climate, geomorphology and biogeography. Influence of physical processes in mountain environments on human culture and activities. Cultural significance of mountains. Mountains as a resource. Land use and human-land interactions in mountains. Course is intended for students with an interest in what makes mountains unique and inspiring landscape elements.
Prerequisite(s): GEOG 1104
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AHRM 3464, APS 3464, HD 3464, HUM 3464, SOC 3464, UAP 3464

GEOG 3504 - Severe Weather (3 credits)
An introduction into mesoscale environments favoring the development of severe thunderstorms and tornadoes, the analysis of moisture, instability and shear parameters associated with severe weather events. Thunderstorm life-cycles, analysis of thermodynamic diagrams, role of wind shear and associated convective mode, hail production and forecasting, tornadogenesis and research.
Prerequisite(s): GEOG 2505
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3515 - Dynamic Meteorology (3 credits)
Examination of the physics that govern motion of Earths atmosphere. General atmospheric concepts, atmospheric principles of thermodynamics, hydrostatics, and stability. 3516: Examination of the physics that govern motion of Earths atmosphere. Principles of fluid dynamics, specifically the physics governing horizontal motion, corresponding vertical motions, and synoptic scale systems, as represented in various coordinate systems.
Prerequisite(s): GEOG 2506 and MATH 2214 and (PHYS 2206 and PHYS 2216 or PHYS 2306)
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3516 - Dynamic Meteorology (3 credits)
3515: Examination of the physics that govern motion of Earths atmosphere. General atmospheric concepts, atmospheric principles of thermodynamics, hydrostatics, and stability. 3516: Examination of the physics that govern motion of Earths atmosphere. Principles of fluid dynamics, specifically the physics governing horizontal motion, corresponding vertical motions, and synoptic scale systems, as represented in various coordinate systems.
Prerequisite(s): GEOG 3515
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3844 - European Geopolitics (3 credits)
Impact of Geography on European politics and economics. Significance of territorial, identity, networking and environmental geopolitics. Theoretical debates in the fields of political and population geography. Current culture and demographic challenges and geopolitical disputes within Europe and particularly between the European Union (EU) and its neighboring world regions.
Prerequisite(s): GEOG 2224 or IS 2224 or PSCI 2224
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3844, PSCI 3844

GEOG 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

GEOG 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course
Repeatability: up to 18 credit hours

GEOG 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 4044 - Biogeography (3 credits)
A survey of the field of biogeography. A study of the factors influencing the distribution of plants and animals approached from ecological, historical, and cultural perspectives. Human influence on biotic patterns, such as crop domestication, habitat alteration, species introductions and extinctions, management issues, and environmental change, is a primary focus.
Prerequisite(s): GEOG 1104 or BIOL 2804
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4054 - Geography of Wine (3 credits)
Analysis of physical and cultural forces that shape the production, consumption, and great variety of wine in the world. Wine as a complex commodity is examined through its economic, social, political, and ideological impacts in different parts of the world throughout history. Particular emphasis will be focused on place as an agent in defining the product.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4074 - Medical Geography of Infectious Diseases (3 credits)
Examination of geographic patterns of infectious diseases and underlying explanatory processes at spatial scales ranging from global to local. Interactions between natural and social environments and their contributions to infectious disease burdens. Human health impacts of climate variability and change. Application of theories such as landscape epidemiology and methods in medical geography and the social sciences to understanding disease emergence events and pandemics. Examination of role of environmental change and human migration on disease diffusion patterns. Analysis of major factors related to HIV/AIDS epidemic that explain the disease's spatial and spatio-temporal pattern in different social and cultural settings. Pre: Junior standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4084 - Modeling with Geographic Information Systems (3 credits)
Use of automated systems for geographic data collection, digitization, storage, display, modeling and analysis. Basic data flow in GIS modeling applications. Development of proficiency in the use of current GIS software. Senior Standing.
Prerequisite(s): GEOG 2084
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)
Course Crosslist: GEOS 4084

GEOG 4094 - Generative AI Applications in Social Science (3 credits)
Apply key concepts in generative AI to social science research across multiple disciplines, including geography, urban studies and planning, environmental studies, education, writing, sociology, psychology, political science, and economics. Analyze quantitative and qualitative data by utilizing various generative AI tools, such as ChatGPT and Dall-E. Integrate the geographic information system (GIS) with generative AI tools. Evaluate the impacts of generative AI on society in terms of ethical concerns, geographic and sociodemographic biases, and responsible uses. Criticize existing generative AI tools. Develop public and educational policies to guide the responsible use of generative AI for social science research. Pre: Junior Standing
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4134 - Interdisciplinary Issues and Ethics in Water Resources (3 credits)
Analysis of issues and ethics related to water resources, water as a hazard upon human (infrastructure, economy) and ecological (rivers, groundwater) systems, water and vector borne disease, climate change, dams, and eutrophication. Development of proficiency in demonstrating the multidimensionality of water resources. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOS 4134

GEOG 4164 - Qualitative Methods & Ethics in Geography (3 credits)
Overview of qualitative research methods in the context of human geography. Theories, practices, and interpretations surrounding human geography methods. Debates surrounding the use of a range of qualitative methods. Critical analysis of academic writing. Data collection, analysis and interpretation methods. Epistemological underpinnings of qualitative methodological choices. Ethical considerations related to human subject research. Visual, graphic, and oral communication skills. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4184 - Health Applications of Geospatial Techniques (3 credits)
Investigation of theoretical foundations and practical uses of geospatial techniques in the analysis of human health data. Emphasis on description of spatial data and measurement of clustering of diseases and health concerns. Quantification of exposure to pathogens and environmental factors that impact human health to explain clusters. Analysis of health disparities and their impact on health. Acquisition and analysis of health data, interpretation of findings, and presentation of results in independent analysis. Development of policies to promote population health.
Prerequisite(s): GEOG 2084
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4204 - Geography of Resources (3 credits)
Physical and cultural systems that influence the spatial distribution of resources and resource use. Emphasis on historical and current contexts of natural resources use and perspectives in the United States, with consideration of worldwide distributions of resources. Environmental cognition and perception, water, public lands, conservation and preservation, food and hunger, human population, and alternative energy. Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4214 - Gender, Environment, and International Development (3 credits)
Key concepts and critiques related to the intersection of gender, environment, and international development. Development institutions and organizations with relationship to gender and environment. Theoretical and applied perspectives on eco-feminism; bio-diversity; climate change; feminist political ecology; agriculture and natural resources; participatory methods and empowerment. Case studies from Africa, Asia, and Latin America. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 4214, WGS 4214

GEOG 4224 - Tracking Environmental Change (3 credits)
Multidisciplinary approaches to documenting and understanding past environmental change. Methods used to unravel the physical and human drivers of historical and longer-term changes in climate, vegetation, and fire patterns. Application of environmental change data and insights to improve land and conservation management under changing climates. Pre: Junior standing
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4254 - R Programming for Geospatial Applications (3 credits)
Geospatial data analytics using R programming language. Batch-processing capability for analyzing large vector and raster geospatial data including remote sensing imagery and GIS layers. Using R scripts, algorithms, and functions to implement spatial analysis and spatial-temporal modeling. Bridging open source GIS/remote sensing and Machine learning. Linux system and high-performance computing environment.
Prerequisite(s): GEOG 4084
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4284 - Human Dimensions of Coastal Social-Ecological Systems (3 credits)
Coastal change and multiple stressors. Social-ecological systems. Concepts of resilience, vulnerability and adaptation to climate change. The tragedy of the coastal commons. Adaptive management, co-management, adaptive co-management. Non-Western knowledge systems, Indigenous and local knowledge. Food security, blue food systems, food system transformations. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4304 - Geospatial Analysis of Mobility (3 credits)
Apply key concepts in human mobility and travel behavior theories to real-world scenarios. Analyze emerging issues in mobility and its impacts on society, encompassing topics such as ride-hailing services, autonomous vehicles, AI, and smart city technologies, and evaluate their implications for future urban development. Evaluate and implement R- and Python-based geospatial analysis tools to address contemporary mobility issues. Synthesize and analyze big geospatial and human mobility data. Propose innovative policy and urban planning recommendations.
Prerequisite(s): GEOG 2084
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4314 - Spatial Analysis in Geographic Information Systems (3 credits)
Theory and application of Geographic Information Systems, with special emphasis on analytical operations, database design, cartographic modeling, and raster GIS. Spatial data handling and analysis to facilitate decision-making through the communication of geographically referenced data.
Prerequisite(s): GEOG 2084
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOG 4324 - Algotrithms in Geographic Information Systems (4 credits)
Computational methods in automated mapping and map analysis. Visual Basic programming and algorithm design for spatial display and analysis under both raster and vector data models. Requires regular use of the departmental microcomputer and UNIX workstation laboratory.
Prerequisite(s): GEOG 4084 and CS 1064
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

GEOG 4334 - Geospatial Information Technology for Land Change Modeling (3 credits)
Analysis of the spatio-temporal patterns of Land Use and Land Cover Change (LULCC) as observed in satellite images. Tropical deforestation, urbanization, and agricultural intensification. Rates and patterns of LULCC linked to biophysical and socio-economic drivers. Impacts of land change with respect to local climate, biodiversity, water yield and quality, and ecosystem services.
Prerequisite(s): GEOG 4084 or GEOS 4084
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4354 - Introduction to Remote Sensing (3 credits)
Theory and methods of remote sensing. Practical exercises in interpretation of aerial photography, satellite, radar, and thermal infrared imagery. Digital analysis, image classification, and evaluation. Applications in earth sciences, hydrology, plant sciences, and land use studies.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: GEOS 4354

GEOG 4374 - Remote Sensing and Phenology (3 credits)
Analysis of spatial and temporal patterns of the vegetated land surface as observed by satellite images. Application of satellite image time series to derivation of land surface phenology, and analysis of the appearance and development of phenology in the USA and worldwide. Methods of monitoring of phenology with satellite imagery. Causes of spatio-temporal changes of phenological events. Effects of global climate change.
Prerequisite(s): GEOG 4354
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4394 - Introduction to Web Mapping (3 credits)
Application of web mapping technologies to geographic data collection, storage, analysis, and display. History and context, spatial data infrastructures, hardware and software architectures, open geospatial consortium standards, mapping APIs, virtual globes, user-centric design, web cartography. Group and individual projects.
Prerequisite(s): GEOG 2084
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4404 - Geovisualization (3 credits)
Advanced topics in digital and dynamic map production, emphasizing concepts in advanced cartographic design, information visualization, and human-computer interaction. Topics include cartograms, computer aided design, animation, lidar and photogrammetric point cloud visualization, Web Geographic Information Systems, terrain visualization, and virtual geographic environments.
Prerequisite(s): GEOG 2084 and GEOG 3314
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4414 - Climate Change and Societal Impacts (3 credits)
Impacts of climate change on different societies. Concepts of adaptation, vulnerability, and resilience. Notions of complexity, uncertainty, and thresholds related to climate change outcomes. Case study analysis of communities affected by climate change. Understanding future and assessing climate vulnerability across various spatiotemporal scales. Scenario planning, foresight analysis, and interactive digital tools. Pre: Sophomore standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4444 - Practicing Sustainability (3 credits)
Practicum in sustainability. Synthesize and integrate knowledge from undergraduate career and apply to real world problems of sustainability. Topics and projects selected from opportunities to examine specific local and regional sustainability issues on the VT campus, in the New River Valley and the Commonwealth at large. Pre: Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NR 4444

GEOG 4504 - Synoptic Meteorology (3 credits)
Examination of large-scale (1000-5000km) weather systems using both analytical and operational analysis. Topics include thermal structure of atmosphere & resulting circulation, frontal analysis, lifting mechanisms, barotropic/baroclinic systems, and mid-latitude cyclones. Weather pattern influences of the jetstreams and oscillation of large pressure systems including El Nino/La Nina and the North Atlantic Oscillation.
Prerequisite(s): GEOG 3504 and MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4514 - Tropical Meteorology (3 credits)
Tropical weather and climate topics: remote sensing and observations; tropical climatology, including regional and large-scale circulations, monsoons, and the El Nino/Southern Oscillation; tropical convection, including the clouds in the subtropics, deep convection in the equatorial region, and tropical cloud clusters and thunderstorms; and tropical cyclones, including their structure, intensity, lifecycle, and formation.
Prerequisite(s): GEOG 2506 and GEOG 3504
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4524 - Physical Meteorology (3 credits)
Study of the physics associated with cloud and precipitation development, the emission, absorption, and transmission of solar and terrestrial radiation, meteorological acoustics, and atmospheric electricity.
Prerequisite(s): GEOG 3515
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4534 - Numerical Weather Prediction (3 credits)
Scientific basis of numerical weather prediction, including data assimilation, numerical integration, model initialization, physical parameterizations, ensemble methods, and model verification. Overview of numerical errors and their effects on predictability. Current operational forecasting models and the role of models in weather forecasting. Application of knowledge to running a high-resolution numerical weather forecast in a high-performance computing environment.
Prerequisite(s): GEOG 3515 and GEOG 4504
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4554 - Remote Sensing of Atmosphere (1 credit)
Remote sensing technologies used in monitoring weather. Evaluation of Doppler radar products, including base reflectivity, base velocity, storm-relative velocity, and vertically integrated liquid imagery. Could observation through infrared and visible satellite imagery; remote weather station design, set-up and data retrieval.
Prerequisite(s): GEOG 4354
Instructional Contact Hours: (1 Lec, 1 Crd)

GEOG 4574 - Climate Data Analysis and Programming (3 credits)
Elements of 1-dimensional and high-dimensional climate data storage and formatting. Manipulate and query atmospheric reanalysis, global climate model, and gridded observation datasets. Implement efficient research workflows through the development of computer scripts to statistically analyze climate data.
Prerequisite(s): GEOG 2505
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4764 - International Development Policy and Planning (3 credits)
Examination of major development theories and contemporary issues and characteristics of low-income societies (industrialization, urbanization, migration, rural poverty, hunger, foreign trade, and debt) that establish contexts for development planning and policy-making. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 4764, UAP 4764

GEOG 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Geosciences (GEOS)

GEOS 1004 - Earth Science: Our Past, Present, and Future (3 credits)
Introduction to Earth science, including the fundamental concepts of geology in the modern context of humans interacting with the Earth. Formation and evolution of the Earth (history, plate tectonics, the rock cycle, geologic time), internal Earth dynamics (earthquakes, volcanoes, mitigating natural hazards), Earth materials (minerals and rocks, energy and mineral resources), surface processes (Earth system science, hydrologic cycle, global geochemical cycles, oceans and atmosphere, climate, erosion and landscapes), Earth sustainability (resources, environmental change), evaluating geological information and products of research, the scientific approach to problem solving, and the ethical issues associated with geoscience and the environment.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 1014 - Evolution of the Earth-Life System (3 credits)
Introduction to the interaction of the Earths processes that shape our planet and its biosphere through time. Application of modern geoscientific inquiry; biological, chemical and physical interactions that are part of the Earth system; distribution of life on Earth (i.e., biogeography); diversity of life over time; the differentiation between science and pseudoscience; ethical issues around human activities and their impact on the Earth-Life system.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 1024 - Earth Resources, Society, and Environment (3 credits)
Introduction to the Earths resources including their nature, formation, occurrence, extraction, distribution, consumption, and waste management and disposal using an integrated cradle to grave analysis. Population, the Earths metallic and non-metallic resources, rare earth elements, non-renewable and renewable energy and water. Social, environmental, economic and political impacts resource production and consumption have had historically, currently, and that are predicted into the future including current and future sources of energy in the United States and internationally. Sustainability, water abundance and quality, fracking, climate change, ocean acidification, and ozone depletion.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 1034 - Earths Natural Hazards (3 credits)
Fundamentals of Earth processes that drive natural hazards, including earthquakes, volcanoes, tsunamis, hurricanes, tornadoes, floods, climate change and impacts with space objects; impacts of human activities on the Earth; defining and analyzing hazards and risks through testing hypotheses on geologic data; ethical issues arising from hazard mitigation; analysis of uncertainties of scientific information.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 1054 - Age of Dinosaurs (3 credits)
Introduction to dinosaur paleontology, including fundamental geological and biological concepts, with focus on how modern paleontologists ask interdisciplinary questions to examine the fossil record. Use of dinosaurs to explore: process and impact of scientific method; geologic processes, geologic time, global change, ecosystems, biogeography; anatomy, evolution, biodiversity, phylogenetic relationships; and media portrayal of extinct animals.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 1064 - Climate History: Past, Present, and Future (3 credits)
Introduction to the fundamental components of Earths climate system. Changes of Earths climate at different time scales. Climate change induced by plate tectonics, variations in Earths orbit and transition to and from ice ages. Historical and future changes of Earths climate. Climate models as tools to interpret climate data. Impacts of climate change. Climate ethics and policies.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 1104 - Introduction to Earth Sciences Laboratory (1 credit)
Introduction to Earth sciences laboratory, including identification of minerals and rocks, topographic and geologic maps, structural geology, geology impacting humans and humans impacting geology, environmental and social impacts.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lab, 1 Crd)

GEOS 1124 - Earth Resources, Society and Environment Laboratory (1 credit)
Laboratory course on Earths resources including their nature, importance, occurrence, extraction, and environmental, social, and political impacts of consumption. Earths resources include metal ores, non-metallic resources which includes surface and ground water and non-renewable (e.g., fossil fuels) and renewable energy (e.g., hydroelectric). Sustainability, water quality and quantity, climate change, and ocean acidification related to resource extraction and consumption.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lab, 1 Crd)

GEOS 2004 - Geosciences Career and Professional Development (3 credits)
Introduction to career and professional development in the geosciences, including investigating career options, searching for internships and jobs, discussing topics of ethics, diversity and inclusion, evaluating information resources, collaborating in research groups, and developing skills in technical communication. Restricted to geoscience majors.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 2014 - Mission to the Planets (3 credits)
The events and processes that shaped the terrestrial planets; the scientific method (i.e., observations, techniques, and theories) that supports our understanding of these events and processes; the role of science, politics, and engineering and how these impact planetary science missions; ethical issues associated with planetary research; manned and unmanned exploration and how they have shaped our understanding of the planets.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 2024 - Earth's Dynamic Systems (6 credits)
Overview of the geosciences, emphasizing processes operating within and on the Earth now and over the last 4.55 billion years. Earth's systems, cycles and material. Earth's formation, the physical Earth, and plate tectonics. Earth's record, including the fossil record, evolution, origin and diversity of life, and biogeography. History of the Earth-Life system, including key events throughout time. Time and length scales. Climate change and extinction. Field trips required. Restricted to geoscience majors (5H, 3L, 6C), partial duplication of GEOS 1004.
Instructional Contact Hours: (5 Lec, 3 Lab, 6 Crd)

GEOS 2104 - Elements of Geology (3 credits)
Structure of the earth, properties of minerals and rocks, and geologic processes that act on the surface and in the interior of the earth, and integrated geologic systems of importance in engineering and regional planning. For students in engineering and physical sciences. Geology 2104 duplicates material in Geology 1004 and both may not be taken for credit.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 2444 - Geoscience Field Observations (3 credits)
Study of geological processes in the field. Integration of field observations with datasets into conceptual geological interpretations and models. Identification of rock type, lithology and structure in outcrop.
Prerequisite(s): GEOS 1004 or GEOS 2024 or GEOS 2104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

GEOS 2984 - Special Study (1-10 credits)
Instructional Contact Hours: (1-10 Lec, 1-10 Crd)

GEOS 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 3014 - Environmental Geosciences (3 credits)
The roles of geology and geophysics in defining and monitoring the natural environment, with special application to interactions between humans and the geologic environment. Both descriptive treatment and quantitative concepts related to environmental processes involving the solid earth and earths surface, with emphasis on geologic hazards (e.g., earthquakes, volcanoes, landslides and slope failures, flooding, groundwater problems, mineral and rock dusts).
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 3024 - Computational Methods in the Geosciences (3 credits)
Development of computational skills aimed at extracting pertinent trends and significance of a wide variety and quantity of highly heterogeneous geoscience data; application of analytical, statistical and signal processing methods for analyzing time-series, spatial and satellite imagery data; tools for producing publication quality maps, graphs, charts, and other visual aids.
Prerequisite(s): MATH 1225 or MATH 1025
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 3034 - Oceanography (3 credits)
Descriptive and quantitative treatment of the geological, physical, chemical and biological processes that occur in, or are influenced by, the oceans. The history of oceanic exploration and discovery is addressed.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 3044 - Geosciences Outreach (2 credits)
Service-learning through teaching. Identification and development of geoscience outreach activities based on national and state science education standards. Assessment methods for evaluating the effectiveness of outreach activities. Techniques for effective instructional design and communication of geoscience concepts to enrich the general publics awareness of the geosciences.
Prerequisite(s): GEOS 2024 or (GEOS 1004 and GEOS 1014) or (GEOS 2104 and GEOS 1014)
Instructional Contact Hours: (2 Lec, 2 Crd)

GEOS 3104 - Elementary Geophysics (3 credits)
Acquisition and interpretation of exploration geophysical data. Seismic reflection and refraction methods, gravity and magnetic fields, geoelectrical methods, and geophysical well logging.
Prerequisite(s): (GEOS 1004 or GEOS 2024 or GEOS 2104) and (MATH 1026 or MATH 1226) and (PHYS 2205 or PHYS 2305)
Corequisite(s): PHYS 2206 or PHYS 2306
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 3204 - Sedimentology-Stratigraphy (3 credits)
Study of sedimentary basins in a plate-tectonic framework, mechanisms of basin formation, three-dimensional geometry of basin fill, and controls on basin fill. Siliciclastic and carbonate-evaporate rocks as examples of basin fill are discussed in lectures and studied in the lab and in the field. Applied aspects of the course include a discussion of geometries of sedimentary aquifers and reservoirs.
Prerequisite(s): GEOS 1004 or GEOS 2024 or GEOS 2104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 3304 - Geomorphology (3 credits)
Examines the variety of landforms that exist at the earths surface. Detailed investigation of major processes operating at the earths surface including: tectonic, weathering, fluvial, coastal, eolian, and glacial processes. Field excursion.
Prerequisite(s): GEOG 1104 or GEOS 1004 or GEOS 2104 or GEOS 2024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CSES 3304, GEOG 3304

GEOS 3404 - Elements of Structural Geology (3 credits)
Introduction to basic geological structures, evolution of microfabrics, development of faults, folds and foliations, stereographic analysis of geological structures, thrust fault geometries, balancing of geological cross-sections, and introduction to the concepts of stress and strain.
Prerequisite(s): GEOS 1004 or GEOS 2024 or GEOS 2104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 3504 - Mineralogy (3 credits)
Principles of modern mineralogy, crystal chemistry, and crystallography, with emphasis on mineral atomic structure and physical property relationships, mineralogy in the context of geology, geochemistry, environmental science and geophysics, phase equilibria, mineral associations, and mineral identification, and industrial applications of minerals. There are three required field trips during the semester.
Prerequisite(s): CHEM 1035 or CHEM 1055 or (ISC 1106 and ISC 1116)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: MSE 3104

GEOS 3604 - Paleontology (3 credits)
Paleontological principles and techniques and their application to the evolution of life, the ecological structure of ancient biological communities, the interpretation of ancient depositional environments, and the history of the earth.
Prerequisite(s): (GEOS 1004 and GEOS 1014) or GEOS 2024
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 3614 - Soils (3 credits)
Characterization of soils as a natural resource emphasizing their physical, chemical, mineralogical, and biological properties in relation to nutrient availability, fertilization, plant growth, land-use management, waste application, soil and water quality, and food production. For CSES, ENSC, and related plant- and earth-science majors. Partially duplicates CSES/ENSC 3134.
Prerequisite(s): CHEM 1036
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CSES 3114

GEOS 3624 - Soils Laboratory (1 credit)
Parent materials, morphology, physical, chemical, and biological properties of soils and related soil management and land use practices will be studied in field and lab. Partially duplicates CSES/ENSC 3134.
Corequisite(s): GEOS 3614
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: CSES 3124

GEOS 3634 - Natural History Collections and Curation (3 credits)
Introduction to museums and natural history collections, with a focus on hands-on curation of specimens to learn standard archival practices and principles. Exploration of campus collections such as the Museum of Geosciences, Massey Herbarium, and Cheatham Vertebrate Collection with particular focus on: specimen acquisition and accessioning; specimen preparation, preservation, and identification; collection labeling, organization, and storage; collection management databases; metadata; emergency response plans; and the role of museums over time for outreach and interpretation. Application of knowledge through final project.
Prerequisite(s): GEOS 2024 or (GEOS 1004 and GEOS 1014) or (GEOS 2104 and GEOS 1014) or (BIOL 1105 and BIOL 1106)
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 3644 - Paleontological Laboratory Techniques (2 credits)
Laboratory techniques for extracting and preserving paleontological data. Tracing the process a fossil goes through from the field until it is permanently curated. Supervised hands-on experience in an active paleontological laboratory. Independent paleontology information preservation projects. Topics include: philosophy of fossil preparation, mechanical and chemical preparation, conservation and lab materials, digital data and virtual preparation, molding and casting, 3D printing, and collaboration with other museums.
Prerequisite(s): GEOS 1014 or GEOS 1054 or GEOS 2024
Instructional Contact Hours: (2 Lec, 2 Crd)

GEOS 3704 - Igneous and Metamorphic Rocks (3 credits)
Study of characteristics and mechanisms of igneous intrusion at depth in the crust, volcanic phenomena on the surface, and textural and mineralogical modification of rocks at elevated temperatures and pressures of crustal metamorphism. Tectonic aspects of igneous and metamorphic rocks will be stressed.
Prerequisite(s): GEOS 1004 or GEOS 2104 or GEOS 2024
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

GEOS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 4024 - Senior Seminar (3 credits)
Integration and solution of significant geoscience research problems and case studies by analysis and integration of information across a wide spectrum of geoscience sub-disciplines. Techniques for effective oral and written communication of technical information to experts and non-experts. Independent and team research projects. Analysis of ethics associated with societally-relevant geosciences issues. Ethics and professionalism in geosciences.
Prerequisite(s): GEOS 2004 and GEOS 2024 and GEOS 2444 and GEOS 3204 and GEOS 3404 and GEOS 3504
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 4084 - Modeling with Geographic Information Systems (3 credits)
Use of automated systems for geographic data collection, digitization, storage, display, modeling and analysis. Basic data flow in GIS modeling applications. Development of proficiency in the use of current GIS software. Senior Standing.
Prerequisite(s): GEOG 2084
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)
Course Crosslist: GEOG 4084

GEOS 4124 - Seismic Stratigraphy (3 credits)
Overview of seismic data acquisition and processing methods, seismic wavelets, static and dynamic corrections, and seismic velocities; seismic reflection data interpretation; seismic reflection responses Seismic mapping; seismic stratigraphy and seismic lithology. Consent required.
Prerequisite(s): GEOS 3104 and GEOS 3204
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4134 - Interdisciplinary Issues and Ethics in Water Resources (3 credits)
Analysis of issues and ethics related to water resources, water as a hazard upon human (infrastructure, economy) and ecological (rivers, groundwater) systems, water and vector borne disease, climate change, dams, and eutrophication. Development of proficiency in demonstrating the multidimensionality of water resources. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 4134

GEOS 4154 - Earthquake Seismology (3 credits)
Seismicity and its causes in the context of plate tectonics; determination of earthquake location, size and focal parameters; seismogram interpretation; seismometry; hazard potential; use of earthquakes in determining earth structure.
Prerequisite(s): MATH 2204 or MATH 2204H and MATH 2214 and PHYS 2305 and GEOS 3104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4164 - Potential Field Methods in Exploration Geophysics (4 credits)
Theory and application to engineering, environmental, and resource exploration. Gravity, magnetics, electrical resistivity, self potential, induced polarization, ground-penetrating radar, magnetotellurics, electromagnetic induction.
Prerequisite(s): (MATH 2204 or MATH 2204H) and MATH 2214 and PHYS 2306 and GEOS 3104
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

GEOS 4174 - Exploration Seismology (4 credits)
Theory and application of seismic methods to engineering, environmental and resource exploration: reflection seismics, refraction seismics, and tomography. Data acquisition, digital filtering, data corrections, imaging, interpretation, and forward modeling.
Prerequisite(s): MATH 2204 or MATH 2204H and MATH 2214 and PHYS 2305 and GEOS 3104
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

GEOS 4184 - Geodesy in the Earth Sciences (3 credits)
Study of measurement of Earth 's geometric shape, orientation in space, the gravity field, and how these properties change over time. Geodetic methods of measurement (i.e., GNSS, InSAR, TLS, gravity). Reference frames, geodetic applications, and geodetic advances.
Prerequisite(s): GEOS 1004 or GEOS 1024 or GEOS 1034 or GEOS 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 4234 - Vertebrate Evolution (4 credits)
Characterization of the evolution of vertebrates from the fossil record to now. Tracing anatomical features in humans to their origin of different vertebrate groups. Chronicling vertebrate diversification events through extinctions, changes in climate in the last 600 million years, biogeography, and phylogenetic methods. Evidence of evolution through fossils and dissection.
Prerequisite(s): GEOS 1014 or BIOL 2704 or GEOS 2024
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

GEOS 4244 - Morphology of the Vertebrates (4 credits)
Identification of skeletal osteological elements of major groups of vertebrates, including aspects of skeletal functional morphology and homology, with emphasis on extant taxa. Skeletal systems of model and non-model organisms such as fish, amphibians, reptiles, birds, and mammals; specimen care and data management; modern skeletal collection practices.
Prerequisite(s): (GEOS 1014 or GEOS 2024 or GEOS 1054) or (BIOL 1105 and BIOL 1106)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

GEOS 4254 - Integrative Earth System History (3 credits)
Study of Earth system evolution, with a focus on critical transitions that shaped the history of the Earth, and the integration and interaction of the atmosphere, hydrosphere, biosphere, and geosphere. Principles of system science, box models, atmospheric and oceanographic processes, microbial processes, isotopic tracers, elemental cycles, and critical transitions in Earth history, including the origin of life, changes in atmospheric composition, climatic events and mass extinctions.
Prerequisite(s): GEOS 2024 or (GEOS 1004 and GEOS 1014) or (GEOS 2104 and GEOS 1014)
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 4264 - Sedimentary Basins (3 credits)
Formation, evolution, and characterization of regions of the Earths surface that experience long-lived subsidence and sediment accumulation. Integration of concepts and skills from: stratigraphy, surface processes, tectonics, structural geology, burial/thermal history, geo/thermochronology, and geodynamics; content is relevant to fields such as paleontology, (paleo)climatology, and subsurface resource management. Use of programming/statistical software packages.
Prerequisite(s): GEOS 3204
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4314 - Coastal Hazards (3 credits)
Study of past, current, and future drivers of coastal change and hazards. Integration of concepts and skills from: climatic, isostatic, and tectonic processes that drive sea-level change; geologic (e.g., coastal stratigraphy, microfossils) and instrumental (e.g., tide gauges, satellite altimetry) coastal change reconstructions, models, measurements, and projections. Coastal earthquake, tsunami, hurricane, and storm-surge hazards. Approaches and challenges of communicating coastal hazards to the public. Coastal hazards and public policy.
Prerequisite(s): GEOS 1004 or GEOS 2024 or GEOS 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 4354 - Introduction to Remote Sensing (3 credits)
Theory and methods of remote sensing. Practical exercises in interpretation of aerial photography, satellite, radar and thermal infrared imagery. Digital analysis, image classification and evaluation. Applications in earth sciences, hydrology, plant sciences, and land use studies.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: GEOG 4354

GEOS 4404 - Advanced Structural Geology (3 credits)
Basic principles of rock behavior under applied, non-hydrostatic stress (experimental and tectonic) and analysis of the geometrical patterns produced. Alternate years.
Prerequisite(s): GEOS 3404
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4614 - Stable Isotope Biogeochemistry (3 credits)
Introduction to the fundamental processes that drive the sorting of carbon, nitrogen, oxygen, hydrogen, and sulfur stable isotopes in modern and past marine and terrestrial systems. Application of stable isotopes to address research questions in a variety of disciplines, including geology, paleobiology, ecology, and environmental sciences. Collect, prepare, analyze, and interpret stable isotope data.
Prerequisite(s): CHEM 1035 or CHEM 1055 or CHEM 1055H
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 4624 - Mineral Deposits (3 credits)
Introduction to the range and variety of metallic and non-metallic economic mineral deposits. Classification of the petrologic and tectonic settings of mineral deposits. Source, transport and depositional mechanisms of mineral deposit formation. Laboratory emphasizes identification of ore minerals, gangue minerals, common host rocks, wall-rock alteration and mineral zoning. Course requirement of 3 hours of GEOS at the 3000-level or above, may be satisfied by taking prerequisite prior to or concurrent with course.
Prerequisite(s): GEOS 1004 or GEOS 2104 or GEOS 2024
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4634 - Environmental Geochemistry (3 credits)
Application of quantitative methods of thermodynamic and physicochemical analysis to the study of the distribution and movement of chemical elements in surface and near-surface geological environments. Emphasis on practical approaches to environmental geochemistry.
Prerequisite(s): (MATH 1225 or MATH 1025) and (CHEM 1035 or CHEM 1055) or (ISC 1106 and ISC 1116)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4714 - Volcanoes and Volcanic Processes (3 credits)
Study of characteristics and mechanisms of volcanic phenomena, including magma dynamics, origin and chemistry of lavas, physics of eruptions, and characteristics of volcanic products, particularly pyroclastic deposits. Includes focus on volcanism as a general planetary process, on terrestrial tectonic settings of volcanism and on volcanic hazards.
Prerequisite(s): GEOS 1004 or GEOS 2024 or GEOS 2104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4804 - Groundwater Hydrology (3 credits)
Physical principles of groundwater flow, including application of analytical solutions to real-world problems. Well hydraulics. Geologic controls on groundwater flow.
Prerequisite(s): (MATH 1226 or MATH 1026) and (PHYS 2205 or PHYS 2305)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4824 - Engineering Geology (3 credits)
Application of geological, geochemical, and hyrdogeological principles to engineering problems; relating rock and soil forming processes to engineering properties of geological materials; physical and chemical weathering processes and relationships with engineering properties of soil and rock; effective stress theory and geologic hazards; methods and data types for environmental applications and engineering works; geologic hazards and human-land interactions; professionalism and ethics in the practice of engineering geology.
Prerequisite(s): (GEOS 1004 or GEOS 2024 or GEOS 2104) and (PHYS 2305 or PHYS 2205) and (CHEM 1035 or CHEM 1015) and (MATH 1225 or MATH 1025)
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 4924 - Tectonics (4 credits)
Overview of modern plate tectonic theory and history. Physical processes driving present-day plate tectonic deformation including continental rifts, rifted margins, continental transforms, strike-slip faults, subduction zones and orogenic belts. Plate kinematic concepts and information about the Earth's structure. Application of scientific method, data analysis, and computational modeling.
Prerequisite(s): (MATH 1025 or MATH 1225) and (PHYS 2205 or PHYS 2305)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

GEOS 4944 - Study Abroad Topics in Geosciences (1-3 credits)
Study of geoscience topics in a global environment. Cross#cultural perspectives on scientific inquiry and knowledge in the geosciences. Application to topics of societal relevance. Field experiences in places of geologic, societal and cultural interest. Specific topics may vary from semester to semester. May be repeated with different content for a maximum of 9 credit hours.
Prerequisite(s): GEOS 2024 or GEOS 2104 or (GEOS 1004 and GEOS 1104)
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 9 credit hours

GEOS 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

GEOS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 4994 - Undergraduate Research (1-19 credits)
May be repeated for a maximum of 4 credits.
Instructional Contact Hours: Variable credit course
Repeatability: up to 4 credit hours

GEOS 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

German (GER)

GER 1105 - Elementary German (3 credits)
Fundamentals of the German language with emphasis on grammar, reading, composition, and conversation. 1105: for students with no prior knowledge of the language; 1106: for students who have completed 1105 or less than three years in high school.
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 1106 - Elementary German (3 credits)
Fundamentals of the German language with emphasis on grammar, reading, composition, and conversation. 1105: for students with no prior knowledge of the language; 1106: for students who have completed 1105 or less than three years in high school.
Prerequisite(s): GER 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 1114 - Accelerated Elementary German (6 credits)
Proficiency-oriented approach to elementary German, designed for learners who wish to progress rapidly through the beginning stages of language learning. It develops the four language skills (speaking, listening, reading, writing) in a cultural context. Partially duplicates GER 1105 and 1106.
Instructional Contact Hours: (6 Lec, 6 Crd)

GER 2105 - Intermediate German (3 credits)
Review of grammar with increasing emphasis on reading, writing, and oral communication.
Prerequisite(s): GER 1106 or GER 1114
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 2106 - Intermediate German (3 credits)
Review of grammar with increasing emphasis on reading, writing, and oral communication. I,II
Prerequisite(s): GER 2105
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 2114 - Accelerated Intermediate German (6 credits)
Proficiency-oriented approach to intermediate German, designed for learners who wish to progress rapidly through the intermediate stages of language learning. The course strengthens the four language skills (speaking, listening, reading and writing) in a cultural context. Accelerated version of GER 2105-2106.
Prerequisite(s): GER 1106
Instructional Contact Hours: (6 Lec, 6 Crd)

GER 2724 - Introduction to German Culture and Civilization (3 credits)
Examination of major German-language cultural movements, works, and figures from the earliest times to the present. Interdisciplinary exploration of German-language literature, film, art, architecture, music, and theatre in the context of the history of the German-speaking world. Analysis of Germanic culture, values and beliefs, and politics in their European and international context. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 3105 - Grammar, Composition and Conversation (3 credits)
Progressive and comprehensive review of German syntax and morphology. Development of written and oral expression. Development of reading and listening skills and introduction to contemporary public debates through the study of original German materials. Understanding of the role of social, historical, political, and cultural contexts and of fact-based reasoning in communication. Introduction to cultural research in German. Taught in German. GER 3105: review of basic and complex grammatical structures; GER 3106: review of advanced grammatical structures, writing intensive.
Prerequisite(s): GER 2106 or GER 2114
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 3106 - Grammar, Composition and Conversation (3 credits)
Progressive and comprehensive review of German syntax and morphology. Development of written and oral expression. Development of reading and listening skills and introduction to contemporary public debates through the study of original German materials. Understanding of the role of social, historical, political, and cultural contexts and of fact-based reasoning in communication. Introduction to cultural research in German. Taught in German. GER 3105: review of basic and complex grammatical structures; GER 3106: review of advanced grammatical structures, writing intensive.
Prerequisite(s): GER 3105
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 3125 - German Oral Proficiency (3 credits)
For acquisition of measured levels of proficiency in speaking and understanding spoken German. Content-based instruction in small groups. 3125: to achieve an oral proficiency rating comparable to Intermediate-high on the American Council on the Teaching of Foreign Languages Oral Proficiency Interview (ACTFL-OPI) or S-1+ on the Foreign Service Institute (FSI) scale. 3126: to achieve an oral proficiency rating comparable to Advanced on the (ACTFL-OPI) or a 2 on the FSI scale. Admission by oral exam. Taught alternate years.
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 3126 - German Oral Proficiency (3 credits)
For acquisition of measured levels of proficiency in speaking and understanding spoken German. Content-based instruction in small groups. 3125: to achieve an oral proficiency rating comparable to Intermediate-high on the American Council on the Teaching of Foreign Languages Oral Proficiency Interview (ACTFL-OPI) or S-1+ on the Foreign Service Institute (FSI) scale. 3126: to achieve an oral proficiency rating comparable to Advanced on the (ACTFL-OPI) or a 2 on the FSI scale. Admission by oral exam. Taught alternate years.
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 3204 - Culture of the German-Speaking Countries (3 credits)
Study of German, Austrian, and Swiss culture and civilization from the Middle Ages to the present, including literature, art, architecture, film, and music.
Prerequisite(s): GER 3104 or GER 3105 or GER 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 3305 - Topics in German Culture and Literature (3 credits)
Introduces students to critical issues in German culture and literature. Familiarizes students with artistic, cultural, and socio-historical contexts necessary to analyze artifacts (canonical and non-canonical literature, film, art, architecture, and music). Develops critical reading, writing, speaking, and listening skills in German regarding complex texts, contexts, and concepts. Fosters cross-cultural awareness and intercultural sensitivity. 3305: examines pre-20th-century German cultural and literary developments; 3306: examines cultural and literary developments in the 20th and 21st centuries. Taught in German. Variable content. May be repeated once for credit with different content for a maximum of 6 credits.
Prerequisite(s): (GER 3105 and GER 3106) or (GER 3105 and GER 3204) or (GER 3105 and GER 3306) or (GER 3106 and GER 3204) or (GER 3106 and GER 3306)
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

GER 3306 - Topics in German Culture and Literature (3 credits)
Introduces students to critical issues in German culture and literature. Familiarizes students with artistic, cultural, and socio-historical contexts necessary to analyze artifacts (canonical and non-canonical literature, film, art, architecture, and music). Develops critical reading, writing, speaking, and listening skills in German regarding complex texts, contexts, and concepts. Fosters cross-cultural awareness and intercultural sensitivity. 3305: examines pre-20th-century German cultural and literary developments; 3306: examines cultural and literary developments in the 20th and 21st centuries. Taught in German. Variable content. May be repeated once for credit with different content for a maximum of 6 credits.
Prerequisite(s): GER 3105 or GER 3106
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

GER 3474 - Topics in German Cinema (3 credits)
Critical issues in the history of German Cinema. Aesthetic characteristics of major periods, with an emphasis on cinematic trends and ways in which films reflect cultural developments in German-speaking countries. Taught in English. Variable content. May be taken twice for credit with different content.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

GER 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 4154 - Advanced Composition and Stylistics (3 credits)
Intensive advanced work in written German. Development of the students ability to write clear, correct, and articulate German in a variety of modes. Style analysis. Writing intensive.
Prerequisite(s): GER 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 4304 - Age of Goethe (3 credits)
Major writers of the age of Goethe: Goethe, and Schiller; the development of German Classicism.
Prerequisite(s): GER 3105 and GER 3106 and GER 3306
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 4314 - Studies in 19th-Century Literature (3 credits)
Variable content course devoted to the study of 19th century drama, lyric, and prose. May be repeated for credit with different content.
Prerequisite(s): GER 3105 and GER 3106 and GER 3306
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 4324 - Studies in 20th-Century Literature (3 credits)
A variable content course devoted to the study of major literary works of the 20th century. May be repeated for credit with different content.
Prerequisite(s): GER 3105 and GER 3106 and GER 3306
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 4334 - Special Topics in German Life, Literature, and Language (3 credits)
Variable content course devoted to the study of various aspects of German culture, literature, and language. May be repeated for credit with different content.
Prerequisite(s): (GER 3105 and GER 3106) and (GER 3204 or GER 3305 or GER 3306)
Instructional Contact Hours: (3 Lec, 3 Crd)

GER 4794 - Senior Tutorial in German Studies (1 credit)
Individual or small group sessions which give the student the opportunity to hone special language skills, with a focus on post-graduation application of these skills. May concentrate on areas such as technical or business language, linguistics, translation, interpreting, creative writing, specialized literary, or cultural studies. Must be pre-arranged three weeks before end of previous semester. May be taken twice for credit with different content. PRE: one 4000-level German course, major with senior standing, and consent required.
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 2 credit hours

GER 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

GER 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Greek (GR)

GR 1105 - Classical and New Testament Greek (3 credits)
Introduction to classical/New Testament Greek, for development of reading ability. 1105: Short readings of graded difficulty. 1106: Introduction to the basics of the introduction of language, continued, with the introduction of select longer passages from ancient Greek authors.
Instructional Contact Hours: (3 Lec, 3 Crd)

GR 1106 - Classical and New Testament Greek (3 credits)
Introduction to classical/New Testament Greek, for development of reading ability. 1105: Accidence, syntax, and vocabulary, with translation of short readings of graded difficulty. 1106: Accidence, syntax, and vocabulary continued, with the introduction of selected longer passages from ancient Greek authors.
Instructional Contact Hours: (3 Lec, 3 Crd)

GR 1205 - Elementary Modern Greek (3 credits)
Fundamentals of modern Greek with emphasis on developing proficiency for communication through reading, writing, speaking, listening, and cultural competence. GR 1205 is for students with no prior knowledge of the language.
Instructional Contact Hours: (3 Lec, 3 Crd)

GR 1206 - Elementary Modern Greek (3 credits)
Fundamentals of modern Greek with emphasis on developing proficiency for communication through reading, writing, speaking, listening, and cultural competence. GR 1206 is for students who have completed GR 1205 or the equivalent. Completion of 1206 meets the university foreign language requirement.
Prerequisite(s): GR 1205
Instructional Contact Hours: (3 Lec, 3 Crd)

GR 2104 - Greek New Testament (3 credits)
Review and refinement of the language is combined with readings from the New Testament in ancient Greek, with attention to historical context and analysis of the language May be repeated with different content for a maximum of 9 credits.
Prerequisite(s): GR 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: RLCL 2104

GR 2114 - Readings in Classical Greek Literature (3 credits)
Study of several major writers of ancient Greek literature. Selections from epic poetry, tragedies, philosophical dialogues, history and oratory. May be repeated with different content for a maximum of 9 credits.
Prerequisite(s): GR 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

GR 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GR 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GR 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GR 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GR 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GR 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GR 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GR 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GR 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

GR 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Hebrew (HEB)

HEB 1105 - Elementary Modern Hebrew (3 credits)
Introduction to speaking, listening, reading, and writing the modern Hebrew language. Emphasis on developing proficiency in practical language use, comprehension and cultural competency. 1105: Basic tasks such as greetings, counting, and simple requests; for students with no prior knowledge of the language. 1106: More advanced tasks like asking directions, expressing personal preferences, or making purchases.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 1105

HEB 1106 - Elementary Modern Hebrew (3 credits)
Introduction to speaking, listening, reading, and writing the modern Hebrew language. Emphasis on developing proficiency in practical language use, comprehension and cultural competency. 1105: Basic tasks such as greetings, counting, and simple requests; for students with no prior knowledge of the language. 1106: More advanced tasks like asking directions, expressing personal preferences, or making purchases.
Prerequisite(s): HEB 1105
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 1106

HEB 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

HEB 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HEB 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

HEB 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

History (HIST)

HIST 1004 - Introduction to History (3 credits)
Introduces students to the main concepts and issues of discipline of history. Familiarizes students with the Department of History, educational requirements, university resources, and career opportunities for History majors.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1014 - Topics in Reacting to the Past (3 credits)
Introduction to fundamental issues in history through historical simulations. Enacting specific roles in historical situations while improving liberal learning skills, including evaluating evidence, understanding multiple perspectives, writing persuasive essays, and developing public speaking skills. Specific topics may vary from semester to semester. May be repeated one time with different content for a maximum of six credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

HIST 1024 - Ancient History (3 credits)
Surveys the civilizations and peoples of Greece, Rome, and the Ancient Near East (including Egypt and Mesopotamia) from the invention of writing around 3,000 B.C. to the fall of the Roman Empire in the fifth century C.E. through study of literature as well as archaeological artifacts. Examines the interactions and interdependencies of these civilizations and considers their enduring influence.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1025 - Introduction to European History (3 credits)
Examines the political, social, and cultural history of Europe since the medieval period. Focuses on the complex interplay between demographic transformation, social and political change, and cultural development. 1025: Explores the legacy of the Roman Empire, the expansion and consolidation of “Europe,” the medieval world and expansion in the Atlantic World. 1026: Explores the rise of Absolutism and the Enlightenment, the Age of Revolutions, imperialism, the rise of new political ideologies and nation-building, and Europe in the twentieth century world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1026 - Introduction to European History (3 credits)
Examines the political, social, and cultural history of Europe since the medieval period. Focuses on the complex interplay between demographic transformation, social and political change, and cultural development. 1025: Explores the legacy of the Roman Empire, the expansion and consolidation of “Europe,” the medieval world and expansion in the Atlantic World. 1026: Explores the rise of Absolutism and the Enlightenment, the Age of Revolutions, imperialism, the rise of new political ideologies and nation-building, and Europe in the twentieth century world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1084 - Food Studies (3 credits)
Interdisciplinary introductory course explores how food shapes and is shaped by culture and society. Examines how people use food to express meanings (e.g., via foodways, story, art, architecture, religion, ethical codes), how food options, practices, and inequities are shaped by social structures (e.g. cultural and legal norms regarding race, class, and gender), and how the material properties of food (e.g., chemical, ecological, technological) are linked to identities, ideological commitments, and historical moments.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 1084, RLCL 1084, SOC 1084

HIST 1115 - History of the United States (3 credits)
Examines the history of the United States through intersections of politics, economics, sciences, the arts and significant social movements. Considers how the modern United States has emerged through the interactions of diverse ethnic, racial, national, class, and religious groups. 1115: pre-Columbian societies through the Civil War; 1116: Reconstruction through present. Sequence recommended as preparation for advanced courses in United States history.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1116 - History of the United States (3 credits)
Examines the history of the United States through intersections of politics, economics, sciences, the arts and significant social movements. Considers how the modern United States has emerged through the interactions of diverse ethnic, racial, national, class, and religious groups. 1115: pre-Columbian societies through the Civil War; 1116: Reconstruction through present. Sequence recommended as preparation for advanced courses in United States history.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1214 - History of the Modern World (3 credits)
An examination of the global significance of the critical political, social, cultural, and international issues in the 20th century.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1215 - Intro to World History (3 credits)
Examine political, economic, social, and cultural change around the world over the course of human existence, with particular emphasis connections and comparisons of human societies across space and time. 1215: Covers early civilizations to 1500 CE. Major themes include the development of human civilization and the interactions of different societies through exchange of people, ideas, goods, and disease. 1216: Covers from 1500 CE to present. Major themes include the spread of European imperialism and resistance to it, development of nation-states, world wars, and post-colonial globalization.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1216 - Intro to World History (3 credits)
Examine political, economic, social, and cultural change around the world over the course of human existence, with particular emphasis connections and comparisons of human societies across space and time. 1215: Covers early civilizations to 1500 CE. Major themes include the development of human civilization and the interactions of different societies through exchange of people, ideas, goods, and disease. 1216: Covers from 1500 CE to present. Major themes include the spread of European imperialism and resistance to it, development of nation-states, world wars, and post-colonial globalization.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1224 - Conquest and Culture in Latin American Empires (3 credits)
Explores major themes and events in the political and cultural history of major empires in Mexico and Peru from 900 to 1600. Examines the emergence of indigenous empires, their confrontation with European conquistadors, and life in the early colonial period. Discusses the cultural collision that occurred when Europeans arrived in the Americas, and complicates the narrative of the conquest. Focuses on the complex interplay between geography, political and economic organization, and social change. Investigates the position of indigenous peoples in pre-Columbian and European empires in Mesoamerica and the Andes. Discussion of the methods and sources to interpret postclassic and early Colonial Latin America.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1354 - Conflict and Security in Modern East Asia (3 credits)
Survey of the 20th century history of five states in northeast Asia, People's Republic of China, Taiwan, Japan, North and South Korea, and the connections between them. Causes and consequences of war, colonization and nationalist movements and their implications for contemporary regional and global relations. Emphasis on cultural concepts, political ideologies, social relations and historical conflicts as background to current security concerns.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1515 - History of Africa (3 credits)
Examines political, economic, social and cultural themes in African history from the beginnings of human civilization to the recent past, with particular emphasis on historical experiences of race, gender, class, religion, ethnicity, and nationality. 1515: Covers early civilizations through the abolition of the slave trade. Examines migrations and trade, the expansion of Islam, and slavery in Africa and the Atlantic and Indian Oceans. 1516: Covers Africa since the nineteenth century. Examines European conquest, and major political, cultural and social changes during the colonial and post-colonial eras.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1516 - History of Africa (3 credits)
Examines political, economic, social and cultural themes in African history from the beginnings of human civilization to the recent past, with particular emphasis on historical experiences of race, gender, class, religion, ethnicity and nationality. 1515: Covers early civilizations thorugh the abolitionof the slave trade. Examines migrations and trade, the expansion of Islam, and slavery in African and the Atlantic and Indian Oceans. 1516: Covers Africa since the nineteenth century. Examines European conquest, and major political, cultural and social changes during the colonial and post-colonial eras.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1764 - History of Rock n Roll (3 credits)
Rock 'n' roll in historic and cultural contexts. Effects on social identity, worldviews, economic justice, cultural appropriation, diversity, power, and traditions. Creative and aesthetic influences in human experience and cultural expression. Significant music figures, movements, and trends in artistic, political, social, technological, and industrial developments in the U.S.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 2004 - Historical Methods (3 credits)
Explanation of the discipline of history: its history, philosophies, and methods, with emphasis on historical research.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2054 - Engineering Cultures (3 credits)
Development of engineering and its cultural values in historical and transnational perspectives. Explores the varying knowledge, identities, and commitments of engineers and engineering across different countries. Examines values in emergent infrastructures of engineering education and work, and the participation of engineers and engineering in evolving forms of capitalism. Helps students learn to reflect critically on their knowledge, identities, and commitments in varying curricula and a globalizing world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 2054

HIST 2104 - Topics and Critical Issues in US History (3 credits)
Introduction to the problems, methods and skills of the discipline of history through the study of significant themes and critical issues in the history of the United States. Emphasis on the study of source materials and historical interpretations of specific themes in American history. Themes grounded in issues of class, race, gender, and equality in US history. Specific topics will vary from semester to semester. Course may be repeated twice for a maximum of 9 credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

HIST 2114 - Topics and Critical Issues in European History (3 credits)
Introduction to the problems, methods and skills of the discipline of history through the study of significant themes and critical issues in European history. Emphasis on the study of source materials and historical interpretations. Specific thematic content is variable. Themes grounded in European history/Europe's role in world that interrogate the concept of "the West." Specific topics will vary from semester to semester. Course may be repeated twice for a maximum of 9 credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

HIST 2124 - Topics and Critical Issues in World History (3 credits)
Introduction to the problems, methods and fundamental skills of the discipline of history through the study of significant themes and critical issues in world history. Emphasis on the study of source materials and historical interpretations. Specific thematic content is variable. Examines political, economic, social, and cultural change at historically specific periods of time around the world with a focus on drawing comparisons and making connections across regional spaces. Specific topics may vary from semester to semester. May be repeated two times with different content for a maximum of 9 credit hours.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

HIST 2134 - The Revolution Will Be Televised: Topics in History on TV (3 credits)
Explores topics in history through the lens of specific TV shows or series. Featured shows and topics will vary from semester to semester. Considers how television programs have represented historical events, ideas, and communicated ideas about race, gender, sexuality, class, or culture. May be repeated once with different content for a maximum of 6 credit hours.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

HIST 2166 - History of France (3 credits)
French history from Roman Gaul to the present. 2165: Roman, Medieval, and Renaissance France; Absolute Monarchy. 2166: The Revolution; Nineteenth and Twentieth Century France.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2184 - History of the Balkans (3 credits)
History of Southeastern Europe from the sixth century to the present. Chief themes are movement of peoples, Byzantine and Ottoman Empires, religious conflicts, social developments, and rival nationalisms.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2224 - Ancient Greek and Roman Women (3 credits)
Examines the history of ancient Greek and Roman women from ninth century BCE to the fall of the Roman Empire. Analyzes contributions of women to each civilization. Studies construction of and contemporary debates about women's ascribed social, political, and cultural roles.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CLA 2224

HIST 2234 - Classics in the Modern World (3 credits)
Examines the influences, traditions, and receptions of the ancient Greeks and Romans in the modern world, especially in the United States. Explores the re-interpretation of the ancient Greek and Roman world across mediums, and by leaders and governments in diverse societies. Discusses contexts and ideologies of re-makings of the ancient Greek and Roman world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CLA 2234

HIST 2244 - Cities of Rome (3 credits)
Examines the building development of the ancient city of Rome and selected Roman cities; investigates how social, political, and cultural aspects of private and public architecture in these physical cities both create meaning and preserve memory. Explores the ways in which later cultures, especially through literature, have engaged with the pervasive and persistent influence of ancient Rome, not just as a physical place, but also as a cultural construct.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CLA 2244

HIST 2264 - America in the 1960s (3 credits)
Surveys the political, social, and cultural history of the U.S. over the long Sixties (mid-1950s to mid-1970s). Examines the civil rights movement, Vietnam War and antiwar movement, identity politics, cultural revolutions, American liberalism, and American conservatism. Explores how intersection of race, class, gender, ethnicity and age shaped varying experiences of the 1960s. Emphasis on the study of source materials and historical interpretations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2275 - African-American History (3 credits)
2275: African continent through Civil War. Examines trajectory of slavery as well as its global impacts and legacy, the development of racial thought, slave resistance and rebellions, the fight for Emancipation, and African American contributions to culture, economics and society of United States. 2276: Reconstruction through present. Examines impact and legacy of Reconstruction, the fight against Jim Crow segregation, and the social, cultural, political and economic contributions of African Americans in the nineteenth and twentieth century United States. Exploration of the global implications of race relations in the United States.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2275

HIST 2276 - African-American History (3 credits)
2275: African continent through Civil War. Examines trajectory of slavery as well as its global impacts and legacy, the development of racial thought, slave resistance and rebellions, the fight for Emancipation, and African American contributions to culture, economics and society of United States. 2276: Reconstruction through present. Examines impact and legacy of Reconstruction, the fight against Jim Crow segregation, and the social, cultural, political and economic contributions of African Americans in the nineteenth and twentieth century United States. Exploration of the global implications of race relations in the United States.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2276

HIST 2345 - History of the Middle East (3 credits)
History of the Middle East from the seventh century to today, with emphasis on formation of Islamic civilization, medieval and early modern political systems, European imperialism, and the struggle for independence. 2345: seventh century to 1914; 2346: independence, wars, revolutions, and social change since 1914.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2346 - History of the Middle East (3 credits)
History of the Middle East from the seventh century to today, with emphasis on formation of Islamic civilization, medieval and early modern political systems, European imperialism, and the struggle for independence. 2345: seventh century to 1914; 2346: independence, wars, revolutions, and social change since 1914.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2355 - History of China (3 credits)
China from prehistory to the present. Special attention to political, social, economic, and cultural developments. 2355: Prehistory, Imperial China to the sixteenth century; 2356: late Imperial China to modern and contemporary China.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2356 - History of China (3 credits)
China from prehistory to the present. Special attention to political, social, economic, and cultural developments. 2355: Prehistory, Imperial China to the sixteenth century; 2356: late Imperial China to modern and contemporary China.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2364 - History of Japan (3 credits)
Political, social, economic, and cultural development of Japan from earliest times to present; emphasis on problems of modernization in the nineteenth and the twentieth centuries.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2374 - Gods and Kings in Premodern India (3 credits)
History of India from pre-historical times to approximately 1700, with particular focus on the interplay between religion and politics. Emphasis on sources for and interpretations (historiography) of early Indian history. Literary versus archaeological record of pre-historic India, the earliest empires and rulers, and impact of the Islamic and wider world on India. Legacies of ancient and medieval India in the contemporary world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2374

HIST 2384 - Gandhi in the Making of Modern India (3 credits)
History of India since approximately 1700, with particular focus on Gandhis influence on modern India and the world. Emphasis on sources for and interpretations (historiography) of modern Indian history. Examination of pre-colonial and colonial pasts and legacies. Exploration of Gandhis role in political, social, cultural, and religious movements of the early 20th century, and Gandhis legacy in the independent states of South Asia and the contemporary world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2384

HIST 2394 - Tofu to Tikka: Food in Asian History (3 credits)
Exploration of the evolution and alterations of food and cuisines throughout Asian history. Examination of the economic, geographical, political, philosophical/religious, and social underpinnings of food in premodern Asian societies; influence of the Columbian Exchange of Asian and global cuisines; Euro-American imperialism's impact on food and society in Asia and in the European and American metropoles; emergence of national cuisines in Asia; and Asian food in the post-colonial diaspora.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2394

HIST 2484 - Modern Germany (3 credits)
Political, social, economic, and cultural history of Germany since 1815. Discussion of the origins, experience and impact of political ideologies and national unification/reunification, colonial expansion, Nazism, war and genocide, and the role of Germany in Europe and the world. Diverse perspectives on German history and its implications through primary and secondary source materials. Particular focus on historiographical interpretations of the German past.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2494 - Cities in History (3 credits)
Examines the changing conditions of urban life and the shifting roles that cities have played in U.S. history. Identifies transformations and movements in physical development, including urban form, architecture, urban planning, infrastructure, and environmental conditions. Details the processes of immigration and the consequences of demographic change in cities. Analyzes the contests over politics arising from these urban changes.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2504 - Crime and Punishment in American History (3 credits)
Analyzes changing understandings of crime and punishment from the Colonial Era to the Age of Mass Incarceration. Considers how factors of race, ethnicity, class, and gender intersected with changing ideas of criminality and punishments.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CRIM 2504

HIST 2514 - U.S. Food History (3 credits)
Introduction to the history of food in the United States. Examines food cultures, food systems, food industries, nutrition, government regulation, inequalities, and environmental effects of food and agricultural production. Studies these topics across different demographics in the United States and its global context, with attention to change over time.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2524 - History of Agriculture (3 credits)
Survey of agricultural history in the United States, with comparative global case studies. Examination of indigenous practices, labor, development of market economies, relationships among plants and animals, scientific and technological change, landscape transformation and sustainability, food systems, and inequality and exploitation within cultures and societies.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2534 - America at War (3 credits)
The United States at war from the American Revolution to the War on Terror. Emphasis on how U.S. policymakers have justified war, popular understandings of "the enemy," the merits and limitations of distinctions between civilians and service members, and the role of technological innovation. Engagements with interdisciplinary and intersectional perspectives with a war and society approach.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2544 - U.S. South: Pre-Colombian to 1865 (3 credits)
Surveys history and cultures of the U.S. South from the Pre-Colombian era to the modern South. Analyzes the enslavement and emancipation of Black southerners, slave resistance, the impact of capitalism, Reconstruction, the creation of the Lost Cause mythology and Jim Crow segregation. Examines the political and economic influences of the region from the emergence of abolitionist thought, populism, the long struggle for racial equality, and the creation of the Sunbelt. Special emphasis placed on struggles for social justice, civil rights and demographic changes within the region.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2554 - U.S. South: 1865 to Present (3 credits)
Surveys history and cultures of the U.S. South from the Pre-Colombian era to the modern South. Analyzes the enslavement and emancipation of Black southerners, slave resistance, the impact of capitalism, Reconstruction, the creation of the Lost Cause mythology and Jim Crow segregation. Examines the political and economic influences of the region from the emergence of abolitionist thought, populism, the long struggle for racial equality, and the creation of the Sunbelt. Special emphasis placed on struggles for social justice, civil rights and demographic changes within the region.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 2604 - Introduction to Data in Social Context (3 credits)
Examines the use of data to identify, reveal, explain, and interpret patterns of human behavior, identity, ethics, diversity, and interactions. Explores the historical trajectories of data to ask how societies have increasingly identified numerical measures as meaningful categories of knowledge, as well as the persistent challenges to assumptions about the universality of categories reducible to numerical measures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 5F Quant & Comp Thnk Found., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 2604, STS 2604

HIST 2624 - Topics in the History of Data in Social Context (3 credits)
Examination of the meaning of data in historical context. Exploration of how historical context shapes classification, collection, and interpretation of data. Analysis of data as a meaningful category of human experience. Variable content. May be repeated once for up to six (6) hours of credit.
Pathway Concept Area(s): 1A Discourse Advanced, 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

HIST 2715 - History of Technology (3 credits)
Development of technology and engineering in their social and cultural contexts. Examines the interaction of people, cultures, technologies, and institutions such as governments, religious bodies, corporations, and citizens groups. 2715: Examines the creation and modification of technologies to establish the basic structures of civilization, from prehistory to the Industrial Revolution (about 1800). 2716: Examines the nature of technological change and consequences in society, from about 1800 to present.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 2715

HIST 2716 - History of Technology (3 credits)
Development of technology and engineering in their social and cultural contexts. Examines the interaction of people, cultures, technologies, and institutions such as governments, religious bodies, corporations, and citizens groups. 2715: Examines the creation and modification of technologies to establish the basic structures of civilization, from prehistory to the Industrial Revolution (about 1800). 2716: Examines the nature of technological change and consequences in society, from about 1800 to present.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 2716

HIST 2724 - Introduction to Displacement Studies (3 credits)
Examines key concepts, ideas, and technologies in global population displacement, including categorization, distribution and governance of displaced groups. Introduces displacement drivers such as natural disaster, climate change, civil unrest, infectious disease, and forced relocation. Identifies digital infrastructures used for, by, and against displaced populations. Describes experiences of displaced people.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 2724, LAHS 2724, STS 2724

HIST 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 2984H - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 3004 - Colonial America (3 credits)
Critical analysis of early American society. Founding and development of the colonies in the 17th century; 18th century colonial life.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3014 - The American Revolution (3 credits)
Causes, nature, and results of the American Revolution, 1763- 1789.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3054 - The American Civil War (3 credits)
Causes, course, and consequences of the American Civil War. Emphasis on transformations in regional and national identity, race relations, the status of African Americans, gender roles, military affairs, and the United States place on the world stage. Develop skill in written and oral discourse.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3084 - Recent America, 1917-Present (3 credits)
Social, economic, cultural, and political history of America from the entry into World War I, the turbulent 1920s, the Great Depression, the New Deal, World War II, postwar prosperity, the Cold War, social and cultural ferment, Vietnam, Watergate, to the new anxieties about the limits of power in the 1980s.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3105 - Women in U S History (3 credits)
Roles of women from colonial settlement to the present. Special attention to family experiences, political agendas, and economic contributions of women and to social construction of gender identities. 3105: to 1865; 3106: since 1865.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3106 - Women in U S History (3 credits)
Roles of women from colonial settlement to the present. Special attention to family experiences, political agendas, and economic contributions of women and to social construction of gender identities. 3105: to 1865; 3106: since 1865.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3124 - Murder in American History (3 credits)
Considers how the definition of murder as a crime has changed from the colonial period to the present day. Uses murder cases to study the dynamics of American society in condemning, condoning, or celebrating murder. Asks how cultural factors, including racial prejudice, gender stereotypes, beliefs about sexuality, and class status affected the act of killing, media coverage of the event, societal reactions, and the execution of justice. Topics covered include abortion, lynching, vigilante justice, and the evolution of the legal system.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CRIM 3124

HIST 3134 - Sports in American History (3 credits)
Impact of sports in American history. Emphasis on the impact of team sports (college and professional basketball, baseball, and football) and individual sports (golf, boxing, and automobile racing) on the development of American society and culture.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3144 - American Environmental History (3 credits)
Explores interactions between Americans and the environment from the time of European contact to the recent past. Traces the sometimes unexpected ways in which nature has shaped history, humans have altered the natural world, environmental attitudes have evolved, and environmental inequalities have arisen.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3164 - Sexuality in American History (3 credits)
Examines the changing social and cultural meanigns of sexual behavior and identity in American life from the colonial era to the present. Explores relationships between sexuality and power, culture and politics, and government regulation with consideration of theoretical frameworks of interpretation. Focuses on dynamics of race, ethnicity, gender, and class.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3174 - Native American History (3 credits)
The Native experience in North America or Latin America from 1491 to present. Emphasis on social diversity and organization, resistance to colonization, leadership and cultural change, and political sovereignty among indigenous peoples. Methods for interpreting a variety of primary sources, including texts, material culture, and archaeological findings. Engagements with shifting historiographical perspectives and political movements for recognition of Native sovereignty.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 3174

HIST 3184 - Food Sovereignty (3 credits)
Food sovereignty, the right to produce and consume culturally relevant food, as a set of practices and as a social movement through comparative case studies. Origins of food sovereignty in response to effects of colonialism, the green revolution, and the global corporate food system on peasant and Indigenous subsistence livelihoods and the concept's transformation through dialogue with indigenous agricultural knowledge and poor peoples' environmentalism. Food sovereignty's challenge to the dominant food system and conceptions of development, how groups implement this vision of democratized social and productive relations through projects of agroecology and land reform, and its potential in the context of ecological calamity.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 3184

HIST 3214 - History of Appalachia (3 credits)
Early settlement, religion, the pre-industrial economy, the coming of the coal and lumber industries, labor activism, politics, migration, and regional identity.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 3214

HIST 3224 - History of Virginia (3 credits)
Social, political, cultural, and economic developments in Virginia, from the sixteenth century to the present.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3234 - The North American West (3 credits)
A study of the peoples and history of the North American West from the sixteenth century through the twentieth.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3254 - The Vietnam War (3 credits)
A critical study of the causes and consequences of the Vietnam War, 1945-1975. Analysis of Americas strategic and military objectives, the nature and conduct of the war, and the growth of the antiwar movement at home.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3274 - The Greek City (3 credits)
History of the ancient Greek city-state (polis) from the Archaic period (800-500 BC) to the creation of the Roman Empire. Principal topics are: origins and definition of the polis; Greek colonization throughout the Mediterranean and Black Seas; the struggle for autonomy in the Classical and Hellenistic periods; and the Hellenizing impact of the polis on non-Greek populations.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3284 - The Roman Revolution (3 credits)
History of the Roman world from 264 B.C. to A.D. 180. Particular attention to the three themes of imperialism, revolution, and empire through extensive reading of the contemporary authors.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3294 - Roman Britain (3 credits)
Examines the social, political, and military origins of early England from Stonehenge to the Norman Conquest; emphasis on archaeology and material culture; and the legacy of the Romans and Romanization on forging a British identity.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3304 - The World of Alexander the Great (3 credits)
Examines the life and times of Alexander the Great and the Hellenistic World, a new cosmopolitan multicultural world initiated by his conquests. Analyzes the rise of Mecedon, the accomplishments and powers of Alexander, and discusses the world forged after him through analysis of literary and non-literary primary sources.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3314 - The Later Roman Empire (3 credits)
Roman Empire in the west from A.D. 180 to A.D. 476 and in the east from A.D. 476 to A.D. 1071. Particular attention to the causes of the fall of the empire in the west and to the Byzantine Empire in the east until the coming of the Turks and the Christian Crusaders.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3324 - The Medieval World (3 credits)
Characteristic thought and institutions of high and late Middle Ages.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3334 - The Renaissance (3 credits)
The Italian Renaissance in its European context. Emphasis upon the culture and institutions of Italian states from 1300 to 1500.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3344 - The Era of The Reformation (3 credits)
Development of Protestantism and reformation of the Catholic Church from 1500 to about 1600. Emphasis upon social, political, and economic factors as well as theology. Examination of conflicts engendered by the reformation movements.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3354 - Reform and Revolution in Early Modern England (3 credits)
Examines the political, social, economic, and religious history of early modern England. Focus on the English Reformation and descent into Civil War and Revolution. Discussion of the Houses of Tudor and Stuart and their roles in radically transforming England into a constitutional monarchy in which the rule of law reigned supreme. Engagement with diverse perspectives on the religious, social, and political upheaval of the sixteenth and seventeenth centuries through focused study of primary and secondary source materials.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3364 - The Age of Revolution and Napoleon (3 credits)
The French Revolution in its European and global context, with particular attention to social and political causes of unrest, strategies of popular mobilization, debates about authority and order, the emergence of empires, and the long-term implications of revolutionary change.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3374 - French Empire (3 credits)
History of French empire from the seventeenth century to the present, in the Carribean, Canada, Asia, North America and Sub-Saharan Africa. Considers indepdendence movements and the effects of post-colonial migrations on metropolitan France. Focus on issues of religion, race, and human rights
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3484 - Nazi Germany: History and Memory (3 credits)
Causes, course, and consequences of the rise of National Socialism in Germany. Political, economic, social, and cultural aspects of life in Germany. Conditions of Weimar Germany; fascism; the emergence of the Nazi Party and its acquisition, exercise and abuse of power; transformation of German society; the problem of Hitler; the Second World War and Holocaust; and memory and representation of the Nazi period.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3494 - The Holocaust (3 credits)
This course provides a historical account, a psychological analysis, and an occasion for philosophical contemplation on the Holocaust. We will examine the deliberate and systematic attempt to annihilate the Jewish people by the National Socialist German State during World War II. Although Jews were the primary victims, Gypsies, people with disabilities, homosexuals, Jehovahs Witnesses and political dissidents were targeted; we will discuss their fate as well. The class will be organized around the examination of primary sources: written accounts, photographic and film, and personal testimony.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 3494, RLCL 3494

HIST 3504 - The Age of The Crusades (3 credits)
The origins and development of religious violence examined from an interdisciplinary and cross-cultural perspective; the place of that phenomenon in medieval society. Christianity, Islam, Judaism and their interactions in the medieval world.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3504

HIST 3534 - Modern Military History (3 credits)
Evolution of warfare in its political and social setting since the French Revolution. Discussion of both European and American military institutions.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3544 - World War II (3 credits)
Examines the origins, nature, and consequences of the Second World War in transnational perspective. Discussion of social, economic, political and diplomatic conditions that led to and shaped the conduct of the war. Engagement with diverse perspectives on the war and its implications through primary and secondary source materials.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3554 - Age of Globalization (3 credits)
An examination of historical forces that have shaped patterns of globalization, with emphasis on the late twentieth and twenty-first centuries. Key themes: debates about the origins of globalization, causes and consequences of global inter-relatedness, influence of key people, events, and ideas on patterns of globalization, and the effects of disease, technology and environment on processes of globalization.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3564 - The Cold War (3 credits)
Examines politics, society, and culture of the Cold War in transnational perspective. Discussion of origins of the Cold War and the emergence of superpowers; cultural, economic and territorial imperialism in the Cold War; the role of ideology; lived experience and the legacy of the Cold War. Engagement with diverse perspectives on the Cold War and its implications through primary and secondary source materials.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3594 - The Rise of Modern Latin America (3 credits)
Major themes and issues in Modern Latin American History. Discussion of the rise of Latin American nations, stressing the internal and external challenges new republics confronted during the nineteenth century and the opportunities and conflicts of the twentieth century.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3604 - Russia to Peter the Great (3 credits)
Russian history from the founding of Russia in the ninth century to the reign of Peter the Great in the early eighteenth century, with special attention to political developments, changes in society and culture and regional context.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3614 - Imperial Russia (3 credits)
Russian history from Peter the Great to the Revolution of 1917, with special attention to political developments, changes in society and culture, and the impact of the regional context.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3624 - Health and Illness in African History (3 credits)
Examines key subjects and themes in the history of health, medicine, and disease in African history. Topics include indigenous health systems, colonial medicine, and post-colonial health crises, including HIV/AIDS.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3644 - Twentieth-Century Russia (3 credits)
The history of the Soviet Union from 1917 to the present, with particular emphasis on collectivization, industrialization, ideology, international relations, and other factors that have determined the peculiar character of the Soviet state.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3654 - Arab-Israeli Conflict (3 credits)
Examines the origin and evolution of the Arab-Israeli Conflict from the late Ottoman era to present. Considers a variety of perspectives on the major events, places, people and history of the conflict, including the British Mandate period, independence, and post-1967. Connects the relationship between events and ideas in Palestine/Israel and their local, regional and global significance through analysis and synthesis of primary and secondary texts. Promotes interpretation of the conflict and potential solutions in written and oral form, both from the student's own and alternative points of view.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3664 - Revolutionary China (3 credits)
Ideological and institutional development of the Chinese Communist movement since 1920; emphasis on problems of historical change in modern China.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3674 - Topics in Chinese History (3 credits)
Examination of variable topics in Chinese history, ranging from the beginnings of civilization to the recent past. Examines the primary sources and histriographic debates of a particular issue. Explores the diversity within China and its relatiionship with the rest of the world. Can be repeated with different content up to 9 hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

HIST 3694 - History through Film (3 credits)
This course introduces students to critical issues in history and representation, utilizing film to analyze central historical issues. The specific thematic content is variable. Course may be repeated for up to 9 credits.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Repeatability: up to 9 credit hours

HIST 3705 - History of Science (3 credits)
Conceptual and institutional development of physical and biological sciences viewed within a cultural and societal context. 3705: Early Science; 3706: Modern Science.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 3705

HIST 3706 - History of Science (3 credits)
Conceptual and institutional development of physical and biological sciences viewed within a cultural and societal context. 3705: Early Science; 3706: Modern Science.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 3706

HIST 3714 - War and Medicine (3 credits)
Examines the relationship between war and medicine. Focus on suffering and care during and after major conflicts, both on the battlefield and the home front. Emphasis on race, class, and gender.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3724 - History of Disease, Medicine, and Health (3 credits)
Development of Western concepts and institutions of disease, medicine, and health with emphasis on nineteenth century to present. Social construction of disease, and relationship between health and social, economic, and political structures. Special attention to roles of race, class, gender and ethical issues in medical care and research, and to the lived experience of suffering, treatment and healing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3734 - History of Modern Biology (3 credits)
Exploration of the history of biology during the nineteenth century and twentieth centuries, including developments in evolutionary biology, genetics and molecular biology, biology and race, and conservation biology. Emphasis on biology's reciprocal relationship with society, how it has helped shape ideas of race and ethnicity, and the ethical dilemmas it has generated.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 3734

HIST 3744 - Social History of Film (3 credits)
This course introduces students to critical issues in the social history of film, examining the production and consumption of film in specific historical moments as well as the effects of film on society, culture, and politics. The specific thematic content is variable. May be repeated with different content for a maximum of 9 credits.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

HIST 3754 - Public History (3 credits)
Investigation of the ways in which historians research, interpret, and present the past to the public.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3764 - Oral History: Methods and Practices (3 credits)
Explores the theory and methodology of oral history practice. Considers the use of oral history interviews in historical research, and explores questions of ethics, interpretation, and the construction of memory. Includes training in technical operations and a variety of interview techniques, transcription, and historical use of interviews.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3774 - Digital History (3 credits)
Develops skills and methods for researching and presenting history in a digital environment, with special emphasis on use of digital media as a tool for public historians.
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3914 - Critical Reading and Analysis in History (3 credits)
Develops critical reading skills in history. Demonstrates that historical knowledge is part of a scholarly conversation that grows and evolves over time. Assesses the critical role of interpretation in history, investigates historical controversies and debates, and develops skills to evaluate historiographical trends.
Prerequisite(s): HIST 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 3954B - Study Abroad (1-19 credits)
Pathway Concept Area(s): 2 Critical Thinking Humanities
Instructional Contact Hours: Variable credit course

HIST 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 4004 - Topics in Social and Cultural History (3 credits)
Selected topics in social and cultural history. May be repeated with different content. 3 other hours of history and junior standing required.
Prerequisite(s): HIST 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

HIST 4014 - History Lab: Creative Technologies, Hidden Histories, Informal Learning (3 credits)
Application of creative technologies to visualize hidden histories in transdisciplinary experiential learning projects. Training in creative technologies, informal learning techniques, interpretation of marginalized histories, and digital cultural heritage design. Consideration of ethical questions involving the representation of diverse social identities, traditions, and histories. Pre: Sophomore Standing.
Pathway Concept Area(s): 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ART 4014, EDCI 4014

HIST 4864 - Internship (6 credits)
Placement in historically relevant work in one of a variety of settings. These may include museum interpretation and management, archival management, editing, historic preservation and more. Demonstrate historical research and communication skills. Plan with others in a professional setting. Apply disciplinary skills to site-based contemporary problems and situations. Evaluate the experience. P/F only.
Instructional Contact Hours: (6 Lec, 6 Crd)

HIST 4914 - History Research Seminar (3 credits)
Variable topic, writing-intensive, capstone course for history majors. Provides in-depth knowledge of a specific historical subfield. Utilizes archival historical sources, online research databases, and existing literature to create an original work of historical scholarship. May be repeated with different content up to 6 hours. Junior standing or above required.
Prerequisite(s): HIST 3914 or HIST 3904
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

HIST 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

HIST 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Horticulture (HORT)

HORT 1264 - Landscape Skills Practicum (1 credit)
Relevant skills important for the success in the landscape industry. Safe equipment operation, landscape, irrigation and hardscape installation, management and estimating techniques, marketing and sales strategies, and arboriculture methods.
Instructional Contact Hours: (3 Lab, 1 Crd)

HORT 2134 - Plants and Greenspaces in Urban Communities (3 credits)
Modern concepts of sustainability changing plant use in urban settings. Fundamentals of urban plant systems in the context of urban ecosystem management. Philosophy and critical analysis of sustainability related to green infrastructure, including urban forests, green roofs, urban soils, urban wildlife, urban agriculture, and innovations merging plant and ecosystem functions with building and site engineering. Multi-disciplinary emphasis at site, regional, and global, scales.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 2134

HORT 2144 - Indoor Plants (3 credits)
Basic horticultural principles, identification and cultural criteria applicable to foliage and flowering plants grown indoors. Specific plant groups discussed include ferns, cacti and succulents, and carnivorous plants, among many others.
Instructional Contact Hours: (3 Lec, 3 Crd)

HORT 2164 - Floral Design (3 credits)
Fundamental art theory, historical and cultural influences, tools and techniques as applied to current floral art. Emphasis on applied experiential learning through designing, building and producing acceptable floral displays for home and public environments. Sustainable and ethical practices in growing and purchasing flowers. Fee $128.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

HORT 2184 - Plants, Places, and Cultures in a Global Context (3 credits)
Impact of worldwide production and trade in fruits, vegetables, and cut flowers (horticultural commodities) on societies, cultures, economies, politics, and environment. Case studies covering history, economics, social/cultural impacts of producing fruit, vegetables, tea, coffee, and other horticultural crops in producing and consuming countries. Case studies illustrate inextricable interactions and interconnectedness between horticultural crops and cultures.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HORT 2224 - Horticulture Science and Industry (2 credits)
Survey course of horticultural crops (fruits, vegetables, ornamentals) and enterprises. Includes plant science and business aspects of horticultural production and service industries, and introduces related issues and emerging technologies such as work force characteristics, organic production, and biotechnology. I.
Instructional Contact Hours: (2 Lec, 2 Crd)

HORT 2234 - Environmental Factors in Horticulture (3 credits)
Principles and practices in managing environmental factors - temperature, water, light, atmospheric gases and pollutants, and soil and minerals - that influence growth and production of horticultural plants.
Instructional Contact Hours: (3 Lec, 3 Crd)

HORT 2244 - Plant Propagation (3 credits)
Principles and practices of plant propagation by sexual and asexual methods.
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

HORT 2304 - Plant Biology (3 credits)
Introductory botany. Form, growth, function, reproduction, and ecological adaptations of major groups of plants.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIOL 2304

HORT 2834 - Sustainable Agriculture Practicum (3 credits)
Hands-on training in sustainable agricultural production at a student-operated vegetable and fruit farm. Participation in tasks required in managing a diversified sustainable horticulture operation, including planting, pest management, irrigation, and post-harvest handling. Discussion of soil fertility, planning, efficiency, food safety and community food systems. May be repeated with different content, for a maximum of 6 credits.
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)
Repeatability: up to 6 credit hours

HORT 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HORT 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HORT 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HORT 3114 - Wines and Vines (3 credits)
Development of a working knowledge of world wine styles, wine appreciation, and sensory evaluation of wine. Emphasis on the influences of grape growing and winemaking practices on wine quality, style, economic value, and significance in global food culture. Pre: Must be at least 21 years of age.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FST 3114

HORT 3324 - Herbaceous Landscape Plants (3 credits)
Identification, growing requirements, culture, landscape use, physiology, and propagation of native and non-native herbaceous landscape plants for temperate environments. Ornamental annuals and perennials; cultivated wildflowers, plants for wetland and aquatic systems.
Prerequisite(s): HORT 2244
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

HORT 3325 - Woody Landscape Plants (3 credits)
Functions, growing requirements, hardiness, problems, and methods of identification of landscape plant materials. 3325: Commonly available woody landscape plants. 3326: Native and rare woody landscape plants.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

HORT 3326 - Woody Landscape Plants (3 credits)
Functions, growing requirements, hardiness, problems, and methods of identification of landscape plant materials. 3325: Commonly available woody landscape plants. 3326: Native and rare woody landscape plants.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

HORT 3354 - Trees in the Built Environment (3 credits)
Science and practice of tree cultivation, conservation, and management in human-dominated environments along an urban to rural gradient. Holistic study of landscape tree management: planning, planting, inspection, maintenance, removal, and wood waste utilization. Examination of tree responses to urbanization and tree influences on built environments. Emphasis on sustainable, ethical stewardship of landscape trees for the benefit of people and the environment.
Prerequisite(s): (FREC 2314 or BIOL 2304 or HORT 2304) and (FREC 2324 or HORT 3325 or HORT 3326)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 3354

HORT 3664 - Hardscape Materials and Installation (2 credits)
Non-plant portions of landscape construction such as rock walls, paver floors, arbors, and water gardens. The course covers the materials, construction methods, and business aspects required for hardscape construction.
Prerequisite(s): HORT 2224
Instructional Contact Hours: (6 Lab, 2 Crd)

HORT 4004 - Horticulture Seminar (1 credit)
Assessment of fundamental horticultural skills developed through academics and employment. Includes career placement preparation and problem solving through research and production project design and implementation using a team approach. Junior standing required.
Instructional Contact Hours: (1 Lec, 1 Crd)

HORT 4205 - Public Gardens Maintenance and Management (1 credit)
4205: Principles and practices of winter annuals and spring blooming bulb production and installation; water garden cultivation and systems maintenance; fall fertilization programming; vegetative waste management; information dissemination and communication methods for public outreach including education, interpretive programs, and fundraising. 4206: Principles and practices of pruning, summer annual production; soil amendment and protection; plant collections/accessions curation and database management; personnel and financial management issues unique to public gardens. Pre: Junior standing required.
Instructional Contact Hours: (3 Lab, 1 Crd)

HORT 4206 - Public Gardens Maintenance and Management (1 credit)
4205: Principals and practices of winter annuals and spring blooming bulb production and installation; water garden cultivation and systems maintenance; fall fertilization programming; vegetative waste management; information dissemination and communication methods for public outreach including education, interpretive programs, and fundraising. 4206: Principles and practices of pruning, summer annual production; soil amendment and protection; plant collections/accessions curation and database management; personnel and financial management issues unique to public gardens. Junior status required.
Instructional Contact Hours: (3 Lab, 1 Crd)

HORT 4324 - Greenhouse Management (3 credits)
For persons who intend to manage or advise those managing commercial or institutional greenhouses. Includes greenhouse construction, environmenal controls, disease/insect identification and management, control of plant growth, root-zone management, and marketing and management principles specific to greenhouse operations. Pre: Coursework or experience in plant growth and environmental management required.
Instructional Contact Hours: (3 Lec, 3 Crd)

HORT 4334 - Greenhouse and Controlled Environment Agriculture Management (3 credits)
Managing commercial or institutional greenhouses and/or controlled environment operations. Construction, environmental controls, disease/insect identification and management, control of plant growth, root-zone management. Marketing, accounting, and management principles specific to greenhouse and controlled environment operations.
Prerequisite(s): HORT 2234
Instructional Contact Hours: (3 Lec, 3 Crd)

HORT 4344 - Production of Food Crops in Controlled Environment Agriculture (3 credits)
Controlled environment agriculture. Study of major hydroponic systems used in the production of horticultural food crops. Crop life cycles, nutrient requirements. Cost analysis and troubleshooting common problems that arise in controlled environment systems.
Prerequisite(s): HORT 4334
Instructional Contact Hours: (3 Lec, 3 Crd)

HORT 4504 - Landscape Contracting (2 credits)
Capstone course for students entering the landscape contracting industry. Includes contracts, site plan interpretation, cost estimation and bidding, project sequencing, business marketing, irrigation design, and current issues. Emphasis on real-world skills and problem solving. Pre: Senior Standing Required.
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

HORT 4545 - Small Scale and Residential Landscape Design (4 credits)
Development of graphic skills with concentration on a variety of media and techniques. Basic theory and principles on design of small scale and residential landscapes with emphasis on spatial composition, user needs, ecology, and uses of plant materials and light construction.
Prerequisite(s): HORT 3325
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

HORT 4546 - Small Scale and Residential Landscape Design (4 credits)
Development of graphic skills with concentration on a variety of media and techniques. Basic theory and principles on design of small scale and residential landscapes with emphasis on spatial composition, user needs, ecology, and uses of plant materials and light construction. 4545, I; 4546, II.
Prerequisite(s): HORT 3325
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

HORT 4554 - Creating the Ecological City (3 credits)
Multidisciplinary, team oriented, problem-solving approaches to creating cities that foster healthy interconnections between human and ecological systems. Analysis of problems from practical and ethical perspectives in the context of the diverse knowledge bases and values of decision-makers. Formation and utilization of integrated design teams to solve complex urban design and planning problems at a variety of scales. Senior standing.
Prerequisite(s): HORT 2134 or FREC 2134
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BSE 4554, FREC 4554, LAR 4554, SPIA 4554

HORT 4614 - Ornamental Plant Production and Marketing (3 credits)
In-depth production and marketing of woody and herbaceous plants in wholesale nursery and floriculture/greenhouse and related retail outlets. Includes production laboratory.
Prerequisite(s): HORT 2234 and HORT 2244 and HORT 4324 and AAEC 2434
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

HORT 4644 - Small Fruit Production (3 credits)
Propagation, production, and marketing of small fruit crops for the mid-Atlantic region. Emphasis on sustainable practices, market sectors, and health and nutritional benefits. Blueberries, strawberries, brambles and other crops.
Prerequisite(s): HORT 2234 and HORT 2244 and AAEC 2434
Instructional Contact Hours: (3 Lec, 3 Crd)

HORT 4654 - Viticulture (3 credits)
Overview of grapevine growth and development, factors affecting yield and grape quality, and regional industry. Vineyard financial considerations, site evaluation, varietal characteristics plus cultural practices of pruning, training, canopy management, fertilization and pest management.
Prerequisite(s): HORT 2234
Instructional Contact Hours: (3 Lec, 3 Crd)

HORT 4744 - Plant Establishment and Environmental Design (3 credits)
Plant establishment and environmental design process for sustainable landscapes emphasizing the relationship between design of human-constructed landscapes and ecosystems at larger scales. Site assessment, urban soils, site rehabilitation, plant response to disturbed environments, green infrastructure and other contemporary landscape forms. Plant selection, sourcing, and installation to achieve environmental design goals. Emphasis on hands-on, experiential learning to achieve sustainable landscapes. Pre: Senior Standing.
Prerequisite(s): HORT 2134 or FREC 2134 or CSES 3134 or ENSC 3134 or CSES 3114 or ENSC 3114 or GEOS 3614 or LAR 1254
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

HORT 4764 - Vegetable Crops (3 credits)
A comprehensive study of major and minor vegetable crops of Virginia, the U.S., and world in relation to production practices, crop development, nutritional value, and quality characteristics.
Prerequisite(s): HORT 2234
Instructional Contact Hours: (3 Lec, 3 Crd)

HORT 4784 - Vegetable Seed Production (2 credits)
The study of production agriculture or reproductive biology. Seed production, handling, identification, conditioning, enhancement, packaging, storage, testing, federal standards, and biotechnology. Pre: 4764 or 2244 or equivalent experience in vegetable crops, plant propagation, or plant growth and development.
Prerequisite(s): HORT 4764 or HORT 2244
Instructional Contact Hours: (2 Lec, 2 Crd)

HORT 4794 - Medicinal Plants and Herbs (3 credits)
Comprehensive study of medicinal plants/herbs history, production, processing, lore and documented scientific benefits. Traditional plant medicinal practices of Native Americans, Chinese, Indians, European and African cultures will be contrasted with use of contemporary herbal products.
Prerequisite(s): BIOL 1005 or BIOL 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

HORT 4835 - Organic Vegetable Production (2 credits)
Detailed practices in organic vegetable production. Issues in starting organic production, profitability, organic transition strategies and organic certification.
Prerequisite(s): HORT 2254 and ALS 3404
Instructional Contact Hours: (2 Lec, 2 Crd)

HORT 4836 - Organic Vegetable Production (2 credits)
Detailed practices in organic vegetable production. Issues of initial and improving soil quality in organic systems, factors that affect produce quality and whole-farm weed/disease/pest management.
Prerequisite(s): HORT 4835
Instructional Contact Hours: (2 Lec, 2 Crd)

HORT 4845 - Organic Vegetable Production Laboratory (1 credit)
Field experiences, demonstrations, and farm tours complementing 4835 and 4836 lectures.
Corequisite(s): HORT 4835
Instructional Contact Hours: (3 Lab, 1 Crd)

HORT 4846 - Organic Vegetable Production Laboratory (1 credit)
Field experiences, demonstrations, and farm tours complementing 4835 and 4836 lectures.
Corequisite(s): HORT 4836
Instructional Contact Hours: (3 Lab, 1 Crd)

HORT 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HORT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HORT 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HORT 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Hospitality and Tourism Management (HTM)

HTM 1414 - Introduction to Hospitality and Tourism Management (3 credits)
Hospitality & Tourism industry segmentation, management structures and practices, the significance of service delivery, economic impact of tourism and career opportunities. Concepts examined through readings, case studies and industry gues speakers.
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HTM 2104 - Careers in Hospitality and Tourism (1 credit)
Provide students with an early start on understanding and identifying the many career options in the field of Hospitality and Tourism Management. In-depth focus on the different skills and training necessary for various career paths, including core hospitality and tourism management, hospitality and tourism business acumen, and hospitality and tourism strategy and innovation. Emphasize the importance of personal job search strategies and provide networking opportunities with leaders in the industry. Students will create professional materials, including resumes and online profiles. Serves as a foundational course in preparing students for career success in the Hospitality and Tourism Management field. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

HTM 2314 - Introduction to International Business (3 credits)
Fundamental concepts of international business. International business environment and how it affects decisions, the creation of competitive advantage in the multinational firm, and complexities of managing it. Why international businesses exist, drivers of international expansion, differences among countries in terms of political, legal, economic, technological and cultural dimensions, and the complexity of international business decisions. Causes and consequences of globalization, international trade, and analyzing the challenges of managing international business, with a focus on a number of industries, including hospitality and tourism. Operational, strategic, and ethical issues which are unique to multinational corporations.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MGT 2314

HTM 2434 - Hospitality Sales (3 credits)
A comprehensive study of the management of the sales function and its role in the overall financial performance of hospitality operations.
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 2454 - Global Travel & Tourism Management (3 credits)
Introduction to travel and tourism both domestically and abroad. Includes topics such as the history, sociology and psychology of tourism; the tourism system, including private industry, associations and governing bodies; measuring and predicting travel motivations, behavior, and demand; and management issues in a global context. Course concludes with an international travel research final project.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 2464 - Designing the Service Experience (3 credits)
An overview of the service industry, its historical and economic importance, social, psychological and cultural impacts and future trends. Emphasizes the unique characteristics and management challenges of service organizations.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 2474 - Introduction to Meetings and Convention Management (3 credits)
A study of the meetings and convention industry. Focus on the components and processes involved in developing and conducting meetings and conventions.
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 2514 - Catering Management (3 credits)
Introduces students to various venues in which catering services can be offered, and presents an overview of the functions, processes, and controls found in successful catering management and operations; emphasis is placed on the sales/marketing aspects of the business.
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 2954 - Hospitality and Tourism Study Abroad (3 credits)
This course provides students with an international hospitality and tourism management business experience. It is only offered as part of a program outside the United States. Students will learn from the structured educational experience developed by the faculty directing the study abroad program. This course can be taken twice for a maximum of six credit hours. Sophomore standing and a minimum GPA of 3.0 required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

HTM 2964 - Field Study (3 credits)
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HTM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HTM 3044 - Private Club Management (3 credits)
Develop an understanding of the private club sector of the hospitality industry. Topic areas are divided into club fundamentals, revenue-generating operations within clubs and support functions/departments of club operations. Junior standing as well as background courses in basic financial management are suggested.
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 3244 - Franchising and Ownership in the Services Industries (3 credits)
Theory and practice of franchising as a form of business ownership and a vehicle for entrepreneurship. Contemporary issues related to franchising in different segments of the services industries including hospitality and tourism. Legal aspects, financial viability, ethical issues, and agency relationships in franchising. Franchise concept development, franchisor-franchisee relationship, franchise agreements, family business, minority franchising, and international franchising. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 3414 - Chef Lab: Culinary Operations Management (4 credits)
Food and kitchen safety, hazard analysis, purchasing, recipe development, costing, and volume food preparation, in a commercial kitchen lab experience one day per week along with a two hour per week lecture. Design/Lab Studio. Pre: Sophomore standing.
Instructional Contact Hours: (2 Lec, 2 Lab, 4 Crd)

HTM 3424 - Event Management (3 credits)
Management of special events in the hospitality and tourism industry. Organizational functions necessary for designing a broad range of special events, using formal elements of design to deliver successful events through use of effectively designed floor plans, event flow and logistics, risk management and contingency planning as well as analyzing the factors that influence an events success. Examine ethical issues at play in the context of modern event planning and implementation. Study review processes, evaluation methods and techniques used in events management. Sophomore standing.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 3444 - Hospitality Financial Management (3 credits)
The application of accounting, finance, and cost control principles to hospitality industry organizations. The focus of this course is to provide future food service and lodging organization managers with the ability to handle the unique problems regarding financial analysis and cost control in this industry.
Prerequisite(s): ACIS 2116 and ECON 2006
Corequisite(s): FIN 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 3484 - Socio-Cultural Impacts of Tourism (3 credits)
A study of both historic and current impacts of tourism on family, community, culture, government, globalization, and the environment at the domestic and international levels. The course uses a sustainable tourism framework to examine the complex ways in which tourism both affects and is affected by modern society worldwide. Includes topics such as eco-tourism, volunteer tourism and space tourism.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 3524 - Lodging Management (3 credits)
Organization, function, and management of lodging operations. Current issues and management challenges in the lodging industry. Applications of revenue management to lodging systems. Pre: Sophomore standing
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

HTM 3954 - HTM Study Abroad (1-6 credits)
This course provides students with an international hospitality and tourism management business experience. Students will be required to apply their knowledge and skills from their Pamplin College of Business core courses within this course. Students will learn from the structured educational experience developed by the faculty directing the study abroad program. Pamplin College of Business majors must have been approved for upper division course- work.
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)

HTM 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HTM 4334 - Sustainable Entrepreneurship and Innovation in Hospitality & Tourism (3 credits)
Analysis of hospitality and tourism innovative and entrepreneurial enterprises to pursue sustainable growth. Analyze the sustainability of hospitality & tourism business ideas regarding growth opportunities considering societal, demographic, and environmental changes from a variety of sources. An examination of the key elements of sustainable entrepreneurship for hospitality and tourism enterprises that apply across a range of business models. Includes a field based, experiential learning project where teams collaborate to analyze data from multiple sources to develop and execute business ideas for existing or new enterprises. Pre: Junior standing.
Prerequisite(s): MGT 2064 or AAEC 2434
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 4354 - Information Technology and Social Media in Hospitality and Tourism (3 credits)
Introduction to the strategic use of information technology (IT) in todays hospitality and tourism organizations. Includes the most current and widely used information systems in operation, management, and e-business in hospitality and tourism as well as identification, discussion and debate of the ethical issues associated with these systems. Study of social media as a marketing tool for hospitality and tourism businesses. Examine impacts of IT on organizations and the industry as a whole. Pre: Sophomore standing.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 4414 - Restaurant Management: Design and Innovation (3 credits)
Reviews organizational structures, terminology, and categories associated with restaurant management. Discusses principles of restaurant management, including concept design development, financial analysis, daily operations, and customer service. Focuses on emerging trends in technology and innovation. Case study discussions of current issues and challenges in the industry, development of comprehensive restaurant business plan, and "Training for Intervention Procedures" (TIPS) certification.
Prerequisite(s): HTM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 4434 - Event and Experience Management Senior Workshop (3 credits)
Senior experiential learning workshop to integrate and apply ethics, research, and design concepts from past coursework by engaging in actual professional events and experiences. Explore and understand the complexity of planning, coordination, and evaluation of events and the impact on the human experience. Capstone for Pathways Minor in Event & Experience Management. Pre: Senior Standing; Registered for the Event and Experience Management Pathways Minor.
Prerequisite(s): HTM 3424
Pathway Concept Area(s): 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 4444 - Winery Tourism (3 credits)
The course focuses on the role of wine and wineries in tourism, wine marketing and management in the hospitality industry, and examines the components of a winery. Students must be 21 years of age due to the inclusion of wine tasting in the course. COURSE FEE: $18.
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 4454 - Hospitality Revenue Management (3 credits)
Examines lodging and foodservices Revenue Management (RM) issues. Customer-centric approach, explores RM from various traditional academic perspectives, including economics, pricing, forecasting, consumer behavior, accounting, finance, and human resources. Management-oriented, emphasizes practical aspects of decision-making. Applies theoretical concepts through class discussion, group projects and individual assignments.
Prerequisite(s): HTM 3444
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 4464 - Human Resources Management in the Hospitality Industry (3 credits)
An overview of the concepts of human resources management as applied to the specific environments within the hospitality industry.
Prerequisite(s): MGT 3304 or MGT 3404
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 4474 - Hospitality & Tourism Law (3 credits)
Managerial approach to the law that applies to hotels, food-service establishments, events, and tourism; special focus on manager's duties to guests. Key concepts covered include contract and property law, licensing and permits, labor relations, risk management including food and beverage issues, safety and security, and liability and negligence.
Prerequisite(s): FIN 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 4484 - International Tourism (3 credits)
Survey of global travel and tourism issues, including trends and patterns of global tourism, flow models, constraints and obstacles to international travel, demand for travel and tourism, tourism supply distribution, destination competitiveness, tourist safety and security, international travel and tourism organizations, performance measures. Analysis of sustainable indicators in protected areas and world heritage sites, tourism statistics and trends.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 4514 - Hospitality Market Data Analysis (3 credits)
Extraction and analysis of industry data on a selected market for development and presentation of the Market Study in a worldwide competition among other universities. In conjunction with a leading hospitality industry data provider, students have an opportunity to extract and analyze current industry data. Expands teamwork and communication skills through written and oral delivery of the study. Impact Analysis study of a recent current event on hotels, related and non-related travel sectors.
Prerequisite(s): HTM 3524 and HTM 3444 and HTM 4454
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

HTM 4964 - Field Study in HTM (3 credits)
Prerequisite(s): (HTM 3414 and HTM 3524) or (HTM 3414 and HTM 3444) or (HTM 3254 and HTM 3444)
Instructional Contact Hours: (3 Lec, 3 Crd)

HTM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HTM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HTM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Human Development (HD)

HD 1004 - Childhood and Adolescence (3 credits)
Basic concepts related to human development. Emphasis on developmental theories and principles of physical, social, and emotional growth, development, and behavior of children, individually and within families and cultures, from conception through adolescence. Designed as a general survey Course for majors and non-majors.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 1014 - Introduction to Human Development & Family Science First Year Experience (1 credit)
Introduction to the Human Development and Family Science Department: majors, minors, and curriculum requirements and options. Introduction to academic skills and career exploration. Exploration of University programs and services that support students and promote student development.
Instructional Contact Hours: (1 Lec, 1 Crd)

HD 1134 - Introduction to Disabilities Studies (3 credits)
Introduction to concepts related to physical, intellectual, cognitive, and emotional disability, with a focus on disability as a social construct and lived experiences of people with disabilities across the lifespan. Exploration of texts, videos, and other created artifacts to evaluate concepts and models of disability.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 1984C - Special Study (1-19 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences
Instructional Contact Hours: Variable credit course

HD 2004 - Adulthood and Aging (3 credits)
Introduction to adult development and aging (gerontology). Basic concepts, principles, theories, research methods and social issues of development from emerging adulthood through the end of life. Biopsychosocial analysis of issues affecting aging processes, including family dynamics. Consideration of social, economic, political and ethical issues in aging. Attention to multicultural perspectives and significant global challenges and opportunities related to aging around the world.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 2014 - Integrative Practices for Health, Wellbeing, and Resilience (3 credits)
Theories of integrative (mind-body) health and wellbeing. Examination of multidimensional factors, including stress, personality, relationships, and social environment, as well as issues of identity and equity that influence health across the lifespan. Engagement in contemplative and evidence-based integrative health practices used for promoting health, wellbeing, and resilience. Attention given to ethical use and teaching of practice methods.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 2104 - Quantitative Approaches to Community Research (3 credits)
Computational methods and ethical issues in the collection, transformation, consumption, and use of quantitative data in the design and evaluation of community programs. Consideration of effective data visualization and communication of findings. Emphasis on evaluating the reliability and accuracy of data used to frame decisions about community-related policies and service-oriented programs.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 2104

HD 2304 - Family Relationships (3 credits)
Overview of basic concepts, principles, theories, and issues of development and change in family relationships. Topics include families in historical and contextual perspective, structural and relational diversity in families, and processes of relational development, maintenance, and dissolution in families.
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 2314 - Human Sexuality (3 credits)
Explores the diversity of human sexuality using global perspectives. Biological, historical, developmental, psychological, sociological and self-reflexive approaches. Interdisciplinary examination of the social constructions of sexuality and gender; the historical and contemporary theoretical perspectives and research on sex; the interactions of race, ethnicity, class, gender, sexual orientation, religion, ability, and nationality in shaping sexuality and family formation; the international commercialization of sex; the impact of violence and sexual coercion; the debates surrounding sexual ethics, unintended pregnancy, sex education, and biotechnology; the application of the scientific method, study designs, and methods of observation; the promotion of sexual and reproductive health across the lifespan; and the development of sexual practices, rituals, mythologies, belief systems and other cultural contexts for sexuality across time and around the world.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 2335 - Principles of Human Services (3 credits)
2335: Basic concepts, techniques, and structure of the human services profession. Survey of client/family assessment and problem management. 2336: Advanced topics in human services focusing on: case management, crisis intervention, program administration, specialized interventions, ethics, and professional development.
Corequisite(s): 1004 or Pre: 1004.
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 2336 - Principles of Human Services (3 credits)
2335: Basic concepts, techniques, and structure of the human services profession. Survey of client/family assessment and problem management. 2336: Advanced topics in human services focusing on: case management, crisis intervention, program administration, specialized interventions, ethics, and professional development.
Prerequisite(s): HD 2335
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 3014 - Research Methods in Human Development (3 credits)
Critical thinking and problem-solving involved in applying methods of scientific inquiry to the field of human development and family science. Analysis of individuals, families, and groups. Topics include method of data collection, basic methods for displaying and analyzing data, and writing reports.
Prerequisite(s): HD 2004 and HD 2304 and (STAT 3005 or STAT 3615 or STAT 3604)
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3024 - Community Analytics (3 credits)
Application of data analytics concepts to community issues at local and global levels. Data sources, data quality, data representation and data ethics. Statistical analysis to improve community livability. Communication of data and statistics for community stakeholders. Evaluation of reports that use data. Sophomore standing or higher.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3114 - Issues in Aging (3 credits)
Investigates selected contemporary issues and measures potential solutions in adulthood and old age; family and friend relationships; work and retirement; political, legal, and economic issues; vulnerability related to gender.
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3144 - Education of Exceptional Learners (3 credits)
Introduction to the historical, ethical, legal, and economic models relevant to understanding students with disabilities and meeting their needs to increase their potential for success throughout their lives. Addresses research in early intervention, K-12 instruction, post-secondary education, and transition into work settings.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: EDCI 3144

HD 3214 - Infancy and Early Childhood (3 credits)
Theories, principles, and patterns of physical, cognitive, social and emotional development from conception to the early school years. Micro and macro environmental influences on development, including families and culture, are considered as they interact with genetic/biological determinants of development.
Prerequisite(s): HD 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3224 - Middle Childhood and Adolescence (3 credits)
Theories, principles, and patterns of physical, cognitive, social and emotional development from middle childhood to adolescence. Micro and macro environmental influences, including families and culture, on development as they interact with genetic/biological determinants of development.
Prerequisite(s): HD 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3234 - Child/Youth Community Services (3 credits)
Health and human service programs serving children, youth, and families to address life course development issues in the changing American family. Overview of child/youth care issues in areas such as poverty, health and healthcare, day-care services, school-based services, court services, child abuse and neglect, and children in residential settings. Methods of determining service eligibility, needs assessment techniques, translation of client data into a plan for community-based programs and services, and procedures for maintaining quality assurance.
Prerequisite(s): HD 1004 and HD 2304 and HD 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3254 - Curriculum in Early Childhood (3 credits)
Supervised experience in planning and implementing emergent, play-based learning experiences for young children; examination of the role of the teacher; exploration of early childhood curricular design and materials suitable for addressing milestones of child development based on theory and research; utilization of approaches related to sharing child-specific information with families.
Prerequisite(s): HD 1004 and HD 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3304 - Advanced Helping Skills (3 credits)
Helping skills used in human services settings. Case management, evaluating crisis situations, and approaches to individual and family assessment.
Prerequisite(s): HD 2335 and HD 2336
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AHRM 3464, APS 3464, GEOG 3464, HUM 3464, SOC 3464, UAP 3464

HD 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

HD 3954 - Study Abroad (1-9 credits)
Instructional Contact Hours: (1-9 Lec, 1-9 Crd)

HD 3954C - Study Abroad (1-19 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences
Instructional Contact Hours: Variable credit course

HD 3954G - Study Abroad (1-19 credits)
Pathway Concept Area(s): 7 Identity & Equity in U.S.
Instructional Contact Hours: Variable credit course

HD 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 4304 - Human Services Administration (3 credits)
Issues, functions, and responsibilities involved in developing, implementing, and evaluating family and human services programs.
Prerequisite(s): HD 3234 or HD 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4324 - Advanced Family Relationships (3 credits)
Investigation of challenges, stresses, and crises experienced by diverse, complex families over the life course; protective factors and resilience; coping strategies; prevention and intervention; public policies. Pre: Junior standing.
Prerequisite(s): HD 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4324H - Advanced Family Relationships (3 credits)
Investigation of challenges, stresses, and crises experienced by individuals and families; protective factors and resilience; coping strategies; prevention and intervention; public policies.
Prerequisite(s): HD 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4334 - Perspectives On Addiction and Family Systems (3 credits)
Intra-personal and inter-personal dimensions of compulsive- addictive patterns manifested in the context of the family system. Reciprocal interaction between families and other systems. Junior standing required.
Prerequisite(s): HD 2304 or HD 2314
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4354 - Family, Law, and Public Policy (3 credits)
Theoretical and substantive issues that relate to the development and implementation of family policies. Implications of political culture and family legislation for the well-being of children and their families.
Prerequisite(s): HD 1004 and HD 2335 and HD 2336 and HD 2004 and HD 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4354H - Family, Law, and Public Policy (3 credits)
Theoretical and substantive issues that relate to the development and implementation of family policies. Implications of political culture and family legislation for the well-being of children and their families.
Prerequisite(s): HD 1004 and HD 2335 and HD 2336 and HD 2004 and HD 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4364 - Gender And Family Diversity (3 credits)
Examination of the changing character of individual and family diversity, as related to the intersections among gender, race, class, sexuality, age, and ability. Junior standing required
Prerequisite(s): HD 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4714 - Senior Capstone Seminar (3 credits)
Intensive learning experiences in critical thinking and analysis of human development and family science. Opportunities to demonstrate breadth of learning while developing leadership skills and honing professional competencies. Topics include leadership and team development, problem solving, grant writing, program evaluation, and electronic portfolios. Pre: Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

HD 4964 - Field Study (1-19 credits)
Prerequisite(s): HD 1004 and HD 2004 and HD 2335 and HD 2336
Instructional Contact Hours: Variable credit course

HD 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

HD 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Human Nutrition, Foods, and Exercise (HNFE)

HNFE 1004 - Foods, Nutrition And Exercise (3 credits)
Scientific information applied to current concerns in foods, nutrition and exercise as it affects the nutritional health well-being of humans. I,II
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 1114 - Orientation to HNFE (1 credit)
An introduction to the academic and career planning for students in the Human Nutrition, Foods & Exercise major.
Instructional Contact Hours: (1 Lec, 1 Crd)

HNFE 1214 - Topics in Lifetime Activities (1 credit)
Participation in physical activity, fitness assessment, motor skill development. Awareness and development of the physical, spiritual, emotional, social, and intellectual components of wellness. Application of healthy lifestyle choices for improved quality of life. May be repeated with varying content, for a maximum of 6 credits. Pass/Fail Only
Instructional Contact Hours: (3 Lab, 1 Crd)
Repeatability: up to 6 credit hours

HNFE 1215 - Meraki Living Learning Community, Be Well, Be You (1 credit)
Introduces students in the Meraki Living Learning Community to six dimensions of well-being: purpose, social, financial, community, physical, and emotional. Classroom learning, guided practice, connection to well-being resources, and individual exploration to promote lifelong holistic health and well-being. Personal well-being focused on developing a concept of self, understanding purpose, and learning positive health behaviors to support physical activity, nutrition, mindfulness, and personal finance.
Instructional Contact Hours: (1 Lec, 1 Crd)

HNFE 1216 - Meraki Living Learning Community, Be Well, Be You (1 credit)
Introduces students in the Meraki Living Learning Community to six dimensions of well-being: purpose, social, financial, community, physical, and emotional. Classroom learning, guided practice, and individual exploration to promote lifelong holistic health and well-being. Community well-being focused on mental health initiatives, student leadership, developing and sustaining relationships, and service.
Prerequisite(s): HNFE 1215
Instructional Contact Hours: (1 Lec, 1 Crd)

HNFE 1804 - Principles of Sport Science (3 credits)
Introduction to the principal concepts of improving human physical capacity through sport, exercise training and diet. Emphasis on critical thinking and evidence-based decision making in describing the limits to human performance, responses, adaptations, and health benefits of exercise.
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 2004 - Professional Dietetics (1 credit)
Introduction to the profession of dietetics with emphasis on competencies, preparation, and responsibilities associated with dietetic practice. Overview of the structure of The American Dietetic Association (ADA) and its relationship to the dietetic professional. Discussion of current professional concerns. II
Corequisite(s): HNFE 2014
Instructional Contact Hours: (1 Lec, 1 Crd)

HNFE 2014 - Nutrition Across the Life Span (3 credits)
Nutritional requirements and related health concerns of pregnant and lactating women, infants, children, adults and the elderly are studied in relation to the physiological and metabolic aspects of pregnancy, lactation, growth and development, maintenance of health, prevention of disease, and aging. 1 year of biology or chemistry required. CHEM 1056 may be substituted for co-requisite CHEM 1036.
Prerequisite(s): HNFE 1004
Corequisite(s): CHEM 1035
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 2014H - Nutrition Across the Life Span (3 credits)
Nutritional requirements and related health concerns of pregnant and lactacting women, infants, children, adults and the elderly are studied in relation to the physiological and metabolic aspects of pregnancy, lactation, growth and development, maintenance of health, prevention of disease, and aging. 1 year of biology or chemistry required. CHEM 1056 may be substituted for co-requisite CHEM 1036.
Prerequisite(s): HNFE 1004
Corequisite(s): CHEM 1035
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 2104 - Moving Body, Moving Mind (3 credits)
Methods of working intentionally towards cultivating optimal brain states. Mind/body practices to develop connections between contemporary neuroscience, movement, and meditative practices. Studies in the intersection of consciousness, movement, and thought. Introduction to yoga, meditation, authentic movement, experiential anatomy, and somatic work. Emphasis on holistic perspectives of the body through active listening, ethical reasoning, healthy self-image, and attention to the practices of intentional embodiment.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: DANC 2104

HNFE 2204 - Medical Terminology (3 credits)
Structure, pronunciation, and use of medical terms; anatomical structures and body systems; terms used in pathology, testing, diagnosis, surgery, pharmacology and treatment.
Prerequisite(s): (BIOL 1005 or BIOL 1105 or BIOL 1205H) and (BIOL 1006 or BIOL 1106 or BIOL 1206H) or ISC 2105
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 2254 - Exercise Leadership - Group Fitness Instructor (3 credits)
Development of theoretical and practical skills for leading exercise in a group setting. Topics include: general guidelines for instructing safe, effective, and purposeful exercise, essentials of the instructor-participant relationship, the principles of motivation to encourage adherance in the group fitness setting, effective instructor-to-participant communication techniques, methods for enhancing group leadership, and the group fitness instructors professional role. Obtain knowledge of programming for multiple populations. Will complete a CPR and AED certification as a part of in-class instruction. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

HNFE 2264 - Exercise Leadership- Personal Trainer (3 credits)
Development of practical skills for conducting one-on-one exercise sessions for general healthy adults and special populations. Exercise selection, testing, training principles, and behavioral change skills required to be an effective personal trainer. Preparation for a nationally accredited personal training certification. CPR and AED certification. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

HNFE 2274 - Wilderness First Responder (3 credits)
Assessment and treatment of emergencies in remote settings. Anatomy, physiology, and pathophysiology, personal and group safety and hygiene, patient assessment and documentation of treatment for trauma, medical emergencies, environmental emergencies, and long-term care. Team management of medical emergencies in wilderness context, organization and implementation of rescues, decision-making, leadership, judgment, and prevention. Prepares students to successfully complete a national certification exam. Pass/fail only.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

HNFE 2314 - Active Transportation for a Healthy, Sustainable Planet (3 credits)
Connections among active transportation (e.g., bicycling, walking) and significant global challenges such as physical inactivity, health, the environment, and the economy on local to global scales. Methods to assess walkability among communities with different worldviews and the influence of the built environment on rates of active transportation. Approaches to evaluate demographic and psychosocial predictors and physical and policy barriers to use of active transportation. Successful strategies to increase active transportation through community design guidelines, behavior change tools, transportation planning, and policy.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SPIA 2314

HNFE 2334 - Introduction to Integrative Health (3 credits)
Introduction to the principles of integrative health that promote health and well-being. Examination of the person- centered integrative health treatment methods including holistic stress management, the human spirit, communication, energy healing, elements of meditation, healing environments, Chinese medicine, Ayurvedic medicine, voice work, nutrition, therapeutic massage and bodywork, and healing effects of physical activity. Review of scientific evidence of integrative treatments.
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 2484 - Evidence-Based Practice in Health Science (1 credit)
Evidence-based practice in the field of health science. Utilization and evaluation of published research in literature. Answers to health and healthcare related questions. Identification of well-defined research questions using current frameworks. Best practices of healthcare policies.
Prerequisite(s): HNFE 1004
Corequisite(s): HNFE 2014
Instructional Contact Hours: (1 Lec, 1 Crd)

HNFE 2544 - Functional Foods for Health (3 credits)
Introduction to functional foods (foods with additional value beyond basic nutrition) including development of functional foods, novel sources, and traditional foods with value-added health benefit; regulatory issues; and media messages.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FST 2544

HNFE 2664 - Behavioral Theory in Health Promotion (3 credits)
Introduction to behavioral theories used to design, implement and evaluate health promotion programs, and theories underlying health behavior change. Interactions between individuals, physical and social environments, interpersonal, and intrapersonal determinants of health behavior. Epidemiological evidence of benefits of healthful eating and physical activity.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 2774 - Topics in HNFE (1-3 credits)
A variable-content course. Explores significant contemporary topics in the areas of nutrition, foods, exercise and health. May be repeated for up to six credits.
Prerequisite(s): HNFE 1004
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 6 credit hours

HNFE 2804 - Exercise and Health (3 credits)
Introduction to the foundations of exercise science as applied to healthy living, and the concept of exercise as medicine. Fundamentals of health appraisal, foundations of fitness training principles and prescription; nutrition and energy cost, and application of exercise prescription for disease prevention and treatment.
Prerequisite(s): HNFE 1004 and BMSP 2135
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 2824 - Prevention and Care of Athletic Injuries (2 credits)
An introduction to the techniques and principles of athletic training. I,II.
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

HNFE 2954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 2964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 2984A - Special Study (1-19 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: Variable credit course

HNFE 2984N - Special Study (1-19 credits)
Pathway Concept Area(s): 1F Discourse Foundational
Instructional Contact Hours: Variable credit course

HNFE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 3024 - Science of Food Prep Lab (2 credits)
Application of the principles of food science and food preparation techniques related to health promotion, disease prevention, and disease management. Selection, production, and evaluation of foods and beverages. Emphasis on experimentation illustrating chemical and physical reactions, sensory and physical properties, nutrient manipulation, cooking applications, and functions of foods.
Prerequisite(s): (HNFE 1004 and CHEM 1036) or CHEM 1056 or (ISC 2106 and FST 2014)
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

HNFE 3034 - Methods of Human Health Assessment (2 credits)
Evidence-based practice in areas of human health assessment including: anthropometric measurements, vital signs, body composition, aerobic capacity, muscular strength, energy requirements, and health behaviors. Comparison and analysis of assessment methods.
Prerequisite(s): (HNFE 2014 or HNFE 2014H) and BMSP 2136
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

HNFE 3114 - Foodservice and Meal Management (4 credits)
Foodservice and meal management for the dietetics professional. Emphasis is placed on understanding food procurement, production, distribution, and marketing in a safe and well managed operation. I
Prerequisite(s): HNFE 3024 or HNFE 2224
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

HNFE 3224 - Communicating with Food (3 credits)
Development of oral and written communication skills to communicate food and nutrition information to diverse populations. II
Prerequisite(s): (HNFE 2014 or HNFE 2014H) and (HNFE 3024 or HNFE 2224)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

HNFE 3634 - Epidemiologic Concepts of Health and Disease (3 credits)
Designed to give students in the health sciences a basic understanding of the modern concepts regarding health and disease as well as skills in organizing epidemiological data, disease investigation and surveillance. Includes a survey of terms, concepts, and principles pertinent to epidemiology. Lifestyles of populations and the relationships between lifestyles and health status are studied. II.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHS 3634

HNFE 3804 - Exercise Physiology (3 credits)
Effects of exercise on physiology: neuromuscular, metabolic, cardiopulmonary. Scientific basis of physical training. I
Prerequisite(s): BMSP 2136 and HNFE 2804
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 3824 - Kinesiology (3 credits)
The anatomical and biomechanical basis of human motion, with applications for motor skill acquisition, and development and rehabilitative exercises. I
Prerequisite(s): BMSP 2135 and BMSP 2136
Corequisite(s): PHYS 2205 or PHYS 2305.
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 4004 - Seminar in HNFE: Writing and Discourse in the Major (3 credits)
Focused review of relevant and current literature in selected areas of food, nutrition and exercise. Develop practical strategies for finding research articles on specific topics utilizing a variety of search tools (e.g., library, on-line search engines, etc.). Develop analytical skills to critically assess the significance of published research data. Develop competence in written and verbal presentation of current research in formats suitable for a scientific or a lay audience.
Prerequisite(s): COMM 2004 or ALCE 3634 and HNFE 2484
Corequisite(s): HNFE 4025
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4024 - Emerging Issues in Dietetics (1 credit)
Investigation of emerging dietetics topics including professional development, new technologies, current legislative issues, and promising evidence-based practice strategies. Integration of knowledge from previous courses to support quality dietetics practice will be emphasized.
Prerequisite(s): HNFE 4026
Corequisite(s): HNFE 4125
Instructional Contact Hours: (1 Lec, 1 Crd)

HNFE 4025 - Metabolic Nutrition (3 credits)
4025: Study of bioenergetics and macronutrients, with emphasis on sources, interrelationships, and factors affecting utilization and metabolism. Emphasis on how carbohydrates, lipids, and proteins are metabolized following a meal, during fasting conditions, and when exercising. How metabolism of carbohydrates, lipids and proteins affects and is effected by metabolic disease such as obesity and diabetes will also be examined. 4026: Study of essential vitamins and minerals and their interaction with body systems, especially as these relate to food, exercise and health. Emphasis on how deficiency, toxicity and genetic conditions affect various organ systems, including bone, skin, digestive, and blood. Historical and regulatory policies, and scientific studies establishing recommended dietary allowances for micronutrients are considered.
Prerequisite(s): (HNFE 2014 or HNFE 2014H) and (BCHM 2024 or BCHM 3114 or BCHM 4115)
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4026 - Metabolic Nutrition (3 credits)
Prerequisite(s): HNFE 4025
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4114 - Food and Nutritional Toxicology (3 credits)
Principles of food and nutritional toxicology with primary emphasis on food components and food toxins including absorption, metabolism and excretion. An overview of types of adverse food reactions including food allergy, food sensitivity, and food intolerance. An overview of U.S. and international lawas and regulation of safety assessment of foods including food additives, dietary supplements, and residues of contaminants, pesticides, and antibiotics. Analysis of food and nutritional toxicity cases in the context of the food system, regulatory policies, and public communication.
Prerequisite(s): BMSP 2136 and BCHM 2024 and HNFE 2484
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4125 - Medical Nutrition Therapy (3 credits)
Study of nutritional diagnostic, therapeutic and counseling services provided by a registered dietitian. 4125: Emphasis on the relationship between principles of nutritional care and the medical treatment of individuals with selected diseases or clinical problems. 4126: Integration of knowledge of pathophysiology, biochemical, and clinical parameters, medical treatment and nutrition therapy for patients with selected clinical problems/disease states.
Prerequisite(s): HNFE 2004 and HNFE 4026
Corequisite(s): HNFE 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4126 - Medical Nutrition Therapy (3 credits)
Study of nutritional diagnostic, therapeutic and counseling services provided by a registered dietitian. 4125: Emphasis on the relationship between principles of nutritional care and the medical treatment of individuals with selected diseases or clinical problems. 4126: Integration of knowledge of pathophysiology, biochemical, and clinical parameters, medical treatment and nutrition therapy for patients with selected clinical problems/disease states. 4125: I. 4126: II.
Prerequisite(s): HNFE 4125
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4134 - Experiential Approach to Nutritional Therapy (2 credits)
Use of didactic and experiential methods to learn and apply theories of behavior change in diverse nutrition counseling situations. Pre: Instructor approval. I
Prerequisite(s): HNFE 4644
Corequisite(s): HNFE 4125
Instructional Contact Hours: (2 Lec, 2 Crd)

HNFE 4174 - Nutrition and Physical Performance (3 credits)
Nutritional requirements for the wellbeing and optimal performance of athletes. Methods of assessment and modification of diet, performance, and body composition in athletes. Evaluation of dietary ergogenic aids and supplements for performance and body composition.
Prerequisite(s): HNFE 2804
Corequisite(s): HNFE 4025
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4224 - Alternative and Complementary Nutrition Therapies (2 credits)
Critical evaluation of health claims, mechanisms of action, and research literature for a wide variety of alternative nutrition therapies used for disease prevention and treatment. Practical application of knowledge through completion of problem-based learning projects.
Prerequisite(s): (BIOL 1005 or BIOL 1105 or BIOL 1205H) and (BIOL 1006 or BIOL 1106 or BIOL 1206H) and (CHEM 1036 or CHEM 1056) or ISC 2106 and HNFE 2484
Instructional Contact Hours: (2 Lec, 2 Crd)

HNFE 4254 - Experimental Foods (2 credits)
Experimental study of the functions of ingredients and factors affecting food quality with emphasis on an independent project.
Prerequisite(s): HNFE 3234
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

HNFE 4354 - Dietary Supplements and Health (3 credits)
Practical and fundamental aspects of widely used dietary supplements (micronutrients, macronutrients, prebiotics, probiotics, plant extracts, bioactive compounds,). Efficacy and mechanism of dietary and botanical supplements in weight management, health promotion, and disease prevention. Interaction of dietary supplements with gut microbiome. Safety and regulatory considerations of dietary supplements. Project-based learning practice with the integration of literature review, project development, writing, and oral presentation.
Prerequisite(s): (BCHM 2024 or BCHM 3114) and (BMSP 2136 and HNFE 2484)
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4514 - Nutritional Genomics (3 credits)
Interactions between foods and nutrients with genetics, genomic DNA, and gene expression in humans and animals. Genetic variants that affect optimal health, metabolism and nutrition in individuals, as well as inheritance of these variants in individuals, and allele frequencies in populations. Scientific, ethical, and legal considerations of genes and nutrition knowledge, personalized testing, and genetic engineering. Junior standing.
Prerequisite(s): HNFE 2484
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4624 - Community Nutrition (3 credits)
The application of nutrition principles to an analysis of current applied nutrition programs and a study of the political and legislative processes affecting the practice of dietetics. I
Prerequisite(s): (HNFE 2014 or HNFE 2014H) and HNFE 4026
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4634 - Socio-Cultural Food Systems (3 credits)
Study of social, cultural, and economic aspects of food systems, using quantitative and qualitative methods to assess nutritional status.
Prerequisite(s): HNFE 1004 and SOC 3004
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

HNFE 4644 - Health Counseling (3 credits)
Roles, responsibilities, legal requirements and scope of the health professional. Interviewing, counseling, education, health promotion and behavior change strategies for diverse populations. Guidance and referral, health assessment, communication skills, and problem-solving. Application of counseling techniques such as goal-setting, ethical practice, cultural competence, evidence-based practice. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4645 - Applications in Nutrition Counseling (2 credits)
4645: Experiential methods to apply theories of behavior change to promote nutrition and health changes. Learn and apply nutrition care process using evidence-based knowledge through providing client-centered counseling to individuals. Understanding of contemporary issues related to behavior change and emerging issues through review of lay and professional literature. 4646: Advance nutrition counseling skills through work with more diverse clients. Learn and apply quality improvement skills to enhance nutrition counseling service. Identify information on emerging issues and apply appropriately in counseling setting.
Prerequisite(s): HNFE 4644
Corequisite(s): HNFE 4125
Instructional Contact Hours: (2 Lec, 2 Crd)

HNFE 4646 - Applications in Nutrition Counseling (2 credits)
Prerequisite(s): HNFE 4645
Instructional Contact Hours: (2 Lec, 2 Crd)

HNFE 4754 - Advanced Human Anatomy and Pathophysiology (3 credits)
Advanced laboratory course in human anatomy and physiology with an emphasis on how pathologic disease states affect human homeostasis. Congenital, genetic, chronic, and common global diseases with recognition and evaluation of causes, risk factors, and impact on body systems. Cadaver prosections will supplement models, specimens, and an advanced anatomy visualization system. Intended for students pursuing graduate education in health sciences.
Prerequisite(s): BMSP 2136 and BMSP 2146
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

HNFE 4774 - Advanced Contemporary Topics in HNFE (1-3 credits)
A variable-content course. Explores advanced topics in the areas of nutrition, foods, exercise or health using higher- order thinking and problem-solving skills. Qualitatively and quantitatively assess current facts supported by scientific literature, as well as controversial issues with conflicting data. May be repeated for a maximum of six credits. Junior Standing.
Prerequisite(s): HNFE 2014 or HNFE 2014H and HNFE 2484
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 6 credit hours

HNFE 4804 - Exercise Metabolism and Disease (3 credits)
Explores the role of exercise in the pathophysiology of human metabolic disease with an emphasis on obesity, diabetes, insulin resistance, and exercise tolerance at whole body, cellular and molecular level dysfunction. In-depth assessment of the prospect of exercise as preventive and therapeutic for treatment of metabolic diseases.
Prerequisite(s): HNFE 4025 and HNFE 2804
Corequisite(s): HNFE 3804
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4814 - Advanced Athletic Injuries (2 credits)
Medical documentation and administration. Practical experience in locating, identifying, and evaluating anatomic structures Mechanisms of injury and healing process, testing and evaluation of athletic injuries, treatment and rehabilitation of injury to return to play. Not part of an accredited athletic training program.
Prerequisite(s): HNFE 2824 and HNFE 3804
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

HNFE 4824 - Advanced Kinesiology (3 credits)
Advanced study of human movement during exercise. Integration of biomechanical, anatomical and neuromuscular concepts in the regulation of joint movement associated with exercise, injury and disease.
Prerequisite(s): HNFE 3824 and HNFE 2484
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4834 - Applications in Clinical Exercise (3 credits)
Supervised experience with the Therapeutic Exercise and Community Health Center. Direct Involvement with rehabilitative and preventive exercise and lifestyle programming for cardio-vascular, musculo-skeletal, and other conditions. Exercise leadership, case management, and daily operations. Included seminars, lab experience, and individual meetings with participants and supervisors, related projects.
Prerequisite(s): HNFE 3874
Instructional Contact Hours: (9 Lab, 3 Crd)

HNFE 4844 - Exercise and Neuromuscular Performance (3 credits)
Functional properties of the neuromuscular system. Emphasis placed on the acute and chronic responses of muscle in exercise, rehabilitation and the factors which determine human performance. Special emphasis on the molecular biological factors responsible for skeletal muscle development and differentiation, as well as adaptation to training and disease states, including activation of signal cascades responsible for the changes in muscle performance.
Prerequisite(s): HNFE 3804 and HNFE 2484
Instructional Contact Hours: (3 Lec, 3 Crd)

HNFE 4854 - Internship in Exercise Science and Health Promotion (1-3 credits)
Capstone internship experience in the fields of exercise science and/or health promotion. The student will be immersed in the day-to-day challenges and responsibilities of a practicing health-fitness professional. The 45 contact hours per credit will involve work experience in some aspect of exercise science and/or health promotion. Senior standing and Exercise and Health Promotion majors only. May be repeated for maximum 3 credits.
Prerequisite(s): HNFE 4834
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

HNFE 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

HNFE 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Humanities (HUM)

HUM 1024 - Introductory Humanities: Great Books (3 credits)
An introduction to the humanities through the topic of "Great Books." Students will closely analyze primary canonical texts from the West and from the global south. Political, religious, philosophical, and literary works by important writers and communities from across the globe will be explored to understand the human condition and self-formation. Such engagement with primary texts will be put into the context of larger topics such as class, race, and gender in addition to colonialism, decolonialism, and postcolonial modernity.
Instructional Contact Hours: (3 Lec, 3 Crd)

HUM 1054 - Virginia Tech Prison Book Project (1 credit)
A one-hour course with the Virginia Tech Prison Book Project. Students will complete a learning module about carceral institutions in the United States and the impact of educational opportunities on the lives of incarcerated people. They will then participate in a service learning event where they match individual requests from incarcerated readers to books and prepare the books for shipping.
Instructional Contact Hours: (1 Lab, 1 Crd)
Course Crosslist: CRIM 1054, RLCL 1054

HUM 1324 - Introductory Humanities: The Modern World (3 credits)
The shifts in thought and values during the nineteenth and twentieth centuries in the global imagination, including issues of commerce, scientific inquiry, industrialization, nationalism, war, labor, gender, class differences, race, and the beginnings of postmodernity. Emphasis on interpretive and analytic skills in terms of reading, discussing, and writing about the interrelationships among the arts, literature, philosophy, history, religion, and science, and their contributions toward shaping the values and aspirations of the age, including global contexts and Asian cultures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HUM 1504 - Introduction to Popular Culture (3 credits)
The development and formation of the category of popular culture. Competing theories and methods for analyzing popular culture. Activities, objects, and ideas included under the rubric of popular culture. Critical thinking about the production of popular culture in relation to race, gender, class, and other forms of human difference.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 1504

HUM 1604 - Introduction to Humanities and the Arts (3 credits)
Explores the written, visual, and performing arts of selected periods and cultures, setting them in the context of their times. Study of these periods linked with overarching questions of cultural encounters, interactions, and negotiations. Introduces principles of each art form as well as the means of appreciation. Students taught methods in researching, writing, and presenting on these art forms.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HUM 1704 - Introduction to Appalachian Studies (3 credits)
Introduces students to the history of the Appalachian region from European contact to the present. Traces the idea of Appalachia by tracing ways in which Americans have imagined the region over time. Explores humanistic problems of cultural identity, race and ethnicity, place and globalization, and impacts of natural resource extraction.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 1704

HUM 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 1984A - Special Study (3 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: (3 Lec, 3 Crd)

HUM 2104 - Oral Traditions and Culture (3 credits)
Examination of the worlds great oral traditions, both ancient and contemporary. Emphasis on performance contexts, relationships among multicultural traditions, including American Indian oral traditions, and the relationships among orality, literacy, technology, media, and culture.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 2104

HUM 2204 - The Creative Process (3 credits)
Explores ways in which creativity and design can be understood historically as well as understood and practiced in a classroom setting. Subjects include any or all of the following: theories of creativity; traditions associated with understanding and making several kinds of art; studying artworks from different cultural backgrounds, working with the limitations and possibilities inherent in design projects, and examining how and why they were created; and preparing final creative projects for classroom presentation.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HUM 2404 - Folk Cultures in Appalachia (3 credits)
Examination of the expressive genres and cultural processes of communities in Appalachia. Documentation of art and skill in everyday life, including material culture (e.g., foodways, architecture), customary behavior (e.g., music, ritual, occupational practice), and verbal art (e.g., narrative, speechplay), and analysis of how people have used these forms to shape social identities, physical spaces, and power relations.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 2404

HUM 2504 - Introduction to American Studies (3 credits)
Methodology and tools of American studies, with a focus on developing analytic skills to assess discourse across varied media. Interdisciplinary investigation of histories, politics, cultures, and beliefs in the Americas, including the impacts of encounter and exchange. Intensive study of a specific topic or period.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2504

HUM 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 3034 - Theories of Popular Culture (3 credits)
Examination of theories for understanding the ways in which popular objects and practices (such as television programs, films, or attending sporting events) represent, maintain, and contest societal norms, including norms regarding gender and sexuality, race and ethnicity, and class and place, with an emphasis on the United States.
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3034

HUM 3034H - Theories of Popular Culture (3 credits)
Examination of theories for understanding the ways in which popular objects and practices (such as television programs, films, or attending sporting events) represent, maintain, and contest societal norms, including norms regarding gender and sexuality, race and ethnicity, and class and place, with an emphasis on the United States.
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3034H

HUM 3204 - Multicultural Communication (3 credits)
Exploration of communication in and among various cultural groups through an examination of communicative practices, registers, discourse, and performance. Emphasis on understanding cultural differences and similarities in the different styles and stances in communication and their meanings to participants.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3204

HUM 3204H - Multicultural Communication (3 credits)
Exploration of communication in and among various cultural groups through an examination of communicative practices, registers, discourse, and performance. Emphasis on understanding cultural differences and similarities in the different styles and stances in communication and their meanings to participants.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3204

HUM 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AHRM 3464, APS 3464, GEOG 3464, HD 3464, SOC 3464, UAP 3464

HUM 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 4104 - Explorations in Advanced Humanities Topics (3 credits)
In-depth study of special interdisciplinary topic. Topics vary but involve a close and extensive study of the interrelationship between cultural ideas and their expressions in several of the following forms: literature, philosophy, religion, art, music, drama, material culture, and popular culture. May be repeated with different topics, for a maximum of 9 credits.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: RLCL 4104

HUM 4124 - Topics in Culture (3 credits)
Uses sociological, anthropological, as well as artistic and humanist paradigms to analyze culture. Discusses 20th and 21st century cultural trends. Analyzes the implications of social context for cultural artifacts such as art. Topics are variable. Example topics include the cultural construction of race and the cultural of the nineteen sixties. Course may be repeated with different course content for up to 6 credits. Pre: Junior or Senior standing.
Prerequisite(s): SOC 1004 or SOC 1014 or AFST 1714 or AINS 1104 or RLCL 1004 or RLCL 2004 or WGS 1824
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: SOC 4124

HUM 4414 - Issues in Appalachian Studies (3 credits)
Research conducted by students on issues relevant to local or regional sustainability in contemporary Appalachia on contemporary environmental and community issues. Focus on environmental justice ethical issues expressed in or created by various forms of discourse.
Prerequisite(s): HUM 1704 or APS 1704
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 4414

HUM 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Industrial and Systems Engineering (ISE)

ISE 2004 - Introduction to Industrial and Systems Engineering (1 credit)
Introduction to the Industrial and Systems Engineering profession through exposure to problems, principles, and practice. Systems thinking, critical thinking, and contemporary issues in industrial and systems engineering. Introduction to the ISE Department, focusing on faculty and research areas. Importance of ethics and professionalism. Academic planning for the BSISE degree.
Instructional Contact Hours: (1 Lec, 1 Crd)

ISE 2014 - Engineering Economy (2 credits)
Concepts and techniques of analysis for evaluating the value of products/services, projects, and systems in relation to their cost. Economic and cost concepts, calculating economic equivalence, comparison of alternatives, purchase versus lease decisions, financial risk evaluation, cash flow sensitivity analysis, and after-tax analysis.
Instructional Contact Hours: (2 Lec, 2 Crd)

ISE 2024 - Probability Foundations for Industrial and Systems Engineers (3 credits)
Introduction to the mathematical foundations of probability theory for industrial engineers. Understanding of probability as a model for real phenomena, with applications of probability in an industrial engineering context. Review of set theory, counting (permutations and combinations), definition of probability axioms, sample spaces, random variables, independence, probability distribution functions, probability mass or density functions, expectations, moment-generating functions, joint and conditional random vectors and distributions, and distributions of functions of random variables, central limit theorem.
Prerequisite(s): MATH 2204 or MATH 2204H
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 2034 - Data Management for Industrial and Systems Engineers (3 credits)
Investigation of data modeling, storage, acquisition, and utilization in industrial and systems engineering. Development of effective spreadsheet applications. Design and implementation of relational databases via entity-relationship modeling, relational schema, normalization, and queries. Structured query language (SQL) fundamentals and SQL relational databases. Overview of non-relational databases, Big Data, and Data Analytics. All topics covered within the context of typical industrial and systems engineering problems.
Prerequisite(s): CS 1044 or CS 1064 or CS 1114 or ECE 1574
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 2044 - Careers in Industrial and Systems Engineering (1 credit)
Overview of the breadth of careers and professional opportunities in the field of industrial and systems engineering. Technical approaches and solutions, emerging trends, career progression, and leadership aspects of industrial and systems engineering practice. Representation of practice across all areas of industrial and systems engineering as well as across a range of industries.
Instructional Contact Hours: (1 Lec, 1 Crd)

ISE 2214 - Manufacturing Processes Laboratory (1 credit)
Laboratory exercises and experimentation in manufacturing processes. Emphasis on using production machines and equipment to make products using multiple manufacturing processes, coupled with inspection per engineering drawings. Processes include assembly, casting, machining, forming, welding, and non-traditional machining, performed manually and/or via computer programming. Also covers basic shop floor operation and documents used for monitoring and controlling part production.
Instructional Contact Hours: (3 Lab, 1 Crd)

ISE 2404 - Deterministic Operations Research I (3 credits)
Deterministic operations research modeling concepts. Linear programming, integer programming, and non-linear programming modeling, assumptions, algorithms, modeling languages, and modern optimization software. Graphical solution, Simplex tableau method and its graphical interpretation. Branch and bound and branch and cut methods. Duality, sensitivity analysis, and Karush-Kuhn-Tucker (KKT) Optimality Conditions with economic interpretation. Network models (formulations and algorithms) including transportation problems, assignment problems, shortest path problems, maximum flow problems, minimum cost network flow problems, and minimal spanning tree problems.
Prerequisite(s): MATH 1114 or MATH 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 2804 - Foundations of Systems Engineering (3 credits)
A systems approach to designing, building, verifying, deploying, operating, and sustaining complex engineered systems. Emergent properties of systems, system lifecycle, and systems engineering as a process driven discipline. Technical management of processes regarding acquisition, contracting, and development. Problem formulation and elicitation of requirements. Creation of system elements: resource components, functions, internal and external interfaces. Introduction to decision analysis and risk management, model-based systems engineering and system architectures.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ISE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ISE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ISE 3004 - Industrial Cost Control (3 credits)
Introduction to basic accounting concepts and operating characteristics of accounting systems. Principles of financial, cost and activity-based accounting, design of accounting systems, techniques of analysis, and cost control. Emphasis on interpretation of accounting for decision-analysis, including the benefits of limitations of accounting information.
Prerequisite(s): ISE 2014 or ME 3024
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3034 - Technical Communication for Engineers (3 credits)
Fundamentals of effective technical writing. Structure, presentation, and utility of common engineering documents: laboratory reports, technical reports, proposals, progress reports, and project reports. Practice in writing common engineering documents, both individually and collaboratively. Strategies and practice for effective oral technical presentations, both individually and group-based. Ethical and legal considerations in technical writing and oral technical presentations. All topics covered within the context of typical engineering problems and practice.
Prerequisite(s): ENGL 1106
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3204 - Manufacturing Processes (3 credits)
Survey of manufacturing processes including casting, forming, machining, welding, joining, and nontraditional processes such as electrical-discharge machining. Basic manufacturing materials and their properties, structure of metals, metal deformation and heat treatment. Mathematical modeling of common manufacturing processes; process planning and the effect of plans on cost; impact of product design on manufacturability and assemblability. Recent trends in manufacturing, sustainable manufacturing. Also includes topics in inspection and testing, computer-aided manufacturing, and numerical control.
Prerequisite(s): ENGE 1216 or ENGE 1414
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3214 - Facilities Planning and Logistics (3 credits)
Theory, concepts, and methods for designing and analyzing facilities and material flow in manufacturing, storage, and distribution environments. Topic areas include material handling systems, facility layout, facility location, warehousing, distribution, logistics, and transportation. C- or better in ISE 2014, 2404, and 3414.
Prerequisite(s): ISE 2014 and ISE 2404
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3414 - Probabilistic Operations Research (3 credits)
This course introduces probability models used to investigate the behavior and performance of manufacturing and service systems under conditions of uncertainty. Major topics include probability, conditioning, elementary counting processes, and Markov chains and Markov processes. Emphasis is on the use of these tools to model queues, inventories, process behavior, and equipment reliability. C- or better required in STAT 4105, MATH 2224 or 2204, MATH 2214 or 2214H, and ISE 2004.
Prerequisite(s): ISE 2024 and (MATH 2204 or MATH 2204H or MATH 2406H) and (MATH 2214 or MATH 2214H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3424 - Discrete-Event Computer Simulation (3 credits)
Analysis and design of work systems through static and dynamic simulation. Topics include an introduction to systems analysis and modeling, simulation optimization, model development and testing, and problem analysis through simulation. C- or better required in ISE 3414 and STAT 4105.
Prerequisite(s): ISE 3414
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ISE 3434 - Deterministic Operations Research II (3 credits)
Advanced concepts in deterministic operations research, including theory of complexity, integer programming, advanced linear programming techniques, nonlinear programming, dynamic programming. Covers modeling languages and optimization software for integer programming and nonlinear programming problems. Grade of C- or better required in ISE 2004, 2404 and MATH 2204 or 2224.
Prerequisite(s): ISE 2404 and (MATH 2224 or MATH 2204) and ISE 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3614 - Human Factors Engineering and Ergonomics (3 credits)
Investigation of human factors, ergonomics, and work measurement engineering, with emphasis on a systems approach toward workplace and machine design. Discussion of basic human factors research, discipline-specific ethics, design/evaluation methods for industrial and artificial intelligence (AI) systems including human machine interactions, human information processing, visual and auditory processes, design of display and control, effects of environmental stressors on humans, visualization and sonification of large datasets, human factors role in the design of machine learning and AI applications.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 3624 - Industrial Ergonomics (3 credits)
Introduction to ergonomics and work measurement with an emphasis on people at work. Discussion of methods for work measurement, ergonomic assessment, and evaluation, with major topics including productivity and performance, manual materials handling, work-related musculoskeletal disorders, safety, training and legal issues. C- or better required in ISE 3614.
Prerequisite(s): ISE 3614 and ESM 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4004 - Theory of Organization (3 credits)
A theory of cooperative behavior in formal organizations, including the structure and elements of formal organizations. The executive process and the nature of executive responsibility also are examined.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4005 - Project Management and Systems Design (2 credits)
Capstone design experience for ISE majors. 4005: Structured systems engineering and project management methods and tools to plan, manage, and execute technical industrial and systems engineering projects. Students work in teams to apply industrial and systems engineering and project management tools to define and analyze a real-world problem and communicate results effectively. 4006: Designing, implementing, and evaluating work system solutions, all via students working in teams. Communication of solutions to various project stakeholders.
Prerequisite(s): ISE 2034 and ISE 2214 and ISE 3034 and ISE 3214 and ISE 3424 and ISE 3624 and ISE 4204
Corequisite(s): ISE 4404
Instructional Contact Hours: (2 Lec, 2 Crd)

ISE 4006 - Project Management and Systems Design (2 credits)
Capstone design experience for ISE majors. 4005: Structured systems engineering and project management methods and tools to plan, manage, and execute technical industrial and systems engineering projects. Students work in teams to apply industrial and systems engineering and project management tools to define and analyze a real-world problem and communicate results effectively. 4006: Designing, implementing, and evaluating work system solutions, all via students working in teams. Communication of solutions to various project stakeholders.
Prerequisite(s): ISE 4005
Instructional Contact Hours: (2 Lec, 2 Crd)

ISE 4014 - Introduction to Management Systems (3 credits)
Introduction to a systems approach for the design and improvement of management systems used in organizations. Discussion of organizational improvement approaches to improve the design and operation of management systems used in managerial decision-making. Analysis of success and failure of organizational improvement projects. Discussion of performance measurement systems, evaluation, and assessment tools.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4015 - Management Systems Theory, Applications, and Design (3 credits)
Systems approach to management, domains of responsibility, structured and synergistic management tools, management system model, contextual frameworks, information portrayal, automation objectives model, evaluation, shared information processing, information modeling. A management process for definition, measurement, evaluation and control, the organization as an information processor, corporate culture, scoping agreements, schemas and management elements, structured design.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4204 - Production Planning and Inventory Control (3 credits)
Planning and control of operations in both manufacturing and service industries. Management and utilization of resources to support cost effective products and services. Principles, models, and techniques used for production planning and inventory control.
Prerequisite(s): ISE 2404 and ISE 3414 and STAT 4706
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4214 - Lean Manufacturing (3 credits)
Overview of Lean Manufacturing principles, theory, methods, and techniques in modern manufacturing enterprises. Lean philosophy and basic concepts, master production scheduling and production smoothing, assembly line sequencing, setup time reduction, U-shaped line balancing/operation, machine arrangement, kanban, autonomation, and value stream mapping. Investigation and discussion of lean manufacturing case studies. C- or better required in ISE 4204.
Prerequisite(s): ISE 4204
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4264 - Industrial Automation (3 credits)
Survey of various technologies employed in industrial automation, with emphasis on industrial applications of robotics, machine vision and learning, and programmable controllers. Introductory robot motion modeling, investigation into problems in Computer- Aided Design (CAD)/Computer-Aided Manufacturing (CAM) integration. Examination of components commonly employed in automation systems, their aggregation, and related production process design.
Prerequisite(s): ISE 3204 or ISE 2214
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ISE 4304 - Global Issues in Industrial Management (3 credits)
Industrial management topics of current interest explored from a global perspective. Current domestic and international challenges resulting from a global marketplace and the proliferation of information and technology. Industrial management and organizational performance, total quality management, business process re-engineering, leadership, organizational change, role of communication and information, and ethics. Examination and comparison across international boundaries.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4404 - Statistical Quality Control (3 credits)
Application of statistical methods and probability models to the monitoring and control of product quality. Techniques for acceptance sampling by variables and attributes. Shewhart control charts for both mean and range of quality characteristics. Design of experiments and analysis of variance for effective data-generation processes. Motivation behind, and theoretical development and application of, both control charts and design of experiments. Design of effective quality control procedures.
Prerequisite(s): ISE 3414 and STAT 4706
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4414 - Industrial Quality Control (3 credits)
Implementation of statistical quality control techniques in an industrial setting. Development and analysis of cost models for use in the design of optimal quality control plans. Also included are new techniques, advanced quality control models, and an examination of the role of industrial statistics in the overall product quality assurance function. C- or better required in ISE 4404.
Prerequisite(s): ISE 4404
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4424 - Logistics Engineering (3 credits)
Introduction to the key issues in the integrated support of a product or process. Synthesis of topics from earlier studies to provide a cohesive approach to their applications. Logistics engineering provides a survey of product support issues and methods of resolving them within the context of the overall production activity. C- or better required in ISE 3414.
Prerequisite(s): ISE 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4434 - Supply Chain and Operations Engineering (3 credits)
Mathematical models, algorithms, and tools to support the design/redesign and management of supply chain systems. Resiliency, reliability, efficiency, and effectiveness of supply chains; collaboration and coordination among the different decision-makers in supply chains; impact of new developments on supply chain engineering, including the growth of the internet and e-commerce, the need to build suitable and environmentally-friendly supply chains. Mathematical modeling and system-wide optimization of the entire supply chain system under certainty.
Prerequisite(s): ISE 2404 and ISE 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4624 - Physical Work Assessment (3 credits)
Physical ergonomics assessment methods, including cardiorespiratory testing, metabolic energy expenditure and balance, strength, anthropometry, endurance and fatigue, electromyography, biomechanics, thermal stress.
Prerequisite(s): ISE 3624
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4634 - Human Factors in Transportation (3 credits)
Introduction to human factors principles applied to surface transportation for industrial engineers. Understanding of human factors research methods, with applications for safety to the transportation system. Haddon's Matrix, human factors research methods, crash countermeasures, public policy implications, and automated driving systems.
Prerequisite(s): ISE 3614
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4644 - Risk and Hazard Control (3 credits)
Introduction to the fields of risk assessment, risk and hazard control, safety management, process safety, and system safety engineering through exposure to problems, principles, and practice. Integrated systems approach to problem solving. Industrial accident and disaster case study analysis and review of contemporary issues. Review of risk analysis and control techniques and overview of global regulations and guidelines for process, industrial, and occupational safety. C- or better required in ISE 3614.
Prerequisite(s): ISE 3614
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4654 - Principles of Industrial Hygiene (3 credits)
Introduction to the foundations of the field of Industrial Hygiene, that discipline devoted to the anticipation, recognition, measurement, evaluation, and control of occupational health hazards. Includes biological (e.g. microbial agents, allergens), chemical (e.g. solvents, carcinogens, dusts), and physical (e.g. radiation , temperature) hazards. Overview of control of health hazards, such as personal protective equipment, administrative controls, and engineering controls. Will involve lecture and participatory case-study activities. Will provide ample opportunity for hands-on use of monitoring equipment, protective equipment and controls testing devices.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4804 - System Dynamics Modeling of Industrial Systems (3 credits)
Computer-aided approach to analyze and make better decisions in complex industrial systems. Systems thinking and causal loop modeling of complexity over time. Interconnectivity of industrial systems, production, and service. Stock-flow diagrams. Systems modeling of product development and market adoption. Simulation of dynamic problems arising in complex systems. Systems modeling and simulation-based decision analysis to improve performance in service and manufacturing.
Instructional Contact Hours: (3 Lec, 3 Crd)

ISE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ISE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ISE 4984A - Special Study (1-19 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: Variable credit course

ISE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Industrial Design (IDS)

IDS 1114 - Play to Make (3 credits)
Transdisciplinary practice in an inclusive, collaborative environment, through the lens of design, technology and creative expression, to describe and evaluate the convergence between art, technology, and human experience in the arts, sciences, humanities, and engineering. Exploration of play for creation of ideas and artifacts (including, but not restricted to multimedia narratives, learning simulations, immersive/performative experiences, and data exploration). Inclusive collaboration with peers and practicing professionals in diverse fields. Critical consideration of art and design and the impacts on history, society, cultures, individuals, and communities. Collaborative research, design, creation, and exhibition of a transdisciplinary project to identify and address a global challenge.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

IDS 2015 - Industrial Design Laboratory II (5 credits)
Introduction to the discipline of Industrial Design. Emphasis on form generation, including: design theory, problem solving methodologies, conceptualization of ideas, and aesthetic sensibility. Secondary emphasis on skill development in 2 and 3 dimensions: awareness of materials and manufacturing processes, storyboarding, model making, written documentation of design process, and verbal presentation. IDS 2015 is taught in conjunction with IDS 3224: Topics in Design Competencies: Workshop and IDS 2065: Visual Design.
Prerequisite(s): ARCH 1016
Instructional Contact Hours: (3 Lec, 7 Lab, 5 Crd)

IDS 2016 - Industrial Design Laboratory II (6 credits)
Introduction to the discipline of Industrial Design. Emphasis on form generation, including: design theory, problem solving methodologies, conceptualization of ideas, and aesthetic sensibility. Secondary emphasis on skill development in 2 and 3 dimensions: awareness of materials and manufacturing processes, storyboarding, model making, written documentation of design process, and verbal presentation. IDS 2015 is taught in conjunction with IDS 3224: Topics in Design Competencies: Workshop and IDS 2065: Visual Design.
Prerequisite(s): IDS 2015
Instructional Contact Hours: (3 Lec, 9 Lab, 6 Crd)

IDS 2034 - Design Visualization (3 credits)
Visual communication, modes of representation techniques, freehand drawings, perspectives, axonometric techniques, computer modeling, and form analysis. Presentation of ideas through rapid sketching and communicating resolved designs through detailed hand drawings. Development of portfolio and skills to choose appropriate methods for tasks.
Prerequisite(s): ARCH 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

IDS 2044 - Human Factors (3 credits)
This course examines human factors as it informs the design process, and as a tool to maximize the physical and psychological aspects of design toward the establishment of a human centered design. Frameworks of industrial design philosophy, research methods, standards and data, human issues, cultural context, and design outcomes.
Prerequisite(s): ARCH 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

IDS 2114 - History of Industrial Design (3 credits)
Broad movements in the history of art and industrial design. Application and analysis of art and design elements, principles, and composition techniques. Materials, processes, and innovations in art and design in context of culture, geography, and perspective.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

IDS 2124 - History of Modern Industrial Designers (3 credits)
Introduction to modern industrial design. Elements, principles, and composition techniques in art and design. Major movements from the 20th-century and how the values, ideals, and styles of designers influence the evolution of design. Comparative study of objects, design theory, and methodologies related to the changes in the profession and global perspectives.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

IDS 2214 - IDS Studio for Minors (6 credits)
Introduction to the discipline and the critical elements that contribute to the complexity of a work of design. Emphasis on intellectual discipline, skills development, communication of ideas, materials research, and a self-motivated search for critical issues. For registered Industrial Design Minors only.
Instructional Contact Hours: (3 Lec, 9 Lab, 6 Crd)

IDS 2304 - Computer Aided Industrial Design (3 credits)
An introduction to computer aided two and three- dimensional design and modeling as applied in industrial design using both solid and surface software modeling techniques.
Prerequisite(s): ARCH 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

IDS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IDS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IDS 3015 - Industrial Design Laboratory III (6 credits)
Introduction to systematic processes in design. Introduction and application of Human Factors and systematic planning methods in the development of industrial products in the areas of work, education and health. Development of professional presentation skills and methods.
Prerequisite(s): IDS 2016
Instructional Contact Hours: (3 Lec, 9 Lab, 6 Crd)

IDS 3016 - Industrial Design Laboratory III (6 credits)
Introduction to systematic processes in design. Introduction and application of Human Factors and systematic planning methods in the development of industrial products in the areas of work, education and health. Development of professional presentation skills and methods.
Prerequisite(s): IDS 3015
Instructional Contact Hours: (3 Lec, 9 Lab, 6 Crd)

IDS 3124 - Materials and Processes (3 credits)
Current design processes, materials, manufacturing processes, techniques, and equipment used in the design of products for mass and rapid production. Variety of materials and manufacturing processes available to the industrial designer for mass production impact his/her design process. Emphasis placed on the relationship of processes and equipment, to the environment and the end user. Includes concepts of material science. Practical issues of material selection and application, process selection, and specification.
Instructional Contact Hours: (3 Lec, 3 Crd)

IDS 3204 - Topics in Professional Development (1-19 credits)
Issues of practicing in an industrial design professional environment: public speaking, portfolio presentation, client/civic engagement (service learning), interdisciplinary teamwork and leadership in the development process of industrial products. Repeatable with instructor permission. Variable credit and duration.
Instructional Contact Hours: Variable credit course
Repeatability: up to 99 credit hours

IDS 3224 - Topics in Design Competencies (1-19 credits)
Issues of industrial design competencies and expertise required in a professional design environment, for example: software; model making (both hand making and digital rapid prototyping); workshop (wood, metal and plastics); specialized product design areas (packaging, furniture or exhibit design). Repeatable with instructor permission Variable credit and duration.
Instructional Contact Hours: Variable credit course
Repeatability: up to 99 credit hours

IDS 3234 - Topics in Design Theory (1-19 credits)
Issues of industrial design theory required for advancement in a professional design environment, for example: Product Semantics; Design Ethics; EcoDesign/Sustainability; Universal Design. Repeatable with instructor permission. Variable credit and duration.
Instructional Contact Hours: Variable credit course
Repeatability: up to 99 credit hours

IDS 3514 - Design Research (3 credits)
The course looks at the question of research and the ongoing exercise of re-definition for designers using examples of current design research corporations.
Prerequisite(s): IDS 2016
Instructional Contact Hours: (3 Lec, 3 Crd)

IDS 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

IDS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

IDS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IDS 4015 - Industrial Design Laboratory IV (6 credits)
Detailed analysis, research and application of human factors to the design of equipment, work spaces and environments. Design and construction of full scale, interactive models and spaces. Introduction to group activities. Emphasis on the needs, the production and marketing factors of special populations, such as the elderly and disabled.
Prerequisite(s): IDS 3016
Instructional Contact Hours: (3 Lec, 9 Lab, 6 Crd)

IDS 4016 - Industrial Design Laboratory IV (6 credits)
Detailed analysis, research and application of human factors to the design of equipment, work spaces and environments. Design and construction of full scale, interactive models and spaces. Introduction to group activities. Emphasis on the needs, the production and marketing factors of special populations, such as the elderly and disabled.
Prerequisite(s): IDS 4015
Instructional Contact Hours: (3 Lec, 9 Lab, 6 Crd)

IDS 4044 - Professional Practice and Entrepreneurship (2 credits)
Focus on assembling multidisciplinary teams to engage in the process of bringing a product to market, building a business around a core competency in design, the structure of a design office, and the development and protections of intellectual property. Pre-requisite: Senior standing or permission of instructor.
Prerequisite(s): IDS 2015
Instructional Contact Hours: (2 Lec, 2 Crd)

IDS 4094 - Startup: Commercialization of Innovation (3 credits)
Work in interdisciplinary teams in an experiential environment replicating modern innovation environments. Engage in real world innovation commercialization opportunities. Individual experiences and projects involving actual inventions, innovations, technologies, intellectual property (e.g. patents) and market opportunities. Integrate design thinking, scientists, entrepreneurs, advisors and other potential collaborators. Create a representation of a plan for a minimum viable product for an innovative product or service based on customer and market feedback.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGE 4094, MGT 4094

IDS 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

IDS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IDS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course
Repeatability: up to 99 credit hours

IDS 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IDS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course
Repeatability: up to 99 credit hours

IDS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Instructional Design & Tech (EDIT)

EDIT 4614 - Instructional Technology: Audio-visual and Computer Uses (3 credits)
An introductory instructional technology course. Principles and production of audio-visual materials and methods in instruction. Application of microcomputers in instruction, emphasizing computer literacy, programming and evaluation of instructional software. Course in methods of teaching, field teaching experience, or teaching experience required.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

EDIT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDIT 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Integrated Science (ISC)

ISC 1004 - Integrated Science Curriculum First-Year Experience (2 credits)
Introduction to the different fields of science and mathematics, and academic and career planning for majors that are enrolled in the Integrated Science Curriculum. Discussion of academic plans and university and college requirements. Discussion of academic resources such as the University Library, academic integrity, VT Engage, and Recreation Sports. Resume building for internships, research experiences, and graduate school. Exposure to areas of practice and research, and opportunities for education, training, and employment in fields of interest to students.
Instructional Contact Hours: (2 Lec, 2 Crd)

ISC 1005 - Integrated Scientific Reasoning (3 credits)
Introduction to scientific reasoning in the context of integrated science. Exposure to the scientific process through sample topics that showcase the science involved. Data collection and analysis in physical and life sciences through hands-on lab components integrated into the class. Ethical issues as related to physical and biological systems. 1005: Integrated Science: Water and Life on Earth. 1006: Integrated Science: Forms of Energy.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ISC 1006 - Integrated Scientific Reasoning (3 credits)
Introduction to scientific reasoning in the context of integrated science. Exposure to the scientific process through sample topics that showcase the science involved. Data collection and analysis in physical and life sciences through hands-on lab components integrated into the class. Ethical issues as related to physical and biological systems. 1005: Integrated Science: Water and Life on Earth. 1006: Integrated Science: Forms of Energy.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ISC 1105 - Integrated Science I (6 credits)
Introduction to the fundamental principles of biology, chemistry, physics and mathematics in an integrated environment. Application of these principles to large-scale societal problems, including the areas of food, energy, health, water, the environment, and more. 1105: Discrete dynamical systems, differentiation and integration, differential equations, population dynamics, chemical reactions, chemical kinetics, Newtons laws, linear and rotary motion, kinetic and potential energy. 1106: Genetics, evolution, molecular biology, organic chemistry, biochemistry, thermodynamics, gases, heat engines, oscillations.
Corequisite(s): ISC 1115
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (6 Lec, 6 Crd)

ISC 1106 - Integrated Science I (6 credits)
Introduction to the fundamental principles of biology, chemistry, physics and mathematics in an integrated environment. Application of these principles to large-scale societal problems, including the areas of food, energy, health, water, the environment, and more. 1105: Discrete dynamical systems, differentiation and integration, differential equations, population dynamics, chemical reactions, chemical kinetics, Newtons laws, linear and rotary motion, kinetic and potential energy. 1106: Genetics, evolution, molecular biology, organic chemistry, biochemistry, thermodynamics, gases, heat engines, oscillations.
Prerequisite(s): ISC 1105
Corequisite(s): ISC 1116
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (6 Lec, 6 Crd)

ISC 1106H - Integrated Science I (6 credits)
Introduction to the fundamental principles of biology, chemistry, physics and mathematics in an integrated environment. Application of these principles to large-scale societal problems, including the areas of food, energy, health, water, the environment, and more. 1105: Discrete dynamical systems, differentiation and integration, differential equations, population dynamics, chemical reactions, chemical kinetics, Newtons laws, linear and rotary motion, kinetic and potential energy. 1106: Genetics, evolution, molecular biology, organic chemistry, biochemistry, thermodynamics, gases, heat engines, oscillations.
Prerequisite(s): ISC 1105
Corequisite(s): ISC 1116
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (6 Lec, 6 Crd)

ISC 1115 - Integrated Science Laboratory I (2 credits)
Laboratory component of Integrated Science Curriculum where students conduct project-based interdisciplinary laboratories organized into content modules. Discussion of ethical issues connected to scientific advances. 1115: tools of scientific research, water, ecology, kinetics. 1116: tools of scientific research, environmental chemistry, surfactants, nanomedicine.
Corequisite(s): ISC 1105
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (6 Lab, 2 Crd)

ISC 1116 - Integrated Science Laboratory I (2 credits)
Laboratory component of Integrated Science Curriculum where students conduct project-based interdisciplinary laboratories organized into content modules. Discussion of ethical issues connected to scientific advances. 1115: tools of scientific research, water, ecology, kinetics. 1116: tools of scientific research, environmental chemistry, surfactants, nanomedicine.
Prerequisite(s): ISC 1115
Corequisite(s): ISC 1106
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (6 Lab, 2 Crd)

ISC 2105 - Integrated Science II (6 credits)
Introduction to the fundamental principles of biology, chemistry, physics and mathematics in an integrated environment. 2105 Molecular cell biology, metabolism, photosynthesis, membrane transport, quantum theory, spectroscopy, elasticity, waves, fluids, electricity and magnetism, linear algebra, genomics, probability theory. 2106: Gene regulation, signal transduction, development, motility, intramolecular forces, stochastic processes, optics and microscopy, materials science, analytical tools. Restricted to majors in the College of Science. Only by permission of the instructor.
Prerequisite(s): ISC 1106H
Instructional Contact Hours: (6 Lec, 6 Crd)

ISC 2106 - Integrated Science II (6 credits)
Introduction to the fundamental principles of biology, chemistry, physics and mathematics in an integrated environment. 2105: Molecular cell biology, metabolism, photosynthesis, membrane transport, quantum theory, spectroscopy, elasticity, waves, fluids, electricity and magnetism, linear algebra, genomics, probability theory. 2106: Gene regulation, signal transduction, development, motility, intramolecular forces, stochastic processes, optics and microscopy, materials science, analytical tools. Restricted to majors in the College of Science. Only by permission of the instructor.
Prerequisite(s): ISC 2105
Instructional Contact Hours: (6 Lec, 6 Crd)

ISC 2106H - Integrated Science II (6 credits)
Introduction to the fundamental principles of biology, chemistry, physics and mathematics in an integrated environment. 2105: Molecular cell biology, metabolism, photosynthesis, membrane transport, quantum theory, spectroscopy, elasticity, waves, fluids, electricity and magnetism, linear algebra, genomics, probability theory. 2106: Gene regulation, signal transduction, development, motility, intramolecular forces, stochastic processes, optics and microscopy, materials science, analytical tools. Restricted to majors in the College of Science. Only by permission of the instructor.
Prerequisite(s): ISC 2105
Instructional Contact Hours: (6 Lec, 6 Crd)

ISC 2115 - Integrated Science Laboratory II (1 credit)
Laboratory component of Integrated Science Curriculum where students conduct project-based interdisciplinary laboratories organized into content modules. 2115: Tools of Scientific Research, Genomics and Proteomics, Nanoscience, and Electromagnetism. 2116: Tools of Scientific Research, Neuroscience, Optics, and Independent Research Project.
Prerequisite(s): ISC 1116
Corequisite(s): ISC 2105
Instructional Contact Hours: (3 Lab, 1 Crd)

ISC 2116 - Integrated Science Laboratory II (1 credit)
Laboratory component of Integrated Science Curriculum where students conduct project-based interdisciplinary laboratories organized into content modules. 2115: Tools of Scientific Research, Genomics and Proteomics, Nanoscience, and Electromagnetism. 2116: Tools of Scientific Research, Neuroscience, Optics, and Independent Research Project.
Prerequisite(s): ISC 2115
Corequisite(s): ISC 2106
Instructional Contact Hours: (3 Lab, 1 Crd)

ISC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ISC 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Interior Design (ITDS)

ITDS 1114 - Design Appreciation (3 credits)
Introduction to fundamental design concepts, design methods and the history of design. Examples drawn from architecture, interior design, industrial design, graphic design as well as vernacular craft and design traditions. Key concepts from art, literature and philosophy are discussed in relation to design theory.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ITDS 1224 - Introduction to Interior Design (3 credits)
Introduction to the elements and principles of interior design, the discipline and practice of interior design. Case studies from interior design practice. Design thinking, language of design, career paths, contemporary issues, global issues, presentation and drawing techniques and sketchbook preparation.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ITDS 2044 - Interior Design I (6 credits)
First in a series of six studios. Foundation level interior design studio. Exploration and development of interior spaces emphasizing spatial volume, human factors, elements and principles of design, and presentation techniques. Course contact to credit hour structure: Lecture (1H,1C), Lab (6L, 2C), Design Lab/Studio (5L,3C).
Prerequisite(s): ARCH 1016
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

ITDS 2054 - Interior Design II (6 credits)
Spatial relationships continue as a priority from ITDS 2044 and become more advanced. Programs of required spaces are introduced in design projects along with issues of human behavior and perception and color. Course contact to credit hour structure: Lecture (1H,1C), Lab (6L, 2C), Design Lab/Studio (5L,3C).
Prerequisite(s): ITDS 2044
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

ITDS 2134 - Materials and Methods in Interior Design (3 credits)
Properties and appropriate use of materials in design and construction of building interiors. Floor, wall, and ceiling materials, and materials used in furnishings and equipment are included. Special attention is given to the health effects and environmental impact of material choices in interior design.
Instructional Contact Hours: (3 Lec, 3 Crd)

ITDS 2224 - Interior Design Graphic Communication (3 credits)
Exploration and development of advanced presentation techniques appropriate for communicating interior design concepts. Special attention is given to utilizing digital media as support for visual and verbal communication.
Prerequisite(s): ITDS 2114
Corequisite(s): ITDS 2144
Instructional Contact Hours: (6 Lab, 3 Crd)

ITDS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITDS 3044 - Interior Design III (6 credits)
Exploration and development of interior spaces emphasizing corporate office use, branding of interior environments, and building system integration. Course contact to credit hour structure: Lecture (1H,1C), Lab (6L, 2C), Design Lab/Studio (5L,3C).
Prerequisite(s): ITDS 2054
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

ITDS 3054 - Interior Design IV (6 credits)
Design process, space planning and code compliance with advanced understanding of appropriate concepts for integrating furniture, fixtures, equipment, color, and finish materials in design solutions. Course contact to credit hour structure: Lecture (1H,1C), Lab (6L, 2C), Design Lab/Studio (5L,3C).
Prerequisite(s): ITDS 3044
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

ITDS 3114 - Sustainable Design and Biophilia (3 credits)
Sustainable design concepts and theories. Ethical considerations of biophilia, biomimicry, cradle-to-cradle, and other emerging ways of addressing environmental sustainability. Use of biophilia to guide decision making in the built environment. Use of core green building concepts including water use, energy use, sustainable sites and materials. Review of Green Building standards.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ITDS 3125 - History of Interiors (3 credits)
Survey of significant developments in the design of interiors, furniture, and materials culture with a focus on western civilization. Style, scale, material culture of each period. Social, economic, technological and political influences on design. Significant designers and craftsmen. 3125: 3000 BC through the 19th century European. Egypt, Greece, Rome, Renaissance, Baroque, Rococo, Neoclassical. 3126: Colonial America through 21st century including Modern design. Bauhaus, DeStijl, Post-War, Post-Modern, Eastern influences.
Instructional Contact Hours: (3 Lec, 3 Crd)

ITDS 3126 - History of Interiors (3 credits)
Survey of significant developments in the design of interiors, furniture, and materials culture with a focus on western civilization. Style, scale, material culture of each period. Social, economic, technological and political influences on design. Significant designers and craftsmen. 3125: 3000 BC through the 19th century European. Egypt, Greece, Rome, Renaissance, Baroque, Rococo, Neoclassical. 3126: Colonial America through 21st century including Modern design. Bauhaus, DeStijl, Post-war, Post-Modern, Eastern influences.
Instructional Contact Hours: (3 Lec, 3 Crd)

ITDS 3175 - Building Systems for Interior Design (3 credits)
Overview of building systems as they relate to the design of building interiors. 3175: overview of building construction including structural systems and materials, code information and thermal concepts related to building systems. 3176: lighting for buildings, sustainable design guidelines, integration of building systems.
Prerequisite(s): ITDS 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

ITDS 3176 - Building Systems for Interior Design (3 credits)
Overview of building systems as they relate to the design of building interiors. 3175: overview of building construction including structural systems and materials, code information and thermal concepts related to building systems. 3176: lighting for buildings, sustainable design guidelines, integration of building systems.
Prerequisite(s): ITDS 2044 and ITDS 3175
Instructional Contact Hours: (3 Lec, 3 Crd)

ITDS 3184 - Construction Documents for Interior Design (3 credits)
An overview of construction documents: drawings and specifications. Development of a set of construction documents for a small commercial interior.
Instructional Contact Hours: (3 Lec, 3 Crd)

ITDS 3954 - Study Abroad-Interior Design (1-19 credits)
Instructional Contact Hours: Variable credit course

ITDS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITDS 4044 - Interior Design V (6 credits)
High-level spatial quality and design solution. Exploration and development of interior spaces for a variety of project types. Focus on collaboration and team work. Course contact to credit hour structure: Lecture (1H,1C), Lab (6L, 2C), Design Lab/Studio (5L,3C).
Prerequisite(s): ITDS 3054
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

ITDS 4054 - Interior Design VI (6 credits)
Senior Thesis studio requiring the integration of research and the design of a self-generated project. Course contact to credit hour structure: Lecture (1H,1C), Lab (6L, 2C), Design Lab/Studio (5L,3C).
Prerequisite(s): ITDS 4044 and ITDS 4224
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

ITDS 4224 - Design Research for Interiors (3 credits)
Project Programming and Design Research Methods in Interior Design. Evaluate and apply design research. Methods in design research, evidence-based design, and neuroscience.
Corequisite(s): ITDS 4044
Instructional Contact Hours: (3 Lec, 3 Crd)

ITDS 4554 - Contemporary Interior Design Practice (3 credits)
Study of social, economic, political, and technological issues that influence contemporary interior design practice.
Prerequisite(s): ITDS 3126
Instructional Contact Hours: (3 Lec, 3 Crd)

ITDS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITDS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITDS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITDS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

International Studies (IS)

IS 1004 - Nations and Nationalities (3 credits)
Introduction to world and American ethnic and indigenous cultures and to social constructions of human and group identity, nationalism and extreme ethno-nationalism. History of the political, economic, and cultural transition from primordial communities to sovereign states. Introduction to the rise of racism, sexism, ethnicism, classism, nativism, xenophobia, etc. in modern societies and episodes of mass political violence including ethnic cleansing and genocide.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 1004

IS 1024 - Comp Gov & Politics (3 credits)
Government and politics of selected countries outside the United States; nature of politics and government, types of political systems, linkages of people and governments, and current political issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 1024

IS 1034 - Introduction to International Studies and Political Science (3 credits)
Introduces students to the fields of International Studies and Political Science and their respective subfields. Familiarizes students with the undergraduate programs in International Studies and Political Science and emphasizes student preparation for careers in the respective fields. Focuses on inquiry, problem-solving, integration of ideas and experiences with a focus on International Studies and Political Science. Familiarizes students with the basic principles of the research and writing process.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 1034

IS 1104 - Introduction to European Studies (3 credits)
Multidisciplinary analysis of core issues and topics in European studies. Current affairs, politics, economics, culture, religions, society and history. Regional and individual country perspectives. Basic research techniques and evaluation of sources.
Instructional Contact Hours: (3 Lec, 3 Crd)

IS 1114 - Introduction to Transatlantic Studies (3 credits)
Multidisciplinary analysis of core issues and topics in transatlantic studies. Origins and evolution of transatlantic interactions. Historical, political, economic, cultural (including language and literature), civilizational, religious, and societal ties binding Europe and the Americas. Basic research techniques and evaluation of sources.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 1114

IS 1204 - Topics in Global Dialogues (1 credit)
Examination of the impact of culture in world politics. Topics under examination include: culture and global diversity; culture, identity, and order in world politics; international conflict and intercultural relations. Extensive use of case studies. May be repeated twice with different content for a maximum of three (3) credits.
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours
Course Crosslist: PSCI 1204

IS 2004 - Research and Writing in International Studies (3 credits)
Introduces the research and writing process in the field of International Studies. Addresses topics such as selecting and planning a research project, conceptualizing a research design, gathering and analyzing data, interpreting the results and writing a report. Prioritizes research within a framework of rigorous, well-rounded and thorough practices of research ethics. Emphasizes intercultural and diverse research and practices.
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

IS 2034 - Geography of Global Conflict (3 credits)
Geographical dimensions of global conflicts, international management of conflicts, conflicts of differences, historical, ideological, failed states and resources will be examined. Background to conflicts, current status of conflicts, different points of view in conflict. Topics in the course will change as the geography of global conflict changes.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2034, PSCI 2034

IS 2044 - Food, War and Conflict (3 credits)
Explores the history of food production and processing relative to the commencement or continuation of conflict. Examines why and how wars have been fought over economic policies, food trade and control of food supplies. Examines efforts to protect food and water supplies from intentional contamination and acts of terrorism. Focus on food products and the preservation, processing and distribution technologies that arose from war and conflict.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FST 2044, PSCI 2044

IS 2054 - Introduction to World Politics (3 credits)
An introduction to the prevalent methods and theories in the study of world politics. Topics include: historical context of contemporary world politics, global actors and power relations, conflict and conflict resolution, international law, and contemporary global issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2054, PSCI 2054

IS 2064 - The Global Economy and World Politics (3 credits)
Introduction to theories and methods in the study of global political economy. Topics include: historical origins, comparative advantage, the factor endowment trade theory, the gold standard, economic nationalism, the Great Depression, the Bretton Woods System, Keynesianism, the Nixon shocks, international organizations, monetary governance, the Great Recession, poverty and underdevelopment, and contemporary challenges of income inequality within and among economies.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2064, PSCI 2064

IS 2084 - The Evolution of World Order (3 credits)
A historical and comparative study of states systems (i.e, ancient, medieval, modern, and contemporary states system). Emphasis on the globalization of the European states system, its various aspects (political, economic, cultural, religious, civilizational, and technological) and its implications for contemporary world order (i.e., the question of human equality and the impact of colonialism and post-colonialism on the question of social, political and economic justice).
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 2084

IS 2104 - Europe Country Analysis (3 credits)
Examination of the politics, economics, culture, society, population patterns, and history of individual European countries. Impact of individual European states' domestic affairs on their respective European sub-regions and Europe as a whole. Analysis of intra-European regional developments. Examination of differing country perspectives on European integration.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 2104

IS 2114 - Transatlantic Political Frameworks (3 credits)
Examination of transatlantic political, security and economic institutions, such as the Organization for Economic Cooperation & Development (OECD), the North Atlantic Treaty Organization (NATO), and the Organization for Security & Cooperation in Europe (OSCE). Impact of domestic politics and external policies on the operation of transatlantic institutions. US-European relations and their impact on transatlantic institutions and European security. Bilateral political links between European and North America States (i.e., the UK-US- Canada, and France-Canada) and their impact on transatlantic relations and European security.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 2114

IS 2134 - Geography of the Global Economy (3 credits)
Geographical dimensions of the global economy since World War II. Globalization and the emergence of a new international division of labor. The relative decline of the United States and the growth of Japan, East Asia and the European Union. Changing geographies of foreign direct investment location. Places and regions in geo-economic discourse. Population and resources issues in the early twenty-first century.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2134, PSCI 2134

IS 2224 - Geography of Europe (3 credits)
Europe: as an idea, as a place, as a space, and as a political entity. Basic knowledge of Europe's historical physical environments, political geography, population distribution, varied cultures, and economic development. Cultural variations and their implications on settlement patterns, political divisions, and economic patterns and processes.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2224, PSCI 2224

IS 2474 - Religion and Violence (3 credits)
Investigation of the categories of religion and secularity as they apply to war and peace. Analysis of episodes from both past and present in which religion seems to have played a role. Introduction to research skills related to the study of religion and violence, building from theoretical and historical considerations.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2474

IS 2484 - Religion and Politics (3 credits)
Investigation of religion and politics as distinct categories in different times and places. Analysis of episodes from both past and present in which religion and politics have come together, or have been kept apart. Examination of the roles religion and politics play in the modern world and how they impact the lived experience of diverse populations both in the United States and throughout the world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 2484, RLCL 2484

IS 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 3004 - Professionalism and Careers in Political Science and International Studies (3 credits)
Designed to teach students how to synthesize skills and information learned in their Political Science and International Studies classes. Exploration of various career options, graduate school options, and proper procedures for seeking and applying for employment and graduate school. Introduction to professionalism in the workplace and professional development in the area of political science and international studies. Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3004

IS 3034 - The CIA: Its Capabilities in Todays Geo-Political World (3 credits)
Role of the discipline of geography in the origins, procedures, and history of CIA. Role of the CIA in providing national intelligence at both strategic and operational levels. Origins and changes to the CIA since WWII. Capabilities to support both policy-makers and national security entities. Case studies illustrating the CIAs operations in different regions of the world.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 3034, PSCI 3034

IS 3044 - The Politics of Internet Governance (3 credits)
Introduces students to theoretical, technological, and policy debates in Internet governance. Topics include multistakeholder governance, cybersecurity and cybercrime, network investigative techniques, data protection, vulnerability disclosure, use of anonymity-granting technologies, network neutrality, virtual currencies, big data, algorithmic bias and decision-making, politics of the domain name system, privacy, free expression, cross-border dispute resolution, data ownership, and challenges to state authority.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3044

IS 3054 - The Dark Web and Threat Analytics (3 credits)
Introduction to dual-use anonymity-granting technologies such as the Dark Web. Covers open source threat intelligence as a technique to assess trends and trajectories in anonymous online content. Substantive topics include the use of Dark Web technologies for political expression in repressive regimes, anonymity and privacy protection in an age of big data as well as the misuse of these tools for doxing, trolling, and the creation of illegal markets for drugs, guns, malicious software, human trafficking, and child abuse imagery. Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3054

IS 3064 - Food Politics (3 credits)
Focuses on how scholars, pundits, citizens, and policymakers think about food on local, national, and global scales. Explores various ways of producing, distributing, and consuming food and how they are implicated in specific organizations of power and possibility. Examines how food, and the discourses surrounding food, help structure understandings of a variety of issues, such as identity, property, labor, gender, race, responsibility, and death.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3064

IS 3104 - Security Studies: Theories and Concepts (3 credits)
Introduces the various theoretical approaches to security. Examines key concepts in the field of Security Studies, such as uncertainty, polarity, war, coercion, terrorism, intelligence, genocide, crimes against humanity, ethnic conflict, and human security.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3104

IS 3114 - Global Security (3 credits)
Explores various theoretical approaches to security and discusses traditional and non-traditional security issues. Focuses on global, international and regional security challenges and examines alternative strategic and tactical solutions for addressing them.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3114

IS 3115 - Selected World Problems (3 credits)
Selected world problems and how they affect various countries and regions. Each semester, a topic will be chosen. 3115: World problems in a global or regional context. 3116: World problems in a European context. 3115 and/or 3116 may be repeated for a combined maximum of 9 credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 3115

IS 3116 - Selected World Problems (3 credits)
Selected world problems and how they affect various countries and regions. Each semester, a topic will be chosen. 3115: World problems in a global or regional context. 3116: World problems in a European context. 3115 and/or 3116 may be repeated for a combined maximum of 9 credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 3116

IS 3125 - Intelligence and National Security (3 credits)
Introduces students to the field of Intelligence Studies. Focuses on the structure, role and capabilities of the U.S. intelligence community and investigates the relationship between intelligence and national security strategy. Addresses topics pertaining to data collection and intelligence analysis, covert operations and counterintelligence. 3125: Intelligence and National Security. 3126: The Intelligence Process.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3125

IS 3126 - Intelligence and National Security (3 credits)
Introduces students to the field of Intelligence Studies. Focuses on the structure, role and capabilities of the U.S. intelligence community and investigates the relationship between intelligence and national security strategy. Addresses topics pertaining to data collection and intelligence analysis, covert operations and counterintelligence. 3125: Intelligence and National Security. 3126: The Intelligence Process.
Prerequisite(s): IS 3125 or PSCI 3125
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3126

IS 3134 - Global Conflict and War (3 credits)
Focuses on the causes, legal and moral constraints, impacts, and consequences of conflict and war. Explores historical and contemporary cases of conflict and war and investigates the role of state and non-state actors in these conflicts. Examines the impact of technology, religion, culture and identity on the present and future of war.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3134

IS 3135 - Strategies of Modern Warfare (3 credits)
3135: Analyzes the theory and practice of conventional warfare and investigates how strategic thought has influenced and shaped modern warfare. 3136: Examines the theory and practice of irregular warfare and focuses on the theory and practice of counterinsurgency and counterterrorism.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3135

IS 3136 - Strategies of Modern Warfare (3 credits)
3135: Analyzes the theory and practice of conventional warfare and investigates how strategic thought has influenced and shaped modern warfare. 3136: Examines the theory and practice of irregular warfare and focuses on the theory and practice of counterinsurgency and counterterrorism.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3136

IS 3144 - Global Governance and Public Policy (3 credits)
Examines the norms, institutions, practices and processes developed by the international community to address global problems such as poverty, pandemics, global warming, displaced persons and transnational crime. Utilizes theories of decision- and policy-making and investigates the role of states, international governmental and non- governmental organizations, coalitions and corporations in global public policy-making.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3144

IS 3154 - Topics in Global Public Policies (3 credits)
Examines in depth selected global public policies pertaining to health, energy, environment, development, education, refugees or labor. May be repeated with different content for a maximum of nine (9) credits.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) or (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 3154

IS 3164 - Global Trade: Structures and Policies (3 credits)
Focuses on the operations of global trading system and its structure, theories of trade in international political economy, world trading powers and international and regional trade international organizations such as the World Trade Organization (WTO), the European Union (EU), the United States-Mexico-Canada Agreement (USMC), European Union (EU), United Nations Conference on Trade and Development (UNCTAD), the United Nations Industrial Development Organization (UNIDO) and the World Intellectual Property Organization (WIPO) and their policies.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3164

IS 3165 - Global Economic Governance and Policy (3 credits)
3165: International Trade - Focuses on the operations of global and regional international organizations such as the World Trade Organization (WTO), the European Union (EU), the United Nations Conference on Trade and Development (UNCTAD), the United Nations Industrial Organization (UNIDO) and the World Intellectual Property Organization (WIPO) and examines their policies and regulations. 3166: International Finance - Focuses on the operations of global and regional international organizations such as the International Monetary Fund (IMF) and World Bank, the European Union (EU), the Organization for Economic Cooperation and Development (OECD) and examines their policies and regulations.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3165

IS 3166 - Global Economic Governance and Policy (3 credits)
3165: International Trade - Focuses on the operations of global and regional international organizations such as the World Trade Organization (WTO), the European Union (EU), the United Nations Conference on Trade and Development (UNCTAD), the United Nationa Industrial Organization (UNIDO) and the World Intellectual Property Organization (WIPO) and examines their policies and regulations. 3166: International Finance - Focuses on the operations of global and regional international organizations such as the International Monetary Fund (IMF) and World Bank, the European Union (EU), the Organization for Economic Cooperation and Development (OECD) and examines their policies and regulations.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3166

IS 3174 - Monetary Foundations of the World Economy (3 credits)
Focuses on the evolution the operations of global and structure of regional international organizations such as the International Monetary Fund (IMF) and World Bank, the global financial and monetary order. Theories of the global and monetary system in international political economy, the structure of world finance, international financial institutions, the rise of new financial powers in the world economy, central banking, monetary and financial regulation and financial crises and policy responses.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3174

IS 3175 - Global Development (3 credits)
3175: The Politics of Development - Examines issues and politics of the developing world and investigates the forces that promote or cut off economic development in low-income countries. Discusses development issues in various world regions. 3176: Economic Development - Emphasizes economic development and focuses on domestic and international policies aiming at addressing poverty in the developing world.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3175

IS 3176 - Global Development (3 credits)
3175: The Politics of Development - Examines issues and politics of the developing world and investigates the forces that promote or cut off economic development in low-income countries. Discusses development issues in various world regions. 3176: Economic Development - Emphasizes economic development and focuses on domestic and international policies aiming at addressing poverty in the developing world.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3176

IS 3184 - Human Security (3 credits)
Introduces the field of human security and examines the conceptual, theoretical, and methodological issues surrounding it. Identifies the relevant human security actors, explores the tools of human security, and discusses the application of human security. Investigates the implications of human security and discusses its future.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3184

IS 3194 - Nuclear Strategy & Politics (3 credits)
Examines the fundamentals of nuclear strategy and investigates the politics associated with the acquisition and proliferation of nuclear weapons. Focuses on nuclear doctrines and policies and explores international efforts associated with nuclear arms control and disarmament. Analyzes the nuclear postures of various nuclear states.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3194

IS 3344 - Global Environmental Issues: Interdisciplinary Perspectives (3 credits)
Critical examination of major global environmental problems from a humanities perspective, including international community responses to global environmental problems such as global warming, atmospheric ozone depletion, acid rain, tropical deforestation, toxic waste. Actions by key actors in the international community to develop solutions. Relationship of justice, fairness, equality, and diversity to political questions of power or authority. Pre: 3 credits of Critical Issues in a Global Context.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3344, UAP 3344

IS 3374 - The Politics of Energy (3 credits)
Critical and humanistic perspectives of energy and its global problems. Politics and ethics of fuel extraction, distribution, and consumption across cultures and histories. Energy narratives, discourses, and aesthetics in the formation of political identities. Energy and the rise of modern democracy and global capitalism, with an emphasis on the energy dimensions of climate justice. Pre: Junior Standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3374

IS 3384 - Politics of Global and Comparative Migration (3 credits)
Theories and politics of international migration. How policies in destination, transit, and origin countries influence migration. Why governments adopt the migration policies they do. Impacts of global, regional, and national politics and policies on migration among countries.
Prerequisite(s): PSCI 1024 or IS 1024 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064 or PSCI 2084 or IS 2084
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3384

IS 3394 - Comparative Politics of Immigrant Inclusion (3 credits)
Theories of citizenship applied across levels of government. Comparative policies for political, social, and military inclusion. Explanations for variations in policies supporting citizenship and inclusion across countries. Explanations for differences among immigrants' political inclusion across countries.
Prerequisite(s): PSCI 1024 or IS 1024 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064 or PSCI 2084 or IS 2084
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3394

IS 3514 - Latin American Government and Politics (3 credits)
Introduction to the political systems of Latin American countries, including legislative-executive relations, interest groups, political parties, electoral systems, political violence, and socio-political development.
Prerequisite(s): PSCI 1014H or PSCI 1014 or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3514

IS 3515 - European Political Systems (3 credits)
The government and politics of selected European states and of the European Union. 3515: normally includes the United Kingdom. 3516: normally includes Germany and Hungary.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3515

IS 3516 - European Political Systems (3 credits)
The government and politics of selected European states and of the European Union. 3515: normally includes the United Kingdom. 3516: normally includes Germany and Hungary.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3516

IS 3524 - Politics of Post-Communist Systems (3 credits)
Institutions, party structures, political economy, elite politics, ethnic conflicts, leadership dynamics, and mass political behavior in Russia and other post-communist political systems.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3524

IS 3534 - African Government and Politics (3 credits)
Survey of major concepts and themes in the study of African politics and development: analyses of the state, political institutions, social forces, democratization, sustainable development, issues of contemporary African politics.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3534

IS 3554 - Comparative Political Economy (3 credits)
Economic policies and collective choice processes of pre-industrial, industrializing, and advanced industrial states; problems and crises of industrial development, economic distribution, and technological transfer in the transition from an agrarian to advanced industrial society.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3554

IS 3574 - Government and Politics of Japan (3 credits)
Introduction to governmental institutions, patterns of political organization and behavior, and key policies of the Japanese political system.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3574

IS 3584 - Governments and Politics of Asia (3 credits)
Introduction to governmental institutions, political behavior, and social and economic policy approaches of China and other selected countries in the Asian region.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3584

IS 3594 - Topics in Middle East Politics and International Relations (3 credits)
Government and politics of Middle Eastern states. Religion, culture and society in the Middle East. Nationalism and Middle East politics. Regional conflicts and regional security. International relations of the Middle East. Great powers and Middle East politics. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 1024 or PSCI 1024 or IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3594

IS 3615 - International Relations (3 credits)
Structure and development of the modern international system, theories of international policies, international law; international organizations.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3615

IS 3616 - International Relations (3 credits)
Structure and development of the modern international system; theories of international policies; international law; international organizations.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3616

IS 3624 - Foreign Policy and Diplomacy (3 credits)
Focuses on actors, issues, and processes pertaining to foreign policy formulation and implementation. Examines theoretical and historical perspectives on foreign policy analysis. Investigates the national security, foreign policy, and diplomacy nexus. Discusses type of diplomacy and diplomatic methods.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3624

IS 3625 - US-Russia Foreign Policies (3 credits)
3625: Formulation of American foreign policy; roles of the President; Congress; press; public; and bureaucracy; central themes, issues, and problems of American diplomacy; 3626: Development and operational practices of Russian foreign policy decision-making in the international environment; party and state political institutions; Marxist-Lenninist ideology.
Prerequisite(s): PSCI 1024 or IS 1024 or PSCI 1024H or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3625

IS 3626 - US-Russia Foreign Policies (3 credits)
3625: Formulation of American foreign policy; roles of the President, Congress, press, and bureaucracy; central themes, issues, and problems of American diplomacy; 3626: Development and operational practices of Russian foreign policy decision-making in the international environment; party and state political institutions; Marxist-Leninist ideology.
Prerequisite(s): PSCI 1024 or PSCI 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3626

IS 3634 - Human Rights: Global Issues (3 credits)
Identification, articulation and clarification of the relationship between human rights and other contemporary international phenomena, issues, events, and processes that affect human rights. Detailed consideration of the diverse traditions and cultural interpretations of human rights.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H or PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3634

IS 3644 - Religion in the Middle East (3 credits)
Critical issues in religion in the Middle East. Competing methods for analyzing religion in the Middle East. Key concepts relating to religion and inter-religious relations in the Middle East such as minority, majority, tolerance, citizenship, and family law. Critical thinking about the relationship between Islam and other religions with particular reference to Muslim-Jewish and Muslim-Christian relations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ARBC 3644, RLCL 3644

IS 3694 - Far-right Violence in the United States (3 credits)
Assessment of theoretical and conceptual foundations to understand the rise of far-right violence in the United States. Identification of causes of radicalization into the far-right. Comparison of case studies of historical and contemporary far-right violence. Evaluation of differences and similarities in historical and contemporary case studies. Appraisal of successful responses to far-right violence.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3694

IS 3704 - National Security Strategy (3 credits)
Focuses on the causes of war and the conditions of peace. Examines the logic, levels, and outcomes of strategy and investigates the impact of international law and politics on the use of force. Explores contemporary strategic theory and discusses current issues in grand strategy.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3704

IS 3734 - National Security (3 credits)
Post-1945 strategic problems, policies, and security commitments of major participants in international politics, especially the United States and Russia; effects of security policies on international and domestic political economies.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3734

IS 3795 - Global Terrorism and Counterterrorism (3 credits)
Evaluation of theories and concepts used to analyze terrorism and counterterrorism. Identification and analysis of origins, causes, and consequences of terrorism globally. Comparison of historical and contemporary terrorism and counterterrorism. Appraisal of how histories of colonialism and the growth of new media affect terrorism and responses to terrorism. Identification of successful counterterrorism methods, strategies and practices. Evaluation of ethics and human rights in global counterterrorism. 3795: histories, origins, and spread of terrorism; 3796: strategies and practices of counterterrorism.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3795

IS 3796 - Global Terrorism and Counterterrorism (3 credits)
Evaluation of theories and concepts used to analyze terrorism and counterterrorism. Identification and analysis of origins, causes, and consequences of terrorism globally. Comparison of historical and contemporary terrorism and counterterrorism. Appraisal of how histories of colonialism and the growth of new media affect terrorism and responses to terrorism. Identification of successful counterterrorism methods, strategies and practices. Evaluation of ethics and human rights in global counterterrorism. 3795: histories, origins, and spread of terrorism; 3796: strategies and practices of counterterrorism.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3796

IS 3804 - European Integration (3 credits)
Analysis of the process of industrial, political, legal, economic, social and cultural integration of states in Europe as a whole or within a European sub-region. History and theories of European integration. Examination of various European organizations whose actions reflect different approaches to and different degrees of integration in Europe.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3804

IS 3814 - The European Union: Institutions and Policies (3 credits)
Evolution, organizational structure, political dynamics, and decision-making mechanisms of the European Union. Major internal and external EU policies such as foreign, security and defense policy, economics, Single Market, and monetary union.
Prerequisite(s): IS 3804 or PSCI 3804
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3814

IS 3824 - European Union's Foreign and Security Policy (3 credits)
The European Union (EU) as an actor in the foreign, security and defense policy fields. The external relations of the EU and its role in world affairs. The institutional arrangements of EU external relations and EU activity in policy areas including human rights, peacekeeping, environmental governance, trade, and economic development.
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3824

IS 3825 - European Union's Foreign Relations (3 credits)
The global strategy and foreign policy objectives of the European Union and the evolving relations between the EU and the rest of the world. EU's role in world affairs. 3825: EU's global strategy and its relations with major world powers, such as the United States, Russia, and China. 3826: EU's global strategy and its relations with countries in various world regions as well as global multilateral organizations, such as the United Nations (UN) and the World Trade Organization (WTO).
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3825

IS 3826 - European Union's Foreign Relations (3 credits)
The global strategy and foreign policy objectives of the European Union and the evolving relations between the EU and the rest of the world. EU's role in world affairs. 3825: EU's global strategy and its relations with major world powers, such as the United States, Russia, and China. 3826: EU's global strategy and its relations with countries in various world regions as well as global multilateral organizations, such as the United Nations (UN) and the World Trade Organization (WTO).
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3826

IS 3834 - European Security Governance (3 credits)
Structure and function of major European security organizations, such as the North Atlantic Treaty Organization (NATO), the European Union (EU), the Organization for Security and Cooperation in Europe (OSCE), and the Collective Security Treaty Organization (CSTO). In-depth analysis of those organizations' role in the European security architecture. Examination of inter-organizational cooperation in addressing European security issues and conflicts.
Prerequisite(s): IS 3804 or PSCI 3804
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3834

IS 3844 - European Geopolitics (3 credits)
Impact of Geography on European politics and economics. Significance of territorial, identity, networking and environmental geopolitics. Theoretical debates in the fields of political and population geography. Current culture and demographic challenges and geopolitical disputes within Europe and particularly between the European Union (EU) and its neighboring world regions.
Prerequisite(s): GEOG 2224 or IS 2224 or PSCI 2224
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 3844, PSCI 3844

IS 3854 - European Political Economy (3 credits)
The European Union's major institutions and policies relating to economic and monetary union and trade. Monetary integration, fiscal and economic policy cooperation, financial integration (including the banking union), the single market and the common commercial policy, the common agricultural policy and the EU's regional policy. The internal structure and organization of the European political economy and the external dimension of Europe and its impact on global economics, ranging from the World Trade Organization to EU enlargement and the Developing World.
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3854

IS 3874 - The European Business Environment (3 credits)
Political, legal, economic, socio-cultural, technological and environmental issues and policies affecting the operation and strategies of foreign companies in Europe. Business operations inside and outside the European Union. Impact of EU policies and the EU legal framework on business strategies and policies of non-EU companies. Business strategy for the European market, marketing and human resources management in Europe, and corporate governance and control in Europe. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MGT 3874, PSCI 3874

IS 3884 - Culture and Society in Contemporary Europe (3 credits)
The impact of religion and culture in contemporary European politics and societies. Nationalism versus European cosmopolitanism. Religion, religious radicalism and religious tolerance in Europe. Culture and society in European urban and rural areas. Attitudes towards women and LGBTQ in Europe. Social foundations and cultural determinants of marginalization of social groups, migrants and refugees.
Prerequisite(s): IS 1104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3884, SOC 3884

IS 3894 - Transatlantic Relations Since 1945 (3 credits)
Analysis of the post- World War II transatlantic relations. Origins and historical context of the transatlantic partnership. Impact of the changing security context and domestic politics on the evolution of transatlantic relations. Causes of tensions and discord between the United States and its European allies and their impact on European security and world order.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3894

IS 3914 - European Economics (3 credits)
Microeconomics, macroeconomics and economic policies of the European Union. EU economic law, institutions, decision-making, and budgeting. Historic and current influences on regional economic development. Monetary and fiscal policies. Economic research methods, analysis, and reporting.
Prerequisite(s): ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 3914, PSCI 3914

IS 3924 - Theories of Transatlantic Relations (3 credits)
Examination of historical, cultural, and civilizational approaches to the study of ties binding Europe and North America. Exploration of the role of identity and national interests in the analysis of transatlantic relations. Investigation of the causes of tensions between the United States and its European allies and the management of these tensions.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3924

IS 3934 - NATO & European Security (3 credits)
Origins and evolution of the North Atlantic Treaty Organization (NATO). Organizational structure, decision and policy-making, missions, and operations. NATO and the European Union's Common Foreign and Security policy (CFSP) and Common Security and Defense Policy (CSDP). Impact of domestic politics and external policies on the operation of NATO and European security.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3934

IS 3944 - International Enrollment (0 credits)
Participation in an approved study abroad program without direct supervision of the Va Tech faculty but with required enrollment in an approved program of study in a foreign university.
Instructional Contact Hours: (0 Lec, 0 Crd)

IS 3944S - International Enroll Special 3 (0 credits)
Participation in an approved Study Abroad program without direct supervision of the Virginia Tech faculty but with required enrollment in an approved program of study in an international university. Course represents three billable hours and no academic credit.
Instructional Contact Hours: (0 Lec, 0 Crd)

IS 3944T - International Enroll Special 4 (0 credits)
Participation in an approved Study Abroad program without direct supervision of the Virginia Tech faculty but with required enrollment in an approved program of study in an international university. Course represents four billable hours and no academic credit.
Instructional Contact Hours: (0 Lec, 0 Crd)

IS 3944U - International Enroll Special 6 (0 credits)
Participation in an approved Study Abroad program without direct supervision of the Virginia Tech faculty but with required enrollment in an approved program of study in an international university. Course represents six billable hours and no academic credit.
Instructional Contact Hours: (0 Lec, 0 Crd)

IS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4004 - Seminar in International Studies (3 credits)
Interdepartmental seminar to synthesize and articulate basic assumptions, theories, and methods of international studies. Senior standing in IS and instructor consent required.
Instructional Contact Hours: (3 Lec, 3 Crd)

IS 4014 - International Development (3 credits)
Utilizes development, gender, and social theory to examine the impact of aid programs on communities in the Third World. Analyzes such issues as the impact of development projects in agriculture, natural resources, and employment on the local people, the impact of aid on women; and the policies and administrative structures that direct the world of international development.
Instructional Contact Hours: (3 Lec, 3 Crd)

IS 4024 - Seminar in Diplomacy and Security (3 credits)
In-depth analysis of selected topics in diplomacy, strategy, and national security including issues pertaining to international conflict and cooperation; dimensions of national power; objectives of national policy and implementation of national strategy; diplomatic negotiations; and conflict resolution. Senior Standing.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4024

IS 4034 - Topics in Diplomacy Lab (3 credits)
Examines the fundamentals of policy analysis and formulation and emphasizes research and writing on topics pertaining to diplomacy, security, and foreign policy. Focuses on policy analysis and evaluation and concentrates on policy design. Emphasizes preparation and presentation of policy reports. May be taken three times for credit with different policy topics. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 4034

IS 4044 - International Communication (3 credits)
Comparative perspectives on global communication systems; problems with the flow of information; roles of international organizations; mass communication and national development; implications for conflict resolution; selected case studies. Senior standing required or instructor consent required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JMC 4044

IS 4054 - Seminar in Global Political Economy (3 credits)
Examines theoretical and historical approaches to global political economy and assesses their practical implications. Focuses on issue areas such as production, trade, money, finance and investment and analyzes their implications for the global economic and political order. Investigates issues pertaining to economies of development and in transition. Senior Standing.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4054

IS 4064 - Seminar in Global Development (3 credits)
Examines how economic and political forces interact in the developing world, discusses the history of these interactions from the pre-colonial period to the present and explores how colonialism shaped the developing worlds economic and political trajectories. Utilizes case studies, historical analysis and development economics to better understand the economic and political condition of countries in the developing world. Senior Standing.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4064

IS 4074 - The Politics of Cybersecurity (3 credits)
Analyses the politics of cybercrime, cyberwar, and the challenges of producing effective cybersecurity. Topics include the economics of cybersecurity, the cross-border nature of global cybercrime, encryption and anonymity-granting technologies, targeting critical national infrastructure, network investigative techniques, cybersecurity measurement, politics of zero-day vulnerabilities, and the process of providing effective cybersecurity at the individual, organizational, subnational, and national levels.
Prerequisite(s): PSCI 3044 or IS 3044
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4074

IS 4104 - Topics in European Studies (3 credits)
Selected issues pertaining to European Studies, such as racism in Europe, European art and society, religion and society in Europe, gender politics, and demographic trends in Europe. May be repeated twice with different content for a maximum of nine (9) credits. Pre: Senior Standing.
Prerequisite(s): IS 1104
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 4104

IS 4114 - Topics in European Union Policies (3 credits)
Governmental and non-governmental actors in environmental policy, climate, energy, health, agricultural, education, industrial, social or similar policymaking. EU organizational structures and decision-making mechanisms. Public opinion. Analysis of policy results and effectiveness. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

IS 4124 - Topics in European Integration (3 credits)
Research and analysis of selected issues pertaining to European integration. Democracy and European governance. Nationalism and European integration. Impact of fascism and racism on European integration. Integration of refugees and migrants in European societies. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 3804 or PSCI 3804
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

IS 4134 - Capstone Research Project in European Studies (3 credits)
Independent research project focusing on contemporary Europe. Identifying a topic of inquiry, formulating a research question, conducting a literature review, and preparing a research proposal. Collecting, evaluating and analyzing data, composing a research paper and presenting the research findings. Topics may originate from any discipline contributing to European studies. Pre: Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

IS 4144 - Topics in Transatlantic Relations (3 credits)
Research and analysis of selected post World War II political, diplomatic and security issues pertaining to transatlantic relations. Topics under examination include: US-EU relations and European security; the transatlantic partnership and world order; transatlantic politics and the global economic system; causes of the transatlantic divide; British foreign policy, transatlantic relations and European security. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 4144

IS 4154 - Topics in Transatlantic Studies (3 credits)
Research and analysis of selected issues pertaining to transatlantic studies. Topics under examination include: religion and the transatlantic world; the political economy of the transatlantic slave trade; and the role of culture, language, and literature in cementing transatlantic ties. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: PSCI 4154

IS 4174 - Climate Change and the International Policy Framework (3 credits)
Science, causes and impacts of climate change. Mitigation and adaptation measures to address the causes and impacts of climate change. International climate change policy, with attention to the policy making process, in particular the role of the United Nations Framework Convention on Climate Change and climate negotiations. Science and diplomacy in climate negotiations to achieve successful outcomes. The ethical and social implications of climate change policies.
Pathway Concept Area(s): 1A Discourse Advanced, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 4174, PSCI 4174

IS 4184 - Capstone Project Transatlantic Studies (3 credits)
Independent research project focusing on issues and topics pertaining to transatlantic studies. Identifying a topic of inquiry, formulating a research question, conducting a literature review, and preparing a research proposal. Collecting, evaluating and analyzing data, composing a research paper and presenting the research findings. Topics may originate from any discipline contributing to transatlantic studies. Pre: Senior Standing
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4184

IS 4614 - Senior Seminar in International Relations (3 credits)
Selected topics in international relations, including objectives of national policy; dimensions and components of national power; comparative diplomacy; international conflict and cooperation; instruments of conflict resolution. Topics vary from semester to semester as announced. Must have senior standing and any two of the prerequisites.
Prerequisite(s): PSCI 3615 or PSCI 3616 or IS 3615 or IS 3616 or PSCI 3625 or PSCI 3626 or PSCI 3734 or IS 3626 or IS 3734
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4614

IS 4714 - Senior Seminar in Policy Analysis (3 credits)
Theoretical, analytical, and methodological approaches used to assess government activities and public policy. Topics vary from semester to semester as announced. Must have senior standing.
Prerequisite(s): PSCI 3724 and PSCI 3734
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4714

IS 4734 - Theories and Practices of International Conflict Management (3 credits)
Examines alternative perspectives on peace, security, and international intervention and their implications for policy. Focuses on the role of international organizations and other actors in conflict resolution and peace-building and explores issues pertaining to humanitarian intervention, human security, and state-building. Utilizes case studies in peacekeeping and peace building to highlight the link between theory and practice.
Prerequisite(s): PSCI 3616 or IS 3616
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4734

IS 4735 - Topics in Multilateral Diplomacy Workshop (3 credits)
Simulation of diplomatic practice in major global and regional international organizations. Diplomatic strategies and tactics. Effects of decision-making and policy-making structures and processes on diplomatic outcomes. Crisis management and conflict resolutions mechanisms. Diplomatic negotiations and diplomatic resolutions. Extensive use of simulations. 4735: Multilateral diplomacy in global organizations: United Nations (UN) and World Trade Organization (WTO). May be repeated once with different content for a maximum of six (6) credits. 4736: Multilateral diplomacy in sub-global/regional organizations: European Union (EU), North Atlantic Treaty Organization (NATO), and Organization for Security & Cooperation in Europe (OSCE). May be repeated once with different content for a maximum of six (6) credits. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: PSCI 4735

IS 4736 - Topics in Multilateral Diplomacy Workshop (3 credits)
Simulation of diplomatic practice in major global and regional international organizations. Diplomatic strategies and tactics. Effects of decision-making and policy-making structures and processes on diplomatic outcomes. Crisis management and conflict resolutions mechanisms. Diplomatic negotiations and diplomatic resolutions. Extensive use of simulations. 4735: Multilateral diplomacy in global organizations: United Nations (UN) and World Trade Organization (WTO). May be repeated once with different content for a maximum of six (6) credits. 4736: Multilateral diplomacy in sub-global/regional organizations: European Union (EU), North Atlantic Treaty Organization (NATO), and Organization for Security & Cooperation in Europe (OSCE). May be repeated once with different content for a maximum of six (6) credits. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: PSCI 4736

IS 4744 - Intelligence Analysis Workshop (3 credits)
Examines the impact of historical experience and bureaucratic structures on intelligence analysis. Discusses the contents of the intelligence agenda and explores issues pertaining to intelligence analysis. Focuses on the intelligence process and offers a target-centric approach to intelligence analysis. Emphasizes and evaluates the use of structured analytic techniques in intelligence analysis.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4744

IS 4754 - Internship (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

IS 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Italian (ITAL)

ITAL 1105 - Elementary Italian (3 credits)
Fundamentals of the Italian language with emphasis on grammar, reading, composition, and conversation. 1105: for students with no prior knowledge of the language; 1106: for students who have completed 1105 or less than three years in high school.
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 1106 - Elementary Italian (3 credits)
Fundamentals of the Italian language with emphasis on grammar, reading, composition, and conversation. 1105: for students with no prior knowledge of the language; 1106: for students who have completed 1105 or less than three years in high school.
Prerequisite(s): ITAL 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 1204 - Italian Language and Cultures (1-3 credits)
Fundamentals of the Italian Language with emphasis on developing proficiency in practical language use and cultural competency. Offered off campus. Does not fulfill the University foreign language requirement. Variable credit course.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)

ITAL 2105 - Intermediate Italian (3 credits)
Emphasizes comprehension of written and spoken Italian, communication in Italian, literature, and culture of Italy.
Prerequisite(s): ITAL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 2106 - Intermediate Italian (3 credits)
Emphasizes comprehension of written and spoken Italian, communication in Italian, literature, and culture of Italy.
Prerequisite(s): ITAL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

ITAL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 2984B - Special Study (1-19 credits)
Pathway Concept Area(s): 2 Critical Thinking Humanities
Instructional Contact Hours: Variable credit course

ITAL 3105 - Culture Composition and Conversation (3 credits)
Practice in oral and written communication in Italian on a variety of topics in Italian culture. Progressive and comprehensive review of Italian grammar. Expansion of vocabulary.
Prerequisite(s): ITAL 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 3106 - Culture Composition and Conversation (3 credits)
Practice in oral and written communication in Italian on a variety of topics in Italian culture. Progressive and comprehensive review of Italian grammar. Expansion of vocabulary.
Prerequisite(s): ITAL 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 3305 - Introduction to Italian Literature in Context (3 credits)
Overview of genres and themes of Italian literature from national unification to the present. Familiarizes students with the socio-historical context necessary to discuss and write critically about this literature. 3305 examines the period from unification until the end of World War II including representations of national identity at the time of unification and beyond, generic experimentalism, resistance and complicity in the Fascist era, social realities during World War II. 3306: examines the period from the end of World War II to the present including retrospective debates about historical eras, economic conditions and political responses, gender politics, the influence of specific historical migrations on literature. Taught in Italian.
Prerequisite(s): ITAL 3105 or ITAL 3106
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 3306 - Introduction to Italian Literature in Context (3 credits)
Overview of genres and themes of Italian literature from national unification to the present. Familiarizes students with the socio-historical context necessary to discuss and write critically about this literature. 3305 examines the period from unification until the end of World War II including representations of national identity at the time of unification and beyond, generic experimentalism, resistance and complicity in the Fascist era, social realities during World War II. 3306: examines the period from the end of World War II to the present including retrospective debates about historical eras, economic conditions and political responses, gender politics, the influence of specific historical migrations on literature. Taught in Italian.
Prerequisite(s): ITAL 3105 or ITAL 3106
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

ITAL 3474 - Topics in Italian Cinema (3 credits)
Critical issues in the history of modern and contemporary Italy through cinema, with an emphasis on films produced in Italy that most reflect the nation, its culture and society, and its cinematic trends. Students will discuss and write about the cultural, intellectual, and historical contexts present in Italian cinematic works. Sample topics, depending on the given semester, include organized crime, immigration, the urbanization of Italy, and neorealism. Taught in English. May be repeated, with different content, for a maximum of 6 credit hours.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

ITAL 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

ITAL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ITAL 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Japanese (JPN)

JPN 1105 - Elementary Japanese (3 credits)
Fundamentals of the Japanese language with emphasis on developing proficiency in practical language use and cultural competency. 1105 is for students with no prior knowledge of the language; 1106 is for students who have completed 1105, or more than one year, but less than three years of high school Japanese.
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 1106 - Elementary Japanese (3 credits)
Fundamentals of the Japanese language, with emphasis on developing proficiency in practical language use and cultural competency. 1105 is for students with no prior knowledge of the language; 1106 is for students who have completed 1105, or more than one, but less than three, units of high school Japanese.
Prerequisite(s): JPN 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 1114 - Accelerated Elementary Japanese (6 credits)
Proficiency-oriented approach to Elementary Japanese, designed for learners who wish to progress rapidly through the beginning stages of language learning. Speaking, listening comprehension, reading comprehension, writing, and cultural competency at the JLPT (Japanese Language Proficiency Test) level 4 (ACTFL novice-high). Accelerated version of 1105-1106. Duplicates 1105 and 1106. For students with no prior knowledge of the language.
Instructional Contact Hours: (6 Lec, 6 Crd)

JPN 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course
Repeatability: up to 19 credit hours

JPN 2105 - Intermediate Japanese (3 credits)
Emphasizes comprehension of written and spoken Japanese, communication in Japanese; study of some literature and culture of the Japanese people. 2105 is for students who have completed 1105 and 1106 or equivalent. 2106 is for students who have completed 2105 or equivalent.
Prerequisite(s): JPN 1106 or JPN 1114
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 2106 - Intermediate Japanese (3 credits)
Emphasizes comprehension of written and spoken Japanese, communication in Japanese; study of some literature and culture of the Japanese people. 2105 is for students who have completed 1105 and 1106 or equivalent. 2106 is for students who have completed 2105 or equivalent.
Prerequisite(s): JPN 2105
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 2114 - Accelerated Intermediate Japanese (6 credits)
Proficiency-oriented approach to Intermediate Japanese, designed for highly motivated learners who wish to progress rapidly through the intermediate stages of language learning or those with some prior experience in Japanese in need of intensive review. Emphasis on reading, writing, listening, and oral communication, and review of intermediate grammar and vocabulary in guided oral and written assignments in tasks such as jobs (full and part time), holidays, vacations, shopping, and education. Study of authentic materials and cultural artifacts in Japanese. Accelerated version of 2105-2106. Duplicates 2105 and 2106. Not recommended for advanced or native speakers of Japanese.
Prerequisite(s): JPN 1106 or JPN 1114
Instructional Contact Hours: (6 Lec, 6 Crd)

JPN 2744 - From Atom to Akira: Japan's Pop Culture (3 credits)
Analysis of Japanese popular culture through anime (animation), manga (comics), and video games. Introduction of important socio-cultural issues in Japan such as language, ideology, identity, gender, race, class, and nationalism. Exploration of the domestic and global popularity of these mediums and their socio-historical contexts, styles, and characteristics. Fostering of cross-cultural awareness and intercultural understanding by addressing global challenges and opportunities in Japan through popular culture. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 3105 - Advanced Japanese (3 credits)
3105: Practice in communication skills in Japanese both orally and writing, including review of grammar, directed composition and conversation, with an emphasis on pronunciation, cultural competency, and oral expressions. Not recommended for native speakers. 3106: Reinforcement of oral proficiency, reading, grammar, and writing skills, allowing students to explore a broad range of texts of general and professional interest. Not recommended for native speakers.
Prerequisite(s): JPN 2106 or JPN 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 3106 - Advanced Japanese (3 credits)
3106: Reinforcement of oral proficiency, reading, grammar, and writing skills, allowing students to explore a broad range of texts of general and professional interest. Not recommended for native speakers.
Prerequisite(s): JPN 3105
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 3125 - Japanese for Oral Proficiency (3 credits)
Devoted to the acquisition of spoken dialect and the enhancement of cultural competency. 3125: Provides students with the ability to converse in every day Japanese conversation. Focus on everyday conversational skills including life topics, transactions, and Japanese media. Emphasis on appropriate body language and understanding of cultural, political, and religious knowledge. 3126: Provides students with the ability to converse in advanced and complex situations. Focus on formal conversations (honorific, humble, and extra-polite) and business Japanese. Not recommended for native speakers.
Prerequisite(s): JPN 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 3126 - Japanese for Oral Proficiency (3 credits)
Devoted to the acquisition of spoken dialect and the enhancement of cultural competency. 3125: Provides students with the ability to converse in every day Japanese conversation. Focus on everyday conversational skills including life topics, transactions, and Japanese media. Emphasis on appropriate body language and understanding of cultural, political, and religious knowledge. 3126: Provides students with the ability to converse in advanced and complex situations. Focus on formal conversations (honorific, humble, and extra-polite) and business Japanese. Not recommended for native speakers.
Prerequisite(s): JPN 3125
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 3304 - Japanese Literature in Translation (3 credits)
Overview of genres, themes, and narrative strategies characteristic of Japanese literature and other cultural artifacts, as well as the various historical and cultural contexts from which they arose. Exploration of themes, such as transience, honor, and community, with a particular focus on change and evolution over time. Assessment of literature and cultural artifacts' rendering of and impact on the construction of Japanese identity, such as race, gender, and sexuality. Creation of cross-cultural awareness by distinguishing the influence of other literary traditions on Japan's literature. Development of intercultural understanding by analyzing common themes in Japanese literature and culture and their implications not just for Japanese life, but also for how they interact with broader global concerns. Taught in English.
Prerequisite(s): ENGL 1106 and ENGL 1204H
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 3474 - Topics in Japanese Cinema (3 credits)
Evaluation of the socio-cultural contexts and perspectives of Japanese cinema, including Japanese cinema's ability both to produce and reproduce socio-cultural contexts like the political, religious, or aesthetic constructs of a particular time period. Explanation of the relationship between those contexts and films, such as the anti-war stance of many pre-WWII directors or the impact of Japan's 1989 financial collapse on cinema. Development of a coherent understanding of Japanese cinema and cinematic techniques through films and literary sources, both primary in translation and secondary. Analysis of intercultural perspectives, such as the influence of American and European films on Japanese cinema and vice-versa, in relation to a student's own cinematic tradition. Comparison of intercultural experiences with broader global concerns, challenges, and opportunities as expressed through Japanese film. Taught in English. Variable content. May be repeated twice with different content for a maximum of 6 credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

JPN 3724 - Modern Japanese Culture and Society (3 credits)
Overview of Japanese society and culture through analysis of Japanese language texts and other cultural artifacts, with an emphasis on modern Japan. Examination of socio-cultural and linguistic factors that have influenced the development of modern Japan and Japanese identity, such as its focus on community, weakened financial clout, growing cultural capital. Exploration of the impact of issues such as aging, work-life balance, globalization, and gender norms that continue to shape modern Japanese society, and relating them to students' lives. Assessment of these issues within regional (Asian) and global contexts. Taught in Japanese.
Prerequisite(s): JPN 3106
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 4104 - Japanese Advanced Grammar (3 credits)
Advanced Japanese grammar skills. Use of special verbs in honorific, extra-modest, and humble form. Analysis and writing of personal and professional texts. Question formation within larger sentences, naming items, using passive and passive-causative sentences. Development of the ability to read, write, and apply the use of 317 intermediate-level kanji in various contexts.
Prerequisite(s): JPN 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

JPN 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

JPN 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Journalism and Mass Communication (JMC)

JMC 1114 - Introduction to Media Production Technology (3 credits)
Introduction to basic technologies necessary for multimedia production. Attention to aesthetics and technical aspects of production technologies, including creation, editing, and organization of content. COURSE FEE $95.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 2034 - Visual News Reporting (3 credits)
News reporting through photography, videography, online outlets, and data visualization. Concepts of visual storytelling. Design and production tools and techniques for visual news and feature stories. News elements and journalism ethics in visual communication. Pre: Sophomore standing.
Prerequisite(s): COMM 1016 or ENGL 1106 or ENGL 1204H
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 2074 - Introduction to Sports Media (3 credits)
Development, concepts, and impact of sports media, including roles and responsibilities of journalists, production staff, and public relations professionals. Considerations of stakeholders behaviors and connections. Study of ethical standards and perspectives, communication in sports organizations, types of media, issues in context, and data analytics.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3114 - Video Production: Studio (3 credits)
Producing, directing, and writing live video segments; operating control room and studio equipment including studio camera, video switcher, audio board and the creation of video graphics and written packages.
Prerequisite(s): COMM 2034
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

JMC 3154 - Multimedia Reporting (3 credits)
Multimedia news gathering, news writing, audio/visual storytelling, and news judgment for the print and online media. Consideration of professional strategies and standards for reporters, including legal and ethical issues.
Prerequisite(s): COMM 2024 and COMM 2034
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3174 - Advanced Multimedia Reporting (3 credits)
Multimedia gathering and writing of complex news, features, and documentary; visual content and news judgment for television, print and online media; techniques of broadcast interviewing and on-camera performance. Considerations of legal and ethical issues related to the reporting of complex news.
Prerequisite(s): COMM 3154 or JMC 3154
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

JMC 3184 - Media Weather Reporting (3 credits)
Techniques for gathering meteorological, information, reporting weather news, and delivering weather forecasts through print, broadcast and online media. Weather information in disaster response. Ethical uses of weather information in reporting threats to public safety.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3244 - Political Communication (3 credits)
Distribution of political information; elite-mass communication; alternative models of political communication; communication and telecommunications policy.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3244

JMC 3254 - Media and Politics (3 credits)
Explores the role of the mass media in contemporary American politics by examining the development of media as sources of social and political influence. Study of news organizations, their coverage of electoral and issue campaigns, and their impact on candidates and voters. Includes the role of new technologies in campaigns. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3254

JMC 3284 - Data Journalism (3 credits)
Numeracy and data analysis in news reporting. Data sourcing and visualization in storytelling. Ethical and legal issues in data use. Careers in data journalism.
Prerequisite(s): COMM 2024 and COMM 2034
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3304 - Topics in Sports Communication (3 credits)
Study of the theory and practices related to sports communication in fields such as public relations or reporting. Topics may include print, broadcast, and online news; college sports information; social media; crisis management; and media relations. May be repeated once with different course content. Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3314 - Sports Journalism (3 credits)
Theory and practice of sports journalism, including strategies for writing and broadcasting sports information. Study of ethics and professional standards. Junior standing required. Fee $95.
Prerequisite(s): COMM 2024 and COMM 2034
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3324 - Sports Play-by-Play Reporting (3 credits)
Audio and video play-by-play sports reporting and commentary for broadcast and online media. Game research and preparation techniques. Voice pacing, inflection, delivery, airtime management, and ad-libbing skills. Command and use of game statistics. Ethical issues in sports play-by-play reporting and commentary. COURSE FEE $67.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3334 - Sports as Entertainment (3 credits)
Evolution of print, broadcast, and online sports coverage into a leading form of entertainment in the United States. Economic, political, and cultural influences of sports and sports betting in U.S. society. Sports portrayals, personalities, and scandals in movies, music, radio, and television through U.S. history. Ethical perspectives on sports as entertainment.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3344 - Sports Data Journalism (3 credits)
Game statistics and data analysis in sports reporting. Data visualization in sports storytelling. Data sources, sports performance trends, and predictions. Ethical and legal issues in sports data use.
Prerequisite(s): JMC 3314 and COMM 2024 and COMM 2034
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4014 - Media Effects (3 credits)
Impact of mass media on individuals and on society; methods for documentation of media effects; research about effects on various demographic groups such as children, elderly, and minorities; effects of advertising; effects of interactive and time shift technologies. Junior standing required.
Prerequisite(s): COMM 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4044 - International Communication (3 credits)
Comparative perspectives on global communication systems; problems with the flow of information; roles of international organizations; mass communication and national development; implications for conflict resolution; selected case studies. Senior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4044

JMC 4064 - Social Media Analytics (3 credits)
Introduction to analytic techniques for social media platforms. Quantitative and qualitative analytic techniques. Design, implementation, and analysis of experimental and observational studies of how people use and engage with social media platforms and how platforms themselves can be used to drive engagement with content. History and trending topics in social media use. Ethical issues involving social media and big data.
Prerequisite(s): COMM 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4094 - Broadcast Management (3 credits)
Broadcast management procedures; programming; sales and advertising. Senior standing required.
Prerequisite(s): COMM 3154 or JMC 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4114 - Photojournalism (3 credits)
Interpretive and creative photography applied to journalism; cameras, films, photography techniques; history of photography as communication; advanced darkroom techniques. Junior standing required.
Prerequisite(s): COMM 2034 and COMM 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4134 - Editorial Writing (3 credits)
Development and function of the editorial page; writing of editorials, reviews, and personal columns; examination of role of letters and syndicated columns and cartoons; problems editorial writers face in their jobs and communities. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4144 - Magazine Writing (3 credits)
The writing of feature material (as opposed to the reporting of hard news), plus detailed examination of several article types from a wide variety of contemporary magazines and newspapers. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4254 - Topics Multimedia Journalism (3 credits)
Selected topics in multimedia journalism; emphasis on critical analysis of issues in journalism, and application of media to disseminate information. May be repeated for credit up to a maximum of 6 credit hours with different content.
Prerequisite(s): COMM 2024 and COMM 2034
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

JMC 4264 - Social Media Theory and Practice (3 credits)
Study of social media as a professional communication and media tool. Emphasis on foundations in communication theory and contemporary approaches.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4274 - Broadcasting Performance (3 credits)
Advanced study of on-air performance for broadcasters. Professional behaviors and strategies for developing conversational writing, broadcast style, interviewing, reporting, and anchoring. Fee $95.
Prerequisite(s): COMM 3154 or JMC 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4334 - Communication Ethics (3 credits)
Discussion of issues related to professional communication ethics; emphasis on recognizing ethical issues, applying theoretical models and critical thinking skills to ethical issues in multimedia journalism, public relations, and communication studies. Includes research on topics related to communication ethics. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4344 - Free Speech in Cyberspace (3 credits)
Discussion of free expression on the Internet; an examination of how First Amendment law; state laws and federal communication policies impact the multiple kinds of speech that take place in cyberspace; examination of the history and development of the Internet and the future of free speech in cyberspace. Pre: Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4344H - Free Speech in Cyberspace (3 credits)
Discussion of free expression on the Internet; an examination of how First Amendment law; state laws and federal communication policies impact the multiple kinds of speech that take place in cyberspace; examination of the history and development of the Internet and the future of free speech in cyberspace. Pre: Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4374 - New Communications Technology (3 credits)
Identify recent trends in the innovation of new communications technologies; storage, transmission, and display systems of mediated communication: optical disc, common carriers, telecommunication-computer linkages, high-definition TV, and virtual reality; information industries and society; markets for new and existing telecommunication services. Junior standing required.
Prerequisite(s): COMM 2084 or COMM 4014 or JMC 4014
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4814 - Digital Newsroom: Online (3 credits)
Production of news content for social networks, mobile applications and web-based content management systems. Preparation of news and feature stories on deadline in a newsroom setting. Collection of information from diverse sources. News judgment. Production requirements for online platforms. Audience engagement. Ethical and legal issues in news reporting. Design/lab studio. COURSE FEE $95.
Prerequisite(s): JMC 3174
Instructional Contact Hours: (5 Lab, 3 Crd)

JMC 4824 - Digital Newsroom: Broadcast (3 credits)
Production of news content for broadcast. Preparation of news and feature stories on deadline in a newsroom setting. Collection of information from diverse sources. News judgment. Videography and digital editing. Broadcast performance. Ethical and legal issues in news reporting. Design lab/studio. $95 COURSE FEE.
Prerequisite(s): JMC 3174
Instructional Contact Hours: (5 Lab, 3 Crd)

JMC 4834 - Sportscenter (3 credits)
Gather, formulate, and deliver sports stories to diverse audiences through print, online, and broadcast channels. Produce sports news on deadline in a newsroom setting. Ethical and legal issues in sports journalism. Design lab/studio. COURSE FEE $95. Pre: Senior standing.
Prerequisite(s): JMC 3314 and JMC 4274 and COMM 2024
Instructional Contact Hours: (5 Lab, 3 Crd)

Judaic Studies (JUD)

JUD 1105 - Elementary Modern Hebrew (3 credits)
Introduction to speaking, listening, reading, and writing the modern Hebrew language. Emphasis on developing proficiency in practical language use, comprehension and cultural competency. 1105: Basic tasks such as greetings, counting, and simple requests; for students with no prior knowledge of the language. 1106: More advanced tasks like asking directions, expressing personal preferences, or making purchases.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HEB 1105

JUD 1106 - Elementary Modern Hebrew (3 credits)
Introduction to speaking, listening, reading, and writing the modern Hebrew language. Emphasis on developing proficiency in practical language use, comprehension and cultural competency. 1105: Basic tasks such as greetings, counting, and simple requests; for students with no prior knowledge of the language. 1106: More advanced tasks like asking directions, expressing personal preferences, or making purchases.
Prerequisite(s): JUD 1105
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HEB 1106

JUD 2134 - Judaism: A Survey of History, Culture, and Heritage (3 credits)
Introduction to the academic study of Judaism; a variety of scholarly approaches to Jewish textual and cultural sources, including the Hebrew Bible, rabbinic literature, and diverse contemporary cultural, religious, and social expressions. Emphasis on developing skills in critical thinking, reading, and writing about Judaism as a way of understanding the beliefs, philosophies, and histories of global Jewish communities past and present.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2134

JUD 2414 - Hebrew Bible/Old Testament (3 credits)
Introduction to the academic study of the Hebrew Bible (Old Testament), including its contents, contexts, major themes, and reception; a variety of scholarly approaches, including historical-critical, literary, ethical, and gender studies methods. Emphasis on developing skills in critical thinking, reading, and writing about the Hebrew Bible (Old Testament).
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2414

JUD 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JUD 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JUD 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JUD 3404 - Torah and Tradition (3 credits)
Detailed study of the first five books of the Bible, known as the Torah or Pentateuch. Scholarly approaches will include historical-critical research; comparative mythology; form and canon criticism; gender and literary studies; and the reception of these books in the Hebrew Bible, the New Testament and beyond.
Prerequisite(s): REL 2414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3404

JUD 3404H - Torah and Tradition (3 credits)
Detailed study of the first five books of the Bible, known as the Torah or Pentateuch. Scholarly approaches will include historical-critical research; comparative mythology; form and canon criticism; gender and literary studies; and the reception of these books in the Hebrew Bible, the New Testament, and beyond.
Prerequisite(s): RLCL 2414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3404H

JUD 3494 - The Holocaust (3 credits)
This course provides a historical account, a psychological analysis, and an occasion for philosophical contemplation on the Holocaust. We will examine the deliberate and systematic attempt to annihilate the Jewish people by the National Socialist German State during World War II. Although Jews were the primary victims, Gypsies, people with disabilities, homosexuals, Jehovahs Witnesses and political dissidents were targeted; we will discuss their fate as well. The class will be organized around the examination of primary sources: written accounts, photographic and film, personal testimony.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3494, RLCL 3494

JUD 3544 - The State of Israel: A Political History (3 credits)
This course provides a survey on the political history of the State of Israel and highlights major themes uniquely characterizing the specific events surrounding its establishment and its first 50 years of existence. Additionally, the course will add a comparative dimension by using the political history of Israel as a case study to discuss major themes in political science such as democracy, government, political economy, etc.
Prerequisite(s): JUD 2134 or PSCI 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3544, RLCL 3544

JUD 4424 - Advanced Topics in Jewish Culture, History and Thought (3 credits)
Selected topics in Jewish culture, history and thought. Possible topics includes: the philosophy of Maimonides, Spinoza or Buber, or a course dedicated to one of the following topics: Kabbalah, Hasidism, The American Jewish experience in the first half of the 20th century, and Oriental Jewish art and folklore. Two JUD courses or senior standing required. Alternate years.
Instructional Contact Hours: (3 Lec, 3 Crd)

JUD 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JUD 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JUD 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

JUD 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Korean (KOR)

KOR 1105 - Elementary Korean (3 credits)
Introduction to speaking, listening, reading, and writing the Korean language. Emphasis on developing proficiency in practical language use, comprehension, and cultural competency. 1105: Basic tasks such as greetings, counting, and simple requests; for students with no prior knowledge of the language. 1106: Transactions like asking directions, expressing personal preferences, or making purchases.
Instructional Contact Hours: (3 Lec, 3 Crd)

KOR 1106 - Elementary Korean (3 credits)
Introduction to speaking, listening, reading, and writing the Korean language. Emphasis on developing proficiency in practical language use, comprehension, and cultural competency. 1105: Basic tasks such as greetings, counting, and simple requests; for students with no prior knowledge of the language. 1106: Transactions like asking directions, expressing personal preferences, or making purchases.
Prerequisite(s): KOR 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

Landscape Architecture (LAR)

LAR 1014 - Landscape Architecture Foundation Design Laboratory (6 credits)
Immersive, interactive learning environment, design concept and process development, self and peer assessment. Design studies in two and three dimensions across multiple scales, landscape systems, foundational design theories, principles of spatial design and techniques used to create landscape spaces, systematical exploration and communication of ideas through visual, physical, and oral communications.
Prerequisite(s): ARCH 1015
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

LAR 1254 - Environment and Natural Systems (3 credits)
Introduction to the environment, natural systems with emphasis on their relationship to urban sustainability and resilience: natural elements, structures, patterns, natural systems, ecology, and landscape ecology. Impact of human actions and decisions on the environment and natural systems from global to local scale. Application of relevant theories and methods related to the environment and natural systems in planning and design.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAR 1264 - Seeing, Understanding and Representing Landscape and the Built Environment (3 credits)
Exploration of the natural and built environment through observation, interpretation and graphic representation of the landscape. Development of a range of graphic strategies and techniques with an emphasis on design thinking, iteration, and ethical issues expressed in the natural and built environment.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

LAR 2015 - Landscape Architecture Design Studio: Place and Process (6 credits)
Basic theory, principles, and methods of landscape design and site planning. 2015: Design theory involving two and three dimensional compositions. Mass/space relationships, principles of spatial design and techniques used to create landscape space. 2016: Design theory relating to landscape design and site planning. Design of small scale spaces in which the analysis of site, context and the requirements of human use are brought together in a creative synthesis.
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

LAR 2016 - Landscape Architecture Design Studio: Place and Process (6 credits)
Basic theory, principles, and methods of landscape design and site planning. 2015: Design theory involving two and three dimensional compositions. Mass/space relationships, principles of spatial design and techniques used to create landscape space. 2016: Design theory relating to landscape design and site planning. Design of small scale spaces in which the analysis of site, context and the requirements of human use are brought together in a creative synthesis.
Prerequisite(s): LAR 2015
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

LAR 2025 - Landscape Architecture Design Studio Place, Process and People (6 credits)
Landscape design and site planning including design processes, design communication, community-based design, case study methods, landscape performance. 2025: planning, programming and design of places, analysis of site, context and design for human use, and natural systems in creative design syntheses. 2026: master plan and site-scale planning and design incorporating multiple program elements with emphasis on social, cultural and natural systems infrastructure of neighborhoods and communities. Course Contact to Credit Hour Structure: Lecture (1H,1C), Lab (6L, 2C) Design Lab/Studio (5L, 3C). (1H, 11L, 6C)
Prerequisite(s): LAR 1014
Corequisite(s): LAR 2164
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

LAR 2026 - Landscape Architecture Design Studio Place, Process and People (6 credits)
Landscape design and site planning including design processes, design communication, community-based design, case study methods, landscape performance. 2025: planning, programming and design of places, analysis of site, context and design for human use, and natural systems in creative design syntheses. 2026: master plan and site-scale planning and design incorporating multiple program elements with emphasis on social, cultural and natural systems infrastructure of neighborhoods and communities. Course Contact to Credit Hour Structure: Lecture (1H,1C), Lab (6L, 2C) Design Lab/Studio (5L, 3C). (1H, 11L, 6C)
Prerequisite(s): LAR 2025
Corequisite(s): LAR 3154
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

LAR 2154 - Landscape Architecture History (3 credits)
Historical development of designed landscapes and landscape architecture with emphasis on western and select non-western cultures. Thematic focus on design theories, the social constructions of nature and relationships with land, ideology of landscape, experience of landscape by different social groups and cultures, landscape ethics, and parallels between site and urban design.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

LAR 2164 - Landform Function and Aesthetics (4 credits)
Design principles and technology related to the creation of landforms for functional, aesthetic, and environmental purposes. Landform grading techniques for integrating soils, water, vegetation, transportation systems, and structures through the design and construction processes. Evaluating landform performance for landscape resilience. Design Lab/ Studio.
Prerequisite(s): LAR 1264
Instructional Contact Hours: (1 Lec, 5 Lab, 4 Crd)

LAR 2254 - Social and Cultural Landscapes (3 credits)
Introduction to experiential and cultural content of designed landscapes. Physiological, functional, and psychological factors that affect experience of the landscape. Study of cultural values, attitudes, and philosophies that have shaped historic and contemporary landscapes.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAR 2554 - Leadership for Global Sustainability (3 credits)
Leadership principles and humanities perspectives that help examine and engage global sustainable development challenges such as climate change, food-water-energy nexus, rising middle class, circular economy, and environmental justice. Topics include collaboration, stories, conflict resolution, self-awareness, bias, equity, religion, hubris, globalism, and moral naturalism. Examine trade-offs among economic, environmental, and social dimensions of sustainable development. Integration and application of disciplinary topics including ethics, ecology, evolution, anthropology, economics, religion, aesthetics, and risk management.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 2554, NR 2554

LAR 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAR 3015 - Intermediate Landscape Design and Construction Documents (6 credits)
Development of intermediate site planning and design knowledge skills. 3015 focuses on site/project scale planning and design with emphasis on greenfield development sites and models of conversation oriented design/development.
Prerequisite(s): LAR 2016
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

LAR 3016 - Intermediate Landscape Design and Construction Documents (6 credits)
3016 focuses on site/project scale planning and design involving multiple program elements with a focus on urban and suburban redevelopment and densification. Emphasis is given to the social, cultural and natural systems infrastructure of neighborhoods and communities.
Prerequisite(s): LAR 3015
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

LAR 3044 - Land Analysis and Site Planning (3 credits)
Concepts, principles, and processes of land analysis and evaluation for physical planning and design. Approaches to spatial problem solving with an emphasis on data collection, evaluation, and synthesis using applicable technologies such as Geographic Information Systems (GIS). Analysis and synthesis of natural and socio-cultural systems at varying scales in the site planning and design process using Geodesign method.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAR 3154 - Watershed Sensitive Site Design and Construction (4 credits)
Examines soil and water resource issues related to landscape architectural site planning and design. Key topics include watershed sensitive site design, estimation and management of storm water runoff, rainwater conservation, design of open channel conveyances for site planning applications, and erosion and sedimentation control. Prerequisite: LAR 2164 or consent of instructor
Prerequisite(s): LAR 2164
Instructional Contact Hours: (2 Lec, 4 Lab, 4 Crd)

LAR 3164 - Design in Detail: Materials, Methods and Assembly (4 credits)
Landscape construction knowledge and practices integrating concepts of design detailing with material selection, sustainable construction methods, and environmental performance. Concepts of landscape performance in material use and human interaction, effects on the built environment, and technical documentation.
Prerequisite(s): LAR 2164
Instructional Contact Hours: (2 Lec, 3 Lab, 4 Crd)

LAR 3264 - People Community and Place (3 credits)
Advanced course focusing on landscape/behavior interactions and implications for the design of outdoor environments at site and community scales for sustainable communities. Systems approach to engage various community design program elements, including social, land use, physical infrastructure, public space, movement, energy, and natural systems, in place-making strategies for diverse populations. Methods of community participation and engagement used in community-based design practices. Pre: Junior standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAR 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

LAR 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAR 4004 - History and Theory of Landscape Architecture II (3 credits)
This course studies theoretical and practical developments in landscape architecture and related arts through investigation and analysis of design theory and philosophy, and built form. Pre: 2004 or permission of instructor.
Prerequisite(s): LAR 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

LAR 4014 - Design and Construction Documentation (6 credits)
Landscape architectural project-based design and construction documentation. Site design integrating experiential learning, programming, schematic design, design development, construction documentation, construction cost estimation, and technical specifications. Construction principles and practices in preparation of site design and set of construction documents. Community-based principles and practices for site design development. Lecture (1H,1C), Lab (6L, 2C) Design Lab/Studio (5L, 3C) (1H, 11L, 6C).
Prerequisite(s): LAR 2164 and LAR 3154 and LAR 3164
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

LAR 4034 - Evolution of the American Landscape (3 credits)
Examine and interpret physical changes in the rural and urban landscapes of the United States as they reflect cultural values; technologic innovations; immigration patterns; the roles of diverse professions over time; changing views of use, conversation and preservation of national resources; and expectations for places of live, work and play using an iterative writing process and reflective course discussions.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAR 4084 - Landscape Design and Planning Studio (3-6 credits)
Advanced design studio addresses current land design and planning issues including global climate change across contexts and spatial scales using complex problem-solving methods of a geodesign framework. Domestic and international precedents, theories, guidelines, and regulations. Development and communication of consensus-based comprehensive plans and designs that address sustainability and resilience issues caused by climate change and others. Use of collaborative community-based design practices. Non-Majors - Lecture (1H, 1C), Lab (6L, 2C). Majors – Course Contact to Credit Hour Structure: Lecture (1H, 1C) Lab (6L, 2C) Design Lab/Studio (5L, 3C). Variable credit course. (1H, 6-11L, 3-6C)
Prerequisite(s): LAR 4014
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 6-11 Lab, 3-6 Crd)

LAR 4094 - Senior Project (3-6 credits)
Advanced landscape architectural design capstone course using applied research requiring development of a landscape architecture project selected and completed by the student under the direction of a faculty advisor. Landscape architecture theories and issues; design principles and processes, technological tools and communication strategies to develop and implement a comprehensive design study or independent design project in the context of specific concerns of the built environment. Repeatable for a maximum of 9 credit hours. 3 credit hour course - Lecture (1H, 1C), Lab (6L, 2C). 6 credit hour course - Course Contact to Credit Hour Structure: Lecture (1H, 1C), Lab (6L, 2C), Design Lab/Studio (5L, 3C). Variable credit course. (1H, 6-11L, 3-6C)
Prerequisite(s): LAR 4014 and LAR 4084
Instructional Contact Hours: (1 Lec, 6-11 Lab, 3-6 Crd)
Repeatability: up to 9 credit hours

LAR 4134 - Landscape Representation (3 credits)
2D and 3D hand and digital drawing modes and representational techniques used in landscape design explorations and visual presentations. Study and application of landscape representations. Visual communication of landscapes, landscape change, hydrologic patterns, ecologic processes, and human systems related to design, planning and management of the built environment across geographic and site scales. Design Lab/Studio.
Instructional Contact Hours: (1 Lec, 3 Lab, 3 Crd)

LAR 4154 - Design Studies of the Built Environment (3-6 credits)
Design study of built environment using comparative case studies of relationships between society and culture and the physical and built environments, as seen across scales. Design and use analysis and documentation of elements of the physical environment; exploration of interface between building, people, and landscape systems. Independent case study research project includes on-site field investigations, design research and final documentation of findings. Pre: Junior standing. 3 credit hour course - Design Lab (5L, 3C). 6 credit hour course - Design Lab (9L, 6C) Variable credit. Design Lab/Studio. (5-9L, 3-6C)
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 5-9 Lab, 3-6 Crd)

LAR 4244 - Professional Practice in Landscape Architecture (3 credits)
Comparative study of career options, professional practice types in landscape architecture including current and future practices. Introduction to firm organizational structure, business models, organizational culture and project management. Review of laws, regulations, contracts, financial and business planning, professional ethics and societal forces impacting design processes and work from project inception to built outcomes. Portfolio and resume development.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAR 4254 - Theories of Landscape Architecture (3 credits)
Critical examination of theories relevant to landscape architectural design and the inter-relationship between theory and practice. Evolution of theory with respect to built works. Overview of concurrent design theories and philosophies in the related arts. Pre-requisite: Senior standing or instructors permission.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAR 4304 - Topics in Landscape Architecture (3 credits)
Topics in landscape architecture history, theory and design methods is an advanced course focusing upon issues facing the professional practice of landscape architecture today. Special emphasis on methods of analysis and interpretation including application of creative techniques, analogous thinking, computer-aided procedures and information handling in landscape architecture design and practice. Pre: 3015 and 3016 or permission of instructor. May be repeated with different content for a maximum of 12 credits.
Prerequisite(s): LAR 3015 and LAR 3016
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 12 credit hours

LAR 4324 - Landscape Architecture Technology III-Construction Documents (4 credits)
This course provides the link between landscape architectural design and construction documentation. Landscape technology covered in preceding technology courses is combined with information on construction principles and practices in the preparation of landscape architectural construction drawings and technical specifications.
Prerequisite(s): LAR 4244
Instructional Contact Hours: (2 Lec, 4 Lab, 4 Crd)

LAR 4554 - Creating the Ecological City (3 credits)
Multidisciplinary, team oriented, problem-solving approaches to creating cities that foster healthy interconnections between human and ecological systems. Analysis of problems from practical and ethical perspectives in the context of the diverse knowledge bases and values of decision-makers. Formation and utilization of integrated design teams to solve complex urban design and planning problems at a variety of scales. Senior standing.
Prerequisite(s): HORT 2134 or FREC 2134
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BSE 4554, FREC 4554, HORT 4554, SPIA 4554

LAR 4705 - Landscape Design and Planning (6 credits)
Theories, methods, techniques, and tools relating to the planning and design of sites, communities, and regional landscapes. 4705: Development of design ability through the study of: two- and three-dimensional design, principles and elements of spatial composition, theories and techniques for planning and design of sites, and design communication techniques. Investigation of natural and man-made physical factors and cultural factors, and human needs. Creative design synthesis. 4706: Evaluation of land resources and the allocation of land uses within large complex sites and regional landscapes. Theories and techniques of site planning and community design. Research of natural, cultural and physical conditions. Application of geographic information systems. Assessment of community development and land planning concepts. Proposing land-use and management strategies at community and regional landscape scales. Identification and application of community-based design practices. Pre: 4705 for 4706. Course Contact to Credit Hour Structure: Lecture (1H,1C), Lab (6L, 2C) Design Lab/Studio (5L, 3C). (1H, 11L, 6C)
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

LAR 4706 - Landscape Design and Planning (6 credits)
Theories, methods, techniques, and tools relating to the planning and design of sites, communities, and regional landscapes. 4705: Development of design ability through the study of: two- and three-dimensional design, principles and elements of spatial composition, theories and techniques for planning and design of sites, and design communication techniques. Investigation of natural and man-made physical factors and cultural factors, and human needs. Creative design synthesis. 4706: Evaluation of land resources and the allocation of land uses within large complex sites and regional landscapes. Theories and techniques of site planning and community design. Research of natural, cultural and physical conditions. Application of geographic information systems. Assessment of community development and land planning concepts. Proposing land-use and management strategies at community and regional landscape scales. Identification and application of community-based design practices. Pre: 4705 for 4706. Course Contact to Credit Hour Structure: Lecture (1H,1C), Lab (6L, 2C) Design Lab/Studio (5L, 3C). (1H, 11L, 6C)
Prerequisite(s): LAR 4705
Instructional Contact Hours: (1 Lec, 11 Lab, 6 Crd)

LAR 4964 - Field Work (1-19 credits)
Instructional Contact Hours: Variable credit course

LAR 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAR 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAR 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAR 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Latin (LAT)

LAT 1105 - Elementary Latin (3 credits)
Introduction to Latin, for development of reading ability. 1105: Introduction to the basics of the language and short readings of graded difficulty. 1106: Introduction to the basics of the language, continued, with introduction of selected passages from ancient Roman authors for reading, comprehension, and translation.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAT 1106 - Elementary Latin (3 credits)
Introduction to Latin, for development of reading ability. 1105: Accidence, syntax, and vocabulary, with translation of discrete sentences and short readings of graded difficulty. 1106: Accidence, syntax, and vocabulary continued, with the introduction of selected passages from ancient Roman authors for reading, comprehension, and translation.
Prerequisite(s): LAT 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

LAT 2104 - Cicero and Livy (3 credits)
A course in two major Latin prose authors. Review and refinement of the language is combined with an increasing attention to historical, cultural, linguistic and literary questions. May be repeated with different content for a maximum of 9 credits.
Prerequisite(s): LAT 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

LAT 2114 - Latin Epic: Vergil and Ovid (3 credits)
A course in two important Latin poets of the Age of Augustus with a view to increasing the students ability to understand and read Latin. Review and refinement of the language is combined with an increasing attention to historical, linguistic, cultural, and literary questions. May be repeated with different content for a maximum of 9 credits.
Prerequisite(s): LAT 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

LAT 2124 - Latin Lyric: Catullus and Horace (3 credits)
Two important Latin poets of the Late Republic. Review and refinement of the language is combined with an increasing attention to historical, linguistic, cultural, and literary questions. May be repeated with different content for a maximum of 9 credits.
Prerequisite(s): LAT 1105 and LAT 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

LAT 2134 - Late Medieval Latin (3 credits)
Post-classical Latin, from Augustine and Boethius through the Middle Ages, Renaissance, and the Modern Age. Review and refinement of the language is combined with an increasing attention to historical, cultural, linguistic and literary questions. May be repeated with different content for a maximum of 9 credits.
Prerequisite(s): LAT 1105 and LAT 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

LAT 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

LAT 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 3004 - Readings in Latin Literature (3 credits)
A variable content course devoted to the study of major Latin texts not offered in the 2000-level courses. Emphasis is on content, style, and context. May be repeated for credit with different content. Two 2000-level courses in Latin or equivalent proficiency required. Writing Intensive.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAT 4004 - Directed Studies in Latin Prose Composition (3 credits)
Application of Latin grammar structure to the translation of English into Latin. Original compositions are written in Latin. (Will be offered during the academic year whenever there is sufficient enrollment and available staffing). One 3000-level course in Latin required.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAT 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

LAT 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

LAT 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Leadership Studies (LDRS)

LDRS 1414 - Citizen Leadership (3 credits)
Language, theories, concepts, and competencies associated with practicing effective leadership and social change and developing intercultural and global awareness.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

LDRS 1424 - Citizen Leadership Praxis (3 credits)
Application of foundational knowledge of leadership, intercultural and global awareness, the social change model, and socially responsible leadership concepts toward a service-learning project.
Prerequisite(s): LDRS 1414
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

LDRS 2014 - Principles of Peer Leadership (3 credits)
Theories and basic principles associated with being a positive influence on fellow students, identification of contemporary college student issues, leadership skills utilized to motivate peers in teamwork-based scenarios, leadership skills associated with human development, ethics, maintaining community, and conflict in decision making. May be repeated once for a maximum of 6 credits.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

LDRS 2964 - Field Study (1-19 credits)
May be repeated for a maximum of 6 credits.
Instructional Contact Hours: Variable credit course
Repeatability: up to 6 credit hours

LDRS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LDRS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LDRS 3104 - The Dynamics of Leadership (3 credits)
This course examines advanced leadership theories and leadership effectiveness in todays organizations.
Prerequisite(s): LDRS 1015 or LDRS 1414
Instructional Contact Hours: (3 Lec, 3 Crd)

LDRS 3304 - Elements of Team Leadership (3 credits)
Develop effectiveness in leading, delegating, and communicating within a team environment. Emphasis on motivation of team members, emotional intelligence, ethical issues, team member dynamics, team management, and effective team processes.
Prerequisite(s): LDRS 1015 or LDRS 1414
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

LDRS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

LDRS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LDRS 4044 - Leadership Studies Capstone (1 credit)
Culmination of comprehensive knowledge gained about leadership and social change throughout a students undergraduate career. Involves reflection on collegiate leadership experiences and coursework in the leadership and social change minor. Results in student development of an electronic portfolio (i.e., ePortfolio). Pre: Senior standing.
Prerequisite(s): LDRS 1015 or LDRS 1414
Instructional Contact Hours: (1 Lec, 1 Crd)

LDRS 4514 - Skills for Nonprofit Organizational Leaders (3 credits)
Skills essential for leading nonprofit organizations. Nonprofit sector, governance, fundraising, financial administration, managing personnel, media communications, strategic planning, and leadership skills. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

LDRS 4754 - Internship (1-19 credits)
Instructional Contact Hours: Variable credit course

LDRS 4964 - Field Study (1-19 credits)
May be repeated for a maximum of 6 credits.
Instructional Contact Hours: Variable credit course
Repeatability: up to 6 credit hours

LDRS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LDRS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LDRS 4994 - Undergraduate Research (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

LDRS 4994H - Undergraduate Research (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

Liberal Arts and Human Science (LAHS)

LAHS 1004 - Introduction to Liberal Arts and Human Sciences (1 credit)
Introduction to the College of Liberal Arts and Human Sciences: discover majors, minors, and degree requirements in the College of Liberal Arts and Human Sciences. Introduction to academic skills and career options. Review of policies and procedures for academic planning and success. Review of University programs and services that support students and promote student development.
Instructional Contact Hours: (1 Lec, 1 Crd)

LAHS 1014 - Academic Recovery and Success Strategies (1 credit)
Helps students on academic probation and/or returning from academic suspension to develop academic skills, behaviors and motivation towards success; focuses on the development and application of college-level study skills, personal success strategies, and the use of campus resources that enhance individual student achievement. Credit not applicable to meeting degree requirements.
Instructional Contact Hours: (1 Lec, 1 Crd)

LAHS 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAHS 1984G - Special Study (1-19 credits)
Pathway Concept Area(s): 7 Identity & Equity in U.S.
Instructional Contact Hours: Variable credit course

LAHS 2104 - Introduction to Hip Hop Studies (3 credits)
Interdisciplinary survey and examination of Hip Hop aesthetic and cultural expressions, history, and scholarship and their contexts in the U.S. and globally; including how Hip Hop comments on, responds to and reflects, and mediates intersectional identities, space, place, traditions, and histories of inequity and power in the U.S. and globally. Critical analysis and creation of multimedia texts in response to and synthesizing diverse perspectives in Hip Hop. Opportunities to engage and participate in a variety of campus and community organizations and resources.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAHS 2724 - Introduction to Displacement Studies (3 credits)
Examines key concepts, ideas, and technologies in global population displacement, including categorization, distribution and governance of displaced groups. Introduces displacement drivers such as natural disaster, climate change, civil unrest, infectious disease, and forced relocation. Identifies digital infrastructures used for, by, and against displaced populations. Describes experiences of displaced people.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 2724, HIST 2724, STS 2724

LAHS 2784 - Introduction to Public Interest Technology (3 credits)
Introduces concepts, skills, and problems related to Public Interest Technology, an emerging field of comprehensive approaches to ensure that technology—broadly conceived to encompass digital, genomic, agricultural, financial, and other sectors—works for the benefit of public interest. Focuses on introducing basic concepts and frameworks in Public Interest Technology, including social justice, inclusive design, the politics of design and production, technology policy, and stakeholder identification and participation.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

LAHS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAHS 2974H - Independent Study (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

LAHS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAHS 2984G - Special Study (3 credits)
Pathway Concept Area(s): 7 Identity & Equity in U.S.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAHS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

LAHS 3954G - Study Abroad (3 credits)
Pathway Concept Area(s): 7 Identity & Equity in U.S.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAHS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

LAHS 4024 - Communicating and Engaging with Science Capstone (3 credits)
Capstone experience in in communicating and engaging with science. Transdisciplinary collaboration cooperating with peers in STEM and non-STEM fields. Engagement—via digital, performative, written, and visual approaches—with audiences with diverse levels of scientific understanding. Discussion of methods for assessing the impact of science communication. Senior standing required.
Prerequisite(s): ENGL 4824 and TA 2404
Instructional Contact Hours: (3 Lec, 3 Crd)

LAHS 4115 - Tech for Humanity Enabling Capability Studio I (3 credits)
Two-semester experiential learning course sequence, which serves as experiential learning studio course, which serves as culminating capstone experience for the planned Tech for Humanity minor. Immerses students in teams working with stakeholders to identify a sociotechnical problem regarding a technology for which the stakeholder group has less access, awareness, adoption, or benefit compared to the broader population; conduct humanistic and social scientific research to better understand the problem; evaluate different policy and design solutions to the problem and how they contribute to social justice, including enhancing diversity, equity, access, and inclusion; and create a concrete prototype of a solution to the identified problem. LAHS 4115 In the first semester of the two-course sequence, students work with an external stakeholder partner (e.g., business, nonprofit organization, community group, or government) to identify a pressing sociotechnical problem experienced by the partner or its users, customers, or constituents. Students apply humanistic or social/behavioral scientific research methods (e.g., historical documentary analysis and focus group interviews) to better understand the nature and causes of the problem. Students evaluate potential solutions to the problem in light of what they found through their research and the potential for increasing social justice. LAHS 4116 In the second semester, student teams prioritize design and prototyping process, working through difficulties and constraints any potential solution faces, and assessing strengths and weaknesses of proposed solutions in dialogue with their stakeholders. Students prototype potential solutions, whether a technological or process design or proposed policy or legislation, and have their prototype assessed, tested, and critiqued by both the instructor and representatives from the stakeholder group.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAHS 4116 - Tech for Humanity Enabling Capability Studio (3 credits)
Two-semester experiential learning course sequence, which serves as experiential learning studio course, which serves as culminating capstone experience for the planned Tech for Humanity minor. Immerses students in teams working with stakeholders to identify a sociotechnical problem regarding a technology for which the stakeholder group has less access, awareness, adoption, or benefit compared to the broader population; conduct humanistic and social scientific research to better understand the problem; evaluate different policy and design solutions to the problem and how they contribute to social justice, including enhancing diversity, equity, access, and inclusion; and create a concrete prototype of a solution to the identified problem. LAHS 4115 In the first semester of the two-course sequence, students work with an external stakeholder partner (e.g., business, nonprofit organization, community group, or government) to identify a pressing sociotechnical problem experienced by the partner or its users, customers, or constituents. Students apply humanistic or social/behavioral scientific research methods (e.g., historical documentary analysis and focus group interviews) to better understand the nature and causes of the problem. Students evaluate potential solutions to the problem in light of what they found through their research and the potential for increasing social justice. LAHS 4116 In the second semester, student teams prioritize design and prototyping process, working through difficulties and constraints any potential solution faces, and assessing strengths and weaknesses of proposed solutions in dialogue with their stakeholders. Students prototype potential solutions, whether a technological or process design or proposed policy or legislation, and have their prototype assessed, tested, and critiqued by both the instructor and representatives from the stakeholder group.
Prerequisite(s): LAHS 4115
Instructional Contact Hours: (3 Lec, 3 Crd)

LAHS 4214 - Experiential Learning for Social Impact Capstone (3 credits)
Capstone in displacement studies. Promotes social justice through community engaged research. Work with a research or cultural center on campus or a community organization off campus. Academy of Transdisciplinary Studies advisor approval. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

LAHS 4754 - Internship (1-19 credits)
Instructional Contact Hours: Variable credit course

LAHS 4964 - Field Study (1-19 credits)

Management (MGT)

MGT 1064 - Entrepreneurs Residence Experience (3 credits)
Introduces students in the Innovate Living Learning Community to the various aspects of the entrepreneurial ecosytem at Virginia Tech and familiarizes them with common business terminology in the field. Discover the difference between ideas and entrepreneurial opportunities and relate current business events to topics in the course, including specific entrepreneurial opportunities. Provides weekly opportunities to interact with and learn from visiting entrepreneurs through various methods (i.e. fireside chats, dinners, and speaking events) to enhance learning outside of the classroom and build confidence in engaging with seasoned professionals. Discusses entrepreneurial ideas and current opportunities and applies learning to create and deliver an effective, individual startup concept pitch.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 1104 - Foundations of Business (3 credits)
Introduces students to the free enterprise system and the various business functions, such as management, human resources, marketing, operations, accounting and finance, technology as well as to the different types of business such as manufacturing and service. Analyzes the various business functions to help improve understanding of career interests and opportunities, as well as to provide a basic understanding of how a company operates. Applies learning through a group project in which a micro-business is created and managed.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 1935 - Fundamentals of Cadet Professional Leadership (2 credits)
1935: Foundational course of the Virginia Tech Corps of Cadets Citizen-Leader Program. Explores basic business etiquette and introduces the cadet to concepts of online professional identity, basic career preparation, resume writing, basic interviewing techniques and ways to create a healthy nutrition and physical fitness program. Includes a comprehensive physical fitness laboratory. Membership in the Corps of Cadets is required. 1936: Introduces methodologies for efficient and effective leadership, explores options for multiple career paths, basic business etiquette, opportunity to attend leadership conferences and field trips to local businesses. Prepares cadets for leadership positions in their sophomore year. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 1936 - Fundamentals of Cadet Professional Leadership (2 credits)
1935: Foundational course of the Virginia Tech Corps of Cadets Citizen-Leader Program. Explores basic business etiquette and introduces the cadet to concepts of online professional identity, basic career preparation, resume writing, basic interviewing techniques and ways to create a healthy nutrition and physical fitness program. Includes a comprehensive physical fitness laboratory. Membership in the Corps of Cadets is required. 1936: Introduces methodologies for efficient and effective leadership, explores options for multiple career paths, basic business etiquette, opportunity to attend leadership conferences and field trips to local businesses. Prepares cadets for leadership positions in their sophomore year. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 1945 - Fundamentals of Cadet Leadership (2 credits)
Foundational course of the Virginia Tech Corps of Cadet Leader Development Program. Explores self-understanding, personality types, active and passive followership, leadership and ethical theories. A laboratory introduces freshmen cadets to academic success strategies. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 1946 - Fundamentals of Cadet Leadership (2 credits)
Continued emphasis on self-understanding and followership. Introduces adversarial and positive leadership models, hazing statutes and leadership case studies. Prepares cadets for leadership positions in their sophomore year. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 2064 - Foundations of Entrepreneurship (3 credits)
Introduction to the study and practice of entrepreneurship in a human-centered context. Examination of the influence of different cultures, institutions, and global factors and the role of human values, beliefs and behaviors on modes of entrepreneurial action. Application of theories and methods of entrepreneurial opportunity identification within the contexts of human behavior, social institutions and/or patterns of culture to generate ideas for new ventures and application of design-thinking theories and concepts in a field-based, experiential learning project to design, iterate and validate a value proposition and business model for a new venture.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 2104 - Careers in Management (1 credit)
Career opportunities associated with the Management major's three options: Human Resource Management (HRM), Management Consulting and Analytics (MCA), and Entrepreneurship, Innovation and Technology (EIT). Analyzes the current job markets and opportunities for these career paths. Creating effective resumes and cover letters and researching and networking with targeted firms. Experience scenarios of informational, behavioral, case interviews, and elevator pitch presentations. Incorporate real life perspective through guest speakers who are industry experts and local field visits. Pre: Sophomore and Junior Management majors and business undecided only. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

MGT 2114 - Principles of Project Management (3 credits)
Broad and comprehensive overview of project management (PM) with emphasis on its application in organizations. Tools, techniques, and evaluative frameworks that are intended to solve problems and execute organizational strategy. Emphasizes project lifecycle and introduces multiple PM approaches and technologies. Change management evaluation and project manager role in implementing related strategies. Assessment of project financial performance, impact, and risk.
Prerequisite(s): MGT 1064 or MGT 1104
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 2204 - Global Business of Pop Culture (3 credits)
Analyze the global business of pop culture through a semester-long case study of a selected pop culture industry. Investigate how social, historical, political, and economic forces shape, and are shaped by, business-decision making at local and global scales. Emphasis on business-decision making by pop culture entities reflecting how they have (or have not) responded over time to changing power dynamics and inequity in the macroenvironment (e.g., reimagined social identities and expectations, accelerated globalization and market access, political unrest, etc.). Use project-based learning to assess past strategic decisions from multiple, intersecting perspectives (e.g., social, historical, political, economic, etc.) and make recommendations about market-based decisions.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 2314 - Introduction to International Business (3 credits)
Fundamental concepts of international business. International business environment and how it affects decisions, the creation of competitive advantage in the multinational firm, and complexities of managing it. Why international businesses exist, drivers of international expansion, differences among countries in terms of political, legal, economic, technological and cultural dimensions, and the complexity of international business decisions. Causes and consequences of globalization, international trade, and analyzing the challenges of managing international business, with a focus on a number of industries, including hospitality and tourism. Operational, strategic, and ethical issues which are unique to multinational corporations.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HTM 2314

MGT 2354 - Teams, Leadership, and Business: Cultivating Excellence (3 credits)
Explores a broad range of concepts and theories important for a basic understanding of team leadership, including organizational behavior, motivation, conflict management, business engagement and stakeholders. Semester-long, service-learning assignment and case analyses to evaluate practical applications of exceptional leadership practices and team skills. Examines different cultures and values found within a team and business and challenges of diversity and inclusion in team settings. Pre: Sophomore standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 2504 - Sustainable Business Management (3 credits)
Foundational study and practice of sustainability and social issues in a business management context. Uses the emerging environmental, social, and governance (ESG) framework to explore the historical context of sustainability in business, influential ESG stakeholders, business commitments towards "net zero" status, business' role in creating and mitigating environmental impact of greenhouse gas emissions (GHG's), profitability of sustainable businesses, relevant government policy and regulation, ESG measurement and reporting, innovation and competitive advantage, sustainable supply chain management, sustainable business models, embedding sustainability into strategy, and how managers conceptualize and initiate ESG programming.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 2614 - Foundations of Management Consulting and Data Analytics (3 credits)
Provides students with a fundamental understanding of management consulting as an industry, the consulting process, and success-factors for providing value-adding consulting services. Examines financial and other key concepts that successful management consultants need to master to provide insight and value to their customers. Provides a comprehensive overview of new and emerging technologies impacting the consulting industry and consulting skills in data analytics, data sense-making and data visualization.
Prerequisite(s): MGT 1104 or MGT 1064
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 2935 - Career Planning for Cadets (2 credits)
2935: Cadets in this class learn the basic of business networking, developing presentations, professional mentorship, personal finance, and investments, advanced nutrition and living a healthy lifestyle. A physical fitness laboratory complements the lecture. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 2936 - Career Planning for Cadets (2 credits)
2936: Cadets in the class learn about careers in public service, leadership through service learning, personal investment strategies, ethical business leadership, explore opportunities for public service, and participate in leadership conference. A physical fitness laboratory complements the lecture. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 2945 - Small Unit Leadership for Cadets (1 credit)
Prepares cadets for responsibilities as small unit leaders. Builds on the previous years knowledge to focus on skills and knowledge necessary to lead small units. Introduces cadets to the importance of communication, includes basic counseling techniques, disciplinary actions, conflict resolution, cadet regulations and leadership case studies. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 1 Crd)

MGT 2946 - Small Unit Leadership for Cadets (1 credit)
Prepares cadets for organizational leadership. Teaches skills and knowledge necessary to effectively lead a mid- level organization. Includes practical counseling techniques using the cadet counseling form, the leaders toolbox, the cadet disciplinary system, mentor program, and conflict resolution. Includes instruction on the Senior Sergeant Selection Process. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 1 Crd)

MGT 2954 - Business Study Abroad (1-19 credits)
This course provides students with an international business experience. It is only offered as part of a program outside of the United States. Students will learn from the structured educational experience developed by the faculty leader. This course is intended for students who want to take management-related free electives. Pre: Instructors consent and the completion of 24 semester hours with a minimum GPA of 3.0 or departmental consent.
Instructional Contact Hours: Variable credit course

MGT 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 2984G - Special Study (1-19 credits)
Pathway Concept Area(s): 7 Identity & Equity in U.S.
Instructional Contact Hours: Variable credit course

MGT 2984O - Special Study (1-19 credits)
Pathway Concept Area(s): 5F Quant & Comp Thnk Found.
Instructional Contact Hours: Variable credit course

MGT 3064 - Cornerstones of Entrepreneurship and Innovation (3 credits)
Provides a cornerstone foundation for the understanding of entrepreneurship and the business innovation process exposing students to fundamental business concepts applied and integrated in these arenas. An examination of value creation through entrepreneurship and the rudiments of new ventures are provided helping students develop an entrepreneurial frame of mind and perspective. Pre: Completion of 45 credit hours and two CLE Area 5 courses.
Prerequisite(s): MGT 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3074 - Social Entrepreneurship (3 credits)
Provides a foundation for how social entrepreneurs use and combine resources to pursue opportunities that lead to social change and/or address social needs. An examination of the nature of social entrepreneurship and its various practices is provided, helping students develop an entrepreneurial frame of mind and prepare them to act as effective leaders of social change.
Prerequisite(s): MGT 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3084 - Digital Entrepreneurship, Innovation, and Product Development (3 credits)
Technology-based and digital entrepreneurship in startups, corporate, and public-sector organizations. Course activities in commercialization and resource mobilization strategies for the development of new digital technologies. Data-driven assessment and pursuit of entrepreneurial opportunities in digital environments, including cybersecurity, artificial intelligence, blockchain technologies, biotechnology, and other emerging new technologies.
Prerequisite(s): MGT 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3094 - Global Entrepreneurship (3 credits)
Global entrepreneurship and venture creation strategies in intercultural global perspectives. Identifies the global entrepreneurial core competencies, applies formal global thinking concepts, and uses integrative problem-solving tools in global entrepreneurial opportunity contexts. Analyze the value proposition of a new venture model across national boundaries. Builds framework for understanding the entrepreneurial process in global contexts. Blends theory with practical experiences in global business contexts to explore and research global entrepreneurial process and environment.
Prerequisite(s): MGT 2064
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3304 - Management Theory and Leadership Practice (3 credits)
Introduces the student to a broad range of concepts, theories and practices important for a basic understanding of management. Includes the functions of management, roles of managers in organizations, and tools and techniques for managing organizational performance. Focus on the global environment in which today's managers must effectively and ethically lead organizations. Pre: Sophomore standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3324 - Organization Behavior (3 credits)
This course examines the determinants and consequences of human behavior in formal organizations. Specific focus is on the individual, interpersonal, and group processes which underlie all the human dynamics.
Corequisite(s): 3304 or 3404.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3334 - Managing Human Resources (3 credits)
Examines the strategies, policies, and practices associated with effectively managing human resources. Designed to provide future managers with tools and techniques to acquire, develop, reward, and retain employees within the legal and social context of todays organizations. Emphasizes how managing human resources can contribute to organizational effectiveness in a variety of industrial and organizational settings.
Prerequisite(s): MGT 3304 or MGT 3404
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3344 - Employee & Labor Relations Law, Bargaining, and Dispute Resolution (3 credits)
Historical, legal, social, and economic forces that shape employment relationships in the U.S. Labor and employment laws and how they apply in specific cases. Anticipate and respond to a union organizing campaign. Employment contract bargaining and dispute resolution in union and nonunion settings. Compare U.S. private sector, public sector, and international employee and labor relations laws and institutions. Debate contemporary employee relations' events and issues using critical thinking and ethical reasoning.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3404 - Principles of Management (3 credits)
Management concepts, theories, and practices for the effective and successful operation of modern organizations. Four functions of management and the activities involved in each function. Importance of ethical management practices in the effective operation of global business organizations, including entrepreneurial ventures. Individuals and group behaviors in the workplace, as well as methods to improve workplace performance.Duplicates some material in MGT 3304. Course credit will not be awarded for both MGT 3304 and MGT 3404.
Prerequisite(s): MGT 1104 or MGT 1064
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3414 - Talent and Organizational Development (3 credits)
Talent development systems and their strategic support of organizational learning, performance management process, a high-performing workforce, and organizational success. Foundational elements of talent development, including performance management process equity in evaluation and interviews. Emerging talent and organizational development trends and technologies. Talent development and performance management analytics to identify organizational talent capacity to meet current and future workplace needs. Organizational and talent development learning plans within talent-centered cultures in diverse organizational contexts. Emerging issues in learning, performance management, and talent development. Client projects, guest speakers from the field, and contemporary case studies.
Prerequisite(s): MGT 3304 or MGT 3404
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3424 - Strategic Talent Planning, Acquisition, and Analytics (3 credits)
Strategic talent planning, acquisition, and analytics within organizations. Alignment of talent planning and acquisition strategies with legal and social contexts, organizational goals, equity, and firm performance. Identification and analysis of key human capital data to inform talent acquisition decisions. Impact of talent planning decisions on acquisition and selection decisions, job design, internal workforce mobility, retention and succession planning for immediate and long-term outcomes. Emerging trends impacting field of human resources and specific to these topics.
Prerequisite(s): MGT 3304 or MGT 3404
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3444 - Multicultural Diversity in Organizations (3 credits)
Evaluates the impact of multicultural diversity on the employees work experience and on organizational processes/ performance. Students analyze and discuss theories and practices related to the business case for diversity, exploring the processes through which multicultural diversity (both domestic and international) affects the organization and its stakeholders. Topics include multicultural diversity theories, legislation, interpersonal and international differences, cultural intelligence, and organizational practices. Pre: Junior Standing. (3H,3C)
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3604 - Managerial Analytics (3 credits)
Digital tools to analyze managerial data ranging from productivity data to large scale, organizational databases. Three themes: (1) analyzing and improving productivity using digital tools; (2) applying exploratory data tools; (3) improving organizational collaboration, analysis, and knowledge sharing using relational databases.
Corequisite(s): 3304 or 3404.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3614 - Strategy and Competition Analytics (3 credits)
Develops concepts and techniques for analyzing and formulating strategy in a variety of business environments. Focuses on research, data, and analysis related to the key players in the environment from both a competitive and cooperative perspective. Basic frameworks for analysis include mapping the objectives and constraints of the players, and modeling the pattern of interaction among the players. Provides an in-depth exposure to the theory and tools of strategy analysis and practice in their management consulting application.
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 3754 - Management Internships and Career Development (3 credits)
Guided experience in work environments and job search. Through unpaid internships, students have the opportunity to view the inner workings of businesses first hand while working on organizationally meaningful assignments. Class activities prepare students for conducting effective job searches.
Prerequisite(s): MGT 3304 or MGT 3404
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

MGT 3804 - Topics for Cadet Global Leadership Studies (3 credits)
Analyzes historic and current leadership challenges using specific military campaigns for context. Covers national and military objectives and various instruments of national power in relation to national security. Travel to relevant country and battlefields for experiential learning. May be repeated with different content for a maximum of six (6) credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

MGT 3874 - The European Business Environment (3 credits)
Political, legal, economic, socio-cultural, technological and environmental issues and policies affecting the operation and strategies of foreign companies in Europe. Business operations inside and outside the European Union. Impact of EU policies and the EU legal framework on business strategies and policies of non-EU companies. Business strategy for the European market, marketing and human resources management in Europe, and corporate governance and control in Europe. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3874, PSCI 3874

MGT 3935 - Advanced Professional Development for Cadets (2 credits)
3935: Cadets in this learn about the mentor-protege relationship; resolving team conflicts; diversity in the workplace; standards of business conduct, dining etiquette; and maintaining a healthy lifestyle. A physical fitness laboratory compliments the lecture. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 3936 - Advanced Professional Development for Cadets (2 credits)
3936: Cadets in the class learn about business challenges from panels of experts in various career fields, business problem solving, speaking before a business audience, business writing, preparing for an internship and participation in a leadership conference. A physical fitness laboratory complements the lecture. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 3945 - Cadet Organizational Leadership (1 credit)
Prepares junior class cadets for responsibilities as senior sergeants. Builds on the previous years knowledge of small unit leadership. Introduces cadets to decision making, writing decision papers/executive summaries, project management, public speaking, and refinement of their personal leadership philosophy. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 1 Crd)

MGT 3946 - Cadet Organizational Leadership (1 credit)
Prepares junior calss cadets for the role of responsibility they will assume as senior leaders in the Corps. Continues focus on organizational leadership and introduces cadets to command and a commanders responsibilities. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 1 Crd)

MGT 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 3974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 4064 - Developing Entrepreneurial Ventures (3 credits)
Takes a cross-functional perspective on identifying and evaluating entrepreneurial opportunities, developing new ventures, and pursuing new venture strategies to compete in the marketplace. Explores business potentials of new venture ideas, examines new ventures feasibility, and develops business planning tools for the venture. Pre: Senior Standing.
Prerequisite(s): MGT 3064
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4084 - Management Consulting (3 credits)
Hands-on application of accounting, finance, marketing, management, information technology, and project management to actual business clients through on-site consultation with start-up and existing businesses and non-profits. Through classroom instruction, instructor coaching, and experiential studies, students will use the skills they have learned over several semesters to explore the field of management consulting. For the Management major with senior standing in the Management Consulting Option.
Prerequisite(s): MGT 3304 or MGT 3404 and MGT 3614
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4094 - Startup: Commercialization of Innovation (3 credits)
Work in interdisciplinary teams in an experiential environment replicating modern innovation environments. Engage in real world innovation commercialization opportunities. Individual experiences and projects involving actual inventions, innovations, technologies, intellectual property (e.g. patents) and market opportunities. Integrate design thinking, scientists, entrepreneurs, advisors and other potential collaborators. Create a representation of a plan for a minimum viable product for an innovative product or service based on customer and market feedback.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGE 4094, IDS 4094

MGT 4314 - International Management (3 credits)
The course is designed to provide the student with familiarity concerning the unique problems, characteristics, and demands that face multinational managers and the international business community. Junior standing required.
Prerequisite(s): MGT 2314 or HTM 2314
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4324 - Business and Professional Ethics (3 credits)
An inquiry into the fundamental norms of conduct in business and other professions and their justification in relation to the most important ethical theories. Special attention will be given to moral problems such as the ethics of hiring and firing, bribery, and professional responsibility to society.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 4324

MGT 4334 - Ethical Leadership and Corporate Social Responsibility (3 credits)
Focus on the leadership role of managers in promoting ethics and corporate social responsibility in business today. Consideration of the overall role of business in society and specific business-society issues such as equity and identity at work, environmental pollution, consumer and employee concerns, corporate-community relations, and the activities of multinational corporations. Issues examined through conceptual frameworks of business ethics, corporate social responsibility, and leadership (especially servant leadership). Emphasis placed on students articulating analysis of such issues through written and oral communication.
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4344 - Productivity and Quality Leadership (3 credits)
This course provides an introduction to leadership in the context of productivity and quality improvement. It focuses on understanding the concepts and skills associated with contemporary management strategies and systems. This course requires active student involvement and emphasizes participative leadership skills, data collection, qualitative problem solving, and communication processes. For Management majors only. Senior standing required.
Prerequisite(s): MGT 3304 or MGT 3404 and MGT 3324 and MGT 3604 and BIT 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4354 - Leadership: Advances in Skills and Concepts (3 credits)
This cornerstone course provides cutting-edge experiences, skills, and knowledge in leadership for students in the leadership minor. Within an historical context that balances military, political, and business perspectives, four types of leadership will be examined: self-leadership, dyadic leadership, team leadership, and enterprise leadership. Special emphasis will be placed on the specific skills, such as computer literacy and project management, required for leaders to succeed in modern, technologically oriented organizations. Pre: Senior standing.
Prerequisite(s): MGT 2354 or MGT 3304 or MGT 3404
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4394 - Strategic Management (3 credits)
Senior-level capstone course to formulate and implement strategies to create and sustain competitive advantage. Emphasis on developing pragmatic and action-oriented general management skills that integrate across functional areas of the organization. Utilize various tools, concepts, and analytical framework to define and analyze strategic problems. Revisits business principles and practices covered in basic business courses. Pre: Senior standing.
Prerequisite(s): (MGT 3304 or MGT 3404) and (MKTG 3104 or MKTG 3104H) and FIN 3104 and BIT 3414
Corequisite(s): FIN 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4414 - Strategic Compensation, Benefits, and Rewards (3 credits)
Strategic perspective on how decisions about employee compensation, benefits, and rewards help firms to implement business strategy and achieve competitive advantage. Basic compensation tools and analytic techniques used to design an internally aligned and externally competitive pay system in organizations. Individual and group level performance-based rewards that drive performance and achieve business objectives. Strategic choice of employee benefits aligned with organizational goals. Compensation-related laws and analysis of compensation data to ensure equity and legal compliance.
Prerequisite(s): MGT 3334 or MGT 3344 or MGT 3424
Instructional Contact Hours: (3 Lec, 3 Crd)

MGT 4854 - Analytics in Action (3 credits)
Problem-solving framework and analytic techniques for solving messy, unstructured, high-impact, real-world organizational/societal problems within an interdisciplinary, intercultural, experiential learning context. Definition of problem scope, objectives, need for change, ethical concerns, and diversity and inclusion issues; identification of stakeholders and their values; evaluation of decision tradeoffs; problem decomposition and hypothesis formulation; project planning and administration; data versus user requirements, ethical and inclusive decision making, data collection, preparation, and analysis; team roles and management; professional communication of insights, policy and action recommendations.
Corequisite(s): BDS 2005, CMDA 2014
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIT 4854

MGT 4935 - Cadet Citizen Leader Practicum (2 credits)
4935:Students in the class learn practical strategies for leading teams to plan execute a project; project writing; applied dining etiquette; being a mentor to others, leadership through service learning and living a healthy lifestyle. A physical fitness laboratory compliments the lecture. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 4936 - Cadet Citizen Leader Practicum (2 credits)
4936: Students in the class begin the process of transition from college to their intended career. Topics include conduct of effective meetings, salary and benefits negotiation, obtaining post-graduation professional development, serving as a mentor, and developing a plan for the first six months in a new job. A physical fitness laboratory compliments the lecture. Membership in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MGT 4944 - Leading in Your Profession (1 credit)
Examines the skills and knowledge necessary to succeed in a responsible role of leadership when beginning ones career. It is a capstone course that draws on the leadership training and experience cadets have accumulated during their first three years in the Corps of Cadets. Senior standing in the Corps of Cadets required. Course may be taken twice for credit. The pre-requisite requirement is such that a student must take the pre-requisite twice before enrolling in this course.
Prerequisite(s): MGT 2944
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 2 credit hours

MGT 4945 - Executive Leadership for Cadets (1 credit)
Examines executive level leadership. It explores executive decision making, constraint theory and problem solving in both the military and civilian career fields. Senior standing in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 1 Crd)

MGT 4946 - Executive Leadership for Cadets (1 credit)
Prepares senior class cadets for the transition from college to career professional. Explores life planning, personal finance, taking charge in a new organization, cross- generational communication, and developing subordinate relationships. Senior standing in the Corps of Cadets is required.
Instructional Contact Hours: (1 Lec, 1 Crd)

MGT 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MGT 4994H - Undergraduate Research (1-19 credits)
Honors section
Instructional Contact Hours: Variable credit course

Marketing (MKTG)

MKTG 2104 - Careers in Marketing (1 credit)
Provide students with an early start on understanding the many career options within the marketing major. In-depth focus in developing an online professional branded website and career map. Enhance and broaden the understanding of customer's needs, while gaining the sense of ownership over the product and/or service to meet customer's needs through communication of marketing strategy. Serves as a foundational course in preparing students for career success in the Marketing field. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

MKTG 2954 - Business Study Abroad (1-19 credits)
This course provides students with an international business experience. It is only offered as part of a program outside of the United States. Students will learn from the structured educational experience developed by the faculty leader. This course is intended for students who want to develop marketing-related free electives. Pre: Instructors consent and the completion of 24 semester hours with a minimum GPA of 3.0 or departmental consent.
Instructional Contact Hours: Variable credit course

MKTG 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 2964H - Field Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

MKTG 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 2994 - Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 3104 - Marketing Management (3 credits)
Study of the marketing process from a macro and management viewpoint. The macro viewpoint includes the role of marketing in society. The management viewpoint includes the product, distribution, promotional, and pricing decisions. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 3104H - Marketing Management (3 credits)
Study of the marketing process from a macro and management viewpoint. The macro viewpoint includes the role of marketing in society. The management viewpoint includes the product, distribution, promotional, and pricing decisions. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 3134 - Personal Well-being and Professional Success (3 credits)
In-depth study of the science of well-being and stress management for business and business professionals from multi-disciplinary perspective (Positive Psychology, Consumer Research, Behavioral Economics, Neuroscience, Sociology). Includes relevance of well-being data in marketing and business contexts. Application of well-being and stress management strategies to overcome wellbeing barriers, ensure work-life balance and create positive work environments. Exploration of policy implications of well-being data.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 3164 - Introduction to Digital Marketing Strategy (3 credits)
Study of the principles of digital marketing and its applications. Integration of digital strategies with overall business and traditional marketing plans. Emphasis given to critical digital knowledge in inbound marketing, identifying and creating buyer personas, email marketing, search engine optimization, planning and executing digital content marketing calendars, social media marketing, web analytics and digital compliance legislation and regulations, and their ramifications.
Corequisite(s): 3104 or 3104H.
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 3504 - Advertising (3 credits)
Survey of advertising principles and its applications. The course covers advertising history, the impact of advertising on society, and ethical and regulatory issues. The process of creating and placing advertising is explored including advertising objectives, budgeting, media planning and mix, creative objectives and strategy, copy execution and production, and copy testing. Junior standing required.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 4054 - Sales Technology (3 credits)
Course focus is on the integration of technology and data analytics to advance sales. Study of how technology is leveraged in the social sales process which includes how to successfully utilize technology in social selling situations. Emphasis given to Customer Relationship Management (CRM) strategies, benefits, operations, and application across the customer life cycle. Students demonstrate proficiency in CRM technology, through experiential learning by earning Salesforce, Hubspot and Smartfox badges.
Prerequisite(s): MKTG 3104
Corequisite(s): MKTG 4554
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4114 - Introduction to AI in Marketing (3 credits)
Study Artificial Intelligence (AI) and machine learning concepts, myths vs. facts, and barriers associated with AI. Explore the need and uses of AI in marketing and sales. Includes strategies for firms to identify AI opportunities, and the pitfalls and barriers associated with AI implementation. Consider how to implement AI, measure AI success, and gain competitive advantage through AI. Analyze the consumer, firm, and societal impacts of AI from marketing and ethics perspectives, and suggest corrective strategies for firms. Pre: Junior standing.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4144 - Business and Marketing Strategies for the Process Industries (3 credits)
Business strategies and industrial marketing concepts, and their application in the chemical, pharmaceutical and related process industries. The course is designed for engineers and other students planning a career in the process industries. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CHE 4144

MKTG 4154 - Marketing Research (3 credits)
This course is a study of the scientific process of problem solving in a marketing context. It includes concepts of problem definition, hypotheses generation, questionnaire development, research design, implementation, analysis, and interpretation of statistical findings. Junior standing required.
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and (BIT 2405 or (STAT 3005 and STAT 3006) or STAT 3604 or (STAT 3615 and STAT 3616) or STAT 4604) and BIT 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4164 - Social Media and Content Marketing (3 credits)
Study of social media channels and content creation processes and strategies. Integration of inbound marketing methodologies with social and digital media marketing. Emphasis given to content marketing distribution strategies, influencer marketing, social media advertising, and key content marketing tools including blogs, vlogs, and podcasts, as well as employee advocacy programs and social media and crisis management plans for organizations.
Prerequisite(s): MKTG 3164
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4174 - Analytics & Metrics for Digital Marketing Strategy (3 credits)
Study of the assessment of digital marketing analytics and metrics and their applications. Optimization of digital marketing results across all digital marketing strategies and tactics. Emphasis given to digital marketing measurement models, data-driven decision making including application of the decision-making framework, predictive analytics and data visualizations, website analytics, organic search analytics, social media metrics, email marketing metrics, as well as paid, owned and earned media analytics.
Prerequisite(s): MKTG 3164
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4204 - Consumer Behavior (3 credits)
An integrated analysis of individual and environmental influences on consumer decision making, purchase, and consumption behaviors with strong emphasis on implications for developing, executing, and assessing marketing strategy. Junior standing required.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4204H - Consumer Behavior (3 credits)
An integrated analysis of individual and environmental influences on consumer decision making, purchase, and consumption behaviors with strong emphasis on implications for developing, executing, and assessing marketing strategy. Junior standing required. Honors section
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4254 - Product and Price Management (3 credits)
Emphasis on strategic branding and product planning within the context of marketing management. Analysis of economic, financial, legal, and marketing principles to make effective pricing decisions. Examination of relationships between product and price management. Junior standing.
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and MKTG 4154 and (MKTG 4204 or MKTG 4204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4264 - Analytics for Marketing (3 credits)
Integrates conceptual and quantitative aspects of marketing. Provides concentrated emphasis on the role of analytical and computer models to enhance marketing decision making. Emphasis on managerial decision making in key areas, including segmentation and targeting, positioning, forecasting, new product design, forecasting and pricing. Role of consumer perceptions and behaviors on decision making. Hands-on experience with model building and using analytical tools.
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and MKTG 4154 and (MKTG 4204 or MKTG 4204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4304 - Marketing Communications (3 credits)
Theory and application of an organizations marketing communications function. Includes traditional and digital channels. Development of a marketing communications plan, situation analysis, setting communication goals, creating message strategy, implementing the strategy using promotional mix variables, planning traditional and social media, and determining the communication budget. Junior standing.
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and (MKTG 4204 or MKTG 4204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4354 - Marketing Channels and Logistics (3 credits)
Management of the firms distribution function. Study of the structure, functions, interactions, and activities of marketing channels. Analysis and development of integrated physical distribution and logistics systems for the firm. Junior standing required.
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and (BIT 2405 or (STAT 3005 and STAT 3006) or STAT 3604 or (STAT 3615 and STAT 3616) or STAT 4604) and BIT 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4404 - Field Practicum in Marketing (3 credits)
Application of marketing concepts and theories to a specific business concept. On-site performance of marketing activities and a written analysis of the firms marketing strategy and execution. Junior Standing
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4454 - Sales Force Management (3 credits)
Integration of behavioral research to provide an understanding of the role of the salesperson within the sales organization and in relation to the buyers. Personal selling examines the dyadic interaction between buyer and seller. Managing the sales force covers planning, organizing, directing, and controlling the activities of the sales personnel. Junior standing required.
Prerequisite(s): MKTG 4554 and (MKTG 3104 or MKTG 3104H) and MKTG 4204
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4554 - Principles of Professional Selling (3 credits)
Learn about the management of relationships between buyers and sellers to effectively build partnerships, including the importance of understanding buyer behavior to facilitate the sales process. Explore the concepts of prospecting for customers, planning for the sales call, presentation skills, as well as the formal negotiation process and how these areas relate to adaptive selling. Address common sales management issues including how to manage cross-functional teams and their time and territories, as well as explore the ethical and legal issues that often arise throughout the sales process. Discuss the various career paths and opportunities within sales.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4604 - Retail Management (3 credits)
Analysis of managerial problems in retailing establishments, including traditional and online formats. Focus is on operational problems, retail and e-retail store organization, location analysis, buying, selling, sales promotion, and merchandise handling. Junior standing required.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4644 - Marketing, Society and the Public Interest (3 credits)
The impact of marketing on society from a multi- disciplinary and multi-stakeholder perspective. Marketings role in solving societal problems is explored. Topics include at-risk market segments, controversial products and practices, and issues of social justice.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4704 - International Marketing (3 credits)
Assessing international markets, comparing marketing systems; management of international marketing operations; focusing on distribution, promotional, and pricing problems faced by firms engaging in world trade. Junior standing required.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4734 - Real Estate Marketing (3 credits)
This course extends the fundamental concepts of marketing into the study and practice of real estate. The course is concerned with the topics of demographic analysis, market information systems, market research, and marketing strategy of residential and commercial real estate, with particular emphasis on the important area of real estate personal selling. Junior standing required.
Prerequisite(s): MKTG 3104 or MKTG 3104H
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4754 - Strategic Marketing (3 credits)
An integrative course in marketing policy and strategy, employing comprehensive case problems in the formulation of marketing action programs and business policy. Senior standing required. Any one of the following Marketing prerequisites–4304, 4354, 4554--may be taken concurrently with 4754.
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and MKTG 4154 and (MKTG 4204 or MKTG 4204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4754H - Stategic Marketing (3 credits)
An integrative course in marketing policy and strategy, employing comprehensive case problems in the formulation of marketing action programs and business policy. Senior standing required. Any one of the following Marketing prerequisites - 4304, 4354, 4554 - may be taken concurrently with 4754H
Prerequisite(s): (MKTG 3104 or MKTG 3104H) and MKTG 4154 and (MKTG 4204 or MKTG 4204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4774 - Advanced Professional Selling (3 credits)
Advanced theory and practice of professional selling with primary focus on the professional sales process, analysis of associated strategic and ethical issues, and acquisition of critical skills required of successful salespeople. Builds on foundation created in Buyer/Seller Relationship (MKTG 4554) to expand knowledge and skills of students considering career in professional sales.
Prerequisite(s): MKTG 4554 and MKTG 4204 and (MKTG 3104 or MKTG 3104H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MKTG 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 4964H - Field Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

MKTG 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MKTG 4994H - Honors Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Materials Science and Engineering (MSE)

MSE 1004 - Materials In Todays World (1 credit)
An introductory course designed for the student with a basic high school science background who wishes to understand and learn about the exciting materials developments which are affecting us all in todays world. The course will introduce the structures and properties of metals, ceramics, polymers (plastics), composites, and materials for electronic and optical applications. Students will also gain an appreciation for the processing and design limitations of materials used in everyday applications.
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 1014 - The Science of Materials in Everyday Life (3 credits)
Introduction to the science of materials using everyday applications in modern society from medicine, transportation, sports, art, music, infrastructure, and electronics. Discussion of metals, ceramics, plastics, biomaterials, and hybrid materials based on the fundamental science dictating their structure properties, and processing. Considerations of tradeoffs between environmental sustainability, ethical and societal issues, and economics for materials choices.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 2014 - Materials Engineering Transition (1 credit)
Supplemental coverage of introductory topics not included in courses delivered to non-MSE majors.
Prerequisite(s): MSE 2034 or MSE 3094 or AOE 3094
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 2034 - Elements of Materials Engineering (3 credits)
This course is designed to introduce the non-MSE student to the structures and properties of metals, ceramics, polymers, and composites. In addition, students will gain an understanding of the processing and design limitations of these materials, as well as being introduced to new classes of materials being developed to meet the ever expanding range of material requirements. Non-MSE majors only.
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 2044 - Fundamentals of Materials Engineering (4 credits)
This course is designed to introduce the MSE major to the structures and properties of metals, ceramics, polymers, composites, and electronic materials. Students will also gain an understanding of the processing and design limitations of materials. Topics fundamental to the further study of materials, such as crystal structures, phase diagrams, and materials design and processing will be emphasized as foundations for future MSE courses.
Prerequisite(s): CHEM 1035
Corequisite(s): PHYS 2305
Instructional Contact Hours: (4 Lec, 4 Crd)

MSE 2054 - Fundamentals of Materials Science (3 credits)
Introduces MSE majors to fundamental underlying concepts governing phase equilibrium, microstructure, electronic properties of materials, and transport phenomena as a foundation to understanding materials behavior and processing.
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 2114 - Math Programming MSE I (1 credit)
Basic computational and graphical functions in mathematics oriented programming languages using data and engineering examples from the field of Materials Science. Students apply general methods to problems of their choice through mini- projects.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 2884 - Materials Engineering Professional Development I (1 credit)
Topics on professional, communications, and leadership skills in entering the engineering workplace; building and presenting qualifications for professional development; expanding the professional network; and ethical, diversity, inclusion, and equity in the engineering workplace. Career gap analysis, team dynamics, resumes, job interviews, cover letters, scholarship essays, personal statements, professional development portfolios, case studies, poster presentations. Pre: Sophomore standing in the MSE major.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 2984D - Special Study (1-19 credits)
Pathway Concept Area(s): 4 Reasoning in Natural Sci.
Instructional Contact Hours: Variable credit course

MSE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 3044 - Transport Phenomena in MSE (3 credits)
Mass transport (continuum and atomistic diffusion), heat transport and fluid flow (momentum transport). Analytical and computer based methods for solving transport problems.
Prerequisite(s): MSE 2044 and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 3054 - Mechanical Behavior of Materials (3 credits)
Mechanical properties and behavior of engineering materials subjected to static, dynamic, creep, and fatigue loads under environments and stress states typical of service conditions; biaxial theories of failure; behavior of cracked bodies; microstructure-property relationships and design methodologies for homogeneous and composite materials.
Prerequisite(s): ESM 2204 and (MSE 2034 or MSE 2044 or MSE 3094 or AOE 3094 or CEE 3684)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 3054

MSE 3064 - Mechanical Behavior of Materials Laboratory (1 credit)
Laboratory experiments on behavior and mechanical properties of solid materials. Tension, compression, bending, hardness, nano-indentation, and impact tests; behavior of cracked bodies; fatigue and crack growth tests; creep deformation; microstructure-property relationships; laboratory equipment, instrumentation, and computers.
Prerequisite(s): ESM 2204
Corequisite(s): MSE 3054
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: ESM 3064

MSE 3104 - Mineralogy (3 credits)
Principles of modern mineralogy, crystal chemistry, and crystallography, with emphasis on mineral atomic structure and physical property relationships, mineralogy in the context of geology, geochemistry, environmental science and geophysics, phase equilibria, mineral associations, and mineral identification, and industrial applications of minerals. There are three required field trips during the semester.
Prerequisite(s): CHEM 1035 or CHEM 1055 or (ISC 1106 and ISC 1116)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: GEOS 3504

MSE 3114 - Mathematics Programming in Materials Science II (1 credit)
Advanced computational and graphical methods in mathematics oriented programming languages. Students develop programs that solve and/or provide visualizations of solutions to materials science and engineering problems.
Prerequisite(s): MSE 2114
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 3134 - Crystallography and Crystal Structures (3 credits)
Provides a comprehensive foundation in crystallography including lattices, point groups, space groups, reciprocal lattices, properties of x-rays, and electron density maps, all leading to a formal description of structures and an interpretation of the published crystallographic data.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 3204 - Fundamentals of Electronic Materials (3 credits)
Introduction to the electrical, magnetic, and optical properties of solid-state materials. Development of atomic scale models for physical phenomena that are observable at the macroscopic scale. Connection is made between basic materials properties and the operational characteristics of selected solid-state devices.
Prerequisite(s): MSE 2054 and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 3304 - Physical Metallurgy (3 credits)
Deformation of crystalline solids and its relationship to crystal structure and crystal defects: crystal structures of metals, dislocations and plastic deformation, vacancies, recovery, recrystallization, grain growth, deformation twinning and martensite.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 3314 - Materials Laboratory I (1 credit)
Sample preparation for materials characterization techniques including various types of microscopy, spectroscopy, diffraction, and hardness testing. Instruction in the use of heat treating equipment and polishing and chemical etching procedures.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 3324 - Elementary Metal Casting Laboratory (1 credit)
Introduction to metal casting processes; gating, risering, molding and puring. Hands-on experience. Emphasis on safe foundry practices. Oral and written reports are required.
Prerequisite(s): (MSE 2034 or MSE 2044) and ISE 2214
Corequisite(s): MSE 3354
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 3334 - Test Methods for Foundry Laboratories (2 credits)
The properties of foundry sand, molten metal and castings are measured using standard laboratory test procedures. Safe foundry practices are emphasized. Oral and written reports are required.
Prerequisite(s): (MSE 2034 or MSE 2044) and ISE 2214
Corequisite(s): MSE 3354
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

MSE 3354 - Foundry Safety (1 credit)
Provides comprehensive training in foundry safety procedures and policies. (May register multiple times).
Prerequisite(s): (MSE 2034 or MSE 2044) and ISE 2214
Corequisite(s): 3324 or 3334 or 4324.
Instructional Contact Hours: (2 Lec, 1 Crd)

MSE 3884 - Materials Engineering Professional Development II (1 credit)
Teamwork, ethical, professional, and communication practices in collaborative engineering environments; identification of areas of interest for potential senior design capstone projects; discipline-specific preliminary research in preparation for senior design projects: motivations and needs identification, broader impact (economic, social, environmental, and global), relevant theoretical concepts and methodologies, ethical engineering considerations, management logistic such identification of facilities and equipment, risk and safety analysis, critical paths and project timelines; basic project and time management; collaborative communications in written and oral form, personal professional development plans. Extends the basic treatment of these topics given in MSE 2884. Pre: Junior standing in the MSE major.
Prerequisite(s): MSE 2884
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 3954 - Study Abroad (1-6 credits)
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)

MSE 4034 - Thermodynamics of Materials Systems (3 credits)
Topics in thermodynamics on the solution of materials selection and design related problems such as materials stability at high temperatures and in corrosive chemical environments. Thermodynamic principles important in controlling equilibrium in single component systems and multicomponent solid solutions and in establishing the thermodynamic driving force in kinetic processes which are important in materials processing unit operations. Estimation of thermodynamic properties and equilibrium calculations in multicomponent and multiphase systems.
Prerequisite(s): MSE 2044
Corequisite(s): CHEM 1036
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4044 - Powder Processing (3 credits)
Processing methods associated with powder synthesis, characterization, colloidal processing, and forming of powder compacts. Theory of solid state and liquid phase sintering.
Prerequisite(s): MSE 3044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4055 - Materials Selection and Design I and II (3 credits)
4055: Selection of materials for engineering systems, based on constitutive analyses of functional requirements and material properties. 4056: The role and implications of processing on material selection.
Prerequisite(s): (MSE 3204 and MSE 3304) or (MSE 3204 and MSE 4414) or (MSE 3204 and MSE 4554) or (MSE 3304 and MSE 4414) or (MSE 3304 and MSE 4554) or (MSE 4414 and MSE 4554)
Corequisite(s): MSE 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4056 - Materials Selection and Design I and II (3 credits)
4055: Selection of mateials for engineering systems, based on constitutive analyses of functional requirements and material properties. 4056: The role and implications of processing on material selection.
Prerequisite(s): MSE 4055
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4075 - Senior Design Laboratory (1 credit)
A capstone design course centered around an open-ended, faculty-advised senior project involving the design of a process, material, or a technique for solving a technological problem. Senior standing in MSE required.
Prerequisite(s): MSE 4644
Corequisite(s): MSE 4055, MSE 4085
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 4076 - Senior Design Laboratory (2 credits)
A capstone design course centered around an open-ended, faculty-advised senior project involving the design of a process, material, or a technique for solving a technological problem. Senior standing in MSE required.
Prerequisite(s): MSE 4075
Corequisite(s): MSE 4086
Instructional Contact Hours: (6 Lab, 2 Crd)

MSE 4085 - Senior Capstone Recitation (2 credits)
Topics in engineering professional practice, project planning and reporting, including discussion and presentation of proposals, interim and project reports. Instruction in environmental, social, and economic impacts of engineering; design theory and analysis; ethics, continuous learning, and global issues. Capstone course runs in parallel with faculty-advised Senior Design Laboratory. 4085: Emphasis on project planning and management techniques, teamwork strategies, literature research, and technical communication style. 4086: Continuing development of technical documents, with emphasis on professional communication to various audience formats. Additional focus on broader impacts of technical projects, including social, economic, environmental, ethical, and global contexts. Pre: Senior standing in MSE.
Prerequisite(s): MSE 3884
Corequisite(s): 4075 or 4095H for 4085; 4076 or 4096H for 4086. (2H,2C) for 4085. (1H,1C) for 4086.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 2 Crd)

MSE 4085H - Senior Capstone Recitation (2 credits)
Topics in engineering professional practice, project planning and reporting, including discussion and presentation of proposals, interim and project reports. Instruction in environmental, social, and economic impacts of engineering; design theory and analysis; ethics, continuous learning, and global issues. Capstone course runs in parallel with faculty-advised Senior Design Laboratory. 4085: Emphasis on project planning and management techniques, teamwork strategies, literature research, and technical communication style. 4086: Continuing development of technical documents, with emphasis on professional communication to various audience formats. Additional focus on broader impacts of technical projects, including social, economic, environmental, ethical, and global contexts. Pre: Senior standing in MSE.
Prerequisite(s): MSE 3884
Corequisite(s): 4075 or 4095H for 4085; 4076 or 4096H for 4086. (2H,2C) for 4085. (1H,1C) for 4086.
Instructional Contact Hours: (2 Lec, 2 Crd)

MSE 4086 - Senior Capstone Recitation (1 credit)
Topics in engineering professional practice, project planning and reporting, including discussion and presentation of proposals, interim and project reports. Instruction in environmental, social, and economic impacts of engineering; design theory and analysis; ethics, continuous learning, and global issues. Capstone course runs in parallel with faculty-advised Senior Design Laboratory. 4085: Emphasis on project planning and management techniques, teamwork strategies, literature research, and technical communication style. 4086: Continuing development of technical documents, with emphasis on professional communication to various audience formats. Additional focus on broader impacts of technical projects, including social, economic, environmental, ethical, and global contexts. Pre: Senior standing in MSE.
Prerequisite(s): MSE 4085
Corequisite(s): 4075 or 4095H for 4085; 4076 or 4096H for 4086. (2H,2C) for 4085. (1H,1C) for 4086.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)

MSE 4095H - Honors Senior Design-Laboratory (3 credits)
Two-semester MSE capstone design course centered around an open-ended, faculty-advised senior honors project involving the design of a process, material, or a technique for solving a technological problem. Outcomes and work effort are consistent with that expected of honors students. MSE 4095H: Literature search, planning and proof-of-concept studies of assigned project. Individual preparation and presentation of an original senior honors thesis related to a team project in which the students also participate. Presentation of detailed project plan to faculty. MSE 4096H: Execution of proposed project, analysis of results and preparation of journal-quality presentation of results. Oral presentation of results to MSE faculty and students. Enrollment in University Honors and senior standing in MSE required.
Prerequisite(s): MSE 4644
Corequisite(s): MSE 4055, MSE 4085
Instructional Contact Hours: (9 Lab, 3 Crd)

MSE 4096H - Honors Senior Design Laboratory (3 credits)
Two-semester MSE capstone design course centered around an open-ended, faculty-advised senior honors project involving the design of a process, material, or a technique for a solving a technological problem. Outcomes and work effort are consistent with that expected of honors students. MSE 4096H: Execution of proposed project, anaylsis of results and preparation of journal-quality presentation of results. Oral presentation of results to MSE faculty and students. Enrollment in University Honors and senior standing in MSE required.
Prerequisite(s): UH 4095H
Corequisite(s): MSE 4086
Instructional Contact Hours: (9 Lab, 3 Crd)

MSE 4164 - Principles of Materials Corrosion (3 credits)
Introduction to the scientific principles of materials corrosion and corrosion protection. Topics include: thermodynamics of materials corrosion, including potential- PH (Pourbaix) diagrams, kinetics of corrosion reactions and mixed potential theory, types of corrosion (uniform, galvanic, crevice, pitting, fatigue, stress corrosion cracking, intergranular, and hydrogen embrittlement), material/environmental factors that promote or prevent the various types of corrosion, and methods and techniques of corrosion testing.
Corequisite(s): MSE 4034
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4174 - Corrosion and Degradation of Materials Laboratory (1 credit)
Introduction to experimental techniques and principles used to study the effects of environmental exposure on various contemporary advanced materials systems. Emphasis on creation and measurement of property variations in engineered materials caused by time and chemical or energetic stimuli, and effective communication of these results.
Prerequisite(s): MSE 4034 and MSE 3314 and MSE 4424
Corequisite(s): MSE 3044
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 4224 - Electronic, Magnetic, and Optical Properties of Materials Laboratory (1 credit)
Introduction to experimental techniques used to study the electronic, magnetic, and optical properties of contemporary advanced materials systems; property variations made possible by composition and processing of engineered materials; and interaction of fields with materials – including effective communication of these results.
Prerequisite(s): MSE 3204 and MSE 3314 and MSE 4424
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 4234 - Semiconductor Processing (3 credits)
Manufacturing practices used in silicon integrated circuit fabrication and the underlying scientific basis for these process technologies. Physical models are developed to explain basic fabrication steps, such as substrate growth, thermal oxidation, dopant diffusion, ion implantation, thin film deposition, etching, and lithography. The overall CMOS integrated circuit process flow is described within the context of these physical models.
Prerequisite(s): ECE 2214
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECE 4234

MSE 4304 - Metals and Alloys (3 credits)
This course covers the production, properties and uses of commercially important metals and alloys. The influence of structure, chemistry, and processing upon the properties of metals is emphasized. Alloy selection is discussed. Mechanical, electrical, thermal and chemical characteristics of ferrous and nonferrous alloys are studied.
Prerequisite(s): MSE 2034 or MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4305 - Physical Metallurgy and Modeling of Metal Casting (3 credits)
4305: Casting processes; solidification and its influences on the structure and chemistry of castings; role of fluid flow and heat transfer in mold design; origin and control of casting defects. 4306: Design, layout, and modeling of metal components cast from aluminum, bronze, iron and steel; design of metal running systems; modeling of solidification process.
Prerequisite(s): MSE 3304
Corequisite(s): 3044 or ME 3304 for 4306.
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4306 - Physical Metallurgy and Modeling of Metal Casting (3 credits)
4305: Casting processes; solidification and its influence on the structure and chemistry of castings; role of fluid flow and heat transfer in mold design; origin and control of casting defects. 4306: Design, layout, and modeling of metal components cast from aluminum, bronze, iron and steel; design of metal running systems; modeling of solidification processes.
Prerequisite(s): (MSE 2034 or MSE 2044) and MSE 3324
Corequisite(s): 3044 or ME 3304 for 4306.
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4314 - Bladesmithing (3 credits)
Introduction to bladesmithing processes. Hands-on experience with heating metal, visual temperature measurement, manual hammer forging, forge welding, cooling metal, and heat treatment. Emphasis on safe forging and bladesmithing practices.
Corequisite(s): MSE 3304, MSE 3354
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MSE 4324 - Advanced Metal Casting Laboratory (2 credits)
Advanced metal casting processes; no-bake sand molds; investment casting; rapid prototyping; melting and casting of aluminum, bronze, iron and steel. Casting finishing including shot and sand blasting. Hands-on experience. Emphasis on safe foundry practices. Oral and written reports are required.
Prerequisite(s): MSE 3324
Corequisite(s): MSE 3354
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

MSE 4334 - Applied Materials Analysis (3 credits)
Fundamental materials theory applied to structure-property relationships in materials science and engineering through basic characterization techniques. Demonstrations, lab exercises, and practical application of modern characterization techniques such as Scanning and Transmission Electron Microscopy (SEM, TEM), Focused Ion Beam (FIB), and Atomic Force Microscopy (AFM).
Prerequisite(s): MSE 2044 and (MSE 3314 or MSE 4424)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MSE 4384 - Nuclear Materials (3 credits)
An introduction to materials for nuclear applications with emphasis on fission reactors. Fundamental radiation effects on materials; material properties relevant to structural, moderator, reflector, blanket, coolant, control shielding and safety systems; processes such as nuclear fuel cycles, fuel enrichment and reprocessing; and related structural systems.
Prerequisite(s): (MSE 3044 or ME 3304) and (MSE 3054 or ESM 3054 or ME 3614)
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4394 - Introduction to Molecular Dynamics Simulation (3 credits)
Background of molecular dynamics simulation method. Fundamental molecular dynamics principles, algorithms and components (atomic structure, periodic boundary conditions, interatomic potentials, equations of motion of atoms, statistical ensembles, integration of equations of motion). Implementation of algorithms into codes. Simulations of the time evolution of atoms, particles, or molecules under static or varying thermodynamic conditions and external loads. Connection between atom trajectories and evolution of the physical property of the simulation system with statistical mechanics principles. Hands-on case studies using molecular dynamics simulation package, LAMMPS. Prior knowledge of a programming language such as Fortran, C, C++, Matlab, Mathematica, Python, Java is highly recommended. Pre: Junior standing.
Prerequisite(s): MSE 2034 or MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4414 - Physical Ceramics (3 credits)
Study of the relationships between the physical properties (thermal, optical, mechanical, electrical and magnetic) and the structure and composition of ceramics at the atomic and microscopic level as affected by processing and service environment. Emphasis will be placed on application and design using structural ceramics.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4424 - Materials Laboratory II (1 credit)
Processing and characterization of materials; exploration of the influence of processing parameters on physical and mechanical properties. Emphasis on material synthesis.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 4434 - Ceramic and Glass Materials Processing Laboratory (1 credit)
Introduction to experimental techniques used to synthesize, process, and analyze resulting properties of ceramic and glass materials. Measurement of property variations made possible by changing composition and processing of engineered ceramic systems.
Prerequisite(s): MSE 4414 and MSE 3314 and MSE 4424
Instructional Contact Hours: (3 Lab, 1 Crd)

MSE 4544 - Laboratory In Polymer Science (2 credits)
Experimental techniques used in the synthesis of various linear polymers, copolymers, and crosslinked networks. Determination of polymer molecular weights and molecular weight distribution. Methods used in the thermal, mechanical, and morphological characterization of polymeric systems.
Prerequisite(s): CHEM 3616 and CHEM 4534
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)
Course Crosslist: CHEM 4074

MSE 4554 - Polymer Engineering (3 credits)
This course is designed to introduce the student to polymers from the MSE perspective. The basics of polymer syntheses and polymerization will be outlined. The relationship between processing, structure, and properties will be presented with respect to the performance and design requirements of typical polymer applications.
Prerequisite(s): MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4574 - Biomaterials (3 credits)
Materials for biomedical applications. Basic material types and properties, functional uses of materials in medical applications, and tissue response mechanisms. Integrated design issues of multicomponent material design in prosthetic devices for hard and soft tissues, orthopedics , cardiovascular, and drug delivery applications.
Prerequisite(s): MSE 2034 or MSE 2044
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BMES 4574

MSE 4584 - Biomimetic Materials (3 credits)
Introduction to structure property relationships in biological materials such as wood, bone, shells, spider silk, connective tissue, blood vessels and jellyfish. Proteins and polysaccharides, biosynthesis and assembly, biomineralization, hierarchical organization. Introduction to tissue engineering and regenerative medicine. Life cycle, environmental aspects of biofabrication.
Prerequisite(s): (MSE 2034 or MSE 2044) and (CHEM 1036 or BIOL 1106)
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4604 - Composite Materials (3 credits)
The application of the fundamental concepts of mechanics, elasticity, and plasticity to multiphase and composite materials. Constitutive equations for the mechanical and physical properties of metal, ceramic, and polymeric matrix composites. The role of processing and microstructure on properties.
Prerequisite(s): (MSE 2034 or MSE 2044) and ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4614 - Nanomaterials (3 credits)
Synthesis methods of 0D nanoparticles, 1D nanotubes/nanowires/nanorods, 2D nanoribbons and nanofilms, and special nano-features on supports. Bottom-up and top-down approaches. Methods of characterization for nanomaterials. Processing of nanospecies into higher order dimensions; conventional processing techniques; techniques developed solely for nanomaterials. Chemical, physical, mechanical, and electrical properties of nanomaterials and applications of nanomaterials.
Prerequisite(s): MSE 4034
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4644 - Materials Optimization Through Designed Experiments (3 credits)
Methods of analysis of variation in materials systems, manufacturing or R&D through the use of statistical methods including experimental design techniques. Instructional examples related to Materials Science and Engineering.
Prerequisite(s): MSE 3314 or MSE 4424
Instructional Contact Hours: (3 Lec, 3 Crd)

MSE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 4984A - Special Study (1-19 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: Variable credit course

MSE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MSE 29844 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Mathematics (MATH)

MATH 1004 - Discovering Mathematics I (1 credit)
Introduction to the scope and applicability of mathematics and its many sub-disciplines. Introduction to the process of thinking, learning, and writing as a mathematician through topics such as logic systems, recreational mathematics, LaTeX programming, history, ethics, open problems, and research in mathematics. Also includes advising topics such as planning a Virginia Tech course of study. P/F only. Math majors.
Instructional Contact Hours: (1 Lec, 1 Crd)

MATH 1014 - Precalculus with Transcendental Functions (3 credits)
Precalculus college algebra, basic functions (algebraic, exponential, logarithmic, and trigonometric), conic sections, graphing techniques, basic probability. Usage of mathematical models, analytical calculations, and graphical or numerical representations of data to analyze problems from multiple disciplines that address intercultural and global challenges in areas such as chemistry, environmental science, the life sciences, finance, and statistics. Use of spreadsheet software. Two units of high school algebra and one of plane geometry are required.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1025 - Elementary Calculus (3 credits)
Quantitative and computational thinking to address relevant global issues. Unified calculus course covering techniques and applications of differential and integral calculus for functions of one variable. Constitutes the standard first-year mathematics courses for the life sciences. 1025: Differential calculus, graphing, applications for the life sciences, use of spreadsheet software. Assumes 2 units of high school algebra, 1 unit of geometry, 1/2 unit of trigonometry and precalculus. 1026: Integral calculus, numerical techniques, elementary differential equations, applications for the life sciences, use of spreadsheet and scientific software. A student can earn credit for at most one of 1025 and 1225. A student can earn credit for at most one of 1026 and 1226.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1026 - Elementary Calculus (3 credits)
Quantitative and computational thinking to address relevant global issues. Unified calculus course covering techniques and applications of differential and integral calculus for functions of one variable. Constitutes the standard first-year mathematics courses for the life sciences. 1025: Differential calculus, graphing, applications for the life sciences, use of spreadsheet software. Assumes 2 units of high school algebra, 1 unit of geometry, 1/2 unit of trigonometry and precalculus. 1026: Integral calculus, numerical techniques, elementary differential equations, applications for the life sciences, use of spreadsheet and scientific software. A student can earn credit for at most one of 1025 and 1225. A student can earn credit for at most one of 1026 and 1226.
Prerequisite(s): MATH 1025 or MATH 1225
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1044 - Discovering Mathematics II (2 credits)
Introduction to the scope and applicability of mathematics and its many sub-disciplines. Introduction to the process of thinking, learning, and writing as a mathematician through topics in pure and applied mathematics and a brief experience with mathematical research. Also includes advising topics such as planning a Virginia Tech course of study. Math majors.
Instructional Contact Hours: (2 Lec, 2 Crd)

MATH 1214 - Preparation for Calculus (3 credits)
Linear equations, polynomials, relations and functions, rational functions, quadratic equations, radicals and functions with rational exponents, exponentials, logarithms, trigonometric functions, trigonometric identities. Designed as preparation for MATH 1225: Calculus of a Single Variable.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1225 - Calculus of a Single Variable (4 credits)
1225-1226: CALCULUS OF A SINGLE VARIABLE Quantitative and computational thinking to address relevant intercultural and global issues. Unified calculus course covering techniques of differential and integral calculus for functions of one variable. Constitutes the standard first-year mathematics courses for science and engineering. 1225: limits, continuity, differentiation, transcendental functions, applications of differentiation, introduction to integration. Assumes 2 units of high school algebra, 1 unit of geometry, 1/2 unit each of trigonometry and precalculus, and placement by Math Dept. 1226: techniques and applications of integration, trapezoidal and Simpson's rules, improper integrals, sequences and series, power series, parametric curves and polar coordinates, software-based techniques. A student can earn credit for at most one of 1025 and 1225. A student can earn credit for at most one of 1525 and 1225. A student can earn credit for at most one of 1026 and 1226. Pre: Grade of at least C- in 1225 for 1226.
Prerequisite(s): MATH 1214
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (4 Lec, 4 Crd)

MATH 1226 - Calculus of a Single Variable (4 credits)
1225-1226: CALCULUS OF A SINGLE VARIABLE Quantitative and computational thinking to address relevant intercultural and global issues. Unified calculus course covering techniques of differential and integral calculus for functions of one variable. Constitutes the standard first-year mathematics courses for science and engineering. 1225: limits, continuity, differentiation, transcendental functions, applications of differentiation, introduction to integration. Assumes 2 units of high school algebra, 1 unit of geometry, 1/2 unit each of trigonometry and precalculus, and placement by Math Dept. 1226: techniques and applications of integration, trapezoidal and Simpson's rules, improper integrals, sequences and series, power series, parametric curves and polar coordinates, software-based techniques. A student can earn credit for at most one of 1025 and 1225. A student can earn credit for at most one of 1525 and 1225. A student can earn credit for at most one of 1026 and 1226. Pre: Grade of at least C- in 1225 for 1226.
Prerequisite(s): MATH 1225
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (4 Lec, 4 Crd)

MATH 1454 - Introduction to Programming for Mathematical Problem-Solving (3 credits)
Introduction to programming for mathematical problem solving. Programming software interfaces. Logic and conditional computations. Iterative computations and recursion. Data arrays. Compartmentalized computations using functions. Data visualization. Data input/output. Programming applications such as Monte Carlo simulation, random walks, computational geometry, and graph theory.
Corequisite(s): MATH 1225
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1524 - Business Calculus (4 credits)
Differential calculus techniques for functions of one and two variables. Emphasis on graphs, rates of change, and optimization of linear, quadratic, exponential, and logistic functions. Terminology and applications for business, including spreadsheet software. Mathematical models of real-world business problems, including discrete and continuous models, that address intercultural and global challenges in such areas as finance, marketing, and accounting. Assumes 2 units of high school algebra and 1 unit of geometry.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (4 Lec, 4 Crd)

MATH 1535 - Geometry and Mathematics of Design (3 credits)
A standard first-year mathematics sequence for architecture majors. Mathematical models of real-world problems, including discrete and continuous models, that address relevant global challenges in such areas as urban planning, building construction, and home design. 1535: Euclidean geometry, trigonometry, sequences and the golden ratio, graph theory, tilings, polygons and polyhedra, applications for 2- and 3-dimensional design and construction, use of geometric software. 1536: vectors in the plane and space, descriptive and projective geometry, differential and integral calculus, applications for 2- and 3-dimensional design and construction, including areas, volumes, centroids, and optimization. Assumes 2 unites of high school algebra and 1 unit of high school geometry.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1536 - Geometry and Mathematics of Design (3 credits)
A standard first-year mathematics sequence for architecture majors. Mathematical models of real-world problems, including discrete and continuous models, that address relevant global challenges in such areas as urban planning, building construction, and home design. 1535: Euclidean geometry, trigonometry, sequences and the golden ratio, graph theory, tilings, polygons and polyhedra, applications for 2- and 3-dimensional design and construction, use of geometric software. 1536: vectors in the plane and space, descriptive and projective geometry, differential and integral calculus, applications for 2- and 3-dimensional design and construction, including areas, volumes, centroids, and optimization. Assumes 2 unites of high school algebra and 1 unit of high school geometry.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1614 - Numbers and Operations for Teachers (3 credits)
Study of the nature and structure of numbers for prospective elementary and middle school teachers; number theory, number systems, operations and algebraic thinking, problem solving, and mathematical modeling. 1614 may not be taken by math majors for credit.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1624 - Geometry for Teachers (3 credits)
Study of key geometry concepts for prospective elementary and middle school teachers; multiple perspectives including transformational, coordinate, Euclidean and analytical geometry; geometric modeling; geometric and spatial reasoning. 1624 may not be taken by math majors for credit.
Prerequisite(s): MATH 1614
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 2114 - Introduction to Linear Algebra (3 credits)
Vector and matrix algebra systems of linear equations, linear equations, linear independence, bases, orthonormal bases, rank, linear transformations, diagonalization, implementation with contemporary software. Math 1226 or a grade of at least B in VT MATH 1225. A student can earn credit for at most one of 2114 and 2405H.
Prerequisite(s): MATH 1225 or MATH 1226 or
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2114H - Introduction to Linear Algebra (3 credits)
Vector and matrix algebra systems of linear equations, linear equations, linear independence, bases, orthonormal bases, rank, linear transformations, diagonalization, implementation with contemporary software. Math 1226 or a grade of at least B in VT MATH 1225. A student can earn credit for at most one of 2114H and 2405H.
Prerequisite(s): MATH 1225 or MATH 1226 or
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2204 - Introduction to Multivariable Calculus (3 credits)
Calculus for functions for several variables. Planes and surfaces, continuity, differentiation, chain rule, extreme values, Lagrange multipliers, double and triple integrals and applications, software-based techniques. A student can earn credit for at most one of 2204 and 2406H. A student can earn credit for at most one of 2024 and 2204. A student can earn credit for at most one of 2204 and CMDA 2005.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2204H - Introduction to Multivariable Calculus (3 credits)
Calculus for functions of several variables. Planes and surfaces, continuity, differentiation, chain rule, extreme values, Lagrange multipliers, double and triple integrals and applications, software-based techniques. A student can earn credit for at most one of 2204H and 2406H. A student can earn credit for at most one of 2024 and 2204H. A student can earn credit for at most one of 2204H and CMDA 2005.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2214 - Introduction to Differential Equations (3 credits)
Unified course in ordinary differential equations. First-order equations, second-and-higher-order constant coefficient linear equations, systems of first-order linear equations, and numerical methods. Mathematical models describing motion and cooling, predator-prey population models, SIR-models, mechanical vibrations, electric circuits, rates of chemical reactions, radioactive decay. Quantitative and computational thinking to address relevant intercultural and global issues. A student can earn credit for at most one of 2214 and 2406H. A student can earn credit for at most one of 2214 and CMDA 2006.
Prerequisite(s): (MATH 1114 or MATH 2114 or MATH 2114H or MATH 2405H or ISC 2105) and MATH 1226
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2214H - Introduction to Differential Equations (3 credits)
Unified course in ordinary differential equations. First-order equations, second-and-higher-order constant coefficient linear equations, systems of first-order linear equations, and numerical methods. Mathematical models describing motion and cooling, predator-prey population models, SIR-models, mechanical vibrations, electric circuits, rates of chemical reactions, radioactive decay. Quantitative and computational thinking to address relevant intercultural and global issues. A student can earn credit for at most one of 2214H and 2406H. A student can earn credit for at most one of 2214H and CMDA 2006
Prerequisite(s): (MATH 1114 or MATH 2114 or MATH 2114H or MATH 2405H or ISC 2105) and MATH 1226
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2405H - Mathematics in a Computational Context (5 credits)
Unified course covering topics from linear algebra, differential equations, and calculus for functions of several variables. Comprises the standard second year mathematics courses for science and engineering. 2405H: Vector and matrix algebra, systems of linear equations, linear independence, bases, orthonormal bases, rank, linear transformations and diagonalization. Ordinary linear homogeneous differential equations, implementation with contemporary software. 2406H: Ordinary nonhomogeneous differential equations, calculus for functions of several variables, planes and surfaces, continuity, differentiation, chain rule, extreme values, Lagrange multipliers, double and triple integrals and applications, with software-based techniques. A student can earn credit for at most one of 2114, 2114H, and 2405H. A student can earn credit for at most one of 2204, 2204H, and 2406H. A student can earn credit for at most one of 2214, 2214H, and 2406H.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (5 Lec, 5 Crd)

MATH 2406H - Mathematics in a Computational Context (5 credits)
Unified course covering topics from linear algebra, differential equations, and calculus for functions of several variables. Comprises the standard second year mathematics courses for science and engineering. 2405H: Vector and matrix algebra, systems of linear equations, linear independence, bases, orthonormal bases, rank, linear transformations and diagonalization. Ordinary linear homogeneous differential equations, implementation with contemporary software. 2406H: Ordinary nonhomogeneous differential equations, calculus for functions of several variables, planes and surfaces, continuity, differentiation, chain rule, extreme values, Lagrange multipliers, double and triple integrals and applications, with software-based techniques. A student can earn credit for at most one of 2114, 2114H, and 2405H. A student can earn credit for at most one of 2204, 2204H, and 2406H. A student can earn credit for at most one of 2214, 2214H, and 2406H.
Prerequisite(s): MATH 2405H
Instructional Contact Hours: (5 Lec, 5 Crd)

MATH 2534 - Introduction to Discrete Mathematics (3 credits)
Emphasis on topics relevant to computer science. Topics include logic, propositional calculus, set theory, relations, functions, mathematical induction, elementary number theory and Boolean algebra. Does not carry credit for mathematics majors, but may be used as though it were a 3000-level elective course for the mathematics minor. Two units of high school algebra, one unit of geometry, one-half unit each of trigonometry and precalculus mathematics required. 2534 may not be taken by math majors for credit without special permission. A student can earn credit for at most one of 2534 and 3034.
Prerequisite(s): CS 1114 or ECE 1574 or ECE 1004 or CS 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2644 - Mathematics Tutoring (1 credit)
Introduction to professional, culturally respectful mathematics tutoring. Development of listening and questioning skills, assessment of students' mathematical difficulties. Exploration of teaching and learning processes, effectively utilizing technology, and adjusting instruction to diversity in students' mathematical reasoning. Concurrent mathematics tutoring experience required. May be repeated twice with different leadership expectations for a maximum of 3 credits.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

MATH 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

MATH 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 2984H - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 3034 - Introduction to Proofs (3 credits)
Practice in writing mathematical proofs. Exercises from set theory, number theory, and functions. Propositional logic, set operations, equivalence relations, methods of proof, mathematical induction, the division algorithm and images and pre-images of sets. A student can earn credit for at most one of 2534 and 3034.
Prerequisite(s): MATH 2114 or MATH 2114H or MATH 2405H
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 3124 - Modern Algebra (3 credits)
Introduction to abstract algebraic structures (groups, rings, and fields) and structure-preserving maps (homomorphisms) for these structures. Proof-intensive course illustrating the rigorous development of a mathematical theory from initial axioms.
Prerequisite(s): MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 3134 - Applied Combinatorics and Graph Theory (3 credits)
Emphasis on concepts related to computational theory and formal languages. Includes topics in graph theory such as paths, circuits, and trees. Topics from combinatorics such as permutations, generating functions, and recurrence relations.
Prerequisite(s): MATH 1226 and (MATH 2534 or MATH 3034)
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 3144 - Linear Algebra I (3 credits)
Introductory course in linear algebra. Abstract vector spaces, linear transformations, algorithms for solving systems of linear equations, matrix analysis. This course involves mathematical proofs.
Prerequisite(s): (MATH 3034 or MATH 2534) and (MATH 2114 or MATH 2114H or MATH 2405H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 3214 - Calculus of Several Variables (3 credits)
Fundamental calculus of functions of two or more variables. Implicit function theorem, Taylor expansion, line integrals, Greens theorem, surface integrals.
Prerequisite(s): MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 3224 - Advanced Calculus (3 credits)
Theory of limits, continuity, differentiation, integration, series. 3224 duplicates 4525.
Prerequisite(s): (MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005) and MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 3414 - Numerical Methods (3 credits)
Computational methods for numerical solution of non-linear equations, differential equations, approximations, iterations, methods of least squares, and other topics. A grade of C or better required in CS prerequisite 1044 or 1705. A student can earn credit for at most one of 3414 and 4404.
Prerequisite(s): (CS 1044 or CS 1705 or CS 1114 or CS 1124) and MATH 2406H or (CMDA 2005 and CMDA 2006) or (MATH 2214 or MATH 2214H) and (MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 3414

MATH 3574 - Applied Complex Variables (1 credit)
Arithmetic of complex numbers. Geometry of the complex plane. Geometry of exponentiation and roots. Complex exponential, trigonometric and hyperbolic functions. Continuity and differentiability. Analytic and harmonic functions.
Prerequisite(s): MATH 2204 or MATH 2204H
Instructional Contact Hours: (1 Lec, 1 Crd)

MATH 4044 - History of Mathematics (3 credits)
Historical development of mathematics from antiquity to modern times. Senior standing in mathematics or mathematics education required.
Prerequisite(s): MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4124 - Introduction to Abstract Algebra (3 credits)
An introduction to the theory of groups and rings. Topics include normal subgroups, permutation groups, Sylows Theorem, Abelian groups, Integral Domains, Ideals, and Polynomial Rings.
Prerequisite(s): MATH 3124
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4134 - Number Theory (3 credits)
Introduction to elementary number theory. Topics covered may include divisibility, greatest common divisors, unique prime factorization, congruences, Fermat's Little Theorem, Chinese Remainder Theorem, multiplicative number-theoretic functions, Diophantine equations, primitive roots, and the Quadratic Reciprocity Law.
Prerequisite(s): MATH 3034 or MATH 3134
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4144 - Linear Algebra II (3 credits)
Second course in linear algebra. Similarity invariants, Jordan canonical form, inner product spaces, self-adjoint operators, selected applications.
Prerequisite(s): MATH 3144
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4175 - Cryptography (3 credits)
4175: Introduction to classical and modern symmetric-key cryptography; alphabetic ciphers, block ciphers and stream ciphers; background in modular arithmetic and probability; perfect secrecy; linear and differential cryptanalysis; Advanced Encryption Standard; hashing. 4176: Introduction to modern public-key cryptography and cryptanalysis; RSA algorithm, ElGamal algorithm, Diffie-Hellman algorithm; digital signatures; background in group theory and number theory; algorithms for primality testing, factoring, and discrete logarithms; elliptic curves.
Prerequisite(s): MATH 3034 or MATH 3124 or MATH 3134 or MATH 3144 or MATH 3224 or MATH 4134 or CMDA 3605
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4176 - Cryptography (3 credits)
4175: Introduction to classical and modern symmetric-key cryptography; alphabetic ciphers, block ciphers and stream ciphers; background in modular arithmetic and probability; perfect secrecy; linear and differential cryptanalysis; Advanced Encryption Standard; hashing. 4176: Introduction to modern public-key cryptography and cryptanalysis; RSA algorithm, ElGamal algorithm, Diffie-Hellman algorithm; digital signatures; background in group theory and number theory; algorithms for primality testing, factoring, and discrete logarithms; elliptic curves.
Prerequisite(s): MATH 4175 or CMDA 3606 or MATH 3034 or MATH 3134 or MATH 3144
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4225 - Elementary Real Analysis (3 credits)
Real number system, point set theory, limits, continuity, differentiation, integration, infinite series, sequences and series of functions.
Prerequisite(s): MATH 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4226 - Elementary Real Analysis (3 credits)
Real number system, point set theory, limits, continuity, differentiation, integration, infinite series, sequences and series of functions.
Prerequisite(s): MATH 4225
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4234 - Elementary Complex Analysis (3 credits)
Analytic functions, complex integration, series representation of analytic functions, residues, conformal mapping, applications
Prerequisite(s): MATH 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4245 - Intermediate Differential Equations (3 credits)
Solution techniques, linear systems, the matrix exponential, existence theorems, stability, non-linear systems, eigenvalue problems.
Prerequisite(s): MATH 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4254 - Chaos and Dynamical Systems (3 credits)
Survey of basic concepts in chaotic dynamical systems. Includes material on bifurcation theory, conjugacy, stability, and symbolic dynamics.
Prerequisite(s): MATH 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4324 - Elementary Topology (3 credits)
Basic concepts of topological spaces, continuous functions, connected spaces, compact spaces, and metric spaces.
Prerequisite(s): MATH 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4334 - College Geometry (3 credits)
Transformational approach to Euclidean geometry including an in-depth study of isometries and their application to symmetry, geometric constructions, congruence, coordinate geometry, and non-Euclidean geometries.
Prerequisite(s): MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4404 - Applied Numerical Methods (3 credits)
Interpolation and approximation, numerical integration, solution of equations, matrices and eigenvalues, systems of equations, approximate solution of ordinary and partial differential equations. Applications to physical problems. A student can earn credit for at most one of 3414 and 4404.
Prerequisite(s): MATH 4564 and (ESM 2074 or AOE 2074)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4404

MATH 4414 - Issues in Scientific Computing (3 credits)
Theory and techniques of modern computational mathematics, computing environments, computational linear algebra, optimization, approximation, parameter identification, finite difference and finite element methods and symbolic computation. Project-oriented course; modeling and analysis of physical systems using state-of-the-art software and packaged subroutines.
Prerequisite(s): (MATH 2214 or MATH 2214H or MATH 2406H or CMDA 2006) and MATH 3214 and (CS 1114 or MATH 1454)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: CS 4414

MATH 4425 - Fourier Series and Partial Differential Equations (3 credits)
Separation of variables for heat, wave, and potential equations. Fourier expressions. Application to boundary value problems. Bessel functions. Integral transforms and problems on unbounded domains.
Prerequisite(s): MATH 2406H or CMDA 2006 or MATH 2214 or MATH 2214H and MATH 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4426 - Fourier Series and Partial Differential Equations (3 credits)
Separation of variables for heat, wave, and potential equations. Fourier expressions. Application to boundary value problems. Bessel functions. Integral transforms and problems on unbounded domains.
Prerequisite(s): MATH 4425
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4445 - Introduction to Numerical Analysis (3 credits)
4445: Vector spaces and review of linear algebra, direct and iterative solutions of linear systems of equations, numerical solutions to the algebraic eigenvalue problem, solutions of general non-linear equations and systems of equations. 4446: Interpolation and approximation, numerical integration and differentiation, numerical solutions of ordinary differential equations. Computer programming skills required.
Prerequisite(s): MATH 2406H or (CMDA 2005 and CMDA 2006) or (MATH 2214 or MATH 2214H) and (MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4446 - Introduction to Numerical Analysis (3 credits)
4445: Vector spaces and review of linear algebra, direct and iterative solutions of linear systems of equations, numerical solutions to the algebraic eigenvalue problem, solutions of general non-linear equations and systems of equations. 4446: Interpolation and approximation, numerical integration and differentiation, numerical solutions of ordinary differential equations. Computer programming skills required.
Prerequisite(s): MATH 2406H or (CMDA 2005 and CMDA 2006) or (MATH 2214 or MATH 2214H) and (MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4454 - Applied Mathematical Modeling (3 credits)
Analysis of classical and modern applications of mathematics in the physical, biological and social sciences. Emphasis on problem formulating, modeling, solving, simulating, and analyzing results. Programming language required.
Prerequisite(s): MATH 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4564 - Operational Methods for Engineers (3 credits)
Laplace transformations, Fourier series, partial differential equations and separation of variables, boundary value problems, and Sturm-Liouville theory.
Prerequisite(s): (MATH 2214 or MATH 2214H) or MATH 2406H or CMDA 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4574 - Vector and Complex Analysis for Engineers (3 credits)
Vector Analysis: Greens theorem, potential theory, divergence, and Stokes theorem. Complex Analysis: Analyticity, complex integration, Taylor series, residues, conformal mapping, applications. 4574 may not be taken by math majors for credit.
Prerequisite(s): MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4625 - Mathematics for Secondary Teachers (3 credits)
Course activities will emphasize the curricular themes of problem solving, reasoning and proof, communication, connections, and representation. 4625: Topics in discrete mathematics and algebra from a secondary teaching perspective. 4626: Topics in trigonometry, geometry, measurement, statistics, and probability from a secondary teaching perspective.
Prerequisite(s): MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4626 - Mathematics for Secondary Teachers (3 credits)
Course activities will emphasize the curricular themes of problem solving, reasoning and proof, communication, connections, and representation. 4625: Topics in discrete methematics and algebra from a secondary teaching perspective. 4626: Topics in trigonometry, geometry, measurement, statistics, and probability from a secondary teaching perspective.
Prerequisite(s): MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4644 - Secondary School Mathematics With Technology (3 credits)
Use and impact of technology in secondary mathematics curriculum. Various technologies including graphing calculators, calculator based laboratory and probes (CBLs), computer algebra systems, spreadsheets, dynamic geometry software and the Internet will be used to explore secondary mathematical concepts from an advanced viewpoint.
Prerequisite(s): MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4664 - Senior Math Education Seminar (2 credits)
A review of basic principles and problem-solving techniques in the eleven topics covered by the Praxis II (Mathematics Content Knowledge) examination. Passing the Praxis II examination prior to student teaching is a state requirement for all students seeking secondary licensure. Passing Praxis I required.
Prerequisite(s): MATH 3124
Instructional Contact Hours: (2 Lec, 2 Crd)

MATH 4754 - Internship (1-19 credits)
May be repeated for a maximum of 12 credits.
Instructional Contact Hours: Variable credit course
Repeatability: up to 12 credit hours

MATH 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

MATH 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Mechanical Engineering (ME)

ME 2004 - Engineering Analysis Using Numerical Methods (3 credits)
Numerical methods applied to engineering analysis with a design/lab studio. Numerical techniques including root finding, linear algebra, integration, ordinary differential equations, curve fitting, discrete Fourier transforms, optimization. Structured programming and iterative problem-solving using a high-level environment such as Matlab. Design/Lab Studio.
Prerequisite(s): (ENGE 1215 or ENGE 1414) and MATH 1226 and (MATH 2114 or MATH 2114H or MATH 2405H or MATH 2214 or MATH 2214H or MATH 2406H)
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

ME 2024 - Introduction to Engineering Design and Economics (3 credits)
Design process, mini-design projects, collaborative design, product dissection, economics of decision making, reverse engineering, intellectual property, oral, written, and graphic communications, engineering ethics.
Prerequisite(s): ENGE 1216 or ENGE 1114 or ENGE 1434 or ENGE 1414
Corequisite(s): ESM 2104, MATH 2114, PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 2124 - Introduction to Thermal and Fluid Engineering (2 credits)
Basics of thermodynamics, fluid mechanics, and heat transfer. Fluid and thermal properties of materials. Ideal gas equation of state. First law of thermodynamics in closed systems. Transient heat transfer. First law of thermodynamics in open systems. Fluid mechanics balances, open systems. Emphasis on applications in all topic areas.
Prerequisite(s): (ESM 2104 or PHYS 2306) and (MATH 2114 or MATH 2114H)
Corequisite(s): MATH 2214
Instructional Contact Hours: (2 Lec, 2 Crd)

ME 2134 - Thermodynamics (4 credits)
Classical (equilibrium) thermodynamics and its applications. Includes thermodynamic properties of pure substances: property diagrams, property tables, property software, equations of state; the first law of thermodynamics; the second law of thermodynamics; gas mixtures; combustion: atomic and energy balances; and power and refrigeration cycles.
Prerequisite(s): PHYS 2305 and (MATH 2204 or MATH 2204H or MATH 2406H) and CHEM 1035
Corequisite(s): (MATH 2214 or MATH 2214H or MATH 2406H).
Instructional Contact Hours: (4 Lec, 4 Crd)

ME 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 3024 - Engineering Design and Economics (3 credits)
Engineering design process; project management; product planning; customer needs, specifications, and Quality Function Deployment (QFD); benchmarking and intellectual property; concept generation, screening, scoring, and selection; design for assembly, product architecture, economic, and ethical considerations; concept testing. Written and oral communications of engineering design; computer aided design. Team-based term project with prototype fabrication of mechanical assembly manipulated by a microcontroller. For Pathways Advanced Discourse credit, must complete combination of ME 3024, ME 3034, and ME 4015-4016.
Prerequisite(s): ESM 2104 and ENGL 1106
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3034 - Mechanical Engineering Discourse (1 credit)
Principles and application of effective technical and professional communication in mechanical engineering; organizing, structuring, and developing effective written documents and oral presentations for a range of audiences, including technical reports, memorandums, laboratory reports, live and recorded presentations, and posters for public exhibition; use of effective language and style; development of effective visual aids; presentation delivery skills; acquiring new knowledge using appropriate learning strategies by finding, comprehending and evaluating information from a variety of sources; ethical and professional responsibilities in both identifying appropriate information and communicating technical results. For Pathways Advanced Discourse credit, must complete combination of ME 3024, ME 3034, and ME 4015-4016.
Prerequisite(s): ENGL 1106
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)

ME 3124 - Thermodynamics (3 credits)
Classical thermodynamics and its applications. Thermodynamic properties of pure substances: property tables, property software, equations of state. First law of thermodynamics. Second law of thermodynamics. Gas mixtures. Combustion: atom and energy balances. Power and refrigeration cycles.
Prerequisite(s): (ME 2124 and MATH 2214 and MATH 2204) or (ME 2124 and MATH 2214 and MATH 2204H) or (ME 2124 and MATH 2214 and MATH 2224) or (ME 2124 and MATH 2214 and MATH 2224H) or (ME 2124 and MATH 2214H and MATH 2204) or (ME 2124 and MATH 2214H and MATH 2204H) or (ME 2124 and MATH 2214H and MATH 2224) or (ME 2124 and MATH 2214H and MATH 2224H) or (ME 2124 and MATH 2405H and MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3134 - Fundamentals of Thermodynamics (3 credits)
Fundamental concepts, first and second laws, gas and vapor processes with emphasis on chemical reactions, statistical interpretation of entropy, limited use of thermodynamic property tables. This course is for non-ME students.
Prerequisite(s): MATH 2214 or MATH 2214H
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3194 - Technology, Innovation and Humanistic Engineering for a Sustainable Future (3 credits)
Foundational understanding of converging, emerging and disruptive technologies. Pedagogical aspects of innovation, team dynamics and effective communication. Leadership Cube—Six principles of effective leadership. Humanistic engineering. Sustainable energy and sustainable water platforms. Smart device designs for disease diagnostics and mitigation. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3304 - Heat and Mass Transfer (3 credits)
Comprehensive basic course in heat and mass transfer for mechanical engineering students. Principles of conduction, convection, and radiation with applications to heat exchangers and other engineering systems.
Prerequisite(s): ME 2134 and ME 3414 and (MATH 2214 or MATH 2214H or MATH 2306H) and (MATH 2204 or MATH 2204H or MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3404 - Fluid Mechanics (3 credits)
Comprehensive first course in basic and applied fluid mechanics. Fluid properties, statics, kinematics, and dynamics. Eulers and Bernoullis equations. Hydrodynamics. Dimensional analysis and similitude. Real fluids, laminar and turbulent flows. Boundary layer model and approximate analysis. Compressible flow and propulsion devices. Flow measurement. Introduction to turbomachinery with applications.
Prerequisite(s): (ME 2124 and MATH 2214 and MATH 2204) or (ME 2124 and MATH 2214 and MATH 2204H) or (ME 2124 and MATH 2214 and MATH 2224) or (ME 2124 and MATH 2214 and MATH 2224H) or (ME 2124 and MATH 2214H and MATH 2204) or (ME 2124 and MATH 2214H and MATH 2204H) or (ME 2124 and MATH 2214H and MATH 2224) or (ME 2124 and MATH 2214H and MATH 2224H) or (ME 2124 and MATH 2405H and MATH 2406H)
Instructional Contact Hours: (2 Lec, 1 Lab, 3 Crd)

ME 3414 - Fluid Dynamics (4 credits)
Comprehensive first course in fluid dynamics. Fluid properties. Hydrostatics. Mass, momentum,and energy conservation in control volumes. Elementary dynamics and Bernoullis equation.Dimensional analysis and similitude. Laminar and turbulent flows. Introduction to Eulers and Navier-Stokes equations. Pipe flows. External flows and boundary layers. Introduction to compressible flows. Includes laboratory experiments.
Prerequisite(s): ME 2004 and (MATH 2114 or MATH 2114H or MATH 2405H) and (MATH 2204 or MATH 2204H or MATH 2406H) and (MATH 2214 or MATH 2214H or MATH 2406H)
Corequisite(s): ME 2134
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ME 3504 - Dynamic Systems - Vibrations (3 credits)
Principles of dynamic system modeling with emphasis on second order mechanical systems. Harmonic and nonharmonic vibrations of single and multi-degree of freedom systems. Applications of computer simulation and analysis techniques in vibrations.
Prerequisite(s): (ME 3514 and MATH 2214) or (ME 3514 and MATH 2214H) or (ME 3514 and MATH 2405H and MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3514 - System Dynamics (3 credits)
Mathematical descriptions of physical systems behavior including mechanical, electrical, thermal, and fluid systems and their combinations; system descriptions using state variable and transfer functions; analysis of system responses: convolution integral, frequency response, numerical simulations, and Laplace transform methods; systems concepts: input-output, causality, and analogies; general process descriptions including first-order, second-order, and time delayed.
Prerequisite(s): (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2204 and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2204 and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2204 and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2204H and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2204H and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2204H and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2224 and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2224 and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2224 and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2224H and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2224H and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214 and MATH 2224H and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2204 and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2204 and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2204 and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2204H and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2204H and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2204H and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2224 and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2224 and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2224 and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2224H and MATH 2114) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2224H and MATH 2114H) or (ESM 2104 and ESM 2304 and MATH 2214H and MATH 2224H and MATH 2405H) or (ESM 2104 and ESM 2304 and MATH 2405H and MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3524 - Mechanical Vibrations (4 credits)
Development and application of mathematical methods, physical understanding, and computational tools for modeling, analysis, and design of vibrating systems. Free and forced vibration of single and multiple degree-of-freedom systems, particularly systems experiencing sinusoidal excitation. Distributed parameter systems. Practical engineering applications.
Prerequisite(s): ESM 2304 and (MATH 2114 or MATH 2114H or MATH 2405H) and (MATH 2214 or MATH 2214H or MATH 2406H) and ME 2004
Instructional Contact Hours: (4 Lec, 4 Crd)

ME 3534 - Controls Engineering I (4 credits)
Fundamentals of feedback control theory, time-domain and frequency-domain analysis, automatic control system design synthesis to meet performance and stability requirements, numerical simulation and discrete real-time implementation on microcontrollers.
Prerequisite(s): ME 2004 and (MATH 2114 or MATH 2114H or MATH 2405H) and (MATH 2214 or MATH 2214H or MATH 2406H) and (MATH 2204 or MATH 2204H or MATH 2406H) and ESM 2104 and ESM 2304
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ME 3604 - Kinematics and Dynamics of Machinery (3 credits)
Kinematic analysis and design of cams, gears, and linkages, velocity, acceleration and force analysis, kinematic synthesis, balancing, kinematic and force analysis by complex numbers, computer-aided analysis, and synthesis of linkages.
Prerequisite(s): ESM 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3614 - Mechanical Design I (3 credits)
Design of mechanical components subject to static and fatigue loads. Design using screws, fasteners, springs and bearings. Computer-aided design using transfer matrix and finite element methods.
Prerequisite(s): ESM 2204 and (MATH 2214 or MATH 2214H) and (MATH 2114 or MATH 2114H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 3624 - Mechanical Design (4 credits)
Comprehensive first course in mechanical design. Stress and Strain. Fundamentals of designing mechanical components subjected to static and cyclical loads. Design elements for screws, fasteners, springs, and welds. Hands-on laboratory learning of concepts discussed in class. Course credit will not be awarded for both ME 3614 and ME 3624.
Prerequisite(s): ME 2004 and ESM 2204 and (MATH 2214 or MATH 2214H or MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

ME 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 4005 - Mechanical Engineering Lab (3 credits)
Principles of measurement, measurement standards and accuracy, detectors and transducers, digital data acquisition principles, signal conditioning systems and readout devices statistical concepts in measurement, experimental investigation of engineering systems, technical report writing.
Prerequisite(s): (STAT 3704 or STAT 4604 or STAT 4705 or STAT 4714) and ME 3524 and ECE 2054
Corequisite(s): ME 3534
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ME 4006 - Mechanical Engineering Lab (3 credits)
Principles of measurement, measurement standards and accuracy, detectors and transducers, digital data acquisition principles, signal conditioning systems and readout devices statistical concepts in measurement, experimental investigation of engineering systems, technical report writing.
Prerequisite(s): ME 4005 and ECE 3254
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ME 4015 - Engineering Design and Project (3 credits)
Team oriented, open-ended, multi-disciplinary design projects focused on industrially relevant problems. A specific, complex engineering design problem taken from problem definition to product realization and testing. Emphasis on documenting and reporting technical work. Making informed judgments which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 4015: Problem identification, including consideration of public health and welfare, as well as global, cultural, social, environmental, and economic factors and constraints; idea generation and concept selection; application of design, test, and analysis tools developed in previous courses; ethical and professional responsibilities; verification and validation; communication and working in teams. 4016: Project management; working on teams, analysis and optimization, fabrication and testing, and communicating technical ideas. For Pathways Advanced Discourse credit, must complete combination of ME 3024, ME 3034, and ME 4015-4016.
Prerequisite(s): ME 3024 and ME 3034 and ME 3524 and ME 3534 and ME 3624 and ME 4005 and (ME 3304 or MSE 2034) and ME 3414
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ME 4016 - Engineering Design and Project (3 credits)
Team oriented, open-ended, multi-disciplinary design projects focused on industrially relevant problems. A specific, complex engineering design problem taken from problem definition to product realization and testing. Emphasis on documenting and reporting technical work. Making informed judgments which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 4015: Problem identification, including consideration of public health and welfare, as well as global, cultural, social, environmental, and economic factors and constraints; idea generation and concept selection; application of design, test, and analysis tools developed in previous courses; ethical and professional responsibilities; verification and validation; communication and working in teams. 4016: Project management; working on teams, analysis and optimization, fabrication and testing, and communicating technical ideas. For Pathways Advanced Discourse credit, must complete combination of ME 3024, ME 3034, and ME 4015-4016.
Prerequisite(s): ME 4015
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ME 4034 - Bio-Inspired Technology (3 credits)
Introduction to engineering solutions inspired by biological systems. Overview over the approach of bio-inspired technology and the state of the art. Exploration of the relationship between engineered and natural biological systems. Explanation of concepts of biological systems, such as evolutionary optimization, sensing, actuation, control, system integration, assembly and materials in engineering terms. Practice of interdisciplinary analysis skills in technical report writing projects where man-made and biological systems are evaluated for parallels to engineering and their technological potential.
Prerequisite(s): (PHYS 2205 and PHYS 2206) or (PHYS 2305 and PHYS 2306)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4124 - Computer Aided Design of Fluid-Thermal Systems (3 credits)
Review of physical laws and engineering concepts introduced in thermodynamics, fluid mechanics, and heat transfer with applications. Emphasis on analysis, modeling, and design of engineering systems, components, and physical phenomena with state-of-the-art computer software such as Ansys CFX, Star CCM, Aspen Plus, and ProSimPlus.
Prerequisite(s): (ME 3124 or ME 2134) and (ME 3404 or ME 3414) and ME 3304
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

ME 4154 - Industrial Energy Systems (3 credits)
Survey of energy-intensive technologies used in typical industrial plants, with emphasis on cost-effective energy conservation. Burners, boilers, pumps, air compressors, electric motors, lights, refrigeration plants, HVAC systems, cogeneration systems, waste heat recovery equipment. Energy-efficient design and operation. Determination of energy efficiency based on field measurements. Economic analysis of energy conservation measures. Mitigation of environmental impacts.
Prerequisite(s): ME 2134 or CHE 2164 or BSE 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4164 - Energy Systems for Buildings (3 credits)
Application of the fundamental principles of thermodynamics, heat transfer, and fluid flow to analyze energy use for building environmental control. Exploration of approaches for configuring basic thermal-fluid engineering components (e.g. pumps, piping, fans, heat exchangers, refrigeration cycles, etc.) to yield systems that provide heating, cooling, and ventilation. Introduction to techniques and software tools for estimating energy use by these systems and the associated economic and environment impact. Examination of alternate technologies for meeting building energy needs including small scale combined heat and power systems and renewable energy systems.
Prerequisite(s): ME 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4174 - Spacecraft Propulsion (3 credits)
Spacecraft propulsion systems and their applications in orbital, interplanetary, and interstellar flight. Rocket propulsion fundamentals; advanced mission analysis; physics and engineering of chemical rockets, electrical thrusters, and propellantless systems (tethers and sails); spacecraft integration issues.
Prerequisite(s): AOE 3164 or AOE 4234 or ME 4234
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4174

ME 4184 - Drone Technology and Flight Operations (3 credits)
Basic aviation science, skills training in uncrewed flight operations, and knowledge of the regulatory environment that governs drone flight. Aerodynamics, propulsion, aircraft performance, sensing and control, meteorology, the Federal Aviation Regulations, safety and risk management. Flight management tools for conducting preflight inspections and approving flight missions. Pre: Students in Mechanical Engineering will be given preference, other programs and students eligible with permission.
Instructional Contact Hours: (2 Lec, 1 Lab, 3 Crd)

ME 4194 - Sustainable Energy Solutions for a Global Society (3 credits)
Addresses energy metrics, global and US energy supply and demand, transitional energy sources (natural gas, petroleum, coal, nuclear), sustainable/renewable source (solar, geothermal, hydro, tidal, wind, biofuels), and methods for increasing efficiencies (energy storage, batteries, green building, conservation). Options for transportation, electricity, lighting and heating needs of industry, agriculture, community, and citizens. Production, transmission, storage, and disposal issues considered in the context of global political, economic, and environmental impacts. Senior Standing in major may be substituted for pre-requisite ENGL 3764.
Prerequisite(s): (CHEM 1035 or CHEM 1055) and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ESM 4194

ME 4204 - Internal Combustion Engines (3 credits)
Analysis and design of gasoline and diesel engines. Fundamental processes and their application in current technology. Thermodynamics: air standard and air-fuel cycles. Combustion: stoichiometry, fuels, chemical equilibrium, chemical kinetics, flame propagation, knock, pollutant formation and control. Flow processes: volumetric efficiency, intake and exhaust tuning, two-stroke scavenging, carburetion, fuel injection, super- and turbo-charging.
Prerequisite(s): ME 2134 and ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4224 - Gas Turbines for Power and Propulsion (3 credits)
Introduction to various applications of gas turbines for land, sea and air. Aero-thermo-mechanical aspects of component performance and reliability. Operational characteristics, limitations and component matching. Industrial standards, development and certification requirements. Design of gas turbine engines and comparison of the predicted performance (specific fuel consumption) against the in-service operation.
Prerequisite(s): ME 2134 and ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4234 - Aerospace Propulsion Systems (3 credits)
Design principles and performance analysis of atmospheric and space propulsion engines and systems. Application of thermodynamics, compressible fluid flow and combustion fundamentals to the design of gas turbine and rocket engines and components, including inlets, turbomachines, combustors, and nozzles. Matching of propulsion system to vehicle requirements. Must have a C- or better in pre-requisites ME 3404 and ME 3124 or AOE 3114 and AOE 3134.
Prerequisite(s): AOE 3114 and (AOE 3164 or AOE 3264) or ME 3414 and ME 2134
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4234

ME 4324 - Energy Systems: Theory and Applications (3 credits)
Theory and applications of thermodynamic and fluid mechanics principles as applied to energy systems. Fundamental concepts on exergy, mixtures, psychrometry and thermochemistry. Analyses and applications include vapor and gas power systems, refrigeration, air conditioning, combustion processes and one-dimensional compressible flow.
Prerequisite(s): ME 2134 and ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4344 - Biological Transport Phenomena (3 credits)
Engineering analysis and predictive modeling of heat and mass transport in biological systems (e.g., tissues, organs, organisms, and biomedical devices). Examination of processes that involve conduction, convection, diffusion, generation/consumption. Application of analytical and computational methods to solve differential equations that describe unsteady and/or multi-dimensional transport. Topics include oxygen transport, pharmacokinetic analysis, kidney function, blood perfusion, burns, and cryopreservation.
Prerequisite(s): (CHE 3114 and CHE 3044 and CHE 3144) or (ME 3304 and ME 3404)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CHE 4304

ME 4454 - Engineering Leadership in Practice: Managing the Technical Design Process (3 credits)
Introduction to management and mentoring skills associated with the application of the engineering design process. Course covers skills necessary for leading diverse teams of people through a technical design project. Managing teams of local high school students through an authentic technical design experience associated with design competitions. Course addresses the practical applications of science, math and engineering, while building and managing teams of people to meet technical project goals. Prerequisite: ME 4015 or similar team-based design experience, or by permission of instructor.
Prerequisite(s): ME 4015
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: EDCI 4454

ME 4464 - Introduction to Compressible Flows (3 credits)
Derivation of mass, momentum, and energy conservation equations for one dimensional (1-D), steady, inviscid, compressible gas flows of calorically perfect gases. Departure from incompressible flow theory. Importance of Mach number. Isentropic flows. Steady and unsteady 1-D normal shock flows. Oblique shock flows (with surface reflections) and/or Prandtl-Meyer expansion waves. Converging and converging-diverging quasi-1-D nozzle flows. Inviscid flows in straight ducts with heat addition; adiabatic flows in straight ducts with friction. Introduction to Newtonian hypersonic flow theory, high temperature effects, and rarefied gas principles.
Prerequisite(s): ME 2134 and ME 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4504 - Dynamic Systems - Controls Engineering I (3 credits)
Fundamentals of feedback control theory, classical analysis and design techniques for automatic controls, introduction to modern control theory.
Prerequisite(s): (ME 3514 and MATH 2214) or (ME 3514 and MATH 2214H) or (ME 3514 and MATH 2405H and MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4524 - Introduction to Robotics and Automation (3 credits)
Automation, robot technology, kinematics, dynamics, trajectory planning, and control of two-dimensional and spatial robots; robot programming; design and simulation of robotic devices.
Prerequisite(s): ME 2004 and ME 3524 and ME 3534
Corequisite(s): ME 4584
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4534 - Land Vehicle Dynamics (3 credits)
Analytical methods for land vehicle dynamics. Mechanics of pneumatic tires on pavement and steel wheels on rails. Vehicle stability, handling, response to random guideway and roadway irregularities, ride quality computation methods and standards, suspension design.
Prerequisite(s): ME 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4544 - Automotive Engineering (3 credits)
Vehicle performance, drive train, suspension, steering, and brake systems. Steady state and transient conditions. Senior standing in Mechanical Engineering required.
Prerequisite(s): ME 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4554 - Advanced Technology for Motor Vehicles (3 credits)
Energy use and environmental issues for motor vehicles: Emissions standards, fleet requirements, dynamometer testing, fuel economy, and vehicle performance. Alternative fuel vehicles: Characteristics and infrastructure of fuels, batteries, electric vehicles, and hybrid electric vehicles. Vehicle design: Modeling and simulation of vehicle energy use and performance, component sizing. Fuel cells for transportation. Heavy-duty vehicles and busses. Low mass vehicles and future vehicle technology.
Prerequisite(s): ME 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4564 - Vehicle Control (3 credits)
Overview of vehicle control systems and control algorithms for anti-lock braking, stability, road holding, lane departure, traction control, and tire pressure monitoring. Advanced driver assist systems and intelligent tire technology. Hands-on experience with hardware-in-the- loop systems. Mathematical modeling and simulation of vehicle control.
Prerequisite(s): ME 3524 and ME 3534
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4584 - Robotics Laboratory (1 credit)
Develop, compile, and test algorithms for serial and mobile robots. Robot forward and inverse kinematics, task planning, velocity kinematics, force rendering, control, haptics, mapping and localization, computer vision and path planning.
Corequisite(s): ME 4524 or ECE 4704
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: ECE 4584

ME 4614 - Mechanical Design II (3 credits)
Design of mechanical elements such as welded joints hydrodynamic bearings, spur gears, shafts, brakes. Alternative fatigue design methods, cumulative fatigue, mechanical design computer software.
Prerequisite(s): ME 3624
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4624 - Finite Element Practice in Mechanical Design (3 credits)
Application of the finite element method to stress analysis problems in mechanical design. Modeling techniques, proper use of existing computer programs, interpreting of results, application to design modification.
Prerequisite(s): ME 3624
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4634 - Introduction to Computer-aided Design and Manufacturing (3 credits)
Participants will study the computer-aided design and manufacturing of mechanical systems. A mechanical system will be designed including preliminary design, analysis, detail design, numerical control programming, and documentation. Applications programs will be written and interfaced to the CAD/CAM database. All assignments will be carried out on a CAD/CAM system.
Prerequisite(s): ME 3024
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

ME 4644 - Introduction to Rapid Prototyping (3 credits)
Participants will study topics fundamental to rapid prototyping and automated fabrication, including the generation of suitable CAD models, current rapid prototyping fabrication technologies, their underlying material science, the use of secondary processing, and the impact of these technologies on society. The rapid prototyping process will be illustrated by the actual design and fabrication of a part. Programming skills required.
Prerequisite(s): ME 3024
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4654 - Optimization Techniques in Engineering (3 credits)
Fundamental mathematical concepts for optimization and optimality conditions. Classification of optimization techniques/problems in engineering. Concepts of forward and inverse design. Linear programming. Step-size calculation methods. Search direction calculation methods. 1st and 2nd order gradient-based algorithms. Evolutionary strategies for optimization. Pattern search/genetic algorithm. Sensitivity analysis. Reliability-based and robustness-based optimization.
Prerequisite(s): ME 2004 or (AOE 2074 and CS 1044 and CS 1054 and CS 1064 and CS 1114 and CS 1124 and ECE 1574)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4664 - Introduction to Global Collegiate Engineering Design (3 credits)
Participants will study topics fundamental to global collaborative engineering design, product data management, and collaborative product data management. These topics will be applied during a team project with team members located overseas, utilizing state-of-the-art collaborative engineering and product data management software and hardware technologies. Partially duplicates 5664. Credit may only be received for one course.
Prerequisite(s): ME 3024
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4674 - Materials Selection in Mechanical Design (3 credits)
Systematic approach to materials selection accounting for market need, functional requirements, shape, safety, cost and environmental issues. Overview of design process, material property charts, material indices, selection of materials with multiple constraints and/or conflicting objectives, shape factors, design considerations in hybrid materials, environmental issues as well as several case studies.
Prerequisite(s): ESM 2204 and MSE 2034
Corequisite(s): ME 3624
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4684 - Industrial Internet of Things (3 credits)
Theory and applications of Industrial Internet of Things (IIoT). Industrial data flow, devices and network in manufacturing. Basics for IIoT architecture and implementation of IIoT solutions with cloud computing platforms and OEM IIoT platforms. Device connection, data transfer and application of diagnostics, maintenance, and predictive data analytics on IIoT platforms.
Prerequisite(s): ME 3534 or (CS 1044 or CS 1054 or CS 1064 or CS 1114)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4724 - Engineering Acoustics (3 credits)
Basic acoustical theory and practice, acoustic terminology, measurement, transmission, and perception of sound, muffler design, noise control techniques.
Prerequisite(s): ME 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4734 - Robotics and Mechatronics Seminar (1 credit)
Topics in robotics and mechatronics. Invited lectures from industry, government organizations and universities. Recent research results, developments and challenges, providing a global and social context for the topics.
Prerequisite(s): ME 3534 and ECE 3254
Instructional Contact Hours: (1 Lec, 1 Crd)

ME 4735 - Mechatronics (3 credits)
Electromechanical system modeling, control and applications. Design and building of electronic interfaces and controllers for mechanical devices, sensors, signal acquisition, filtering, and conditioning. Microcontroller-based closed-loop control and device communications. Sensor and actuator selection, installation, and application strategies are studied. A term design project is a key component to this course (for 4736).
Prerequisite(s): (ECE 3254 and ME 3514) or (ECE 2004 and ECE 2704)
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4736 - Mechatronics (3 credits)
Electromechanical system modeling, control and applications. Design and building of electronic interfaces and controllers for mechanical devices, sensors, signal acquisition, filtering, and conditioning. Microcontroller-based closed-loop control and device communications. Sensor and actuator selection, installation, and application strategies are studied. A term design project is a key component to this course (for 4736).
Prerequisite(s): ME 4735
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4744 - Mechatronics: Theory and Application (4 credits)
Electromechanical design and control applications. Theory, modeling, simulation, analysis, design and building of electronic interfaces and controllers; sensors and actuators; software development, micro-controller technology, and applications. Design Lab/Studio.
Prerequisite(s): ME 3534 and ECE 3254 and (CS 1044 or ECE 1574 or CS 2505)
Instructional Contact Hours: (3 Lec, 2 Lab, 4 Crd)

ME 4754 - Mechatronics: Advanced Topics and Application (3 credits)
Electromechanical design and control applications. Design and building of electronic interfaces and controllers including sensors, actuators, signal acquisition, filtering, and conditioning for applications. Systems integration with wireless communication; image processing; embedded programs for data acquisition and feedback control applications.
Prerequisite(s): ME 4744
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4764 - Audio Engineering Technology (3 credits)
Principles and design in the field of audio engineering. Loudspeaker design and construction, microphone technology, digital audio acquisition, signal processing in audio engineering, human perception, technical acoustics, binaural hearing, surround sound processing and production, theory, measurement, and reproduction of 3D surround sound, virtual instrument theory and practice, room acoustics and simulation, principles of audio effects (e.g., compression, reverberation, equalization), and acoustic materials engineering.
Prerequisite(s): ME 3524 and ME 3534
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4824 - Introduction to Human-Robot Interaction (3 credits)
Formalizing interaction between robots and humans. Developing learning and control algorithms that enable robots to seamlessly and intelligently collaborate with humans. Mathematical approaches to human-robot interaction, learning from demonstration, Bayesian inference, intent detection, safe and optimal control, assistive autonomy, and user study design. Review and present existing literature.
Prerequisite(s): ME 4524
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4854 - Nano and Micromechanics of Materials (3 credits)
Analysis of microstructural mechanics, crystal structures, defects, and dislocations. Mechanical behavior of crystalline materials at the microscale. Computational modeling of mechanical behavior in discrete atomistic and molecular systems, including molecular dynamics. Application of these methods to polymers and other soft materials, biological materials, carbon-based materials, and metallic alloys.
Prerequisite(s): ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4864 - Micro/Nano-Robotics (3 credits)
Overview of Micro/Nano-robotic systems. Physics of reduced length scales (scaling effects in the physical parameters, surface forces, contact mechanics, and Micro/Nano-scale dynamical phenomena), Basics of Micro/Nano-manufacturing, microfabrication and soft lithography, Biomimetic design strategies for mobile micro-robots, Principle of transduction, material properties and characteristics of Micro/Nano-actuators (piezoelectric, shape-memory alloy, and a variety of MEMS and polymer actuators), Control requirements and challenges of Micro/Nano-actuators, Micro/Nano sensors for mobile microrobotic applications, Micro/Nano-manipulation (scanning probe microscopy, operation principles, designing experiments for nanoscale mechanical characterization of desired samples).
Prerequisite(s): ME 3414 and ME 3624 and ME 3534
Instructional Contact Hours: (3 Lec, 3 Crd)

ME 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 4974H - Independent Study (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

ME 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 4984A - Special Study (1-19 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: Variable credit course

ME 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ME 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Meteorology (MTRG)

MTRG 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MTRG 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MTRG 3524 - Meteorology Field Methods (3 credits)
A field methods course in meteorology. On-location observation and analysis of temperature, wind fields, pressure, and dewpoint. In-field experiences with radar and satellite data, numerical model output and portable weather stations. On-location sites and corresponding curriculum may include severe storm analysis in the Great Plains, mountain weather in the White Mountains (NH) or Rocky Mountains (CO), and costal storms along the Atlantic or Gulf of Mexico coastlines. May be repeated for credit, with permission and different content, for a maximum of 9 hours.
Prerequisite(s): GEOG 2506 and GEOG 3504
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

MTRG 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

MTRG 4584 - Topics in Applied Meteorology (1-3 credits)
Contemporary and emerging theory and praxis in meteorology. Variable topics such as operational weather forecasting situations and scenarios. Identifying common meterological problems and developing pragmatic approaches for solutions. Repeatable with different content for a maximum of six credit hours.
Prerequisite(s): GEOG 1514
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 6 credit hours

MTRG 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MTRG 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MTRG 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MTRG 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Military Navy (MN)

MN 1004 - Introduction to Naval Science (3 credits)
A basic introduction to the Naval profession and concept of sea power. Explores the role of the commissioned officer and covers uniform regulations, the Uniform Code of Military Justice, Naval terminology, the Oath of Office, the Navy Ethos, and customs and courtesies. Also covers basic communication and the importance of training and qualification. The relationship to sea power and maritime strategy explained through the missions of the Navy and Marine Corps, briefly touching on the mission of other branches. Explains how directives are revised and published, as well as possible threats against platforms. Basic shipboard damage control covered with an emphasis on combating naval casualties.
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 1014 - Naval Fitness (1 credit)
Reflects a culture on physical fitness as way of life within the United States Navy & the United States Navy Reserve Officer Training Corps (NROTC). Structured to motivate members to participate and implement year-round physical fitness conditioning program emphasizing total-body wellness to demonstrate expeditionary mission requirements. Prepares midshipmen to demonstrate competency in fitness programs upon entering active duty. Class is limited to students currently enrolled in the Virginia Tech NROTC program. Comprised of evolving content and may be repeated 9 times for a maximum of 10 credit hours. Pre: Enrollment in the Virginia Tech Naval ROTC program.
Instructional Contact Hours: (3 Lab, 1 Crd)
Repeatability: up to 10 credit hours

MN 1104 - Naval Ships Systems I: Engineering (3 credits)
Ship characteristics and types. Includes ship design, hydrodynamic forces, stability, main propulsion, electrical and auxiliary systems, interior communications, ship control, and damage control. One semester of college level science required.
Prerequisite(s): MN 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MN 2004 - Naval Ships Systems II: Weapons (3 credits)
Theory and employment of naval weapons systems. Includes threat detection, evaluation, weapon selection, delivery systems, guidance, and warhead design. Elements of command, control, and communications.
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 2104 - Seapower and Maritime Affairs (3 credits)
A survey of naval history from the American Revolution to the present with emphasis on major developments in strategy, tactics, and technology. Discussion of the geopolitical theory of Alfred Thayer Mahan. Explores present concerns in seapower and maritime affairs, including the economic and political dimensions of ocean commerce, the Law of the Sea, a comparison of U.S. and Soviet maritime strategies, and current naval affairs.
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MN 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MN 3005 - Navigation and Naval Operations (3 credits)
3005: An in-depth study of the theory and practice of piloting and introduction to celestial navigation. Students develop practical skills in the use of charts, visual and electronic aids. A study of the International Rules of the Nautical Road. 3006: Relative motion, vector-analysis theory, and ship employment. Includes an introduction to naval operations, ship characteristics, shiphandling, and afloat communications. I
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 3006 - Navigation and Naval Operations (3 credits)
3005: An in-depth study of the theory and practice of piloting and celestial navigation. Students develop practical skills in the use of charts, visual and electronic aids. 3006: A study of the International Rules of the Nautical Road, relative motion, vector-analysis theory, and ship employment. Includes an introduction to naval operations, ship characteristics, shiphandling, and afloat communications. II
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 3204 - Evolution of Warfare (3 credits)
Development of warfare focusing on impact of major military theorists, strategists, and technicians. Ancient times to present. I
Prerequisite(s): MN 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 4005 - Leadership and Management/Ethics (3 credits)
4005: Examines leadership skills, strategies, and contexts as interpreted through the lenses of the leader, the follower, and the situation. Contrasts the roles of leader and manager within diverse constructs. Focuses on building and sustaining high-performance teams through transformational, charismatic and servant leadership. Challenges students to develop individual leadership skill development programs. Introduces general ethical theories and moral reasoning skills in the context of ethical decision making case studies, dark side trait analysis, and associated mitigation strategies. 4006: Explores philosophical schools of ethical thought in the context of targeted/representative case studies, both historical and contemporary in nature. Applies theoretical approaches to moral reasoning specifically as they pertain to ethical dilemmas within the rubrics of distributive justice and just war theory. Analyzes moral obligations as entailed by a voluntary oath of service. Examines strategies for mentorship, behavior reinforcement, and disciplinary options to optimize organizational success. Pre: Sophomore Standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

Instructional Contact Hours: (3 Lec, 3 Crd)

MN 4204 - Amphibious Warfare (3 credits)
Historical survey of the development of amphibious doctrine and the conduct of amphibious operations. Emphasis is on amphibious operations in World War II. Present day potential and limitations on amphibious operations are explored. I
Instructional Contact Hours: (3 Lec, 3 Crd)

MN 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MN 4984 - Special Study (1-19 credits)
II
Instructional Contact Hours: Variable credit course

Military Sciences (AROTC) (MS)

MS 1005 - Military Science I, Army Reserve Officer Training Corps (2 credits)
First year of military science. MS 1005: Introduction to the Army introduces the personal challenges and competencies that are critical for effective leadership and communication. Student learning focuses on developing individual and interactive skills. Students learn how cultural understanding, goal setting, time management, stress management, and comprehensive fitness relates to leadership and the Army profession. Students further learn the ROTC course structure and progression, and are immersed into Army organizational culture via classroom instruction, physical fitness training, and leadership labs. MS 1006: Foundations of Agile and Adaptive Leadership introduces students to basic knowledge required to be a successful member of a military team, to include the U.S. Armys mission, its role and relationship in the American governance system, U.S. military customs and courtesies, operational terms and graphics, map reading, land navigation squad tactics, the Army Values and Warrior Ethos. This course includes reading assignments, homework assignments, practical exercises, a mid-term exam, and a final exam. Students receive systematic and specific feedback on leader attributes, values, and core leader competencies throughout the course. Successful completion of this course will help prepare cadets for Military Sci II, AROTC.
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

MS 2005 - Military Science II, Army Reserve Officer Training Corps (3 credits)
Second year of military science. 2005: Troop Leading Procedures focuses on operations order production, leadership principles and styles, ethical and moral reasoning, land navigation and intermediate squad and platoon tactics. Required participation: leadership lab, physical training and field training exercises. 2006: Unified Land Operations focuses on doctrine and symbology, principles of joint operations, intermediate small unit tactics and leadership, effective communication, team building, counseling and coaching methods, code of conduct and law of land warfare. Required participation: leadership lab, physical training and field training exercises.
Prerequisite(s): MS 1005 and MS 1006
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

MS 2006 - Military Science II, Army Reserve Officer Training Corps (3 credits)
Second year of military science. 2005: Troop Leading Procedures focuses on operations order production, leadership principles and styles, ethical and moral reasoning, land navigation and intermediate squad and platoon tactics. Required participation: leadership lab, physical training and field training exercises. 2006: Unified Land Operations focuses on doctrine and symbology, principles of joint operations, intermediate small unit tactics and leadership, effective communication, team building, counseling and coaching methods, code of conduct and law of land warfare. Required participation: leadership lab, physical training and field training exercises.
Prerequisite(s): MS 1006
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

MS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MS 3005 - Military Science III, Army Reserve Officer Training Corps (4 credits)
Third year of military science. 3005: Training management and the warfighting functions focuses on unified land operations, troop leading procedures, operations order production, written and oral communication, training management, squad leadership and tactics, squad and platoon offense/defense, land navigation, after action reviews, leadership, and physical training. Required participation: leadership lab, physical training and field training exercises. 3006: Applied leadership in small unit operations, squad and platoons offense/defense, basic rifle marksmanship, written and oral communication, land navigation, fires support to dismounted operations, leadership, physical training and preparation for advanced camp. Required participation: leadership lab, physical training and weekend field training exercises.
Prerequisite(s): MS 2005 and MS 2006
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

MS 3006 - Military Science III, Army Reserve Officer Training Corps (4 credits)
Third year of military science. 3005: Training management and the warfighting functions focuses on unified land operations, troop leading procedures, operations order production, written and oral communication, training management, squad leadership and tactics, squad and platoon offense/defense, land navigation, after action reviews, leadership, and physical training. Required participation: leadership lab, physical training and field training exercises. 3006: Applied leadership in small unit operations, squad and platoons offense/defense, basic rifle marksmanship, written and oral communication, land navigation, fires support to dismounted operations, leadership, physical training and preparation for advanced camp. Required participation: leadership lab, physical training and weekend field training exercises.
Prerequisite(s): MS 2005 and MS 2006
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

MS 4005 - Military Science IV, Army Reserve Officer Training Corps (4 credits)
Fourth year of military science. 4005: The Army Officer focuses on development of the Army officer. It is an academically challenging course where students develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. Students learn about Army programs that support counseling subordinates and evaluating performance, applying values and ethics to organizational problems, career planning, and legal responsibilities. Required participation: leadership lab, physical training and field training exercises. 4006: Company Grade Leadership focuses on preparing students to fulfill key leadership roles at the company level. This is an academically challenging course where students study, practice, develop, and apply critical thinking skills pertaining to Army leadership, officer skills, Army values and ethics, personal development, small unit tactics, platoon level leadership. Required participation: leadership lab, physical training and weekend field training exercises.
Prerequisite(s): MS 3006
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

MS 4006 - Military Science IV, Army Reserve Officer Training Corps (4 credits)
Fourth year of military science. 4005: The Army Officer focuses on development of the Army officer. It is an academically challenging course where students develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. Students learn about Army programs that support counseling subordinates and evaluating performance, applying values and ethics to organizational problems, career planning, and legal responsibilities. Required participation: leadership lab, physical training and field training exercises. 4006: Company Grade Leadership focuses on preparing students to fulfill key leadership roles at the company level. This is an academically challenging course where students study, practice, develop, and apply critical thinking skills pertaining to Army leadership, officer skills, Army values and ethics, personal development, small unit tactics, platoon level leadership. Required participation: leadership lab, physical training and weekend field training exercises.
Prerequisite(s): MS 3005 and MS 3006
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

MS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Military, Aerospace Studies (AS)

AS 1115 - Introduction to the Air Force (1 credit)
Introduction to the United States Air Force and Air Force Reserve Officer Training Corps. Mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, and introduction to communication skills.
Corequisite(s): AS 2944
Instructional Contact Hours: (1 Lec, 1 Crd)

AS 1116 - Introduction to the Air Force (1 credit)
Introduction to the United States Air Force and Air Force Reserve Officer Training Corps. Mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, and introduction to communication skills.
Corequisite(s): AS 2944
Instructional Contact Hours: (1 Lec, 1 Crd)

AS 2115 - Team and Leadership Fundamentals (1 credit)
A fundamental understanding of both leadership and team building. 2115: Followership, motivation, listening, problem solving, full-range leadership, standards and accountability, self-assessment, oral and written communication, and financial readiness of an Air Force officer. 2116: Human relations, team building models, ethical decision making, stress management and resiliency, and conflict resolution.
Prerequisite(s): AS 1115 and AS 1116
Corequisite(s): AS 2934, AS 2944
Instructional Contact Hours: (1 Lec, 1 Crd)

AS 2116 - Team and Leadership Fundamentals (1 credit)
A fundamental understanding of both leadership and team building. 2115: Followership, motivation, listening, problem solving, full-range leadership, standards and accountability, self-assessment, oral and written communication, and financial readiness of an Air Force officer. 2116: Human relations, team building models, ethical decision making, stress management and resiliency, and conflict resolution.
Prerequisite(s): AS 2115
Corequisite(s): AS 2934, AS 2944
Instructional Contact Hours: (1 Lec, 1 Crd)

AS 2934 - Air Force Fitness (1 credit)
Reflects change in culture on physical fitness and incorporates fitness as a way of life with the United States Air Force & the Air Force Reserve Officer Training Corps (AFROTC). Structured to motivate members to develop and maintain year-round physical fitness conditioning program emphasizing total-body wellness to meet expeditionary mission requirements. Prepares cadets to tackle squadron fitness programs upon entering active duty. Course may be taken up to 10 times. Pre-requisite: Enrollment on AFROTC
Corequisite(s): AS 2944
Instructional Contact Hours: (2 Lec, 1 Crd)
Repeatability: up to 10 credit hours

AS 2944 - AFROTC Leadership Laboratory (1 credit)
Experiential learning laboratory that allows cadets to practice and demonstrate mastery of leadership skills essential to an Air Force officer. May be taken eight times. Membership in Virginia Tech Corps of Cadets required.
Corequisite(s): AS 1115, AS 1116, AS 2115, AS 2116, AS 3215, AS 3216, AS 4215, AS 4216
Instructional Contact Hours: (4 Lab, 1 Crd)
Repeatability: up to 8 credit hours

AS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AS 3215 - Air Force Management and Leadership (3 credits)
Integrated leadership study emphasizing concepts and skills. Motivational and behavioral processes, management, military ethics, communication, and group dynamics. Examines case studies and scenarios.
Prerequisite(s): AS 2116
Corequisite(s): AS 2944
Instructional Contact Hours: (3 Lec, 3 Crd)

AS 3216 - Air Force Management and Leadership (3 credits)
Integrated leadership study emphasizing concepts and skills. Motivational and behavioral processes, management, military ethics, communications, and group dynamics. Examines case studies and scenarios.
Prerequisite(s): AS 2116
Corequisite(s): AS 2944
Instructional Contact Hours: (3 Lec, 3 Crd)

AS 4215 - National Security Forces in Contemporary American Society (3 credits)
Examines the formulation, organization, and implementation of national security; evolution of strategy; management of conflict; and civil-military interaction. Military profession, officership, and the military justice system. Air Force communication skills.
Prerequisite(s): AS 3216
Corequisite(s): AS 2944
Instructional Contact Hours: (3 Lec, 3 Crd)

AS 4216 - National Security Forces in Contemporary American Society (3 credits)
Examines the formulation, organization, and implementation of national security; evolution of strategy; management of conflict; and civil-military interaction. Military profession, officership, and the military justice system. Air Force communications skills.
Prerequisite(s): AS 3216
Corequisite(s): AS 2944
Instructional Contact Hours: (3 Lec, 3 Crd)

AS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

AS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Mining and Minerals Engineerin (MINE)

MINE 1024 - Leadership and Service in the Mineral Industries (1 credit)
Leadership and service principles. Awareness of self and others through personality typing. Strategic planning. Importance of energy and mineral industries to developed and developing countries as well as associated consequences. Mineral extraction and purification processes and calculations. Conflict resolution. Challenges and opportunities available in the energy and mineral industries. May include guest speakers and field trips.
Instructional Contact Hours: (1 Lec, 1 Crd)

MINE 1034 - Automation and Data Analytics in the Mineral Industries (1 credit)
Discovering challenges and opportunities available in autonomous vehicles, systems, and data analytics associated with the energy and mineral industries. Fundamentals of robotics and data analytics; hands on projects with autonomous kits and drones; analysis of industry data, including production studies; introduction to presentation of complex data in a simplified manner; introduction to simulations and digital twins.
Instructional Contact Hours: (1 Lec, 1 Crd)

MINE 1044 - Space Mining (1 credit)
Explore challenges and opportunities in off-earth mining. Resources currently identified on earth and critical uses; astroidal, lunar, and martian resources; operating conditions in space; environmental, social, and governance issues; economic drivers; in situ resource utilization.
Instructional Contact Hours: (1 Lec, 1 Crd)

MINE 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 2114 - Energy and Raw Materials: Geopolitics and Sustainable Development (3 credits)
Supply and demand of energy resources and raw materials. Domestic and global trends. Development of energy and mineral resources. Electricity generation, efficiency, and distribution. Energy and raw materials infrastructure Disparities in resource-producing vs. resource-consuming regions. Environmental considerations and engineering management. Land use and reclamation. Greenhouse gas management. Policy, regulations, and incentives. Geopolitical considerations. Conservation and efficiency. Sustainable development. This course is available to undergraduate students of all ranks and all majors.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 2504 - Introduction to Mining Engineering (3 credits)
Introduction to the complete field of mining and minerals engineering, including phases of mine development, discreet mining methods and mineral processing operations. Consideration in unconventional oil and gas development. Emphasis on basic engineering problem solving skills, and considerations for worker health and safety, economics, and environmental and social issues.
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 2524 - Elements of Mine Design (3 credits)
Basic concepts used in the modeling and design of mining systems including basic statistical concepts, sampling, geological and geostatistical modeling of ore bodies, ore reserve estimation, and selection of basic mine development methods.
Prerequisite(s): MINE 2504 and GEOS 1004
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MINE 2534 - Mine Surveying and Mapping (3 credits)
Specialized principles of field surveying and mapping as applied to the delineation of mineral deposits and the design and monitoring of surface and underground mining operations. Introduction to modern surveying instruments, field techniques, and computational procedures. Basic digital mine mapping to include standard mine symbols and representation of surface and underground mine workings. Partially duplicates ENGE 2824.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MINE 2544 - Leadership for Responsible Mining (2 credits)
Principles of leadership for the global resource industries including identification of project impacts and risks, stakeholder analysis and conflict management. Emphasis on engineering ethics and effective communications. Sustainable development of mineral and energy resources, with focus on emerging technical, economic, environmental and social issues in the US and abroad.
Prerequisite(s): ENGL 1106
Corequisite(s): MINE 2504
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 2 Crd)

MINE 2564 - Resource Exploration and Design (3 credits)
Basic methods and concepts in exploration and modeling of ore bodies. Resource exploration planning. Exploration technologies for potential mine sites. Design of mining systems. Computational modeling of ore bodies and mine systems. Environmental, regulatory, ethical, and social considerations in mine system design.
Prerequisite(s): GEOS 1004
Corequisite(s): MINE 2504
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MINE 2714 - Introduction to Petroleum and Natural Gas Engineering (3 credits)
Introduction to basics of petroleum and natural gas engineering. Concepts of conventional and unconventional fossil fuel energy; basics of rock mechanics and reservoir fluid properties. Concepts of drilling and completion engineering. Concepts of hydraulic fracturing; basic knowledge of formation evaluation and various rock types. Basics of geophysical monitoring methods; basics of different oil and gas reservoirs; basics of production engineering and fundamentals of recovery mechanisms, discussion of petroleum and natural gas social and policy issues.
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 3544 - Mineral Processing Laboratory (1 credit)
Laboratory investigations of the unit operations and principles of mineral processing including ore preparation (size reduction, mineral liberation, and classification) and mineral recovery (froth flotation, electrostatic separation, magnetic separation, and solid-liquid separation).
Prerequisite(s): MINE 3534
Corequisite(s): MINE 3554
Instructional Contact Hours: (3 Lab, 1 Crd)

MINE 3564 - Underground Mine Design (3 credits)
Design fundamentals of mining systems and stope development for tabular and massive underground mineral deposits. Equipment selection and application, permitting, cost analysis and production simulation.
Prerequisite(s): MINE 2564 and MINE 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3574 - Surface Mine and Quarry Design (3 credits)
Surface mining methods, and their selection; mine planning and design; excavation, haulage and ancillary systems; equipment selection and maintenance; impoundment and piles design; mine closure/reclamation.
Prerequisite(s): MINE 2564 and MINE 3674
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3584 - Ventilation Engineering (3 credits)
Subsurface ventilation systems. Ventilation planning and design, laws of airflow, airway resistance. Ventilation surveys, network analysis, ventilation economics. Ventilation software. Fan types, impeller theory, fan laws and testing. Mine ventilation thermodynamics.
Prerequisite(s): MINE 2504
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MINE 3604 - Mining Geomechanics (3 credits)
Properties and behavior of geologic materials and masses and their classifications and ratings. Design principles of structures founded on and in rocks and basic aspects of ground control in mining. Laboratory techniques used in the determination of geologic materials properties and behavior. Determination of rock index properties, strengths, failure criterion and mechanical behavior.
Prerequisite(s): MINE 2504 and GEOS 1004 and ESM 2204
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MINE 3624 - Mineral Resource Project Management (3 credits)
Applied and theoretical concepts in the valuation and management of mining and energy extraction projects. Project engineering, resource management, scheduling, and tracking. Estimation of capital costs, operating costs, and revenues for underground and surface mines, mineral beneficiation plants, and oil and gas ventures. Commodity sales contracts and price projections. Cash flow analysis, revenue-generating and service producing alternative selection, taxes/deductions. Quantitative risk analysis including stochastic simulation. Environmental, ethical, and legal considerations in project management.
Prerequisite(s): MINE 2504 and MINE 2564
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3634 - Fundamentals of Mineral Processing (3 credits)
Principles of mineral processing with an emphasis on metallurgical data evaluation, unit operations, and flowsheet configurations. Metallurgical accounting, slurry calculations, grade-recovery relationships, chemical aspects of mineral processing, and particle size analysis. Unit operations including rushing, grinding, size separation, gravity separation, magnetic and electrostatic separation, froth dewatering. Laboratory investigations of the unit operations and principles of mineral processing.
Prerequisite(s): MINE 2504 and GEOS 1004 and CHEM 1035
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

MINE 3644 - Applications in Mineral Processing (2 credits)
Applied concepts in the design and operation of mineral processing plants. Flowsheet engineering, unit selection, unit sizing, water/mass flow balancing, simulation, process control, and cost estimation. Environmental, economic, and legal considerations in process plant design.
Prerequisite(s): MINE 3634
Instructional Contact Hours: (2 Lec, 2 Crd)

MINE 3664 - Fluids and Thermodynamics for Resources (3 credits)
Fluid properties and hydrostatics. Derivation and application of the continuity, momentum, and energy equation (Bernoulli's equation) for ideal and real fluid flow (laminar or turbulent). Properties of pure substances: property tables, property software, equations of state. First law of thermodynamics. Second law of thermodynamics. Gas mixtures. Applications in the resource extraction industries.
Prerequisite(s): ESM 2304 and MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3674 - Explosives and Rock Fragmentation (3 credits)
Rock fragmentation for excavation; drilling fragmentation, rock drilling systems; blasting fragmentation, types and properties of commercial explosives and accessories, system of initiation, design of blasting rounds, applications in mining and construction, structural damage criteria, overbreak control, safe practice and regulations; fragmentation by excavation machines; excavation system selection and design.
Prerequisite(s): MINE 2504 and GEOS 1004 and ESM 2204
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3714 - Petroleum and Natural Gas Reservoir Engineering (3 credits)
Introduction to oil and gas reservoirs; basics of reservoir rock and fluid properties; fundamentals of different petroleum reservoirs; determination of oil and gas in place; material balance equation; prediction of transient pressure distribution; prediction of saturation distribution; basics of recovery mechanisms; single and multiphase flows in petroleum reservoirs; and prediction of recovery factor and production rate.
Prerequisite(s): MINE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3724 - Formation Evaluation and Engineering (3 credits)
Well log measurements and interpretation; standard logging suites used in industry; core sampling methods and laboratory analysis; relationship of well data to seismic and other geophysical data; relationship of well-derived reservoir properties to reservoir estimation calculations, well completions strategies, and development strategies.
Prerequisite(s): MINE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 4504 - Materials Handling and Power Systems (3 credits)
Principles of materials handling, fluid power and electrical power systems for surface and underground mining operations. Engineering analysis and design of secondary haulage operations (belt conveyors, hoists, trucks, railways), fluid power systems (hydraulics, pumps, piping networks, compressors, pneumatic equipment). Electrical systems (electrical machinery, distribution networks, controls), and other ancillary systems required to support mining operations. Assessment of equipment reliability and development of preventive maintenance programs.
Prerequisite(s): ESM 3024
Corequisite(s): ECE 3054
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 4614 - Health and Safety Systems (3 credits)
Investigation of health and safety management systems. Study of mine legislation; data analysis of accidents; hazard identification; risk management; training programs; emergency response plans.
Prerequisite(s): MINE 3564 or MINE 3574
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 4624 - Mine and Water Reservoir Engineering (3 credits)
Essential topics related to water in resource extraction projects, including surface and ground water hydrology, chemistry and treatment of mine-influenced waters and waters from unconventional oil and gas production, and mine dewatering. Emphasis on basic design calculations and modeling.
Prerequisite(s): MINE 3664 and (MINE 3564 or MINE 3574)
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 4635 - Mining Engineering Capstone (2 credits)
4635: Serves as the capstone design course sequence for Mining and Minerals Engineering. Undertake a comprehensive design project and feasibility study that integrates courses taken throughout their curriculum, in consideration of public and occupational health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors and constraints. Includes exploration of professional and ethical obligations of engineers and impacts of projects on communities, project management, communication, and working in teams. 4636: Serves as the capstone design course sequence for Mining and Minerals Engineering. Undertake a comprehensive design project and feasibility study that integrates courses taken throughout their curriculum, in consideration of public and occupational health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors and constraints. Includes exploration of professional and ethical obligations of engineers and impacts of projects on communities, project management, communication, and working in teams. Culminates in the preparation of a technical report that describes the commercial development, extraction and closure of a mineral deposit under global reporting standards, and provides detailed operational layouts, production calculations, and engineering cost analyses.
Prerequisite(s): MINE 2544 and (MINE 3564 or MINE 3574) and MINE 3624
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 2 Crd)

MINE 4636 - Mining Engineering Capstone (2 credits)
4635: Serves as the capstone design course sequence for Mining and Minerals Engineering. Undertake a comprehensive design project and feasibility study that integrates courses taken throughout their curriculum, in consideration of public and occupational health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors and constraints. Includes exploration of professional and ethical obligations of engineers and impacts of projects on communities, project management, communication, and working in teams. 4636: Serves as the capstone design course sequence for Mining and Minerals Engineering. Undertake a comprehensive design project and feasibility study that integrates courses taken throughout their curriculum, in consideration of public and occupational health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors and constraints. Includes exploration of professional and ethical obligations of engineers and impacts of projects on communities, project management, communication, and working in teams. Culminates in the preparation of a technical report that describes the commercial development, extraction and closure of a mineral deposit under global reporting standards, and provides detailed operational layouts, production calculations, and engineering cost analyses.
Prerequisite(s): MINE 4635
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 2 Crd)

MINE 4644 - Environmental Management for Mining and Geoenergy (2 credits)
Environmental impacts of mines and geoenergy resource development projects, including water, land and air pollution. Statutory and regulatory environmental requirements, with an emphasis on permitting, monitoring and compliance. Best practices for environmental management systems.
Prerequisite(s): MINE 3564 or MINE 3574
Instructional Contact Hours: (2 Lec, 2 Crd)

MINE 4654 - Mine Power Systems and Automation (3 credits)
Fundamentals of electrical theory. Circuit elements, calculations and network analysis. Components and design of mine power systems. Motors, cables, load flow analyses, transmission and distribution. Electrical safety. U.S. mine-specific regulation, intrinsic safety and permissibility. Applications in mine systems automation via programmable logic control. Basic ladder logic routines.
Prerequisite(s): MATH 2214
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 4664 - Resource Engineering Leadership Seminar (1 credit)
Invited speakers and subject experts, assigned readings, facilitated activities and discussions, personality and values assessment, learning taxonomy and learning styles, diversity in the workplace, implications of personal differences for workplace and leadership dynamics, strategies and best practices for effective leadership, oral and written communication for diverse audiences. Pre: Senior Standing.
Instructional Contact Hours: (1 Lec, 1 Crd)

MINE 4714 - Well Drilling and Completion Engineering (3 credits)
Introduction to drilling and completion design; functions of drilling fluids; wellbore hydraulics and drilling bits; principles of well control; casing design; design of cementing jobs; directional drilling in conventional and unconventional formations, completions.
Prerequisite(s): MINE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 4724 - Petroleum and Natural Gas Production Engineering (3 credits)
Extraction of reservoir fluids; oil and gas thermodynamic properties; phase behavior of petroleum fluids; analysis of surface production facilities; fluid separation; processing of reservoirs fluids; fluid disposal in an environmentally acceptable manner; surface transportation systems; separator design; design of artificial lift systems.
Prerequisite(s): MINE 2714
Instructional Contact Hours: (3 Lec, 3 Crd)

MINE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MINE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Music (MUS)

MUS 1004 - School of Performing Arts First Year Experience (1 credit)
Orientation to the School of Performing Arts philosophy and the resources of the School, the College, and the University. Cultivate a common intellectual, analytical, and creative conversation among first-year students. Enhance student participation in the creative and scholarly life of the Schools programs. Foster a sense of community and understanding across disciplines.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: TA 1004

MUS 1005 - Theory Fundamentals (3 credits)
Fundamental elements of music theory. 1005: Introduction to elements of music theory. Musical notation, scales of various global traditions, foundations of tonality; intervals, triads, dominant seventh chords, rhythm, meter, cadences, harmonic analysis. Composition with species counterpoint and the twelve-bar blues progression. Aural recognition of musical sounds through ear training. 1006: More complex harmonic and rhythmic processes. Increase complexity of intervals, chords, rhythms, progressions and score reading. Introduce transposition and vocabulary for timbre and textural discussion. Aural recognition of more advanced musical sounds through ear training. Fluency in terms and conventions for western art music, rock, hip-hop. Composition of original music.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 1006 - Theory Fundamentals (3 credits)
Fundamental elements of music theory. 1005: Introduction to elements of music theory. Musical notation, scales of various global traditions, foundations of tonality; intervals, triads, dominant seventh chords, rhythm, meter, cadences, harmonic analysis. Composition with species counterpoint and the twelve-bar blues progression. Aural recognition of musical sounds through ear training. 1006: More complex harmonic and rhythmic processes. Increase complexity of intervals, chords, rhythms, progressions and score reading. Introduce transposition and vocabulary for timbre and textural discussion. Aural recognition of more advanced musical sounds through ear training. Fluency in terms and conventions for western art music, rock, hip-hop. Composition of original music.
Prerequisite(s): MUS 1005
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 1104 - Music Appreciation (3 credits)
Survey of the art of music encompassing a variety of music styles and historical eras in both the western and non- western world. Students will develop strategies to contextualize music, via listening, from the perspective of the listener, composer, and performer.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 1114 - Listening in the Digital Age (3 credits)
An introduction to musical access and listening in the digital age. Introduces basic elements of music and the creative process together with important musicians and their works. Explores historical, social, and cultural forces and trends that influence the creation and interpretation of various musical styles, including classical, blues, jazz, popular, and world music.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 1124 - Living a Musical Life (3 credits)
Embrace a wide variety of music and ways to make music. Learn about the health benefits of lifelong music-making. Units include regional, national, and international traditions in historical, political, and cultural contexts. No prior musical training required.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 1134 - Music of the Americas (3 credits)
Musical traditions in the American continent, with a specific focus on Latin-American and Latinx musics. Introduction to music from different traditions across nations and social-historical contexts. Critical engagement with broad social concepts from cultural, political, and historical perspectives. Development of listening and writing skills.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 2025 - European-American Music Theory (3 credits)
Fundamental elements of music and conventions of genre and style in a global context. 2025: pitch & harmony, rhythm & meter, timbre, texture, and movement. Emphasis on rote learning of pitch notation, intervals, key signatures, chords vs non-chord tones, and pitch collections. Methods to analyze harmony, phrase structure, and meter. Develop vocabulary for timbre and texture. Basic skills of score reading and transposition. 2026: form, as well as more complex harmonic and rhythmic processes, such as harmonic rhythm, syntax and metric dissonance. Increase complexity of score reading to include larger ensembles. In-depth study of genre, considering elements of harmony, rhythm & meter, and form in European and North-American classical, jazz, and popular musics.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 2026 - European-American Music Theory (3 credits)
Fundamental elements of music and conventions of genre and style in a global context. 2025: pitch & harmony, rhythm & meter, timbre, texture, and movement. Emphasis on rote learning of pitch notation, intervals, key signatures, chords vs non-chord tones, and pitch collections. Methods to analyze harmony, phrase structure, and meter. Develop vocabulary for timbre and texture. Basic skills of score reading and transposition. 2026: form, as well as more complex harmonic and rhythmic processes, such as harmonic rhythm, syntax and metric dissonance. Increase complexity of score reading to include larger ensembles. In-depth study of genre, considering elements of harmony, rhythm & meter, and form in European and North-American classical, jazz, and popular musics.
Prerequisite(s): MUS 2025
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 2045 - Sightsinging Laboratory (1 credit)
Study and practice of techniques involved in the sight reading and sightsinging of printed music. Majors and minors only.
Corequisite(s): MUS 2025
Instructional Contact Hours: (3 Lab, 1 Crd)

MUS 2046 - Sightsinging Laboratory (1 credit)
Study and practice of techniques involved in the sight reading and sightsinging of printed music. Majors and minors only.
Prerequisite(s): MUS 2045
Corequisite(s): MUS 2026
Instructional Contact Hours: (3 Lab, 1 Crd)

MUS 2054 - Introduction to Music Technology (2 credits)
History, theory, and applications of music technology. Techniques for notating music and for recording and editing audio, using computer software and digital audio equipment. Consent Required. Design lab.
Instructional Contact Hours: (3 Lab, 2 Crd)

MUS 2055 - Audio Technology For Music (3 credits)
Develops basic understanding of audio technology for musical applications, focusing on todays digital audio recording and editing technologies including microphone use, live recording, and studio session recording. Develops critical listening skills through lab experimentation and recording. Pre: 2054 and permission of instructor required.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 2056 - Audio Technology For Music (3 credits)
Develops basic understanding of audio technology for musical applications, focusing on todays digital audio recording and editing technologies including microphone use, live recording, and studio session recording. Develops critical listening skills through lab experimentation and recording. Pre: 2054 and permission of instructor required.
Prerequisite(s): MUS 2055
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 2065 - Music Composition (2 credits)
Organizing the basic elements of music: pitch, rhythm, timbre, articulation, and dynamics. Composing pieces for solo instruments and duos. Preparing scores and parts, for performances and recordings of the compositions. Knowledge of basic music theory required. Consent Required.
Instructional Contact Hours: (2 Lec, 2 Crd)

MUS 2066 - Music Composition (2 credits)
Composing for specific instruments and combinations of instruments. Exploring traditional and extended technique. Organizing the structure of a piece based on recurrence, development, variation, priority, and perspective of musical material, for trio adn quartet or a larger ensemble. A grade of C or better in prerequisite.
Prerequisite(s): MUS 2065
Instructional Contact Hours: (2 Lec, 2 Crd)

MUS 2115 - Survey of Western Music (3 credits)
Survey and study of the historical evolution of Western art music. MUS 2115: classical music from Antiquity into the Classical era. MUS 2116: classical and other music from the Romantic era through the 20th century to music of today. Investigation of the materials of music. Exploration of music as it both reflects and impacts history, including historical considerations of gender, race, culture, and other extramusical factors. Relevance of historical and contemporary music to our society today.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 2116 - Survey of Western Music (3 credits)
Survey and study of the historical evolution of Western art music. MUS 2115: classical music from Antiquity into the Classical era. MUS 2116: classical and other music from the Romantic era through the 20th century to music of today. Investigation of the materials of music. Exploration of music as it both reflects and impacts history, including historical considerations of gender, race, culture, and other extramusical factors. Relevance of historical and contemporary music to our society today.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 2124 - Music Traditions in Appalachia (3 credits)
Survey and study of music traditions in Appalachia. Investigation of the formal elements of this music, including instruments and musical terms and forms. Exploration of style as a reflection of many cultural influences. Study of the impact and development of these traditions in contemporary musical practices.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 2124

MUS 2134 - Disability Culture & the Arts (3 credits)
Disability as an identity, community, and culture through a study of music and the arts. Overview of the disability rights and disability justice movements in the United States, as told through music, film, literature, and performance art. Analyze creative works, confront obstacles to inclusion, and discover disability cultural values. No previous musical training required.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 2214 - Class Applied Piano (1 credit)
Group piano lessons for beginners or for students at an early stage of keyboard development. May be repeated for 1 credit. Consent required.
Instructional Contact Hours: (3 Lab, 1 Crd)
Repeatability: up to 2 credit hours

MUS 2224 - Class Applied Voice (1 credit)
Group voice lessons for beginners or for students at an early stage of vocal development. May be repeated for 1 credit. Consent required.
Instructional Contact Hours: (3 Lab, 1 Crd)
Repeatability: up to 2 credit hours

MUS 2234 - Class Applied Strings (1 credit)
Group string lessons for beginners or for students at an early stage of string development. May be repeated for 1 credit. Consent required.
Instructional Contact Hours: (3 Lab, 1 Crd)
Repeatability: up to 2 credit hours

MUS 2244 - Class Applied Woodwinds (1 credit)
Group woodwind lessons for beginners or for students at an early stage of woodwind development. May be repeated for 1 credit. Consent required.
Instructional Contact Hours: (3 Lab, 1 Crd)
Repeatability: up to 2 credit hours

MUS 2254 - Class Applied Brass (1 credit)
Group brass lessons for beginners or for students at an early stage of brass development. May be repeated for 1 credit. Consent required.
Instructional Contact Hours: (3 Lab, 1 Crd)
Repeatability: up to 2 credit hours

MUS 2264 - Class Applied Percussion (1 credit)
Group percussion lessons for beginners or for students at an early stage of development. May be repeated for 1 credit. Consent required.
Instructional Contact Hours: (3 Lab, 1 Crd)
Repeatability: up to 2 credit hours

MUS 2274 - Music Education Lab Ensemble (1 credit)
Music education laboratory ensemble. Performance techniques, teaching methods, management procedures, materials and literature for school music ensembles. May be repeated for credit.
Instructional Contact Hours: (1 Lab, 1 Crd)

MUS 2284 - Piano Accompanying (2 credits)
Examine and practice the skills necessary for successful piano accompanying. Develop keyboard skills such as sightreading, transposition, choral score reading, and harmonization. Learn principles of accompanying vocal repertoire, instrumental repertoire, including large ensemble repertoire; adapt orchestral reductions for piano. Instructor consent required.
Instructional Contact Hours: (2 Lec, 2 Crd)

MUS 2314 - Woodwind Techniques I - Flute, Clarinet, Saxophone (1 credit)
Instruction in basic performing skills and practices for woodwind instruments (flute, clarinets, saxophone). Study of pedagogy for woodwind instruction in K-12 music education settings. Survey of repertoire, resources, and materials for use in woodwind instruction.
Instructional Contact Hours: (3 Lab, 1 Crd)

MUS 2324 - Woodwind Techniques II - Oboe and Bassoon (1 credit)
Instruction in basic performing skills and practices for woodwind instruments (oboe, bassoon). Study of pedagogy for woodwind instruction in K-12 music education settings. Survey of repertoire, resources, and materials for use in woodwind instruction.
Instructional Contact Hours: (3 Lab, 1 Crd)

MUS 2334 - High Brass Techniques (1 credit)
Instruction in basic performing skills and practices for high brass instruments (trumpet and horn). Study of pedagogy for teaching brass in K-12 music education settings. Survey of repertoire, resources, and materials for use in brass instruction.
Instructional Contact Hours: (3 Lab, 1 Crd)

MUS 2344 - Low Brass Techniques (1 credit)
Instruction in basic performing skills and practices for low brass instruments (trombone, euphonium, and tuba). Study of pedagogy for teaching brass in K-12 music education settings. Survey of repertoire, resources, and materials for use in brass instruction.
Instructional Contact Hours: (3 Lab, 1 Crd)

MUS 2364 - Introduction to Music Education (2 credits)
Principles and practices fundamental to music learning and teaching. Philosophical bases for teaching music. Major educational learning theories (e.g., behaviorism, cognitivism, social constructivism, multiple intelligences, spiral learning theory, Bloom's taxonomy, etc.). Pedagogical approaches, culturally responsive teaching, and technology integration in the music classroom. Field observation for real world public-school music instruction.
Instructional Contact Hours: (2 Lec, 2 Crd)

MUS 2514 - Individual Applied Voice (1-3 credits)
Individual instruction in voice. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2515 - Vocal Diction (1 credit)
An introduction to principles of vocal diction for singing using the International Phonetic Alphabet and standard foreign-language pronunciation techniques.
Instructional Contact Hours: (1 Lab, 1 Crd)

MUS 2516 - Vocal Diction (1 credit)
An introduction to principles of vocal diction for singing using the International Phonetic Alphabet and standard foreign-language pronunciation techniques.
Instructional Contact Hours: (1 Lab, 1 Crd)

MUS 2524 - Individual Applied Keyboard (1-3 credits)
Individual instruction in keyboard. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2534 - Individual Applied Violin (1-3 credits)
Individual instruction in violin. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2544 - Individual Applied Viola (1-3 credits)
Individual instruction in viola. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2554 - Individual Applied Cello (1-3 credits)
Individual instruction in cello. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2564 - Individual Applied Bass (1-3 credits)
Individual instruction in bass. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2574 - Individual Applied Flute (1-3 credits)
Individual instruction in flute. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2584 - Individual Applied Oboe (1-3 credits)
Individual instruction in oboe. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2594 - Individual Applied Clarinet (1-3 credits)
Individual instruction in clarinet. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2604 - Introduction to Arts Marketing (3 credits)
An introduction to the theories and practice of marketing and building community engagement as applied to arts activities and professional not-for-profit arts organizations, through a survey of standard marketing approaches, examination of current practices in the field, and direct hands-on experience.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: TA 2604

MUS 2614 - Individual Applied Saxophone (1-3 credits)
Individual instruction in saxophone. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2624 - Individual Applied Bassoon (1-3 credits)
Individual instruction in bassoon. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2634 - Individual Applied Horn (1-3 credits)
Individual instruction in horn. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2644 - Individual Applied Trumpet (1-3 credits)
Individual instruction in trumpet. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2654 - Individual Applied Trombone (1-3 credits)
Individual instruction in trombone. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)

MUS 2664 - Individual Applied Baritone (1-3 credits)
Individual instruction in baritone. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2674 - Individual Applied Tuba (1-3 credits)
Individual instruction in tuba. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2684 - Individual Applied Percussion (1-3 credits)
Individual instruction in percussion. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2734 - Individual Applied Composition (1-3 credits)
Individual instruction in composition. May be repeated. Consent and audition required.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 2754 - Individual Applied Recording (1-3 credits)
Individual instruction through directed experiential learning of music recording and production. Integration of critical listening, acoustics, audio recording, and signal processing with music theory and performance. An emphasis on hands-on exploratory research in the use of instruments, acoustics, and microphone techniques combined with traditional methods and emerging technologies to capture and produce recordings of musical performances and works in a natural and effective manner. Permission required. May be repeated for a maximum of 8 hours.
Prerequisite(s): MUS 2055
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 8 credit hours

MUS 2815 - Jazz Improvisation (2 credits)
Fundamental principles of jazz improvisation. Topics include interval relationships, chord identification, modes and modality, blues and ii-V-I chord progressions. Pre: Permission of instructor required.
Instructional Contact Hours: (2 Lec, 2 Crd)

MUS 2816 - Jazz Improvisation (2 credits)
Fundamental principles of jazz improvisation. Topics include interval relationships, chord identification, modes and modality, blues and ii-V-I chord progressions. Pre: Permission of instructor required.
Instructional Contact Hours: (2 Lec, 2 Crd)

MUS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MUS 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MUS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MUS 3024 - Counterpoint (3 credits)
Study of the development and aesthetics of contrapuntal techniques throughout the common practice period.
Prerequisite(s): MUS 3026
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3025 - European-American Music Analysis (3 credits)
Extended compositional techniques in late-nineteenth and twentieth-century music, and analysis of larger works. 3025: chromatic harmony, twentieth-century techniques of pitch organization (e.g., set theory), grouping and displacement dissonance, large-scale musical forms. Analysis complemented by model composition and performance to demonstrate mastery of theoretical concepts and stylistic competency. 3026: synthesis of analytical techniques while navigating musical ambiguity in complete works of various sizes (miniatures to multi-part). Analytical observations connected to expressive or narrative meaning in musics from various styles and genres. Refine ability to write about music through research project.
Prerequisite(s): MUS 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3026 - European-American Music Analysis (3 credits)
Extended compositional techniques in late-nineteenth and twentieth-century music, and analysis of larger works. 3025: chromatic harmony, twentieth-century techniques of pitch organization (e.g., set theory), grouping and displacement dissonance, large-scale musical forms. Analysis complemented by model composition and performance to demonstrate mastery of theoretical concepts and stylistic competency. 3026: synthesis of analytical techniques while navigating musical ambiguity in complete works of various sizes (miniatures to multi-part). Analytical observations connected to expressive or narrative meaning in musics from various styles and genres. Refine ability to write about music through research project.
Prerequisite(s): MUS 3025
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3034 - Form and Analysis in the Common-practice Period (3 credits)
Domains of rhythm and meter, harmony, and cadence as related to musical form. Score-based and aural analysis of formal functions of common theme-types and large-scale forms in selected works from the mid-eighteenth through nineteenth centuries using William Caplin's theory. Identification of deviations from stylistic norms. Analysis complemented by model composition to demonstrate mastery of theoretical concepts and stylistic competency.
Prerequisite(s): MUS 3026
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3035 - Advanced Class Piano (1 credit)
Develop keyboard skills such as sightreading, harmonization, transposition, learn all scales/arpeggios and important keyboard progressions. A grade of C or better required in prerequisite.
Instructional Contact Hours: (3 Lab, 1 Crd)

MUS 3036 - Advanced Class Piano (1 credit)
Continued development of keyboard skills. Advanced transposition, harmonization, and sightreading, open score reading, and real-world application of skills acquired throughout keyboard study. A grade of C or better required in prerequisite.
Prerequisite(s): MUS 3035
Instructional Contact Hours: (3 Lab, 1 Crd)

MUS 3044 - Orchestration & Analysis (3 credits)
An introduction to the craft of scoring and arranging of music for full orchestra. Analysis of scores, small projects and a full orchestration project.
Prerequisite(s): MUS 3026
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3045 - Advanced Ear Training (1 credit)
3045: Hearing chromatic chord function in melodic and harmonic contexts. Sight-singing chromatic melodies and performing chromatic progressions. Aurally recognizing musical form (binary, ternary, strophic). Discovering markedness in common practice era music and recognizing commonalities with and differences from other music cultures A grade of C or better required in prerequisite. 3046: Hearing chord function in advanced chromatic melodic and harmonic contexts. Sight-singing advanced chromatic melodies and performing highly chromatic progressions. Aurally recognizing musical form (sonata, rondo, other forms). Hypothesizing about evolution of style and articulating intertextual experience. A grade of C or better required in prerequisite.
Prerequisite(s): MUS 2046 and MUS 2026
Instructional Contact Hours: (3 Lab, 1 Crd)

MUS 3046 - Advanced Ear Training (1 credit)
Prerequisite(s): MUS 3045
Instructional Contact Hours: (3 Lab, 1 Crd)

MUS 3054 - Introduction to Vocal/choral Arranging (3 credits)
Techniques of arranging music for vocal/choral ensembles. Emphasis on transcription from recordings to develop rhythmic, melodic, and harmonic dictation skills. Discussion, transcription, listening, small writing exercises, final project.
Prerequisite(s): MUS 3035 and MUS 3036
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3055 - Music and Media Production (3 credits)
Develops advanced knowledge of music production through practical application of music recording and production technologies, including advanced microphone techniques, critical listening, and critical artistic evaluation skills. Individual and group production projects. Hands-on experience with a variety of expressive media technologies including CD and DVD production in a collaborative, inter- disciplinary team approach.
Prerequisite(s): MUS 2056
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3056 - Music and Media Production (3 credits)
Develops advanced knowledge of music production through practical application of music recording and production technologies, including advanced microphone techniques, critical listening, and critical artistic evaluation skills. Individual and group production projects. Hands-on experience with a variety if expressive media technologies including CD and DVD production in a collaborative, interdisciplinary team approach.
Prerequisite(s): MUS 3055
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3064 - Digital Sound Manipulation (3 credits)
Cross-disciplinary study of recording technology and its effects on music. Aesthetics of electronic music. Recording and editing digital sound. Visual programming for live sound synthesis and processing. Acoustic compilers for programmatic sound processing and synthesis. Individual creative applications of tools learned in class. Team-based work on creative projects. Emphasis on intercultural and global use of creative music technologies.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3065 - Computer Music and Multimedia Design (3 credits)
A two-semester study of interactive multimedia composition and performance software as a foundation for creative work and research endeavors. Also provides an in-depth study of digital sound synthesis, algorithmic creation of multimedia content, and the design of audio-visual interactive systems using latest technologies. Must meet pre-requisite or have permission of the instructor
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3066 - Computer Music and Multimedia Design (3 credits)
A two-semester study of interactive multimedia composition and performance software as a foundation for creative work and research endeavors. Also provides an in-depth study of digital sound synthesis, algorithmic creation of multimedia content, and the design of audio-visual interactive systems using latest technologies. Must meet pre-requisite or have permission of the instructor
Prerequisite(s): MUS 3065
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3074 - Topics in Music Analysis (3 credits)
Contemporary methods of music analysis. Readings from landmark music theory texts and top music theory journals. Analysis of complementary music. Formulating unique research projects to demonstrate mastery of theoretical frameworks. May be repeated 2 times with different content for a maximum of 9 credit hours.
Prerequisite(s): MUS 3026
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

MUS 3114 - Symphonic Literature (3 credits)
Study of representative works of symphonic music from the eighteenth, nineteenth, and twentieth centuries, with corollary readings in the history of musical ideas. Consent required.
Prerequisite(s): MUS 3026 and MUS 3174
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3124 - 20th Century Music Literature (3 credits)
An introduction to music in Europe and America since 1945; supplementary study in the aesthetics of contemporary music. Consent required.
Prerequisite(s): MUS 3026 and MUS 3174
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3134 - Vocal Music Literature (3 credits)
Covers vocal music of Europe and America, especially music composed the eighteenth century. Examines differences in style and forms of choral and solo-vocal expression characteristic of the Baroque, Classic, Romantic, and Modern eras. Discusses issues of vocal performance practice. Ability to read music required.
Prerequisite(s): MUS 3026 and MUS 3174
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3144 - Early Music Literature (3 credits)
Covers vocal and instrumental music from the Middle Ages to the eighteenth century. Examines differences in style and forms of expression characteristic especially of Medieval, Renaissance, and early Baroque music. Discusses issues of performance practice. Ability to read music required.
Prerequisite(s): MUS 3026 and MUS 3174
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3154 - Piano Literature (3 credits)
Study of representative works of keyboard repertoire from the 17th century to the works of contemporary composers. Extensive stylistic analysis and discussion of performance practice. Pre: consent required.
Prerequisite(s): MUS 3026 and MUS 3174
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3164 - History of Electronic Music (3 credits)
Seminal electronic music works in historical context. Electronic music practices of the 20th and 21st centuries. The technologies of electronic music. Analysis of electronic music. Historical origins and trends in electronic music. Connections between experimental and popular electronic music forms.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3164H - History of Electronic Music (3 credits)
Seminal electronic music works in historical context. Electronic music practices of the 20th and 21st centuries. The technologies of electronic music. Analysis of electronic music. Historical origins and trends in electronic music. Connections between experimental and popular electronic music forms.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3174 - Music as Global Culture (3 credits)
Musical traditions from around the globe as both artistic production and cultural practice. Expose students to music from both non-Western and Western traditions. Connect cultural context to musical meaning. Critical engagement with different musics and their histories.
Prerequisite(s): MUS 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3184 - Histories of Music I: Music in the European and American Traditions (3 credits)
Examination of the development of different musical genres in Europe and the Americas from approximately 1600 to 1918. Consideration of historical and sociocultural context. Introduction of a diverse array of styles and genres. Critical engagement with social, cultural, and historical issues and their relation to music. Development of historical research skills, facility with writing about music, and practical applications.
Prerequisite(s): MUS 3174
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3194 - Histories of Music II: Music in the 20th and 21st Centuries (3 credits)
Musical traditions and developments in the twentieth and twenty-first centuries, with emphasis on music (voice, acoustic, and electronic) in the United States and increasing globalization. Introduction of students to music from both non-Western and Western traditions. Critical engagement with formalized and vernacular musics through sociopolitical concepts (race, gender, etc.). Research into music in the twenty-first century United States. Development of both historical and ethnographic research skills. Writing about music.
Prerequisite(s): MUS 3174
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3214 - Teaching Music in the Elementary School (3 credits)
Methods of teaching elementary school music. Emphasis on Kodaly, Orff, and traditional music textbook series approaches to teaching music in elementary schools. Pre: Instructor permission and successful completion of sophomore music continuation exam.
Corequisite(s): MUS 4964
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3225 - Conducting (3 credits)
An introduction to the practice and theory of ensemble conducting and leadership. 3225: Basic conducting skills, and choral conducting. 3226: Intermediate conducting skills, and instrumental conducting. Consent required.
Prerequisite(s): MUS 3026
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3226 - Conducting (3 credits)
An introduction to the practice and theory of ensemble conducting and leadership. 3225: Basic conducting skills, and choral conducting. 3226: Intermediate conducting skills, and instrumental conducting. Consent required.
Prerequisite(s): MUS 3225
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3234 - Piano Pedagogy (3 credits)
Examination of principles and practice of piano pedagogy. Covers teaching methods, materials and literature for the independent studio teacher. Pre: consent required.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3244 - Vocal Pedagogy (3 credits)
Exploration of historical and modern treatises. Implementation of technical methods to build vocal technique. Experimentation with biofeedback in pedagogical context. Practical application of pedagogical methods. Pre: Successful completion of continuation exam.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3314 - Instrumental Ensemble Music (1 credit)
Instruction and participation in instrumental music performance ensembles under direction of members of the music faculty. Attention to technical proficiency, stylistic elements, musical design and interpretation in the works to be performed. Addresses ethical obligations and practice in a music ensemble setting. May be repeated for a combined maximum of 8 hours. Consent and audition required.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)
Repeatability: up to 8 credit hours

MUS 3414 - Choral Ensemble Music (1 credit)
Instruction and participation in choral music performance ensembles under direction of members of the music faculty. Attention to technical proficiency, stylistic elements, musical design and interpretation in the works to be performed. Addresses ethical obligations and practice in a music ensemble setting. May be repeated for a combined maximum of 8 hours. Consent and audition required.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)
Repeatability: up to 8 credit hours

MUS 3814 - Jazz History (3 credits)
A survey and analysis of jazz music, including traditional jazz, big band, bebop, rhythm and blues, free jazz/avant garde, fusion, and hip-hop. Exploration of historical, social, and cultural forces and trends that influence the creation and interpretation of jazz music.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 3815 - Advanced Jazz Improvisation (2 credits)
Topics will include in-depth analysis of the great improvisers in multiple genres with a focus on developing professional-level skills.
Prerequisite(s): MUS 2816
Instructional Contact Hours: (2 Lec, 2 Crd)

MUS 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

MUS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MUS 4014 - Topics in Advanced Electroacoustic Research (3 credits)
Rotating advanced research topics in electroacoustic music. Sonification, spatialization, algorithmic music, electronic music instrument design, digital performance ensembles, and advanced computer music composition. Repeatable with different content up to a maximum of 12 credit hours.
Prerequisite(s): MUS 3066 and MUS 3164
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 12 credit hours

MUS 4014H - Topics Adv Electroacoustic Res (3 credits)
Rotating advanced research topics in electroacoustic music. Sonification, spatialization, algorithmic music, electronic music instrument design, digital performance ensembles, and advanced computer music composition. Repeatable with different content up to a maximum of 12 credit hours.
Prerequisite(s): MUS 3066 and MUS 3164
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 12 credit hours

MUS 4055 - Music Technology Senior Seminar (1 credit)
Weekly seminars in music technology with group discussion of progress in current student projects, the current state of artistic and business practices in the recording industry, and guest lecturers drawn from the professional world.
Prerequisite(s): MUS 3056
Instructional Contact Hours: (1 Lec, 1 Crd)

MUS 4056 - Music Technology Senior Seminar (1 credit)
Weekly seminars in music technology with group discussion of progress in current student projects, the current state of artistic and business practices in the recording industry, and guest lecturers drawn from the professional world.
Prerequisite(s): MUS 3056
Instructional Contact Hours: (1 Lec, 1 Crd)

MUS 4124 - Special Topics in Music History and Literature (3 credits)
Specific, in depth study of one of several topics in music history and or literature.
Prerequisite(s): MUS 3174
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 4174 - Topics in Musicology (3 credits)
Examine topics in historical musicology and their interdisciplinary resonance. Examination of primary sources, top musicology journals, and monographs as appropriate. Historical and technical analysis of music. Investigation of historical and sociocultural context of music. May be repeated 2 times with different content for a maximum of 9 credit hours.
Prerequisite(s): MUS 3174
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

MUS 4204 - Secondary General and Choral Music Education Methods (3 credits)
This course examines philosophical, planning, administrative, organizational, instructional methods, assessment of student learning and cultural performances necessary to manage and teach secondary general and choral music programs.
Prerequisite(s): MUS 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

MUS 4214 - Instrumental Methods: Elementary (2 credits)
Develop skills and practices to direct an elementary instrumental music program in a school setting. Learn practices, procedures, and strategies for leading rehearsals and lessons, developing curriculum, assessing student learning, and administering a school instrumental program.
Prerequisite(s): MUS 2364
Instructional Contact Hours: (2 Lec, 2 Crd)

MUS 4224 - Instrumental Methods: Secondary (2 credits)
Develop skills and practices to direct an instrumental music program in a middle or high school setting. Learn practices, procedures, and strategies for leading rehearsals and lessons, developing curriculum, assessing student learning, and administering a school instrumental music program.
Prerequisite(s): MUS 2364
Instructional Contact Hours: (2 Lec, 2 Crd)

MUS 4234 - Topics in Music Education (2 credits)
Study of specialized areas of pedagogy, instruction, administration, and classroom management in music education. Prepares students to lead specialized ensembles and courses in school music contexts. Course can only be taken one time for credit toward degree requirements.
Prerequisite(s): MUS 2364
Instructional Contact Hours: (2 Lec, 2 Crd)

MUS 4514 - Advanced Individual Applied Voice (1-3 credits)
Individual instruction in voice at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2514
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4524 - Advanced Individual Applied Keyboard (1-3 credits)
Individual instruction in keyboard at an advanced level. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2524
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4534 - Advanced Individual Applied Violin (1-3 credits)
Individual instruction in violin at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2534
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4544 - Advanced Individual Applied Viola (1-3 credits)
Individual instruction in viola at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2544
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4554 - Advanced Individual Applied Cello (1-3 credits)
Individual instruction in cello at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2554
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4564 - Advanced Individual Applied Bass (1-3 credits)
Individual instruction in bass at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2564
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4574 - Advanced Individual Applied Flute (1-3 credits)
Individual instruction in flute at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2574
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4584 - Advanced Individual Applied Oboe (1-3 credits)
Individual instruction in oboe at an advanced level. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2584
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4594 - Advanced Individual Applied Clarinet (1-3 credits)
Individual instruction in clarinet at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2594
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4614 - Advanced Individual Applied Saxophone (1-3 credits)
Individual instruction in saxophone at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2614
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)

MUS 4624 - Advanced Individual Applied Bassoon (1-3 credits)
Individual instruction in bassoon at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2624
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4634 - Advanced Individual Applied Horn (1-3 credits)
Individual instruction in horn at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2634
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4644 - Advanced Individual Applied Trumpet (1-3 credits)
Individual instruction in trumpet at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2644
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4654 - Advanced Individual Applied Trombone (1-3 credits)
Individual instruction in trombone at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2654
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4664 - Advanced Individual Applied Baritone (1-3 credits)
Individual instruction in baritone at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2664
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4674 - Advanced Individual Applied Tuba (1-3 credits)
Individual instruction in tuba at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2674
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4684 - Advanced Individual Applied Percussion (1-3 credits)
Individual instruction in percussion at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2684
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4734 - Advanced Individual Applied Composition (1-3 credits)
Individual instruction in composition at an advanced level. Majors only. May be repeated. Performance continuation exam required.
Prerequisite(s): MUS 2734
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)

MUS 4744 - Advanced Individual Applied Conducting (1-3 credits)
Individual instruction in conducting at an advanced level. May be repeated. Consent required.
Prerequisite(s): MUS 2744
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

MUS 4754 - Advanced Individual Applied Recording (1-3 credits)
Individual instruction through directed experiential learning in music recording and production at an advanced level. Integration of critical listening, acoustics, audio recording, signal processing, audio mixing, and audio mastering with music theory and performance. An emphasis in hands-on exploratory research in the use of instruments, acoustics, microphones, recording, and production techniques combined with traditional methods and emerging technologies to capture and produce recordings in an artistic manner suitable for use in a senior portfolio. Permission required. May be repeated for a maximum of 12 hours.
Prerequisite(s): MUS 2754
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 12 credit hours

MUS 4764 - Advanced Individual Applied Electroacoustics (1 credit)
Individual instruction and completion of a major project in electroacoustic composition, performance, or research, at an advanced level. Repeatable up to three times for a maximum of 3 credit hours.
Prerequisite(s): MUS 3064 and MUS 3066
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

MUS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MUS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MUS 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MUS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MUS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MUS 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Nanoscience (NANO)

NANO 1015 - Introduction to Nanoscience (3 credits)
Introduction to the interdisciplinary field of nanoscience with perspectives from biology, geoscience, computational science, chemistry, and physics. 1015: Historical perspectives; public perception; economic impact, nanoscience in biology and environment; quantum physics principles; characterization tools; mathematical modeling. 1016: Nanofabrication methods; nanoparticle synthesis and characterization; self-assembly; applications in medicine, electronics, and energy; sustainability. Pre: 1015 for 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 1016 - Introduction to Nanoscience (3 credits)
Introduction to the intersdisciplinary field of nanoscience with perspectives from biology, geoscience, computational sceince, chemistry, and physics. 1015: Historical perspectives; public perception; economic impact, nanoscience in biology and environment; quantum physics principles; characterization tools; mathematical modeling. 1016: Nanofabrication methods; nanoparticle synthesis and characterization; self-assembly; applications in medicine, electronics, and energy; sustainability. Pre: 1015 for 1016.
Prerequisite(s): NANO 1015
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 2024 - Quantum Physics of Nanostructures (4 credits)
Introduction to the quantum physics which governs the properties of matter at the nanoscale. Specific topics include: Quantization, wave-particle duality, and Schrodinger equation, with applications to the hydrogen atom, periodic crystals, and nanostructures; electron spin, spintronics, and quantum statistical physics.
Prerequisite(s): NANO 1016 and MATH 1226 and (PHYS 2306 or ISC 2105)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

NANO 2114 - Nanoscience Research Seminar (1 credit)
Readings and discussion of current research areas of nanoscience and nanotechnology including nanofabrication, scanning probe techniques, functional nanomaterials, molecular engineering, bionanotechnology and nanomedicine. Presentations by guest nanoscience faculty on their research activities.
Prerequisite(s): NANO 1016
Instructional Contact Hours: (1 Lec, 1 Crd)

NANO 2324 - Quantum Physics for Nanomedicine (3 credits)
Introduction to quantum physics with a focus on nanomedicine related topics. Principles of quantization, wave-particle duality, Pauli exclusion principle, and the Schrödinger equation, with applications to the hydrogen atom, regular crystals, and nanostructures. Implications for nanomedicine of quantum dots, surface plasmon resonance, nanoscale sensing, and targeted drug delivery using nanoparticles.
Prerequisite(s): NANO 1016 and (PHYS 2206 or PHYS 2306 or ISC 2105)
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 2814 - NanoCareers (1 credit)
Exploration of career opportunities in nanoscience and nanomedicine, including employment, graduate education, and health professions. Professional development activities, including resume assembly, career fairs, mentorship and networking, elevator pitch, entrepreneurship, and financial literacy. Pre: Sophomore standing.
Instructional Contact Hours: (1 Lec, 1 Crd)

NANO 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 3015 - Nanoscale Synthesis, Fabrication, and Characterization (4 credits)
Tools for synthesis, fabrication and characterization of nanomaterials and nanostructures including organic and polymer synthesis, self-assembly, and top-down fabrication as well as methods for identifying their structure and electronic, optical, and thermal properties. 3015: Multiphase macromolecules; electron and scanning probe microscopies; fullerenes, graphene, and nanotubes; optical and electron spectroscopies, thermal analysis; quantum dots and metallic nanoparticles. 3016: Nucleic acid self-assembly; polyelectrolyte complexes; dynamic light scattering and zeta potential; electrostatic self-assembly; self-assembled monolayers; photolithography; electron and ion beam lithography; microcontact printing and nanoimprint lithography.
Prerequisite(s): CHEM 2514 or CHEM 2535 or CHEM 2565
Corequisite(s): 2024 or 2324 or PHYS 3324.
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

NANO 3016 - Nanoscale Synthesis, Fabrication, and Characterization (4 credits)
Tools for synthesis, fabrication and characterization of nanomaterials and nanostructures including organic and polymer synthesis, self-assembly, and top-down fabrication as well as methods for identifying their structure and electronic, optical, and thermal properties. 3015: Multiphase macromolecules; electron and scanning probe microscopies; fullerenes, graphene, and nanotubes; optical and electron spectroscopies, thermal analysis; quantum dots and metallic nanoparticles. 3016: Nucleic acid self-assembly; polyelectrolyte complexes; dynamic light scattering and zeta potential; electrostatic self-assembly; self-assembled monolayers; photolithography; electron and ion beam lithography; microcontact printing and nanoimprint lithography.
Prerequisite(s): NANO 3015 and (CHEM 2514 or CHEM 2536 or CHEM 2566)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

NANO 3114 - Professional Dissemination of Nanoscience Research (1 credit)
Technical skills for dissemination of nanoscience research. Effective use of the nanoscience and nanotechnology literature, use of technologies that support collaborative oral and written communication. Key elements of effective journal publications and conference presentations.
Prerequisite(s): NANO 2114
Instructional Contact Hours: (1 Lec, 1 Crd)

NANO 3124 - Nanoscience and the Environment (3 credits)
Introduction to the connections between nanoscience, nanotechnology, and the environment. Overview of environmental science, why environmental issues are relevant to industry/business/research, naturally-occurring nanomaterials and their roles on Earth, and what is currently known about how manufactured and incidental nanomaterials interact with the atmosphere, hydrosphere, pedosphere, and biosphere.
Prerequisite(s): NANO 1016 and (BIOL 2124 or BIOL 2134 or NEUR 3044) and (CHEM 1036 or CHEM 1056 or ISC 2106H)
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 4124 - Advanced Nanomaterials and Devices (3 credits)
Overview of types of nanomaterials such as nanoparticles, quantum dots, fullerenes, carbon nanotubes, nanowires, graphene, and ultra-thin films. Special nanocomposite materials. Electronic, optical, magnetic, and transport properties of nanomaterials. Interactions between nanomaterials and substrates or interfaces. Applications of nanomaterials for electronics, magnetic storage, and energy-efficient devices.
Prerequisite(s): NANO 3016 and MATH 2214 and (NANO 2024 or PHYS 3324)
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 4314 - Nanomedicine (4 credits)
Medical use of nanomaterials including basic, translational, and clinical research. Nanomedical approaches to drug delivery. Diagnostic sensors. Use of nanomedical tools over conventional techniques to treat diseases/disorders. Technical issues associated with medical applications. Bioavailability of nanotherapies. Use of quantum dots for imaging. Ethical concerns and economic benefits associated with nanomedicine.
Prerequisite(s): NANO 3016 and (BIOL 2104 or BIOL 2124)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

NANO 4324 - Introduction to Nanomedicine (3 credits)
Overview of fundamental biocompatible technologies under development at the nanoscale level and their application in the biomedical field. Use of various forms and compositions of nanomaterials for potential applications in diagnosis, delivery, imaging, and treatment of human diseases. Focus on synthesis, characterization, and specific applications of nanomaterial as well as on nanotheranostics. Pharmacokinetic distribution of drug-embedded nanocarriers and their pharmacodynamics in biological systems. Nanoscale properties of materials for medical imaging. Classification of nanobiosensors used in clinical settings.
Prerequisite(s): NANO 3015 and (BIOL 2124 or BIOL 2134 or NEUR 3044)
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 4334 - Advanced Nanomedicine (3 credits)
Medical use of nanomaterials in translational medicine and clinical research. Nanomedical approaches to targeted delivery and local imaging. Diagnostic sensors. Use of nanomedical tools over conventional techniques to diagnose and treat human diseases/disorders. Bioavailability and biocompatibility of nanotherapeutics. Ethical concerns and economic benefits associated with developing and implementing nanomedical approaches in the clinic. Use of nanotechnological advances for surgical procedures. Use of nanoparticles composites for nanodentistry and in nanodermatology. Safety protocols for the use of nanotechnology in clinical treatment.
Prerequisite(s): NANO 4324
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 4354 - Advanced Nanomedicine Laboratory (1 credit)
Use of nanotechnology to study cellular and molecular processes relevant to human diseases. Manipulation of nucleic acids. Use of various nanoparticle materials to study nucleic acids uptake by cells. Use of fluorescence and confocal imaging to identify homotypic and heterotypic cellular interactions. Purification of cells from biological fluids. Concepts in dielectrophoresis and microfluidic devices. Students must be certified to work with blood-borne pathogens from the Environmental Health and Safety department.
Prerequisite(s): NANO 4324
Corequisite(s): NANO 4334
Instructional Contact Hours: (3 Lab, 1 Crd)

NANO 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Natural Resources (NR)

NR 1115 - Seeking Sustainability (3 credits)
1115: Strategies to promote sustainability through the identification, description, and analysis of the dominant interconnections within and between environmental, social, and economic systems across local to global scales. 1116: Perceptions of, conditions of, and strategies to analyze processes of change within complex systems, and promote sustainability across local to global scales.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 1115

NR 1116 - Seeking Sustainability (3 credits)
Prerequisite(s): NR 1115 or GEOG 1115
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 1116

NR 1234 - First Year Experience In Natural Resources and Environment (3 credits)
Introduction to problem solving related to natural resources and environmental issues. Developing a sense of identity and place within the college while acquiring skills and knowledge that enhance academic success. Exposure to programs on campus that support sustainability and student success. Introduction to a variety of career pathways within natural resources and environmental conservation.
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

NR 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NR 2234 - 1st Semester Experience-Transfer Students in Natural Resources and Environment (2 credits)
Problem solving related to natural resources and environmental issues, focusing on research, writing and oral presentation skills. Orientation to the college while acquiring skills and knowledge that enhance academic success, including university resources and professional/ personal ethics. Introduction to a variety of career pathways within natural resources and environmental conservation. Restricted to transfer students.
Instructional Contact Hours: (2 Lec, 2 Crd)

NR 2554 - Leadership for Global Sustainability (3 credits)
Leadership principles and humanities perspectives that help examine and engage global sustainable development challenges such as climate change, food-water-energy nexus, rising middle class, circular economy, and environmental justice. Topics include collaboration, stories, conflict resolution, self-awareness, bias, equity, religion, hubris, globalism, and moral naturalism. Examine trade-offs among economic, environmental, and social dimensions of sustainable development. Integration and application of disciplinary topics including ethics, ecology, evolution, anthropology, economics, religion, aesthetics, and risk management.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 2554, LAR 2554

NR 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NR 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NR 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

NR 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course
Repeatability: up to 12 credit hours

NR 4004 - Professional Skills in Natural Resources (1 credit)
Elements of professionalism and principles of success across a wide spectrum of natural resources careers. Skills for ethical and professional interaction including effective communication, advancement of diversity and inclusion, and personal responsibility. Career preparation principles including employer outreach, job seeking, resume writing, and interview preparation. Guest speakers from academia, industry, and government. Pre: Senior standing.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: FREC 4004

NR 4014 - Natural Resources Economics (3 credits)
Examination of domestic and international natural resource use, exploitation, and degradation problems, with special focus on use of economics to understand why potential overuse of natural resources exists, and what policy options are available to correct these problems and ensure sustainable natural resource use over time. Water, forests, fisheries, land and exhaustible resources. Permission of instructor may be substituted for the pre-requisite.
Prerequisite(s): ECON 2005 or AAEC 1005
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 4014

NR 4105 - Leadership in Natural Resources (3 credits)
Preparation for leadership roles in the natural resource professions. Introduction to theories of leadership; characteristics of effective leaders; leading and working in interdisciplinary teams. Techniques of meeting facilitation; written and oral communication skills in a leadership context. Effects of preferred modes of interacting with others, perceiving information, making decisions, and approaching tasks on the ability to lead and work with others. Consent of instructor.
Prerequisite(s): FIW 2114 or FOR 2314 or FREC 2314 or GEOG 3104 or SBIO 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

NR 4106 - Leadership in Natural Resources (3 credits)
Preferred styles for dealing with change and conflict; generational change in the workplace; approaches to negotiation and resolution of conflicts. Exploration of specific models of leadership. Application of leadership skills, conflict resolution, teambuilding and project development skills in student group projects. Consent of instructor.
Prerequisite(s): NR 4105
Instructional Contact Hours: (3 Lec, 3 Crd)

NR 4444 - Practicing Sustainability (3 credits)
Practicum in sustainability. Synthesize and integrate knowledge from undergraduate career and apply to real world problems of sustainability. Topics and projects selected from opportunities to examine specific local and regional sustainability issues on the VT campus, in the New River Valley and the Commonwealth at large. Pre: Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 4444

NR 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NR 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NR 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NR 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Neuroscience (NEUR)

NEUR 1004 - Neuroscience Orientation Seminar (2 credits)
Introduction to the field of neuroscience. Exposure to areas of practice and research, opportunities for education and training, and employment in the field. Academic and career planning for neuroscience majors. Discussion of university resources to promote student success.
Instructional Contact Hours: (2 Lec, 2 Crd)

NEUR 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 2014H - Honors Fundamentals of Neuroscience (3 credits)
Fundamental concepts in neuroscience including nervous system organization, signaling within neurons and across synapses, sensory and motor systems, emotion, memory, and language. Major neurological disorders and animal models used in neuroscience. Restricted to non-neuroscience majors in the Honors College.
Prerequisite(s): BIOL 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2025 - Introduction to Neuroscience (3 credits)
Introduction to the fundamental principles of neuroscience. 2025: Structure and function of the nervous system. Cellular and molecular basis of neuronal signaling including electrical properties of neurons, synaptic transmission, and integration. Neurotransmitter systems and molecular signaling. Neural development and synaptic plasticity. 2026: Systems-level overview of the central nervous system. Sensory systems including olfaction, temperature, and pain. Retinal control of vision. Vestibular system and hearing. Motor systems and control of movement. Circuits related to stress, learning and behavior.
Prerequisite(s): BIOL 1005 or BIOL 1105 or ISC 1106H
Corequisite(s): NEUR 2035
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2026 - Introduction to Neuroscience (3 credits)
Introduction to the fundamental principles of neuroscience. 2025: Structure and function of the nervous system. Cellular and molecular basis of neuronal signaling including electrical properties of neurons, synaptic transmission, and integration. Neurotransmitter systems and molecular signaling. Neural development and synaptic plasticity. 2026: Systems-level overview of the central nervous system. Sensory systems including olfaction, temperature, and pain. Retinal control of vision. Vestibular system and hearing. Motor systems and control of movement. Circuits related to stress, learning and behavior.
Prerequisite(s): NEUR 2025
Corequisite(s): NEUR 2036
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2035 - Neuroscience Laboratory (1 credit)
Organization and function of the nervous system. 2035: neuroanatomy, microscopy, intracellular stimulation, extracellular recording, electrophysiology, neurotransmitters, and neuroplasticity. 2036: receptive field, sensation and perception, motor system, simple neural circuitry, neuroendocrine and higher level cognitive processes.
Corequisite(s): NEUR 2025
Instructional Contact Hours: (3 Lab, 1 Crd)

NEUR 2036 - Neuroscience Laboratory (1 credit)
Organization and function of the nervous system. 2035: neuranatomy, microscopy, intercellular stimulation, extraceullular recording, nerve stimulation, electrophysiology, neurotransmitters, and neuroplasticity. 2036: receptive field, sensation and perception, motor system, simple neural circuitry, neuroendocrine and higher level cognitive processes.
Prerequisite(s): NEUR 2035
Corequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lab, 1 Crd)

NEUR 2364 - Mind Altering Substances from Nature (3 credits)
Neurobiological effects of psychoactive chemicals from nature. Neurotoxic effects and dangers of psychoactive plants and fungi. Therapeutic applications of mind-altering substances in neurological disease. Experimental uses of mind-altering chemicals in neuroscience research. Cultural history, legal standing, regulatory oversight, and contemporary use portrayals of mind-altering substances from nature in medicine and society. Neurobiological effects of psychoactive plant chemicals.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2464 - Neuroscience and Society (3 credits)
Social, ethical, and legal issues faced by human societies from the perspective of neuroscience. Broader questions about how neuroscience informs education, medicine, law, and public health. Research in neuroscience as it relates to issues of mental health, poverty, stress, and politics.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2554 - Experimental Neuroscience (3 credits)
Introduction to the conceptual framework of contemporary experimental methods and practices in neuroscience research. Exploration of experimental techniques including electrophysiology, advanced imaging, immunohistochemistry, transgenic animal models, and behavioral assays. Includes face-to-face interaction with various research faculty to explore research methods in practice and discuss current research and expertise.
Prerequisite(s): NEUR 2025 and NEUR 2035
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2594 - Exploring Clinical Neuroscience (3 credits)
Exploration of careers in clinical neuroscience. Introduction to neuroanatomy, clinical presentation of neurological diseases, application of neuroscientific research to clinical practice, and clinical treatments. Ethical challenges in clinical practice. Burnout and resilience.
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 3034 - Global Perspectives Pre-Departure (2 credits)
Preparation for Global Perspectives in Neuroscience and Medicine summer study abroad program. Travel preparations and financial planning. Academic overview and preparation. Risk management and travel etiquette. Introduction to global perspectives of neurological diseases. Restricted to students accepted into Global Perspectives in Neuroscience and Medicine summer study abroad program.
Instructional Contact Hours: (2 Lec, 2 Crd)

NEUR 3044 - Cellular and Molecular Neuroscience (3 credits)
Fundamental principles of cellular and molecular neuroscience. Methods to study neurochemisty and neurobiology, theoretical and practical issues of relating cellular/molecular structures and functions to higher-level nervous system functioning, and current understanding of cellular/molecular bases of nervous system disorders.
Prerequisite(s): NEUR 2025 and (CHEM 1036 or ISC 2105)
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3054 - Brain-Body Interactions in Health and Disease (3 credits)
Role of brain-body interactions in influencing an organism's health. Biological mechanisms involved in bidirectional communication between the brain, endocrine system, immune system, and digestive system. Gut microbiome and gut-brain axis in health and disease. Disease states linked to disturbed communication between brain and body, including diabetes, depression, autism, and Alzheimer's disease.
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3074 - Evolutionary Neuroscience (3 credits)
Role of evolution and natural selection in shaping genetic, molecular, and cellular components of brain within invertebrates and vertebrates through modern humans. Evolution of molecules and cells in the brain. Comparing brain structure and function between invertebrates and vertebrates, including evolution of animal and human cognition and behavior. Adaptations of brain structure and function necessary for human cognition, emotion, language, and intelligence.
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3084 - Cognitive Neuroscience (3 credits)
Concepts in cognitive neuroscience. Methods available to study brain and nervous system function, theoretical and practical issues of relating mental functions to biological brain functions. Overview of current understanding of the neural bases of various mental functions (e.g., memory, attention, emotion, decision making).
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3144 - Mechanisms of Learning and Memory (3 credits)
Foundation of social interactions in human and non-human: ability to learn and memorize locations, situations, individuals, facts and tasks forms. Cellular and molecular mechanism underlying learning and memory and model systems. Approaches to these processes along with diseases presenting with learning and memory deficits in humans.
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3234 - The Artificial Brain (3 credits)
Introduction to brain-machine interactions and computer models of neural systems. Exploration of brain-computer interface applications, biophysically-based computational models of the brain, and computer neural networks in the context of artificial intelligence. Emphasis on the capabilities and limitations of neural networks and how they inform our understanding of the human brain. Discussion of societal impact and ethical considerations.
Prerequisite(s): NEUR 2026 and (MATH 1026 or MATH 1226)
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3554 - Neuroscience Research and Practical Experience (3 credits)
Integration of the interdisciplinary fields of neuroscience: includes the conceptual frameworks and theories of neuroscience spanning molecules to behavior, the methods available to study nervous system structure and function from molecules to behavior, theoretical and practical issues of linking these lower-levels structures and processes to higher-level neurological and psychological functions, and the latest applications and technologies for translating neuroscience into more effective interventions and treatments. Practical experience includes literature review research and writing, data analysis and interpretation, written and oral presentation, and site-specific training.
Prerequisite(s): NEUR 2026 and NEUR 2554
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3594 - Neurobiology of Psychiatric Disorders (3 credits)
Neurobiological and clinical aspects of psychiatry. Overview of disorders such as depression, anxiety, schizophrenia, addiction, and obsessive-compulsive disorder. Neurobiology of emotional behavior. Clinical perspectives of psychiatric treatment, interventional psychiatry, and cross-disciplinary approaches to psychiatry. Underlying pathophysiology of a variety of psychiatric disorders. Neuropharmacology of commonly used psychiatric medications. Ethical issues related to psychiatric care.
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3604 - Neurobiochemistry (3 credits)
The biochemical mechanisms of the nervous system, with a focus on the human brain. Bioenergetics and nutrient metabolism in the central nervous system. Synthesis, function, and metabolism of neurotransmitters and neuropeptides, membrane chemistry, structure and function of neurotransmitter receptors and transporters, ion channels and pumps, secretory pathway and intracellular signaling pathways. The biochemistry of neuroactive drugs and toxins.
Prerequisite(s): NEUR 2025
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3774 - Neuroendocrinology (3 credits)
Comprehensive survey of the interrelationships between human neural and endocrine systems. Regulatory mechanisms for neural control of hormone secretions, peripheral hormone action on physiological processes, and hormonal influences on behavior.
Prerequisite(s): NEUR 2025
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3844 - Computational Neuroscience and Neural Engineering (3 credits)
Introduction to computational and systems neuroscience. Data analysis and signal processing techniques for neural data. Neural modeling to include mean field models, Hodgkin-Huxley models, integrate and fire models. Neural engineering and brain machine interface (BMI) applications.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BMES 3844

NEUR 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

NEUR 3914 - Neuroscience of Drug Addiction (3 credits)
History of addiction as a chronic, relapsing brain disease. Neurocircuitry and molecular basis of the brain affected by common drugs of abuse. Overview of the use, abuse, liability, and psychotherapeutic effects of drugs on humans. Common classes of drug abuse: alcohol, sedatives, tobacco/ nicotine, opiods, cannabinoids, psychostimulants, psychedelics, steroids, anti-anxiety, antidepressants, and antipsychotics. Animal models in drug addiction studies. Current and future pharmacotherapeutics for drug addiction treatment and ethical considerations of treatments.
Prerequisite(s): NEUR 2025 and NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3944 - War and the Brain (3 credits)
Neurological and psychological factors associated with military and war. Neuroscientific basis of decision making, mental resilience, and cognitive enhancement. Etiology and treatment of brain injuries sustained during war including post-traumatic stress disorder, traumatic brain injury, and chemical warfare. Neurotechnological advances that shape soldiers and warfare. Ethical considerations of militarization of neuroscience.
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 4034 - Diseases of the Nervous System (3 credits)
Common brain and Central Nervous System (CNS) disorders ranging from trauma to autism. Genetic, molecules and cellular changes in disease. Therapeutic implications and development of novel drugs. Challenges in drug discovery and implementation of personalized medicine. Ethical issues regarding genetic findings.
Prerequisite(s): NEUR 2026 and NEUR 3044
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4044 - Neuroscience Senior Seminar (3 credits)
Integration of methods and results from cutting-edge interdisciplinary neuroscience research; theoretical and practical issues when linking molecular/cellular structures and processes to higher-level neurological and psychological functions. May be repeated twice with different content for a maximum of 9 credits.
Prerequisite(s): NEUR 3044 or NEUR 3084
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

NEUR 4054 - Developmental Neuroscience (3 credits)
Genetic, molecular, and cellular processes underlying brain development and neural circuit formation, including neural induction, cell differentiation, cell fate determination, axon guidance, neuronal migration, synapse formation, and cell death. Neurodevelopment processes in vertebrate and invertebrate animal models. Molecular and cellular underpinnings of neurodevelopmental disorders.
Prerequisite(s): NEUR 3044
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4064 - Neuropharmacology (3 credits)
Role of drugs affecting function of the brain, spinal cord, and peripheral nerves. Principles of pharmacology and biological mechanisms involved in pharmacokinetics (drug absorption, distribution, metabolism, elimination, and toxicity). Neurotransmission in peripheral and central nervous systems. Major classes of drugs affecting the nervous system (antidepressants, anxiolytics, antipsychotics, anticonvulsants, sedatives/hypnotics, analgesics, general and local anesthetics) and their mechanisms of action. Evaluate scientific findings of drug pharmacodynamics for major drug classes used to treat diseases of the nervous system.
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4244 - Neural Control of Movement (3 credits)
Neuroscience of motor control and related disorders. How the neural system sub-components involved in motor control mediate motor reflexes, motor learning, central pattern generation, and motor control of speech and language. Sensorimotor physiology, proprioceptive system, exercise physiology. Neuro-rehabilitative technology and disruption of motor control by injury or disease.
Prerequisite(s): NEUR 3044 or NEUR 3084
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4314 - Genetics in Neuroscience (3 credits)
Concepts of classical, modern genetics and epigenetics as it relates to neuroscience. Practical applications including genome-wide association (GWAS), next-generation sequencing, epigenetics, genome editing and screening methods. Use of model organisms in neurogenetic disorders research. Relationship of genetics and its influences on theoretical and practical issues in neurological and neurodevelopmental disorders. Personalized medicine in neurodevelopmental and neurogenetic disorders.
Prerequisite(s): NEUR 3044
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4364 - Neuroscience of Language and Communication Disorders (3 credits)
Concepts of language as distinctive human behavior and central to social life. Neural underpinnings of humans ability to speak and understand language. Neurologic processing of language comprehension and production in healthy and language-impaired individuals. Auditory and visual word recognition, reading, understanding speech, representation of word meaning, language production, and bilingualism. Neuroethology of communication and neurological disorders of communication: dyslexia, stuttering, and aphasia. Theoretical issues in language processing and converging evidence from different techniques and animal models addressing these issues.
Prerequisite(s): NEUR 3044 or NEUR 3084
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4454 - Neuroeconomics (3 credits)
Neural processes related to reward, learning, reflection, delay of gratification, and social interaction. Clinical uses of neuroeconomics research techniques. Implications of neuroeconomics in economics, policy, law and business.
Prerequisite(s): NEUR 2026 or ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 4454, PSYC 4454

NEUR 4514 - Neuroimmunology in Health and Disease (3 credits)
Immune system and its role in neurological health and psychiatric and neurological disorders. Details of cell type, functions and signaling of the peripheral and central immune system and sympathetic nervous system. Cross-talk between the brain and immune system across the blood brain barrier and circumventricular organs. Neurobiological basis and treatment options for autoimmune diseases. Role of immune system in psychiatric illness.
Prerequisite(s): NEUR 3044
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4594 - Clinical Neuroscience in Practice (3 credits)
Clinical approaches to diagnose and treat neurological disorders. Diseases include stroke, trauma, brain tumors, psychiatric illnesses, and epilepsy. Clinical experience includes diagnostic procedures, radiological techniques, and surgical procedures in operating room. Patient rounding, follow-up, and outcomes. Medical emergencies and appropriate professional responses. Ethical issues regarding health care, disparity, life and death decisions. Medical profession exploration.
Prerequisite(s): NEUR 4034
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4814 - Nutritional Neuroscience (3 credits)
Concepts in nutritional aspects of neuroscience. Energy metabolism in central nervous system and brain regulating ingestive behavior. Communication with peripheral organs, regulation of whole body energy homeostasis, brain physiology and pathology on molecular and cellular level. Role of appetite neurocircuitry in formulation of practical solutions to societal problems such as nutrition, eating disorders, and obesity.
Prerequisite(s): NEUR 2026 or ALS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALS 4814

NEUR 4914 - Drug Development in Neuroscience (3 credits)
Current approaches and pitfalls for developing therapeutics for treating disorders of the central nervous system (CNS). Theoretical issues and practical applications targeting identification, high-throughput screening, pharmacokinetics and pharmacodynamics, preclinical testing, clinical trials, and the FDA approval process. Ethical implications for drug development and testing.
Prerequisite(s): NEUR 3044 or NEUR 3914
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4964 - Field Work (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 4994 - Undergraduate Research (1-19 credits)
$30 fee
Instructional Contact Hours: Variable credit course

NEUR 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Nuclear Science & Engineering (NSEG)

NSEG 3145 - Fundamentals of Nuclear Engr (3 credits)
Application of fundamental principles of neutron physics and reactor theory. Introduction to nuclear cross-section data, neutron scattering, nuclear fission, and diffusion theory. Examination of current and next generation nuclear power.
Prerequisite(s): MATH 2214 or MATH 2214H or MATH 2406H
Instructional Contact Hours: (3 Lec, 3 Crd)

NSEG 3146 - Fundamental of Nuclear Engr (3 credits)
Application of fundamental principles of neutron physics and reactor theory. Calculation of critical mass and dimensions of a reactor using modified one-group theory; reactivity changes in the core due to control rods, chemical boron shim, temperature changes, and fissioin production poisons. Determination of reactor thermal design criteria. Introduction to radiation protection and reactor accident analysis. Nuclear enginering ethics principles.
Prerequisite(s): NSEG 3145 or ME 3145
Instructional Contact Hours: (3 Lec, 3 Crd)

NSEG 3604 - Radiation Detection, Protection and Shielding (3 credits)
Radioactive decay, interaction of charged particles and photons with matter, methods of radiation detection and radiation dosimetry, counting statistics, radiation protection criteria and exposure limits, external radiation protection using time, distance and shielding.
Prerequisite(s): PHYS 2306
Corequisite(s): MATH 2214 or MATH 2214H or MATH 2406H.
Instructional Contact Hours: (3 Lec, 3 Crd)

NSEG 4204 - Nuclear Fuel Cycle (3 credits)
Uranium nuclear fuel cycle: radiation basics, uranium reserves, mining, conversion, enrichment, fuel manufacturing, in-core fuel management and refueling, spent fuel storage, reprocessing/recycling and final disposition as waste in a geologic repository. Introduction to nuclear safeguards and nonproliferation as applied to each step of cycle. Alternative fuel cycles.
Prerequisite(s): MATH 2214 or MATH 2214H or MATH 2406H
Corequisite(s): NSEG 3146
Instructional Contact Hours: (3 Lec, 3 Crd)

NSEG 4214 - Nuclear Power Plant Operations (3 credits)
Emphasis on pressurized water reactor plant operations. Review of boiling water reactor operations. Detailed system functions and operation, reactor plant startup and shutdown procedures, reactor refueling, reactor plant safety analysis, reactor plant licensing, ethics and integrity in the nuclear industry.
Prerequisite(s): NSEG 3145
Corequisite(s): NSEG 3146
Instructional Contact Hours: (3 Lec, 3 Crd)

NSEG 4424 - Reactor Thermal Hydraulics (3 credits)
Fundamental processes of heat generation and transport in nuclear reactors: reactor coolant systems and components, heat generation and spatial distribution, heat transport by conduction and convection, single-phase flow, two-phase flow and boiling, critical heat flux.
Prerequisite(s): MATH 2214 or MATH 2214H or MATH 2406H
Corequisite(s): NSEG 3145
Instructional Contact Hours: (3 Lec, 3 Crd)

NSEG 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NSEG 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NSEG 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

NSEG 4994H - Undergraduate Research (1-19 credits)
Honors Section
Instructional Contact Hours: Variable credit course

Peace Studies (PSVP)

PSVP 2044 - Peace and Violence (3 credits)
Introduces major theories of peace and violence. Explores contemporary patterns and root causes of interpersonal, institutional, and structural violence. Particular attention to conflict management, prevention, strategies, and promotion of peace at the local, national, and global levels.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSVP 2444 - Conflict Resolution, Mediation and Peacebuilding (3 credits)
Introduces fundamental principles, values and skills of conflict resolution. Special emphasis on facilitative mediation, restorative justice and other conflict resolution methodologies in the greater context of peacebuilding. Exploration of conflict resolution as tools of personal development and social justice.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSVP 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSVP 4104 - Global Society, Violence and the Prospects for Peace (3 credits)
Examines major theories in the interdisciplinary field of peace studies. Includes current, historical, and global causes, patterns and types of conflict, and methods of conflict resolution. Particular attention given to the philosophical and sociological discussions of the causes of violence and the possibilities for peace.
Prerequisite(s): PSVP 2044 or SOC 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

PSVP 4224 - Victimology (3 credits)
An in-depth exploration of the multifaceted field of victimology. A scientific study of victims and the aftermath of victimization, which delves into the physical, emotional, and psychological consequences victims endure. Provides insights into the historical context of victim studies, various theoretical frameworks, and the evolving role of the criminal justice system concerning victims' rights and advocacy. Additionally, this course examines the societal consequences of victimization and explores preventive, interventionist, and compensatory mechanisms to support victims and mitigate the impact of crimes.
Prerequisite(s): CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CRIM 4224

PSVP 4444 - Schools, Violence, and Justice (3 credits)
Focuses on the nature, extent, causes, and consequences of widely recognized forms of violence within schools, such as bullying, fighting, sexual assaults, harassment, dating violence, and shootings. Examines the effectiveness of violence prevention programs. Includes sociological theories of violence within schools. Explores the social debate over balancing the collective public safety obligations of schools with individual students rights/responsibilities.
Prerequisite(s): SOC 3414 or CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 4444

PSVP 4484 - Hate Crimes (3 credits)
Focuses on the causes, manifestations, and consequences of hate crimes in the United States. Includes theories of prejudice and biased behavior, the context of perpetration, the individual and community-level effects on the victims, and the political, historical, and social significance of such crimes. Considers broad questions of bias compared to hate, the recognition and prosecution of hate crimes compared to non-bias crimes, the impacts of hate crimes at the individual and community levels, and responses by law enforcement and communities.
Prerequisite(s): CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CRIM 4484

PSVP 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSVP 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSVP 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Philosophy (PHIL)

PHIL 1204 - Knowledge and Reality (3 credits)
Examines historical and contemporary approaches to such issues as: the nature of reality and the self, the relationship between mind and body, the existence of God, the nature of knowledge and illusion. Application to ethical questions about the fear of death, and the meaning of life.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 1304 - Morality and Justice (3 credits)
A critical survey of theories concerning human nature, the meaningful life, and the moral evaluation of actions, persons, and institutions. Theories will be applied to such issues as abortion, justice, and moral problems faced by professionals.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 1504 - Critical Thinking (3 credits)
Introduction to critical thinking, the examination of the reasons (grounds, evidence) for claims on any subject matter. Mastery of central concepts of critical thinking: argument, claim, validity and invalidity, strength and weakness, deduction and induction, fallacy, objection and response. Techniques for critical reconstruction and evaluation of arguments, including ethical ones. Formal logic techniques for evaluation of truth-functional and categorical arguments, akin to mechanical computation or derivation. Application of techniques to arguments appearing in ordinary language passages.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 1604 - How Science Works (3 credits)
Introduction to scientific methods and reasoning. Foundation for interpreting scientific information and conducting research across a range of fields, especially natural sciences. Topics: use of theories, experiments and models; hypothesis testing and confirmation; deductive, inductive and abductive reasoning; descriptive and inferential statistics; causation; influence of societal values on science; diversity and objectivity in science. Examples from physics, astronomy, geology, environmental science and other fields.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 1984B - Special Study (1-19 credits)
Pathway Concept Area(s): 2 Critical Thinking Humanities
Instructional Contact Hours: Variable credit course

PHIL 2115 - Ancient Through Medieval Philosophy (3 credits)
A critical survey and analysis of the history of Western philosophical thought from its beginnings through the Medieval Period. Addresses and assesses historical theories about issues involving the nature of justice, virtue, ethics, knowledge, and reality. Key concepts analyzed include that of the soul, human flourishing, form and matter, the human function and God. 2115: Presocratics, Socrates, Plato, Aristotle, and the Stoics; 2116: late Greek and Roman philosophy, St. Augustine, St. Thomas Aquinas, and William of Ockham.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2116 - Ancient Through Medieval Philosophy (3 credits)
A critical survey and analysis of the history of Western philosophical thought from its beginnings through the Medieval Period. Addresses and assesses historical theories about issues involving the nature of justice, virtue, ethics, knowledge, and reality. Key concepts analyzed include that of the soul, human flourishing, form and matter, the human function and God. 2115: Presocratics, Socrates, Plato, Aristotle, and the Stoics; 2116: late Greek and Roman philosophy, St. Augustine, St. Thomas Aquinas, and William of Ockham.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2125 - History of Modern Philosophy (3 credits)
Philosophical thought from the seventeenth to the nineteenth century, integrating intercultural analysis and comparisons. 2125: Global traditions in 17th and 18th century natural philosophy, including theories of mind, value, and knowledge. 2126: Global traditions in 18th and 19th century philosophy, including theories of science, knowledge, and value.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2126 - History of Modern Philosophy (3 credits)
Philosophical thought from the seventeenth to the nineteenth century, integrating intercultural analysis and comparisons. 2125: Global traditions in 17th and 18th century natural philosophy, including theories of mind, value, and knowledge. 2126: Global traditions in 18th and 19th century philosophy, including theories of science, knowledge, and value.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2304 - Global Ethics (3 credits)
Ethical issues in international context. Application of the principles of moral theory to such issues as the obligations of richer nations toward poorer ones, cultural and other forms of relativism, emigration and immigration, nationalism, war, deterrence, intervention, environmental degradation, preservation of natural diversity, and responsibilities toward future generations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2314 - Philosophy of Sex, Gender, and Race (3 credits)
Critical survey of contemporary themes in the philosophy of race and feminist philosophy in the United States. Topics in metaphysics (what is race? what is sex? what is gender?), ethics and political philosophy (oppression, solidarity, and social justice), and epistemology (narrative, standpoint, and white ignorance). Emphasis on situating contemporary philosophical views in social and historical contexts.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2504 - Logic and Language (3 credits)
Introduction to logic, the systematic analysis of expressions and reasoning in natural languages (like English) by means of simplified, formal languages. Foundational to philosophy, linguistics, law and computer science; useful in any discipline in the sciences or humanities where sustained reasoning and argumentation are central. Core semantic concepts: truth and meaning, synonymy, ambiguity, consistency, entailment, truth conditions. Core syntactic concepts: expression, sentence, connective, scope, predicate, term, quantifier. Core deductive reasoning concepts: argument, validity, soundness, proof. Formal languages for propositional logic and predicate logic. Translation between these formal languages and natural language sentences and arguments. Application of formal logic to evaluate natural language argumentation. Moral language and ethical reasoning.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2605 - Reason and Revolution in Science (3 credits)
Study of philosophical approaches to understanding and justifying modes of human reasoning both in science and everyday life. 2605: nature of theory confirmation and falsification; 2606: justifying changing paradigms of human inquiry.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2606 - Reason and Revolution in Science (3 credits)
Study of philosophical approaches to understanding and justifying modes of human reasoning both in science and everyday life. 2605: nature of theory confirmation and falsification; 2606: justifying changing paradigms of human inquiry.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 3015 - Political Theory (3 credits)
Analysis of the fundamental ideas in the history of political theory. 3015: The thought and ethical implications of philosophers from the ancient Greeks to early modern times. Analysis of writings from Plato through medieval theorists to those of the Seventeenth Century. 3016: The thought and ethical implications of philosophers from the late Seventeenth Century to the present. Analysis of key concepts in the thought of theorists from the early modern period until the present.
Prerequisite(s): PSCI 2014
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3015

PHIL 3016 - Political Theory (3 credits)
Analysis of the fundamental ideas in the history of political theory. 3015: The thought and ethical implications of philosophers from the ancient Greeks to early modern times. Analysis of writings from Plato through medieval theorists to those of the Seventeenth Century. 3016: The thought and ethical implications of philosophers from the late Seventeenth Century to the present. Analysis of key concepts in the thought of theorists from the early modern period until the present.
Prerequisite(s): PSCI 2014
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PPE 3016, PSCI 3016

PHIL 3024 - Topics in Philosophical Movements (3 credits)
Focus on the assumptions, methods and ethical dimensions of one or more contemporary or historically important philosophical movement, such as Pragmatism, Feminism, Existentialism, Islamic Philosophy, Philosophy and African-American Thought, or Philosophy and Literature. May be repeated 2 times with different content for a maximum of 9 credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

PHIL 3314 - Ethical Theory (3 credits)
Careful examination of some important historical or contemporary ethical theories. Includes coverage of such topics as the assessment of character and action, the foundations of ethical theories, their justification, their relationship to scientific theories, and their objective or subjective status. 3 Philosophy credits required.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PPE 3314

PHIL 3324 - Biomedical Ethics (3 credits)
Philosophical analysis of ethical issues in medicine and biotechnology, such as problems arising in connection with the relations between physicians and patients, the challenges of cultural diversity, practices surrounding human and animal research, decisions about end of life care, embryonic stem cell research, genetic engineering, biotechnological human enhancement, and social justice in relation to health-care policy.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 3334 - Ethical Perspectives on Artificial Intelligence (3 credits)
Critical examination of ethical concepts and theories, such as utilitarianism, deontology and virtue theory, applied to issues that arise in artificial intelligence, including applications in smart design & construction, energy, ubiquitous mobility, and robotics & autonomous systems. Addresses questions such as: How much should privacy be protected in the digital future? How can energy be equitably transported and consumed in relation to poor regions and future generations? Who should autonomous vehicles be programmed to protect or sacrifice in emergency situations? How should we evaluate the effects on family and society of smart technology? Should we fear that robots will take over?
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 3414 - Aesthetics (3 credits)
Critical survey and analysis of key concepts in aesthetics and the philosophy of art. Historical and contemporary theories concerning natural beauty, aesthetic experience and properties, the nature and interpretation of artworks, their representational and expressive features, the relationship between artistic value, the value that attaches to nature, and moral value.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 3454 - Philosophy of Religion (3 credits)
A consideration of religious belief and its justification with attention to such philosophical issues as the nature and existence of the Judeo-Christian-Muslim God, proofs for the existence of God, the problem of evil, a religious basis for ethics, the nature of faith, and the variety of religious beliefs.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3454

PHIL 3505 - Modern Logic and Its Development (3 credits)
Logic and logical theory and the history of its development. 3505: Validity of arguments. Syllogistic logic from Aristotle to modern times. Deductive methods in truth functional and quantificational logic through the theory of identity. Translation from English into symbolic form. 3506: Metalogic and the history and philosophy of modern logical theory. Decidability and undecidability, completeness and incompleteness of formal systems. Developments from Cantor to Goedel. Must have 3505 to take 3506.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 3614 - Philosophy of the Environment (3 credits)
Philosophical issues in environmental science and policy. Foundational concepts in the environmental sciences, epistemic challenges of environmental research and decision-making, and ethical questions about conservation policy and climate justice. Topics include: the wilderness ideal; biodiversity; effectiveness of different ecosystem restoration techniques; environmental modeling; decision-making under scientific uncertainty; indigenous environmental justice; ethics of de-extinction; values in environmental science; climate change; ethics of geoengineering; and public participation in conservation.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 3884 - Topics in Philosophy, Politics, and Economics (3 credits)
Topics-based course in philosophy, politics, and economics (PPE). Discussion of important topics and thinkers in PPE with historical and practical relevance. Focus on interdisciplinary analysis and methods. Topics include: limits of markets; well-being theory, science, and policy; socioeconomic justice; economic and political institutions; and global poverty. May be repeated 1 time with different content for a maximum of six credits hours. Pre: 3 credit hours in PPE, PHIL, PSCI, or ECON.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: ECON 3884, PPE 3884, PSCI 3884

PHIL 4014 - Special Topics in Philosophy (3 credits)
Critical examination of special issues or figures of current philosophical interest at an advanced level. Sample topics: Philosophy and Race; Ludwig Wittgenstein; Origins of Analytic Philosophy; and Animals, Minds and Morality. May be repeated 2 times with different content for a maximum of 9 credits. Pre: 3 Philosophy credits required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

PHIL 4204 - Philosophy of Mind (3 credits)
Current issues in the philosophy of mind such as relation of mind and body, status of the mental, knowledge of ones own and other minds, personal identity, consciousness, mentality of animals and machines, topics in the philosophy of psychology. 3 Philosophy credits required.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4214 - Metaphysics (3 credits)
Critical survey and analysis of key concepts in metaphysics, the study of what kinds of entities exist and what their most fundamental and general features are like. Historical and contemporary theories concerning existence, abstract entities, material objects, time, persistence, possibility and necessity, causation, free will and determinism, and social ontology. Pre: Requires the completion of 3 credits Philosophy course.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4224 - Epistemology (3 credits)
Theory of knowledge. Is all knowledge based on experience? Does knowledge have a foundation? Can knowledge of the present and the nearby give us reasons for beliefs about the future, the past, or about events far away? 3 Philosophy credits required.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4304 - Political Philosophy (3 credits)
Study of fundamental topics in political philosophy, such as distributive justice, equality, individual rights, constitutional government, and the justification of political authority. 3 Philosophy credits required.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PPE 4304

PHIL 4324 - Business and Professional Ethics (3 credits)
An inquiry into the fundamental norms of conduct in business and other professions and their justification in relation to the most important ethical theories. Special attention will be given to moral problems such as the ethics of hiring and firing, bribery, and professional responsibility to society.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MGT 4324

PHIL 4334 - Jurisprudence (3 credits)
An examination of the nature of law and legal systems with attention to traditional theories of law and to such topics as judicial decision and discretion, law and morality, the justification of legal coercion. 3 Philosophy credits required.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4514 - Special Topics in Logic (3 credits)
Topics that build upon a knowledge of classical deductive logic: extensions of classical logic, alternatives to classical logic, philosophy of logic, and philosophy of language. Topics to be announced each semester course is offered.
Prerequisite(s): PHIL 3505
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4604 - Philosophy of Biology (3 credits)
This course is designed primarily for students of biology or philosophy students with a strong interest in biology. Topics vary from year to year, but include the changing character of biology as a science, the special character of biological explanations and methods, and the place and value of reduction (e.g., of Mendelian to molecular genetics) in biology.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4614 - Philosophy of Science (3 credits)
An examination of the structure and methodology of science as well as key concepts such as explanation, confirmation, realism, and instrumentalism. One year of science and 3 philosophy credits required.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHIL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHIL 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Philosophy, Politics, and Econ (PPE)

PPE 1004 - Introduction to Philosophy, Politics, and Economics (3 credits)
Discussion of classic and contemporary texts in philosophy, politics, and economics (PPE) with historical and current relevance. Core concepts, ideas, and topics include: history of moral, political, and economic thought; political economy; justice, equality, fairness, and democracy; socioeconomic status, power, class, and diversity; the human condition and its cultural evolution and experience in the United States and abroad. Course introduces students to basic principles of research and writing. First-Year Experience course.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PPE 1214 - Economic History of Diversity and Inclusion (3 credits)
Economic analysis of topics concerning diversity and inclusion. Emphasis on Virginia and surrounding states. Introduction to the basic principles of economic analysis and economic history, with a special emphasis on models of institutional change, economic growth, discrimination, inequality, migration, and indigenous economic systems. Impact of institutions, environment, and technological change on labor markets, asset markets, and standard of living. Consideration of the role of data in understanding diversity and related ethical issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 1214

PPE 2024 - Research Methods in Political Science (3 credits)
Introduction to research in political science; formulation of theory, operationalization and measurement, gathering, analysis and interpretation of data.
Prerequisite(s): (PSCI 1014 or PSCI 1014H) and (PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 2024

PPE 2894 - PPE Gateway Course (3 credits)
Integrated study of philosophy, politics, and economics. Trains students to make decisions that are not only economically sound, but also socially, ethically, and politically informed. Core concepts, topics, and ideas include: models of human nature, rational choice theory, social cooperation, distributive justice, markets, and democracy. Pre: Sophomore standing.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PPE 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PPE 3016 - Political Theory (3 credits)
Analysis of the fundamental ideas in the history of political theory. 3015: The thought and ethical implications of philosophers from the ancient Greeks to early modern times. Analysis of writings from Plato through medieval theorists to those of the Seventeenth Century. 3016: The thought and ethical implications of philosophers from the late Seventeenth Century to the present. Analysis of key concepts in the thought of theorists from the early modern period until the present.
Prerequisite(s): PSCI 2014
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 3016, PSCI 3016

PPE 3024 - Economic Justice (3 credits)
This course explores how different assumptions regarding the basis of claims for access to economic resources lead to different outcomes. Students will explore a variety of theories and examine their own beliefs about economic justice.
Prerequisite(s): (ECON 2005 or ECON 2025H) and (ECON 2006 or ECON 2026H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 3024

PPE 3314 - Ethical Theory (3 credits)
Careful examination of some important historical or contemporary ethical theories. Includes coverage of such topics as the assessment of character and action, the foundations of ethical theories, their justification, their relationship to scientific theories, and their objective or subjective status. 3 Philosophy credits required.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 3314

PPE 3884 - Topics in Philosophy, Politics, and Economics (3 credits)
Topics-based course in philosophy, politics, and economics (PPE). Discussion of important topics and thinkers in PPE with historical and practical relevance. Focus on interdisciplinary analysis and methods. Topics include: limits of markets; well-being theory, science, and policy; socioeconomic justice; economic and political institutions; and global poverty. May be repeated 1 time with different content for a maximum of six credits hours. Pre: 3 credit hours in PPE, PHIL, PSCI, or ECON.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: ECON 3884, PHIL 3884, PSCI 3884

PPE 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

PPE 4304 - Political Philosophy (3 credits)
Study of fundamental topics in political philosophy, such as distributive justice, equality, individual rights, constitutional government, and the justification of political authority. 3 Philosophy credits required.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 4304

PPE 4884 - PPE Capstone Course (3 credits)
Discussion of advanced concepts, methods, and ideas at the intersection of philosophy, politics, and economics. Focus on utility theory, game theory, social choice theory, public choice theory, markets, justice, and democracy. Senior research project. Senior standing required.
Prerequisite(s): PPE 2894 or PHIL 2894 or PSCI 2894 or ECON 2894
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PPE 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

PPE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PPE 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Physics (PHYS)

PHYS 1055 - Introduction to Astronomy (3 credits)
Survey course of astronomy topics ranging from the solar system to the universe, with Application of evidence-based reasoning, critical thinking, and use of theoretical models and observations. 1055 has a focus on the solar system: apparent sky motions, telescopes, matter and radiation, properties of the planets, structure and evolution of the solar system, cultural and intercultural aspects that influenced the understanding of the solar system, climate change as a Global challenge. 1056 has a focus on the universe: stars, star formation, stellar evolution, organization of the Milky Way Galaxy, galaxies, quasars, structure and evolution of the universe, cosmological models, cultural and intercultural aspects of the development of astronomical thought, life in the universe.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 1056 - Introduction to Astronomy (3 credits)
Survey course of astronomy topics ranging from the solar system to the universe, with Application of evidence-based reasoning, critical thinking, and use of theoretical models and observations. 1055 has a focus on the solar system: apparent sky motions, telescopes, matter and radiation, properties of the planets, structure and evolution of the solar system, cultural and intercultural aspects that influenced the understanding of the solar system, climate change as a Global challenge. 1056 has a focus on the universe: stars, star formation, stellar evolution, organization of the Milky Way Galaxy, galaxies, quasars, structure and evolution of the universe, cosmological models, cultural and intercultural aspects of the development of astronomical thought, life in the universe.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 1155 - Astronomy Laboratory (1 credit)
Simulation of apparent sky motions; observations of planets, stars, and nebulae with quantitative analysis; long term observations of sky changes; analysis of images; laboratory experiments of astrophysical relevance.
Corequisite(s): PHYS 1055
Instructional Contact Hours: (3 Lab, 1 Crd)

PHYS 1156 - Astronomy Laboratory (1 credit)
Simulation of apparent sky motions; observations of planets, stars, and nebulae with quantitative analysis; long term observations of sky changes; analysis of images; laboratory experiments of astrophysical relevance.
Prerequisite(s): PHYS 1155
Corequisite(s): PHYS 1056
Instructional Contact Hours: (3 Lab, 1 Crd)

PHYS 2074 - Highlights of Contemporary Physics (3 credits)
Conceptual overview of modern scientific thinking in physics, with application of critical reasoning and quantitative and conceptual problem solving based on fundamental physics principles. Presentation of the key ideas and philosophical aspects of the most important developments in modern physics, such as quantum mechanics, relativity, particle physics, cosmology. Discussion of their impact on our understanding of the universe, our position in it, intercultural aspects, and the relevance of physics for technical challenges requiring global awareness.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 2205 - General Physics (3 credits)
General physics course sequence for students in curricula other than physical sciences, mathematics, or engineering, who have not studied calculus. Applications of reasoning in the natural sciences using physical laws in a real-world context and in the students own discipline. Overview of intercultural and universal aspects of physics, and of human benefits of physics to address global challenges. 2205: mechanics, wave phenomena, fluids. 2206: optics, thermodynamics, electromagnetism, relativity, topics in nuclear and modern physics.
Prerequisite(s): MATH 1025 or MATH 1026 or MATH 1225 or MATH 1524
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 2206 - General Physics (3 credits)
General physics course sequence for students in curricula other than physical sciences, mathematics, or engineering, who have not studied calculus. Applications of reasoning in the natural sciences using physical laws in a real-world context and in the students own discipline. Overview of intercultural and universal aspects of physics, and of human benefits of physics to address global challenges. 2205: mechanics, wave phenomena, fluids. 2206: optics, thermodynamics, electromagnetism, relativity, topics in nuclear and modern physics.
Prerequisite(s): (PHYS 2305 or PHYS 2205) and (MATH 1025 or MATH 1026 or MATH 1225 or MATH 1524)
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 2215 - General Physics Laboratory (1 credit)
Laboratory experiments dealing with basic laws and techniques of physics; designed to illustrate topics covered in PHYS 2205-2206. Applications of reasoning in the natural sciences using physics experiments in a real-world and interdisciplinary context. Ethical responsibilities and issues in a laboratory setting. 2215: analysis of experimental errors, formatting for presenting graphical data, analyzing and describing and prioritizing experimental design features, communicating concepts orally and in writing, concepts of force, momentum, conservation of energy, wave and interference phenomena. 2216: analysis of experimental errors, communicating concepts orally and in writing, concepts of geometrical optics, optical instruments, heat and phase transitions, electricity and electrical energy storage, magnetic fields and magnetic induction, atomic spectra.
Corequisite(s): PHYS 2205
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

PHYS 2216 - General Physics Laboratory (1 credit)
Laboratory experiments dealing with basic laws and techniques of physics; designed to illustrate topics covered in PHYS 2205-2206. Applications of reasoning in the natural sciences using physics experiments in a real-world and interdisciplinary context. Ethical responsibilities and issues in a laboratory setting. 2215: analysis of experimental errors, formatting for presenting graphical data, analyzing and describing and prioritizing experimental design features, communicating concepts orally and in writing, concepts of force, momentum, conservation of energy, wave and interference phenomena. 2216: analysis of experimental errors, communicating concepts orally and in writing, concepts of geometrical optics, optical instruments, heat and phase transitions, electricity and electrical energy storage, magnetic fields and magnetic induction, atomic spectra.
Prerequisite(s): PHYS 2215 or PHYS 2305
Corequisite(s): PHYS 2206
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

PHYS 2254 - Hello Quantum World! (3 credits)
Introduction to the concepts of quantum mechanics and quantum computing using a pictorial approach. Quantum bits, quantum superposition, quantum gate operations, quantum entanglement, and quantum measurements represented pictorially. Demonstration of quantum circuits and quantum algorithms. Use of cloud quantum processors with drag-and-drop interfaces. Quantum teleportation, no-cloning theorem, quantum key distribution. Use of the pictorial formalism to define the concept of vectors.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 2305 - Foundations of Physics (4 credits)
Introductory sequence for students in physical sciences, mathematics, and engineering. Overview of intercultural contributions to physics and universal aspects of physics, and of human benefits of physics to address world-wide challenges. 2305: classical mechanics of translational and rotational motion, Newtonian gravitation, and thermal physics. 2306: oscillations, waves, electricity, magnetism, and optics.
Prerequisite(s): MATH 1225
Corequisite(s): MATH 1226
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

PHYS 2306 - Foundations of Physics (4 credits)
Introductory sequence for students in physical sciences, mathematics, and engineering. Overview of intercultural contributions to physics and universal aspects of physics, and of human benefits of physics to address world-wide challenges. 2305: classical mechanics of translational and rotational motion, Newtonian gravitation, and thermal physics. 2306: oscillations, waves, electricity, magnetism, and optics.
Prerequisite(s): MATH 1226 and PHYS 2305
Corequisite(s): 2325 or (MATH 1206 or MATH 1206H or MATH 1226) for 2305.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

PHYS 2324 - Thermal Physics Module (1 credit)
Introduction to thermal physics; solids, liquids, and gases; moles, temperature, ideal gas law; work, heat, first law of thermodynamics, ideal gas processes; molecular speeds, pressure; heat engines, refrigerators, the second law of thermodynamics. Intended for transfer students whose introductory physics courses did not include thermal physics. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

PHYS 2325 - Seminar for Physics Majors (1 credit)
Introduction to the field of physics and to the Physics Department. Overview of modern physics topics such as special relativity, quantum mechanics, condensed matter, nuclear, and particle physics. Presentation of research activities in the department. Also provides more in-depth discussion of and math preparation for topics in 2305-2306. For physics majors.
Corequisite(s): PHYS 2305
Instructional Contact Hours: (1 Lec, 1 Crd)

PHYS 2326 - Seminar for Physics Majors (1 credit)
Introduction to the field of physics and the Physics Department. Overview of modern physics topics such as special relativity, quantum mechanics, condensed matter, nuclear, and particle physics. Presentation of research activities in the department. Also provides more in-depth discussion of and math preparation for topics in 2305-2306. For physics majors.
Prerequisite(s): PHYS 2325
Corequisite(s): PHYS 2306
Instructional Contact Hours: (1 Lec, 1 Crd)

PHYS 2334 - Waves and Sound Module (1 credit)
Introduction to mechanical waves and sound; one-dimensional waves, transverse waves, sinusoidal waves; sound waves; waves in two- and three-dimensions; power, intensity; the Doppler Effect; principle of superposition of waves; standing waves, standing waves on a string, standing sound waves; interference of waves, interference in two and three-dimensions. Intended for transfer students whose introductory physics courses did not include the topics of mechanical waves and sound. Pass/Fail only.
Prerequisite(s): PHYS 2305
Instructional Contact Hours: (1 Lec, 1 Crd)

PHYS 2344 - Optics Module (1 credit)
Introduction to ray and wave optics; the ray model for light; reflection and refraction; image formation by mirrors; image formation by lenses; lenses in combinations, optical instruments; the wave model of light; interference of light waves; diffraction of light waves. Intended for transfer students whose introductory physics courses did not include introductory optics. Pass/Fail only.
Corequisite(s): PHYS 2334
Instructional Contact Hours: (1 Lec, 1 Crd)

PHYS 2404 - Physics Outreach (2-19 credits)
Service learning through teaching. An early field experience for physics students who are interested in physics education. Visit local schools and host campus visits to teach K-12 students fundamental physics concepts by performing physics demonstrations and activities. Learn successful communication techniques, lead classroom discussions, and utilize pedagogical content knowledge to effectively organize physics presentations to the general public. Repeatable (no maximum).
Corequisite(s): PHYS 2305
Instructional Contact Hours: (2-19 Lec, 2-19 Crd)

PHYS 2504 - Math Methods in Physics (3 credits)
Applications of mathematical methods to physics. Topics include spatial coordinate systems, linear algebra techniques in coupled motions, series approximations of solutions to physical systems, extremum problems in physics, differential equations in mechanics, integration in two and three spatial dimensions, probability theory in thermal physics.
Prerequisite(s): PHYS 2305
Corequisite(s): 2306, (MATH 2214 or 2214H) and (MATH 2224 or 2204 or 2204H).
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 2964 - Field Study (1-9 credits)
Instructional Contact Hours: (1-19 Lec, 1-9 Crd)

PHYS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

PHYS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 2994H - Undergraduate Research (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

PHYS 3154 - Observational Astrophysics (2 credits)
Telescopic observations of the moon, planets, stars, interstellar medium, and galaxies; astrophotography; digital imaging. Telescopes; virtual observing techniques and instruments; photographic and digital imaging systems. Astronomical data reduction and interpretation; digital image processing. Prior credit for PHYS 2154 precludes credit for 3154.
Prerequisite(s): PHYS 1156
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

PHYS 3254 - Enriched Physics Outreach (3 credits)
Design and implementation of physics lesson plans for K-12 students at local schools and campus visits. Creation of inquiry-based, student-centered physics lessons which motivate and educate students of all ages. Development of activities and experiments to engage students in being scientists.
Corequisite(s): PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3314 - Intermediate Laboratory (3 credits)
Characteristics of common instrumentation and basic circuits, methods of producing good practices in data gathering, recording, and analysis.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

PHYS 3324 - Modern Physics (4 credits)
Photons and their interactions with matter, wave-particle duality, Heisenberg uncertainty principle, Schrodingers equation of motion, hydrogenic and multi-electron atoms, Pauli exclusion principle, molecules, solids, nuclei, elementary particles. Includes lab work. MATH 4544 can be substituted for co-requisite MATH 2214 or 2214H. Pre: 2306.
Prerequisite(s): PHYS 2306
Corequisite(s): MATH 2214 or MATH 2214H.
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

PHYS 3355 - Intermediate Mechanics (3 credits)
Formal aspects of classical mechanics and dynamics. Topics include Newtonian, Lagrangian and Hamiltonian theory applied to non-relativistic systems in one, two, and three dimensions, relativistic dynamics, linear algebra applied to coupled many-body motion, small oscillations, and rigid body motion.
Prerequisite(s): (PHYS 2305 and PHYS 2306 and PHYS 2504 and MATH 2204 and MATH 2214) or (PHYS 2305 and PHYS 2306 and PHYS 2504 and MATH 2204 and MATH 2214H) or (PHYS 2305 and PHYS 2306 and PHYS 2504 and MATH 2204H and MATH 2214) or (PHYS 2305 and PHYS 2306 and PHYS 2504 and MATH 2204H and MATH 2214H) or (PHYS 2305 and PHYS 2306 and PHYS 2504 and MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3356 - Intermediate Mechanics (3 credits)
Formal aspects of classical mechanics and dynamics. Topics include Newtonian, Lagrangian and Hamiltonian theory applied to non-relativistic systems in one, two, and three dimensions, relativistic dynamics, linear algrbra applied to coupled many-body motion, small oscillations, and rigid body motion.
Prerequisite(s): PHYS 3355
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3405 - Intermediate Electricity and Magnetism (3 credits)
Electrostatics, multipoles, Laplaces equation, and dielectric media. Magnetostatics, magnetic media, and electromagnetic induction. Maxwells equations, electromagnetic energy, waves, and radiation. Must meet pre-requisites and have a grade of C or better in each of 2305-2306 sequence.
Prerequisite(s): (MATH 2214 or MATH 2214H) and PHYS 2305 and PHYS 2306 and PHYS 2504
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3406 - Intermediate Electricity and Magnetism (3 credits)
Electrostatics, multipoles, Laplaces equation, and dielectric media. Magnetostatics, magnetic media, and electromagnetic induction. Maxwells equations, electromagnetic energy, waves, and radiation. Must meet pre-requisites and have a grade of C or better in each of 2305-2306 sequence.
Prerequisite(s): PHYS 3405
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3655 - Introduction to Astrophysics (3 credits)
Application of elementary physical laws to determine dimensions, masses, luminosities, structures, and evolution of astronomical objects and the universe as a whole. Emphasis is on quantitative derivation.
Prerequisite(s): PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3656 - Introduction to Astrophysics (3 credits)
Application of elementary physical laws to determine dimensions, masses, luminosities, structures, and evolution of astronomical objects and the universe as a whole. Emphasis is on quantitative derivation.
Prerequisite(s): PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3684 - Quantum Software I (2 credits)
Organization of quantum information (assemblies of bits) for quantum-computing applications in chemistry, physics, biology, and computer science. Numerical methods for quantum software, emphasizing spin lattices and simulations such as quantum games. Best practices for programming, including techniques for quantum-coding (in Python or Julia), structuring a software product for quantum-computational science use, version control, and cloud-based documentation and code-sharing (via Github). Classical/quantum translation.
Prerequisite(s): MATH 2114 or MATH 2114H or MATH 3144
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: CHEM 3684

PHYS 3704 - Thermal Physics (3 credits)
Introduction to the concepts, formalism, and applications of classical and quantum statistical mechanics, including thermodynamics.
Prerequisite(s): PHYS 2306 and PHYS 3324
Corequisite(s): 2504, (MATH 2214 or 2214H).
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4224 - Physics Teaching and Learning (2 credits)
Seminar course on how people learn and understand key concepts in physics to encourage more effective teaching strategies. Discussions of readings in physics, physics education research, and cognitive science. Recognition of common student preconceptions of physics concepts and identification of strategies which help to elicit conceptual change. Field work teaching precollege or college students. For students interested in teaching and learning physics, graduate teaching assistants, and undergraduate learning assistants.
Prerequisite(s): PHYS 2306
Instructional Contact Hours: (2 Lec, 2 Crd)

PHYS 4254 - Quantum Information Technologies (3 credits)
Quantum computing and other quantum information technologies. Differences between bit and qubit. Quantum logic gates, concept of entanglement, quantum teleportation, quantum cryptography and key distribution, quantum computing algorithms, including Deutsch-Jozsa algorithm, Grovers search algorithm, Shors factoring algorithm. Basics of public-key cryptosystems and number theory as needed to present Shors algorithm. Errors in a quantum computer and quantum error correction.
Prerequisite(s): MATH 2114 or MATH 2114H
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4264 - Quantum Optics and Qubit Processors (3 credits)
Quantum optics and quantum bit (qubit) platforms for quantum technology applications. Qubit as physical system, quantum unitary evolution as quantum gate, quantum control using electromagnetic fields, Rabi oscillations, adiabatic theorem, density matrix, Liouville-von Neumann equation, decay and decoherence (T1 and T2), spin echo, Ramsey interferometry, coherent population trapping, entanglement, dynamical maps, electromagnetic field quantization, Jaynes-Cummings Hamiltonian, spontaneous emission, solid-state qubit platforms (spin qubits, superconducting qubits), atomic qubit platforms (trapped ions), color-centers in solids.
Prerequisite(s): PHYS 4455
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4315 - Modern Experimental Physics (2 credits)
Representative apparatus, techniques, and phenomena of contemporary research. Includes electrical measurements, computers, thermometry, vacuum deposition, machine shop, nuclear spectra, experimentation related to major developments of modern physics.
Prerequisite(s): PHYS 3314
Instructional Contact Hours: (6 Lab, 2 Crd)

PHYS 4316 - Modern Experimental Physics (2 credits)
Representative apparatus, techniques, and phenomena of contemporary research. Includes electrical measurements, computers, thermometry, vacuum deposition, machine shop, nuclear spectra, experimentation related to major developments of modern physics.
Prerequisite(s): PHYS 3314 and PHYS 4315
Instructional Contact Hours: (6 Lab, 2 Crd)

PHYS 4455 - Introduction to Quantum Mechanics (3 credits)
Experimental bases; postulates; conservation theorems and symmetry; one-dimensional and two-dimensional problems; angular momentum and problems in three dimensions; matrix mechanics and spin; applications to atomic and molecular physics; perturbation theory; scattering.
Prerequisite(s): PHYS 3355
Corequisite(s): PHYS 3406
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4456 - Introduction to Quantum Mechanics (3 credits)
Experimental bases; postulates; conservation theorems and symmetry; one-dimensional and two-dimensional problems; angular momentum and problems in three dimensions; matrix mechanics and spin; applications to atomic and molecular physics; perturbation theory; scattering.
Prerequisite(s): PHYS 4455
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4504 - Introduction to Nuclear and Particle Physics (3 credits)
Structure and properties of atomic nuclei and elementary particles, theoretical interpretations based on elementary quantum mechanics. Symmetries; various nuclear models; interactions at small distances; classification of elementary particles. Consent required.
Corequisite(s): PHYS 4456
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4514 - Introduction to Nuclear Physics (3 credits)
Nuclear properties and nuclear interactions. Nuclear reactions and radioactive decays, including alpha, beta and gamma decays. Theoretical models of the nucleus and their interpretations. Experimental methods in nuclear physics. Applications, including nuclear power production.
Prerequisite(s): PHYS 3324
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4524 - Intro Particle Physics (3 credits)
Relativistic kinematics. Particle interaction amplitudes and cross sections. Particle types including quarks, hadrons, leptons and bosons. Experimental methods in particle physics. Symmetries. The quark model. Weak interactions and electroweak unification. Particle physics beyond the Standard Model.
Prerequisite(s): PHYS 3324
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4534 - Quantitative Analysis of Physics Experiments (3 credits)
Statistical analysis of physics experiments. Probabilistic elements in experiments. Data analysis frameworks in physics subfields. Maximum likelihood estimation and Bayesian techniques. Physical principles and nuisance parameters. Analysis strategies and computational methods. Graphical data representation.
Prerequisite(s): PHYS 2504 and PHYS 3324 and CS 1064
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4554 - Introduction to Solid State Physics (3 credits)
Basic concepts of solid state physics including crystal structure, lattice vibrations, electron states, energy bands, semiconductors, metals. Consent required.
Corequisite(s): PHYS 4456
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4564 - Polymer Physics (3 credits)
Introduction to the field of polymer physics. Statistical descriptions of polymers based on Brownian motion and random walk models. Conformations and single chains. Thermodynamics of polymer mixtures, solutions, and melts. Properties of polymer networks. Polymer dynamics in both melt and solution states.
Prerequisite(s): PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4574 - Nanotechnology (3 credits)
Introduction to methods of controlling matter on the nanometer length scale and the applications thereof. Nanolithography, self-assembly, and scanned probe microscopy; nanomaterials including fullerenes, carbon nanotubes, and quantum dots; nanoscale and molecular electronics; nanoelectromechanical systems; nanoscale optoelectronics; and nanobiotechnology.
Prerequisite(s): PHYS 2205 and PHYS 2206 or PHYS 2305 and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4614 - Optics (3 credits)
Fundamentals of the ray, wave and quantum models of light, and topics in modern optics with contemporary applications.
Prerequisite(s): PHYS 2306 and (MATH 2214 or MATH 2214H) and (MATH 2224 or MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4624 - Optics Laboratory (1 credit)
Laboratory experiments dealing with ray and wave optical phenomena designed to illustrate and complement the principles covered in OPTICS PHYS 4614. Physics majors are required to take 4624 concurrently with the lecture course 4614.
Corequisite(s): PHYS 4614
Instructional Contact Hours: (3 Lab, 1 Crd)

PHYS 4634 - Modern Classical Physics (3 credits)
Geometric formulation of classical physics. Applications in relativity, optics, elasticity, fluid mechanics, plasma physics. Real-world examples from fundamental, experimental, and applied physics. Quantum roots of and quantum techniques in classical physics. Geometrical connections between classical mechanics, optics, and quantum physics. Problems in and connections between elasticity, fluid dynamics, magnetohydrodynamics, and plasma physics.
Prerequisite(s): PHYS 3355 and PHYS 3405
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4654 - Modern Cosmology (3 credits)
Survey of our current understanding of the origin, evolution, and fate of the Universe. Observational evidence behind the idea of the hot Big Bang, including the linear velocity-distance law, the existence of the cosmic microwave background, and the arguments for dark matter. Physics of a dynamic, expanding Universe via the Friedman-Lemaitre- Robertson-Walker metric. Physical principles to determine the conditions in the early Universe, introducing the idea of inflation. Mechanisms driving the origin and evolution of galaxies and large-scale structures.
Prerequisite(s): PHYS 3656
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4664 - Astroparticle Physics (3 credits)
Observations of high-energy photons, cosmic rays, and neutrinos. Energy-loss interactions in astrophysical environments. Propagation of cosmic particles and ultra-high energy cosmic rays. Origins of cosmic rays. Astrophysical neutrinos and neutrino oscillations. Stellar evolution and evolution into supernova explosions. Mechanisms of astrophysical particle acceleration. Multi-messenger astronomy.
Prerequisite(s): PHYS 3655 or PHYS 3656
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4674 - Introduction to General Relativity (3 credits)
Introduction to methods and applications of Einsteins general theory of relativity. Space and time and gravity in Newtonian physics; special theory of relativity, gravity as geometry of curved space-time; black holes; cosmology; Einsteins gravitational field equations; gravitational waves and relativistic stars.
Prerequisite(s): (MATH 2214 or MATH 2214H or MATH 2514) and PHYS 3355
Corequisite(s): PHYS 3406
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4684 - Quantum Software II (1 credit)
Modern software collaboration techniques and tools including collaborative code repositories and cloud-based documentation. Application of structure and version control to software and documentation. Developing code with industry-standard quantum-software modules. Hands-on scientific coding for quantum problems. Project management skills including proposal development and technical presentation delivery.
Prerequisite(s): CHEM 3684 or PHYS 3684
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: CHEM 4684

PHYS 4714 - Introduction to Biophysics (3 credits)
Selected topics from the general area of biomechanics, bioelectricity, radiation biophysics, molecular biophysics, and thermodynamics and transport in biological systems. Emphasis on the physical aspects of biological phenomena and biophysical measurement techniques and instrumentation.
Prerequisite(s): PHYS 2206 or PHYS 2306 or ISC 2106H
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4724 - Soft Matter Physics (3 credits)
Physical characteristics of various soft matter systems including liquids, liquid crystals, polymers, colloids, surfactants, granular materials, and biological soft materials. Van der Waals and electrostatic interactions in the context of soft matter. Descriptions of soft matter phases, phase diagrams, phase separation, and phase transitions. Theories of self-assembly and self-organization. Problems in and connections between elasticity, viscoelasticity, and mechanics of fluids including capillarity and wetting. Model of random walk and its applications to colloidal systems. Applications of variational methods in soft matter. Computer simulation methods in soft matter.
Prerequisite(s): PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4755 - Introduction to Computational Physics (3 credits)
Survey of computational methods in physics. 4755: Applications in physics of curve fitting, numerical calculus, ordinary and partial differential equations, numerical methods for matrices, spectral analysis, and N-body systems. 4756: Investigation of physical systems using Molecular Dynamics simulations, Monte Carlo simulations, genetic algorithm and numerical renormalization. Introduction to advanced techniques, as for example density matrix renormalization group method, matrix product state approach, smoothed particle hydrodynamics, and density functional theory.
Prerequisite(s): PHYS 2306 and CS 1044 or CS 1054 or CS 1064 or CS 1114 or ECE 1574 or AOE 2074 or ESM 2074
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4756 - Introduction to Computational Physics (3 credits)
Survey of computational methods in physics. 4755: Applications in physics of curve fitting, numerical calculus, ordinary and partial differential equations, numerical methods for matrices, spectral analysis, and N-boyd systems. 4756: Investigation of physical systems using Molecular Dynamics simulations, Monte Carlo simulations, genetic algorithm and numerical renormalization. Introduction to advanced techniques, as for example density matrix renormalization group method, matrix product state approach, smoothed particle hydrodynamics, and density functional theory.
Prerequisite(s): PHYS 4455 and PHYS 4755
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4774 - Intro to Physics of Galaxies (3 credits)
Survey of our current observational and theoretical understanding of the formation and evolution of galaxies. Observational review of galaxy sizes and compositions, including the origin of the Hubble sequence. Physical description of a galaxy via distribution functions and stellar orbits. Time evolution of the distribution function. The Schwarzschild method for determining orbits. The physics of active galaxies.
Prerequisite(s): PHYS 3656
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

PHYS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Plant Pathology, Physiology, and Weed Science (PPWS)

PPWS 2004 - Mysterious Mushrooms, Malicious Molds (3 credits)
Study of the fungi and their close relatives, with special attention to their roles in the natural world and in shaping the course of human history. Historical and practical significance of fungi as sources of medicine, pathogens of plants and animals, rotters and decayers of organic matter, makers of food and drink, manufacturers of dangerous toxins, and producers of mind-altering chemicals. A student must have a basic understanding of biology.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PPWS 2104 - Plants, Genes, and People (3 credits)
Explores how and why humans have manipulated plant genomes from prehistory through the current genomic era by examining the scientific, cultural, historical, and legal aspects of plant gene management in both conventional and transgenic crops.
Prerequisite(s): BIOL 1005 or BIOL 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

PPWS 2754 - Weeds That Shape Our World (3 credits)
How weeds shape our world, and why society will never get rid of them. Introduction to weed identification, weeds in their socio-cultural, environmental, and economic context. Consideration of the tension among their beneficial aspects, control, human attitudes, and the ethical dilemmas they post to society.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PPWS 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PPWS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PPWS 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PPWS 4104 - Plant Pathology (4 credits)
Introduction to plant pathology as a science and a crop protection discipline. Plant disease diagnosis, biology, and identification of plant disease-causing agents, factors leading to disease build-up, and management of plant diseases. Diseases of specific crops are studied as examples to illustrate general principles.
Prerequisite(s): (BIOL 1005 or BIOL 1105) and (BIOL 1006 or BIOL 1106)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

PPWS 4114 - Microbial Forensics and Biosecurity (3 credits)
Concepts of comparative and evolutionary genomics for pathogen characterization and identification taught through case studies of bioterrorism, involuntary and voluntary disease transmission, infectious disease epidemics, and genetically modified organisms; emphasis placed on unambiguous source attribution of a disease outbreak to a particular microbe, risk assessment, response as individual, community, and nation to a bioterrorism attack or disease outbreak, federal biosecurity regulations, and career opportunities.
Prerequisite(s): BIOL 2604 or PPWS 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

PPWS 4154 - Plant Problem Diagnosis (3 credits)
Plant problem diagnosis in the laboratory and field, including recognition of disease, insect and abiotic (nonliving) problems, as well as the major groups of plant pathogens of a variety of regionally important horticultural and agronomic crops. General management options for pests and pathogens.
Corequisite(s): PPWS 4104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

PPWS 4264 - Pesticide Usage (3 credits)
An interdisciplinary study of pesticides used in urban and agricultural environments. Topics studied will include: classification, toxicology, formulation, application techniques, safety, legal considerations, environmental impact, and research and development of new pesticides.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: ENT 4264

PPWS 4504 - Fundamentals of Plant Physiology (3 credits)
Fundamental principles of plant physiology (photosynthesis, respiration, transpiration, nutrition, translocation, and development) will be integrated with discussion of the relationship between abiotic environmental factors and plant physiological processes. Both agricultural and non-crop plants will be emphasized.
Prerequisite(s): (BIOL 1006 or BIOL 2304) and CHEM 1036
Instructional Contact Hours: (3 Lec, 3 Crd)

PPWS 4604 - Biological Invasions (3 credits)
Broad overview of the causes, consequences, and epidemiology of invasive plants, animals, and microbes. Conceptual, mechanistic, societal, and political components of invasive species from Darwin to modern day, covering the invasion process from introduction to ecological or economic impact. Taxonomy, management, and risk assessment will be covered via case studies, within a policy context.
Prerequisite(s): BIOL 1105 and BIOL 1106
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

PPWS 4754 - Weed Science: Principles and Practices (3 credits)
Weeds and human affairs; costs and losses; emphasis on weed biology, weed identification and weed-crop ecology; agronomic, physiological, and chemical principles underlying prevention, eradication, and control of undesired vegetation; methods of weed control available for modern agronomic, forestry, horticultural, and non-crop situations.
Prerequisite(s): BIOL 2304 and CHEM 1036
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

PPWS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PPWS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PPWS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PPWS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Political Science (PSCI)

PSCI 1XXX3 - GEN ED REASONING SOCIAL SCI (3 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

PSCI 1004 - Nations and Nationalities (3 credits)
Introduction to world and American ethnic and indigenous cultures and to social constructions of human and group identity, nationalism and extreme ethno-nationalism. History of the political, economic, and cultural transition from primordial communities to sovereign states. Introduction to the rise of racism, sexism, ethnicism, classism, nativism, xenophobia, etc. in modern societies and episodes of mass political violence including ethnic cleansing and genocide.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 1004

PSCI 1014 - Introduction to United States Government and Politics (3 credits)
Introduction to government and politics of the United States, the Constitution, and various institutional designs and structures. Focus on political culture, interest groups, voting franchise, political parties, and elections. Roles and responsibilities of Congress, bureaucracy, Presidency, and federal courts; Discussion of selected current policy issues and implications of diversity of elected representatives.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 1014H - Honors Introduction to United States Government and Politics (3 credits)
Introduction to government and politics of the United States, the Constitution, and various institutional designs and structures. Focus on political culture, interest groups, voting franchise, political parties, and elections. Roles and responsibilities of Congress, bureaucracy, Presidency, and federal courts; Discussion of selected current policy issues and implications of diversity of elected representatives.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 1024 - Introduction to Comparative Government and Politics (3 credits)
Government and politics of selected countries in the world: the necessity for government; the nature of politics and governmental systems; specific types of political systems; the effects and consequences of institutional designs; linkages of people and governments through political parties, interest groups, and social movements; current political issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 1024

PSCI 1024H - Honors Introduction to Comparative Government and Politics (3 credits)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 1034 - Introduction to International Studies and Political Science (3 credits)
Introduces students to the fields of International Studies and Political Science and their respective subfields. Familiarizes students with the undergraduate programs in International Studies and Political Science and emphasizes student preparation for careers in the respective fields. Focuses on inquiry, problem-solving, and integration of ideas and experiences with a focus on International Studies and Political Science. Familiarizes students with the basic principles of the research and writing principles.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 1034

PSCI 1084 - Food Studies (3 credits)
Interdisciplinary introductory course explores how food shapes and is shaped by culture and society. Examines how people use food to express meanings (e.g., via foodways, story, art, architecture, religion, ethical codes), how food options, practices, and inequities are shaped by social structures (e.g. cultural and legal norms regarding race, class, and gender), and how the material properties of food (e.g., chemical, ecological, technological) are linked to identities, ideological commitments, and historical moments.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 1084, RLCL 1084, SOC 1084

PSCI 1114 - Introduction to Transatlantic Studies (3 credits)
Multidisciplinary analysis of core issues and topics in transatlantic studies. Origins and evolution of transatlantic interactions. Historical, political, economic, cultural (including language and literature), civilizational, religious, and societal ties binding Europe and the Americas. Basic research techniques and evaluation of sources.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 1114

PSCI 1204 - Topics in Global Dialogues (1 credit)
Examination of the impact of culture in world politics. Topics under examination include: culture and global diversity; culture, identity, and order in world politics; international conflict and intercultural relations. Extensive use of case studies. May be repeated twice with different content for a maximum of three (3) credits.
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours
Course Crosslist: IS 1204

PSCI 2014 - Introduction to Political Theory (3 credits)
Examines central themes involved in the practices of normative political theory. Topics will include critical review of the historical origins, established traditions, and major themes in normative political thinking.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 2024 - Research Methods in Political Science (3 credits)
Introduction to research in political science; formulation of theory, operationalization and measurement, gathering, analysis and interpretation of data.
Prerequisite(s): (PSCI 1014 or PSCI 1014H) and (PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PPE 2024

PSCI 2034 - Geography of Global Conflict (3 credits)
Geographical dimensions of global conflicts, international management of conflicts, conflicts of differences, historical, ideological, failed states and resources will be examined. Background to conflicts, current status of conflicts, different points of view in conflict. Topics in the course will change as the geography of global conflict changes.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2034, IS 2034

PSCI 2044 - Food, War and Conflict (3 credits)
Explores the history of food production and processing relative to the commencement or continuation of conflict. Examines why and how wars have been fought over economic policies, food trade and control of food supplies. Examines efforts to protect food and water supplies from intentional contamination and acts of terrorism. Focus on food products and the preservation, processing and distribution technologies that arose from war and conflict.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FST 2044, IS 2044

PSCI 2054 - Introduction to World Politics (3 credits)
An introduction to the prevalent methods and theories in the study of world politics. Topics include: historical context of contemporary world politics, global actors and power relations, conflict and conflict resolution, international law, and contemporary global issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2054, IS 2054

PSCI 2064 - The Global Economy and World Politics (3 credits)
Introduction to theories and methods in the study of global political economy. Topics include: historical origins, comparative advantage, the factor endowment trade theory, the gold standard, economic nationalism, the Great Depression, the Bretton Woods System, Keynesianism, the Nixon shocks, international organizations, monetary governance, the Great Recession, poverty and underdevelopment, and contemporary challenges of income inequality within and among economies.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2064, IS 2064

PSCI 2074 - Law and Politics (3 credits)
Explores the roles of law and legal institutions within the United States. Focuses on structures and procedures of government from a constitutional perspective; the politics of law-making and law-enforcement by legislative, executive, and judicial institutions; and relationships between law and society.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 2084 - The Evolution of World Order (3 credits)
A historical and comparative study of states systems (i.e, ancient, medieval, modern, and contemporary states system). Emphasis on the globalization of the European states system, its various aspects (political, economic, cultural, religious, civilizational, and technological) and its implications for contemporary world order (i.e., the question of human equality and the impact of colonialism and post-colonialism on the question of social, political, and economic justice).
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2084

PSCI 2104 - Europe Country Analysis (3 credits)
Examination of the politics, economics, culture, society, population patterns, and history of individual European countries. Impact of individual European states' domestic affairs on their respective European sub-regions and Europe as a whole. Analysis of intra-European regional developments. Examination of differing country perspectives on European integration.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2104

PSCI 2114 - Transatlantic Political Frameworks (3 credits)
Examination of transatlantic political, security and economic institutions, such as the Organization for Economic Cooperation & Development (OECD), the North Atlantic Treaty Organization (NATO), and the Organization for Security & Cooperation in Europe (OSCE). Impact of domestic politics and external policies on the operation of transatlantic institutions. US-European relations and their impact on transatlantic institutions and European security. Bilateral political links between European and North America States (i.e., the UK-US- Canada, and France-Canada) and their impact on transatlantic relations and European security.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2114

PSCI 2134 - Geog of the Global Economy (3 credits)
Geographical dimensions of the global economy since World War II. Globalization and the emergence of a new international division of labor. The relative decline of the United States and the growth of Japan, East Asia and the European Union. Changing geographies of foreign direct investment location. Places and regions in geo-economic discourse. Population and resources issues in the early twenty-first century.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2134, IS 2134

PSCI 2164 - Foundations of Contemporary Security Environments (3 credits)
Introduction to multiple analytical perspectives on contemporary security environments, including political, legal, ethical, technical, environmental and historical and cultural perspectives relative to the conception, design and implementation of security solutions, practices, and policies. Emphasizes applying and analyzing the effectiveness of diverse procedures, tools and policies used in security and privacy solutions, decision-making, risk management and operational policy to mitigate local, national, international and global threats.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIT 2164, CS 2164

PSCI 2224 - Geography of Europe (3 credits)
Europe: as an idea, as a place, as a space, and as a political entity. Basic knowledge of Europe's historical physical environments, political geography, population distribution, varied cultures, and economic development. Cultural variations and their implications on settlement patterns, political divisions, and economic patterns and processes.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2224, IS 2224

PSCI 2484 - Religion and Politics (3 credits)
Investigation of religion and politics as distinct categories in different times and places. Analysis of episodes from both past and present in which religion and politics have come together, or have been kept apart. Examination of the roles religion and politics play in the modern world and how they impact the lived experience of diverse populations both in the United States and throughout the world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2484, RLCL 2484

PSCI 2954C - Study Abroad (1-19 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences
Instructional Contact Hours: Variable credit course

PSCI 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 3004 - Professionalism and Careers in Political Science and International Studies (3 credits)
Designed to teach students how to synthesize skills and information learned in their Political Science and International Studies classes. Exploration of various career options, graduate school options, and proper procedures for seeking and applying for employment and graduate school. Introduction to professionalism in the workplace and professional development in the area of political science and international studies. Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3004

PSCI 3015 - Political Theory (3 credits)
Analysis of the fundamental ideas in the history of political theory. 3015: The thought and ethical implications of philosophers from the ancient Greeks to early modern times. Analysis of writings from Plato through medieval theorists to those of the Seventeenth Century. 3016: The thought and ethical implications of philosophers from the late Seventeenth Century to the present. Analysis of key concepts in the thought of theorists from the early modern period until the present.
Prerequisite(s): PSCI 2014
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 3015

PSCI 3016 - Political Theory (3 credits)
Analysis of the fundamental ideas in the history of political theory. 3015: The thought and ethical implications of philosophers from the ancient Greeks to early modern times. Analysis of writings from Plato through medieval theorists to those of the Seventeenth Century. 3016: The thought and ethical implications of philosophers from the late Seventeenth Century to the present. Analysis of key concepts in the thought of theorists from the early modern period until the present.
Prerequisite(s): PSCI 2014
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 3016, PPE 3016

PSCI 3034 - The CIA: Its Capabilities in Todays Geo-Political World (3 credits)
Role of the discipline of geography in the origins, procedures, and history of CIA. Role of the CIA in providing national intelligence at both strategic and operational levels. Origins and changes to the CIA since WWII. Capabilities to support both policy-makers and national security entities. Case studies illustrating the CIAs operations in different regions of the world.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 3034, IS 3034

PSCI 3044 - The Politics of Internet Governance (3 credits)
Introduces students to theoretical, technological, and policy debates in Internet governance. Topics include multistakeholder governance, cybersecurity and cybercrime, network investigative techniques, data protection, vulnerability disclosure, use of anonymity-granting technologies, network neutrality, virtual currencies, big data, algorithmic bias and decision-making, politics of the domain name system, privacy, free expression, cross-border dispute resolution, data ownership, and challenges to state authority.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3044

PSCI 3054 - The Dark Web and Threat Analytics (3 credits)
Introduction to dual-use anonymity-granting technologies such as the Dark Web. Covers open source threat intelligence as a technique to assess trends and trajectories in anonymous online content. Substantive topics include the use of Dark Web technologies for political expression in repressive regimes, anonymity and privacy protection in an age of big data as well as the misuse of these tools for doxing, trolling, and the creation of illegal markets for drugs, guns, malicious software, human trafficking, and child abuse imagery. Junior Standing
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3054

PSCI 3064 - Food Politics (3 credits)
Focuses on how scholars, pundits, citizens, and policymakers think about food on local, national, and global scales. Explores various ways of producing, distributing, and consuming food and how they are implicated in specific organizations of power and possibility. Examines how food, and the discourses surrounding food, help structure understandings of a variety of issues, such as identity, property, labor, gender, race, responsibility, and death.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3064

PSCI 3104 - Security Studies: Theories and Concepts (3 credits)
Introduces the various theoretical approaches to security. Examines key concepts in the field of Security Studies, such as uncertainty, polarity, war, coercion, terrorism, intelligence, genocide, crimes against humanity, ethnic conflict, and human security.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3104

PSCI 3114 - Global Security (3 credits)
Explores various theoretical approaches to security and discusses traditional and non-traditional security issues. Focuses on global, international and regional security challenges and examines alternative strategic and tactical solutions for addressing them.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3114

PSCI 3115 - Selected World Problems (3 credits)
Selected world problems and how they affect various countries and regions. Each semester, a topic will be chosen. 3115: World problems in a global or regional context. 3116: World problems in a European context. 3115 and/or 3116 may be repeated for a combined maximum of 9 credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 3115

PSCI 3116 - Selected World Problems (3 credits)
Selected world problems and how they affect various countries and regions. Each semester, a topic will be chosen. 3115: World problems in a global or regional context. 3116: World problems in a European context. 3115 and/or 3116 may be repeated for a combined maximum of 9 credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 3116

PSCI 3125 - Intelligence and National Security (3 credits)
Introduces students to the field of Intelligence Studies. Focuses on the structure, role and capabilities of the U.S. intelligence community and investigates the relationship between intelligence and national security strategy. Addresses topics pertaining to data collection and intelligence analysis, covert operations and counterintelligence. 3125: Intelligence and National Security. 3126: The Intelligence Process.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3125

PSCI 3126 - Intelligence and National Security (3 credits)
Introduces students to the field of Intelligence Studies. Focuses on the structure, role and capabilities of the U.S. intelligence community and investigates the relationship between intelligence and national security strategy. Addresses topics pertaining to data collection and intelligence analysis, covert operations and counterintelligence. 3125: Intelligence and National Security. 3126: The Intelligence Process.
Prerequisite(s): IS 3125 or PSCI 3125
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3126

PSCI 3134 - Global Conflict and War (3 credits)
Focuses on the causes, legal and moral constraints, impacts, and consequences of conflict and war. Explores historical and contemporary cases of conflict and war and investigates the role of state and non-state actors in these conflicts. Examines the impact of technology, religion, culture and identity on the present and future of war.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3134

PSCI 3135 - Strategies of Modern Warfare (3 credits)
3135: Analyzes the theory and practice of conventional warfare and investigates how strategic thought has influenced and shaped modern warfare. 3136: Examines the theory and practice of irregular warfare and focuses on the theory and practice of counterinsurgency and counterterrorism.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3135

PSCI 3136 - Strategies of Modern Warfare (3 credits)
3135: Analyzes the theory and practice of conventional warfare and investigates how strategic thought has influenced and shaped modern warfare. 3136: Examines the theory and practice of irregular warfare and focuses on the theory and practice of counterinsurgency and counterterrorism.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3136

PSCI 3144 - Global Governance and Public Policy (3 credits)
Examines the norms, institutions, practices and processes developed by the international community to address global problems such as poverty, pandemics, global warming, displaced persons and transnational crim. Utilizes theories of decision- and policy-making and investigates the role of states, international governmental and non-governmental organizations, coalitions and corporations in global public policy-making.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3144

PSCI 3154 - Topics in Global Public Policies (3 credits)
Examines in depth selected global public policies pertaining to health, energy, development, education, refugees or labor. May be repeated with different content for a maximum of nine (9) credits.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 3154

PSCI 3164 - Global Trade: Structures and Policies (3 credits)
Focuses on the operations of global trading system and its structure, theories of trade in international political economy, world trading powers and international and regional trade international organizations such as the World Trade Organization (WTO), the European Union (EU), the United States-Mexico-Canada Agreement (USMC), European Union (EU), United Nations Conference on Trade and Development (UNCTAD), the United Nations Industrial Development Organization (UNIDO) and the World Intellectual Property Organization (WIPO) and their policies.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3164

PSCI 3165 - Global Economic Governance and Policy (3 credits)
3165: International Trade - Focuses on the operations of global and regional international organizations such as the World Trade Organization (WTO), the European Union (EU), the United Nations Conference on Trade and Development (UNCTAD), the United Nations Industrial Organization (UNIDO) and the World Intellectual Property Organization (WIPO) and examines their policies and regulations. 3166: International Finance- Focuses on the operations of global and regional international organizations such as the International Monetary Fund (IMF) and World Bank, the European Union (EU), the Organization for Economic Cooperation and Development (OECD) and examines their policies and regulations.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3165

PSCI 3166 - Global Economic Governance and Policy (3 credits)
3165: International Trade - Focuses on the operations of global and regional international organizations such as the World Trade Organization (WTO), the European Union (EU), the United Nations Conference on Trade and Development (UNIDO), and the World Intellectual Property Organization (WIPO) and examines their policies and regulations. 3166: International Finance- Focuses on the operations of global and regional international organizations such as the International Monetary Fund (IMF) and World Bank, the European Union (EU), the Organization for Economic Cooperation and Development (OECD) and examines their policies and regulations.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3166

PSCI 3174 - Monetary Foundations of the World Economy (3 credits)
Focuses on the evolution the operations of global and structure of regional international organizations such as the International Monetary Fund (IMF) and World Bank, the global financial and monetary order. Theories of the global and monetary system in international political economy, the structure of world finance, international financial institutions, the rise of new financial powers in the world economy, central banking, monetary and financial regulation and financial crises and policy responses.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3174

PSCI 3175 - Global Development (3 credits)
3175: The Politics of Development - Examines issues and politics of the developing world and investigates the forces that promote or cut off economic development in low-income countries. Discusses development issues in various world regions. 3176: Economic Development - Emphasizes economic development and focuses on domestic and international policies aiming at addressing poverty in the developing world.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3175

PSCI 3176 - Global Development (3 credits)
3175: The Politics of Development - Examines issues and politics of the developing world and investigates the forces that promote or cut off economic development in low-income countries. Discusses development issues in various world regions. 3176: Economic Development - Emphasizes economic development and focuses on domestic and international policies aiming at addressing poverty in the developing world.
Prerequisite(s): (IS 2054 or PSCI 2054 or GEOG 2054) and (IS 2064 or PSCI 2064 or GEOG 2064)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3176

PSCI 3184 - Human Security (3 credits)
Introduces the field of human security and examines the conceptual, theoretical and methodological issues surrounding it. Identifies the relevant human security actors, explores the tools of human security, and discusses the application of human security. Investigates the implications of human security and discusses its future.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3184

PSCI 3194 - Nuclear Strategy & Politics (3 credits)
Examines the fundamentals of nuclear strategy and investigates the politics associated with the acquisition and proliferation of nuclear weapons. Focuses on nuclear doctrines and policies and explores international efforts associated with nuclear arms control and disarmament. Analyzes the nuclear postures of various nuclear states.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3194

PSCI 3214 - Political Participation (3 credits)
Levels and types of political participation; reasons for participation; who participates and why; effects of political activity on political processes.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3224 - Public Opinion (3 credits)
Sources and distribution of public opinion; measurement of public opinion; relationships between public opinion and public policy; institutions linking public opinion to government decisions.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3234 - Voting and Elections (3 credits)
Voting, elections, and support for political parties and party leaders in the United States and other Western democracies; impact of economic conditions on political support and patterns of realignment and dealignment.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3244 - Political Communication (3 credits)
Distribution of political information; elite-mass communication; alternative models of political communication; communication and telecommunications policy.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JMC 3244

PSCI 3254 - Media and Politics (3 credits)
Explore the role of the mass media in contemporary American politics by examining the development of media as sources of social and political influence. Study of news organizations, their coverage of electoral and issue campaigns, and their impact on candidates and voters. Includes the role of new technologies in campaigns. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JMC 3254

PSCI 3255 - The Politics of Race, Ethnicity and Gender (3 credits)
Studies the status and political behavior of selected political minorities. 3255: compares African-, Mexican- and Native-Americans. 3256: examines diverse political responses to traditional gender roles, current gender issues, and the unique gender problems facing people of color.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3256 - The Politics of Race, Ethnicity and Gender (3 credits)
Studies the status and political behavior of selected political minorities. 3255: compares African-, Mexican- and Native-Americans. 3256: examines diverse political responses to traditional gender roles, current gender issues, and the unique gender problems facing people of color.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3274 - Political Parties (3 credits)
Development, organization, activities, and personnel of political parties; citizens partisan attitudes and behavior; origins, characteristics, stability, and changes of party systems.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3314 - Congress (3 credits)
Congressional structure; organization and procedure; characteristics of members of Congress; Congressional elections; decision-making and external influences; change and reform.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3324 - The Presidency (3 credits)
Election, institutionalization, staffing, relations with Congress, and the bureaucracy; initiation and implementation of public policy.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3334 - Judicial Process (3 credits)
Structure and functions of American legal institutions; participants in the process, impact of legal institutions on society.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3344 - Global Environmental Issues: Interdisciplinary Perspectives (3 credits)
Critical examination of major global environmental problems from a humanities perspective, including international community responses to global environmental problems such as global warming, atmospheric ozone depletion, acid rain, tropical deforestation, toxic waste. Actions by key actors in the international community to develop solutions. Relationship of justice, fairness, equality, and diversity to political questions of power or authority. Pre: 3 credits of Critical Issues in a Global Context.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3344, UAP 3344

PSCI 3354 - Constitutional Law: Structures and Relationships (3 credits)
Power and authority of president, Congress, and courts; division of powers between states and federal government.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3364 - Constitutional Law: Civil and Political Rights (3 credits)
Civil rights and liberties; rights of criminal defendants; competing conceptions of constitutional rights.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3374 - The Politics of Energy (3 credits)
Critical and humanistic perspectives of energy and its global problems. Politics and ethics of fuel extraction, distribution, and consumption across cultures and histories. Energy narratives, discourses, and aesthetics in the formation of political identities. Energy and the rise of modern democracy and global capitalism, with an emphasis on the energy dimensions of climate justice. Pre: Junior Standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3374

PSCI 3384 - Politics of Global and Comparative Migration (3 credits)
Theories and politics of international migration. How policies in destination, transit, and origin countries influence migration. Why governments adopt the migration policies they do. Impacts of global, regional, and national politics and policies on migration among countries.
Prerequisite(s): PSCI 1024 or IS 1024 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064 or PSCI 2084 or IS 2084
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3384

PSCI 3394 - Comparative Politics of Immigrant Inclusion (3 credits)
Theories of citizenship applied across levels of government. Comparative policies for political, social, and military inclusion. Explanations for variations in policies supporting citizenship and inclusion across countries. Explanations for differences among immigrants' political inclusion across countries.
Prerequisite(s): PSCI 1024 or IS 1024 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064 or PSCI 2084 or IS 2084
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3394

PSCI 3414 - Public Administration (3 credits)
The role and context of public administration in the contemporary United States, administrative organization and decision-making, public finance, human resources administration, and program implementation.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 3434

PSCI 3424 - State and Local Government (3 credits)
Institutions, functions, and policies of state, county, and municipal governments in the U.S.; issues confronting these governments in the federal system.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3434 - Urban Politics (3 credits)
Basic concepts of urban politics; governmental structures, policy processes, and political conflicts in U.S. cities, policy options for coping with urban problems.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3444 - Administrative Law and Policy (3 credits)
The legal context of the exercise of discretion by public administrators in the United States. Adjudication and rule- making; access to administrative processes and information; legislative and judicial control of administration.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 3444

PSCI 3514 - Latin American Government and Politics (3 credits)
Introduction to the political systems of Latin American countries, including legislative-executive relations, interest groups, political parties, electoral systems, political violence, and socio-political development.
Prerequisite(s): PSCI 1014H or PSCI 1014 or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3514

PSCI 3515 - European Political Systems (3 credits)
The government and politics of selected European states and of the European Union. 3515: normally includes the United Kingdom. 3516: normally includes Germany and Hungary.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3515

PSCI 3516 - European Political Systems (3 credits)
The government and politics of selected European states and of the European Union. 3515: normally includes the United Kingdom. 3516: normally includes Germany and Hungary.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3516

PSCI 3524 - Politics of Post-Communist Systems (3 credits)
Institutions, party structures, political economy, elite politics, ethnic conflicts, leadership dynamics, and mass political behavior in Russia and other post-communist political systems.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3524

PSCI 3534 - African Government and Politics (3 credits)
Survey of major concepts and themes in the study of African politics and development: analyses of the state, political institutions, social forces, democratization, sustainable development, issues of contemporary African politics.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3534

PSCI 3544 - The State of Israel: A Political History (3 credits)
This course provides a survey on the political history of the State of Israel and highlights major themes uniquely characterizing the specific events surrounding its establishment and its first 50 years of existence. Additionally, the course will add a comparative dimension by using the political history of Israel as a case study to discuss major themes in political science such as democracy, government, political economy, etc.
Prerequisite(s): PSCI 1024 or PSCI 1024H or JUD 2134
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 3544, RLCL 3544

PSCI 3554 - Comparative Political Economy (3 credits)
Economic policies and collective choice processes of pre-industrial, industrializing, and advanced industrial states; problems and crises of industrial development, economic distribution, and technological transfer in the transition from an agrarian to advanced industrial society.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3554

PSCI 3564 - Violent Political Change (3 credits)
Historical origins, political processes, and institutional outcomes of violent political change, rising from mass protest movements, revolutionary organization, military coups, and radical political parties.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3574 - Government and Politics of Japan (3 credits)
Introduction to governmental institutions, patterns of political organization and behavior, and key policies of the Japanese political system.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3574

PSCI 3584 - Governments and Politics of Asia (3 credits)
Introduction to governmental institutions, political behavior, and social and economic policy approaches of China and other selected countries in the Asian region.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3584

PSCI 3594 - Topics in Middle East Politics and International Relations (3 credits)
Government and politics of Middle Eastern states. Religion, culture and society in the Middle East. Nationalism and Middle East politics. Regional conflicts and regional security. International relations of the Middle East. Great powers and Middle East politics. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 1024 or PSCI 1024 or IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3594

PSCI 3615 - International Relations (3 credits)
Structure and development of the modern international system; theories of international politics; international law; international organizations.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3615

PSCI 3616 - International Relations (3 credits)
Structure and development of the modern international system; theories of international politics; international law; international organizations.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3616

PSCI 3624 - Foreign Policy and Diplomacy (3 credits)
Focuses on actors, issues, and processes pertaining to foreign policy formulation and implementation. Examines theoretical and historical perspectives on foreign policy analysis. Investigates the national security, foreign policy, and diplomacy nexus. Discusses types of diplomacy and diplomatic methods.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3624

PSCI 3625 - US-Russia Foreign Policies (3 credits)
3625: Formulation of American foreign policy; roles of the President, Congress, press, public, and bureaucracy; central themes, issues, and problems of American diplomacy; 3626: Development and operational practices of Russian foreign policy decision-making in the international environment; party and state political institutions; Marxist-Leninist ideology.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3625

PSCI 3626 - US-Russia Foreign Policies (3 credits)
3625: Formulation of American foreign policy; roles of the President, Congress, press, public, and bureaucracy; central themes, issues, and problems of American diplomacy; 3626: Development and operational practices of Russian foreign policy decision-making in the international environment; party and state political institutions; Marxist-Leninist ideology.
Prerequisite(s): PSCI 1024 or PSCI 1024H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3626

PSCI 3634 - Human Rights: Global Issues (3 credits)
Identification, articulation and clarification of the relationship between human rights and other contemporary international phenomena, issues, events, and processes that affect human rights. Detailed consideration of the diverse traditions and cultural interpretations of human rights.
Prerequisite(s): PSCI 1024 or PSCI 1024H or IS 1024 or IS 1024H or PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3634

PSCI 3684 - Indigenous Peoples and World Politics (3 credits)
A survey of the historical and contemporary struggles of indigenous peoples throughout the world. Examines the dynamics of colonialism (internal and external), identity construction, gender, cultural integrity, and the ongoing global indigenous rights discourse. In addition to covering broad global processes/theoretical approaches, comparative case studies of particular indigenous groups, such as the Maasai (Kenya, Tanzania) and Mayans (Mexico, Guatemala, Belize), are used to highlight the global, regional and intra-community diversity among contemporary indigenous peoples.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 3684

PSCI 3694 - Far-right Violence in the United States (3 credits)
Assessment of theoretical and conceptual foundations to understand the rise of far-right violence in the United States. Identification of causes of radicalization into the far-right. Comparison of case studies of historical and contemporary far-right violence. Evaluation of differences and similarities in historical and contemporary case studies. Appraisal of successful responses to far-right violence.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3694

PSCI 3704 - National Security Strategy (3 credits)
Focuses on the causes of war and the conditions of peace. Examines the logic, levels, and outcomes of strategy and investigates the impact of international law and politics on the use of force. Explores contemporary strategic theory and discusses current issues in grand strategy.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3704

PSCI 3714 - The U. S. Policy Process (3 credits)
Description and analysis of the processes and institutions involved in the making and implementation of public policy in the United States, with a primary focus on domestic and economic policy. Empirical and normative models of the process of public policy making in the U.S.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 3714

PSCI 3724 - Poverty and Welfare Policy (3 credits)
Public policies regarding the poor, impact of current policies; future policy options.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3734 - National Security (3 credits)
Post-1945 strategic problems, policies, and security commitments of major participants in international politics, especially the United States and Russia; effects of security policies on international and domestic political economies.
Prerequisite(s): PSCI 2054 or IS 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3734

PSCI 3744 - Public Policy Analysis (3 credits)
Methods and approaches used in the analysis and evaluation of public policy; strengths and limitations of various analytic tools; normative issues in the practice of policy analysis.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 3744

PSCI 3754 - American Political Theory (3 credits)
American political theory from the pre-Revolutionary era to the present. American contribution to the understanding of freedom, equality, political community, constitutionalism, political dissent, and the welfare state.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3764 - Contemporary Democratic Theory (3 credits)
History and critiques of classical theories of democracy; contradictions within and contemporary problems facing democracy; future of democracy according to conservative, liberal, and radical theoretical perspectives.
Prerequisite(s): PSCI 2014 and (PSCI 3015 or PHIL 3015 or PSCI 3016 or PHIL 3016)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3774 - Marxian Political Analysis (3 credits)
Contemporary uses of Marxian concepts and theories to study the world economy, business structure, current social issues, modern ethical values, and alienation.
Prerequisite(s): PSCI 2014 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 3774

PSCI 3784 - Origins of the State (3 credits)
Theories of the origins of politics and government; evidence of state formation in prehistoric societies; political behavior in contemporary pre-literate societies as precursor to state formation.
Prerequisite(s): PSCI 2014 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064 or PSCI 2084 or IS 2084
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 3795 - Global Terrorism and Counterterrorism (3 credits)
Evaluation of theories and concepts used to analyze terrorism and counterterrorism. Identification and analysis of origins, causes, and consequences of terrorism globally. Comparison of historical and contemporary terrorism and counterterrorism. Appraisal of how histories of colonialism and the growth of new media affect terrorism and responses to terrorism. Identification of successful counterterrorism methods, strategies and practices. Evaluation of ethics and human rights in global counterterrorism. 3795: histories, origins, and spread of terrorism; 3796: strategies and practices of counterterrorism.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3795

PSCI 3796 - Global Terrorism and Counterterrorism (3 credits)
Evaluation of theories and concepts used to analyze terrorism and counterterrorism. Identification and analysis of origins, causes, and consequences of terrorism globally. Comparison of historical and contemporary terrorism and counterterrorism. Appraisal of how histories of colonialism and the growth of new media affect terrorism and responses to terrorism. Identification of successful counterterrorism methods, strategies and practices. Evaluation of ethics and human rights in global counterterrorism. 3795: histories, origins, and spread of terrorism; 3796: strategies and practices of counterterrorism.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3796

PSCI 3804 - European Integration (3 credits)
Analysis of the process of industrial, political, legal, economic, social and cultural integration of states in Europe as a whole or within a European sub-region. History and theories of European integration. Examination of various European organizations whose actions reflect different approaches to and different degrees of integration in Europe.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3804

PSCI 3814 - The European Union: Institutions and Policies (3 credits)
Evolution, organizational structure, political dynamics, and decision-making mechanisms of the European Union. Major internal and external EU policies such as foreign, security and defense policy, economics, Single Market, and monetary union.
Prerequisite(s): IS 3804 or PSCI 3804
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3814

PSCI 3824 - European Union's Foreign and Security Policy (3 credits)
The European Union (EU) as an actor in the foreign, security and defense policy fields. The external relations of the EU and its role in world affairs. The institutional arrangements of EU external relations and EU activity in policy areas including human rights, peacekeeping, environmental governance, trade, and economic development.
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3824

PSCI 3825 - European Union's Foreign Relations (3 credits)
The global strategy and foreign policy objectives of the European Union and the evolving relations between the EU and the rest of the world. EU's role in world affairs. 3825: EU's global strategy and its relations with major world powers, such as the United States, Russia, and China. 3826: EU's global strategy and its relations with countries in various world regions as well as global multilateral organizations, such as the United Nations (UN) and the World Trade Organization (WTO).
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3825

PSCI 3826 - European Union's Foreign Relations (3 credits)
The global strategy and foreign policy objectives of the European Union and the evolving relations between the EU and the rest of the world. EU's role in world affairs. 3825: EU's global strategy and its relations with major world powers, such as the United States, Russia, and China. 3826: EU's global strategy and its relations with countries in various world regions as well as global multilateral organizations, such as the United Nations (UN) and the World Trade Organization (WTO).
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3826

PSCI 3834 - European Security Governance (3 credits)
Structure and function of major European security organizations, such as the North Atlantic Treaty Organization (NATO), the European Union (EU), the Organization for Security and Cooperation in Europe (OSCE), and the Collective Security Treaty Organization (CSTO). In-depth analysis of those organizations' role in the European security architecture. Examination of inter-organizational cooperation in addressing European security issues and conflicts.
Prerequisite(s): IS 3804 or PSCI 3804
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3834

PSCI 3844 - European Geopolitics (3 credits)
Impact of Geography on European politics and economics. Significance of territorial, identity, networking and environmental geopolitics. Theoretical debates in the fields of political and population geography. Current culture and demographic challenges and geopolitical disputes within Europe and particularly between the European Union (EU) and its neighboring world regions.
Prerequisite(s): GEOG 2224 or IS 2224 or PSCI 2224
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 3844, IS 3844

PSCI 3854 - European Political Economy (3 credits)
The European Union's major institutions and policies relating to economic and monetary union and trade. Monetary integration, fiscal and economic policy cooperation, financial integration (including the banking union), the single market and the common commercial policy, the common agricultural policy and the EU's regional policy. The internal structure and organization of the European political economy and the external dimension of Europe and its impact on global economics, ranging from the World Trade Organization to EU enlargement and the Developing World.
Prerequisite(s): IS 3814 or PSCI 3814
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3854

PSCI 3874 - The European Business Environment (3 credits)
Political, legal, economic, socio-cultural, technological and environmental issues and policies affecting the operation and strategies of foreign companies in Europe. Business operations inside and outside the European Union. Impact of EU policies and the EU legal framework on business strategies and policies of non-EU companies. Business strategy for the European market, marketing and human resources management in Europe, and corporate governance and control in Europe. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3874, MGT 3874

PSCI 3884 - Topics in Philosophy, Politics, and Economics (3 credits)
Topics-based course in philosophy, politics, and economics (PPE). Discussion of important topics and thinkers in PPE with historical and practical relevance. Focus on interdisciplinary analysis and methods. Topics include: limits of markets; well-being theory, science, and policy; socioeconomic justice; economic and political institutions; and global poverty. May be repeated 1 time with different content for a maximum of six credits hours. Pre: 3 credit hours in PPE, PHIL, PSCI, or ECON.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: ECON 3884, PHIL 3884, PPE 3884

PSCI 3894 - Transatlantic Relations Since 1945 (3 credits)
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3894

PSCI 3914 - European Economics (3 credits)
Microeconomics, macroeconomics and economic policies of the European Union. EU economic law, institutions, decision-making, and budgeting. Historic and current influences on regional economic development. Monetary and fiscal policies. Economic research methods, analysis, and reporting.
Prerequisite(s): ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 3914, IS 3914

PSCI 3924 - Theories of Transatlantic Relations (3 credits)
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3924

PSCI 3934 - NATO & European Security (3 credits)
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3934

PSCI 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 4024 - Seminar in Diplomacy and Security (3 credits)
In-depth analysis of selected topics in diplomacy, strategy, and national security including issues pertaining to international conflict and cooperation; dimensions of national power; objectives of national policy and implementation of national strategy; diplomatic negotiations; and conflict resolution. Senior Standing.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4024

PSCI 4034 - Topics in Diplomacy Lab (3 credits)
Examines the fundamentals of policy analysis and formulation and emphasizes research and writing on topics pertaining to diplomacy, security, and foreign policy. Focuses on policy analysis and evaluation and concentrates on policy design. Emphasizes preparation and presentation of policy reports. May be taken three times for credit with different policy topics. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 4034

PSCI 4054 - Seminar in Global Political Economy (3 credits)
Examines theoretical and historical approaches to global political economy and assesses their practical implications. Focuses on issue areas such as production, trade, money, finance and investment and analyzes their implications for the global economic and political order. Investigates issues pertaining to economies of development and in transition. Senior Standing.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4054

PSCI 4064 - Seminar in Global Development (3 credits)
Examines how economic and political forces interact in the developing world, discusses the history of these interactions from the pre-colonial period to the present and explores how colonialism shaped the developing worlds economic and political trajectories. Utilizes case studies, historical analysis and development economies to better understand the economic and political condition of countries in the developing world. Senior Standing.
Prerequisite(s): IS 2064 or PSCI 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4064

PSCI 4074 - The Politics of Cybersecurity (3 credits)
Analyses the politics of cybercrime, cyberwar, and the challenges of producing effective cybersecurity. Topics include the economics of cybersecurity, the cross-border nature of global cybercrime, encryption and anonymity-granting technologies, targeting critical national infrastructure, network investigative techniques, cybersecurity measurement, politics of zero-day vulnerabilities, and the process of providing effective cybersecurity at the individual, organizational, subnational, and national levels.
Prerequisite(s): PSCI 3044 or IS 3044
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4074

PSCI 4104 - Topics in European Studies (3 credits)
Selected issues pertaining to European Studies, such as racism in Europe, European art and society, religion and society in Europe, gender politics, and demographic trends in Europe. May be repeated twice with different content for a maximum of nine (9) credits. Pre: Senior Standing.
Prerequisite(s): IS 1104
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 4104

PSCI 4144 - Topics in Transatlantic Relations (3 credits)
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 4144

PSCI 4154 - Topics in Transatlantic Studies (3 credits)
Research and analysis of selected issues pertaining to transatlantic studies. Topics under examination include: religion and the transatlantic world; the political economy of the transatlantic slave trade; and the role of culture, language, and literature in cementing transatlantic ties. May be repeated twice with different content for a maximum of nine (9) credits.
Prerequisite(s): IS 1114 or PSCI 1114
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: IS 4154

PSCI 4164 - Future of Security: Integrative Solutions for Complex Security Systems (3 credits)
Identification and analysis of complex, real-world security problems and threats to people, organizations, and nations across multiple domains, roles and future scenarios. Crisis communication, decision making tools, ethical principles and problem-solving methods to respond, assess options, plan, scope, and communicate before, during and after conflicts, disasters and attacks. Use of an experiential learning facility, and participation in a reality-based team simulation of cascading security and disaster events.
Prerequisite(s): PSCI 2164 or BIT 2164 or CS 2164
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BIT 4164, CS 4164

PSCI 4174 - Climate Change and the International Policy Framework (3 credits)
Science, causes and impacts of climate change. Mitigation and adaptation measures to address the causes and impacts of climate change. International climate change policy, with attention to the policy making process, in particular the role of the United Nations Framework Convention on Climate Change and climate negotiations. Science and diplomacy in climate negotiations to achieve successful outcomes. The ethical and social implications of climate change policies.
Pathway Concept Area(s): 1A Discourse Advanced, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 4174, IS 4174

PSCI 4184 - Capstone Project Transatlantic Studies (3 credits)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4184

PSCI 4214 - Senior Seminar in Political Behavior (3 credits)
Political behavior: socialization, voting, opinion formation and expression, decision-making in government, as explained by personality, rationality, culture, class, and institutional roles. Topics vary from semester to semester as announced. Senior standing.
Prerequisite(s): PSCI 3214 or PSCI 3224 or PSCI 3234 or PSCI 3244 or PSCI 3264 or PSCI 3274
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 4314 - Senior Seminar in Political Institutions (3 credits)
Selected topics in political institutions, including decision-making, types and structures of political institutions, internal and external influences on institutional behavior. Topics vary from semester to semester. Senior standing.
Prerequisite(s): PSCI 3314 or PSCI 3324 or PSCI 3334 or PSCI 3515 or PSCI 3516 or PSCI 3524
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 4324 - Senior Seminar in Constitutional Law (3 credits)
Cases, law review articles, and related materials containing describing, or commenting on major decisions of the U.S. Supreme Court. Topics vary from semester to semester as announced. Senior standing.
Prerequisite(s): PSCI 3354 or PSCI 3364
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 4414 - Senior Seminar in Public Administration (3 credits)
Selected topics in public administration, including norms of practice, government personnel, administrative process, administrative law, privatizing, and contracting. Topics vary from semester to semester as announced. Must have senior standing.
Prerequisite(s): PSCI 3414 or PSCI 3424 or PSCI 3444
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 4514 - Senior Seminar in Comparative Politics (3 credits)
Selected topics in the comparative analysis of political behavior, processes, and institutions; cross-national institutional and aggregate data analysis. Topics vary from semester to semester as announced. Must have senior standing.
Prerequisite(s): PSCI 3515 or PSCI 3516 or PSCI 3524 or PSCI 3554 or PSCI 3564 or PSCI 3514 or PSCI 3534 or PSCI 3544 or PSCI 3574 or PSCI 3584
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 4614 - Senior Seminar in International Relations (3 credits)
Selected topics in international relations, including objectives of national policy, dimensions and components of national power, comparative diplomacy, international conflict and cooperation, instruments for conflict resolution. Topics vary from semester to semester as announced. Must have senior standing and any two of the prerequisites.
Prerequisite(s): PSCI 3615 or PSCI 3616 or IS 3615 or IS 3616 or PSCI 3625 or PSCI 3626 or PSCI 3734 or IS 3626 or IS 3734
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4614

PSCI 4624 - The Washington Semester: Seminar in American Politics and Public Policy (3 credits)
This seminar is the integrative forum for the principal elements of the Washington Semester experience. The course explores both the role of political institutions in policy formation and implementation and the primary managerial and leadership challenges that arise for implementing organization managers in American democratic public policy-making. Pre: Junior standing or instructor consent and acceptance into the Washington Semester program.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 4624

PSCI 4644 - Washington Semester: Politics, Policy and Administration in A Democracy (3 credits)
This course is part of the Washington Semester. Explores the relationship between the imperatives of democratic mobilization, policy choices and organizational choices through intensive study of the operating context of a selected public or nonprofit organization. Examines implications of policy-maker choices for implementing institution dynamics and challenges. Pre: Junior standing and acceptance into the Washington Semester program required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 4644

PSCI 4714 - Senior Seminar in Policy Analysis (3 credits)
Theoretical, analytical, and methodological approaches used to assess government activities and public policy. Topics vary from semester to semester as announced. Must have senior standing.
Prerequisite(s): PSCI 3724 and PSCI 3734
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4714

PSCI 4724 - Senior Seminar in Political Theory (3 credits)
Selected topics in analytic political philosophy, contemporary ideologies, and democratic theory. Topics vary from semester to semester as announced. Senior standing required. Must have senior standing and any two of the prerequisites.
Prerequisite(s): PSCI 3015 or PHIL 3015 or PSCI 3016 or PHIL 3016 or PSCI 3754 or PSCI 3764 or PSCI 3774 or UAP 3774
Instructional Contact Hours: (3 Lec, 3 Crd)

PSCI 4734 - Theories and Practices of International Conflict Management (3 credits)
Examines alternative perspectives on peace, security, and international intervention and their implications for policy. Focuses on the role international organizations and other actors in conflict resolution and peace-building and explores issues pertaining to humanitarian intervention, human security, and state-building. Utilizes case studies in peacekeeping and peace building to highlight the link between theory and practice.
Prerequisite(s): PSCI 3616 or IS 3616
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4734

PSCI 4735 - Topics in Multilateral Diplomacy Workshop (3 credits)
Simulation of diplomatic practice in major global and regional international organizations. Diplomatic strategies and tactics. Effects of decision-making and policy-making structures and processes on diplomatic outcomes. Crisis management and conflict resolutions mechanisms. Diplomatic negotiations and diplomatic resolutions. Extensive use of simulations. 4735: Multilateral diplomacy in global organizations: United Nations (UN) and World Trade Organization (WTO). May be repeated once with different content for a maximum of six (6) credits. 4736: Multilateral diplomacy in sub-global/regional organizations: European Union (EU), North Atlantic Treaty Organization (NATO), and Organization for Security & Cooperation in Europe (OSCE). May be repeated once with different content for a maximum of six (6) credits. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: IS 4735

PSCI 4736 - Topics in Multilateral Diplomacy Workshop (3 credits)
Simulation of diplomatic practice in major global and regional international organizations. Diplomatic strategies and tactics. Effects of decision-making and policy-making structures and processes on diplomatic outcomes. Crisis management and conflict resolutions mechanisms. Diplomatic negotiations and diplomatic resolutions. Extensive use of simulations. 4735: Multilateral diplomacy in global organizations: United Nations (UN) and World Trade Organization (WTO). May be repeated once with different content for a maximum of six (6) credits. 4736: Multilateral diplomacy in sub-global/regional organizations: European Union (EU), North Atlantic Treaty Organization (NATO), and Organization for Security & Cooperation in Europe (OSCE). May be repeated once with different content for a maximum of six (6) credits. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: IS 4736

PSCI 4744 - Intelligence Analysis Workshop (3 credits)
Examines the impact of historical experience and bureaucratic structures on intelligence analysis. Discusses the contents of the intelligence agenda and explores issues pertaining to intelligence analysis. Focuses on the intelligence process and offers a target-centric approach to intelligence analysis. Emphasizes and evaluates the use of structured analytic techniques in intelligence analysis.
Prerequisite(s): IS 2054 or PSCI 2054 or GEOG 2054
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4744

PSCI 4754 - Internship Program (1-19 credits)
Qualified students are placed in an administrative or legislative staff position under the combined supervision of a faculty member and a responsible supervisor in the employing agency. Detailed reports on the internship experience and a specific project will be required of each intern. (Variable credit to maximum of 6 credits for a full-time position over an entire semester). Three hours of appropriate advanced American government courses, Junior standing, a screening interview, GPA of 3.00 or better and consent required.
Instructional Contact Hours: Variable credit course

PSCI 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PSCI 29843 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Population Health Sciences (PHS)

PHS 1004 - Public Health First Year Experience (1 credit)
Introduction to the Department of Population Health Sciences and the Public Health curricula requirements. Introduces students to experiential learning opportunities, undergraduate research, ethical behaviors and career paths within the discipline. Exploration of programs, services and resources to enhance awareness of opportunities and support systems available for student success including academic advising and career planning. Intended for Public Health majors in their first semesters at Virginia Tech, either as incoming freshmen or transfer students.
Instructional Contact Hours: (1 Lec, 1 Crd)

PHS 1514 - Personal Health (3 credits)
Fundamental health content and theory to provide students with constructive health information necessary to meet current and future personal health needs. Special emphasis on wellness and health promotion.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 2004 - Introduction to Public Health (3 credits)
Examination of how public health core disciplines of epidemiology, health policy and administration, health behavior, and environmental health work together in addressing public health problems. Special emphasis on the history of public health, the public health infrastructure and role of health informatics in public health.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 3014 - Introduction to Environmental Health (3 credits)
Overview of environmental health, examining local, national, and international frameworks. Environmental factors that affect human health, including major classes of chemical, biological, and physical exposures from different environmental media (air, water, food, and soil). Special emphasis on toxicology and epidemiology methodologies used at the individual (mechanistic) level and at the population level to determine environmental causes of disease. Find the most appropriate prevention or control measure to minimize adverse health outcomes.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 3044 - Global Health Issues (3 credits)
Students will get an overview of the determinants of health and how health status is measured. Students will also review the burden of disease, who is most affected by different disease burdens, risk factors, and key measures to address the burden of disease in cost-effective, doable, sustainable, and fair ways. Special attention will be paid throughout the course to health systems issues. The course will cover key concepts and frameworks but be practical in orientation. The course will be global in coverage but will focus on low- and middle-income countries, the health of the poor, and health disparities. The course will pay particular attention to the linkages between health and development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 3064 - Public Health Seminar (1 credit)
Current topics in public health research, policy and practice, including biostatistics, epidemiology, health policy, environmental health, social and behavioral medicine, infectious diseases, and public health education. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

PHS 3074 - Public Health Practicum Prep (1 credit)
Preparation for the public health profession and practicum experience. Covers the necessary skills to become a successful public health professional. Students will explore and prepare for the public health practicum course by assessing interests, identifying placement opportunities, and completing necessary placement materials. Communication, ethical considerations, professional skills along with the development of resume/CV, cover letters, interviewing and networking will be covered. P/F only. Pre: Junior Standing.
Instructional Contact Hours: (1 Lec, 1 Crd)

PHS 3534 - Drug Education (3 credits)
Interpretation of multidimensional (social, psychological and physiological) scientific data regarding drugs. The major drug categories will be covered with special emphasis on substance misuse and abuse.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 3634 - Epidemiologic Concepts of Health and Disease (3 credits)
Designed to give students in the health sciences a basic understanding of the modern concepts regarding health and disease as well as skills in organizing epidemiological data, disease investigation and surveillance. Includes a survey of terms, concepts, and principles pertinent to epidemiology. Lifestyles of populations and the relationships between lifestyles and health status are studied.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HNFE 3634

PHS 3654 - Equity in Rural Health (3 credits)
Exploration of the socioeconomic, behavioral, biological, environmental and other factors that impact human health and contribute to health disparities. Introduction to concepts surrounding rural health equity, including: (i) defining rurality; (ii) identifying social determinants of health; (iii) reviewing the history of the US public health systems and policies tasked with improving rural health; (iv) describing critical health disparities impacting rural communities (such as cardiovascular disease, cancer, mental health and substance use disorders), and the drivers of these disparities; and, (v) (v) assessing health of special populations living in rural communities, such as maternal, newborn, adolescent and child health, aging populations, migrant populations, and LGBTQ + populations (vi) discussing the assessment, planning, policies, and interventions which can be implemented to improve the health of rural communities at the population level.
Prerequisite(s): PHS 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 3964 - Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 4014 - Public Health Program Planning and Evaluation (3 credits)
Fundamental of public health program development, implementation and evaluation. Basic processes, approaches and interventions that identify and address the major health-related needs and concerns of populations. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 4044 - Public Health Policy and Administration (3 credits)
Evolution and analysis of public health policy in the United States. Public health and care systems. Administrative concepts central to public health such as human resources, strategic planning, controlling, directing, leadership and health law. Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 4054 - Concepts in One Health (3 credits)
Dynamic interdependence of human, animal and environmental health; theoretical foundations of One Health; One Health research methods for assessing animal-human linkages; One Health operationalization in human medicine, veterinary medicine and public health; policies and practices related to One Health; and capacity building and public engagement; One Health and traditional Medical Model approaches to health problems. Pre: Junior standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 4064 - Modeling Infectious Diseases (3 credits)
Mathematical modeling of infectious diseases; simple epidemic models, risk structure and modeling risk structure, multi-pathogen models, multi-host models, temporal seasonal models, spatial models, stochastic dynamics and modeling for public health policy. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 4074 - Practicum in Public Health (2 credits)
Application of Public health theories, concepts and data in a work setting; comprehensive, structured experience requires student to demonstrate professional competencies and ethical behavior while working closely with a supervisor in a public health practice setting. Pass/Fail Only. Pre: Senior standing.
Prerequisite(s): PHS 3074
Instructional Contact Hours: (2 Lec, 2 Crd)

PHS 4094 - Appalachian Community Research (3 credits)
Undergraduate participatory community research as applied to issues of cultural heritage, sustainability, and identity. Students engage in projects defined by community groups and organizations as being critical to their well-being, continuity, or growth. Emphasis is on developing concepts of civic professionalism and developmental democracy.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 4094, SOC 4094

PHS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Portuguese (PORT)

PORT 1106 - Beginning Conversational Portuguese (3 credits)
Essential vocabulary and structures of the Portuguese language as spoken in Brazil; emphasis on active spoken and written use of the language for practical daily purposes.
Instructional Contact Hours: (3 Lec, 3 Crd)

PORT 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PORT 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PORT 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PORT 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PORT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PORT 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PORT 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Property Management (PM)

PM 2664 - Introduction to Property Management (3 credits)
The history of residential and commercial property management, roles and responsibilities of real estate managers, developing effective management plans for properties, maintenance strategies, marketing, legal regulations that pertain to real estate management.
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 2684 - Marketing and Leasing Residential Properties (3 credits)
Marketing and leasing functions for multifamily residential properties. Leasing processes, options, and online management tools. Market analysis. State and federal housing laws. Preparation for National Apartment Leasing Professional credentials.
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 2964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 3634 - Managing Affordable and Specialized Housing (3 credits)
Operations management of specialized housing such as senior apartments, active adult communities, independent living communities, assisted living communities, nursing homes, affordable housing, military housing, student housing, as well as community associations and mixed-use housing developments. Consideration of consumer lifestyles, financial circumstances, and sustainability issues for each housing option.
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 3674 - Property Management Operations (3 credits)
Detailed investigation and analysis of the fundamentals of property management operation functions. Functions included: human resources and relationship management, maintenance and risk management, marketing and leasing, and accounting and finance. Property manager and property owner role interpretation through examination of management agreement and plan components as well as nuances among residential properties, office buildings, and shopping centers.
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 3684 - Sustainable Property Management (3 credits)
Comparison and justification of green alternatives during the operations and maintenance phase of the building lifecycle by function with respect to the interrelationships of the social, environmental, and economic spheres of sustainability. Course topics also include group and individual decision-making and their influences on resource use such as energy, water, and waste as well as environmental degradation concern and its influence on various stakeholders and their relationship with each other. Ethical issues as they relate to sustainable property management also covered.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4644 - Advanced Property and Asset Management (3 credits)
Examination of the competencies necessary to maximize the value of real estate assets through effective operations and financial management practices. Includes detailed examination of income maximization, financial reporting, and ownership objectives of real estate investors.
Prerequisite(s): (PM 2674 or PM 3674) and PM 4964
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 4674H - Managing and Marketing Housing for Later Life (2 credits)
Managing and marketing housing for later life, including active adult communities and assisted living facilities. Pre: Junior Standing
Instructional Contact Hours: (2 Lec, 2 Crd)

PM 4684 - Leasing Commercial Properties (3 credits)
Examination of the strategies used to market and lease various types of industrial, office and retail buildings with emphasis placed on brokerage relationships, the legal structure of commercial real estate leases, lease analytics, lease negotiations, and the impact of lease terms on the value of income-producing properties. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 4694 - Contemporary Issues in Property Management (3 credits)
Issues affecting property management, including ethics, professional management decisions, legislative issues, and current management practices. The course culminates in the analysis of an apartment community and development of a management plan. Senior standing.
Prerequisite(s): PM 4964 or PM 4644
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 4744 - Housing Challenges and Policies in the United States (3 credits)
Overview of the issues relating to U.S. housing policy with an emphasis on housing affordability, homeownership, fair housing and community development, and homelessness. Examination of the policy tools used to respond to housing problems at local, state and federal levels.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PM 4914 - Residential Property Management Study Tour (1-19 credits)
Study tour that examines trends in the multifamily housing industry focusing on marketing, management, design, and customer service. Variable credit 2 credits maximum.
Instructional Contact Hours: Variable credit course

PM 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4964H - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4984H - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PM 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Psychology (PSYC)

PSYC 1004 - Introductory Psychology (3 credits)
The scientific study of behavior, with a focus on behavioral research methods, analysis, theoretical interpretations, and applications. Survey of brain structures and their functions, sensory mechanisms, developmental processes, classical and operant conditioning, social processes and cultural norms, approaches to psychotherapy, stress and coping, and applications of psychological science.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 1024 - Pathways Through and Beyond the Psychology Major (2 credits)
First Year Experience course introducing students to the psychology major. Discussion of university resources designed to promote student success. Emphasis on career exploration, and finding relevant research and field experiences outside the classroom.
Instructional Contact Hours: (2 Lec, 2 Crd)

PSYC 1094 - Principles of Psychological Research (3 credits)
Philosophical foundation and ethical issues in psychological research. Research design and methodology. Analytic approaches to developing, understanding, interpreting psychological data.
Prerequisite(s): PSYC 1004 or PSYC 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 1524 - Language and the Mind (3 credits)
Examination of what is unique about human language and the evidence that language affects thought. Investigation of how listeners categorize sounds, parse sentences, and access meaning. Examination of what brain damage and speech errors reveal about language in the brain and mind.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 1524

PSYC 2014 - Psychology of Social Interventions (3 credits)
An introduction to the psychological science that underlies behavioral interventions in non-clinical settings. Theories, methods, and applications as they relate to diverse domains such as health, education, prejudice reduction, and the environment. Methodological issues relating to intervention research in psychological science; understanding and limiting possible sources of bias. Relevance and limitations of psychological science for related public policy.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2024 - Psychology Transfer Student Course (1 credit)
First Year Experience course introducing transfer students to the psychology major. Discussion of university resources designed to promote the successful transition from another school to Virginia Tech. Emphasis on career exploration, professional development, and finding relevant research and field experiences outside the classroom.
Instructional Contact Hours: (1 Lec, 1 Crd)

PSYC 2034 - Developmental Psychology (3 credits)
Basic principles of human psychological development from the prenatal period through old age. Interactions between biological and environmental influences on the developing individual. Research methods in developmental science. Cultural influence on parenting practices, identity formation, and attitudes toward the elderly. Survey of recent literature within the areas of perceptual, cognitive, neurobiological, social, and emotional development.
Prerequisite(s): PSYC 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2044 - Psychology of Learning (3 credits)
Survey of fundamental concepts, phenomena, and principles of learning, such as reinforcement/punishment, classical conditioning, and cognitive explanations of retention/forgetting. Traditional learning research, with particular emphasis on methodology and ethical considerations. The behaviorist perspective, and neurobiological and cognitive approaches to understanding learning. The ethical and responsible use of animal models in learning research, and practical applications of learning theory.
Prerequisite(s): PSYC 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2054 - Psychology of Personality (3 credits)
Study of human personality and psychological adjustment: theory and research. Behavioral, cognitive, humanistic, and environmental determinants of personality. Psychological adjustment and personality development.
Prerequisite(s): PSYC 2004 or PSYC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2064 - Introduction to Neuroscience of Behavior (3 credits)
Introduction to biological factors that produce behavior. Neuroanatomy and neurophysiology. The development of the nervous system, and neuroplasticity. Basic neural processes involved in interpreting information, and making decisions. Conducting neuroscience research, and evaluating neuroscience-related claims in the popular media. The ethical and responsible use of nonhuman animal subjects; the ethical application of research findings in neuroscience to current problems such as psychopathy and neurodegenerative disease.
Prerequisite(s): PSYC 1004
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2074 - Animal Behavior (3 credits)
Study of animal behavior: Comparative psychology and ethology, behavioral genetics, evolution of behavior, ecological aspects of behavior, predation, reproduction, and parental care. Some consideration is given to the relevance of animal behavior to human behavior.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2084 - Social Psychology (3 credits)
Introduction to the social behavior of the individual and the group: social perception and forming judgements of others, attitude formation and change, interpersonal attraction, applied psychology. Cultural influences on attitudes toward diversity, prosocial behavior, prejudice, and aggression and conflict. Application of psychological theories and research to address current social problems.
Prerequisite(s): PSYC 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

PSYC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 3014 - Abnormal Psychology (3 credits)
Survey of various types of psychological disorders and of contrasting theoretical views and representative research on the etiology and prognosis of these disorders. Using the Diagnostic and Statistical Manual (DSM-5) to diagnose psychopathologies accurately. Ethical issues pertaining to clinical practice.
Prerequisite(s): PSYC 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 3024 - Human Behaviors and Natural Environments (3 credits)
Survey of the effects of natural and human-made environments on health and well-being. Historical changes in human-environment relations. Utilizing psychological research methods to investigate the possible impacts of urbanization on human health and well-being. The impacts of culture, region, and socioeconomics on how we utilize our environments, and our ability to change them. Research pertaining to our relationship with nature, use of natural resources, and strategies to encourage behaviors promoting environmental sustainability.
Prerequisite(s): PSYC 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 3034 - Psychological Disorders of Children (3 credits)
An examination of theory, research, and practice as related to the assessment, treatment, and prevention of psychological disorders of children. Special emphasis on the understanding of child behavior disorders from a developmental, clinical-experimental point of view.
Prerequisite(s): (PSYC 2004 or PSYC 1004) and PSYC 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 3054 - Health Psychology (3 credits)
Major theories, strategies, and methods for understanding psychological contributions to health and disease; psychological approaches to the treatment and prevention of disease and unintentional injuries, and health and safety promotion.
Prerequisite(s): PSYC 2004 or PSYC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 3094 - Advanced Research Methods in Psychological Science (3 credits)
Advanced research and analytical methods. Emphasis on methods for specific research and/or practical questions, critical evaluation of research publications. Extended coverage of design and analysis principles and skills, selection and completion of appropriate statistical tests for given data sets. Student-driven empirical report including literature review, methods, analysis, interpretation, and implications for future research. PSYC majors only.
Prerequisite(s): (PSYC 1094 or PSYC 2094) or STAT 3604 or STAT 3615)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 4014 - History and Systems in Psychology (3 credits)
Overview of modern theories in psychology by consideration of current historical controversies. Traces roots of psychology in natural and social sciences. Considers the diversity of psychological study and the future of psychology. Senior standing in psychology required for undergraduate credit. Graduate standing required for graduate credit.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4024 - Industrial and Organizational Psychology (3 credits)
Overview of psychological theories, research findings, and methods relevant to studying the behavior of individuals in organizations. Topics covered may include prediction of job performance, personnel testing, training and development, and leadership.
Prerequisite(s): PSYC 1004 and (PSYC 1094 or HD 3014 or SOC 3204) and (STAT 2004 or STAT 3005 or STAT 3604 or STAT 3615 or BIT 2405)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4034 - Special Topics in Developmental Psychology (3 credits)
Rotating topics in the development of perceptual, cognitive, and socioemotional functioning throughout the life-span. In-depth, critical evaluation of current research literature and theory within various major age-spans. Developmental research methods, and research ethics. Cross cultural and contextual effects on development. May be repeated with different topics for a maximum of 6 credit hours.
Prerequisite(s): PSYC 1004 and PSYC 2034 and (PSYC 1094 or HD 3014 or SOC 3204)
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

PSYC 4044 - Advanced Learning (3 credits)
Critical analysis of basic paradigms of Pavlovian and Instrumental Conditioning with emphasis on general theories of learning and issues involved in cognition, reinforcement, and memory.
Prerequisite(s): PSYC 1004 and PSYC 2044 and (PSYC 1094 or HD 3014 or SOC 3204)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4054 - Personality Research (3 credits)
Research techniques used in contemporary personality psychology: case histories, correlational methods, experimentation, archival studies, and psychobiography.
Prerequisite(s): PSYC 1004 and PSYC 2054 and (PSYC 1094 or HD 3014 or SOC 3204)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4064 - Physiological Psychology (3 credits)
Presentation of concepts important for the study of neuroscience and behavior with a special emphasis on the classic topics of physiological psychology: brain-behavior relations, sensory integration, physiological correlates of motivation and emotion.
Prerequisite(s): PSYC 1004 and (PSYC 2064 or NEUR 2025) and (PSYC 1094 or HD 3014 or SOC 3204)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4074 - Sensation and Perception (3 credits)
Overview of sensory and perceptual systems and their integration in influencing behavior. Emphasis on sensory receptor characteristics, neural structure, psychophysical data, perceptual phenomena and issues, theories about the human perceptual process.
Prerequisite(s): PSYC 1004 and (PSYC 2064 or NEUR 2025) and (PSYC 1094 or HD 3014 or SOC 3204)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4084 - Advanced Social Psychology (3 credits)
Examines social behavior from four major theoretical orientations: reinforcement, field theory, cognitive, and role theory. Topics may include social learning, social exchange theories, group processes, attitude, and person perception.
Prerequisite(s): PSYC 1004 and (PSYC 1094 or HD 3014 or SOC 3204) and PSYC 2084
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4094 - Theory of Psychological Measurement (3 credits)
Theory of psychological measurement and techniques used to develop and evaluate psychological measures. Coverage of standardization, measurement scales, reliability, validity, score transformations, composite scores, weighted scores, and test construction.
Prerequisite(s): PSYC 1004 and (PSYC 1094 or HD 3014 or SOC 3204) and (STAT 2004 or STAT 3005 or STAT 3604 or STAT 3615 or BIT 2405)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4114 - Cognitive Psychology (3 credits)
An experimentally-oriented survey of human cognitive processes which include attention, memory, and decision making. Role of individual difference variables in each area.
Prerequisite(s): PSYC 1004 and PSYC 2044 and (PSYC 1094 or HD 3014 or SOC 3204)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4134 - Language Development (3 credits)
Survey of theories, mechanisms, and processes in human language development. Empirical overview of phonology, semantics, syntax, and pragmatics. Developmental trajectories of mono- and multilingual children. Cultural constraints on language. Perception of language and production of language, in typical and atypical subpopulations (e.g., hearing impairment). Junior/Senior Standing.
Prerequisite(s): PSYC 1004 or PSYC 2004
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 4134

PSYC 4154 - Bilingual Development and Cognition (3 credits)
Survey of the process of language acquisition for children exposed to two languages during their early development. Cognitive development in children growing up in bilingual homes. Exploration of the effects of family factors, social experiences, cultural language norms, and language policies on bilingual children and adults in the current transnational environment of immigration and globalization. The effects of heritage language preservation on cultural identity and issues of equity related to linguistic discrimination in the United States.
Prerequisite(s): PSYC 1004 or PSYC 1524 or ENGL 1524 or ENGL 1504 or HD 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4184 - The Science of Giving (3 credits)
Overview of the science of giving, altruism, helping, cooperation, and prosocial behaviors and decision making. Exploration of the personality contextual, cognitive, and affective factors that move people to help others in need. Application of psychological and behavioral principles necessary to craft interventions such as nudges to increase giving with emphasis on public policy. Methodological issues related to laboratory and field experiments. Ethical considerations in persuasion and influence.
Prerequisite(s): PSYC 1094 or HD 3014 or SOC 3204
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BDS 4184

PSYC 4194 - Predicting Social Behavior (3 credits)
Overview of the process of predicting human choices, preferences, and actions in social contexts. Applications of measurement theory to data preparation, formatting, and scaling. Implications of psychological biases for data transformation and cleaning. Theory-guided predictor variable selection and development. Applications of machine learning to social settings. Evaluating prediction quality, bias, and generalizability. Developing predictive models in software. Ethical and societal implications of predicting human behavior.
Prerequisite(s): PSYC 1004 and (PSYC 1094 or HD 3014 or SOC 3204) and (STAT 2004 or STAT 3005 or STAT 3604 or STAT 3615 or BIT 2405)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BDS 4194

PSYC 4214 - Cognitive Psychology Laboratory (1 credit)
Design, operation, and analysis of experiments to study human cognitive processes (e.g., attention, memory, and decision-making).
Corequisite(s): PSYC 4114
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4234 - Laboratory in Developmental Psychology (1 credit)
Research design and implementation in the study of perceptual and motor development, language development, cognitive development, and social development.
Prerequisite(s): (PSYC 2004 or PSYC 1004) and PSYC 2034
Corequisite(s): PSYC 4034
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4244 - Laboratory in Advanced Learning (1 credit)
Experimental techniques for studying the development, maintenance, and retention of behavior change in humans and animals. Laboratory exercises in Pavlovian and Instrumental Conditioning, verbal learning and memory.
Corequisite(s): PSYC 4044
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4254 - Personality Research Laboratory (1 credit)
Laboratory course in personality research techniques. Emphasis on experimental, archival, questionnaire, and psychobiographical approaches.
Corequisite(s): PSYC 4054
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4264 - Laboratory in Physiological Psychology (1 credit)
Experimental techniques in the area of physiological psychology including: handling and care of laboratory animals, anesthetic and surgical techniques, and measurement of physiological variables.
Corequisite(s): PSYC 4064
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4274 - Laboratory in Sensation and Perception (1 credit)
Overview of the major experimental techniques and phenomena of sensation and perception. Emphasis on psychophysical methods, signal detection, dark adaptation, perceptual illusions.
Corequisite(s): PSYC 4074
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4284 - Laboratory in Social Psychology (1 credit)
Design, performance, and analysis of experiments in social psychology. Various methodologies used in social research (e.g., laboratory experimentation, field observations) will be studied through actual performance of experiments.
Corequisite(s): PSYC 4084
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4294 - Laboratory in Psychological Measurement (1 credit)
Design and implementation of psychological assessment devices including issues of test construction, reliability, validity, standardizing, and detecting test bias.
Prerequisite(s): (PSYC 2004 or PSYC 1004) and (PSYC 2094 or PSYC 1094) and (STAT 2004 or STAT 3604 or STAT 2405)
Corequisite(s): PSYC 4094
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4354 - Senior Seminar (3 credits)
For Psyc majors. Intended to provide in-depth coverage and discussion of a small set of topics selected by members of the seminar.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4364 - Senior Seminar (3 credits)
For Psyc majors. Intended to provide in-depth coverage and discussion of a small set of topics selected by members of the seminar.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4454 - Neuroeconomics (3 credits)
Neural processes related to reward, learning, reflection, delay of gratification, and social interaction. Clinical uses of neuroeconomics research techniques. Implications of neuroeconomics, policy, law and business.
Prerequisite(s): NEUR 2026 or ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 4454, NEUR 4454

PSYC 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

PSYC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Public Relations (PR)

PR 2044 - Principles of Public Relations (3 credits)
Principles of public relations practice; public relations in organizations; responsibilities of the public relations practitioner; legal and ethical considerations; role of public relations in society; history of the field and key people who influenced its development; choosing appropriate communication channels/media.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 3014 - Public Relations Cases (3 credits)
Analysis of contemporary and historic public relations cases. Emphasis on theories, research techniques, planning methods, implementation strategies, evaluation standards, and ethical considerations in public relations programs and campaigns.
Prerequisite(s): COMM 2044 or PR 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 3034 - Topics in Public Relations and Advertising (3 credits)
Selected topics in public relations and advertising. Emphasis on theoretical, practical, or ethical issues in selected contexts. May be repeated 1 time with different content for a maximum of 6 credits.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: ADV 3034

PR 3084 - Advanced Public Relations Research Methods (3 credits)
Analysis and implementation of contemporary academic and professional research tools for public relations. Emphasis on development of research designs, assessment and evaluation of public relations programs and campaigns, and implementation of ethical research practices and standards.
Prerequisite(s): (COMM 2044 or PR 2044) and COMM 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 3144 - Writing and Editing for Public Relations (3 credits)
Advanced writing and editing used to structure and present information in public relations practice. Includes message development, message design for delivery through various media, copyediting skills and tools, strategies for dissemination, and legal and ethical issues in public relations writing.
Prerequisite(s): COMM 2024
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 3324 - Corporate Communication (3 credits)
Examines communication theories, strategies and tactics that corporations use in their public relations efforts to reach and influence publics. Prepares students for in-house public relations work and familiarizes them with expectations of corporate clients. Introduces students to the important role communication plays within and between for-profit, nonprofit, and government institutions. Emphasis on the influence of corporate culture, ethics and values on communication styles. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 3334 - Public Relations and Corporate Social Responsibility (3 credits)
Explores role of communication in corporate social responsibility. Emphasis on the ethical implications of communicating the need to generate profits with the need to ensure that corporate actions do not harm important stakeholders such as employees, investors, customers, and communities.
Prerequisite(s): COMM 2044 or PR 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 3344 - Public Relations and Sports (3 credits)
Examines communication theories, strategies, and tactics that sports organizations use in their public relations efforts. Introduces students to the dynamic relationship between sports organizations, media, and fans. Study of ethics and professional standards in sports public relations. Emphasizes the role of public relations in sports as a strategic communication and management function.
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 4074 - Organizational Communication (3 credits)
Role of communication in complex organizations; communication networks, communication and management, message systems, decision-making; relationships between organizational theory and communication.
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 4164 - Public Relations Administration (3 credits)
Public Relations (PR) administration issues related to budgeting, strategy, legal issues, and campaigns in an organization. Emphasis on PR theory and ethics.
Prerequisite(s): COMM 2044 or PR 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 4304 - Public Relations Campaigns (3 credits)
Public relations campaign research, planning, implementation and evaluation. Emphasis on applying theory in campaign contexts; executing applied research; setting objectives; developing strategic plans, messages and budgets; carrying out courses of action; and evaluating results.
Prerequisite(s): COMM 2124 and (COMM 3144 or PR 3144) and (COMM 3014 or PR 3014)
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 4364 - Crisis Communication and Issue Management (3 credits)
Communication theories of risk, crisis, emergency, and public/private issue management. Legal and ethical considerations in issue management and crisis communication. Communication strategies and tactics for issue and crisis management. Reputation management and image restoration as they relate to risk, crises, emergencies, and issues.
Prerequisite(s): PR 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 4404 - Strategic Communication Capstone (3 credits)
Research and theory in strategic communication. Cultural awareness of diverse publics. Relationship, reputation, crisis, and issue management in interpersonal, group, organizational, and corporate communication contexts. Ethical standards in strategic communication. Corporate social responsibility.
Prerequisite(s): PR 2044 and AHRM 1014 and ACIS 1004 and (COMM 1016 or COMM 2004)
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 4414 - Public Relations Standards and Practices (3 credits)
Addresses complexities of public relations research, planning, implementation, and evaluation required for professional certification. Includes special emphasis on public relations legal and ethical practices. Senior standing.Fee $150.
Prerequisite(s): COMM 2044 or PR 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

Real Estate (REAL)

REAL 1004 - Discovering Real Estate (2 credits)
First year experience for the Program in Real Estate. Academic planning, career exploration, and resources for academic success. Leadership, team building, communication and problem solving in the real estate industry. Role of ethics in the profession. Introduction to peer and professional mentors.
Instructional Contact Hours: (2 Lec, 2 Crd)

REAL 1014 - Careers in Real Estate (1 credit)
Provides an overview of multiple facets of the industry and highlights potential real estate careers. Examines academic training and specific skills needed to integrate knowledge from different real estate disciplines Provides an understanding of ethical leadership and pathways to achieve professional success through utilizing professional skills. Pre: First year or sophomore standing.
Corequisite(s): 2004 or UAP 2004.
Instructional Contact Hours: (1 Lec, 1 Crd)

REAL 1024 - Real Estate: The REAL Deal! (3 credits)
Explore the dynamic world of real estate with a multifaceted understanding of the field. Delve into the history of real estate and compare the fundamentals of real estate across real estate product types. Investigate zoning and design a spatial real estate zoning plan. Differentiate strategies for financial success in real estate, while examining the influence of government on the industry. Engage in discussions that use real estate to solve complex social problems while analyzing issues of identity and equity. Debate diverse outcomes and potential future developments within the ever-evolving landscape of real estate.
Pathway Concept Area(s): 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 2004 - Principles of Real Estate (3 credits)
Introduction to real estate, including markets, land use planning and zoning, development, finance, construction, sales, marketing, management and property valuation. Examines the key actors and processes in each of these areas. Explores major public policies impacting real estate
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 2004

REAL 2024 - Principles of Real Estate Sales (1 credit)
Preparation for the Virginia Salesperson License Exam. Residential real estate sales, mortgages and deeds of trust, types of mortgages, liens, real property management, land use controls, deed restrictions, real estate laws, mandated disclosure, property tax and Real Estate Board Regulations. Pass/Fail only.
Prerequisite(s): REAL 2004 or UAP 2004
Instructional Contact Hours: (1 Lec, 1 Crd)

REAL 2034 - Real Estate Data Analysis (3 credits)
Overview of statistical analysis for use in the real estate market. Introduction of statistical tools and skills needed to draw conclusions from the data. Understanding data, coding and preparing the data, probability and inference, and special topics in inference including insights to inform ethical management and investment decisions.
Prerequisite(s): (UAP 2004 and REAL 1014) or (UAP 2004 and FIN 2164) or (REAL 2004 and REAL 1014) or (REAL 2004 and FIN 2164) or CEE 2834
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 2044 - Professional Development in Real Estate (3 credits)
Professionalism in the real estate industry including professional demeanor, interpersonal and intrapersonal skills, lifelong learning and ethics. Exposure to topics related to personal and professional development such as mentoring, networking, leadership, influencing, negotiating, personal improvement, and utilizing technology in a professional manner.
Prerequisite(s): (REAL 2004 or UAP 2004) and (REAL 1014 or FIN 2164)
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

REAL 3024 - Applied Real Estate Development (3 credits)
Evaluate zoning and entitlements to understand the feasibility of a real estate development. Recognize the process, stakeholders, and challenges associated with developing diverse types of real estate. Use due diligence research to construct a conceptual site plan. Assess constraints and requirements to select appropriate building design elements. Recognize and implement principles of sustainability in real estate development projects. Describe fundamental principles of the construction phase of development using industry-standard terminology.
Prerequisite(s): (REAL 2004 or UAP 2004) and (REAL 2034 or BIT 2405) and (ECON 2005 or AAEC 1005)
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 3034 - Real Estate Market Analysis (3 credits)
Identification of real estate market areas and reconciling market supply and demand for investments and developments. Applications of market analyses to product types such as residential, retail, office, industrial, hotels and resorts, and mixed-use real estate projects.
Prerequisite(s): (REAL 2004 or UAP 2004) and (REAL 2034 or BIT 2405) and (ECON 2005 or AAEC 1005)
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 3044 - Financing Real Estate Projects (3 credits)
Methods and tools for analyzing financial performance of real estate from initial investment to disposition. Sources and uses of both debt and equity capital. Utilizing proformas to assess risks and feasibility. Budgeting for stabilized properties.
Prerequisite(s): (REAL 2004 or UAP 2004) and (REAL 2034 or BIT 2405) and (ECON 2005 or AAEC 1005)
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

REAL 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

REAL 4024 - Sustainable Real Estate Development (3 credits)
Discuss principles of sustainability related to real estate development. Explore industry recognized sustainable rating systems for buildings and infrastructure. Practice project management strategies for scheduling and cost estimating a successful construction project. Identify key building systems and discuss the process for building renovation and construction. Determine the redevelopment potential of an existing site or building. Relate redevelopment principles to sustainable development. Evaluate the advantages and disadvantages of redevelopment projects based on existing conditions. Recognize the long-term economic, environmental, and social impacts of project decision making.
Prerequisite(s): REAL 3024
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 4034 - Real Estate Analytical Methods (1 credit)
Analytical approaches to contemporary topics and issues in real estate decision making. Content varies. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

REAL 4044 - Applied Real Estate Investments (3 credits)
Advanced concepts and practices in real estate investing with topics including but not limited to advanced real estate financial modeling, investment risk and return analyses, securitization, sources of funding, portfolio management, and risk management strategies.
Prerequisite(s): REAL 3024 and REAL 3034 and (REAL 3044 or FIN 4154)
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 4054 - Real Estate Investment Analysis (1 credit)
Analyze supply and demand to predict and model future real estate cash flows. Evaluate real estate investments using financial ratios and conduct financial risk sensitivity analysis to inform a real estate development decision. Generate formal real estate developmental reports. Participate in external real estate case competitions to further comprehension of a real estate analysis and report drafting. Restricted to REAL majors.
Corequisite(s): 3034 or 3044. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

REAL 4064 - Real Estate Appraisal (3 credits)
Application of economic principles to the valuation and appraisal of property including statistical analysis. Cost approach, sales comparison approach and income capitalization approach to conducting appraisal. Appraisal report for evaluating rural property, commercial, residential and transitional. Ethical and professional requirements. Pre: Senior standing.
Prerequisite(s): REAL 3044 or FIN 4154
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 4074 - Residential Real Estate Studio (3 credits)
Course provides mock, real-world learning in a student-led environment. Design, analyze site and financial feasibility, formulate construction plans, and execute leasing and sale of a residential real estate project. Select a project in consultation with faculty and industry advisors. Work on all elements of the life cycle of a residential real estate project from preliminary design through sale of the developed project.
Prerequisite(s): REAL 3024 and (REAL 3034 or MKTG 4734) and (REAL 3044 or FIN 4154)
Instructional Contact Hours: (1 Lec, 3 Lab, 3 Crd)

REAL 4075 - Commercial Real Estate Studio (3 credits)
Couse provides mock, real-world learning in a student-led, team environment. Teams utilize knowledge from prerequisite courses. Teams undertake year-long projects where they design, analyze site and financial feasibility, formulate construction plans, and execute leasing and sale of complex commercial real estate developments. Teams select projects in consultation with faculty and industry advisors. Work focuses on life cycle of real estate projects from design through sale of development. 4075: topics covered include team building, site/project selection, due diligence, initial site design and market analysis. 4076: topics covered include final site design, financing, construction, leasing and property management, and sale. For majors only, senior standing. Design/Lab Studio.
Prerequisite(s): REAL 3024 and REAL 3034
Instructional Contact Hours: (1 Lec, 2 Lab, 3 Crd)

REAL 4076 - Commercial Real Estate Studio (3 credits)
Couse provides mock, real-world learning in a student-led, team environment. Teams utilize knowledge from prerequisite courses. Teams undertake year-long projects where they design, analyze site and financial feasibility, formulate construction plans, and execute leasing and sale of complex commercial real estate developments. Teams select projects in consultation with faculty and industry advisors. Work focuses on life cycle of real estate projects from design through sale of development. 4075: topics covered include team building, site/project selection, due diligence, initial site design and market analysis. 4076: topics covered include final site design, financing, construction, leasing and property management, and sale. For majors only, senior standing. Design/Lab Studio.
Prerequisite(s): (REAL 3044 or FIN 4154) and REAL 4075
Instructional Contact Hours: (1 Lec, 2 Lab, 3 Crd)

REAL 4754 - Real Estate Law (3 credits)
Fundamentals of law as it applies to real estate ownership. Rules, rights, and duties of owners of real estate. Elements of contract law and legal documents, including acquisition and disposal of property, leases, and agreements with third-party service providers. Implications for real estate taxation. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

REAL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

REAL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

REAL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Religion and Culture (RLCL)

RLCL 1004 - Introduction to Religion and Culture (3 credits)
This course introduces students to foundational concepts and debates within the humanities and social sciences by studying one of a rotating set of themes (e.g. love, evil, apocalypse) located at the intersection of religion and culture. Emphasis on cultural diversity, historical transformation, interdisciplinary inquiry, problem-solving and the application of academic discussions to everyday life situations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1004H - Intro to Religion & Culture (3 credits)
This course introduces students to foundational concepts and debates within the humanities and social sciences by studying one of a rotating set of themes (e.g. love, evil, apocalypse) located at the intersection of religion and culture. Emphasis on cultural diversity, historical transformation, interdisciplinary inquiry, problem-solving and the application of academic discussions to everyday life situations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1014 - World Religions (3 credits)
Formation of the category of world religions in the modern West. Basic worldviews, embodied practices, and traditions included under the rubric of world religions. The encounter of and mismatch between traditions identified as world religions and the category of world religions as an instrument of colonialism and imperialism.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1024 - Judaism, Christianity, and Islam (3 credits)
Nature of religion and the analysis of it from an academic perspective. Basic tenets of Judaism, Christianity, and Islam, including their manifestations in the United States and their involvement in critical issues in a global context Interpretation of key texts from various historical and cultural contexts.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1034 - Religion and the Modern World (3 credits)
Modern challenges to traditional religion and responses to these challenges, including: religion as an object of critique; law, sovereignty, and religion; religion, gender, and race; religion, science, and technology; religion and media presentations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1034H - Religion and the Modern World (3 credits)
Modern challenges to traditional religion and responses to these challenges, including: religion as an object of critique; law, sovereignty, and religion; religion, gender, and race; religion, science, and technology; religion and media presentations.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1044 - Religious Ethics (3 credits)
Influential representative social and religious ethical perspectives from ancient Greek philosophers to the present; ethical reasoning on current pressing and perennial social issues - bioethics, sexuality, family, poverty--based on historical and ethical analysis of case studies; theoretical assumptions about morality as the relation between living a virtuous life and performing ethical duties.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1054 - Virginia Tech Prison Book Project (1 credit)
A one-hour course with the Virginia Tech Prison Book Project. Students will complete a learning module about carceral institutions in the United States and the impact of educational opportunities on the lives of incarcerated people. They will then participate in a service learning event where they match individual requests from incarcerated readers to books and prepare the books for shipping.
Instructional Contact Hours: (1 Lab, 1 Crd)
Course Crosslist: CRIM 1054, HUM 1054

RLCL 1084 - Food Studies (3 credits)
Interdisciplinary introductory course explores how food shapes and is shaped by culture and society. Examines how people use food to express meanings (e.g., via foodways, story, art, architecture, religion, ethical codes), how food options, practices, and inequities are shaped by social structures (e.g. cultural and legal norms regarding race, class, and gender), and how the material properties of food (e.g., chemical, ecological, technological) are linked to identities, ideological commitments, and historical moments.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 1084, PSCI 1084, SOC 1084

RLCL 1134 - The Ancient Mediterranean World (3 credits)
Ancient cultures of the Mediterranean world with a focus on their embodiments in the arts, literature, history, philosophy, and religion. Emphasis on Greek, Hellenistic and Roman cultures, their interrelationships with each other and their historical, cultural, material and intellectual encounters with contemporary Mediterranean cultures as well as their influence on later and modern cultures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CLA 1134

RLCL 1214 - The Medieval World (3 credits)
Introduction to Europe and the Mediterranean world in the period between antiquity and the European encounter with the Americas. Investigation of the arts, literature, philosophy, and history of the period in the Christian, Jewish, and Islamic traditions and the multiple types of encounters that those communities experienced. Analysis of the impact the medieval world continues to have on the modern West.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1504 - Introduction to Popular Culture (3 credits)
The development and formation of the category of popular culture. Competing theories and methods for analyzing popular culture. Activities, objects, and ideas included under the rubric of popular culture. Critical thinking about the production of popular culture in relation to race, gender, class, and other forms of human difference.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 1504

RLCL 1904 - Religion and Culture In Asia (3 credits)
Historical and geographical overview of diverse religious/cultural traditions in Asia, such as Hinduism, Buddhism, Sikhism, Confucianism, Daoism, and Shinto. Investigation of the categories religion and culture and their interactions in Asia. Examination of different methodological and interdisciplinary approaches and their integration, with emphasis on critical thinking about the complexities of studying religion and culture in Asia. Asia on a global stage, including Western views of Asia and Asian views of the West.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1904H - Religion and Culture in Asia (3 credits)
Historical and geographical overview of diverse religious/cultural traditions in Asia, such as Hinduism, Buddhism, Sikhism, Confucianism, Daoism, and Shinto. Investigation of the categories religion and culture and their interactions in Asia. Examination of different methodological and interdisciplinary approaches and their integration, with emphasis on critical thinking about the complexities of studying religion and culture in Asia. Asia on a global stage, including Western views of Asia and Asian views of the West.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 2004 - Case Studies in Religion and Culture (3 credits)
Significant case studies in the study of religion and culture with an emphasis on influential and emerging research. Focused engagement with humanities and social sciences research grounded in analysis, comparison, and evaluation of relevant case studies.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 2054 - Ethnography: Studying Culture (3 credits)
Introduction to the methodological tools used by anthropologists and other social scientists to study culture. Engagement with the development of, and debates about, ethnographic methods, as well as their application to case studies. Focus on sample ethnographic accounts of peoples throughout the world, as well as research techniques applicable to many different cultural environments.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 2054

RLCL 2104 - Greek New Testament (3 credits)
Readings from the New Testament in Greek, with attention to grammatical analysis, historical background and other clues interpretation. May repeated with different content for a maximum of 9 credits.
Prerequisite(s): GR 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: GR 2104

RLCL 2124 - Religion in American Life (3 credits)
Understanding and integrating source materials for the study of religion in American life. Genealogy of religion and culture in America (USA). Changes and transformations in religious beliefs and practices and their influences on American life. Debates about religion and culture. Entanglements of religion, politics, race, ethnicity, and law.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 2134 - Judaism: A Survey of History, Culture, and Heritage (3 credits)
Introduction to the academic study of Judaism; a variety of scholarly approaches to Jewish textual and cultural sources, including the Hebrew Bible, rabbinic literature, and diverse contemporary cultural, religious, and social expressions. Emphasis on developing skills in critical thinking, reading, and writing about Judaism as a way of understanding the beliefs, philosophies, and histories of global Jewish communities past and present.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 2134

RLCL 2144 - African Religions (3 credits)
The role of religious (or belief) systems in African societies, especially the three predominant religious traditions in Africa: the so-called African Traditional Religious, Islam, and Christianity; the universe of religious systems and religious experiences and processes of Africa, in particular, Sub-Saharan Africa; critical examination of the mythic stature of Africas religions within Western cultural (and scholarly) world views and institutions.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2144

RLCL 2204 - Race and Gender in Religion and Culture (3 credits)
Influence of race and gender on religion and culture. Overview of approaches to categories of diversity, particularly race and gender, in religious and cultural traditions. Utilization of humanistic and social scientific approaches to investigate geographically variable historical and/or contemporary case studies.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2204, WGS 2204

RLCL 2324 - Islam (3 credits)
Addresses the rise of Islam under the Prophet Muhammad in Arabia, the development of Islam in the Middle Ages, and its resurgence in the 20th century. Issues of geographical, temporal, and ideological diversity, and critical thinking about representations of Islam in the West. Islamic orthodoxy addressed by examining the question of who represents Islam, when, and how.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 2374 - Gods and Kings in Premodern India (3 credits)
History of India from pre-historical times to approximately 1700, with particular focus on the interplay between religion and politics. Emphasis on sources for and interpretations (historiography) of early Indian history. Literary versus archaeological record of pre-historic India, the earliest empires and rulers, and impact of the Islamic and wider world on India. Legacies of ancient and medieval India in the contemporary world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2374

RLCL 2384 - Gandhi in the Making of Modern India (3 credits)
History of India since approximately 1700, with particular focus on Gandhis influence on modern India and the world. Emphasis on sources for and interpretations (historiography) of modern Indian history. Examination of pre-colonial and colonial pasts and legacies. Exploration of Gandhis role in political, social, cultural, and religious movements of the early 20th century, and Gandhis legacy in the independent states of South Asia and the contemporary world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2384

RLCL 2394 - Tofu to Tikka: Food in Asian History (3 credits)
Exploration of the evolution and alterations of food and cuisines throughout Asian history. Examination of the economic, geographical, political, philosophical/religious, and social underpinnings of food in premodern Asian societies; influence of the Columbian Exchange of Asian and global cuisines; Euro-American imperialism's impact on food and society in Asia and in the European and American metropoles; emergence of national cuisines in Asia; and Asian food in the post-colonial diaspora.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2394

RLCL 2414 - Hebrew Bible/Old Testament (3 credits)
Introduction to the academic study of the Hebrew Bible (Old Testament), including its contents, contexts, major themes, and reception; a variety of scholarly approaches, including historical-critical, literary, ethical, and gender studies methods. Emphasis on developing skills in critical thinking, reading, and writing about the Hebrew Bible (Old Testament).
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 2414

RLCL 2424 - New Testament (3 credits)
Introduction to the academic study of the New Testament, including gospels, Pauline materials, theological themes, and sources on the emerging church. A variety of scholarly approaches to the New Testament texts and contexts, including historical-critical, redaction critical, and literary methods. Emphasis on developing skills in critical thinking, reading, and writing about the New Testament and the ancient Mediterranean world as a way of understanding the religion and history of early Christianity.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 2434 - Legends of King Arthur (3 credits)
Introduction to legends of King Arthur, including stories, novels, and films from a wide historical timespan. Tales of knights, kings, and fair maidens that have entertained generations and irrevocably shaped cultural values surrounding gender relations, justice, violence, and the use and abuse of power. Analysis of individual texts and broader consideration of the Arthurian tradition during key literary-historical periods from the medieval era to the present.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 2434

RLCL 2444 - Greek and Roman Myth (3 credits)
Surveys ancient Greek and Roman mythology. Provides students with an introduction to selected myths from ancient Greek and Roman literature, including appropriate historical background information. Familiarizes students with how theories of myth have been applied to individual stories and how such mythological tales have been received by authors and artists in subsequent cultures. Explores the interaction and interdependence of mythological tales from different cultures and perspectives. In English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CLA 2444, ENGL 2444

RLCL 2464 - Religion and Science (3 credits)
Exploration of the relationships between religion and science in the western tradition. Basic frameworks for relationships between religion and science in historical and cultural context, types of human knowledge and truth, similarities and differences between science and religion, evolution, the origins of the creationist movement, and contemporary moral and ethical issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 2464

RLCL 2474 - Religion and Violence (3 credits)
Investigation of the categories of religion and secularity as they apply to war and peace. Analysis of episodes from both past and present in which religion seems to have played a role. Introduction to research skills related to the study of religion and violence, building from theoretical and historical considerations.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2474

RLCL 2484 - Religion and Politics (3 credits)
Investigation of religion and politics as distinct categories in different times and places. Analysis of episodes from both past and present in which religion and politics have come together, or have been kept apart. Examination of the roles religion and politics play in the modern world and how they impact the lived experience of diverse populations both in the United States and throughout the world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2484, PSCI 2484

RLCL 2504 - Introduction to American Studies (3 credits)
Methodology and tools of American Studies, with a focus on developing analytic skills to assess discourse across varied media. Interdisciplinary investigation of histories, politics, cultures, and beliefs in the Americas, including the impacts of encounter and exchange. Intensive study of a specific topic or period.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 2504

RLCL 2514 - Asian American Experience (3 credits)
Interdisciplinary overview of the diverse Asian American experience, incorporating non-Eurocentric perspectives on the Asian immigrant experience and dialogue between Asian American and non-Asian American students. Examination of different historical tracks of various Asian ethnicities, experience of racism, discrimination, cultural adaptation and conflict, and economic survival and success. Gender, age, religious affiliation, family values and inter-generational differences among Asian Americans. The complexity of minority status and the stereotype of "model minority." Activism, political participation, leadership and the meaning of citizenship among Asian Americans. Representations of Asian Americans in the arts and media.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 2514

RLCL 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 3014 - Women and Gender in Islam (3 credits)
An examination of women and gender in Islam from a variety perspectives including Muslim women in Islamic history, normative constructions of the role of women in Islam, and womens roles in contemporary Muslim societies. Understanding of women in classical Islam; feminist and reformist approaches; and Western constructions of the rights of women if Islam.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WGS 3014

RLCL 3024 - Religion and Literature (3 credits)
Read works from world literature, guided by selected critical readings. Compare/contrast diverse models of religion and literature. Study how modernity has impacted traditions of religion and culture. Interpret literary texts that draw from multiple religions. Analyze religion-literature controversies in a range of social, cultural, political contexts. Synthesize sources of multiple media, formats, and contexts.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 3024

RLCL 3034 - Theories of Popular Culture (3 credits)
Examination of theories for understanding the ways in which popular objects and practices (such as television programs, films, or attending sporting events) represent, maintain, and contest societal norms, including norms regarding gender and sexuality, race and ethnicity, and class and place, with an emphasis on the United States.
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 3034

RLCL 3034H - Theories of Popular Culture (3 credits)
Examination of theories for understanding the ways in which popular objects and practices (such as television programs, films, or attending sporting events) represent, maintain, and contest societal norms, including norms regarding gender and sexuality, race and ethnicity, and class and place, with an emphasis on the United States.
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 3034H

RLCL 3144 - Language and Ethnicity in the United States (3 credits)
Exploration of how racial and ethnic identity are expressed through the use of different languages and dialects. Examination of how language is related to issues of equality, social opportunity, and discrimination in the United States.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 3144, SOC 3144

RLCL 3204 - Multicultural Communication (3 credits)
Exploration of communication in and among various cultural groups through an examination of communicative practices, registers, discourse, and performance. Emphasis on understanding cultural differences and similarities in the different styles and stances in communication and their meanings to participants.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 3204

RLCL 3204H - Multicultural Communication (3 credits)
Exploration of communication in and among various cultural groups through an examination of communicative practices, registers, discourse, and performance. Emphasis on understanding cultural differences and similarities in the different styles and stances in communication and their meanings to participants.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 3204

RLCL 3214 - Religion and Culture in India (3 credits)
Interdisciplinary examination of the genealogy of Indian religions (including Hinduism, Buddhism, Jainism, and Sikhism) through anthropological, literary, historical, and textual source materials. Colonial construction and reform of these religions according to modern, universal European ideas of religion; how European notions of the modern nation-state, law, and religious tolerance, and European concepts of self, autonomy, community, (univocal) language, and multiculturalism impacted Indian religions. Pre-modern versus modern notions of tradition and power in Indian religions. Concepts of secularism, gender, race, conversion, caste, and religious-political identity.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 3224 - Religion and Culture in China and Japan (3 credits)
Premodern model of Chinese and Japanese religions: interactions of various traditions (e.g. Confucianism, Buddhism, Daoism, Shinto, and folk); inseparability of religion, culture, society, and politics. Modern reinventions of religion in China and Japan in the late nineteenth and early twentieth centuries. Contemporary issues such as state-religion relations in East Asia, religions of China and Japan in America, East Asian religions and globalization.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 3404 - Torah and Tradition (3 credits)
Detailed study of the first five books of the Bible, known as the Torah or Pentateuch. Scholarly approaches will include historical-critical research; comparative mythology; form and canon criticism; gender and literary studies; and the reception of these books in the Hebrew Bible, the New Testament, and beyond.
Prerequisite(s): RLCL 2414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 3404

RLCL 3404H - Torah and Tradition (3 credits)
Detailed study of the first five books of the Bible, known as the Torah or Pentateuch. Scholarly approaches will include historical-critical research; comparative mythology; form and canon criticism; gender and literary studies; and the reception of these books in the Hebrew Bible, the New Testament, and beyond.
Prerequisite(s): RLCL 2414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 3404H

RLCL 3414 - Jesus in Earliest Christianity (3 credits)
Literary survey of the various representations of Jesus of Nazareth in canonical and apocryphal Christian literature of the first four centuries. Perspectives on Jesus and the interpretive authority involved in producing such variety. Ancient and modern interpretive frameworks for understanding the person and legacy of Jesus in earliest Christianity, including historical-critical frameworks, redaction criticism, genre criticism, and other literary methods. Analyses of modern religious/political discourses as continuations of ancient theological debates. Emphasis on developing skills in critical thinking and close reading of early Christian texts as a means of understanding the religion(s) and histories of the earliest Christians.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 3424 - Orthodoxy and Heresy in Early Christianity (3 credits)
Literary survey focusing on the diversity of Christian beliefs in the first four centuries. Highlights a variety of theological debates and the historical and cultural contexts involved in the eventual production of a Christian orthodoxy, over and against so-called heresy. The history and content of early Christian texts, both canonical and apocryphal. Ancient and modern interpretive frameworks for understanding the variety and diversity of earliest Christian beliefs, including historical-critical frameworks, comparative reading, source criticism, and other literary methods. Emphasis on developing skills in critical thinking and close reading of early Christian texts as a means of understanding the religion(s) and histories of the earliest Christians.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 3454 - Philosophy of Religion (3 credits)
A consideration of religious belief and its justification with attention to such philosophical issues as the nature and existence of the Judeo-Christian-Muslim God, proofs for the existence of God, the problem of evil, a religious basis for ethics, the nature of faith, and the variety of religious beliefs.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 3454

RLCL 3494 - The Holocaust (3 credits)
This course provides a historical account, a psychological analysis, and an occasion for philosophical contemplation on the Holocaust. We will examine the deliberate and systematic attempt to annihilate the Jewish people by the National Socialist German State during World War II. Although Jews were the primary victims, Gypsies, people with disabilities, homosexuals, Jehovahs Witnesses and political dissidents were targeted; we will discuss their fate as well. The class will be organized around the examination of primary sources: written accounts, photographic and film, personal testimony.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3494, JUD 3494

RLCL 3504 - The Age of The Crusades (3 credits)
The origins and development of religious violence examined from an interdisciplinary and cross-cultural perspective; the place of that phenomenon in medieval society. Christianity, Islam, Judaism and their interactions in the medieval world.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3504

RLCL 3544 - The State of Israel: A Political History (3 credits)
This course provides a survey on the political history of the State of Israel and highlights major themes uniquely characterizing the specific events surrounding its establishment and its first 50 years of existence. Additionally, the course will add a comparative dimension by using the political history of Israel as a case study to discuss major themes in political science such as democracy, government, political, economy, etc.
Prerequisite(s): JUD 2134 or PSCI 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 3544, PSCI 3544

RLCL 3644 - Religion in the Middle East (3 credits)
Critical issues in religion in the Middle East. Competing methods for analyzing religion in the Middle East. Key concepts relating to religion and inter-religious relations in the Middle East such as minority, majority, tolerance, citizenship, and family law. Critical thinking about the relationship between Islam and other religions with particular reference to Muslim-Jewish and Muslim-Christian relations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ARBC 3644, IS 3644

RLCL 3884 - Culture and Society in Contemporary Europe (3 credits)
The impact of religion and culture in contemporary European politics and societies. Nationalism versus European cosmopolitanism. Religion, religious radicalism and religious tolerance in Europe. Culture and society in European urban and rural areas. Attitudes towards women and LGBTQ in Europe. Social foundations and cultural determinants of marginalization of social groups, migrants and refugees.
Prerequisite(s): IS 1104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3884, SOC 3884

RLCL 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 4014 - Religion and the Public Sphere (3 credits)
Debates about the resurgence of religion in the modern world. Complexities involved in defining religion. Social-scientific, phenomenological, and cultural approaches to the study of religion. Theories concerning what role religion should play in the public sphere. Theories about secularism, secularization, and the differentiation between religion and politics.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 4024 - Sociology of Religion (3 credits)
Religion as a social structure as well as an institution; with special attention to the functions of religion for individuals, groups and societies, social organization; and the interplay between religion and other social institutions including economics and polity. Taught alternate years.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 4024

RLCL 4104 - Explorations in Advanced Humanities Topics (3 credits)
In-depth study of special interdisciplinary topic. Topics vary but involve a close and extensive study of the interrelationship between cultural ideas and their expressions in several of the following forms: literature, philosophy, religion, art, music, drama, material culture, and popular culture. May be repeated with different topics, for a maximum of 9 credits.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 4104

RLCL 4324 - Topics in Religion and Culture (3 credits)
Selected topics from the religions of the world such as time and the sacred, preliterate religions, women and religion, religion and science, mysticism. May be taken three times for credit with different topics.
Prerequisite(s): RLCL 2004
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

RLCL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Residential Environment & Design (RED)

RED 1604 - Introduction to Residential Design (3 credits)
Analysis of residential spaces to meet the needs of residents. Interrelationship of residential spaces, site, and community, including climate, historic tradition, culture and impact on diversity. House construction systems and finish materials. Current and future trends in design, construction and marketing of housing for diverse households. Impact of codes and regulations on residential design and construction. Professional and labor force issues in the housing industry, interpreting residential floor plans, elevations, detail drawings.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 2234 - Residential Materials (3 credits)
Identifies materials used in residential applications. Flooring, Walls, Ceilings, Trim and Textiles. Reviews properties of materials, wellness for occupants, and sustainability criteria.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 2614 - Residential Construction (3 credits)
Principles of residential construction. Components, materials and methods of residential construction. Terminology used in residential construction. Interior detailing.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 2624 - Residential Design I (3 credits)
Principles of residential design. Concept development using elements and principles of design. Space planning for residential environments including kitchen and bath design. Introduction to hand and computer drawing. Design Lab/Studio.
Prerequisite(s): RED 1604 or RED 2604
Instructional Contact Hours: (5 Lab, 3 Crd)

RED 2644 - Housing and the Consumer (3 credits)
Overview of housing as it relates to consumer needs, values, lifestyles, norms and constraints. Includes structural and tenure alternatives, financial and legal considerations, house design, neighborhood choices, the home buying process, and future directions in housing. Government aspects focus on the history of federal involvement in housing, major housing programs, role of state and local government, and current housing issues and policies.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 2654 - Residential Environments (3 credits)
Application of elements and principles of design in residential spaces and products from diverse cultural perspectives. Examination of human behavior theories that impact the design of residential environments. Development of residential design solutions and processes using computer aided design software. Design Lab/Studio.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (1 Lec, 3 Lab, 3 Crd)

RED 2964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 3624 - Residential Design II (3 credits)
Principles of space planning and 3-dimensional design, including activity analysis and user needs, program preparation as applied to residential settings. Zoning and space planning. Design process including schematic design and design development. Design detailing. Graphic design solutions for specific areas of the home, including social, private, kitchen, and outdoor areas. Design Lab/Studio.
Prerequisite(s): RED 2624 and RED 1624
Instructional Contact Hours: (5 Lab, 3 Crd)

RED 3644 - American Housing (3 credits)
Overview of the role of housing in family life and society throughout the history of the United States. Exploration of the impact of technology, resources, and societal values on the design and style of housing and products used in the home.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 3674 - Residential Systems (3 credits)
Residential systems such as lighting, plumbing, electrical, mechanical and security. Smart home technologies and appliances. Integration of systems into residential environments.
Prerequisite(s): RED 2614
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4224 - Historic Preservation of Residential Properties (3 credits)
History, theory, and field methods of historic preservation in the United States such as building and site surveys, historic structures reports, and National Register Nominations; history and theory of European preservation; fundamental concepts and the role of preservation in allied disciplines; preservation in urban, town, neighborhood, and rural contexts; common preservation strategies and initiatives; understanding of community-based preservation efforts; focus on residential properties.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 4604 - Environmental and Sustainability Issues in Housing (3 credits)
Environmental and sustainability issues in single and multifamily housing in the United States encompassing the building, site, lifestyle, energy and water consumption, waste, air quality and toxic materials; analysis and application of social science theories and equity and identity concerns that provide a foundation for the study of environmentally sustainable housing; current and future alternatives for management of energy and water systems and provision of environmentally sustainable housing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 4604H - Environmental and Sustainability Issues in Housing (3 credits)
Environmental and sustainability issues in single and multifamily housing in the United States encompassing the building, site, lifestyle, energy and water consumption, waste, air quality and toxic materials; analysis and application of social science theories and equity and identity concerns that provide a foundation for the study of environmentally sustainable housing; current and future alternatives for management of energy and water systems and provision of environmentally sustainable housing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 4624 - Residential Design III (3 credits)
Planning, design, and evaluation of residential spaces with an emphasis on kitchens and bathrooms, in relation to the total house plan. Emphasis on planning principles and technical requirements with attention to functional use of the spaces to meet the needs of people. Industry standards, best practices. Materials, fixtures, and mechanical systems. Contract documents. Design Lab/Studio.
Prerequisite(s): RED 3624
Instructional Contact Hours: (5 Lab, 3 Crd)

RED 4624H - Advanced Kitchen and Bath Design (3 credits)
Planning, design, and evaluation of residential kitchens and bathrooms, in relation to the total house plan. Emphasis on planning principles and technical requirements with attention to functional use of the spaces to meet the needs of people.
Prerequisite(s): (AHRM 3624 or RED 3624) and (AHRM 3674 or RED 3674)
Instructional Contact Hours: (6 Lab, 3 Crd)

RED 4654 - Residential Design IV (3 credits)
Advanced topics in house planning, particularly kitchen and bath design, with emphasis on independent work of portfolio quality. Sustainability principles, design process, planning guidelines, design competition. May be repeated once for a maximum of 6 credits. Design Lab/Studio (5L,3C)
Prerequisite(s): RED 4624
Instructional Contact Hours: (5 Lab, 3 Crd)
Repeatability: up to 6 credit hours

RED 4664 - Universal Design (3 credits)
Application and assessment of the principles and strategies of universal design in residential and commercial environments, accessibility regulations and guidelines, products, and technologies. Demographic changes affecting global society. Disabilities and changes throughout the lifespan that affect peoples ability to interact with their environments. Marking strategies to promote universal design communities, products, environments and technologies. Methodologies to evaluate accessibility.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RED 4664H - Universal Design (2 credits)
Evaluation and design of commercial and residential environments with consideration for accessibility, adaptation, safety, and support of the user(s).
Instructional Contact Hours: (2 Lec, 2 Crd)

RED 4764 - Universal Design Lab (1 credit)
Design of residential spaces that meet the needs of a range of users, including older adults and people with disabilities. Principles of universal design are applied to the spatial requirements and product selection for the home.
Prerequisite(s): AHRM 3624 or RED 3624
Corequisite(s): RED 4664
Instructional Contact Hours: (2 Lab, 1 Crd)

RED 4924 - Housing Study Tour (1-19 credits)
A study tour designed to examine the housing industry and trends in design, technology, products and processes. Junior standing required. May be repeated for a maximum of 6 credits.
Instructional Contact Hours: Variable credit course
Repeatability: up to 6 credit hours

RED 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4964H - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4984H - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

RED 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Russian (RUS)

RUS 1105 - Elementary Russian (3 credits)
Fundamentals of grammar, pronunciation, conversation, and reading. Respond to simple questions using appropriate grammar and syntax, participate in conversation about family, school, everyday situations, etc., write in cursive, and read adapted texts. 1105: Grammar and conversation; 1106: Grammar, conversation, and reading.
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 1106 - Elementary Russian (3 credits)
Fundamentals of grammar, pronunciation, conversation, and reading. Respond to simple questions using appropriate grammar and syntax, participate in conversation about family, school, everyday situations, etc., write in cursive, and read adapted texts. 1105: Grammar and conversation; 1106: Grammar, conversation, and reading.
Prerequisite(s): RUS 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 1114 - Accelerated Elementary Russian (6 credits)
Proficiency-oriented approach to elementary Russian, designed for learners who wish to progress rapidly through the beginning stages of language learning. Develops the four language skills (speaking, listening, reading, writing) in a cultural context. Duplicates 1105 and 1106.
Instructional Contact Hours: (6 Lec, 6 Crd)

RUS 2105 - Intermediate Russian (3 credits)
Grammar, reading, conversation, and composition. Emphasizes comprehension of written and spoken Russian.
Prerequisite(s): RUS 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 2106 - Intermediate Russian (3 credits)
Grammar, reading, conversation, and composition. Emphasizes comprehension of written and spoken Russian.
Prerequisite(s): RUS 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 2114 - Accelerated Intermediate Russian (6 credits)
Proficiency-oriented approach to intermediate Russian for learners who wish to progress rapidly through the intermediate stages of language learning. Develops the four language skills (speaking, listening, reading, writing) in a cultural context. Duplicates 2105 and 2106.
Prerequisite(s): RUS 1106 or RUS 1114
Instructional Contact Hours: (6 Lec, 6 Crd)

RUS 2734 - Introduction to Russian Culture and Civilization (3 credits)
Introduction to Russian Culture and Civilization. Interactions between major political and historical events, social and artistic movements in Russia. Russian literature, art, architecture, film, and theatre in the context of Russian cultural history. Aesthetic and rhetorical strategies. Interpretation of intercultural experiences from different vantage points. Taught in English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 3105 - Grammar, Composition and Conversation (3 credits)
Detailed study of grammar. Practice in written and oral expression in Russian on a variety of topics. Supplementary readings to emphasize application of grammatical principles. 3105 includes a rapid grammatical review.
Prerequisite(s): RUS 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 3106 - Grammar, Composition and Conversation (3 credits)
Detailed study of grammar. Practice in written and oral expression in Russian on a variety of topics. Supplementary readings to emphasize application of grammatical principles. 3105 includes a rapid grammatical review.
Prerequisite(s): RUS 2106
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 3114 - Accelerated Advanced Russian Grammar Conversation Composition (6 credits)
Proficiency-oriented approach to advanced Russian. Daily progression through advanced Russian grammar, conversation and composition. Accelerated development of the four language modalities (speaking, listening, reading, writing) in a cultural context. Short translations and paraphrases of authentic Russian texts. Duplicates RUS 3105 and 3106.
Prerequisite(s): RUS 2106 or RUS 2114
Instructional Contact Hours: (6 Lec, 6 Crd)

RUS 3124 - Russian for Oral Proficiency (3 credits)
Devoted to the acquisition of measured levels of proficiency in speaking and understanding spoken Russian. Content-based instruction in small groups. For students who would like to achieve an oral proficiency rating comparable to Intermediate-high on the American Council on the Teaching of Foreign Languages Oral Proficiency Interview (ACTFL-OPI) or S-1+ on the Foreign Service Institute (FSI) scale. Admission by oral exam required. Taught alternate years.
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 3304 - Survey of Nineteenth-Century Russian Literature in Translation (3 credits)
Masterpieces of Russian fiction and poetry written between 1815 and 1881. Romantic poetry of the early nineteenth century and traces the beginnings of Russian prose from early short stories to the rise of the novel as the dominant literary form in the second half of the century. History and politics to theological and philosophical issues in various works. Methods, terminology and practice of literary analysis. Taught in English.
Prerequisite(s): ENGL 1106 or ENGL 1204H
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 3314 - Survey of Twentieth-Century Russian Literature in Translation (3 credits)
Masterpieces of the twentieth-century Russian literature. Symbolist, Acmeist and Futurist poetry, modernist and postmodernist prose such as Mikhail Bulgakovs The Master and Margarita, and Viktor Pelevins Life of Insects. Terminology, practice, and standard methods of literary analysis. Interactions between major political events, social and literary movement. Aesthetic and rhetorical strategies. Taught in English.
Prerequisite(s): ENGL 1106 or ENGL 1204H
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 3424 - Topics in Russian Literature in English (3 credits)
Variable-content course devoted to the study of Russian literary classics. From general surveys of nineteenth- and twentieth-century literature to more intensive study of the works of a single major author. Aesthetic and rhetorical strategies. Interactions between literary movements and political, historical, and cultural events. May be repeated once with different content for a maximum of 6 credits. Readings and lectures in English. No knowledge of Russian required.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: ENGL 3424

RUS 3434 - The Works of Vladimir Nabokov (3 credits)
Readings in major works of Vladimir Nabokov from the 1920s through the 1970s. Aesthetic and rhetorical strategies, literary analysis, major themes, immigration and cultural knowledge. Taught in English.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 3434

RUS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 4204 - Topics in Russian Culture and Civilization (3 credits)
Specific topics in Russian culture and civilization. Variable content. May be repeated for credit with different content.
Prerequisite(s): RUS 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 4304 - Studies in Russian Literature (3 credits)
Selected masterpieces of Russian literature, read in original. Lectures and discussions in Russian. May be repeated for credit with different content.
Prerequisite(s): RUS 3106
Instructional Contact Hours: (3 Lec, 3 Crd)

RUS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

RUS 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

School of Plant & Environmental Science (SPES)

SPES 1004 - First Year Seminar (1 credit)
Exploration of topics related to the School of Plant and Environmental Sciences from a multidisciplinary perspective focusing on communication and teamwork, problem-solving, inquiry, and digital literacy.
Instructional Contact Hours: (1 Lec, 1 Crd)

SPES 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPES 2004 - Cannabis - Science, Industry, and Culture (3 credits)
Major crops in the genus Cannabis (hemp and marijuana). Historical development, botanical aspects, and current research. Medicinal, recreational and industrial products and their use. Legal, cultural, political and socioeconomic issues surrounding cannabis crops.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPES 2244 - World Crops: Food and Culture (3 credits)
How to feed the world in 2050, world crops, primary regions of production, factors that determine where they are grown, economic importance, and use in the human diet. Linkage between food and culture, recipe preparation, and their role in defining who we are, where we come from, and what we have experienced along the way. Tracing of food migration and the African, Caribbean, Asian, Latin American, and European influence on the American cuisine. The universality of food and how every single culture and religion uses food as part of the celebration of life, death, and many cultural events.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SPES 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPES 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPES 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPES 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

SPES 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPES 4114 - Topics: StudyAway: Production, Culture and Social Aspects US Agriculture (3 credits)
Experiential learning, hands-on and face-to-face experience with agricultural industries involved in food production, marketing and consumption. Comparative analysis of agriculture production history, practices and constraints in different regions of the US. The course has two components. One; the in-class (onsite) discussion, analysis, and comparison of the diverse agricultural production systems between Virginia and, two; the studying “away” part (Example, California, Arizona, the Mississippi Delta). Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPES 4864 - Plant Sciences Capstone (2 credits)
Writing and discussion-based learning synthesizing prior knowledge gained in Plant Science degree program. Practice in science-based expository writing and speaking applied to undergraduate coursework, undergraduate research, or work-related experience in the Plant Sciences. Restricted to students in Plant Science degree program. Pre: Junior or Senior standing.
Instructional Contact Hours: (2 Lec, 2 Crd)

SPES 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPES 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPES 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPES 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

School of Pub & International Affairs (SPIA)

SPIA 1024 - Community Service Learning (3 credits)
An introduction to community service learning with emphasis on the development of civic agency. Critical perspectives on community, ethical community engagement, service and volunteerism, servant leadership, and social change. Exposure to the socio-political dynamics inherent in community development and problem solving. Includes significant community engagement and service-learning experiences, reflection, and the development of a personal community engagement action plan.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 1044 - Life in the Built Environment (3 credits)
Development of the human-made environment has shaped our social relations, culture, and identity. Discussion of how the imposition of built form has served both to define a shared culture and as a means of exclusion and injustice. Study of equity and ethics as evidenced and continued in planning, construction, and public space. Learn how the knowledge of these past structures might shape the future of the built environment in the United States in ways that are more equitable, inclusive, and sustainable.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ARCH 1044

SPIA 2004 - Introduction to Urban Analytics (3 credits)
Computational and quantitative thinking applied to urban problems. Multiple data sources and tools for urban analysis. Application of computational and quantitative thinking in decision making and policy processes. Data cleaning, joining/merging, and summarizing. Evaluation of computational and quantitative thinking in urban planning and policy. Ethical and other issues related to computing, analysis and problem solving.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 2024 - Community Systems Thinking (3 credits)
Introduction to systems thinking concepts and their application to community-based problem solving and decision making. Emphasis on identifying interactions between technical and contextual dimensions of persistent, complex global problems. Introduces systemic frameworks for defining problems, identifying and engaging stakeholders, ideating interventions, selecting and employing criteria for decision making, and creating feedback mechanisms for iterative design. Ethics of community engagement is considered. Includes problem- based service-learning projects.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 2114 - Public Service Leadership (1 credit)
Definition and practice of leadership in the public and nonprofit sectors, and its relationship to democratic governance. Decision-making under varying degrees of certainty and ambiguity. Exploring the relationship between public values and the public interest. Evidence for decisions. Case study engagement and presentation.
Instructional Contact Hours: (1 Lec, 1 Crd)

SPIA 2124 - The Art & Science of Negotiation (3 credits)
Practical negotiation techniques and tactics. Tools to systematically assess and prepare for negotiations, including option evaluation and understanding counterparts. Interpersonal skills for effective engagement. Multiparty negotiations. Ethical and moral issues in negotiations. Representation and principle-agent issues. Negotiation process design. Facilitation and mediation. Tackling scientifically and technically complex disputes. Various models, with an emphasis on the mutual gains approach to negotiation.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 2244 - Sustainable Urbanization (3 credits)
Process of urbanization and theories and approaches of urban development. Debates on the meanings of sustainable urbanization and development in cities and how they are measured. Urban sustainability initiatives in the context of urban political economies, land-use practices, urban inequality and diversity, urban nature, and urban policy and politics. Programs and policies designed to enhance sustainable urbanization. Comparative approach and global perspective. Fee $30.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2244

SPIA 2314 - Active Transportation for a Healthy, Sustainable Planet (3 credits)
Connections among active transportation (e.g., bicycling, walking) and significant global challenges such as physical inactivity, health, the environment, and the economy on local to global scales. Methods to assess walkability among communities with different worldviews and the influence of the built environment on rates of active transportation. Approaches to evaluate demographic and psychosocial predictors and physical and policy barriers to use of active transportation. Successful strategies to increase active transportation through community design guidelines, behavior change tools, transportation planning, and policy.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HNFE 2314

SPIA 2544 - Policy Dynamics in Global Health (3 credits)
Overview of global health problems and policy. Key actors and socio-political dynamics that shape knowledge and action on global health issues. Roles and responsibilities in global health policymaking.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 2554 - Collaborative Policy-Making and Planning (3 credits)
Introduction to multi-stakeholder collaboration and public participation in planning, policy-making and public administration. Tools and approaches for engagement and effective collaboration. Deliberative and participatory democracy, and transparency in society. Information sharing and access. Civil society, the media and citizen activism. Ethical and moral issues in collaboration. Barriers to participation, and diversity and inclusion.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPIA 3554 - Transdisciplinary Problem Solving for Social Issues (3 credits)
Strategies and skills for transdisciplinary problem solving. Emphasis on integrative thinking strategies and cognitive and interpersonal skills required to bridge scientific discipline-based, non-scientific discipline-based and cultural knowledge. Strategies to identify important disciplinary, non-scientific, ethical, cultural, and structural elements of a problem. Problem-based learning, ethics, team work, and effective communication skills.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 3704 - Urban Contention and Mobilization (3 credits)
Analyzes the emergence and impact of contentious mobilization in the U.S. and global cities. Includes civil and labor rights, religious freedom, democratization, and other movements for equity and inclusion. Explores social scientific approaches to mobilization, countermobilization, and collective action. Impact of contentious mobilization on governance and planning in urban sites and spaces worldwide. Examines how movements manage and address internal diversity, including variation in members' diverse experiences and objectives.
Pathway Concept Area(s): 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

SPIA 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

SPIA 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPIA 4374 - Federal Cybersecurity Policy and Regulation (3 credits)
This course seeks to give students an understanding of how the government develops new cybersecurity regulations and policies that balance consumer interest in personal protection with industry attitudes towards oversight. The course also covers the policies that government entities take in the interest of national security to maintain state secrets in the face of threats from hackers and other hostile actors.
Prerequisite(s): FIN 4014
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 4454 - Future of Cities (3 credits)
Cities as complex systems. Interdependence of social, economic, environmental, and technological components and how these change over time. Theories about city formation, structure, and change, with implications for sustainability, resilience, and globalization.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 4464 - Data and the Art of Policy-Making and Planning (3 credits)
Critical examination of use of scientific and technical information in planning and policy-making, exploring issues and challenges through social science lens. Investigation of appropriate and responsible use of data within collaborative and deliberative policy-making and planning processes. Presentation of data and underlying models in accessible and understandable formats. Integrating all forms of knowledge into decision-making, including local and traditional knowledge.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 4554 - Creating the Ecological City (3 credits)
Multidisciplinary, team oriented, problem-solving approaches to creating cities that foster healthy interconnections between human and ecological systems. Analysis of problems from practical and ethical perspectives in the context of the diverse knowledge bases and values of decision-makers. Formation and utilization of integrated design teams to solve complex urban design and planning problems at a variety of scales. Senior standing.
Prerequisite(s): HORT 2134 or FREC 2134
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BSE 4554, FREC 4554, HORT 4554, LAR 4554

SPIA 4724 - CyberLeaders Capstone (6 credits)
Interdisciplinary research and analysis from technical and policy standpoints of regulation and industry standards, leading to the development and communication of possible solutions for specific cybersecurity problems related to critical systems. Previous topics include cellphone encryption and Internet of Things security.
Corequisite(s): SPIA 4374
Instructional Contact Hours: (2 Lec, 12 Lab, 6 Crd)

SPIA 4784 - Community Systems Capstone (3 credits)
Collaborative community problem solving in team environments Data collection, interpretation, and presentation augment community-based, iterative design and planning processes. Consideration of ethical engagement and community goals related to social justice, resilience, and sustainability. Discourse-based project culminating in presentation of intervention proposals to stakeholders. Pre: 3 credits in Discourse.
Prerequisite(s): (SPIA 1024 or SOC 2034) and SPIA 2024
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

SPIA 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

SPIA 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPIA 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Science Technology Studies (STS)

STS 1504 - Introduction to Science, Technology, and Society (3 credits)
Examination of the interrelationship among science, technology, and society. Study of how science, technology, and medicine are defined and analyzed by the humanities and social sciences. Examination of topics, theories, and methods of the field of Science and Technology Studies. Depiction of the dynamics of scientific and technological controversies including the roles knowledge, expertise, risk, rhetoric and public understanding play in policy making.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 0 Lab, 3 Crd)

STS 2034 - Introduction to Technology and Race (3 credits)
Examination of the relationship between technology and race. Technology such as information and communication technologies, medical and biometric technologies, transportation, and space travel in contexts of colonialism, indigenous knowledge, and globalization. Role of technology in resistance and emancipation. Assessment of inequity in the design and maintenance of sociotechnical systems including bias in design, surveillance, biopolitics, and the digital divide.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 2054 - Engineering Cultures (3 credits)
Development of engineering and its cultural values in historical and transnational perspectives. Explores the varying knowledge, identities, and commitments of engineers and engineering across different countries. Examines values in emergent infrastructures of engineering education and work, and the participation of engineers and engineering in evolving forms of capitalism. Helps students learn to reflect critically on their knowledge, identities, and commitments in varying curricula and a globalizing world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2054

STS 2154 - The Life Sciences and Society (3 credits)
Basic Science, Technology, and Society (STS) perspectives on the life sciences and the ethical issues they raise. Humanistic approaches to analyze how our values and perceptions are informed by the ways that we understand bodies, biology, and life itself. How our hopes, desires, and fears shape the practices and technologies of the life sciences.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 2254 - Innovation in Context (3 credits)
Critical examination of diverse definitions and examples of innovation. Discussion of innovation as a process of social change; as technology diffusion; as an economic engine; as an ecosystem; as an ideology; and more. Introduction to methods and ideas from the field of Science and Technology Studies including the analysis of innovation from historical, cultural, and economic perspectives, as well as the study of innovations consequences and its alternatives. Collaborative projects focused on creatively describing and critiquing local cases of innovative work.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 2444 - Global Science and Technology Policy (3 credits)
Introduction to issues and themes in global science and technology policy, from the perspective of Science and Technology Studies (STS). Comparison of national and international policy agents, institutions, structures, and processes. Integration of key ideas from STS into policy analysis, including regulatory cultures, cultural notions of risk and expertise, large socio-technical systems, and social shaping of technology. Emphasis on international controversies, diverse cultural perspectives, and inclusion in policy processes. Cases may include international controversies over genetically modified foods, transmissible illnesses, nuclear energy, and information security.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 2454 - Science, Techology, and Environment (3 credits)
Examines the nature and causes of global environmental challenges. Focuses on the role of science and technology in the causation of environmental problems and provision of solutions. Investigates uneven impacts among different groups and nations. Explores multicultural dimensions and ethical debates in the relationship between humanity and natural world. Considers visions of alternative futures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 2464 - Religion and Science (3 credits)
Exploration of the relationships between religion and science in the western tradition. Basic frameworks for relationships between religion and science in historical and cultural context, types of human knowledge and truth, similarities and differences between science and religion, evolution, the origins of the creationist movement, and contemporary moral and ethical issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2464

STS 2604 - Introduction to Data in Social Context (3 credits)
Examines the use of data to identify, reveal, explain, and interpret patterns of human behavior, identity, ethics, diversity, and interactions. Explores the historical trajectories of data to ask how societies have increasingly identified numerical measures as meaningful categories of knowledge, as well as the persistent challenges to assumptions about the universality of categories reducible to numerical measures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 5F Quant & Comp Thnk Found., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2604, SOC 2604

STS 2664 - Technology Ethics (3 credits)
Critical, interdisciplinary exploration of ethical considerations regarding human engagements with technology, including technological development, use, success and failure. History and fundamental concepts of normative ethics and their application to specific technologies and technological systems. Emphasis on conceptualizations and representations of technology with respect to various social, cultural, and historical perspectives on nature, human nature, and technological artifacts.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 2715 - History of Technology (3 credits)
Development of technology and engineering in their social and cultural contexts. Examines the interaction of people, cultures, technologies, and institutions such as governments, religious bodies, corporations, and citizens groups. 2715: Examines the creation and modification of technologies to establish the basic structures of civilization, from prehistory to the Industrial Revolution (about 1800). 2716: Examines the nature of technological change and consequences in society, from about 1800 to present.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2715

STS 2716 - History of Technology (3 credits)
Development of technology and engineering in their social and cultural contexts. Examines the interaction of people, cultures, technologies, and institutions such as governments, religious bodies, corporations, and citizens groups. 2715: Examines the creation and modification of technologies to establish the basic structures of civilization, from prehistory to the Industrial Revolution (about 1800). 2716: Examines the nature of technological change and consequences in society, from about 1800 to present.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2716

STS 2724 - Introduction to Displacement Studies (3 credits)
Examines key concepts, ideas, and technologies in global population displacement, including categorization, distribution and governance of displaced groups. Introduces displacement drivers such as natural disaster, climate change, civil unrest, infectious disease, and forced relocation. Identifies digital infrastructures used for, by, and against displaced populations. Describes experiences of displaced people.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 2724, HIST 2724, LAHS 2724

STS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 3104 - Science and Technology in Modern Society (3 credits)
Examination of science and technology as social and cultural activities in the modern world. The relationship of science and technology to their social and cultural contexts. Institutions and values in science and technology. The changing relationship of technology to science. Discuss how the domain and objects of scientific investigation have been shaped by changing concepts of nature and the natural.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 3124 - Societal Health in North America (3 credits)
Study of human health within and across a variety of geographic contexts in North America. Describe the health consequences of inequity and injustice within and across American contexts. Consider the roles of collectives, social movements, mutual aid, interdisciplinary thinking, power and social justice in addressing pathologies of power and working towards human well-being. Advocate a biosocial lens that considers the dynamic relationships between biology and environmental, social, geographic, and historical contexts.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 3124

STS 3284 - Technology and Disability (3 credits)
Technologies and the experience of disability. The ways institutions, laws, and biases influence how disability is interpreted within engineering and design culture. How disability communities resist, negotiate, adopt, make, and change technologies. Development of work on this topic through making, doing, and writing. Conversations about ableism, media portrayals, historical narratives, ideology, and rhetoric surrounding technology and disability. Includes field trips to learn about the law and assistive technology.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 3314 - Medical Dilemmas and Human Experience (3 credits)
Provides a humanist perspective on dilemmas of medical ethics. Focus on the varieties of human experience of medical dilemmas. Topics include contemporary controversies, such as assisted reproduction, genetic testing and treatment, clinical trials, end-of-life interventions, and the allocation of health-care resources.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 3334 - Energy and Society (3 credits)
Examines the interconnections between energy use and social life. Considers the ways that modern social institutions, such as states, cities, and households are shaped by energy systems, particularly the pervasive use of fossil fuels. Explores the influence of energy extraction and commerce on economic development and global politics. Surveys major contemporary problems related to energy, including climate change and natural resource depletion. Develops an interdisciplinary framework, drawing insights from history, sociology, and economics, for evaluating policies to transition to a sustainable energy system.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 3705 - History of Science (3 credits)
Conceptual and institutional development of physical and biological sciences viewed within a cultural and societal context. 3705: Early Science; 3706: Modern Science
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3705

STS 3706 - History of Science (3 credits)
Conceptual and institutional development of physical and biological sciences viewed within a cultural and societal context. 3705: Early Science; 3706: Modern Science
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3706

STS 3734 - History of Modern Biology (3 credits)
Exploration of the history of biology during the nineteenth century and twentieth centuries, including developments in evolutionary biology, genetics and molecular biology, biology and race, and conservation biology. Emphasis on biology's reciprocal relationship with society, how it has helped shape ideas of race and ethnicity, and the ethical dilemmas it has generated.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3734

STS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4014 - Algorithms & Society (3 credits)
This course focuses on social perspectives of algorithms and implications to factors such as class, gender, race, ethnicity, geography, and disability status. Students will be guided to think critically about the impacts of computing in society, as well as the role of social values in their design. Topics will focus on computing technologies involved in critical contemporary and global concerns including machine learning, privacy, and the infrastructure that describes the social and technical context for algorithms. Pre: Junior Standing
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4014

STS 4304 - Topics: Contemporary Issues in Science, Technology, and Society (3 credits)
Advanced introduction to social scientific concepts and methods in the study of contemporary science and technology. Examines the political, social, and cultural dimensions of a contemporary development or controversy in science and technology. Studies the relationship of science and technology to social structure, power relations, and inequality. Focuses on the institutions and organizations in which emergent science and technology are produced. Discusses policy options informed by social scientific analysis. May be repeated once with different content for a maximum of 6 credits. Pre: Junior standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

STS 4314 - Narrative Medicine (3 credits)
Introduction to the field of narrative medicine, with attention to narrative competencies, the use of narrative medical education, and the function of narratives in the experience of healing. Includes narrative approaches to biomedical ethics.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 4314

STS 4314H - Narrative Medicine (3 credits)
Introduction to the field of narrative medicine, with attention to narrative competence, the use of narrative in medical education, and the function of narratives in the experience of healing. Includes narrative approaches to biomedical ethics.
Prerequisite(s): ENGL 3154 or ENGL 3324
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 4314H

STS 4324 - Medical Experiences and Biomedical Theories (3 credits)
Builds the analytical tools of STS and humanistic deconstruction. Challenges students to read, write, and interrogate academic literatures and real-life, immediate problems and artifacts in ethical, sociocultural, historical, and context informed ways. Builds this competence while examining materials related to current topics in health, such as but not limited to: population, development, reproductive technologies, pollution, climate change, environmental health beyond humans, and, colonialism. Employs multiple humanistic lenses including: biopolitics & biopower, intersectionality, structural and institutional analysis, syndemics, anticolonialism, violence, and disability to examine these materials.
Prerequisite(s): STS 2154 or STS 3314 or SOC 3104
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 4324

STS 4334 - Sexual Medicine (3 credits)
Discusses sex and medicine in contemporary U.S. society. Explores how notions of sexual behavior and normality are defined and structured by medical discourse. Examines cultural institutions that play significant roles in formulating ideas about and definitions of deviance, perversity, and tolerated marginality. Critiques medical responses to sexual variations. Examines experiences of people who have sought out, or been the unwilling victims of, sexual medicine. Junior standing required.
Prerequisite(s): WGS 1824
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WGS 4334

STS 4704 - Gender and Science (3 credits)
Investigates the gender dimensions of science in both historical and contemporary perspectives. Discusses feminist studies of science, exploring strengths and limitations. Assess implications of cultural assumptions about gender for practicing scientists. A 3000 level course in science or engineering may satisfy the prerequisite.
Prerequisite(s): STS 1504 or WGS 2244
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WGS 4704

STS 4754 - Internship (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Science, Technology, & Law (STL)

STL 2304 - Foundations of Science, Technology and Law (3 credits)
US legal system and the rule of law; legal research, analysis, and writing; history, evolution, and moral justifications of intellectual property; intellectual property as it relates to innovative and creative activity; ethical and social issues surrounding intellectual property.
Prerequisite(s): ENGL 1106 or ENGL 1204H
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STL 4304 - Intellectual Property Law (3 credits)
Comprehensive study of the principal legal theories and moral justifications relating to the protection and infringement of intellectual property, including copyrights, patents, trademarks, and related state and federal doctrines (e.g. trade secrets); analysis of commonalities and differences between the different rights; interpretation and application of relevant statutes, rules, and cases; challenges that are posed by new technologies.
Prerequisite(s): STL 2304
Instructional Contact Hours: (3 Lec, 3 Crd)

STL 4314 - Current Topics in Science, Technology and Law (3 credits)
Current developments, problems, and cases at the intersection of science, technology & law; particular focus is placed on intellectual property law and on social, ethical, and other legal issues prompted by new technologies and scientific advancements. Topics include copyright protection in a digital environment; patent law challenges such as patent trolls, patent thickets, ethical considerations related to patenting of life forms; design patents; innovation policy and economic considerations; intellectual property reform efforts; advanced discourse.
Prerequisite(s): STL 2304 or STL 4304 or STL 4324
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STL 4324 - Global Aspects of Intellectual Property Law (3 credits)
Comparative study of international intellectual property protection and enforcement; international treaty arrangements for copyrights, patents and trademarks; policy analysis of the globalized intellectual property system; discussion of global challenges such as access to knowledge, access to essential medicines, adequate protection of geographical indications. Pre: Senior standing.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

STL 4334 - Patent Preparation and Prosecution (3 credits)
Practice of patent law, specifically procedural and substantive laws, rules, and procedures relating to patent application, patent prosecution, and patent maintenance. Filing and prosecuting patents. Ethical issues relating to patent practice. Preparation to take US Patent and Trademark Offices (USPTO) Patent Bar Examination. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

STL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STL 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Sociology (SOC)

SOC 1XXX3 - GEN ED REASONING SOCIAL SCI (3 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

SOC 1004 - Introductory Sociology (3 credits)
Principles and basic concepts of human interaction and social organization. Basic theories and research methods, socialization, deviance, social institutions, population dynamics, social change, and social inequality by social class, race/ethnicity, gender, and sexual orientation.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 1014 - Introduction to Social Anthropology (3 credits)
Introduction to basic concepts including culture and ritual, research methods especially ethnography, and theory in social anthropology for understanding human behavior. Provides a survey of anthropological approaches to language, economics, kinship, religion, identity, gender, race, politics, social organizations, and globalization that compares western and non-western cultures.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 1024 - First Year Experience in Sociology (1 credit)
Develop an identity as a sociologist and foster a sense of community with first year and transfer students in the department. Acquire research skills and an awareness of university resources that enhance academic success. Explore theories used and topics examined by sociologists and participate in sociological research. Identify careers and internship opportunities in sociology.
Instructional Contact Hours: (1 Lec, 1 Crd)

SOC 1084 - Food Studies (3 credits)
Interdisciplinary introductory course explores how food shapes and is shaped by culture and society. Examines how people use food to express meanings (e.g., via foodways, story, art, architecture, religion, ethical codes), how food options, practices, and inequities are shaped by social structures (e.g. cultural and legal norms regarding race, class, and gender), and how the material properties of food (e.g., chemical, ecological, technological) are linked to identities, ideological commitments, and historical moments.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 1084, PSCI 1084, RLCL 1084

SOC 2004 - Social Problems (3 credits)
Examines the nature, extent, and causes of social problems in the United States and around the globe from multiple perspectives. Emphasizes the role of social structural forces including conflicting economic, racial, ethnic, national, and gender interests in the creation and perpetuation of social problems. Discussion of poverty, work, health care, drugs, terrorism, human rights, and social change.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2014 - Sociology of Intimate Relationships (3 credits)
An introduction to concepts, theories, methods, and major research findings in the sociology of intimate relationships. A description and analysis of research findings on the development, operation, and dissolution of intimate relationships, including how sociocultural and economic changes have shaped intimate relationships over time. Emphasis on the United States, including issues of diversity and inequalities in intimate relationships.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2024 - Sociology of Race and Ethnicity (3 credits)
Social construction of race and ethnicity. Relations among ethnic and racial groups. Immigration and patterns of racial and ethnic integration. Social structures and processes that perpetuate racial and ethnic stratification. Consideration of economic, social, political, and health challenges facing racial/ethnic minority groups in U.S. society. Core Curriculum approved for CLE Area 2 only when taken only in combination with AFST 1714.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2034 - Diversity and Community Engagement (3 credits)
Examination of patterns, meanings, and challenges of diversity and inclusion to improve social interactions and community engagement within a global society. Focus on diverse identities, social justice, power, and privilege, applying social science theories and concepts, to facilitate intercultural awareness. Community engagement projects employ research methods to connect course materials and service to community.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2054 - Ethnography: Studying Culture (3 credits)
Introduction to the methodological tools used by anthropologists and other social scientists to study culture. Engagement with the development of, and debates about, ethnographic methods, as well as their application to case studies. Focus on sample ethnographic accounts of peoples throughout the world, as well as research techniques applicable to many different cultural environments.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2054

SOC 2104 - Quantitative Approaches to Community Research (3 credits)
Computational methods and ethical issues in the collection, transformation, consumption, and use of quantitative data in the design and evaluation of community programs. Consideration of effective data visualization and communication of findings. Emphasis on evaluating the reliability and accuracy of data used to frame decisions about community-related policies and service-oriented programs.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HD 2104

SOC 2264 - Race, Class, Gender, and Sexualities (3 credits)
Focuses on how race, class, gender, and sexualities form interlocking systems of privilege and oppression at individual and institutional levels. Emphasizes race, class, gender, and sexualities as changing social constructions and interactive systems that shape social institutions and organizations, meanings, and identities.
Prerequisite(s): WGS 1824
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2264, WGS 2264

SOC 2304 - Individual In Society (3 credits)
Foundation in social psychological principles of sociology including the development of the self through social interaction and intergroup processes. Factors affecting self-perceptions, ways of thinking, attitudes, emotions, behavior, and psychological well-being in social contexts.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2404 - Deviant Behavior (3 credits)
Examines behaviors considered deviant in the United States. Explores major types of deviant behavior, such as corporate crimes, extremist groups, sexual deviance, violence, suicide, alcoholism and other drug addictions, and cyber deviance. Includes sociological theories that explain them.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2454 - Race and Racism (3 credits)
Examines theories of race and racism specifically as they relate to African Americans. We will explain conservative, neo-conservative, liberal, and progressive ideologies concerning race in past and recent United States contexts and how such theories emerged and continue to emerge in recent times. Though the majority of the course focuses on race and racism within the U.S comparative analyses will be made with Brazil and South Africa.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2454

SOC 2514 - Asian American Experience (3 credits)
Interdisciplinary overview of the diverse Asian American experience, incorporating non-Eurocentric perspectives on the Asian immigrant experience and dialogue between Asian American and non-Asian American students. Examination of different historical tracks of various Asian ethnicities, experience of racism, discrimination, cultural adaptation and conflict, and economic survival and success. Gender, age, religious affiliation, family values and inter-generational differences among Asian Americans. The complexity of minority status and the stereotype of "model minority." Activism, political participation, leadership and the meaning of citizenship among Asian Americans. Representations of Asian Americans in the arts and media.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2514

SOC 2604 - Introduction to Data in Social Context (3 credits)
Examines the use of data to identify, reveal, explain, and interpret patterns of human behavior, identity, ethics, diversity, and interactions. Explores the historical trajectories of data to ask how societies have increasingly identified numerical measures as meaningful categories of knowledge, as well as the persistent challenges to assumptions about the universality of categories reducible to numerical measures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 5F Quant & Comp Thnk Found., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2604, STS 2604

SOC 2744 - Black Food in the US: Race, Racism, and Food Studies (3 credits)
A survey of the relationship between Black people in the United States with respect to food, culture, and society. Specifically covers Black food narratives, practices, space, place, as well as issues of inequality and exploitation within society.
Pathway Concept Area(s): 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 3004 - Social Inequality (3 credits)
Class, status, and power in society. Theories and empirical research findings on vertical and horizontal stratification in society. Class differences in behavior, values, and avenues and extent of social mobility. Cross cultural comparisons.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3014 - Gender Relations (3 credits)
Focus on the social construction of gender relations. Examines how gender relations vary cross-culturally, historically, and for different categories of men and women. Explores the causes and consequences of inequality and privilege. Attention paid to the ways race, ethnicity, class, age, and sexualities shape and are shaped by gender and the relationship of gender to social institutions.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3104 - Sociological Theory (3 credits)
Focus on the development and contemporary state of sociological theory. Primary concern is with those theorists who have had significant impact on our thinking about the relationships among man, society, and nature.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3144 - Language and Ethnicity in the United States (3 credits)
Exploration of how racial and ethnic identity are expressed through the use of different languages and dialects. Examination of how language is related to issues of equality, social opportunity, and discrimination in the United States.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 3144, RLCL 3144

SOC 3204 - Social Research Methods (4 credits)
Techniques of data collection and analysis employed in the social sciences with emphasis on survey research methods including questionnaire construction, sampling, and analysis of both self-collected and national data; logic behind application of these techniques.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (4 Lec, 4 Crd)

SOC 3314 - Social Movements (3 credits)
The study of collective attempts to address social injustices and implement other social change in and across societies. Explores sociological and interdisciplinary conceptions of social movements and their relationships to society. Social movement emergence, development, engagement with opponents and authorities, and impact, as shaped by opportunity structures, mobilizing structures and processes, framing, collective identity, strategy and tactics, and other factors. How social movements oppose or promote inequality, oppression, or violence in the U.S. or elsewhere, at the local, national, and transnational level. Application of political process and other current social movement theories.
Prerequisite(s): SOC 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3404 - Environmental Justice (3 credits)
Causes and consequences of environmental and climate injustices; interactions between social inequalities (race, gender, class, position in world-system) and environmental pollution, food and land injustice, climate injustice, and environmental health; environmental racism in environmental policies and practices; political-economic barriers to achieving environmental justice; evaluation of environmental justice reforms and sustainability initiatives; possibilities for system change; social movement strategies for achieving environmental and climate justice; case studies in environmental justice and injustice.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AHRM 3464, APS 3464, GEOG 3464, HD 3464, HUM 3464, UAP 3464

SOC 3504 - Population Trends and Issues (3 credits)
Contemporary American and global population trends in historical and comparative perspective. Discussion of the impact of population change on individual and society. Relevant public policy questions examined.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3614 - Gender and Work in the U.S. (3 credits)
Examination of the role that gender plays in shaping the experience of work, focusing especially on the persistence of occupational segregation by sex, its causes and implications. Also, the interaction of work and family life, including the allocation of household work and control of resources. Social policies affecting gender relations in work organizations will be analyzed.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3714 - Sociology of Aging (3 credits)
Emergence of old age as a social problem. Social aspects of aging in America, including the minority experience and with some cross-cultural comparisons. Social and demographic characteristics of the aged, location of aged in the social structure, and current and future social problems of old age.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3854 - Globalization: Sociological Perspectives (3 credits)
Distinguishes global from international. Examines social globalization and cultural globalization and what forms they take. Explores changes in the role of nation-states and the implications of global changes in the division of labor for economic, gender, and racial/ethnic inequalities. Discusses how globalization is linked with peace, violence, and human rights. Considers alternative and more equitable forms of globalizations and how social movements might lead to such alternatives.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3884 - Culture and Society in Contemporary Europe (3 credits)
The impact of religion and culture in contemporary European politics and societies. Nationalism versus European cosmopolitanism. Religion, religious radicalism and religious tolerance in Europe. Culture and society in European urban and rural areas. Attitudes towards women and LGBTQ in Europe. Social foundations and cultural determinants of marginalization of social groups, migrants and refugees.
Prerequisite(s): IS 1104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3884, RLCL 3884

SOC 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4014 - Sociology of the Family (3 credits)
The family as a basic social institution: similarities and variations in family systems, their interrelationships with other social institutions, and patterns of continuity and change. Taught alternate years.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4024 - Sociology of Religion (3 credits)
Religion as a social structure as well as an institution; with special attention to the functions of religion for individuals, groups and societies, social organization; and the interplay between religion and other social institutions including economics and polity. Taught alternate years.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 4024

SOC 4034 - Sociology of Education (3 credits)
Analysis of the structure, functions, and consequences of schooling in America, the social processes affecting academic achievement, and the implications of current knowledge for educational reform. Taught alternate years.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4044 - Military Sociology (3 credits)
The military institution and its relationship to society. Emphasis on the role of the military and its social organization; recruitment, socialization, career, combat, deviant behavior, changes in the military, and future trends. Taught alternate years. Junior standing.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4054 - Appalachian Languages and Cultures (3 credits)
An empirical examination of how Appalachian speech both reflects and constitutes regional cultures. Emphasis is on applying sociological and anthropological methods and theories to the study of language in use.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 4034

SOC 4094 - Appalachian Community Research (3 credits)
Undergraduate participatory community research as applied to issues of cultural heritage, sustainability, and identity. Students engage in projects defined by community groups and organizations as being critical to their well-being, continuity, or growth. Emphasis is on developing concepts of civic professionalism and developmental democracy.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 4094, PHS 4094

SOC 4114 - The Sociology of Popular Music (3 credits)
Examine the social context(s) of popular music, including the social, economic, and political factors that influence the development of different popular music forms; authenticity within popular music genres; popular musics impact on social activity and identity; the institutions that connect popular music producers with consumers.
Prerequisite(s): SOC 1004 and SOC 1014 or AFST 1714
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4124 - Topics in Culture (3 credits)
Uses sociological, anthropological, as well as artistic and humanist paradigms to analyze culture. Discusses 20th and 21st century cultural trends. Analyzes the implications of social context for cultural artifacts such as art. Topics are variable. Example topics include the cultural construction of race and the cultural of the nineteen sixties. Course may be repeated with different course content for up to 6 credits. Pre: Junior or Senior standing.
Prerequisite(s): SOC 1004 or SOC 1014 or AFST 1714 or AINS 1104 or RLCL 1004 or RLCL 2004 or WGS 1824
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: HUM 4124

SOC 4194 - Senior Seminar (3 credits)
Required seminar for majors. Integration and application of prior coursework, including reviews of theory and research methods. Application of sociological knowledge toward an actual needs assessment in a work setting, completion of a social policy analysis, and a written critique of a sociological publication. Course serves as a bridge to graduate study, prepares students for application of sociological knowledge, and provides overall career guidance. Senior standing and sociology majors only.
Prerequisite(s): SOC 3104 and SOC 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4204 - Applied Research (3 credits)
Stresses differences between applied research and other methodologies. Examines the topics, purposes, problems, theories, and methods appropriate for applied research. Explores ethical and political issues prevalent in applied settings. Includes qualitative, quantitative, and mixed methodologies. Emphasis on survey construction and administration, experimental designs, evaluation research, and participatory action research as used by applied researchers. Includes data analysis and issues of presenting applied research to lay audiences.
Prerequisite(s): SOC 3204 and STAT 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4294 - Capstone: Diversity Engagement (3 credits)
In-depth examination of core themes of diversity. Explains patterns and relational/intersectional aspects of diversity, including the history and legacies of inclusion and exclusion, from a variety of perspectives. Synthesizes diverse writings on issues of social justice and community, power and privilege. Uses social science theories and concepts of diversity to examine contemporary issues of diversity and to facilitate and interpret community engagement projects based in students major fields of study. Focuses on collective responsibility to eliminate bias and discrimination through students community-based project outcomes. This course is restricted to students who have enrolled in the Diversity and Community Engagement Minor.
Prerequisite(s): SOC 2034
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4304 - Research Methods Topics (3 credits)
Variable topics course that focuses on different research methodologies. Includes topics such as feminist research, qualitative methodologies, survey design, evaluation research, and anthropological methods. Can be taken multiple times if different topic.
Prerequisite(s): SOC 3204
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 99 credit hours

SOC 4324 - Medical Experiences and Biomedical Theories (3 credits)
Builds the analytical tools of STS and humanistic deconstruction. Challenges students to read, write, and interrogate academic literatures and real-life, immediate problems and artifacts in ethical, sociocultural, historical, and context informed ways. Builds this competence while examining materials related to current topics in health, such as but not limited to: population, development, reproductive technologies, pollution, climate change, environmental health beyond humans, and, colonialism. Employs multiple humanistic lenses including: biopolitics & biopower, intersectionality, structural and institutional analysis, syndemics, anticolonialism, violence, and disability to examine these materials.
Prerequisite(s): STS 2154 or STS 3314 or SOC 3104
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 4324

SOC 4404 - Sociology of Law (3 credits)
The functions of law as a form of social control. The social forces in the creation, enforcement, and change of the law. The nature of law as a force in social change. Taught alternate years.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4414 - Drugs and Society (3 credits)
Examines the use of drugs, including legal and illegal drugs, from a sociological perspective. Cross-cultural and historical patterns of use are discussed and explained. Particular attention is given to drug use within the context of various social institutions. Junior standing.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4444 - Schools, Violence, and Justice (3 credits)
Focuses on the nature, extent, causes, and consequences of widely recognized forms of violence within schools, such as bullying, fighting, sexual assaults, harassment, dating violence, and shootings. Examines the effectiveness of violence prevention programs. Includes sociological theories of violence within schools. Explores the social debate over balancing the collective public safety obligations of schools with individual students rights/responsibilities.
Prerequisite(s): SOC 3414 or CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSVP 4444

SOC 4454 - Topics in Sociology (3 credits)
A variable topics course in sociology. In-depth examination of topics such as environmental sociology, the sociology of sport and competition, social networks, and sociology of the body. May be repeated 2 times with different content for a maximum of 9 credits. Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

SOC 4704 - Medical Sociology (3 credits)
Social and cultural response to illness and infirmity. Emphasis on the sick role, patient role, practitioner role, organization and politics of health care delivery, stratification, professionalism, and socialization of health practitioners. Taught alternate years. Junior Standing.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4714 - Sociology of Mental Illness (3 credits)
Mental illness and social systems, historically and in contemporary society. Distribution of mental illness with special reference to stratification, role, and deviance theories. Mental health occupations and organization of treatment. Implications for social policy. Taught alternate years. Junior standing.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4754 - Internship (1-3 credits)
Placement and sociologically relevant work in one of a variety of human service settings, combined with relevant readings, discussion and written work coordinated jointly by a faculty member and the setting supervisor. Placement settings include human resource agencies, corrections facilities, extension offices, and law agencies. Sociology major or minor required. Junior or Senior standing required. Consent of internship coordinator required. Coursework relevant to placement setting.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

SOC 4764 - International Development Policy and Planning (3 credits)
Examination of major development theories and contemporary issues and characteristics of low-income societies (industrialization, urbanization, migration, rural poverty, hunger, foreign trade, and debt) that establish contexts for development planning and policy-making. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 4764, UAP 4764

SOC 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Spanish (SPAN)

SPAN 1105 - Elementary Spanish (3 credits)
