The department also offers two graduate certificates--one in Religion and the Public Sphere and the other in Material Culture and Public Humanities; and is a core member of the Alliance for Social, Political, Ethical, and Cultural Thought (ASPECT (https://liberalarts.vt.edu/departments-and-schools/alliance-for-social-political-ethical-and-cultural-thought.html)) Ph.D. program.

For more information on the department or any of our degree programs, please contact rlcl@vt.edu.

Religion and Culture Major (RLCL)

The Bachelor of Arts degree in Religion and Culture (RLCL) combines the strengths of the department in the areas of the humanities and study of religion in order to provide students with opportunities to examine several of the twenty-first century's most important global phenomena. Students completing this cutting-edge, one-of-a-kind degree will explore the impact of religious and cultural practices on politics, economics, the arts, and everyday life (including pop culture), as well as the impact of these practices on moral and ethical practices in today's world. Graduates will be prepared to contribute as employees and citizens to the state of Virginia, the United States, and indeed the world as all levels of society seek better ways to live and work together in the increasingly diverse contexts of the twenty-first century. Religion and culture shape the world and will continue to do so in dramatic and changing ways.

Students who choose this major will develop complex problem-solving skills, alongside critical thinking that will prepare them for a wide range of careers. The global focus of the major affords career opportunities in education, business, government, many private industries, and the non-profit sector. The major has a strong academic and career-advising component.

Humanities for Public Service Major (HPS)

The major in Humanities for Public Service gives intellectual weight to the Virginia Tech motto Ut Prosim ("That I may serve"). The course of study allows students the depth of knowledge to understand the religious and/ or cultural issues confronting modern society, both at home and abroad, while also allowing the flexibility to work directly with faculty on specialized topics ranging from environmental issues in Appalachia, to the impact of Artificial Intelligence on human flourishing.

Students in the major, Humanities for Public Service, build a strong foundation in humanistic learning about cultural and religious traditions with the aim of preparing for careers in public service. The major cultivates cultural awareness and critical thinking skills, familiarizing students with the ways that people have conceptualized, encoded, and reflected on human experience. Therefore it prepares them to sensitively and thoughtfully work for the public good. Requirements include selected courses in theory and practices, as well as a field study/ internship to give students direct experience that will benefit their future careers.

Study Abroad

Students are strongly encouraged to complete an approved study abroad program outside of the U.S. Study abroad programs are occasionally run by faculty in the department.

Honors College

Eligible students are encouraged to participate in the University Honors Program. Completing a degree "In Honors" is an excellent way for outstanding students to integrate the knowledge from several disciplines. Honors students have considerable flexibility in completing the degree requirements.

Double Majors

For information on earning a double major or second degree, contact the Department Chair. Since Religion and Culture major is flexible and dynamic, students are encouraged to earn a second major.

Religion and Culture Minors

The department offers the following minors. Please contact our undergraduate advisor, Benjamin WIley (wiley89@vt.edu), for more information.

- American Studies
- Appalachian Cultures and Environments
- Judaic Studies
- Medieval and Early Modern Studies
- Middle East Studies
- Popular Culture
- Religion

American Studies

American studies is an interdisciplinary field that draws upon a number of academic disciplines, including history, literature, and sociology, to consider relationships between culture and society in the United States as it is embedded in global processes and issues.

Appalachian Cultures and Environments

Appalachian Cultures and Environments is a Pathways minor supporting teaching, research, outreach, and service on topics pertaining to Appalachia in relation to pertinent transglobal issues. Courses focus on these issues from a critical regionalism perspective in which the relationship between these issues and region is considered problematic and open to investigation.

Judaic Studies

Endowed in 1996, the Malcolm and Diane Rosenberg Program in Judaic Studies offers students the opportunity to explore, examine, and critically engage the rich and multifaceted history, religion, and culture of the Jewish people. Judaic culture has significantly contributed to Western and other civilizations.

Medieval and Early Modern Studies

Medieval & Early Modern Studies fosters an interdisciplinary approach to the Medieval and Early Modern Worlds (roughly 300-1700 C.E.).

Middle East Studies

The interdisciplinary minor in Middle East Studies allows students to gain a broad understanding and appreciation of the languages, religions, and cultures of the Middle East and of the region's history and its place in international relations.

Popular Culture

The Minor in Popular Culture provides an understanding of the broadly shared cultures made possible by mass production. Popular culture includes all widely practiced and distributed expressions: news; entertainment; religion; sports; popular art; and styles of decoration, dress, and architecture.

Religion

By examining a diversity of traditions and viewpoints, a program in religious studies provides the resources for an intellectually responsible appraisal of one's own value commitments. A minor in Religion is part of a broad liberal arts education and may lead to graduate study in a variety of fields or to professional training in ministerial or social service vocations.

- Humanities for Public Service Major (p. 1109)
- Religion and Culture Major (p. 1110)

Chair: Rachel Scott
Professors: B. Britt, M. Gabriele, E. Satterwhite,[10] and R. Scott
Associate Professors: A. Abeysekara, A. Ansell, D. Christensen, Z. Ni,[10] and P. Seniors
Assistant Professors: A. Armstrong, C. Buckner, S. Patel, [10] and D. Polanco
Visiting Assistant Professor: R. Aras, and S. Sidky
Instructor: T. Edmondson
Post-Doctoral Associate: S. Plummer

Footnotes:

1 Award for Excellence in Undergraduate Advising
2 Academy of Teaching Excellence inductee
3 Wine Award recipient
4 Sporn Award recipient
5 Alumni Award for Extension Excellence
6 Alumni Award for Research Excellence
7 Alumni Award for Teaching Excellence
8 Academy of Faculty Service
9 Commonwealth of Virginia Outstanding Faculty Award
10 Diggs Teaching Scholar Awards

Undergraduate Course Descriptions (APS)

APS 1704 - Introduction to Appalachian Studies (3 credits)
Introduces students to the history of the Appalachian region from European contact to the present. Traces the idea of Appalachia by tracing ways in which Americans have imagined the region over time. Explores humanistic problems of cultural identity, race and ethnicity, place and globalization, and impacts of natural resource extraction.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 1704

APS 2124 - Music Traditions in Appalachia (3 credits)
Survey and study of music traditions in Appalachia. Investigation of the formal elements of this music, including instruments and musical terms and forms. Exploration of style as a reflection of many cultural influences. Study of the impact and development of these traditions in contemporary musical practices.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: MUS 2124

APS 2404 - Folk Cultures in Appalachia (3 credits)
Examination of the expressive genres and cultural processes of communities in Appalachia. Documentation of art and skill in everyday life, including material culture (e.g., foodways, architecture), customary behavior (e.g., music, ritual, occupational practice), and verbal art (e.g., narrative, speechplay), and analysis of how people have used these forms to shape social identities, physical spaces, and power relations.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 2404

APS 2434 - The Cultural Politics of Music in Appalachia (3 credits)
Examines cultural, political, and social aspects of music in, of, and about Appalachia, including such commercialized and increasingly globalized products as "old-time," "bluegrass," and "country." Ways in which music contests and reproduces social relations of race, class, and gender. Role of migration and racial diversity in formation of Appalachian music. Economic significance of music, such as Virginia's The Crooked Road as a regional touristic undertaking.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

APS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 2974H - Independent Study (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

APS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 3124 - Societal Health in North America (3 credits)
Study of human health within and across a variety of geographic contexts in North America. Describe the health consequences of inequity and injustice within and across American contexts. Consider the roles of collectives, social movements, mutual aid, interdisciplinary thinking, power and social justice in addressing pathologies of power and working towards human well-being. Advocate a biosocial lens that considers the dynamic relationships between biology and environmental, social, geographic, and historical contexts.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 3124

APS 3214 - History of Appalachia (3 credits)
Early settlement, religion, the pre-industrial economy, the coming of the coal and lumber industries, labor activism, politics, migration, and regional identity.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3214

APS 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AHRM 3464, GEOG 3464, HD 3464, HUM 3464, SOC 3464, UAP 3464

APS 3624 - Appalachian Literature (3 credits)
Appalachian literature from the region's beginnings to the present, including such diverse voices as women, Native American, Affrilachian, LGBTQ, and Latinx populations. Literary perspectives on the relationships between self, family, and community; place and displacement; and humans and the natural world. Analysis of stereotypes that have perpetuated inequity and displacement of power, as well as consideration of regional efforts to reclaim equity, power, place, and identity.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 3624

APS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 4034 - Appalachian Languages and Cultures (3 credits)
An empirical examination of how Appalachian speech both reflects and constitutes regional cultures. Emphasis is on applying sociological and anthropological methods and theories to the study of language in use.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 4054

APS 4094 - Appalachian Community Research (3 credits)
Undergraduate participatory community research as applied to issues of cultural heritage, sustainability, and identity. Students engage in projects defined by community groups and organizations as being critical to their well-being, continuity, or growth. Emphasis is on developing concepts of civic professionalism and developmental democracy.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHS 4094, SOC 4094

APS 4414 - Issues in Appalachian Studies (3 credits)
Research conducted by students on issues relevant to local or regional sustainability in contemporary Appalachia on contemporary environmental and community issues. Focus on environmental justice ethical issues expressed in or created by various forms of discourse.
Prerequisite(s): HUM 1704 or APS 1704
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 4414

APS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 4974H - Independent Study (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

APS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

APS 4994H - Undergraduate Research (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (HUM)

HUM 1024 - Introductory Humanities: Great Books (3 credits)
An introduction to the humanities through the topic of "Great Books." Students will closely analyze primary canonical texts from the West and from the global south. Political, religious, philosophical, and literary works by important writers and communities from across the globe will be explored to understand the human condition and self-formation. Such engagement with primary texts will be put into the context of larger topics such as class, race, and gender in addition to colonialism, decolonialism, and postcolonial modernity.
Instructional Contact Hours: (3 Lec, 3 Crd)

HUM 1054 - Virginia Tech Prison Book Project (1 credit)
A one-hour course with the Virginia Tech Prison Book Project. Students will complete a learning module about carceral institutions in the United States and the impact of educational opportunities on the lives of incarcerated people. They will then participate in a service learning event where they match individual requests from incarcerated readers to books and prepare the books for shipping.
Instructional Contact Hours: (1 Lab, 1 Crd)
Course Crosslist: CRIM 1054, RLCL 1054

HUM 1324 - Introductory Humanities: The Modern World (3 credits)
The shifts in thought and values during the nineteenth and twentieth centuries in the global imagination, including issues of commerce, scientific inquiry, industrialization, nationalism, war, labor, gender, class differences, race, and the beginnings of postmodernity. Emphasis on interpretive and analytic skills in terms of reading, discussing, and writing about the interrelationships among the arts, literature, philosophy, history, religion, and science, and their contributions toward shaping the values and aspirations of the age, including global contexts and Asian cultures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HUM 1504 - Introduction to Popular Culture (3 credits)
The development and formation of the category of popular culture. Competing theories and methods for analyzing popular culture. Activities, objects, and ideas included under the rubric of popular culture. Critical thinking about the production of popular culture in relation to race, gender, class, and other forms of human difference.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 1504

HUM 1604 - Introduction to Humanities and the Arts (3 credits)
Explores the written, visual, and performing arts of selected periods and cultures, setting them in the context of their times. Study of these periods linked with overarching questions of cultural encounters, interactions, and negotiations. Introduces principles of each art form as well as the means of appreciation. Students taught methods in researching, writing, and presenting on these art forms.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HUM 1704 - Introduction to Appalachian Studies (3 credits)
Introduces students to the history of the Appalachian region from European contact to the present. Traces the idea of Appalachia by tracing ways in which Americans have imagined the region over time. Explores humanistic problems of cultural identity, race and ethnicity, place and globalization, and impacts of natural resource extraction.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 1704

HUM 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 1984A - Special Study (3 credits)
Pathway Concept Area(s): 1A Discourse Advanced
Instructional Contact Hours: (3 Lec, 3 Crd)

HUM 2104 - Oral Traditions and Culture (3 credits)
Examination of the worlds great oral traditions, both ancient and contemporary. Emphasis on performance contexts, relationships among multicultural traditions, including American Indian oral traditions, and the relationships among orality, literacy, technology, media, and culture.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AINS 2104

HUM 2204 - The Creative Process (3 credits)
Explores ways in which creativity and design can be understood historically as well as understood and practiced in a classroom setting. Subjects include any or all of the following: theories of creativity; traditions associated with understanding and making several kinds of art; studying artworks from different cultural backgrounds, working with the limitations and possibilities inherent in design projects, and examining how and why they were created; and preparing final creative projects for classroom presentation.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

HUM 2404 - Folk Cultures in Appalachia (3 credits)
Examination of the expressive genres and cultural processes of communities in Appalachia. Documentation of art and skill in everyday life, including material culture (e.g., foodways, architecture), customary behavior (e.g., music, ritual, occupational practice), and verbal art (e.g., narrative, speechplay), and analysis of how people have used these forms to shape social identities, physical spaces, and power relations.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 2404

HUM 2504 - Introduction to American Studies (3 credits)
Methodology and tools of American studies, with a focus on developing analytic skills to assess discourse across varied media. Interdisciplinary investigation of histories, politics, cultures, and beliefs in the Americas, including the impacts of encounter and exchange. Intensive study of a specific topic or period.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2504

HUM 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 3034 - Theories of Popular Culture (3 credits)
Examination of theories for understanding the ways in which popular objects and practices (such as television programs, films, or attending sporting events) represent, maintain, and contest societal norms, including norms regarding gender and sexuality, race and ethnicity, and class and place, with an emphasis on the United States.
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3034

HUM 3034H - Theories of Popular Culture (3 credits)
Examination of theories for understanding the ways in which popular objects and practices (such as television programs, films, or attending sporting events) represent, maintain, and contest societal norms, including norms regarding gender and sexuality, race and ethnicity, and class and place, with an emphasis on the United States.
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3034H

HUM 3204 - Multicultural Communication (3 credits)
Exploration of communication in and among various cultural groups through an examination of communicative practices, registers, discourse, and performance. Emphasis on understanding cultural differences and similarities in the different styles and stances in communication and their meanings to participants.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3204

HUM 3204H - Multicultural Communication (3 credits)
Exploration of communication in and among various cultural groups through an examination of communicative practices, registers, discourse, and performance. Emphasis on understanding cultural differences and similarities in the different styles and stances in communication and their meanings to participants.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3204

HUM 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AHRM 3464, APS 3464, GEOG 3464, HD 3464, SOC 3464, UAP 3464

HUM 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 4104 - Explorations in Advanced Humanities Topics (3 credits)
In-depth study of special interdisciplinary topic. Topics vary but involve a close and extensive study of the interrelationship between cultural ideas and their expressions in several of the following forms: literature, philosophy, religion, art, music, drama, material culture, and popular culture. May be repeated with different topics, for a maximum of 9 credits.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: RLCL 4104

HUM 4124 - Topics in Culture (3 credits)
Uses sociological, anthropological, as well as artistic and humanist paradigms to analyze culture. Discusses 20th and 21st century cultural trends. Analyzes the implications of social context for cultural artifacts such as art. Topics are variable. Example topics include the cultural construction of race and the cultural of the nineteen sixties. Course may be repeated with different course content for up to 6 credits. Pre: Junior or Senior standing.
Prerequisite(s): SOC 1004 or SOC 1014 or AFST 1714 or AINS 1104 or RLCL 1004 or RLCL 2004 or WGS 1824
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: SOC 4124

HUM 4414 - Issues in Appalachian Studies (3 credits)
Research conducted by students on issues relevant to local or regional sustainability in contemporary Appalachia on contemporary environmental and community issues. Focus on environmental justice ethical issues expressed in or created by various forms of discourse.
Prerequisite(s): HUM 1704 or APS 1704
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 4414

HUM 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

HUM 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (JUD)

JUD 1105 - Elementary Modern Hebrew (3 credits)
Introduction to speaking, listening, reading, and writing the modern Hebrew language. Emphasis on developing proficiency in practical language use, comprehension and cultural competency. 1105: Basic tasks such as greetings, counting, and simple requests; for students with no prior knowledge of the language. 1106: More advanced tasks like asking directions, expressing personal preferences, or making purchases.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HEB 1105

JUD 1106 - Elementary Modern Hebrew (3 credits)
Introduction to speaking, listening, reading, and writing the modern Hebrew language. Emphasis on developing proficiency in practical language use, comprehension and cultural competency. 1105: Basic tasks such as greetings, counting, and simple requests; for students with no prior knowledge of the language. 1106: More advanced tasks like asking directions, expressing personal preferences, or making purchases.
Prerequisite(s): JUD 1105
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HEB 1106

JUD 2134 - Judaism: A Survey of History, Culture, and Heritage (3 credits)
Introduction to the academic study of Judaism; a variety of scholarly approaches to Jewish textual and cultural sources, including the Hebrew Bible, rabbinic literature, and diverse contemporary cultural, religious, and social expressions. Emphasis on developing skills in critical thinking, reading, and writing about Judaism as a way of understanding the beliefs, philosophies, and histories of global Jewish communities past and present.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2134

JUD 2414 - Hebrew Bible/Old Testament (3 credits)
Introduction to the academic study of the Hebrew Bible (Old Testament), including its contents, contexts, major themes, and reception; a variety of scholarly approaches, including historical-critical, literary, ethical, and gender studies methods. Emphasis on developing skills in critical thinking, reading, and writing about the Hebrew Bible (Old Testament).
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2414

JUD 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JUD 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JUD 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JUD 3404 - Torah and Tradition (3 credits)
Detailed study of the first five books of the Bible, known as the Torah or Pentateuch. Scholarly approaches will include historical-critical research; comparative mythology; form and canon criticism; gender and literary studies; and the reception of these books in the Hebrew Bible, the New Testament and beyond.
Prerequisite(s): REL 2414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3404

JUD 3404H - Torah and Tradition (3 credits)
Detailed study of the first five books of the Bible, known as the Torah or Pentateuch. Scholarly approaches will include historical-critical research; comparative mythology; form and canon criticism; gender and literary studies; and the reception of these books in the Hebrew Bible, the New Testament, and beyond.
Prerequisite(s): RLCL 2414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 3404H

JUD 3494 - The Holocaust (3 credits)
This course provides a historical account, a psychological analysis, and an occasion for philosophical contemplation on the Holocaust. We will examine the deliberate and systematic attempt to annihilate the Jewish people by the National Socialist German State during World War II. Although Jews were the primary victims, Gypsies, people with disabilities, homosexuals, Jehovahs Witnesses and political dissidents were targeted; we will discuss their fate as well. The class will be organized around the examination of primary sources: written accounts, photographic and film, personal testimony.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3494, RLCL 3494

JUD 3544 - The State of Israel: A Political History (3 credits)
This course provides a survey on the political history of the State of Israel and highlights major themes uniquely characterizing the specific events surrounding its establishment and its first 50 years of existence. Additionally, the course will add a comparative dimension by using the political history of Israel as a case study to discuss major themes in political science such as democracy, government, political economy, etc.
Prerequisite(s): JUD 2134 or PSCI 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3544, RLCL 3544

JUD 4424 - Advanced Topics in Jewish Culture, History and Thought (3 credits)
Selected topics in Jewish culture, history and thought. Possible topics includes: the philosophy of Maimonides, Spinoza or Buber, or a course dedicated to one of the following topics: Kabbalah, Hasidism, The American Jewish experience in the first half of the 20th century, and Oriental Jewish art and folklore. Two JUD courses or senior standing required. Alternate years.
Instructional Contact Hours: (3 Lec, 3 Crd)

JUD 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JUD 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

JUD 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

JUD 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (RLCL)

RLCL 1004 - Introduction to Religion and Culture (3 credits)
This course introduces students to foundational concepts and debates within the humanities and social sciences by studying one of a rotating set of themes (e.g. love, evil, apocalypse) located at the intersection of religion and culture. Emphasis on cultural diversity, historical transformation, interdisciplinary inquiry, problem-solving and the application of academic discussions to everyday life situations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1004H - Intro to Religion & Culture (3 credits)
This course introduces students to foundational concepts and debates within the humanities and social sciences by studying one of a rotating set of themes (e.g. love, evil, apocalypse) located at the intersection of religion and culture. Emphasis on cultural diversity, historical transformation, interdisciplinary inquiry, problem-solving and the application of academic discussions to everyday life situations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1014 - World Religions (3 credits)
Formation of the category of world religions in the modern West. Basic worldviews, embodied practices, and traditions included under the rubric of world religions. The encounter of and mismatch between traditions identified as world religions and the category of world religions as an instrument of colonialism and imperialism.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1024 - Judaism, Christianity, and Islam (3 credits)
Nature of religion and the analysis of it from an academic perspective. Basic tenets of Judaism, Christianity, and Islam, including their manifestations in the United States and their involvement in critical issues in a global context Interpretation of key texts from various historical and cultural contexts.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1034 - Religion and the Modern World (3 credits)
Modern challenges to traditional religion and responses to these challenges, including: religion as an object of critique; law, sovereignty, and religion; religion, gender, and race; religion, science, and technology; religion and media presentations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1034H - Religion and the Modern World (3 credits)
Modern challenges to traditional religion and responses to these challenges, including: religion as an object of critique; law, sovereignty, and religion; religion, gender, and race; religion, science, and technology; religion and media presentations.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1044 - Religious Ethics (3 credits)
Influential representative social and religious ethical perspectives from ancient Greek philosophers to the present; ethical reasoning on current pressing and perennial social issues - bioethics, sexuality, family, poverty--based on historical and ethical analysis of case studies; theoretical assumptions about morality as the relation between living a virtuous life and performing ethical duties.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1054 - Virginia Tech Prison Book Project (1 credit)
A one-hour course with the Virginia Tech Prison Book Project. Students will complete a learning module about carceral institutions in the United States and the impact of educational opportunities on the lives of incarcerated people. They will then participate in a service learning event where they match individual requests from incarcerated readers to books and prepare the books for shipping.
Instructional Contact Hours: (1 Lab, 1 Crd)
Course Crosslist: CRIM 1054, HUM 1054

RLCL 1084 - Food Studies (3 credits)
Interdisciplinary introductory course explores how food shapes and is shaped by culture and society. Examines how people use food to express meanings (e.g., via foodways, story, art, architecture, religion, ethical codes), how food options, practices, and inequities are shaped by social structures (e.g. cultural and legal norms regarding race, class, and gender), and how the material properties of food (e.g., chemical, ecological, technological) are linked to identities, ideological commitments, and historical moments.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 1084, PSCI 1084, SOC 1084

RLCL 1134 - The Ancient Mediterranean World (3 credits)
Ancient cultures of the Mediterranean world with a focus on their embodiments in the arts, literature, history, philosophy, and religion. Emphasis on Greek, Hellenistic and Roman cultures, their interrelationships with each other and their historical, cultural, material and intellectual encounters with contemporary Mediterranean cultures as well as their influence on later and modern cultures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CLA 1134

RLCL 1214 - The Medieval World (3 credits)
Introduction to Europe and the Mediterranean world in the period between antiquity and the European encounter with the Americas. Investigation of the arts, literature, philosophy, and history of the period in the Christian, Jewish, and Islamic traditions and the multiple types of encounters that those communities experienced. Analysis of the impact the medieval world continues to have on the modern West.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1504 - Introduction to Popular Culture (3 credits)
The development and formation of the category of popular culture. Competing theories and methods for analyzing popular culture. Activities, objects, and ideas included under the rubric of popular culture. Critical thinking about the production of popular culture in relation to race, gender, class, and other forms of human difference.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 1504

RLCL 1904 - Religion and Culture In Asia (3 credits)
Historical and geographical overview of diverse religious/cultural traditions in Asia, such as Hinduism, Buddhism, Sikhism, Confucianism, Daoism, and Shinto. Investigation of the categories religion and culture and their interactions in Asia. Examination of different methodological and interdisciplinary approaches and their integration, with emphasis on critical thinking about the complexities of studying religion and culture in Asia. Asia on a global stage, including Western views of Asia and Asian views of the West.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 1904H - Religion and Culture in Asia (3 credits)
Historical and geographical overview of diverse religious/cultural traditions in Asia, such as Hinduism, Buddhism, Sikhism, Confucianism, Daoism, and Shinto. Investigation of the categories religion and culture and their interactions in Asia. Examination of different methodological and interdisciplinary approaches and their integration, with emphasis on critical thinking about the complexities of studying religion and culture in Asia. Asia on a global stage, including Western views of Asia and Asian views of the West.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 2004 - Case Studies in Religion and Culture (3 credits)
Significant case studies in the study of religion and culture with an emphasis on influential and emerging research. Focused engagement with humanities and social sciences research grounded in analysis, comparison, and evaluation of relevant case studies.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 2054 - Ethnography: Studying Culture (3 credits)
Introduction to the methodological tools used by anthropologists and other social scientists to study culture. Engagement with the development of, and debates about, ethnographic methods, as well as their application to case studies. Focus on sample ethnographic accounts of peoples throughout the world, as well as research techniques applicable to many different cultural environments.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 2054

RLCL 2104 - Greek New Testament (3 credits)
Readings from the New Testament in Greek, with attention to grammatical analysis, historical background and other clues interpretation. May repeated with different content for a maximum of 9 credits.
Prerequisite(s): GR 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours
Course Crosslist: GR 2104

RLCL 2124 - Religion in American Life (3 credits)
Understanding and integrating source materials for the study of religion in American life. Genealogy of religion and culture in America (USA). Changes and transformations in religious beliefs and practices and their influences on American life. Debates about religion and culture. Entanglements of religion, politics, race, ethnicity, and law.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 2134 - Judaism: A Survey of History, Culture, and Heritage (3 credits)
Introduction to the academic study of Judaism; a variety of scholarly approaches to Jewish textual and cultural sources, including the Hebrew Bible, rabbinic literature, and diverse contemporary cultural, religious, and social expressions. Emphasis on developing skills in critical thinking, reading, and writing about Judaism as a way of understanding the beliefs, philosophies, and histories of global Jewish communities past and present.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 2134

RLCL 2144 - African Religions (3 credits)
The role of religious (or belief) systems in African societies, especially the three predominant religious traditions in Africa: the so-called African Traditional Religious, Islam, and Christianity; the universe of religious systems and religious experiences and processes of Africa, in particular, Sub-Saharan Africa; critical examination of the mythic stature of Africas religions within Western cultural (and scholarly) world views and institutions.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2144

RLCL 2204 - Race and Gender in Religion and Culture (3 credits)
Influence of race and gender on religion and culture. Overview of approaches to categories of diversity, particularly race and gender, in religious and cultural traditions. Utilization of humanistic and social scientific approaches to investigate geographically variable historical and/or contemporary case studies.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2204, WGS 2204

RLCL 2324 - Islam (3 credits)
Addresses the rise of Islam under the Prophet Muhammad in Arabia, the development of Islam in the Middle Ages, and its resurgence in the 20th century. Issues of geographical, temporal, and ideological diversity, and critical thinking about representations of Islam in the West. Islamic orthodoxy addressed by examining the question of who represents Islam, when, and how.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 2374 - Gods and Kings in Premodern India (3 credits)
History of India from pre-historical times to approximately 1700, with particular focus on the interplay between religion and politics. Emphasis on sources for and interpretations (historiography) of early Indian history. Literary versus archaeological record of pre-historic India, the earliest empires and rulers, and impact of the Islamic and wider world on India. Legacies of ancient and medieval India in the contemporary world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2374

RLCL 2384 - Gandhi in the Making of Modern India (3 credits)
History of India since approximately 1700, with particular focus on Gandhis influence on modern India and the world. Emphasis on sources for and interpretations (historiography) of modern Indian history. Examination of pre-colonial and colonial pasts and legacies. Exploration of Gandhis role in political, social, cultural, and religious movements of the early 20th century, and Gandhis legacy in the independent states of South Asia and the contemporary world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2384

RLCL 2394 - Tofu to Tikka: Food in Asian History (3 credits)
Exploration of the evolution and alterations of food and cuisines throughout Asian history. Examination of the economic, geographical, political, philosophical/religious, and social underpinnings of food in premodern Asian societies; influence of the Columbian Exchange of Asian and global cuisines; Euro-American imperialism's impact on food and society in Asia and in the European and American metropoles; emergence of national cuisines in Asia; and Asian food in the post-colonial diaspora.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2394

RLCL 2414 - Hebrew Bible/Old Testament (3 credits)
Introduction to the academic study of the Hebrew Bible (Old Testament), including its contents, contexts, major themes, and reception; a variety of scholarly approaches, including historical-critical, literary, ethical, and gender studies methods. Emphasis on developing skills in critical thinking, reading, and writing about the Hebrew Bible (Old Testament).
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 2414

RLCL 2424 - New Testament (3 credits)
Introduction to the academic study of the New Testament, including gospels, Pauline materials, theological themes, and sources on the emerging church. A variety of scholarly approaches to the New Testament texts and contexts, including historical-critical, redaction critical, and literary methods. Emphasis on developing skills in critical thinking, reading, and writing about the New Testament and the ancient Mediterranean world as a way of understanding the religion and history of early Christianity.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 2434 - Legends of King Arthur (3 credits)
Introduction to legends of King Arthur, including stories, novels, and films from a wide historical timespan. Tales of knights, kings, and fair maidens that have entertained generations and irrevocably shaped cultural values surrounding gender relations, justice, violence, and the use and abuse of power. Analysis of individual texts and broader consideration of the Arthurian tradition during key literary-historical periods from the medieval era to the present.
Prerequisite(s): ENGL 1106 or COMM 1016
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 2434

RLCL 2444 - Greek and Roman Myth (3 credits)
Surveys ancient Greek and Roman mythology. Provides students with an introduction to selected myths from ancient Greek and Roman literature, including appropriate historical background information. Familiarizes students with how theories of myth have been applied to individual stories and how such mythological tales have been received by authors and artists in subsequent cultures. Explores the interaction and interdependence of mythological tales from different cultures and perspectives. In English.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CLA 2444, ENGL 2444

RLCL 2464 - Religion and Science (3 credits)
Exploration of the relationships between religion and science in the western tradition. Basic frameworks for relationships between religion and science in historical and cultural context, types of human knowledge and truth, similarities and differences between science and religion, evolution, the origins of the creationist movement, and contemporary moral and ethical issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 2464

RLCL 2474 - Religion and Violence (3 credits)
Investigation of the categories of religion and secularity as they apply to war and peace. Analysis of episodes from both past and present in which religion seems to have played a role. Introduction to research skills related to the study of religion and violence, building from theoretical and historical considerations.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2474

RLCL 2484 - Religion and Politics (3 credits)
Investigation of religion and politics as distinct categories in different times and places. Analysis of episodes from both past and present in which religion and politics have come together, or have been kept apart. Examination of the roles religion and politics play in the modern world and how they impact the lived experience of diverse populations both in the United States and throughout the world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2484, PSCI 2484

RLCL 2504 - Introduction to American Studies (3 credits)
Methodology and tools of American Studies, with a focus on developing analytic skills to assess discourse across varied media. Interdisciplinary investigation of histories, politics, cultures, and beliefs in the Americas, including the impacts of encounter and exchange. Intensive study of a specific topic or period.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 2504

RLCL 2514 - Asian American Experience (3 credits)
Interdisciplinary overview of the diverse Asian American experience, incorporating non-Eurocentric perspectives on the Asian immigrant experience and dialogue between Asian American and non-Asian American students. Examination of different historical tracks of various Asian ethnicities, experience of racism, discrimination, cultural adaptation and conflict, and economic survival and success. Gender, age, religious affiliation, family values and inter-generational differences among Asian Americans. The complexity of minority status and the stereotype of "model minority." Activism, political participation, leadership and the meaning of citizenship among Asian Americans. Representations of Asian Americans in the arts and media.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 2514

RLCL 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 3014 - Women and Gender in Islam (3 credits)
An examination of women and gender in Islam from a variety perspectives including Muslim women in Islamic history, normative constructions of the role of women in Islam, and womens roles in contemporary Muslim societies. Understanding of women in classical Islam; feminist and reformist approaches; and Western constructions of the rights of women if Islam.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WGS 3014

RLCL 3024 - Religion and Literature (3 credits)
Read works from world literature, guided by selected critical readings. Compare/contrast diverse models of religion and literature. Study how modernity has impacted traditions of religion and culture. Interpret literary texts that draw from multiple religions. Analyze religion-literature controversies in a range of social, cultural, political contexts. Synthesize sources of multiple media, formats, and contexts.
Pathway Concept Area(s): 1A Discourse Advanced, 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 3024

RLCL 3034 - Theories of Popular Culture (3 credits)
Examination of theories for understanding the ways in which popular objects and practices (such as television programs, films, or attending sporting events) represent, maintain, and contest societal norms, including norms regarding gender and sexuality, race and ethnicity, and class and place, with an emphasis on the United States.
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 3034

RLCL 3034H - Theories of Popular Culture (3 credits)
Examination of theories for understanding the ways in which popular objects and practices (such as television programs, films, or attending sporting events) represent, maintain, and contest societal norms, including norms regarding gender and sexuality, race and ethnicity, and class and place, with an emphasis on the United States.
Pathway Concept Area(s): 1A Discourse Advanced, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 3034H

RLCL 3144 - Language and Ethnicity in the United States (3 credits)
Exploration of how racial and ethnic identity are expressed through the use of different languages and dialects. Examination of how language is related to issues of equality, social opportunity, and discrimination in the United States.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 3144, SOC 3144

RLCL 3204 - Multicultural Communication (3 credits)
Exploration of communication in and among various cultural groups through an examination of communicative practices, registers, discourse, and performance. Emphasis on understanding cultural differences and similarities in the different styles and stances in communication and their meanings to participants.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 3204

RLCL 3204H - Multicultural Communication (3 credits)
Exploration of communication in and among various cultural groups through an examination of communicative practices, registers, discourse, and performance. Emphasis on understanding cultural differences and similarities in the different styles and stances in communication and their meanings to participants.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 3204

RLCL 3214 - Religion and Culture in India (3 credits)
Interdisciplinary examination of the genealogy of Indian religions (including Hinduism, Buddhism, Jainism, and Sikhism) through anthropological, literary, historical, and textual source materials. Colonial construction and reform of these religions according to modern, universal European ideas of religion; how European notions of the modern nation-state, law, and religious tolerance, and European concepts of self, autonomy, community, (univocal) language, and multiculturalism impacted Indian religions. Pre-modern versus modern notions of tradition and power in Indian religions. Concepts of secularism, gender, race, conversion, caste, and religious-political identity.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 3224 - Religion and Culture in China and Japan (3 credits)
Premodern model of Chinese and Japanese religions: interactions of various traditions (e.g. Confucianism, Buddhism, Daoism, Shinto, and folk); inseparability of religion, culture, society, and politics. Modern reinventions of religion in China and Japan in the late nineteenth and early twentieth centuries. Contemporary issues such as state-religion relations in East Asia, religions of China and Japan in America, East Asian religions and globalization.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 3404 - Torah and Tradition (3 credits)
Detailed study of the first five books of the Bible, known as the Torah or Pentateuch. Scholarly approaches will include historical-critical research; comparative mythology; form and canon criticism; gender and literary studies; and the reception of these books in the Hebrew Bible, the New Testament, and beyond.
Prerequisite(s): RLCL 2414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 3404

RLCL 3404H - Torah and Tradition (3 credits)
Detailed study of the first five books of the Bible, known as the Torah or Pentateuch. Scholarly approaches will include historical-critical research; comparative mythology; form and canon criticism; gender and literary studies; and the reception of these books in the Hebrew Bible, the New Testament, and beyond.
Prerequisite(s): RLCL 2414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 3404H

RLCL 3414 - Jesus in Earliest Christianity (3 credits)
Literary survey of the various representations of Jesus of Nazareth in canonical and apocryphal Christian literature of the first four centuries. Perspectives on Jesus and the interpretive authority involved in producing such variety. Ancient and modern interpretive frameworks for understanding the person and legacy of Jesus in earliest Christianity, including historical-critical frameworks, redaction criticism, genre criticism, and other literary methods. Analyses of modern religious/political discourses as continuations of ancient theological debates. Emphasis on developing skills in critical thinking and close reading of early Christian texts as a means of understanding the religion(s) and histories of the earliest Christians.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 3424 - Orthodoxy and Heresy in Early Christianity (3 credits)
Literary survey focusing on the diversity of Christian beliefs in the first four centuries. Highlights a variety of theological debates and the historical and cultural contexts involved in the eventual production of a Christian orthodoxy, over and against so-called heresy. The history and content of early Christian texts, both canonical and apocryphal. Ancient and modern interpretive frameworks for understanding the variety and diversity of earliest Christian beliefs, including historical-critical frameworks, comparative reading, source criticism, and other literary methods. Emphasis on developing skills in critical thinking and close reading of early Christian texts as a means of understanding the religion(s) and histories of the earliest Christians.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 3454 - Philosophy of Religion (3 credits)
A consideration of religious belief and its justification with attention to such philosophical issues as the nature and existence of the Judeo-Christian-Muslim God, proofs for the existence of God, the problem of evil, a religious basis for ethics, the nature of faith, and the variety of religious beliefs.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHIL 3454

RLCL 3494 - The Holocaust (3 credits)
This course provides a historical account, a psychological analysis, and an occasion for philosophical contemplation on the Holocaust. We will examine the deliberate and systematic attempt to annihilate the Jewish people by the National Socialist German State during World War II. Although Jews were the primary victims, Gypsies, people with disabilities, homosexuals, Jehovahs Witnesses and political dissidents were targeted; we will discuss their fate as well. The class will be organized around the examination of primary sources: written accounts, photographic and film, personal testimony.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3494, JUD 3494

RLCL 3504 - The Age of The Crusades (3 credits)
The origins and development of religious violence examined from an interdisciplinary and cross-cultural perspective; the place of that phenomenon in medieval society. Christianity, Islam, Judaism and their interactions in the medieval world.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3504

RLCL 3544 - The State of Israel: A Political History (3 credits)
This course provides a survey on the political history of the State of Israel and highlights major themes uniquely characterizing the specific events surrounding its establishment and its first 50 years of existence. Additionally, the course will add a comparative dimension by using the political history of Israel as a case study to discuss major themes in political science such as democracy, government, political, economy, etc.
Prerequisite(s): JUD 2134 or PSCI 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: JUD 3544, PSCI 3544

RLCL 3644 - Religion in the Middle East (3 credits)
Critical issues in religion in the Middle East. Competing methods for analyzing religion in the Middle East. Key concepts relating to religion and inter-religious relations in the Middle East such as minority, majority, tolerance, citizenship, and family law. Critical thinking about the relationship between Islam and other religions with particular reference to Muslim-Jewish and Muslim-Christian relations.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ARBC 3644, IS 3644

RLCL 3884 - Culture and Society in Contemporary Europe (3 credits)
The impact of religion and culture in contemporary European politics and societies. Nationalism versus European cosmopolitanism. Religion, religious radicalism and religious tolerance in Europe. Culture and society in European urban and rural areas. Attitudes towards women and LGBTQ in Europe. Social foundations and cultural determinants of marginalization of social groups, migrants and refugees.
Prerequisite(s): IS 1104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3884, SOC 3884

RLCL 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 4014 - Religion and the Public Sphere (3 credits)
Debates about the resurgence of religion in the modern world. Complexities involved in defining religion. Social-scientific, phenomenological, and cultural approaches to the study of religion. Theories concerning what role religion should play in the public sphere. Theories about secularism, secularization, and the differentiation between religion and politics.
Instructional Contact Hours: (3 Lec, 3 Crd)

RLCL 4024 - Sociology of Religion (3 credits)
Religion as a social structure as well as an institution; with special attention to the functions of religion for individuals, groups and societies, social organization; and the interplay between religion and other social institutions including economics and polity. Taught alternate years.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 4024

RLCL 4104 - Explorations in Advanced Humanities Topics (3 credits)
In-depth study of special interdisciplinary topic. Topics vary but involve a close and extensive study of the interrelationship between cultural ideas and their expressions in several of the following forms: literature, philosophy, religion, art, music, drama, material culture, and popular culture. May be repeated with different topics, for a maximum of 9 credits.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HUM 4104

RLCL 4324 - Topics in Religion and Culture (3 credits)
Selected topics from the religions of the world such as time and the sacred, preliterate religions, women and religion, religion and science, mysticism. May be taken three times for credit with different topics.
Prerequisite(s): RLCL 2004
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

RLCL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

RLCL 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Total Credits	**120-123**

[1] Only 3 credits can be at the 1000-level; at least 3 credits must be APS, HUM, or RLCL).
[2] An advisor-approved study abroad program can be substituted.
[3] May not be met with Degree Core courses. May be met with approved Context/Competency elective courses.
[4] 3 credits; may overlap with another Pathways concept.

Satisfactory Progress Toward a Degree

1. Completion of RLCL 1004 Introduction to Religion and Culture and 12 credits in the major by the semester in which the student has attempted 60 semester hours.
2. GPA of 2.0 in departmental courses by the semester in which the student has attempted 96 semester hours (including transfer, AP, advanced standing, and credit by exam).

Note: Some courses listed on this checksheet have prerequisites. Be sure to consult the Undergraduate Course Catalog and /or check with your advisor.

Graduation Requirements

1. Minimum of 120 credits for the degree. Total Credits Completed:
2. Minimum of 30 credits in departmental courses (maximum of 51 credits). Depart. Credits Completed:
3. Overall GPA and in-major GPA of 2.0 or above.

Note: In-major GPA is based on all courses taken under I and II.

For more information about the B.A. in Humanities for Public Service, contact Ben Wiley at (540) 231-5033 or wiley89@vt.edu.

Foreign Language Requirement

University and CLAHS Admissions Foreign Language Requirement

1. 3 years of a single foreign language in high school or
2. 2 years of a single foreign or sign language in high school, plus 1106 or equivalent in college (these 3 hours count toward the 120 required for graduation and should be listed as an elective course in VII below) or
3. if fewer than 2 years of a single foreign language in high school must complete 1105-1106 or the equivalent in college (these 6 hours do not count toward the 120 required for graduation)

School of Communication

Our Website (https://liberalarts.vt.edu/departments-and-schools/school-of-communication.html)

Overview

The School of Communication offers five undergraduate majors: Advertising, Communication, Multimedia Journalism, Public Relations, and Sports Media and Analytics. These majors lead to a B.A. in Communication. The five majors, each grounded in a strong liberal arts curriculum, prepare students for careers in journalism, broadcasting, digital media production, public relations, advertising, sports media, business, public service, government, and professional specializations, such as law. Coursework in the school focuses on strategic, theoretical, and practical application of message creation, delivery, and analysis. Graduates from each major are prepared to apply their skills immediately in various professional settings or continue their studies in graduate school.

The school is organized into three curriculum divisions: Communication Studies (CMST), Journalism and Mass Communication (JMC), and Public Relations and Advertising (PR/ADV). Each division is responsible for specific majors. The three divisions share responsibility for the school's core (COMM) curriculum. The Communication Studies division coordinates the school's Communication Skills and Public Speaking offerings. The Public Relations curriculum is certified by the Public Relations Society of America.

Majors

Advertising (ADV) - This major prepares students to craft and deliver persuasive messages through paid media. Coursework explores theories, practice, and ethics of advertising. Students learn about market research, consumer behavior, account planning, media buying, brand storytelling, copy design and production, and campaign evaluation. Major courses come from the School of Communication, Pamplin College of Business, and School of Visual Arts.

Communication (COMM) - This major develops human-interaction strategies and skills relating to decision making, influence, and information exchange in face-to-face, public, and organizational contexts. As a graduate, you might consider careers in business, health, civic engagement, law, education, and ministry.

Multimedia Journalism (MJ) - This major prepares students for careers at newspapers, magazines, broadcast and cable outlets, and online news operations. The lines that separate these specialties have blurred as delivery media have converged. Courses offer both practical skills and theory as they address history, law and ethics, current controversies, and opportunities in the changing news business.

Public Relations (PR) - This major emphasizes both skill and management functions of public relations through theoretical and practical applications. Public relations spans media, organizational, corporate, and political contexts. The discipline includes investigation and analysis of public relations situations (e.g., crises, successes), message production and campaign planning, writing and presentation, and evaluation of public relations strategies. Public relations permeates many areas of corporate, nonprofit, and political work, so this major provides students a foundation for many different career paths. The public relations curriculum is certified by the Public Relations Society of America.

Sports Media and Analytics (SMA) - This major prepares students to produce and deliver sports news, consider ways to promote the sports industry, and analyze data related to sports accomplishments, fan participation, and social media. Employment opportunities are varied and include sports reporting; public relations for sports venues, teams, or athletes; and promotional work for businesses that support the fans.

Major Requirements

The curriculum for each major is designed to provide foundational and developmental courses along with major-specific study. Students are introduced to concepts early in the undergraduate career, and the

curriculum allows them to build knowledge and skills as they work on increasingly complex tasks. Students develop skills in written, spoken, and visual communication. At the foundational level, students in every major are required to take the same introductory courses.

Minor Requirements

The School of Communication offers three undergraduate minors: Advertising, Health Communication, and Strategic Communication.

Advertising This 18-credit minor introduces students from outside mass communication disciplines to basic principles of paid persuasive communication. The minor requires students to earn 15 credits from divisions within the School of Communication and 3 credits from the Marketing Department in the Pamplin College of Business.

Health Communication This 21-credit multidisciplinary minor exposes students to core Pathways learning outcomes and builds knowledge about health communication. Four introductory requirements, two mid-level electives, and a capstone course consider theoretical and practical tools used to promote and affect health behavior change.

Strategic Communication This 18-credit multidisciplinary Pathways minor is open to majors from across the university and is especially appropriate for students in business or science, technology, engineering, and mathematics disciplines. Courseworkfour introductory requirements, one elective, and a capstone courseshows students how strategic communication works in a variety of industries. Few jobs have no communication components.

Specific course requirements for each minor are explained on checksheets. These three minors are not open to students in the Advertising, Communication, Multimedia Journalism, Public Relations, or Sports Media and Analytics majors.

Satisfactory Progress Toward the Degree

University policy requires that students demonstrate their progress toward the degree by meeting minimum requirements. A student will be certified as making satisfactory progress toward a degree by meeting the following requirements:

- Completion of COMM 1004 First-Semester Experience in Communication within the first three classes (9 credits) in the major.
- Completion of COMM 1014 Introduction to Communication within the first six classes (18 credits) in the major. Minimum grade of C- required.
- Completion of COMM 2124 Introduction to Communication Research within the first eight classes (24 credits) in the major.
- Overall GPA: 2.0
- Major GPA: 2.0

Students who fall below the standard for either the overall GPA or the major GPA will have one semester to regain the required GPA standards. A student who fails to make satisfactory progress toward degree after that semester will be blocked from continuing in any School of Communication and Digital Media major.

Freshmen and External Transfers into Communication

Incoming freshmen and students enrolled at other institutions should follow directions for application as shown on the Admissions website.

Internal Transfers into Communication

Students enrolled in other Virginia Tech majors who wish to transfer into the School of Communication may use the online system for application.

Instructors: T. H. Bennett, M. Cassady, E. Johnson, C. Thomas, A. Widgeon and J. M. Woolly

Undergraduate Course Descriptions (ADV)

ADV 2034 - Visual Communication Strategies (3 credits)
Concepts and techniques of visual storytelling for corporate and commercial communication through paid, earned, shared, and owned media. Design and production of visual messages for delivery through print, photography, videography, and online channels. Analysis of effective visual communication in advertising and public relations campaigns. Ethical consideration of visual communication choices. Pre: Sophomore standing
Prerequisite(s): COMM 1016 or ENGL 1106 or ENGL 1204H
Instructional Contact Hours: (3 Lec, 3 Crd)

ADV 2134 - Introduction to Health Communication (3 credits)
Introduction to health communication with a focus on current issues and perspectives, including patient-provider communication, cultural conceptions of health and illness, media portrayals of health, communication in health organizations, health communication theories, information technologies in health communication, ethical considerations, and health promotion campaigns.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ADV 3004 - Advertising Copywriting and Brand Storytelling (3 credits)
Writing advertising messages for print, broadcast, and online media. Basic design and strategic messaging for visual, verbal, and video storytelling. Promotional and sales appeals for products, services, and causes. Theories of image creation and brand identity. Legal and ethical considerations in paid media.
Prerequisite(s): COMM 2024 and MKTG 3504
Instructional Contact Hours: (3 Lec, 3 Crd)

ADV 3014 - Account Planning and Media Buying (3 credits)
Account planning and media buying in an agency environment. Business and market analysis for advertising clients. Research and assessment strategies for paid-media messages. Management, motivation and persuasion theories in programming. Data analysis, creative briefs, and copy testing. Selection and scheduling of media buys to deliver promotional messages through appropriate communication channels to target audiences efficiently and effectively. Legal and ethical considerations in advertising planning and management.
Prerequisite(s): MKTG 3504
Instructional Contact Hours: (3 Lec, 3 Crd)

ADV 3024 - Ethics and Social Responsibility in Advertising (3 credits)
Social and ethical issues in commercial and corporate speech. Government regulations of advertising. Propaganda in business, social, and political communication through history. Influence of advertising on culture, social movements, and gender identity.
Prerequisite(s): MKTG 3504
Instructional Contact Hours: (3 Lec, 3 Crd)

ADV 3034 - Topics in Public Relations and Advertising (3 credits)
Selected topics in public relations and advertising. Emphasis on theoretical, practical, or ethical issues in selected contexts. May be repeated 1 time with different content for a maximum of 6 credits.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: PR 3034

ADV 4324 - Issues in Health Communication (3 credits)
Study of issues related to the theory and practice of health communication, including interpersonal, public, organizational, political, and cultural. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

Undergraduate Course Descriptions (CMST)

CMST 2034 - Visual Media (3 credits)
Planning and production of visual messages for delivery through print, photography, videography, websites, social media, and mobile applications. Theories and principles of visual communication important to individuals working in communication jobs. COURSE FEE $59. Pre: Sophomore standing
Prerequisite(s): COMM 1016 or ENGL 1106 or ENGL 1204H
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 2064 - The Tradition of Rhetoric and Societal Change (3 credits)
Key theories and figures in rhetoric over the past 2,500 years. Evolution of rhetorical and critical perspectives in communication. Dynamic, critical nature of persuasive communication. Methodological approaches to rhetorical criticism, ethics of message creation, communication contexts, emerging perspectives, and impact of changing culture/society on rhetorical theory.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3024 - Digital Publishing (3 credits)
Study and contemporary practices in digital publishing aimed at multichannel distribution for diverse audiences. Principles, standards, workflows, technologies, and strategies for ethical and accessible design and automation of content for Web, mobile, print, multimedia, and voice environments.
Prerequisite(s): COMM 2034
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3044 - Oral Communication Center Practicum (1 credit)
Focus on peer pedagogy in a communication center to support development of oral communication competence among students across disciplines. Emphasis on oral communication theory applied to one-on-one support for students oral presentations. May repeat 1 time.
Prerequisite(s): COMM 1016 or COMM 2004
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 2 credit hours

CMST 3064 - Persuasion (3 credits)
Theoretical foundations of persuasion; techniques of persuasion; contemporary persuasive practice and campaigns; persuasive media strategies. Junior standing required.
Prerequisite(s): COMM 1014
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3074 - Persuasive Public Speaking (3 credits)
Advanced critical analysis, preparation and presentation of persuasive speeches. Study of advanced rhetorical principles with emphasis on policy speeches and the use of proofs to convince, strengthen beliefs, and motivate listeners to overt action. Advanced focus on approaches to research, audience analysis, effective organization and extemporaneous delivery.
Prerequisite(s): COMM 1016 or COMM 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3124 - Interpersonal Communication (3 credits)
Basic theories and processes of person-to-person communication; interpersonal perception; verbal and nonverbal communication; establishment of relationships in the family and work situation. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3134 - Public Advocacy (3 credits)
Practical reasoning and argumentation about questions of community significance, emphasizing critical thought, rhetorical strategies, and advocacy. Junior standing required.
Prerequisite(s): COMM 2004 or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3164 - Group Processes and Presentations (1 credit)
Study of group theory and its application to a group project, including team dynamics and leadership, conflict resolution, project management, and team presentation strategies.
Instructional Contact Hours: (1 Lec, 1 Crd)

CMST 3214 - Professional Communication (3 credits)
Theory and contemporary practice of professional oral communication, including interpersonal interaction, small group problem-solving, and public presentations. Emphasis on ethical exchanges in traditional or virtual workshops settings.
Prerequisite(s): COMM 1016 or COMM 2004
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3264 - Communication and Gender (3 credits)
Examines how verbal, nonverbal, and visual communication create, sustain, and challenge the meaning of gender and cultural structures and practices. Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 3274 - Social Dimensions of Games, Simulations, and Virtual Environments (3 credits)
Social impacts, key issues, and research findings related to video games, simulations, and virtual environments. Ethical, policy, and social dimensions in society; industry data and research. Prerequisite: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 4174 - Digital Advocacy Campaigns (3 credits)
Study of advocacy campaigns with digital components. Rhetorical considerations in message construction, analysis of persuasive techniques, ethical standards, and strategies for campaign development. Senior standing required.
Prerequisite(s): (COMM 1016 or COMM 2004) and COMM 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 4214 - Web Content Management Strategies (3 credits)
Methodologies, tools, and strategies for managing workflow of communication projects for Web distribution. Software tools for Web-based communication. Quantitative and qualitative methods for usability and readability of Web content. Web analytics and content metrics to support decision making.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 4224 - Topics in Media Criticism (3 credits)
Selected topics in media criticism. Offered on demand. Senior standing and consent required.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 4244 - Topics in Communication (3 credits)
Selected topics in communication. Application of theory and research in selected context. Ethical and social dimensions of communication issues, policies, and effects. May be repeated with different content for a maximum of 6 credit hours. Pre: Junior standing.
Prerequisite(s): COMM 1014
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

CMST 4284 - Communication for Training and Development (3 credits)
Communication principles and practices for training and development. Communication roles, strategies, and products for learning in workplace environments.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMST 4714 - Senior Seminar in Communication (3 credits)
In-depth study of an issue or theme in communication. Communication theories, issues, policies, effects, and contexts. Research and presentation of research. Pre: Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

Undergraduate Course Descriptions (COMM)

COMM 1004 - First-Semester Experience in Communication (1 credit)
Introduction to areas of research, ethical behaviors, and career paths in the discipline. Consideration of strategies for learning, accessing advising, and locating resources.
Instructional Contact Hours: (1 Lec, 1 Crd)

COMM 1014 - Introduction to Communication (3 credits)
Survey of the communication discipline across areas of specialization from interpersonal to mediated and mass communication, including history and fundamental concepts, theories, contexts. Emphasis on ethical human behavior and message analysis.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 1015 - Communication Skills (3 credits)
Introduction to oral and written communication. 1015: Focus on oral and written communication in interpersonal, small group, and public contexts. Special emphasis on the writing process, listening, interviewing, conflict resolution, critical analysis, and communication in digital and visual media. 1016: Continued Study in oral and written communication skills for small group and public contexts. Focus on practical applications in ethical research and information gathering, audience analysis and adaptation, message development, and oral, written, and visual presentations by individuals and groups.
Pathway Concept Area(s): 1F Discourse Foundational, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 1016 - Communication Skills (3 credits)
Introduction to oral and written communication. 1015: Focus on oral and written communication in interpersonal, small group, and public contexts. Special emphasis on the writing process, listening, interviewing, conflict resolution, critical analysis, and communication in digital and visual media. 1016: Continued Study in oral and written communication skills for small group and public contexts. Focus on practical applications in ethical research and information gathering, audience analysis and adaptation, message development, and oral, written, and visual presentations by individuals and groups.
Prerequisite(s): COMM 1015
Pathway Concept Area(s): 1F Discourse Foundational, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2004 - Public Speaking (3 credits)
Strategies and practice for speaking to specific audiences. Ethical considerations for message preparation, development, presentation, and evaluation. Pre: Sophomore standing.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2014 - Communication Principles of Teamwork (3 credits)
Behavior of people working in groups. Theories and models of communication, types of groups, principles of effective teamwork. Intrapersonal and interpersonal communication and values related to group behavior, relationships, and problem solving. Ethical issues associated with group work. Pre: Sophomore standing required.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2024 - Media Writing (3 credits)
Writing and information gathering skills including news, features, press releases, and advertising copy for broadcast, print and public relations media. Sophomore Standing Required.
Prerequisite(s): COMM 1016 or ENGL 1106 or ENGL 1204H
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2084 - Media and Society (3 credits)
An examination of media influence on society. Emphasis on impact of media (such as newspapers, film, social networks, and video games) on diverse audiences and cultures. Considerations of the evolution of media; social institutions and trends related to the media; domestic, global, ethical, and legal questions posed by the media; intercultural communication; and new technologys influence on society.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2094 - Communication and Issues of Diversity (3 credits)
Study of communication theory and practice related to diversity and the media. Analysis of ethical implications of media influences on workplace communication across disciplines. Development of a personal understanding of diversity and identity by examining media producers, audiences, workforces, outlets, and content.
Prerequisite(s): COMM 1016 or ENGL 1106
Pathway Concept Area(s): 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2124 - Introduction to Communication Research (3 credits)
Study of approaches to research in the discipline, including identification and analysis of existing research; procedures for conducting and reporting basic research in communication. Sophomore Standing required.
Prerequisite(s): COMM 1016 or ENGL 1106 or ENGL 1204H
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 2754H - Topics in Single Medium Communication About Technology Innovation (1 credit)
Study of discovery, analysis, creation, and evaluation of single medium - written or spoken or visual - presentations of ideas related to collaborative technology innovation for societal impact. Analysis of how race, class, gender, and age shape written, oral, or visual expression in the United States and vice versa. Special attention to single medium communications with stakeholders in business, government agencies, nonprofit organizations, and universities. Ethical dimensions of written, spoken, or visual communication about collaborative technology innovation for societal impact. May be repeated 2 times with different content for a maximum of 3 credits.
Prerequisite(s): COMM 1016 or ENGL 1105
Pathway Concept Area(s): 1F Discourse Foundational, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

COMM 2764H - Topics in Multimedia Communication About Technology Innovation (1 credit)
Study of the discovery, analysis, creation, and evaluation of multimedia presentation of ideas related to collaborative technology innovation for societal impact. Analysis of how race, class, gender, and age shape multimedia expression and vice versa. Special attention to communicating across disciplinary, organizational, and cultural differences in the workplace. Ethical dimensions of multimedia communication about collaborative technology innovation for societal impact. May be repeated 2 times with different content for a maximum of 3 credits.
Prerequisite(s): COMM 2754H
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

COMM 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

COMM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 4024 - Communication Law (3 credits)
Study freedom of speech and the press and how these freedoms apply to the press, public relations, advertising and personal speech. Consideration of First Amendment theories and jurisprudence; related ethical issues. Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

COMM 4204 - Communication Internship (1-6 credits)
Placement in a communication industry for practical internship under supervision by a departmental advisor and a professional in the field. May be repeated for credit up to a maximum of 6 hours credit. Pre: Junior standing and consent required.
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)
Repeatability: up to 6 credit hours

COMM 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

COMM 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (JMC)

JMC 1114 - Introduction to Media Production Technology (3 credits)
Introduction to basic technologies necessary for multimedia production. Attention to aesthetics and technical aspects of production technologies, including creation, editing, and organization of content. COURSE FEE $95.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 2034 - Visual News Reporting (3 credits)
News reporting through photography, videography, online outlets, and data visualization. Concepts of visual storytelling. Design and production tools and techniques for visual news and feature stories. News elements and journalism ethics in visual communication. Pre: Sophomore standing.
Prerequisite(s): COMM 1016 or ENGL 1106 or ENGL 1204H
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 2074 - Introduction to Sports Media (3 credits)
Development, concepts, and impact of sports media, including roles and responsibilities of journalists, production staff, and public relations professionals. Considerations of stakeholders behaviors and connections. Study of ethical standards and perspectives, communication in sports organizations, types of media, issues in context, and data analytics.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3114 - Video Production: Studio (3 credits)
Producing, directing, and writing live video segments; operating control room and studio equipment including studio camera, video switcher, audio board and the creation of video graphics and written packages.
Prerequisite(s): COMM 2034
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

JMC 3154 - Multimedia Reporting (3 credits)
Multimedia news gathering, news writing, audio/visual storytelling, and news judgment for the print and online media. Consideration of professional strategies and standards for reporters, including legal and ethical issues.
Prerequisite(s): COMM 2024 and COMM 2034
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3174 - Advanced Multimedia Reporting (3 credits)
Multimedia gathering and writing of complex news, features, and documentary; visual content and news judgment for television, print and online media; techniques of broadcast interviewing and on-camera performance. Considerations of legal and ethical issues related to the reporting of complex news.
Prerequisite(s): COMM 3154 or JMC 3154
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

JMC 3184 - Media Weather Reporting (3 credits)
Techniques for gathering meteorological, information, reporting weather news, and delivering weather forecasts through print, broadcast and online media. Weather information in disaster response. Ethical uses of weather information in reporting threats to public safety.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3244 - Political Communication (3 credits)
Distribution of political information; elite-mass communication; alternative models of political communication; communication and telecommunications policy.
Prerequisite(s): PSCI 1014 or PSCI 1014H or PSCI 1024 or PSCI 1024H or IS 1024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3244

JMC 3254 - Media and Politics (3 credits)
Explores the role of the mass media in contemporary American politics by examining the development of media as sources of social and political influence. Study of news organizations, their coverage of electoral and issue campaigns, and their impact on candidates and voters. Includes the role of new technologies in campaigns. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3254

JMC 3284 - Data Journalism (3 credits)
Numeracy and data analysis in news reporting. Data sourcing and visualization in storytelling. Ethical and legal issues in data use. Careers in data journalism.
Prerequisite(s): COMM 2024 and COMM 2034
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3304 - Topics in Sports Communication (3 credits)
Study of the theory and practices related to sports communication in fields such as public relations or reporting. Topics may include print, broadcast, and online news; college sports information; social media; crisis management; and media relations. May be repeated once with different course content. Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3314 - Sports Journalism (3 credits)
Theory and practice of sports journalism, including strategies for writing and broadcasting sports information. Study of ethics and professional standards. Junior standing required. Fee $95.
Prerequisite(s): COMM 2024 and COMM 2034
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3324 - Sports Play-by-Play Reporting (3 credits)
Audio and video play-by-play sports reporting and commentary for broadcast and online media. Game research and preparation techniques. Voice pacing, inflection, delivery, airtime management, and ad-libbing skills. Command and use of game statistics. Ethical issues in sports play-by-play reporting and commentary. COURSE FEE $67.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3334 - Sports as Entertainment (3 credits)
Evolution of print, broadcast, and online sports coverage into a leading form of entertainment in the United States. Economic, political, and cultural influences of sports and sports betting in U.S. society. Sports portrayals, personalities, and scandals in movies, music, radio, and television through U.S. history. Ethical perspectives on sports as entertainment.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 3344 - Sports Data Journalism (3 credits)
Game statistics and data analysis in sports reporting. Data visualization in sports storytelling. Data sources, sports performance trends, and predictions. Ethical and legal issues in sports data use.
Prerequisite(s): JMC 3314 and COMM 2024 and COMM 2034
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4014 - Media Effects (3 credits)
Impact of mass media on individuals and on society; methods for documentation of media effects; research about effects on various demographic groups such as children, elderly, and minorities; effects of advertising; effects of interactive and time shift technologies. Junior standing required.
Prerequisite(s): COMM 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4044 - International Communication (3 credits)
Comparative perspectives on global communication systems; problems with the flow of information; roles of international organizations; mass communication and national development; implications for conflict resolution; selected case studies. Senior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4044

JMC 4064 - Social Media Analytics (3 credits)
Introduction to analytic techniques for social media platforms. Quantitative and qualitative analytic techniques. Design, implementation, and analysis of experimental and observational studies of how people use and engage with social media platforms and how platforms themselves can be used to drive engagement with content. History and trending topics in social media use. Ethical issues involving social media and big data.
Prerequisite(s): COMM 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4094 - Broadcast Management (3 credits)
Broadcast management procedures; programming; sales and advertising. Senior standing required.
Prerequisite(s): COMM 3154 or JMC 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4114 - Photojournalism (3 credits)
Interpretive and creative photography applied to journalism; cameras, films, photography techniques; history of photography as communication; advanced darkroom techniques. Junior standing required.
Prerequisite(s): COMM 2034 and COMM 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4134 - Editorial Writing (3 credits)
Development and function of the editorial page; writing of editorials, reviews, and personal columns; examination of role of letters and syndicated columns and cartoons; problems editorial writers face in their jobs and communities. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4144 - Magazine Writing (3 credits)
The writing of feature material (as opposed to the reporting of hard news), plus detailed examination of several article types from a wide variety of contemporary magazines and newspapers. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4254 - Topics Multimedia Journalism (3 credits)
Selected topics in multimedia journalism; emphasis on critical analysis of issues in journalism, and application of media to disseminate information. May be repeated for credit up to a maximum of 6 credit hours with different content.
Prerequisite(s): COMM 2024 and COMM 2034
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

JMC 4264 - Social Media Theory and Practice (3 credits)
Study of social media as a professional communication and media tool. Emphasis on foundations in communication theory and contemporary approaches.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4274 - Broadcasting Performance (3 credits)
Advanced study of on-air performance for broadcasters. Professional behaviors and strategies for developing conversational writing, broadcast style, interviewing, reporting, and anchoring. Fee $95.
Prerequisite(s): COMM 3154 or JMC 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4334 - Communication Ethics (3 credits)
Discussion of issues related to professional communication ethics; emphasis on recognizing ethical issues, applying theoretical models and critical thinking skills to ethical issues in multimedia journalism, public relations, and communication studies. Includes research on topics related to communication ethics. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4344 - Free Speech in Cyberspace (3 credits)
Discussion of free expression on the Internet; an examination of how First Amendment law; state laws and federal communication policies impact the multiple kinds of speech that take place in cyberspace; examination of the history and development of the Internet and the future of free speech in cyberspace. Pre: Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4344H - Free Speech in Cyberspace (3 credits)
Discussion of free expression on the Internet; an examination of how First Amendment law; state laws and federal communication policies impact the multiple kinds of speech that take place in cyberspace; examination of the history and development of the Internet and the future of free speech in cyberspace. Pre: Senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4374 - New Communications Technology (3 credits)
Identify recent trends in the innovation of new communications technologies; storage, transmission, and display systems of mediated communication: optical disc, common carriers, telecommunication-computer linkages, high-definition TV, and virtual reality; information industries and society; markets for new and existing telecommunication services. Junior standing required.
Prerequisite(s): COMM 2084 or COMM 4014 or JMC 4014
Instructional Contact Hours: (3 Lec, 3 Crd)

JMC 4814 - Digital Newsroom: Online (3 credits)
Production of news content for social networks, mobile applications and web-based content management systems. Preparation of news and feature stories on deadline in a newsroom setting. Collection of information from diverse sources. News judgment. Production requirements for online platforms. Audience engagement. Ethical and legal issues in news reporting. Design/lab studio. COURSE FEE $95.
Prerequisite(s): JMC 3174
Instructional Contact Hours: (5 Lab, 3 Crd)

JMC 4824 - Digital Newsroom: Broadcast (3 credits)
Production of news content for broadcast. Preparation of news and feature stories on deadline in a newsroom setting. Collection of information from diverse sources. News judgment. Videography and digital editing. Broadcast performance. Ethical and legal issues in news reporting. Design lab/studio. $95 COURSE FEE.
Prerequisite(s): JMC 3174
Instructional Contact Hours: (5 Lab, 3 Crd)

JMC 4834 - Sportscenter (3 credits)
Gather, formulate, and deliver sports stories to diverse audiences through print, online, and broadcast channels. Produce sports news on deadline in a newsroom setting. Ethical and legal issues in sports journalism. Design lab/studio. COURSE FEE $95. Pre: Senior standing.
Prerequisite(s): JMC 3314 and JMC 4274 and COMM 2024
Instructional Contact Hours: (5 Lab, 3 Crd)

Undergraduate Course Descriptions (PR)

PR 2044 - Principles of Public Relations (3 credits)
Principles of public relations practice; public relations in organizations; responsibilities of the public relations practitioner; legal and ethical considerations; role of public relations in society; history of the field and key people who influenced its development; choosing appropriate communication channels/media.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 3014 - Public Relations Cases (3 credits)
Analysis of contemporary and historic public relations cases. Emphasis on theories, research techniques, planning methods, implementation strategies, evaluation standards, and ethical considerations in public relations programs and campaigns.
Prerequisite(s): COMM 2044 or PR 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 3034 - Topics in Public Relations and Advertising (3 credits)
Selected topics in public relations and advertising. Emphasis on theoretical, practical, or ethical issues in selected contexts. May be repeated 1 time with different content for a maximum of 6 credits.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: ADV 3034

PR 3084 - Advanced Public Relations Research Methods (3 credits)
Analysis and implementation of contemporary academic and professional research tools for public relations. Emphasis on development of research designs, assessment and evaluation of public relations programs and campaigns, and implementation of ethical research practices and standards.
Prerequisite(s): (COMM 2044 or PR 2044) and COMM 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 3144 - Writing and Editing for Public Relations (3 credits)
Advanced writing and editing used to structure and present information in public relations practice. Includes message development, message design for delivery through various media, copyediting skills and tools, strategies for dissemination, and legal and ethical issues in public relations writing.
Prerequisite(s): COMM 2024
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 3324 - Corporate Communication (3 credits)
Examines communication theories, strategies and tactics that corporations use in their public relations efforts to reach and influence publics. Prepares students for in-house public relations work and familiarizes them with expectations of corporate clients. Introduces students to the important role communication plays within and between for-profit, nonprofit, and government institutions. Emphasis on the influence of corporate culture, ethics and values on communication styles. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 3334 - Public Relations and Corporate Social Responsibility (3 credits)
Explores role of communication in corporate social responsibility. Emphasis on the ethical implications of communicating the need to generate profits with the need to ensure that corporate actions do not harm important stakeholders such as employees, investors, customers, and communities.
Prerequisite(s): COMM 2044 or PR 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 3344 - Public Relations and Sports (3 credits)
Examines communication theories, strategies, and tactics that sports organizations use in their public relations efforts. Introduces students to the dynamic relationship between sports organizations, media, and fans. Study of ethics and professional standards in sports public relations. Emphasizes the role of public relations in sports as a strategic communication and management function.
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 4074 - Organizational Communication (3 credits)
Role of communication in complex organizations; communication networks, communication and management, message systems, decision-making; relationships between organizational theory and communication.
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 4164 - Public Relations Administration (3 credits)
Public Relations (PR) administration issues related to budgeting, strategy, legal issues, and campaigns in an organization. Emphasis on PR theory and ethics.
Prerequisite(s): COMM 2044 or PR 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 4304 - Public Relations Campaigns (3 credits)
Public relations campaign research, planning, implementation and evaluation. Emphasis on applying theory in campaign contexts; executing applied research; setting objectives; developing strategic plans, messages and budgets; carrying out courses of action; and evaluating results.
Prerequisite(s): COMM 2124 and (COMM 3144 or PR 3144) and (COMM 3014 or PR 3014)
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 4364 - Crisis Communication and Issue Management (3 credits)
Communication theories of risk, crisis, emergency, and public/private issue management. Legal and ethical considerations in issue management and crisis communication. Communication strategies and tactics for issue and crisis management. Reputation management and image restoration as they relate to risk, crises, emergencies, and issues.
Prerequisite(s): PR 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 4404 - Strategic Communication Capstone (3 credits)
Research and theory in strategic communication. Cultural awareness of diverse publics. Relationship, reputation, crisis, and issue management in interpersonal, group, organizational, and corporate communication contexts. Ethical standards in strategic communication. Corporate social responsibility.
Prerequisite(s): PR 2044 and AHRM 1014 and ACIS 1004 and (COMM 1016 or COMM 2004)
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PR 4414 - Public Relations Standards and Practices (3 credits)
Addresses complexities of public relations research, planning, implementation, and evaluation required for professional certification. Includes special emphasis on public relations legal and ethical practices. Senior standing.Fee $150.
Prerequisite(s): COMM 2044 or PR 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		45
Total Credits		**120**

[1] Students who transfer into the major after their freshman year may substitute ENGL 1105 First-Year Writing and ENGL 1106 First-Year Writing for COMM 1015 Communication Skills and COMM 1016 Communication Skills. Those transfer students should take COMM 2004 Public Speaking for Pathways Concept 1A and COMM 2014 Speech Communication for 3 of the required credits hours toward Pathways Concept 3.

[2] In addition to the requirements shown, students must complete the following to reach 120 credits for graduation:

1. **Minor, cognate, or double major**—*Beyond* studies in Advertising and other mass communication disciplines, students must build content knowledge in another area of focus by completing a minor or cognate (minimum 18 credits) or double major (credits vary by major).
2. **Electives**—Once students complete a minor or cognate, they may still need hours for graduation. Students might consider education abroad, an internship, a field study, undergraduate research, independent study, or other non-required Pathways or foreign language courses. Students **should not include ADV, COMM, JMC, or PR courses** among these electives.

Major Restricted Electives

Code	Title	Credits
ADV 2134	Introduction to Health Communication	3
ADV 3034	Topics in Public Relations and Advertising	3
ADV 4324	Issues in Health Communication	3
ART 1234	Topics in Visual Communication Design for Non-Majors	3

PR 3144	Writing and Editing for Public Relations	3
PR 3324	Corporate Communication	3
PR 3334	Public Relations and Corporate Social Responsibility	3

Progress Toward Degree

A student will be certified as making satisfactory progress toward a degree by meeting these requirements:

- Completion of COMM 1004 First-Semester Experience in Communication within the first 3 classes (9 credits) in the major.
- Completion of COMM 1014 Introduction to Communication within the first 6 classes (18 credits) in the major. Minimum grade of C- required.
- Completion of COMM 2124 Introduction to Communication Research within the first 8 classes (24 credits) in the major.
- Overall GPA—Students who fall below 2.0 will follow university policies for probation and subsequent suspension if the GPA is not raised during the probation period.
- Major GPA—Students who fall below 2.0 in their major coursework will have one semester to regain the required GPA standards. All ADV, COMM, JMC and PR courses are included in this calculation. A student who fails to make satisfactory progress toward degree after that semester will be blocked from continuing in ADV or another School of Communication major.

Graduation Requirements

1. Minimum of 120 semester credit hours from the following categories: Degree Core Requirements, Major Requirements, Major Restricted Electives, Pathways to General Education, and Minor and Electives.
2. Minimum of 40 credits in ADV, COMM, JMC or PR; minimum of 72 credits outside ADV, COMM, JMC or PR. **Note: Accreditation standards require Advertising Majors to complete at least 72 hours outside ADV, COMM, JMC or PR.**
3. Overall GPA of 2.0; major GPA 2.0, based on all ADV, COMM, JMC and PR courses the student has completed.
4. Courses taken in major to fulfill graduation requirements must be graded A-F (not pass/fail).
5. ADV, COMM, JMC and PR courses taken for a minor may NOT be counted toward major requirements.

Foreign Language Requirement

Foreign Language—Requirement can be met in one of three ways:

- 2 years of single foreign or classical language or American Sign Language in middle or high school, OR
- Credit by examination for a foreign or classical language or American Sign Language (This option is available only to students who learned a foreign language without the benefit of formal training.), OR
- 6 college-level semester credits in a single foreign or classical language or American Sign Language. These credits are in addition to the 120 required for graduation.

Total Credits	**120**

[1] In addition to the requirements shown, students must complete the following to reach 120 credits for graduation:

1. **Minor, cognate, or double major**—*Beyond* studies in Communication and other mass communication disciplines, students must build content knowledge in another area of focus by completing a minor or cognate (minimum 18 credits) or double major (credits vary by major).
2. **Electives**—Once students complete a minor or cognate, they may still need hours for graduation. Students might consider education abroad, an internship, a field study, undergraduate research, independent study, or other non-required Pathways or foreign language courses. Students **should not include ADV, COMM, JMC, or PR courses** among these electives.

[2] Students who transfer into the major after their first year may substitute ENGL 1105 First-Year Writing and ENGL 1106 First-Year Writing for COMM 1015 Communication Skills and COMM 1016 Communication Skills. Those transfer students should take COMM 2004 Public Speaking for Pathways Concept 1A and COMM 2014 Speech Communication for 3 of the required credits hours toward Pathways Concept 3.

Progress toward Degree

A student will be certified as making satisfactory progress toward a degree by meeting these requirements:

- Completion of COMM 1004 First-Semester Experience in Communication within the first 3 classes (9 credits) in the major.
- Completion of COMM 1014 Introduction to Communication within the first 6 classes (18 credits) in the major. Minimum grade of C- required.
- Completion of COMM 2124 Introduction to Communication Research within the first 8 classes (24 credits) in the major.
- Overall GPA—Students who fall below 2.0 will follow university policies for probation and subsequent suspension if the GPA is not raised during the probation period.
- Major GPA—Students who fall below 2.0 in their major coursework will have one semester to regain the required GPA standards. All COMM, CMST, JMC, and PR courses are included in this calculation. A student who fails to make satisfactory progress toward degree after that semester will be blocked from continuing in COMM or another School of Communication major.

Graduation Requirements

1. Minimum of 120 credits from the following categories: Core Degree Requirements (19), Major Requirements (12), Major Restricted Electives (15), Pathways to General Education (45), Minor and Electives (29).
2. Minimum of 46 credits in COMM, CMST, JMC, or PR; maximum 48 credits in COMM, CMST, JMC, or PR.
3. Overall GPA of 2.0; major GPA 2.0, based on all COMM, CMST, JMC, and PR courses the student has completed.
4. Courses taken in major to fulfill graduation requirements must be graded A-F (not pass/fail).
5. COMM, CMST, JMC, or PR courses taken for a minor may NOT be counted toward major requirements.

Foreign Language Requirements

- 2 years of single foreign or classical language or American Sign Language in middle or high school, OR
- Credit by examination for a foreign or classical language or American Sign Language (This option is available only to students who learned a foreign language without the benefit of formal training.), OR
- 6 college-level semester credits in a single foreign or classical language or American Sign Language. These credits are in addition to the 120 required for graduation.

Subtotal		45
Total Credits		**120**

[1] In addition to degree core, major, and Pathways requirements, students must complete at least 29 credit hours in the following categories to reach 120 credit hours for graduation:

1. **Minor, cognate, or double major**—Beyond studies in Sports Media and Analytics and other mass communication disciplines, students must build content knowledge in another area of focus by completing a minor or cognate (minimum 18 credits) or double major (credits vary by major).
2. Electives—Once students complete a minor or cognate, they may still need hours for graduation. Students might consider education abroad, an internship, a field study, undergraduate research, independent study, or other non-required Pathways or foreign language courses. Students should not **include ADV, COMM, JMC, or PR courses** among these electives.

[2] Students who transfer into the major after their freshman year may substitute ENGL 1105 First-Year Writing and ENGL 1106 First-Year Writing for COMM 1015 Communication Skills and COMM 1016 Communication Skills. Those transfer students should take COMM 2004 Public Speaking for Pathways Concept 1A and COMM 2014 Speech Communication for 3 of the required credits hours toward Pathways Concept 3.

Progress Toward Degree

A student will be certified as making satisfactory progress toward a degree by meeting these requirements:

- Completion of COMM 1004 First-Semester Experience in Communication within the first 3 classes (9 credits) in the major.
- Completion of COMM 1014 Introduction to Communication within the first 6 classes (18 credits) in the major. Minimum grade of C- required.
- Completion of COMM 2124 Introduction to Communication Research within the first 8 classes (24 credits) in the major.
- Overall GPA—Students who fall below 2.0 will follow university policies for probation and subsequent suspension if the GPA is not raised during the probation period.
- Major GPA—Students who fall below 2.0 in their major coursework will have one semester to regain the required GPA standards. All ADV, COMM, JMC, and PR courses are included in this calculation. A student who fails to make satisfactory progress toward degree after that semester will be blocked from continuing in SMA or another School of Communication major.

Graduation Requirements

1. Minimum of 120 semester credit hours from the following categories: Core Degree Requirements, Major Requirements, Major Restricted Electives, Pathways to General Education, Minor and Electives.
2. Minimum of 46 credits in ADV, COMM, JMC, or PR; minimum 70 credits outside ADV, COMM, JMC, or PR.
3. Overall GPA of 2.0; major GPA 2.0, based on all ADV, COMM, JMC, and PR courses the student has completed.
4. Courses taken in major to fulfill graduation requirements must be graded A-F (not pass/fail).
5. ADV, COMM, JMC, and PR courses taken for a minor may **not** be counted toward major requirements.

Foreign Language Requirement

Foreign Language-Requirement can be met in one of three ways:

- 2 years of single foreign or classical language or American Sign Language in middle or high school, ***OR***
- Credit by examination for a foreign or classical language or American Sign Language (This option is available only to students who learned a foreign language without the benefit of formal training.), ***OR***
- 6 college-level semester credits in a single foreign or classical language or American Sign Language. These credits are in addition to the 120 required for graduation.

School of Education

Our Website (http://www.soe.vt.edu)

Overview

The School of Education offers professional education degrees at both the undergraduate and graduate level. Initial undergraduate licensure programs include Elementary Education, Career and Technical Education (Agriculture, Business and Information Technology, Marketing Education, Family and Consumer Sciences, and Technology Education), Math Education, English Language Arts Education, and History and Social Sciences Education. Graduate initial licensure programs include Elementary Education, Math Education, Science Education (Biology, Earth Science, Physics, and Chemistry), History and Social Science Education, CTE (Agriculture, Business and Information Technology, Marketing Education, Family and Consumer Sciences, and Technology Education) and Music Education (instrumental and vocal). The School of Education also offers advanced licensure programs in Counselor Education, Educational Leadership and Policy Studies, and Reading Specialist preparation. These programs prepare education professionals for varied employment settings. Advanced programs are offered at the master's, education specialist, and doctoral levels. To obtain specific information about these programs and their requirements, interested students should visit the School of Education's website (www.soe.vt.edu)

Entrance to the School of Education

The Council for Accreditation of Educator Preparation (CAEP) requires that all students be formally admitted into professional education programs. This formal program admission is different from admission to Virginia Tech. Virginia Tech undergraduate students pursuing licensure will encounter three key gateways during their academic journey. The three gateways include program admission and candidacy, application to student teaching, and recommendation for Virginia teaching licensure. Each gateway is specially designed to ensure all candidates are well-prepared, highly qualified, and ready to enter the teaching profession upon program completion. The School of Education and undergraduate student advisors will provide guidance documents to students to assist them in navigating the applications to each program gateway.

Licensure and Employment Opportunities

All initial teacher education programs are fully accredited by the Council for the Accreditation of Educator Preparation (CAEP) and the Virginia Department of Education. Graduates of professional preparation programs are well prepared for their initial responsibilities and are actively recruited by school systems across the state. Advisors counsel students early in their programs with respect to post-graduation placement opportunities.

Professional Preparation Programs Offered in the School of Education

The School of Education offers undergraduate teacher education programs in CTE (Agriculture Education, Business and Information Technology Education, Technology Education, Family and Consumer Sciences Education, Marketing Education), Elementary Education (Pk-6), English Language Arts Education, History and Social Sciences Education and Mathematics Education. The School of Education also offers graduate professional preparation programs. Please consult the Graduate Catalog (www.graduateschool.vt.edu (http://www.graduateschool.vt.edu)) and the School of Education's website (www.soe.vt.edu (http://www.soe.vt.edu)) for admission and graduation requirements.

- Career and Technical Education - Agricultural Education Major (p. 1135)
- Career and Technical Education Major with Business and Information Technologies Education Option (p. 1136)
- Career and Technical Education Major with Family and Consumer Sciences Education Option (p. 1137)
- Career and Technical Education Major with Marketing Education Option (p. 1138)
- Elementary Education (PK-6) Major (p. 1139)
- English Language Arts Education Major (p. 1140)
- History and Social Sciences Education Major (p. 1141)
- Mathematics Education Major (p. 1142)
- Technology Education Major (https://catalog.vt.edu/undergraduate/liberal-arts-human-sciences/education/technology-education/)

Professors: M. D. Alexander, A. P. Azano, B. S. Billingsley, B. R. Brand, P. E. Doolittle, D. Hicks, M. L. Johnson, B. D. Jones, G. F. Lawson, H. A. Mesmer, Y. Miyazaki, C. A. Mullen, M. Weaver-Hightower, L. E. Welfare, J. G. Wells, J. L. Wilkins, and T.O. Williams
Associate Professors: H. B. Bayne, B. D. Bowen, C. Catalano, M.C. Fullen, S. F. Hein, T. B. Lane, C. L. Lowery, D.A. Robertson, and T. T. Stewart
Assistant Professors: A. E. Allen, N.K. Ferand, S. M. Henry, B. D. Hunt, H. M. Locklear and L. Taylor and C. Thomas
Collegiate Professors: G. A. Holmes and J.S. Mukuni
Professors of Practice: S. D. Adams, N. A. Bradley, J. L. Brinkmann, C.S. Cash, J. Collins, D. J. Fortune, C.S. Foster, D.J. Kniola and B. Kreye
Visiting Professor: R. Kuehl
Administrative and Professional Faculty: C. J. Christianson

Undergraduate Course Descriptions (EDCI)

EDCI 1004 - Introduction to Teacher Education and Licensure (1 credit)
Introduction to the School of Education and teacher education program including majors that lead to teacher licensure, education career exploration, curriculum requirements of licensure programs, and state licensure regulations. Review of academic skills, university programs, and services that support students and promote student development.
Instructional Contact Hours: (1 Lec, 1 Crd)

EDCI 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCI 2004 - Exploring the Teaching Profession- Field Studies in Education (3 credits)
Experiential learning,10 hours per week, in a classroom setting, public or private, exposing students to knowledge, skills, and dispositions of professional educators. Allows for integration of experiential and course-based learning in professional identity formation and classroom management. Introduces students to concepts and terminology necessary for upperlevel educator preparation courses.
Prerequisite(s): EDCI 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 2414 - Design Based Biotechnical Learning (3 credits)
STEM disciplinary content and practice. Design, construction, evaluate, and iterate working biotechnical prototype solutions addressing authentic human needs. Ethical decision-making based on technological solutions appropriate for local and/or global communities.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 2464 - Foundations of Social Studies Education (3 credits)
Introduction to social studies and the study of the social world in all its complexity including the interactions between people, cultures, societies, systems, and ways of being in the world. Exploration of what social studies encompasses, including its purposes and foundational concepts to provide a content-based foundation for future social studies teachers in history, geography, civics, and economics.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 2574 - Social Foundations of Education (3 credits)
History, purpose, and social contexts of education and the PK 12 public education system in the US. Diversity and culturally sensitive approaches to education. Historical, philosophical, social, cultural, and political factors that influence teachers roles and responsibilities and educational practice.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 2614 - The Reading Mind: Learning to read (3 credits)
Survey of theories and research that explain how people learn to read. Brief overview of English written systems. Models of skilled reading, literacy stages, and component processes (e.g., decoding, comprehension). Application of course concepts to self, common myths, media, and products. Analysis of patterns of inequity in reading achievement.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 2674 - Language, Culture, and Learning (3 credits)
This course explores connections between language, culture, and learning. Emphasis on recognizing and critically examining ways that diversity of cultural contexts and social identities influence learning, and challenging students to consider ethical responsibilities in supporting and participating in an equitable society.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 2984 - Special Study (1-19 credits)
Repeatable with different course content.
Instructional Contact Hours: Variable credit course
Repeatability: up to 99 credit hours

EDCI 3004 - Pre-Education Seminar (1-6 credits)
Experiential learning in a PreK through 12th grade setting, public or private, exposing students to knowledge, skills, and dispositions of professional educators. Allows for integration of experiential and course-based learning in professional identity formation and exploration of education careers. NOT student teaching. May be repeated for elective credit up to a maximum of 12 credit hours. Pre: Junior standing.
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)
Repeatability: up to 12 credit hours

EDCI 3024 - Issues of Schooling in the United States (3 credits)
Exploration of U.S. education, purposes, and roles. Impacts of historic, social, political, economic, religious, cultural, global, and curricular issues. Analysis of equal educational opportunity. Role of the teaching profession in educational reforms.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3074 - Elementary Curriculum: Methods in Teaching (3 credits)
Instructional approaches in elementary education curriculum with a focus on: family engagement, collaboration, teaching strategies, behavior and classroom management, assessment, and differentiation. Design and implementation of lesson plans for elementary school students. Professional educator standards.
Corequisite(s): EDCI 3964
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3144 - Education of Exceptional Learners (3 credits)
Introduction to the historical, ethical, legal, and economic models relevant to understanding students with disabilities and meeting their needs to increase their potential for success throughout their lives. Addresses research in early intervention, K-12 instruction, post-secondary education, and transition into work settings.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HD 3144

EDCI 3234 - Foundations of Reading Instruction (PK-6) (3 credits)
Theoretical, practical, and research-based foundations in the science of reading instruction for grades PK-6. Phonics, phonological awareness, fluency, vocabulary, and comprehension instruction. Assessment-informed instruction, classroom organization, reader-text matching.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3244 - Curriculum and Instruction in Elementary Mathematics, PK-3 (3 credits)
Key concepts in curriculum and instruction in grades PK-3 mathematics: mathematical thinking, number and number sense, computation and estimation, geometry and measurement, mathematical discourse within elementary classrooms, teaching methods in grades PK-3, and the role of mental arithmetic. Teaching mathematics through problem solving, reasoning, and communication to support the learning process for all elementary students.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3254 - Elementary Methods in Science (3 credits)
Study and analysis of approaches to elementary science instruction; assessment for learning; instructional design and methods; content integration in lesson plans; inquiry based science investigations; planning science investigations; needs of students; and inclusiveness of learners.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3334 - Teaching Language Arts in the Elementary Classroom (4 credits)
Implementation and assessment of curriculum and instruction in elementary language arts. The six focus areas of writing, speaking, listening, reading, visual representation, and viewing are the core components and the role of childrens literature in language learning.
Instructional Contact Hours: (4 Lec, 4 Crd)

EDCI 3354 - STEM in Elementary Schools (3 credits)
STEM education for pre-service elementary education teachers. Equity in elementary science education. Inquiry as a process in society. Integration of inquiry-based practices and engineering design. STEM activities that mirror real-world problem solving and innovation. Next Generation Science and VDOE standards and engineering models, including 5E Instructional Model, in instructional design.
Prerequisite(s): EDCI 3254
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3464 - Elementary Social Studies Teaching Methods (3 credits)
Emphasizes foundational concepts of curriculum in Social Studies for preservice teachers to effectively utilize state and federal standards to guide instructional strategies and assessments in the elementary classroom (PK-6). Functions of Virginia state and local governments. Exploration of alternative approaches with instructional strategies.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3474 - Assessment and Diagnosis in Elementary Mathematics Classroom (3 credits)
Research in assessment and diagnosis in PK-5 mathematics classroom. Comparison of evaluation and assessment methods and development of assessment models appropriate for use in PK-5 mathematics classrooms. This course involves the exploration of formative and summative assessment tools, formal and informal assessment strategies, and critical issues in assessment practices.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCI 3954G - Study Abroad (1-19 credits)
Pathway Concept Area(s): 7 Identity & Equity in U.S.
Instructional Contact Hours: Variable credit course

EDCI 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCI 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCI 4014 - History Lab: Creative Technologies, Hidden Histories, Informal Learning (3 credits)
Application of creative technologies to visualize hidden histories in transdisciplinary experiential learning projects. Training in creative technologies, informal learning techniques, interpretation of marginalized histories, and digital cultural heritage design. Consideration of ethical questions involving the representation of diverse social identities, traditions, and histories. Pre: Sophomore Standing.
Pathway Concept Area(s): 6D Critique & Prac in Design, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ART 4014, HIST 4014

EDCI 4024 - Humanizing the K-12 Classroom (3 credits)
Social, political, economic and historic structures maintaining power and privilege in the K-12 education system that disadvantage students of different racial, ethic, socioeconomic, class, and cultural groups. Classroom environmental design to support equity and social justice. Impact of teacher and student identity development on student learning. Twenty hours of experiential learning in educational setting. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4074 - Culturally Responsive Teaching in the Elementary Classroom (3 credits)
In-depth, extensive, and reflective understandings of diversity regarding individual students, families, communities, and schooling contexts. Classroom instructional and management strategies that are responsive to cultural and linguistic differences.
Corequisite(s): EDCI 4964
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4244 - Curriculum and Instruction in Middle School Mathematics (4-8) (3 credits)
Key concepts in curriculum and instruction in grades 4-8 mathematics to meet diverse learning needs. Algebraic structure of the rational numbers as it relates to childrens understanding of fractions, decimals, and percents, algebraic and proportional reasoning, and probability and data analysis. Childrens mathematical thinking and learning from a psychological perspective. Teaching mathematics through problem solving, reasoning, and communication to promote an inclusive community of learning based on appropriate educational theories.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4264 - Intro to Reading Instruction for Elementary Students: A Clinical Course (3 credits)
Overview of reading theory, terminology, and development in grade K-5. Introduction to reading assessment, text selection, lesson planning, and instructional strategies. Supervised clinical setting instructing K-5 learner. Pre: Junior or senior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4274 - Curriculum and Instruction in Middle School Mathematics (3 credits)
Key concepts in curriculum and instruction in middle school mathematics to meet diverse learning needs. Algebraic structure of the rational numbers as it relates to understanding of fractions, decimals, and percents, algebraic and proportional reasoning, and probability and data analysis. Mathematical thinking and learning from a psychological perspective. Teaching mathematics through problem solving, reasoning, and communication to promote an inclusive community of learning based on appropriate educational theories.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4454 - Engr. Leadership/Mgmt (3 credits)
Introduction to management and mentoring skills associated with the application of the engineering design process. Course covers skills necessary for leading diverse teams of people through a technical design project. Managing teams of local high school students through an authentic technical design experience associated with design competitions. Course addresses the practical applications of science, math and engineering, while building and managing teams of people to meet technical project goals. Prerequisite: ME 4015 or similar team-based design experience, or by permission of instructor.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: ME 4454

EDCI 4554 - Educating Exceptional Learners (3 credits)
Analysis of purpose, rationale, and foci of educational programs, and related services for individuals with special needs. Identification of characteristics associated with each exceptionality covered by the Individuals with Disabilities Education Act. Review of procedures for assessment, eligibility decisions, and the development of individualized educational programs. Overview of selected instructional strategies, environmental adaptations, and special materials. Examination of findings concerning program efficacy. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4724 - Secondary School Teaching Methods I (3 credits)
Methods for designing and implementing instruction in specific middle and high school content area classrooms (CTE, English, history, social sciences, mathematics, and music) in conjunction with a field experience course. Lesson planning, assessment, differentiation, technology, standards, and adolescent learning development. Reflectivity and collaboration for continuous improvement.
Corequisite(s): 3964, or EDCT 3964, or EDTE 6964
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4734 - Adolescent Literacy and Reading (3 credits)
Challenges to adolescent literacy. Basic processes related to reading, comprehension, vocabulary development, and conceptual knowledge; diverse adolescent readers. Effective plans and teaching strategies for comprehending and using information in disciplinary texts in middle and high school content area classrooms. (Career and Technical, English, history, math, music, and science).
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4744 - Secondary School Teaching Methods II (3 credits)
Methods for designing and implementing a variety of instructional approaches in specific middle and high school content area classrooms (CTE, English, history, social sciences, mathematics, and music) in conjunction with student teaching internship. Emphasis on planning and implementation of instructional design, research inquiry, classroom management, integration of technology. Unit plan development and evaluation.
Prerequisite(s): EDCI 4724
Corequisite(s): 3964 or EDTE 3964
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCI 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCI 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCI 4984 - Special Study (1-19 credits)
Repeatable with different content.
Instructional Contact Hours: Variable credit course
Repeatability: up to 99 credit hours

EDCI 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (EDCO)

EDCO 2004 - Healthy Relationships: Understanding Self and Others (3 credits)
Basic concepts, skills, and theory associated with creating and sustaining healthy relationships in social and professional settings. Self-awareness as it relates to relationship-building. Characteristics and identities of self and others as they relate to relationship-building. Relationship-building skills such as active listening, perspective taking, and empathy.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCO 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (EDCT)

EDCT 1474 - Computer Information Systems (3 credits)
Fundamentals of Information Technology. Social and individual impact of technology. Software and hardware technologies. Networking, programming, and development.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCT 2604 - Introduction to Career and Technical Education (3 credits)
Philosophies, history, legislation, context, administration and delivery systems of the various licensure areas included in Career and Technical Education.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCT 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCT 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCT 4004 - International Trends in Workforce Development (3 credits)
Trends in international workforce development including global talent supply and demand; portable skills and workforce readiness; social, economic and employment issues; worker values; impact of technology, and workplace communication skills for effective writing, speaking, reading, and listening.
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCT 4034 - Methods of Planning Educational Programs in Agriculture (3 credits)
Course examines the procedures involved in the development of courses, curriculum, and instructional materials for education programs in agriculture.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALCE 4034

EDCT 4624 - Managing a Career and Technical Education Program (3 credits)
Responsibilities of a Career and Technical Education teacher. Managing CTE program based on operational polices, promoting program to in-school and external stakeholders, implementing work-based learning, advising program student organizations, and creating a community-based program.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCT 4634 - Student Assessment in Career and Technical Education (3 credits)
Assessment of standards-based outcomes of learning in workforce development and career and technical education programs. Focus on work-based learning, hands-on competencies, Cognitive Learning Targets, and performance assessment. Pre: Senior standing.
Prerequisite(s): EDCT 2604 and EDCT 2964
Instructional Contact Hours: (3 Lec, 3 Crd)

EDCT 4754 - Internship in Education (1-16 credits)
Planned program of clinical practice in education under the direction and supervision of a university supervisor and a selected practitioner. Pre: Recommendation of program area and successful completion of Professional Studies requirement.
Instructional Contact Hours: (1-16 Lec, 1-16 Crd)
Repeatability: up to 16 credit hours

EDCT 4884 - Youth Program Management (3 credits)
Organizational design of educational youth programs such as 4-H and FFA, including administrative planning, human resource development, recruitment, marketing, and budgeting.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALCE 4884

EDCT 4964 - Field Study/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDCT 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (EDEP)

EDEP 2374 - Educational Psychology for PK-12 Teachers (3 credits)
Theoretical, empirical, and practical foundations of educational psychology, including human learning, cognitive processes, development, motivation, classroom management, and instructional strategies for diverse students. Emphasis on application of theory to practice.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDEP 2444 - Motivating Yourself and Others (3 credits)
Survey of human motivation research and research methodologies in education, psychology, and neuroscience. Application of this research in diverse populations, including analysis of human motivation and design of motivating activities. (3H,3C)
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDEP 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDEP 3474 - Principles and Practices in PK-12 Assessment (3 credits)
Theoretical, empirical, and practical foundations of assessment in PK-12. Basic test design and measurement principles and practices, the use of assessments in education, the use of assessment data, and critical issues in assessment. Emphasis on creating classroom-level assessment systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDEP 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (EDIT)

EDIT 4614 - Instructional Technology: Audio-visual and Computer Uses (3 credits)
An introductory instructional technology course. Principles and production of audio-visual materials and methods in instruction. Application of microcomputers in instruction, emphasizing computer literacy, programming and evaluation of instructional software. Course in methods of teaching, field teaching experience, or teaching experience required.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

EDIT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDIT 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (EDTE)

EDTE 1004 - Introduction to Integrative STEM Education (3 credits)
Introduction to creative hands-on problem-solving using technological and engineering design and application. Comprehensive views of how technology and engineering require integration of knowledge to solve technological challenges. Intersection of science, technology, engineering, and mathematics (STEM) with society. Use of virtual and hands-on modeling to identify, evaluate, and test the proper materials and processes for product design. Professional skills such as problem-solving, collaboration, and effective communication.
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

EDTE 1014 - Teaching Technology, Engineering, and Design (3 credits)
Introduction to strategies for teaching technology, engineering, and design in middle and high schools. Exploration of state standards and national recommendations for teaching technology, engineering, and design. Curriculum design and pedagogical frameworks for teaching technological and engineering design-based learning activities, implementing differentiated instruction, and addressing industry trends.
Prerequisite(s): EDTE 1004 or ENGE 1215 or ENGE 1414
Instructional Contact Hours: (3 Lec, 3 Crd)

EDTE 2005 - Engineering Technologies (3 credits)
Fundamentals of technology and engineering design for middle and high school technology educators. 2005: Human needs and cultural context in engineering design process and design thinking. Contributions of systems engineering. Knowledge and skills for processing common materials. Introduction to computer-aided design for two and three-dimensional modeling. Laboratory safety. 2006: Technology and engineering practices. Measurement, analysis, and simulation tools and techniques. Advanced materials processing. Application of computer-aided design for two and three-dimensional modeling. Teaching technology in 6th through 12th grade classrooms.
Prerequisite(s): EDTE 1014
Instructional Contact Hours: (3 Lec, 3 Crd)

EDTE 2006 - Engineering Technologies (3 credits)
Fundamentals of technology and engineering design for middle and high school technology educators. 2005: Human needs and cultural context in engineering design process and design thinking. Contributions of systems engineering. Knowledge and skills for processing common materials. Introduction to computer-aided design for two and three-dimensional modeling. Laboratory safety. 2006: Technology and engineering practices. Measurement, analysis, and simulation tools and techniques. Advanced materials processing. Application of computer-aided design for two and three-dimensional modeling. Teaching technology in 6th through 12th grade classrooms.
Prerequisite(s): EDTE 2005
Instructional Contact Hours: (3 Lec, 3 Crd)

EDTE 2204 - Emerging Issues in Technology and Engineering (3 credits)
Examination of current and projected technology and engineering topics that are growing in regional, state, national, and global importance. Analyzing how the Grand Challenges for Engineering shape future technological advancements and their impact on societies, the environment, and global issues. Development, revision, and field-testing of appropriate learning activities for middle and high school students in selected topic areas.
Prerequisite(s): EDTE 2005
Instructional Contact Hours: (3 Lec, 3 Crd)

EDTE 2964 - Field Study/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

EDTE 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDTE 3204 - Robotics Education (3 credits)
Introduction to designing robotic systems including sensors, electronic components, and mechanical devices. Foundational technical developments in the use of robots and other computer-controlled devices including technical reporting. History and evolution of robots and automation and their social, economic, industrial, and educational impacts. Robotics-based instruction for middle and high-school students.
Prerequisite(s): EDTE 2006 and CS 1014 and CS 1064
Instructional Contact Hours: (3 Lec, 3 Crd)

EDTE 3964 - Field Study/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

EDTE 4204 - Capstone in Technology and Engineering Education (3 credits)
Workforce experience in technology and engineering education, including open-ended research, design, and industry collaboration. Open-ended and team-focused challenges in STEM contexts. Design-cycle (from problem identification to prototype and technical reporting) based on global, economic, environmental, and societal challenges. Comprehensive instructional unit planning to prepare pre-service educators to teach technological and engineering design-based learning to middle and high school students.
Prerequisite(s): EDTE 2204 and EDTE 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

EDTE 4754 - Internship in Education (1-16 credits)
Planned program of clinical practice in education under the direction and supervision of a university supervisor and a selected practitioner. Recommendation of program area and successful completion of Professional Studies required.
Instructional Contact Hours: (1-16 Lec, 1-16 Crd)
Course Crosslist: ALS 4754

EDTE 4964 - Field Study/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

EDTE 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

EDTE 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Career and Technical Education - Agricultural Education Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements [1]		
EDEP 2374	Educational Psychology for PK-12 Teachers	3
EDCI 2574	Social Foundations of Education	3
EDCI 3144	Education of Exceptional Learners	3
EDEP 3474	Principles and Practices in PK-12 Assessment	3
EDCI 4724	Secondary School Teaching Methods I	3
EDCI 4734	Adolescent Literacy and Reading	3
EDCI 4744	Secondary School Teaching Methods II	3
Subtotal		21
Major Requirements		
EDCI 1004	Introduction to Teacher Education and Licensure	1
or ALS 1234	CALS First Year Seminar	
ALCE 2094	Introduction to Metal Fabrication	1
ALCE 2484	Engine and Power Train Technology	3
ALCE 4064	Ag Mechanical Lab Management	3
APSC 1454	Introduction to Animal and Poultry Science	3
CSES 3114/ GEOS 3614	Soils	3
EDCT 2604	Introduction to Career and Technical Education	3
ALCE/EDCT 4884	Youth Program Management	3
Subtotal		20
In addition to the courses above, the VDOE requires those seeking licensure in Agricultural Education have at least 7 hours towards one content area to make an emphasis. Pick one emphasis area: ANIMAL SCIENCE or HORTICULTURE. Then, take the additional courses below for your chosen concentration to fulfill the content emphasis requirement.		7-8
Animal Science Emphasis		
ALS 2304	Comparative Animal Physiology and Anatomy	
ALS 2504	Animals in Society	
Horticulture Emphasis		
HORT 2224	Horticulture Science and Industry	
HORT 2244	Plant Propagation	
HORT 4334	Greenhouse and Controlled Environment Agriculture Management	
Subtotal		7-8
Field-Based Requirements		
EDCI 2004	Exploring the Teaching Profession- Field Studies in Education	3
EDCT 4624	Managing a Career and Technical Education Program	3
EDCI 3964	Field Study	6
EDCI 4964	Field Study	6
Subtotal		18
Free Electives		**8**
Subtotal		8
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
ALCE 3624	Communicating Ag and Life Sciences in Writing	3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
AAEC 1005	Economics of the Food and Fiber System	3
AAEC 1006	Economics of the Food and Fiber System	3
Pathways Concept 4 - Reasoning in the Natural Sciences		
FREC 2004	Forest Ecosystems	3
Select one of the following: (Based on your emphasis)		4
Horticulture Emphasis		
BIOL 1105 & BIOL 1115	Principles of Biology and Principles of Biology Laboratory	

Animal Science Emphasis		
BIOL 1106 & BIOL 1116	Principles of Biology and Principles of Biology Laboratory	
Pathways Concept 5 - Quantitative and Computational Thinking		
STAT 2004	Introductory Statistics (5f)	3
MATH 1014	Precalculus with Transcendental Functions (5f)	3
Select three credits in Pathway 5a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05A)		3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
HORT 2164	Floral Design [2]	3
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		46
Total Credits		**120-121**

[1] Unless otherwise indicated, all courses must be taken on an A-F basis; courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree

[2] Additional fee required

Satisfactory Progress Toward Degree

University Policy 91[1] requires a student to make satisfactory progress towards a degree. Additionally, licensure programs require that by the time a student has completed 72 credits, they must have passed all licensure examinations, carry an in-major GPA of 3.0, and be accepted into the educator preparation program.

3 unless otherwise indicated, all courses must be taken on an A-F basis; courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree.

[1] https://policies.vt.edu/91-eligibility-for-continued-enrollment.pdf

Graduation Requirements

Credits and GPA- Completion of a minimum of 120 credits with a minimum overall GPA of 2.5; and in-major GPA of 3.0. (In major GPA includes all EDCI, EDCT, and EDEP courses)
Prerequisites - Some courses listed may have pre-/co-requisites; please consult the University Course Catalog or check with your advisor.
Additional Requirements - Students must submit passing scores on required state licensure examinations.

Language Study Requirement

Students who do not complete two years of a single foreign or classical language or American Sign Language in high school, may do so by taking six credits of college-level foreign or classical language or American Sign Language. The six credits used to meet this requirement may not be used to satisfy the minimum number of credits required for graduation.

Satisfactory Progress Toward Degree

University Policy 91[1] requires a student to make satisfactory progress towards a degree. Additionally, licensure programs require that by the time a student has completed 72 credits, they must have passed all licensure examinations, carry an in-major GPA of 3.0, and be accepted into the educator preparation program.

[1] https://policies.vt.edu/91-eligibility-for-continued-enrollment.pdf

Graduation Requirements

Credits and GPA – Completion of a minimum of 120 credits with a minimum overall GPA of 2.5; and in-major GPA of 3.0. (In major GPA includes all EDCI and EDEP courses)

Prerequisites: Some courses listed on this checksheet may have pre-/co-requisites; please consult the University Course Catalog or check with your advisor.

Additional Requirements – Students must submit passing scores on required state licensure examinations.

Language Study Requirement

Students who do not complete two years of a single foreign or classical language or American Sign Language in high school, may do so by taking six credits of college-level foreign or classical language or American Sign Language. The six credits used to meet this requirement may not be used to satisfy the minimum number of credits required for graduation.

School of Public and International Affairs

Our Website (https://www.spia.vt.edu/undergrad/)

Overview

School of Public and International Affairs (SPIA) provides opportunities for students interested in public issues to gain perspectives and skills from several related disciplines. SPIA is a school within the College of Liberal Arts and Human Sciences, and is comprised of the Center for Public Administration and Policy (CPAP), the Government and International Affairs (GIA) Program, the Urban Affairs and Planning (UAP) Program, and the SPIA Undergraduate Program that offers a B.A. in Public and Urban Affairs (PUA) and two majors in Smart and Sustainable Cities (SSC) and Environmental Policy and Planning (EPP).

SPIA also provides a Washington, D.C. Semester in Global Engagement (during the Spring semester) and a Washington, D.C. Semester in Leadership through Policy and Governance (during the summer session). Information on the SPIA Undergraduate Program can be obtained from the SPIA website. Information on graduate degrees may be obtained from the Center for Public Administration and Policy, and from the Government and International Affairs and Urban Affairs and Planning programs.

B.A. in Public and Urban Affairs

Smart and Sustainable Cities Major (SSC)

The Smart and Sustainable Cities (SSC) major is one of the first majors of its kind in the United States. In the major, students will learn the dynamics of urban change across time, space, and place. Students will gain a deep understanding of sustainable urban development and how smart technology and urban analytics can be combined to create solutions for the cities of the future.

The core of the major consists of two parallel tracks. The first track focuses on urban analytics and decision-making. In this track, students will develop modeling and data visualization skills that can be applied to understand urban and regional systems in data-driven, quantitative, and computational ways.

The second track focuses on sustainable urbanization and the future of cities. Students in this track will study the process of urbanization. Specific attention is given to the interdependence of social, economic, environmental, and technological factors and how these evolve over time.

Both of these tracks are then integrated through a course on data and the art of decision-making and a degree capstone studio where students apply their knowledge to real problems.

Environmental Policy and Planning Major (EPP)

Promoting sustainable human interaction with the natural environment continues to be one of the critical challenges facing societies around the world. While science and technology are critical to meeting this challenge, they must be supported by policies and plans responsive to diverse political, economic, sociocultural, institutional, and regulatory contexts.

The Environmental Policy and Planning (EPP) major provides students with an interdisciplinary framework to view environmental problems. Students will obtain the knowledge and skills needed to function as policymakers and planners who can understand complex environmental issues and develop enduring solutions.

The EPP major builds on the Public and Urban Affairs (PUA) degree core that provides students with foundational knowledge in policy, planning, governance, and international affairs. The EPP major extends this knowledge through an interconnected sequence of courses that explore environmental policy and planning, land use, and environmental law. EPP students will also develop their expertise by selecting one more elective from three subject areas: Policy; Planning; and Environment and Conservation.

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the General Education (Pathways) (see "Academics (p. 9)") and toward the degree in Public and Urban Affairs.

Satisfactory progress requirements toward the B.A. in Public and Urban Affairs can be found on the major checksheet by visiting the University Registrar website at https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html.

- Environmental Policy and Planning Major (p. 1146)
- Smart and Sustainable Cities Major (p. 1148)
- Urban Affairs and Planning (p. 1149)

Undergraduate Program Director: Steven Hankey
Professors: A. Ahram, R. Buehler, R. Hall, and M. Stephenson
Associate Professors: D. Bieri, M. Cowell, S. Davis, D. Giselle, S. Hankey, S. Misra, T. Schenk, D. Zahm, and Y. Zhang
Assistant Professors: C. Levinson, T. Lim, P. Wagle
Adjunct Professors: B. Anderson, S. Mastran, J. Provo, and M. E. Ridenour

Undergraduate Course Descriptions (SPIA)

SPIA 1024 - Community Service Learning (3 credits)
An introduction to community service learning with emphasis on the development of civic agency. Critical perspectives on community, ethical community engagement, service and volunteerism, servant leadership, and social change. Exposure to the socio-political dynamics inherent in community development and problem solving. Includes significant community engagement and service-learning experiences, reflection, and the development of a personal community engagement action plan.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 1044 - Life in the Built Environment (3 credits)
Development of the human-made environment has shaped our social relations, culture, and identity. Discussion of how the imposition of built form has served both to define a shared culture and as a means of exclusion and injustice. Study of equity and ethics as evidenced and continued in planning, construction, and public space. Learn how the knowledge of these past structures might shape the future of the built environment in the United States in ways that are more equitable, inclusive, and sustainable.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ARCH 1044

SPIA 2004 - Introduction to Urban Analytics (3 credits)
Computational and quantitative thinking applied to urban problems. Multiple data sources and tools for urban analysis. Application of computational and quantitative thinking in decision making and policy processes. Data cleaning, joining/merging, and summarizing. Evaluation of computational and quantitative thinking in urban planning and policy. Ethical and other issues related to computing, analysis and problem solving.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 2024 - Community Systems Thinking (3 credits)
Introduction to systems thinking concepts and their application to community-based problem solving and decision making. Emphasis on identifying interactions between technical and contextual dimensions of persistent, complex global problems. Introduces systemic frameworks for defining problems, identifying and engaging stakeholders, ideating interventions, selecting and employing criteria for decision making, and creating feedback mechanisms for iterative design. Ethics of community engagement is considered. Includes problem- based service-learning projects.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 2114 - Public Service Leadership (1 credit)
Definition and practice of leadership in the public and nonprofit sectors, and its relationship to democratic governance. Decision-making under varying degrees of certainty and ambiguity. Exploring the relationship between public values and the public interest. Evidence for decisions. Case study engagement and presentation.
Instructional Contact Hours: (1 Lec, 1 Crd)

SPIA 2124 - The Art & Science of Negotiation (3 credits)
Practical negotiation techniques and tactics. Tools to systematically assess and prepare for negotiations, including option evaluation and understanding counterparts. Interpersonal skills for effective engagement. Multiparty negotiations. Ethical and moral issues in negotiations. Representation and principle-agent issues. Negotiation process design. Facilitation and mediation. Tackling scientifically and technically complex disputes. Various models, with an emphasis on the mutual gains approach to negotiation.
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 2244 - Sustainable Urbanization (3 credits)
Process of urbanization and theories and approaches of urban development. Debates on the meanings of sustainable urbanization and development in cities and how they are measured. Urban sustainability initiatives in the context of urban political economies, land-use practices, urban inequality and diversity, urban nature, and urban policy and politics. Programs and policies designed to enhance sustainable urbanization. Comparative approach and global perspective. Fee $30.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2244

SPIA 2314 - Active Transportation for a Healthy, Sustainable Planet (3 credits)
Connections among active transportation (e.g., bicycling, walking) and significant global challenges such as physical inactivity, health, the environment, and the economy on local to global scales. Methods to assess walkability among communities with different worldviews and the influence of the built environment on rates of active transportation. Approaches to evaluate demographic and psychosocial predictors and physical and policy barriers to use of active transportation. Successful strategies to increase active transportation through community design guidelines, behavior change tools, transportation planning, and policy.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HNFE 2314

SPIA 2544 - Policy Dynamics in Global Health (3 credits)
Overview of global health problems and policy. Key actors and socio-political dynamics that shape knowledge and action on global health issues. Roles and responsibilities in global health policymaking.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 2554 - Collaborative Policy-Making and Planning (3 credits)
Introduction to multi-stakeholder collaboration and public participation in planning, policy-making and public administration. Tools and approaches for engagement and effective collaboration. Deliberative and participatory democracy, and transparency in society. Information sharing and access. Civil society, the media and citizen activism. Ethical and moral issues in collaboration. Barriers to participation, and diversity and inclusion.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPIA 3554 - Transdisciplinary Problem Solving for Social Issues (3 credits)
Strategies and skills for transdisciplinary problem solving. Emphasis on integrative thinking strategies and cognitive and interpersonal skills required to bridge scientific discipline-based, non-scientific discipline-based and cultural knowledge. Strategies to identify important disciplinary, non-scientific, ethical, cultural, and structural elements of a problem. Problem-based learning, ethics, team work, and effective communication skills.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 3704 - Urban Contention and Mobilization (3 credits)
Analyzes the emergence and impact of contentious mobilization in the U.S. and global cities. Includes civil and labor rights, religious freedom, democratization, and other movements for equity and inclusion. Explores social scientific approaches to mobilization, countermobilization, and collective action. Impact of contentious mobilization on governance and planning in urban sites and spaces worldwide. Examines how movements manage and address internal diversity, including variation in members' diverse experiences and objectives.
Pathway Concept Area(s): 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

SPIA 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

SPIA 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPIA 4374 - Federal Cybersecurity Policy and Regulation (3 credits)
This course seeks to give students an understanding of how the government develops new cybersecurity regulations and policies that balance consumer interest in personal protection with industry attitudes towards oversight. The course also covers the policies that government entities take in the interest of national security to maintain state secrets in the face of threats from hackers and other hostile actors.
Prerequisite(s): FIN 4014
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 4454 - Future of Cities (3 credits)
Cities as complex systems. Interdependence of social, economic, environmental, and technological components and how these change over time. Theories about city formation, structure, and change, with implications for sustainability, resilience, and globalization.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 4464 - Data and the Art of Policy-Making and Planning (3 credits)
Critical examination of use of scientific and technical information in planning and policy-making, exploring issues and challenges through social science lens. Investigation of appropriate and responsible use of data within collaborative and deliberative policy-making and planning processes. Presentation of data and underlying models in accessible and understandable formats. Integrating all forms of knowledge into decision-making, including local and traditional knowledge.
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 4554 - Creating the Ecological City (3 credits)
Multidisciplinary, team oriented, problem-solving approaches to creating cities that foster healthy interconnections between human and ecological systems. Analysis of problems from practical and ethical perspectives in the context of the diverse knowledge bases and values of decision-makers. Formation and utilization of integrated design teams to solve complex urban design and planning problems at a variety of scales. Senior standing.
Prerequisite(s): HORT 2134 or FREC 2134
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BSE 4554, FREC 4554, HORT 4554, LAR 4554

SPIA 4724 - CyberLeaders Capstone (6 credits)
Interdisciplinary research and analysis from technical and policy standpoints of regulation and industry standards, leading to the development and communication of possible solutions for specific cybersecurity problems related to critical systems. Previous topics include cellphone encryption and Internet of Things security.
Corequisite(s): SPIA 4374
Instructional Contact Hours: (2 Lec, 12 Lab, 6 Crd)

SPIA 4784 - Community Systems Capstone (3 credits)
Collaborative community problem solving in team environments Data collection, interpretation, and presentation augment community-based, iterative design and planning processes. Consideration of ethical engagement and community goals related to social justice, resilience, and sustainability. Discourse-based project culminating in presentation of intervention proposals to stakeholders. Pre: 3 credits in Discourse.
Prerequisite(s): (SPIA 1024 or SOC 2034) and SPIA 2024
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SPIA 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

SPIA 4964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

SPIA 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SPIA 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Total Credits		**119**

Satisfactory Progress

To make satisfactory progress within the EPP major, students must complete UAP 1024 Leadership, Service, and Public Problem Solving, PSCI 1014 Introduction to United States Government and Politics, STAT 3604 Statistics for Social Science, and UAP 3354 Introduction to Environmental Policy and Planning by the end of the semester in which 60 hours have been attempted; and maintain an in-major GPA of 2.0.

Graduation Requirements

Hours Requirement

Students must earn at least 120 credit hours to graduate with a PUA degree.

In-major GPA

All courses in the Degree Core and Major Requirements are included in the in-major GPA calculation. A GPA of 2.0 or above (overall and in-major) is required for graduation.

Dual Use of Courses

No course can double count within or between SPIA-related majors or minors with the exception of the Core Degree Requirements. In accordance with university guidelines, courses satisfying degree core requirements may not be used to satisfy other areas of a degree (e.g. Pathways).

Intra-SPIA Program Majoring and Minoring

Students may pursue more than one major or minor associated with the School of Public and International Affairs Program. In this case, the policy pertaining to the "Dual Use of Courses" will apply.

Prerequisites

Some courses listed on this checksheet have prerequisites. Be sure to consult the University Catalog and/or check with your advisor regarding course planning.

Foreign Language Requirement

University and Admissions Foreign Language Requirement

2 years of a single foreign, classical, or sign language in high school ***or complete an 1105-1106 series of foreign language - (these credits will not count toward the 120 required for graduation).***

Urban Affairs and Planning

Our Website (https://spia.vt.edu/programs/uap.html)

Overview

The Urban Affairs and Planning Program (UAP) offers an accelerated program that enables students to earn credit toward a Master of Urban and Regional Planning (MURP) degree while they are completing the requirements for their bachelor degrees. At the graduate level the department offers the master of urban and regional planning degree.

Accelerated Program

The Urban Affairs and Planning Program (UAP) and School of Public and International Affairs (SPIA) offers an accelerated program that enables students to earn credit toward a Master of Urban and Regional Planning (MURP) degree while they are completing the requirements for their Bachelor of Arts in Public and Urban Affairs with a major in Smart and Sustainable Cities (SSC) and/or Environmental Policy and Planning (EPP). This 4+1 five-year program provides qualified students with a unique opportunity to advance in the field of urban and regional planning.

During their senior year, admitted students will take up to 18 credit hours of graduate coursework in the MURP Program. The 18 credit hours of graduate coursework will fulfill both graduate and undergraduate requirements. At the end of their fourth year, students should have completed all undergraduate requirements to receive their bachelor's degree.

In the summer after graduating with their bachelor's degree, students will participate in either a six (6) credit hour professional internship experience with a public agency, non-profit organization or private firm working on planning issues, or an approved six (6) credit hour study abroad program, or participate in six (6) credit hours of approved graduate-level courses.

During their fifth year, students complete 24 credit hours graduate coursework required for the MURP program and earn a Master of Urban and Regional Planning degree.

Criteria for Admission

- Application: VT Graduate School application submitted by end of junior year
- Minimum GPA: 3.5 cumulative
- Test score requirements: None

Chair: Todd Schenk
Professors: R. Buehler, R. Hall, and M. Stephenson
Associate Professors: D. Bieri, M. Cowell, S. Hankey, S. Misra, T. Schenk, D. Zahm, and Y. Zhang
Assistant Professors: T. Lim and P. Wagle
Adjunct Professors: B. Anderson, S. Mastran, J. Provo, and M. E. Ridenour

Undergraduate Course Descriptions (UAP)

UAP 1004 - Introduction to Career & Professional Development in Public Service (1 credit)
This course introduces the academic requirements and potential career fields for the Environmental Policy and Planning (EPP) and Smart and Sustainable Cities (SSC) majors. It is designed to assist new and transfer students with academic planning, career exploration, and the job search process. In addition, students will develop an understanding of professional competencies and examine how these competencies relate to a potential occupational field. During the course, students will develop the materials and skills needed to successfully apply for an internship or job. These materials will include the preparation of a cover letter and resume that respond directly to a targeted position. The skills include interview and presentation techniques.
Instructional Contact Hours: (1 Lec, 1 Crd)

UAP 1024 - Leadership, Service, and Public Problem Solving (3 credits)
Current events and case studies on complex planning and policy issues challenging the United States. Historical, political, economic, social, and geographical context of the issues. Roles, relationships and responsibilities in governing, government, and the public policy process. Approaches to leadership and leadership styles. Professional ethics and the role of ethics in policy decisions. Dealing with competing values and public vs. interests in policy making.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 2004 - Principles of Real Estate (3 credits)
Introduction to real estate, including markets, land use planning and zoning, development, finance, construction, sales, marketing, management and property valuation. Examines the key actors and processes in each of these areas. Explores major public policies impacting real estate.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: REAL 2004

UAP 2114 - Sustainability by Design (3 credits)
Design decision-making in complex contexts. Ethical issues underlying design for sustainability. Evaluation of design in systems, products, places, and modes of living using the Framework for Strategic Sustainable Development (FSSD). Historical and cultural underpinnings of design and sustainability.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ARCH 2114

UAP 2334 - Urbanization and Biodiversity Conservation (3 credits)
Overview of challenges and opportunities that urban environments create for biodiversity conservation and human wellbeing, with a focus on social sciences theories and approaches. How urbanization is changing people's relationship with their environment and what that means for biodiversity conservation and human wellbeing. Examination of how data collection, analysis, and interpretation occur using social sciences methods applied to biodiversity conservation. Diversity, Equity, and Inclusion in the context of urbanization and conservation.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FIW 2334

UAP 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UAP 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UAP 3014 - Urban Policy and Planning (3 credits)
An introduction to urban policy and urban planning. Includes analysis of the basic concepts and principles of urban policy, a review of urban policy in the United States, discussion of the development of urban planning and its role in shaping the urban environment, and an analysis of the relationship between public policy and planning and the organization and structure of the urban environment.
Prerequisite(s): UAP 1024
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 3024 - Urban and Regional Analysis (3 credits)
Overview and application of various methods used to study, represent, understand communities in their urban and regional context. Data collection and analysis; population, land use, transportation and economic forecasting; selecting and applying an appropriate method; designing and presenting a community study. Restricted to majors and minors only.
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 3224 - Policy Implementation (3 credits)
Systematic analysis of the field and practice of public policy implementation. Includes analysis of the structure and dynamics of the policy process as well as specific analytic approaches to understanding policy implementation. Includes analysis of intra-organizational, interorganizational and intergovernmental implementation processes.
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 3264 - Contemporary Urban Issues (3 credits)
Consideration of one particular issue of immediate importance to the contemporary urban environment. Topics emphasize major social or economic policy issues, and may change each year. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 3344 - Global Environmental Issues: Interdisciplinary Perspectives (3 credits)
Critical examination of major global environmental problems from a humanities perspective, including international community responses to global environmental problems such as global warming, atmospheric ozone depletion, acid rain, tropical deforestation, toxic waste. Actions by key actors in the international community to develop solutions. Relationship of justice, fairness, equality, and diversity to political questions of power or authority. Pre: 3 credits of Critical Issues in a Global Context.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3344, PSCI 3344

UAP 3354 - Introduction to Environmental Policy and Planning (3 credits)
Introduction to the interdisciplinary principles of environmental policy, planning, economics, and ethics to address pollution abatement, resources conservation, habitat protection, and environmental restoration. The course will focus on practical means of identifying environmental problems and creatively solving them.
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 3434 - Public Administration (3 credits)
The role and context of public administration in the contemporary United States, administrative organization and decision-making, public finance, human resources administration, and program implementation.
Prerequisite(s): PSCI 1014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3414

UAP 3444 - Administrative Law and Policy (3 credits)
The legal context of the exercise of discretion by public administrators in the United States. Adjudication and rule- making; access to administrative processes and information; legislative and judicial control of administration.
Prerequisite(s): PSCI 1014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3444

UAP 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AHRM 3464, APS 3464, GEOG 3464, HD 3464, HUM 3464, SOC 3464

UAP 3714 - The U. S. Policy Process (3 credits)
Description and analysis of the processes and institutions involved in the making and implementation of public policy in the United States, with a primary focus on domestic and economic policy. Empirical and normative models of the process of public policy making in the U.S.
Prerequisite(s): PSCI 1014
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3714

UAP 3744 - Public Policy Analysis (3 credits)
Methods and approaches used in the analysis and evaluation of public policy; strengths and limitations of various analytic tools; normative issues in the practice of policy analysis.
Prerequisite(s): PSCI 1014 or PSCI 1014H
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3744

UAP 3774 - Marxian Political Analysis (3 credits)
Contemporary uses of Marxian concepts and theories to study the world economy, business structure, current social issues, modern ethical values, and alienation.
Prerequisite(s): PSCI 2014 or PSCI 2054 or IS 2054 or GEOG 2054 or PSCI 2064 or IS 2064 or GEOG 2064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 3774

UAP 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

UAP 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UAP 4184 - Community Involvement (3 credits)
Issues, concepts, and techniques of citizen participation in community development. Institutional frameworks and their historical precedents. Exercises developing group communications skills, public meeting facilitation, and design of community involvement programs. Pre: Senior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 4214 - Gender, Environment, and International Development (3 credits)
Key concepts and critiques related to the intersection of gender, environment, and international development. Development institutions and organizations with relationship to gender and environment. Theoretical and applied perspectives on eco-feminism; bio-diversity; climate change; feminist political ecology; agriculture and natural resources; participatory methods and empowerment. Case studies from Africa, Asia, and Latin America. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 4214, WGS 4214

UAP 4264 - Environmental Ethics and Policy (3 credits)
Issues in applied environmental ethics. Contributions of diverse religious and philosophical traditions to contemporary perspectives on the human-nature relationship. Examination of environmental policies from utilitarian economic, deep ecology, and ecofeminist perspectives. Junior, senior or graduate standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 4344 - Law of Critical Environmental Areas (3 credits)
This course examines the legal principles and policy debates involved in the regulation and protection of critical environmental resources. Specific topics vary but will likely include wetlands law and policy, endangered species habitat, open space, forestland and farmland protection, coastal zone management, and floodplain regulation and policy.
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 4354 - Interdisciplinary Environmental Problem Solving Studio (3 credits)
Interdisciplinary, experiential problem-solving studio focusing on specific environmental problems. Working in groups, students interact with local officials, developers, environmental groups, and community organizations to explore the processes of environmental management, planning, and regulations. Students apply techniques and skills frequently used by environmental policymakers and planners. Pre: Senior standing.
Prerequisite(s): UAP 3354 and UAP 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 4364 - Seminar in Environmental Policy and Planning (2 credits)
Critical examination of the social, political, economic, legal, scientific, and technological contexts underlying processes of environmental change, problems, and solutions, as seen from various conceptual and disciplinary perspectives. Senior status required and 9 credit hours, 3000-level or above, in the Environmental Policy and Planning major or minor.
Prerequisite(s): UAP 3354 and UAP 3224
Instructional Contact Hours: (2 Lec, 2 Crd)

UAP 4374 - Land Use and Environment: Planning and Policy (3 credits)
Environmental factors involved in land use planning and development, including topography, soils, geologic hazards, flooding and stormwater management, ecological features, and visual quality. Techniques used in conducting environmental land inventories and land suitability analyses. Policies and programs to protect environmental quality in land use planning and development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 4384 - Pollution Control Planning and Policy (3 credits)
Planning and policy aspects of managing residuals and environmental contaminants and their effects on human health and environmental quality. Technical and economic factors involved in management of water quality, air quality, solid and hazardous wastes, toxic substances, and noise. Implementation of pollution control legislation, policies, and programs at federal, state, and local levels.
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 4394 - Community Renewable Energy Systems (3 credits)
Practical design fundamentals for small scale renewable energy systems: solar building heating and cooling; solar domestic hot water; wind, photovoltaic, and hydroelectric systems; alcohol, methane and other biomass conversion systems. Developing plans, programs, and policies to stimulate development of renewable systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 4624 - The Washington Semester: Seminar in American Politics and Public Policy (3 credits)
This seminar is the integrative forum for the principal elements of the Washington Semester experience. The course explores both the role of political institutions in policy formation and implementation and the primary managerial and leadership challenges that arise for implementing organization managers in American democratic public policy-making. Pre: Junior standing or instructor consent and acceptance into the Washington Semester program.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4624

UAP 4644 - Washington Semester: Politics, Policy and Administration in A Democracy (3 credits)
This course is part of the Washington Semester. Explores the relationship between the imperatives of democratic mobilization, policy choices and organizational choices through intensive study of the operating context of a selected public or nonprofit organization. Examines implications of policy-maker choices for implementing institution dynamics and challenges. Pre: Junior standing and acceptance into the Washington Semester program required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSCI 4644

UAP 4714 - Economics and Financing of State and Local Governments (3 credits)
Examines the provision and financing of public goods and services in local governments. Analyzes associated policy issues. Reviews experience in Western Europe and developing countries, as well as in the United States.
Prerequisite(s): UAP 3024 and (ECON 2005 or ECON 2005H) and (ECON 2006 or ECON 2006H)
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 4754 - Legal Foundations of Planning (3 credits)
Examination of the legal context in which urban planning and public policy operate. Legal structure, role of law, powers of sovereign governments, constitutional limitations on government activities, and public-private conflict and their influence on planning and public policy are examined. Pre: Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 4764 - International Development Policy and Planning (3 credits)
Examination of major development theories and contemporary issues and characteristics of low-income societies (industrialization, urbanization, migration, rural poverty, hunger, foreign trade, and debt) that establish contexts for development planning and policy-making. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 4764, SOC 4764

UAP 4854 - Planning of the Urban Infrastructure (3 credits)
Course examines the interdependences among the elements of the built environment of the city and those between the elements of the built environment and the policy/planning structure of the city. Considered are those elements associated with the primary urban activities (residential, commercial, industrial) as well as the urban form-giving infrastructure facilities that support those land uses (water supply, sewerage, solid waste disposal, transportation, education, recreation, health, and safety).
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 4914 - Seminar in Public and Urban Affairs (3 credits)
This capstone seminar explores the central questions of the role of the citizen and the citizenry in democratic capitalistic urban societies as well as the nature of accountability in such regimes. Topics such as the processes by which representation occurs, alternate theories of democratic community and the relationship of the public, private and civil sectors in urban society are treated. Senior status in PUA required. PUA majors and minors must complete this course with a C grade or higher to graduate; otherwise course must be repeated.
Prerequisite(s): UAP 4754 and SPIA 2554 and SPIA 3554
Instructional Contact Hours: (3 Lec, 3 Crd)

UAP 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

UAP 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UAP 4964H - Honors Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UAP 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UAP 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UAP 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Science, Technology, and Society

Our Website (http://www.sts.vt.edu)

Overview

The Department of Science, Technology, and Society (STS) offers interdisciplinary work at both the undergraduate and graduate levels that contributes to our understanding of the relations among science, technology, and society. At the undergraduate level, it offers four minors.

Humanities, Science, and Environment Minor (HSE)

This minor provides an interdisciplinary approach to environmental issues, integrating humanities, social sciences, and natural sciences to understand the relationship between people and the natural world.

Science, Technology, and Society (STSO)

This minor may be designed to emphasize combinations of moral, aesthetic, intellectual, political, historical, philosophical, and sociological dimensions of science, technology, and medicine, through case studies and in-depth analysis. Students work with the undergraduate coordinator in STS to design a coherent program.

Medicine and Society Minor (MSOC)

The Medicine and Society minor focuses on the humanistic aspects of medical practice, pressing bioethical questions, and the subjective experience of illness and health. The MSOC minor provides an essential education for anyone curious about the role of medicine in past eras and contemporary culture, and it provides an excellent background for those considering a career in medicine or other health care professions. The minor requires 21 credit hours with at least 14 hours at the 3000 or 4000 level.

Gender, Science, and Technology Minor (GST)

Co-developed by Women's Studies and STS, this minor offers the opportunity for students to cultivate an understanding of the complex ways in which gender is defined in relation to science and technology, and science and technology are defined in relation to gender. The minor coordinator is the Director of the Women's Studies Program.

Contact Carol Sue Slusser in 121 Lane Hall or vie email at slusserc@vt.edu, for more information or to enroll in one of these minors.

Graduate Program in Science and Technology Studies

STS jointly administers the Science and Technology Studies Graduate Program with contributing and affiliated faculty from the departments of History, Philosophy, Political Science, and Sociology. The program offers the M.S. and Ph.D. degrees at both the Blacksburg and National Capital Region campuses. (See the Graduate Catalog for further information.)

Head: Saul Halfon
Professor: J.E. Abbate and B.L. Allen
Associate Professors: D. Breslau, J. H. Collier, S.E. Halfon, A.S. Heflin, R. Hester, P.R. Olson, S. Schmid, L. Vinsel, and M. Wisnioski
Assistant Professors: J. Aggrey, M. Haines, F. Prieto-Nañez, and F. Rosa
Collegiate Assistant Professor: C. Olson
Collegiate Associate Professor: M. Goodrum
Emeritus Professor: R.M. Burian, G.L. Downey, E. Crist Patzig, E.R. Fuhrman, A.F. LaBerge, and D.T. Zallen
Director of Graduate Studies: M. Wisnioski
Director of Undergraduate Studies: L. Vinsel
Undergraduate Coordinator: Carol Sue Slusser

Undergraduate Course Descriptions (STS)

STS 1504 - Introduction to Science, Technology, and Society (3 credits)
Examination of the interrelationship among science, technology, and society. Study of how science, technology, and medicine are defined and analyzed by the humanities and social sciences. Examination of topics, theories, and methods of the field of Science and Technology Studies. Depiction of the dynamics of scientific and technological controversies including the roles knowledge, expertise, risk, rhetoric and public understanding play in policy making.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 0 Lab, 3 Crd)

STS 2034 - Introduction to Technology and Race (3 credits)
Examination of the relationship between technology and race. Technology such as information and communication technologies, medical and biometric technologies, transportation, and space travel in contexts of colonialism, indigenous knowledge, and globalization. Role of technology in resistance and emancipation. Assessment of inequity in the design and maintenance of sociotechnical systems including bias in design, surveillance, biopolitics, and the digital divide.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 2054 - Engineering Cultures (3 credits)
Development of engineering and its cultural values in historical and transnational perspectives. Explores the varying knowledge, identities, and commitments of engineers and engineering across different countries. Examines values in emergent infrastructures of engineering education and work, and the participation of engineers and engineering in evolving forms of capitalism. Helps students learn to reflect critically on their knowledge, identities, and commitments in varying curricula and a globalizing world.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2054

STS 2154 - The Life Sciences and Society (3 credits)
Basic Science, Technology, and Society (STS) perspectives on the life sciences and the ethical issues they raise. Humanistic approaches to analyze how our values and perceptions are informed by the ways that we understand bodies, biology, and life itself. How our hopes, desires, and fears shape the practices and technologies of the life sciences.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 2254 - Innovation in Context (3 credits)
Critical examination of diverse definitions and examples of innovation. Discussion of innovation as a process of social change; as technology diffusion; as an economic engine; as an ecosystem; as an ideology; and more. Introduction to methods and ideas from the field of Science and Technology Studies including the analysis of innovation from historical, cultural, and economic perspectives, as well as the study of innovations consequences and its alternatives. Collaborative projects focused on creatively describing and critiquing local cases of innovative work.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 2444 - Global Science and Technology Policy (3 credits)
Introduction to issues and themes in global science and technology policy, from the perspective of Science and Technology Studies (STS). Comparison of national and international policy agents, institutions, structures, and processes. Integration of key ideas from STS into policy analysis, including regulatory cultures, cultural notions of risk and expertise, large socio-technical systems, and social shaping of technology. Emphasis on international controversies, diverse cultural perspectives, and inclusion in policy processes. Cases may include international controversies over genetically modified foods, transmissible illnesses, nuclear energy, and information security.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 2454 - Science, Techology, and Environment (3 credits)
Examines the nature and causes of global environmental challenges. Focuses on the role of science and technology in the causation of environmental problems and provision of solutions. Investigates uneven impacts among different groups and nations. Explores multicultural dimensions and ethical debates in the relationship between humanity and natural world. Considers visions of alternative futures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 2464 - Religion and Science (3 credits)
Exploration of the relationships between religion and science in the western tradition. Basic frameworks for relationships between religion and science in historical and cultural context, types of human knowledge and truth, similarities and differences between science and religion, evolution, the origins of the creationist movement, and contemporary moral and ethical issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2464

STS 2604 - Introduction to Data in Social Context (3 credits)
Examines the use of data to identify, reveal, explain, and interpret patterns of human behavior, identity, ethics, diversity, and interactions. Explores the historical trajectories of data to ask how societies have increasingly identified numerical measures as meaningful categories of knowledge, as well as the persistent challenges to assumptions about the universality of categories reducible to numerical measures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 5F Quant & Comp Thnk Found., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2604, SOC 2604

STS 2664 - Technology Ethics (3 credits)
Critical, interdisciplinary exploration of ethical considerations regarding human engagements with technology, including technological development, use, success and failure. History and fundamental concepts of normative ethics and their application to specific technologies and technological systems. Emphasis on conceptualizations and representations of technology with respect to various social, cultural, and historical perspectives on nature, human nature, and technological artifacts.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 2715 - History of Technology (3 credits)
Development of technology and engineering in their social and cultural contexts. Examines the interaction of people, cultures, technologies, and institutions such as governments, religious bodies, corporations, and citizens groups. 2715: Examines the creation and modification of technologies to establish the basic structures of civilization, from prehistory to the Industrial Revolution (about 1800). 2716: Examines the nature of technological change and consequences in society, from about 1800 to present.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2715

STS 2716 - History of Technology (3 credits)
Development of technology and engineering in their social and cultural contexts. Examines the interaction of people, cultures, technologies, and institutions such as governments, religious bodies, corporations, and citizens groups. 2715: Examines the creation and modification of technologies to establish the basic structures of civilization, from prehistory to the Industrial Revolution (about 1800). 2716: Examines the nature of technological change and consequences in society, from about 1800 to present.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2716

STS 2724 - Introduction to Displacement Studies (3 credits)
Examines key concepts, ideas, and technologies in global population displacement, including categorization, distribution and governance of displaced groups. Introduces displacement drivers such as natural disaster, climate change, civil unrest, infectious disease, and forced relocation. Identifies digital infrastructures used for, by, and against displaced populations. Describes experiences of displaced people.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 2724, HIST 2724, LAHS 2724

STS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 3104 - Science and Technology in Modern Society (3 credits)
Examination of science and technology as social and cultural activities in the modern world. The relationship of science and technology to their social and cultural contexts. Institutions and values in science and technology. The changing relationship of technology to science. Discuss how the domain and objects of scientific investigation have been shaped by changing concepts of nature and the natural.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 3124 - Societal Health in North America (3 credits)
Study of human health within and across a variety of geographic contexts in North America. Describe the health consequences of inequity and injustice within and across American contexts. Consider the roles of collectives, social movements, mutual aid, interdisciplinary thinking, power and social justice in addressing pathologies of power and working towards human well-being. Advocate a biosocial lens that considers the dynamic relationships between biology and environmental, social, geographic, and historical contexts.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 3124

STS 3284 - Technology and Disability (3 credits)
Technologies and the experience of disability. The ways institutions, laws, and biases influence how disability is interpreted within engineering and design culture. How disability communities resist, negotiate, adopt, make, and change technologies. Development of work on this topic through making, doing, and writing. Conversations about ableism, media portrayals, historical narratives, ideology, and rhetoric surrounding technology and disability. Includes field trips to learn about the law and assistive technology.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 3314 - Medical Dilemmas and Human Experience (3 credits)
Provides a humanist perspective on dilemmas of medical ethics. Focus on the varieties of human experience of medical dilemmas. Topics include contemporary controversies, such as assisted reproduction, genetic testing and treatment, clinical trials, end-of-life interventions, and the allocation of health-care resources.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 3334 - Energy and Society (3 credits)
Examines the interconnections between energy use and social life. Considers the ways that modern social institutions, such as states, cities, and households are shaped by energy systems, particularly the pervasive use of fossil fuels. Explores the influence of energy extraction and commerce on economic development and global politics. Surveys major contemporary problems related to energy, including climate change and natural resource depletion. Develops an interdisciplinary framework, drawing insights from history, sociology, and economics, for evaluating policies to transition to a sustainable energy system.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

STS 3705 - History of Science (3 credits)
Conceptual and institutional development of physical and biological sciences viewed within a cultural and societal context. 3705: Early Science; 3706: Modern Science
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3705

STS 3706 - History of Science (3 credits)
Conceptual and institutional development of physical and biological sciences viewed within a cultural and societal context. 3705: Early Science; 3706: Modern Science
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3706

STS 3734 - History of Modern Biology (3 credits)
Exploration of the history of biology during the nineteenth century and twentieth centuries, including developments in evolutionary biology, genetics and molecular biology, biology and race, and conservation biology. Emphasis on biology's reciprocal relationship with society, how it has helped shape ideas of race and ethnicity, and the ethical dilemmas it has generated.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3734

STS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4014 - Algorithms & Society (3 credits)
This course focuses on social perspectives of algorithms and implications to factors such as class, gender, race, ethnicity, geography, and disability status. Students will be guided to think critically about the impacts of computing in society, as well as the role of social values in their design. Topics will focus on computing technologies involved in critical contemporary and global concerns including machine learning, privacy, and the infrastructure that describes the social and technical context for algorithms. Pre: Junior Standing
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4014

STS 4304 - Topics: Contemporary Issues in Science, Technology, and Society (3 credits)
Advanced introduction to social scientific concepts and methods in the study of contemporary science and technology. Examines the political, social, and cultural dimensions of a contemporary development or controversy in science and technology. Studies the relationship of science and technology to social structure, power relations, and inequality. Focuses on the institutions and organizations in which emergent science and technology are produced. Discusses policy options informed by social scientific analysis. May be repeated once with different content for a maximum of 6 credits. Pre: Junior standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

STS 4314 - Narrative Medicine (3 credits)
Introduction to the field of narrative medicine, with attention to narrative competencies, the use of narrative medical education, and the function of narratives in the experience of healing. Includes narrative approaches to biomedical ethics.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 4314

STS 4314H - Narrative Medicine (3 credits)
Introduction to the field of narrative medicine, with attention to narrative competence, the use of narrative in medical education, and the function of narratives in the experience of healing. Includes narrative approaches to biomedical ethics.
Prerequisite(s): ENGL 3154 or ENGL 3324
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 4314H

STS 4324 - Medical Experiences and Biomedical Theories (3 credits)
Builds the analytical tools of STS and humanistic deconstruction. Challenges students to read, write, and interrogate academic literatures and real-life, immediate problems and artifacts in ethical, sociocultural, historical, and context informed ways. Builds this competence while examining materials related to current topics in health, such as but not limited to: population, development, reproductive technologies, pollution, climate change, environmental health beyond humans, and, colonialism. Employs multiple humanistic lenses including: biopolitics & biopower, intersectionality, structural and institutional analysis, syndemics, anticolonialism, violence, and disability to examine these materials.
Prerequisite(s): STS 2154 or STS 3314 or SOC 3104
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 4324

STS 4334 - Sexual Medicine (3 credits)
Discusses sex and medicine in contemporary U.S. society. Explores how notions of sexual behavior and normality are defined and structured by medical discourse. Examines cultural institutions that play significant roles in formulating ideas about and definitions of deviance, perversity, and tolerated marginality. Critiques medical responses to sexual variations. Examines experiences of people who have sought out, or been the unwilling victims of, sexual medicine. Junior standing required.
Prerequisite(s): WGS 1824
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WGS 4334

STS 4704 - Gender and Science (3 credits)
Investigates the gender dimensions of science in both historical and contemporary perspectives. Discusses feminist studies of science, exploring strengths and limitations. Assess implications of cultural assumptions about gender for practicing scientists. A 3000 level course in science or engineering may satisfy the prerequisite.
Prerequisite(s): STS 1504 or WGS 2244
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WGS 4704

STS 4754 - Internship (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

STS 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Sociology

Our Website (http://www.sociology.vt.edu)

Overview

The Department of Sociology offers a B.S., M.S., and Ph.D. Sociology and is the home to two majors, sociology and criminology, and the Center for Peace Studies and Violence Prevention (CPSVP). Courses are open to students in all colleges of the university.

Sociology Major

In addition to fulfilling the requirements of the General Education (Pathways for students graduating in 2022 and beyond) sociology majors must complete 43 hours in sociology, including:

- 22 hours of sociology core courses and 21 hours of sociology electives, with no more than six hours at the 1000-2000 level,
- three hours at the 3000 level,
- at least nine hours at the 4000 level, and
- three hours in Africana Studies, American Indian Studies, or Women's and Gender Studies at the 2000, 3000, or 4000 level.

Criminology Major

In addition to fulfilling the requirements of the General Education (Pathways for students graduating in 2022 and beyond) criminology majors must complete 43 hours in criminology, including:

- 22 hours of sociology core courses,
- nine hours of required criminology courses, and
- 12 hours of elective criminology courses.

Minors

Minors in sociology must complete 18 hours in sociology including SOC 1004 Introductory Sociology. No more than nine hours at the 1000-2000 level will count toward a minor. A minimum GPA of 2.0 for courses in the minor is required. Sociology offers additional minors in Diversity and Community Engagement, Gender, Science and Technology, and Peace Studies and Social Justice. See the listing of the programs below for further information.

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the General Education (Curriculum for Liberal Education or Pathways) (see "Academics (p. 9)") and toward the degree in Sociology.

Satisfactory progress requirements toward the B.S. in Sociology can be found on the major checksheet by visiting the University Registrar website at http://registrar.vt.edu/graduation-multi-brief/index1.html.

Center for Peace Studies and Violence Prevention

Director: James Hawdon

The Center for Peace Studies and Violence Prevention is a student-center, multi-disciplinary undertaking to promote research, education and outreach in the area of peace studies and violence prevention. Since its inception in 2008, the Center has adopted three thematic areas:

- The prevention of violence
- Peace studies
- The development of new leaders for this century

The Center is a hub for research and pedagogy on peace studies and violence prevention. Our multidisciplinary approach allows students, faculty, and a variety of off-campus constituents to address peace building and violence prevention in a holistic manner.

The Center for Peace Studies offers a minor in Peace Studies. The minor is designed to provide students with a broad perspective on violence prevention and peace building. Students minoring in Peace Studies will be required to take two core courses, PSVP 2044 Peace and Violence and PSVP 4104 Global Society, Violence and the Prospects for Peace. In addition, students will select four elective courses from a variety of courses that focus on either "local" issues of violence prevention and peace building or "global" issues of violence prevention and peace building.

- Criminology Major (p. 1163)
- Sociology Major (p. 1165)

Department Chair: Jennifer A. Johnson

Distinguished Professor: A. K. Harrison
Professors: O. Agozino, S. E. Bell, D. L. Brunsma, T. M. Calasanti, J. E. Hawdon, J. A. Johnson, N. M. King, L. Ritchie, B. Zare
Research Professor: D. A. Gill

Associate Professors: T. Dearden, M. Gardezi, S. Ovink, K. Parti, R. T. Perdue, P. Polanah, A. V. Reichelmann, J. M. Roos, D. Sedgwick, A. S. Vogt Yuan, D. Wimberley, H. Zhu
Associate Professor of Practice: S. Mehra
Assistant Professors: L. O'Donnell Goldensher, L. Halcomb, Z. Li, A. McCumber, H. Williams

Assistant Collegiate Professors: W. T. Jamerson, C. McCown

Adjunct Professors: R. Blieszner, D. Breslau, G. L. Downey, N. McGehee
Instructors: S. Choudhury, K. Dhillon-Jamerson, S. Diaz, S. Illahe, L. Simmons, J. Stilley, L. Weikart

Director of Undergraduate Studies: A. S. Vogt Yuan
Career Advisor: D. Sedgwick
Academic Advisors: R. Franklin, H. Hollandsworth
Distinguished Professor Emeritus: W. E. Snizek
Emeritus Professors: C. Bailey, C. Burger, E. Fuhrman, L. Gillman, M. Hughes, B. R. Hertel, K. J. Kiecolt, J. W. Michaels, W. Reed, S. Samanta, and D. R. Shoemaker

Undergraduate Course Descriptions (CRIM)

CRIM 1054 - Virginia Tech Prison Book Project (1 credit)
A one-hour course with the Virginia Tech Prison Book Project. Students will complete a learning module about carceral institutions in the United States and the impact of educational opportunities on the lives of incarcerated people. They will then participate in a service learning event where they match individual requests from incarcerated readers to books and prepare the books for shipping.
Instructional Contact Hours: (1 Lab, 1 Crd)
Course Crosslist: HUM 1054, RLCL 1054

CRIM 2504 - Crime and Punishment in American History (3 credits)
Analyzes changing understandings of crime and punishment from the Colonial Era to the Age of Mass Incarceration. Considers how factors of race, ethnicity, class, and gender intersected with changing ideas of criminality and punishments.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2504

CRIM 2754 - Internship (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 2964 - Field Work/Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 3124 - Murder in American History (3 credits)
Considers how the definition of murder as a crime has changed from the colonial period to the present day. Uses murder cases to study the dynamics of American society in condemning, condoning, or celebrating murder. Asks how cultural factors, including racial prejudice, gender stereotypes, beliefs about sexuality, and class status affected the act of killing, media coverage of the event, societal reactions, and the execution of justice. Topics covered include abortion, lynching, vigilante justice, and the evolution of the legal system.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 3124

CRIM 3414 - Criminology (3 credits)
Principles of criminology and contemporary theories of criminal behavior, focusing on the extent and distribution of crime in the United States.
Instructional Contact Hours: (3 Lec, 3 Crd)

CRIM 3434 - Systems of Justice (3 credits)
Analyzes the systems of justice in the United States, from a sociological perspective. Focuses on law enforcement, courts, and corrections. Evaluates the effectiveness of social policies related to systems of justice. Explores the structural, community, and individual level factors that influence different stages of justice systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

CRIM 3474 - Women and Crime (3 credits)
Focuses on women as victims and perpetrators of crime, with particular attention to race and class. Analyzes how social, cultural, and economic factors influence victimization and participation in crime. Includes adolescent girls involvement with crime, including juvenile gangs. Evaluates theoretical explanations of why women commit crime. Examines womens experiences with the criminal justice system.
Prerequisite(s): CRIM 3414 or SOC 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

CRIM 4224 - Victimology (3 credits)
An in-depth exploration of the multifaceted field of victimology. A scientific study of victims and the aftermath of victimization, which delves into the physical, emotional, and psychological consequences victims endure. Provides insights into the historical context of victim studies, various theoretical frameworks, and the evolving role of the criminal justice system concerning victims' rights and advocacy. Additionally, this course examines the societal consequences of victimization and explores preventive, interventionist, and compensatory mechanisms to support victims and mitigate the impact of crimes.
Prerequisite(s): CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSVP 4224

CRIM 4424 - Juvenile Delinquency (3 credits)
Examination of juvenile delinquency. Includes methods of data collection and the extent and distribution of delinquency. Detailed coverage of theories of delinquent behavior. Examines the juvenile justice system and treatment and prevention of delinquency. Utilizes current empirical research on delinquency in the U.S. and internationally.
Prerequisite(s): SOC 3414 or CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

CRIM 4454 - Topics in Criminology (3 credits)
A variable topics course in criminology. In-depth examination of topics such as capital punishment, women and criminology, racial profiling, terrorism, white collar crime, law enforcement, international gangs, political crime, the prison system, cybercrime, and rape. May be repeated 2 times with different content for a maximum of 9 credits. Junior standing.
Prerequisite(s): CRIM 3414 or SOC 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

CRIM 4474 - Cyber Criminology (3 credits)
Empirical patterns and consequences of cybercrimes. Emphasis on applying criminological theories of crime and victimization to cyberspace. Cybercrime prevention strategies and tactics. Examination of ethical issues of privacy, security, and social control. Pre: Junior standing.
Prerequisite(s): CRIM 3414 or SOC 3414
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CRIM 4484 - Hate Crimes (3 credits)
Focuses on the causes, manifestations, and consequences of hate crimes in the United States. Includes theories of prejudice and biased behavior, the context of perpetration, the individual and community-level effects on the victims, and the political, historical, and social significance of such crimes. Considers broad questions of bias compared to hate, the recognition and prosecution of hate crimes compared to non-bias crimes, the impacts of hate crimes at the individual and community levels, and responses by law enforcement and communities.
Prerequisite(s): CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSVP 4484

CRIM 4504 - Family and Crime (3 credits)
Focuses on the ways in which involvement in the criminal justice system affects families and family systems. Analyzes the antecedents and consequences of parental incarceration, including an investigation as to how social policies influence this phenomenon. Includes how offenders and their families are embedded in the criminal justice system and learn to navigate periods of incarceration and reentry—which includes family members' secondary prisonization. Examines the emotional and financial costs of incarceration and reentry on families, as families serve as informal safety nets.
Prerequisite(s): CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)

CRIM 4754 - Internship (1-3 credits)
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

CRIM 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CRIM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (PSVP)

PSVP 2044 - Peace and Violence (3 credits)
Introduces major theories of peace and violence. Explores contemporary patterns and root causes of interpersonal, institutional, and structural violence. Particular attention to conflict management, prevention, strategies, and promotion of peace at the local, national, and global levels.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSVP 2444 - Conflict Resolution, Mediation and Peacebuilding (3 credits)
Introduces fundamental principles, values and skills of conflict resolution. Special emphasis on facilitative mediation, restorative justice and other conflict resolution methodologies in the greater context of peacebuilding. Exploration of conflict resolution as tools of personal development and social justice.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSVP 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSVP 4104 - Global Society, Violence and the Prospects for Peace (3 credits)
Examines major theories in the interdisciplinary field of peace studies. Includes current, historical, and global causes, patterns and types of conflict, and methods of conflict resolution. Particular attention given to the philosophical and sociological discussions of the causes of violence and the possibilities for peace.
Prerequisite(s): PSVP 2044 or SOC 2044
Instructional Contact Hours: (3 Lec, 3 Crd)

PSVP 4224 - Victimology (3 credits)
An in-depth exploration of the multifaceted field of victimology. A scientific study of victims and the aftermath of victimization, which delves into the physical, emotional, and psychological consequences victims endure. Provides insights into the historical context of victim studies, various theoretical frameworks, and the evolving role of the criminal justice system concerning victims' rights and advocacy. Additionally, this course examines the societal consequences of victimization and explores preventive, interventionist, and compensatory mechanisms to support victims and mitigate the impact of crimes.
Prerequisite(s): CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CRIM 4224

PSVP 4444 - Schools, Violence, and Justice (3 credits)
Focuses on the nature, extent, causes, and consequences of widely recognized forms of violence within schools, such as bullying, fighting, sexual assaults, harassment, dating violence, and shootings. Examines the effectiveness of violence prevention programs. Includes sociological theories of violence within schools. Explores the social debate over balancing the collective public safety obligations of schools with individual students rights/responsibilities.
Prerequisite(s): SOC 3414 or CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 4444

PSVP 4484 - Hate Crimes (3 credits)
Focuses on the causes, manifestations, and consequences of hate crimes in the United States. Includes theories of prejudice and biased behavior, the context of perpetration, the individual and community-level effects on the victims, and the political, historical, and social significance of such crimes. Considers broad questions of bias compared to hate, the recognition and prosecution of hate crimes compared to non-bias crimes, the impacts of hate crimes at the individual and community levels, and responses by law enforcement and communities.
Prerequisite(s): CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CRIM 4484

PSVP 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSVP 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSVP 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (SOC)

SOC 1XXX3 - GEN ED REASONING SOCIAL SCI (3 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

SOC 1004 - Introductory Sociology (3 credits)
Principles and basic concepts of human interaction and social organization. Basic theories and research methods, socialization, deviance, social institutions, population dynamics, social change, and social inequality by social class, race/ethnicity, gender, and sexual orientation.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 1014 - Introduction to Social Anthropology (3 credits)
Introduction to basic concepts including culture and ritual, research methods especially ethnography, and theory in social anthropology for understanding human behavior. Provides a survey of anthropological approaches to language, economics, kinship, religion, identity, gender, race, politics, social organizations, and globalization that compares western and non-western cultures.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 1024 - First Year Experience in Sociology (1 credit)
Develop an identity as a sociologist and foster a sense of community with first year and transfer students in the department. Acquire research skills and an awareness of university resources that enhance academic success. Explore theories used and topics examined by sociologists and participate in sociological research. Identify careers and internship opportunities in sociology.
Instructional Contact Hours: (1 Lec, 1 Crd)

SOC 1084 - Food Studies (3 credits)
Interdisciplinary introductory course explores how food shapes and is shaped by culture and society. Examines how people use food to express meanings (e.g., via foodways, story, art, architecture, religion, ethical codes), how food options, practices, and inequities are shaped by social structures (e.g. cultural and legal norms regarding race, class, and gender), and how the material properties of food (e.g., chemical, ecological, technological) are linked to identities, ideological commitments, and historical moments.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 1084, PSCI 1084, RLCL 1084

SOC 2004 - Social Problems (3 credits)
Examines the nature, extent, and causes of social problems in the United States and around the globe from multiple perspectives. Emphasizes the role of social structural forces including conflicting economic, racial, ethnic, national, and gender interests in the creation and perpetuation of social problems. Discussion of poverty, work, health care, drugs, terrorism, human rights, and social change.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2014 - Sociology of Intimate Relationships (3 credits)
An introduction to concepts, theories, methods, and major research findings in the sociology of intimate relationships. A description and analysis of research findings on the development, operation, and dissolution of intimate relationships, including how sociocultural and economic changes have shaped intimate relationships over time. Emphasis on the United States, including issues of diversity and inequalities in intimate relationships.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2024 - Sociology of Race and Ethnicity (3 credits)
Social construction of race and ethnicity. Relations among ethnic and racial groups. Immigration and patterns of racial and ethnic integration. Social structures and processes that perpetuate racial and ethnic stratification. Consideration of economic, social, political, and health challenges facing racial/ethnic minority groups in U.S. society. Core Curriculum approved for CLE Area 2 only when taken only in combination with AFST 1714.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2034 - Diversity and Community Engagement (3 credits)
Examination of patterns, meanings, and challenges of diversity and inclusion to improve social interactions and community engagement within a global society. Focus on diverse identities, social justice, power, and privilege, applying social science theories and concepts, to facilitate intercultural awareness. Community engagement projects employ research methods to connect course materials and service to community.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2054 - Ethnography: Studying Culture (3 credits)
Introduction to the methodological tools used by anthropologists and other social scientists to study culture. Engagement with the development of, and debates about, ethnographic methods, as well as their application to case studies. Focus on sample ethnographic accounts of peoples throughout the world, as well as research techniques applicable to many different cultural environments.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2054

SOC 2104 - Quantitative Approaches to Community Research (3 credits)
Computational methods and ethical issues in the collection, transformation, consumption, and use of quantitative data in the design and evaluation of community programs. Consideration of effective data visualization and communication of findings. Emphasis on evaluating the reliability and accuracy of data used to frame decisions about community-related policies and service-oriented programs.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HD 2104

SOC 2264 - Race, Class, Gender, and Sexualities (3 credits)
Focuses on how race, class, gender, and sexualities form interlocking systems of privilege and oppression at individual and institutional levels. Emphasizes race, class, gender, and sexualities as changing social constructions and interactive systems that shape social institutions and organizations, meanings, and identities.
Prerequisite(s): WGS 1824
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2264, WGS 2264

SOC 2304 - Individual In Society (3 credits)
Foundation in social psychological principles of sociology including the development of the self through social interaction and intergroup processes. Factors affecting self-perceptions, ways of thinking, attitudes, emotions, behavior, and psychological well-being in social contexts.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2404 - Deviant Behavior (3 credits)
Examines behaviors considered deviant in the United States. Explores major types of deviant behavior, such as corporate crimes, extremist groups, sexual deviance, violence, suicide, alcoholism and other drug addictions, and cyber deviance. Includes sociological theories that explain them.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2454 - Race and Racism (3 credits)
Examines theories of race and racism specifically as they relate to African Americans. We will explain conservative, neo-conservative, liberal, and progressive ideologies concerning race in past and recent United States contexts and how such theories emerged and continue to emerge in recent times. Though the majority of the course focuses on race and racism within the U.S comparative analyses will be made with Brazil and South Africa.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AFST 2454

SOC 2514 - Asian American Experience (3 credits)
Interdisciplinary overview of the diverse Asian American experience, incorporating non-Eurocentric perspectives on the Asian immigrant experience and dialogue between Asian American and non-Asian American students. Examination of different historical tracks of various Asian ethnicities, experience of racism, discrimination, cultural adaptation and conflict, and economic survival and success. Gender, age, religious affiliation, family values and inter-generational differences among Asian Americans. The complexity of minority status and the stereotype of "model minority." Activism, political participation, leadership and the meaning of citizenship among Asian Americans. Representations of Asian Americans in the arts and media.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 2514

SOC 2604 - Introduction to Data in Social Context (3 credits)
Examines the use of data to identify, reveal, explain, and interpret patterns of human behavior, identity, ethics, diversity, and interactions. Explores the historical trajectories of data to ask how societies have increasingly identified numerical measures as meaningful categories of knowledge, as well as the persistent challenges to assumptions about the universality of categories reducible to numerical measures.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 5F Quant & Comp Thnk Found., 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HIST 2604, STS 2604

SOC 2744 - Black Food in the US: Race, Racism, and Food Studies (3 credits)
A survey of the relationship between Black people in the United States with respect to food, culture, and society. Specifically covers Black food narratives, practices, space, place, as well as issues of inequality and exploitation within society.
Pathway Concept Area(s): 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 3004 - Social Inequality (3 credits)
Class, status, and power in society. Theories and empirical research findings on vertical and horizontal stratification in society. Class differences in behavior, values, and avenues and extent of social mobility. Cross cultural comparisons.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3014 - Gender Relations (3 credits)
Focus on the social construction of gender relations. Examines how gender relations vary cross-culturally, historically, and for different categories of men and women. Explores the causes and consequences of inequality and privilege. Attention paid to the ways race, ethnicity, class, age, and sexualities shape and are shaped by gender and the relationship of gender to social institutions.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3104 - Sociological Theory (3 credits)
Focus on the development and contemporary state of sociological theory. Primary concern is with those theorists who have had significant impact on our thinking about the relationships among man, society, and nature.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3144 - Language and Ethnicity in the United States (3 credits)
Exploration of how racial and ethnic identity are expressed through the use of different languages and dialects. Examination of how language is related to issues of equality, social opportunity, and discrimination in the United States.
Prerequisite(s): ENGL 1106 or ENGL 1204H or COMM 1016
Pathway Concept Area(s): 1A Discourse Advanced, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 3144, RLCL 3144

SOC 3204 - Social Research Methods (4 credits)
Techniques of data collection and analysis employed in the social sciences with emphasis on survey research methods including questionnaire construction, sampling, and analysis of both self-collected and national data; logic behind application of these techniques.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (4 Lec, 4 Crd)

SOC 3314 - Social Movements (3 credits)
The study of collective attempts to address social injustices and implement other social change in and across societies. Explores sociological and interdisciplinary conceptions of social movements and their relationships to society. Social movement emergence, development, engagement with opponents and authorities, and impact, as shaped by opportunity structures, mobilizing structures and processes, framing, collective identity, strategy and tactics, and other factors. How social movements oppose or promote inequality, oppression, or violence in the U.S. or elsewhere, at the local, national, and transnational level. Application of political process and other current social movement theories.
Prerequisite(s): SOC 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3404 - Environmental Justice (3 credits)
Causes and consequences of environmental and climate injustices; interactions between social inequalities (race, gender, class, position in world-system) and environmental pollution, food and land injustice, climate injustice, and environmental health; environmental racism in environmental policies and practices; political-economic barriers to achieving environmental justice; evaluation of environmental justice reforms and sustainability initiatives; possibilities for system change; social movement strategies for achieving environmental and climate justice; case studies in environmental justice and injustice.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AHRM 3464, APS 3464, GEOG 3464, HD 3464, HUM 3464, UAP 3464

SOC 3504 - Population Trends and Issues (3 credits)
Contemporary American and global population trends in historical and comparative perspective. Discussion of the impact of population change on individual and society. Relevant public policy questions examined.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3614 - Gender and Work in the U.S. (3 credits)
Examination of the role that gender plays in shaping the experience of work, focusing especially on the persistence of occupational segregation by sex, its causes and implications. Also, the interaction of work and family life, including the allocation of household work and control of resources. Social policies affecting gender relations in work organizations will be analyzed.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3714 - Sociology of Aging (3 credits)
Emergence of old age as a social problem. Social aspects of aging in America, including the minority experience and with some cross-cultural comparisons. Social and demographic characteristics of the aged, location of aged in the social structure, and current and future social problems of old age.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3854 - Globalization: Sociological Perspectives (3 credits)
Distinguishes global from international. Examines social globalization and cultural globalization and what forms they take. Explores changes in the role of nation-states and the implications of global changes in the division of labor for economic, gender, and racial/ethnic inequalities. Discusses how globalization is linked with peace, violence, and human rights. Considers alternative and more equitable forms of globalizations and how social movements might lead to such alternatives.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 3884 - Culture and Society in Contemporary Europe (3 credits)
The impact of religion and culture in contemporary European politics and societies. Nationalism versus European cosmopolitanism. Religion, religious radicalism and religious tolerance in Europe. Culture and society in European urban and rural areas. Attitudes towards women and LGBTQ in Europe. Social foundations and cultural determinants of marginalization of social groups, migrants and refugees.
Prerequisite(s): IS 1104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3884, RLCL 3884

SOC 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4014 - Sociology of the Family (3 credits)
The family as a basic social institution: similarities and variations in family systems, their interrelationships with other social institutions, and patterns of continuity and change. Taught alternate years.
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4024 - Sociology of Religion (3 credits)
Religion as a social structure as well as an institution; with special attention to the functions of religion for individuals, groups and societies, social organization; and the interplay between religion and other social institutions including economics and polity. Taught alternate years.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: RLCL 4024

SOC 4034 - Sociology of Education (3 credits)
Analysis of the structure, functions, and consequences of schooling in America, the social processes affecting academic achievement, and the implications of current knowledge for educational reform. Taught alternate years.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4044 - Military Sociology (3 credits)
The military institution and its relationship to society. Emphasis on the role of the military and its social organization; recruitment, socialization, career, combat, deviant behavior, changes in the military, and future trends. Taught alternate years. Junior standing.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4054 - Appalachian Languages and Cultures (3 credits)
An empirical examination of how Appalachian speech both reflects and constitutes regional cultures. Emphasis is on applying sociological and anthropological methods and theories to the study of language in use.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 4034

SOC 4094 - Appalachian Community Research (3 credits)
Undergraduate participatory community research as applied to issues of cultural heritage, sustainability, and identity. Students engage in projects defined by community groups and organizations as being critical to their well-being, continuity, or growth. Emphasis is on developing concepts of civic professionalism and developmental democracy.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 4094, PHS 4094

SOC 4114 - The Sociology of Popular Music (3 credits)
Examine the social context(s) of popular music, including the social, economic, and political factors that influence the development of different popular music forms; authenticity within popular music genres; popular musics impact on social activity and identity; the institutions that connect popular music producers with consumers.
Prerequisite(s): SOC 1004 and SOC 1014 or AFST 1714
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4124 - Topics in Culture (3 credits)
Uses sociological, anthropological, as well as artistic and humanist paradigms to analyze culture. Discusses 20th and 21st century cultural trends. Analyzes the implications of social context for cultural artifacts such as art. Topics are variable. Example topics include the cultural construction of race and the cultural of the nineteen sixties. Course may be repeated with different course content for up to 6 credits. Pre: Junior or Senior standing.
Prerequisite(s): SOC 1004 or SOC 1014 or AFST 1714 or AINS 1104 or RLCL 1004 or RLCL 2004 or WGS 1824
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: HUM 4124

SOC 4194 - Senior Seminar (3 credits)
Required seminar for majors. Integration and application of prior coursework, including reviews of theory and research methods. Application of sociological knowledge toward an actual needs assessment in a work setting, completion of a social policy analysis, and a written critique of a sociological publication. Course serves as a bridge to graduate study, prepares students for application of sociological knowledge, and provides overall career guidance. Senior standing and sociology majors only.
Prerequisite(s): SOC 3104 and SOC 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4204 - Applied Research (3 credits)
Stresses differences between applied research and other methodologies. Examines the topics, purposes, problems, theories, and methods appropriate for applied research. Explores ethical and political issues prevalent in applied settings. Includes qualitative, quantitative, and mixed methodologies. Emphasis on survey construction and administration, experimental designs, evaluation research, and participatory action research as used by applied researchers. Includes data analysis and issues of presenting applied research to lay audiences.
Prerequisite(s): SOC 3204 and STAT 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4294 - Capstone: Diversity Engagement (3 credits)
In-depth examination of core themes of diversity. Explains patterns and relational/intersectional aspects of diversity, including the history and legacies of inclusion and exclusion, from a variety of perspectives. Synthesizes diverse writings on issues of social justice and community, power and privilege. Uses social science theories and concepts of diversity to examine contemporary issues of diversity and to facilitate and interpret community engagement projects based in students major fields of study. Focuses on collective responsibility to eliminate bias and discrimination through students community-based project outcomes. This course is restricted to students who have enrolled in the Diversity and Community Engagement Minor.
Prerequisite(s): SOC 2034
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4304 - Research Methods Topics (3 credits)
Variable topics course that focuses on different research methodologies. Includes topics such as feminist research, qualitative methodologies, survey design, evaluation research, and anthropological methods. Can be taken multiple times if different topic.
Prerequisite(s): SOC 3204
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 99 credit hours

SOC 4324 - Medical Experiences and Biomedical Theories (3 credits)
Builds the analytical tools of STS and humanistic deconstruction. Challenges students to read, write, and interrogate academic literatures and real-life, immediate problems and artifacts in ethical, sociocultural, historical, and context informed ways. Builds this competence while examining materials related to current topics in health, such as but not limited to: population, development, reproductive technologies, pollution, climate change, environmental health beyond humans, and, colonialism. Employs multiple humanistic lenses including: biopolitics & biopower, intersectionality, structural and institutional analysis, syndemics, anticolonialism, violence, and disability to examine these materials.
Prerequisite(s): STS 2154 or STS 3314 or SOC 3104
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STS 4324

SOC 4404 - Sociology of Law (3 credits)
The functions of law as a form of social control. The social forces in the creation, enforcement, and change of the law. The nature of law as a force in social change. Taught alternate years.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4414 - Drugs and Society (3 credits)
Examines the use of drugs, including legal and illegal drugs, from a sociological perspective. Cross-cultural and historical patterns of use are discussed and explained. Particular attention is given to drug use within the context of various social institutions. Junior standing.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4444 - Schools, Violence, and Justice (3 credits)
Focuses on the nature, extent, causes, and consequences of widely recognized forms of violence within schools, such as bullying, fighting, sexual assaults, harassment, dating violence, and shootings. Examines the effectiveness of violence prevention programs. Includes sociological theories of violence within schools. Explores the social debate over balancing the collective public safety obligations of schools with individual students rights/responsibilities.
Prerequisite(s): SOC 3414 or CRIM 3414
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PSVP 4444

SOC 4454 - Topics in Sociology (3 credits)
A variable topics course in sociology. In-depth examination of topics such as environmental sociology, the sociology of sport and competition, social networks, and sociology of the body. May be repeated 2 times with different content for a maximum of 9 credits. Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

SOC 4704 - Medical Sociology (3 credits)
Social and cultural response to illness and infirmity. Emphasis on the sick role, patient role, practitioner role, organization and politics of health care delivery, stratification, professionalism, and socialization of health practitioners. Taught alternate years. Junior Standing.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4714 - Sociology of Mental Illness (3 credits)
Mental illness and social systems, historically and in contemporary society. Distribution of mental illness with special reference to stratification, role, and deviance theories. Mental health occupations and organization of treatment. Implications for social policy. Taught alternate years. Junior standing.
Prerequisite(s): SOC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

SOC 4754 - Internship (1-3 credits)
Placement and sociologically relevant work in one of a variety of human service settings, combined with relevant readings, discussion and written work coordinated jointly by a faculty member and the setting supervisor. Placement settings include human resource agencies, corrections facilities, extension offices, and law agencies. Sociology major or minor required. Junior or Senior standing required. Consent of internship coordinator required. Coursework relevant to placement setting.
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

SOC 4764 - International Development Policy and Planning (3 credits)
Examination of major development theories and contemporary issues and characteristics of low-income societies (industrialization, urbanization, migration, rural poverty, hunger, foreign trade, and debt) that establish contexts for development planning and policy-making. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 4764, UAP 4764

SOC 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

SOC 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Criminology Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements [1]		
Sociology		
Take in the order listed		
SOC 1004	Introductory Sociology	3

SOC/HD 2104	Quantitative Approaches to Community Research	3
or STAT 3604	Statistics for Social Science	
SOC 3104	Sociological Theory [2]	3
SOC 3204	Social Research Methods	4
SOC 3004	Social Inequality	3
SOC 4194	Senior Seminar	3
Africana Studies, American Indian Studies and Women's and Gender Studies Elective Courses		
Select one of the following:		3
AFST 1714	Introduction to African American Studies	
AINS 1104	Introduction to American Indian Studies	
WGS 1824	Introduction to Womens and Gender Studies	
Subtotal		22
Major Requirements		
Take in order listed		
SOC 2404	Deviant Behavior	3
CRIM 3414	Criminology	3
CRIM 3434	Systems of Justice	3
Subtotal		9
Elective Courses		
Select 12 credits of the following: [3]		12
CRIM/HIST 2504	Crime and Punishment in American History	
CRIM/HIST 3124	Murder in American History	
CRIM 3474	Women and Crime	
CRIM 4424	Juvenile Delinquency	
CRIM 4454	Topics in Criminology [4]	
CRIM 4474	Cyber Criminology	
CRIM 4484	Hate Crimes	
CRIM 4504	Family and Crime	
CRIM 4754	Internship	
CRIM 4974	Independent Study (in a related area with approval of the department chair)	
CRIM 4994	Undergraduate Research (in a related area with approval of the department chair)	
PSVP 2044	Peace and Violence	
PSVP 2444	Conflict Resolution, Mediation and Peacebuilding	
PSVP 4444	Schools, Violence, and Justice	
SOC 4404	Sociology of Law	
SOC 4414	Drugs and Society	
Subtotal		12
Free Electives		
Select 32 credits		32
Subtotal		32
Pathways to General Education		
All students must fulfill the requirements of the Pathways for General Education Curriculum. Check the Undergraduate Course Catalog & Academic Policies for prerequisites		
Pathways Concept 1 - Discourse		
Select three credits in Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A)		3
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six hours in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six hours in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
Select six hours in Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04)		6
Pathways Concept 5 - Quantitative and Computational Thinking		
Select three hours in Pathway 5a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05A)		3
Select six hours in Pathway 5f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05F)		6
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three hours in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
Select three hours in Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three hours in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		45
Total Credits		**120**

1. In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g., Pathways to General Education Curriculum).
2. It is recommended to take two of the following courses prior to registering for SOC 3104: SOC 2004 Social Problems, SOC 2014 Sociology of Intimate Relationships, SOC 2024 Sociology of Race and Ethnicity, SOC 2034 Diversity and Community Engagement, SOC 2304 Individual In Society, and/or SOC 2404 Deviant Behavior.
3. A maximum of 3 credits from CRIM 4754, CRIM 4974, and CRIM 4994 can be used to fulfill the requirements of the major.
4. CRIM 4454 Topics in Criminology may be taken up to three times; topics must be different.

Requirements for Satisfactory Progress: Students must have completed SOC 1004 Introductory Sociology, SOC 3104 Sociological Theory, SOC 3204 Social Research Methods, and an additional 6 credits of required or elective courses for the criminology major prior to attempting 72 credits (including transfer, advanced placement, advanced standing, and credit by examination).

Upon having attempted 60 credits, students must have an in-major GPA of 2.0 and an in-major GPA of 2.0 thereafter to be considered as making satisfactory progress toward the degree.

If satisfactory progress is not made, procedures will be followed as required by the Academic Eligibility Policy.

Graduation Requirements

Number of Credits for a Bachelor of Science Degree: 120 credits.

77 credits must be completed beyond what is required for a major in criminology.

Number of Credits for a Criminology Major: 43 credits.
The 43 credits consist of 22 credits of sociology core degree courses and 21 credits of additional courses for a criminology major.

Number of Credits of Free Electives: 32 credits.

Number of Credits for the Pathways General Education Curriculum: 45 credits.
All students with a criminology major are required to complete the Pathways General Education Curriculum.

Double Majors in the Department of Sociology: The Department of Sociology offers a major in sociology, with and without options, and a major in criminology. Students are permitted to obtain both majors. Courses in the sociology core degree can meet the requirements of both majors, but none of the other required or elective courses taken for either major can count toward the other.

Minimum GPA: A minimum 2.0 in-major GPA and 2.0 overall GPA.
All courses with a SOC prefix, CRIM prefix, or cross-listed with SOC and/or CRIM are included in the calculation of the in-major GPA.

Grade Requirement: Courses taken as part of the sociology core degree and criminology major must be taken for a letter grade of A-F.

Prerequisites: Check the Undergraduate Course Catalog & Academic Policies for prerequisites.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduates. Please consult the Undergraduate Catalog for details.

Sociology Major

Requirements for Satisfactory Progress: Students must have completed SOC 1004 Introductory Sociology, SOC 3104 Sociological Theory, SOC 3204 Social Research Methods, and an additional 9 credits of sociology courses prior to attempting 72 credits (including transfer, advanced placement, advanced standing, and credit by examination).

Upon having attempted 60 credits, students must have an in-major GPA of 2.0 and an in-major GPA of 2.0 thereafter to be considered as making satisfactory progress toward the degree.

If satisfactory progress is not made, procedures will be followed as required by the Academic Eligibility Policy.

Graduation Requirements

Number of Credits for a Bachelor of Science Degree: 120 credits.
77 credits must be completed beyond what is required for a major in sociology.

Number of Credits for a Sociology Major: 43 credits.
The 43 credits consist of 22 credits of sociology core degree courses.

Number of Credits of Free Electives: 36 credits.

Number of Credits for the Pathways to General Education Curriculum: 45 credits.

Double Majors in the Department of Sociology: The Department of Sociology offers a major in sociology, with and without options, and a major in criminology. Students are permitted to obtain both majors. Courses in the sociology core degree can meet the requirements of both majors, but none of the other required or elective courses taken for either major can count toward the other.

Minimum GPA: A minimum 2.0 in-major GPA and 2.0 overall GPA.
All courses with a SOC prefix or cross-listed with SOC are included in the calculation of the in-major GPA.

Grade Requirement: Courses taken as part of the sociology major must be taken for a letter grade of A-F.

Prerequisites: Check the Undergraduate Course Catalog & Academic Policies for prerequisites.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduates. Please consult the Undergraduate Catalog for details.

1. In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g., Pathways to General Education Curriculum).
2. It is recommended to take two of the following courses prior to registering for SOC 3104 Sociological Theory: SOC 2004 Social Problems, SOC 2014 Sociology of Intimate Relationships, SOC 2024 Sociology of Race and Ethnicity, SOC 2034 Diversity and Community Engagement, SOC 2304 Individual In Society, and/or SOC 2404 Deviant Behavior.
3. A maximum of 3 credits from SOC 2754 , SOC 2964 Field Study, and SOC 2974 Independent Study can be used to fulfill the requirements of the major.
4. A maximum of 3 credits from SOC 4754 Internship, SOC 4964 Field Study, and SOC 4974 Independent Study can be used to fulfill the requirements of the major.
5. A course cross-listed with sociology used to fulfill the 3 credit 2000-4000 level AFST, AINS, or WGS course elective cannot also be used to fulfill other requirements of the major.
6. All pathways courses must be at least 3 credit hours per course. All students must fulfill the requirements of the Pathways to General Education Curriculum.

Natural Resources and Environment

Our Website (http://www.cnre.vt.edu)

Overview

The College of Natural Resources and Environment (https://cnre.vt.edu/), through offerings in the Departments of Fish and Wildlife Conservation, Forest Resources and Environmental Conservation, Geography, and Sustainable Biomaterials, provides an integrated education in renewable natural resource management, conservation, and utilization, as well as a valuable perspective for understanding and solving critical contemporary environmental problems at local, regional, and global scales.

All undergraduate programs of the College of Natural Resources and Environment are designed to provide a professional education that starts with core courses emphasizing physical, biological, and social sciences, along with concepts of renewable natural resource management and sustainability. More advanced courses teach the principles and practices of individual disciplines, along with advanced skills in communications, data analysis and interpretation, and computer modeling. Students prepare for professional careers with public agencies responsible for predicting the weather and managing forest, water, wildlife, fish, and recreation resources; with private firms concerned with producing, manufacturing, and marketing packaging and wood products; with planning agencies and private firms utilizing skills in environmental and land-use analysis and geospatial techniques; or for graduate studies.

Students may develop additional depth of knowledge and specialized skills through completion of options within a major and completion of a minor. Majors offered within the college and options for further specialization are provided below:

Department of Fish and Wildlife Conservation

- Fish Conservation with options:
  - Freshwater Fisheries Conservation
  - Human Dimensions
  - Marine Fisheries Conservation
- Wildlife Conservation with options:
  - No option
  - Human Dimensions

Department of Forest Resources and Environmental Conservation

- Environmental Conservation and Society
- Environmental Data Science
- Environmental Resources Management

- Forestry
- Water: Resources, Policy, and Management

Department of Geography

- Geography
- Meteorology

Department of Sustainable Biomaterials

- Packaging Systems and Design
- Sustainable Biomaterials

The college offers minors (https://cnre.vt.edu/academics/degrees-majors/minors.html) in Forestry, Geographic Information Science, Geography, Meteorology, Natural Resource Recreation, Packaging Systems and Design, Sustainable Biomaterials, Urban and Community Forestry, Watershed Management, and Wildland Fire Ecology. The college offers Pathways minors in Biodiversity Conservation, Blue Planet, Climate and Society, Ecological Cities, and Pathways to Sustainability. Contact the respective departments for more information on minors.

Accreditation

The educational programs in Forestry qualify graduates as professional foresters and are accredited by the Society of American Foresters, the recognized accrediting body. Graduates in Fish and Wildlife Conservation meet certification requirements of the American Fisheries Society and The Wildlife Society, respectively. The Sustainable Biomaterials major is accredited by the Society of Wood Science and Technology, the recognized accrediting body. The degree in Meteorology was developed from guidelines recommended by the American Meteorological Society and the National Weather Service; the degree meets requirements of the federal civil service (GS-1340) for a meteorologist.

Honors College

The University Honors Program is available to students in the College of Natural Resources and Environment. The program provides enriched opportunities for highly qualified and motivated undergraduate students.

Cooperative Education

The college encourages students to become involved in the undergraduate Cooperative Education Program, in which students alternate on-campus academic terms with off-campus employment in their areas of interest.

Study Abroad and Exchange Programs

The College of Natural Resources and Environment offers numerous opportunities to study abroad and earn credits toward degree completion in locations such as Antarctica, Australia, Botswana, Galápagos Islands, Ireland, New Zealand, Panama, and other locations throughout the world. The college participates in reciprocal exchange programs with the University of Canterbury in Christchurch, New Zealand. Where appropriate, students can also participate in the International Student Exchange Program.

Graduate Programs

The college offers educational programs leading to the M.S., M.F., M.N.R, and Ph.D. Complete information on these programs is in the Graduate Catalog.

- Environmental Conservation & Society Major (p. 1186)
- Environmental Data Science Major (p. 1189)
- Environmental Resources Management Major (p. 1191)
- Fish Conservation Major with Freshwater Fisheries Conservation Option (p. 1170)
- Fish Conservation Major with Human Dimensions Option (p. 1172)
- Fish Conservation Major with Marine Fisheries Conservation Option (p. 1174)
- Forestry Major (p. 1193)
- Geography Major (p. 1206)
- Meteorology Major (p. 1208)
- Packaging Systems and Design Major (p. 1215)
- Sustainable Biomaterials Major (p. 1216)
- Water: Resources, Policy, and Management Major (p. 1195)
- Wildlife Conservation Major (p. 1175)
- Wildlife Conservation Major with Human Dimensions Option (p. 1177)

Dean: Paul M. Winistorfer
Associate Dean: Keith W. Goyne
Associate Dean for Extension, Outreach, and Engagement: Brian Bond
Assistant Dean of Advancement: Andrew Ickes
Assistant Dean of Business, Finance, and Administration: Candice Albert
Director of Academic Advising: Stephanie Hart
Director of Inclusion and Diversity: Maryam Kamran
Director of Employer Relations: John Freeborn
Director of Recruitment: John Gray Williams

Fish and Wildlife Conservation

Our Website (http://www.fishwild.vt.edu)

Fish Conservation

The Fish Conservation program is for students interested in research and management of aquatic animals and ecosystems, including wild fish and shellfish, endangered species, and hatchery-raised fish. Most graduates work for state or federal fisheries agencies, environmental consulting firms, or public utilities. Because the more challenging and rewarding jobs require a master's degree, the program emphasizes preparation for graduate study.

Wildlife Conservation

The Wildlife Conservation program is for students interested in research and management of terrestrial animals and ecosystems, including game birds and mammals, non-game animals, and endangered species. Most graduates work for state or federal wildlife agencies, environmental consulting firms, or private land management companies. Because the more challenging and rewarding jobs require a master's degree, the program emphasizes preparation for graduate study.

- Fish Conservation Major with Freshwater Fisheries Conservation Option (p. 1170)
- Fish Conservation Major with Human Dimensions Option (p. 1172)
- Fish Conservation Major with Marine Fisheries Conservation Option (p. 1174)
- Wildlife Conservation Major (p. 1175)

- Wildlife Conservation Major with Human Dimensions Option (p. 1177)

Head: Joel W. Snodgrass
Professors: P. L. Angermeier, K. A. Alexander, C. A. Dolloff, J. D. Fraser, E. A. Frimpong, C. A. Haas, E. M. Hallerman, W. A. Hopkins, Y. Jiao, S. M. Karpanty, M. J. Kelly, D. J. Orth, and D. F. Stauffer
Associate Professors: L. J. Castello, J. M. Ford, J. W. Jones, and J. A. Parkhurst
Assistant Professors: M. Cherry, A. Dayer, L. Escobar, Francesco Ferretti, and Holly Kindsvater
Adjunct Professors: B. Czech, P. Grobler, M. Joos Vandewalle, D. Hawley, T. J. Newcomb, E. Smith, H. Schwarz, J. Walters, and Y. Palti
Career Advisors: *Fish Conservation Undergraduate* - E. M. Murphy (231-6959), *Wildlife Conservation Undergraduate* - C. A. Haas (231-9269)

Undergraduate Course Descriptions (FIW)

FIW 2114 - Principles of Fish and Wildlife Conservation (3 credits)
Basic principles, key people, agencies and laws guiding the science-based conservation and management of fish and terrestrial animals. Conservation and management of organisms, habitats, and human users examined in terms of biological, physical, ecological, ethical and sociological theories and practices. Local to global illustration from both recreational and commercial resources.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 2234 - Fish, Fishing, and Conservation (3 credits)
Sensory perception, behavior, and consciousness in fish. Principles, as related to fish and why they matter, fish conservation ethics, food security, recreational fishing, and responsible fishing practices. Ethical reasoning applied to the contemporary issues of conservation and use of fish, such as subsistence fishing, fish farming, marine protected areas, highly migratory fishes, sharks tourism, and ornamental fishes.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 2314 - Wildlife Biology (3 credits)
Summary of biological characteristics of wild birds and mammals, especially relating to management by humans. Physiological, functional, structural, and behavioral adaptations of individuals to their environments and foods.
Prerequisite(s): (BIOL 1105 or BIOL 1205H) and (BIOL 1106 or BIOL 1206H)
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 2324 - Wildlife Field Biology (3 credits)
Systematics, identification, and natural history of common native vertebrates and plants. Exposure to habitats/ecosystems of western Virginia. Observation, collection, and reporting of field data. Self-scheduled field and media lab activities required.
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

FIW 2334 - Urbanization and Biodiversity Conservation (3 credits)
Overview of challenges and opportunities that urban environments create for biodiversity conservation and human wellbeing, with a focus on social sciences theories and approaches. How urbanization is changing people's relationship with their environment and what that means for biodiversity conservation and human wellbeing. Examination of how data collection, analysis, and interpretation occur using social sciences methods applied to biodiversity conservation. Diversity, Equity, and Inclusion in the context of urbanization and conservation.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 2334

FIW 2514 - Fish and Wildlife Conservation Policy (3 credits)
Foundations of U.S. and Virginia fish and wildlife conservation policy (FWC), including international agreements. Ethical, religious, and legal foundations of FWC policy. Roles of values and beliefs in conservation behavior. Constitutional basis for FWC policy in the U.S. How FWC policies are made, implemented, and revised through state and federal agencies. Major conservation policy strategies, particularly the value of stakeholder collaboration for successful policy development, passage, and implementation. Conduct independent and group social science research to identify and present compelling policy solutions for an FWC problem.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 3514 - Fisheries Techniques (3 credits)
Application of field and laboratory methods in fisheries management and research. Experience with fisheries equipment and techniques.
Prerequisite(s): FIW 2114 and STAT 3615
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

FIW 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 3954C - Study Abroad (1-19 credits)
Pathway Concept Area(s): 3 Reasoning in Social Sciences
Instructional Contact Hours: Variable credit course

FIW 3954D - Study Abroad (1-19 credits)
Pathway Concept Area(s): 4 Reasoning in Natural Sci.
Instructional Contact Hours: Variable credit course

FIW 3964 - Internship Through Directed Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course
Repeatability: up to 12 credit hours

FIW 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 4114 - Biodiversity Conservation (3 credits)
Advanced concepts and practices related to the conservation and enhancement of biological diversity. Understanding and analysis of causes of biological scarcity. Designing actions to mitigate biodiversity loss. Integration of legal, economic, social, and biological principles to develop solutions to conservation of organisms, populations and ecosystems. Cannot be taken for credit by Wildlife Conservation (WLC) majors.
Prerequisite(s): FIW 2114
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4214 - Wildlife Field Techniques (3 credits)
Field research methods for wild vertebrates in terrestrial environments. Application of research methodology including animal capture and marking, determination of sex, age, and condition, radio telemetry and map/compass/GPS orienteering, non-invasive methods of capture, habitat selection, and supervised group research projects. COURSE FEE $299.
Prerequisite(s): FIW 4414 and STAT 3615
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FIW 4244 - Applied Epidemiology of Fish and Wildlife Diseases (3 credits)
Theory and data analyses from veterinary epidemiology applied to fish and wildlife management. Biological sampling methods and data collection in fish and wildlife for epidemiological surveillance in free-ranging populations. Fish and wildlife epidemiology concepts, methods and applications for private, non-profit, academic, state, and federal agencies. Ethically measure, characterize, and forecast epidemics in fish and wildlife.
Prerequisite(s): (BIOL 2704 or BIOL 2704H) and STAT 3615
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4314 - Conservation of Biological Diversity (4 credits)
Principles and practices of conserving biological diversity. Causes, consequences and rates of extinction. Application of philosophical, biological, sociological and legal principles to the conservation of genes, plant and animal species and ecosystems.
Prerequisite(s): FIW 4414 and FIW 4434
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

FIW 4324 - Genetics of Natural and Mangaged Populations (3 credits)
Introductory genetics with an emphasis on evolutionary processes relevant to natural and managed populations of both plant and animal species. Traditional and modern genetics, including quantitative and population genetics, molecular evolution, genomics, and biotechnology.
Prerequisite(s): BIOL 1105 and BIOL 1106 and (STAT 3005 or STAT 3615 or FREC 3214)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 4324

FIW 4334 - Mammalogy (4 credits)
Biology of mammals, including evolution, systematics, anatomy, physiology, ecology, and conservation challenges. Laboratory focus on identification, morphology, and zoogeography.
Prerequisite(s): BIOL 2704 or BIOL 2704H
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

FIW 4344 - Herpetology (4 credits)
Biology of amphibians and reptiles, including evolution, systematics, anatomy, physiology, ecology, and conservation challenges. Laboratory focus on identification, morphology, and zoogeography.
Prerequisite(s): BIOL 2704 or BIOL 2704H
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

FIW 4414 - Population Dynamics and Estimation (3 credits)
Population growth, structure, and regulation of fish and wildlife populations including harvested populations, non-harvested populations, and small or declining populations. Methods of estimating demographic parameters such as population size, survival, and recruitment. Population viability analysis and genetic considerations in population dynamics.
Prerequisite(s): FIW 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4424 - Ichthyology (4 credits)
Morphology and physiology, systematics, zoogeography, and identification of fishes.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

FIW 4434 - Wildlife Habitat Ecology and Management (3 credits)
Relationship of wildlife species to their habitats. Factors influencing distribution and abundance of wildlife populations. Vegetation succession and structure, habitat classification, modeling wildlife habitat relationships and management of habitats in forests, agricultural lands, rangelands, riparian/wetland and urban areas.
Prerequisite(s): FIW 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4454 - Human-Wildlife Conflicts (3 credits)
Current and emerging human-wildlife interactions that lead to conflict; application of knowledge of animal behavior and life history, population dynamics, human dimensions, and ecosystem functions to analyze conflicts and formulate effective resolution; legal statutes and regulatory constraints on resolution; reliance on case studies of existing conflict situations to gain applied experience in diagnosing and solving human-wildlife conflicts using Vertebrate Integrated Pest Management protocols. Pre: Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4464 - Human Dimensions of Fisheries and Wildlife (3 credits)
Values, attitudes, and opinions of people toward fish and wildlife. Social, economic, legal, and political aspects of fisheries and wildlife management. Roles of professionals and the public in fish and wildlife policy processes. Contemporary fish and wildlife policy issues. Senior standing required.
Prerequisite(s): FIW 2114
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4474 - Wildlife Habitat Evaluation (1 credit)
Methods to evaluate habitat quality for selected wildlife species. Determining habitat characteristics important to a selected species. Developing a habitat assessment approach to estimate habitat quality. Measuring and quantifying habitat characteristics. Assessing effects of management actions and habitat alterations on a selected wildlife species. Applying habitat assessment models to guide management and mitigation decisions. Techniques for oral and written presentations. Restricted to Wildlife Conservation Majors.
Corequisite(s): FIW 4434
Instructional Contact Hours: (3 Lab, 1 Crd)

FIW 4484 - Freshwater Biomonitoring (4 credits)
Concepts and practices of using macroinvertebrates and fish to monitor the environmental health of freshwater ecosystems. Effects of different types of pollution and environmental stress on assemblages of organisms and underlying ecological principles. Role of biological studies in environmental regulation. Study design, field and laboratory methods, data analysis and interpretation, verbal and written presentation of results.
Prerequisite(s): (BIOL 2804) and (BIOL 4354 or BIOL 4004 or ENT 4354 or FIW 4424 or FIW 4614)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: BIOL 4484, ENT 4484

FIW 4534 - Ecology and Management of Wetland Systems (3 credits)
Introduction to the variety of wetland systems found in North America, though emphasis will focus on eastern and mid-Atlantic wetland systems. Origin and processes of formation of wetlands, functions and values of wetlands, wetland delineation, wetland classification, regulatory processes affecting wetlands. Objectives of and management techniques used to protect and/or manipulate wetland systems for wildlife and other human needs. Enrollment restricted to junior, seniors and graduate students.
Prerequisite(s): BIOL 3204
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FIW 4614 - Fish Ecology (3 credits)
Interactions of fish with the physical and biological environment. Adaptations of organisms, populations, and communities. Impacts of human activities on major aquatic ecosystems and important fishes. Ecological principles for management of important sport, commercial, and prey fishes.
Prerequisite(s): BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4624 - Marine Ecology (3 credits)
Marine organism, biological, ecological, chemical and physical processes of marine ecosystems in open sea, coastal and benthic environments, research methods and models in marine ecosystem simulation; fisheries in a dynamic ecosystem: human interference and conservation.
Instructional Contact Hours: (3 Lec, 3 Crd)

FIW 4714 - Fisheries Management (4 credits)
History, theory, and practice of fisheries management. Emphasis on basic strategies used in effective management and setting management objectives. Synthesis of fish population dynamics and manipulation, habitat improvement, and human management to achieve objectives. Case studies of major fisheries.
Prerequisite(s): FIW 3514
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

FIW 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FIW 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Fish Conservation Major with Freshwater Fisheries Conservation Option

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
BIOL 1115	Principles of Biology Laboratory	1
BIOL 1116	Principles of Biology Laboratory	1
BIOL 2704	Evolutionary Biology	3
FIW 2114	Principles of Fish and Wildlife Conservation	3
FIW 4314	Conservation of Biological Diversity	4
or FIW 4714	Fisheries Management	
FIW 4414	Population Dynamics and Estimation	3
FIW 4464	Human Dimensions of Fisheries and Wildlife	3
NR 1234	First Year Experience In Natural Resources and Environment	3
or NR 2234	1st Semester Experience-Transfer Students in Natural Resources and Environment	
Subtotal		21
Major Requirements		
BIOL 2804	Ecology	3
FIW 3514	Fisheries Techniques	3
FIW 4424	Ichthyology	4
FIW 4614	Fish Ecology	3
Geographic Information Systems Restricted Elective		
Select one of the following:		3
FREC 4114	Information Technologies for Natural Resource Management	
FREC 4214	Forest Photogrammetry and Spatial Data Processing	
GEOG 2084	Principles of Geographic Information Systems	
GEOG/GEOS 4354	Introduction to Remote Sensing	
GEOS 3034	Oceanography	3
Subtotal		19
Additional Degree Requirements		
CHEM 1035	General Chemistry	3
CHEM 1036	General Chemistry	3
CHEM 1045	General Chemistry Laboratory	1
CHEM 1046	General Chemistry Laboratory	1
Experiential Learning Requirement		
Select one of the following: (requires department approval)		1
FIW 2974	Independent Study	
FIW 2994	Undergraduate Research	
FIW 3964	Internship Through Directed Field Study	
FIW 4974	Independent Study	
FIW 4994	Undergraduate Research	
XXXX 3954	(Study Abroad)	
Legal Foundation Restricted Elective		
Select one of the following:		3
AAEC 3314	Environmental Law	

FIW 2514	Fish and Wildlife Conservation Policy	
FREC 4434	Natural Resource Policy	
UAP 3354	Introduction to Environmental Policy and Planning	
UAP 4344	Law of Critical Environmental Areas	
Writing Restricted Elective		
Select one of the following:		3
ALCE 3624	Communicating Ag and Life Sciences in Writing	
ENGL 3764	Technical Writing	
ENGL 3774	Business Writing	
Subtotal		15
Option Required Courses		
FIW/FREC 4324	Genetics of Natural and Mangaged Populations	3
STAT 3616	Biological Statistics	3
Physical Science Restricted Elective		
Select one of the following:		3
ENSC 3134	Soils in the Landscape	
GEOS 1004	Earth Science: Our Past, Present, and Future	
GEOS 1024	Earth Resources, Society, and Environment	
PHYS 2205	General Physics	
PHYS 2206	General Physics	
Aquatic Ecology Restricted Elective		
Select two of the following:		8
FIW 4484	Freshwater Biomonitoring	
BIOL 4004	Freshwater Ecology	
BIOL 4454	Invertebrate Zoology	
ENT 4354	Aquatic Entomology	
Subtotal		17
Free Electives		
Select 3-4 credits		3-4
Subtotal		3-4
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
ALCE 3634	Communicating Ag and Life Sciences in Speaking (1A)	3
or COMM 2004	Public Speaking	
Pathways Concept 2 - Critical Thinking in the Humanities		
Select three credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		3
Select one of the following:		3
FREC/LAR/NR 2554	Leadership for Global Sustainability	
PHIL 1304	Morality and Justice	
PHIL 2304	Global Ethics	
Pathways Concept 3 - Reasoning in the Social Sciences		
Select three credits in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		3
Select one of the following:		3
AAEC 1005	Economics of the Food and Fiber System	
or AAEC 1006	Economics of the Food and Fiber System	
ECON 2005	Principles of Economics	
or ECON 2006	Principles of Economics	
Pathways Concept 4 - Reasoning in the Natural Sciences		
BIOL 1105	Principles of Biology	3
BIOL 1106	Principles of Biology	3
Pathways Concept 5 - Quantitative and Computational Thinking		
Select one of the following:		6
MATH 1025	Elementary Calculus (5F)	
or MATH 1225	Calculus of a Single Variable	
MATH 1026	Elementary Calculus (5F)	
or MATH 1226	Calculus of a Single Variable	
STAT 3615	Biological Statistics (5A)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
Select three credits in Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		45
Total Credits		**120-121**

1. By the end of the semester in which they have attempted 60 hours (including transfer, advanced placement, advanced standing, and credit by examination), students must pass the following courses, or their equivalents, with a **grade of C - or better**: BIOL 1105, BIOL 1106, BIOL 1115, BIOL 1116, and FIW 2114.

Graduation Requirements

1. **Major Requirements:**
   To earn a B.S. degree in Fish Conservation, a student must pass the following courses, or their equivalents, with a **grade of C - or better**: BIOL 1105, BIOL 1106, BIOL 1115, BIOL 1116, and FIW 2114.

   There are no hidden prerequisites on this check sheet; however, course requirements may change over time, and students should always check for prerequisites for classes they select.

   Students should consult www.fishwild.vt.edu/experiential_learning.html (http://www.fishwild.vt.edu/experiential_learning.html) for more details on how to fulfill the experiential learning requirement. Note that you will not receive credit for your experiential learning until **all** the documents related to the experience are completed and submitted, in addition to being registered for the experience. Students enrolling in FIW 2974, FIW 3964, or FIW 4974 should use the P/F option; FIW 2994, FIW 4994 and XXXX 3954 may be taken P/F or A/F.

   To remain in good standing, a student must achieve and maintain an overall and in-major cumulative GPA of at least 2.0. Courses used for the in-major GPA computation include all those designated as FIW, FREC, GEOG, NR, and SBIO. To graduate, a student must achieve an overall and in-major cumulative GPA of at least 2.0.
2. In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g., Pathways).

Foreign Language Requirement

Complete an 1105-1106 foreign language (e.g., FR, GR, SPAN) grouping or the equivalent unless two (2) high school units of the same foreign language or six (6) transfer credit hours of foreign language have been earned. These credits do not count toward graduation.

Fish Conservation Major with Human Dimensions Option

Total Credits		**120-121**

Satisfactory Progress

1. By the end of the semester in which they have attempted 60 hours (including transfer, advanced placement, advanced standing, and credit by examination), students must pass the courses listed in item number 1 of graduation requirements above (or their equivalents).
2. To remain in good standing, a student must achieve and maintain an overall and in-major cumulative GPA of at least 2.0. Courses used for the in-major GPA computation include all those designated as FIW, FREC, GEOG, NR, and SBIO. To graduate, a student must achieve an overall and in-major cumulative GPA of at least 2.0.

Graduation Requirements

Minimum hours for degree is 120. A minimum cumulative GPA of 2.0 is required for all work applied to the major

Major Requirements:

1. To earn a B.S. degree in Fish Conservation, a student must pass the following courses, or their equivalents, with a grade of C - or better: BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory , and FIW 2114 Principles of Fish and Wildlife Conservation.
2. There are no hidden prerequisites on this check sheet; however, course requirements may change over time, and students should always check for prerequisites for classes they select.
3. Students should consult www.fishwild.vt.edu/experiential_learning.html (http://www.fishwild.vt.edu/experiential_learning.html) for more details on how to fulfill the experiential learning requirement. Note that you will not receive credit for your experiential learning until **all** the documents related to the experience are completed and submitted, in addition to being registered for the experience. Students enrolling in FIW 2974 Independent Study, FIW 3964 Internship Through Directed Field Study, or FIW 4974 Independent Study should use the P/F option; FIW 2994 Undergraduate Research, FIW 4994 Undergraduate Research and XXXX 3954 may be taken P/F or A/F.
4. FIW 2514 Fish and Wildlife Conservation Policy is one option for the Legal Foundation Restricted Elective, under Additional Major Requirements, and it can also serve as an option for 3 credit hours under Pathways Concept 3 requirements.
5. In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g., Pathways).

Foreign Language Requirement

University Requirements—Foreign Language Policy Complete an 1105-1106 foreign language (e.g., FR, GR, SPAN) grouping or the equivalent.

1.

Fish Conservation Major with Marine Fisheries Conservation Option

Subtotal		45
Total Credits		**120-121**

1.

By the end of the semester in which they have attempted 60 hours (including transfer, advanced placement, advanced standing, and credit by examination), students must must pass the following courses, or their equivalents, with a **grade of C - or better**: BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory and FIW 2114 Principles of Fish and Wildlife Conservation.

Graduation Requirements

1. **Major Requirements:**
   To earn a B.S. degree in Fish Conservation, a student must pass the following courses, or their equivalents, with a **grade of C - or better**: BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory and FIW 2114 Principles of Fish and Wildlife Conservation.

   There are no hidden prerequisites on this check sheet; however, course requirements may change over time, and students should always check for prerequisites for classes they select.

   Students should consult www.fishwild.vt.edu/experiential_learning.html (http://www.fishwild.vt.edu/experiential_learning.html) for more details on how to fulfill the experiential learning requirement. Note that you will not receive credit for your experiential learning until **all** the documents related to the experience are completed and submitted, in addition to being registered for the experience. Students enrolling in FIW 2974, FIW 3964, or FIW 4974 should use the P/F option; FIW 2994, FIW 4994 and XXXX 3954 may be taken P/F or A/F.

   To remain in good standing, a student must achieve and maintain an overall and in-major cumulative GPA of at least 2.0. Courses used for the in-major GPA computation include all those designated as FIW, FREC, GEOG, NR, and SBIO. To graduate, a student must achieve an overall and in-major cumulative GPA of at least 2.0.
2. In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g., Pathways).

Foreign Language Requirement

A sequence of two (2) foreign language courses is required for graduation unless two (2) high school units of the same foreign language or six (6) transfer credit hours of foreign language have been earned. These credits do not count toward graduation.

Wildlife Conservation Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
BIOL 1115	Principles of Biology Laboratory	1
BIOL 1116	Principles of Biology Laboratory	1
BIOL 2704	Evolutionary Biology	3
FIW 2114	Principles of Fish and Wildlife Conservation	3
Select one of the following:		4
FIW 4314	Conservation of Biological Diversity (Wildlife Majors)	
FIW 4714	Fisheries Management (Fisheries Majors)	
FIW 4414	Population Dynamics and Estimation	3
FIW 4464	Human Dimensions of Fisheries and Wildlife	3
NR 1234	First Year Experience In Natural Resources and Environment	2-3
or NR 2234	1st Semester Experience-Transfer Students in Natural Resources and Environment	
Subtotal		20-21
Major Requirements		
Select one of the following:		3
BIOL 3204	Plant Taxonomy	
HORT 3324	Herbaceous Landscape Plants	
HORT 3326	Woody Landscape Plants	
FIW 2314	Wildlife Biology	3
FIW 2324	Wildlife Field Biology	3
FIW 4214	Wildlife Field Techniques	3
FIW 4434	Wildlife Habitat Ecology and Management	3
FREC 2324	Dendrology Laboratory	1

Total Credits		**120-122**

To remain in good academic standing, a student must achieve and maintain an overall and in-major cumulative GPA of at least 2.0. Courses used for the in-major GPA computation include all those designated as FIW, FREC, GEOG, NR, and SBIO. To graduate, a student must achieve an overall and in-major cumulative GPA of at least 2.0.

In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g., Pathways).

By the end of the semester in which they have attempted 60 hours (including transfer, advanced placement, advanced standing, and credit by examination), students must pass the following courses, or their equivalents, with a **grade of C - or better**: BIOL 1105, BIOL 1106, BIOL 1115, BIOL 1116, FREC 2324 and FIW 2114.

Graduation Requirements

Minimum hours for degree is 120. A minimum cumulative GPA of 2.0 is required for all work applied to the major.

Major Requirements:
1) To earn a B.S. degree in Wildlife Conservation, a student must pass the following courses, or their equivalents, with a **grade of C - or better**: BIOL 1105, BIOL 1106, BIOL 1115, BIOL 1116, FREC 2324 and FIW 2114.
There are no hidden prerequisites on this check sheet; however, course requirements may change over time, and students should always check for prerequisites for classes they select.
2) Students should consult www.fishwild.vt.edu/experiential_learning.html (http://www.fishwild.vt.edu/experiential_learning.html) for more details on how to fulfill the experiential learning requirement. Note that you will not receive credit for your experiential learning until **all** the documents related to the experience are completed and submitted, in addition to being registered for the experience. Students enrolling in FIW 2974, FIW 3964, or FIW 4974 should use the P/F option; FIW 2994, FIW 4994 and XXXX 3954 may be taken P/F or A/F

3) If you plan to apply for The Wildlife Society Associate Wildlife Biologist certification, be aware that all courses used in the certification application must be passed with a C- or better beginning with applications submitted in 2023.

Foreign Language Requirement

A sequence of two (2) foreign language courses is required for graduation unless two (2) high school units of the same foreign language or six (6) transfer credit hours of foreign language have been earned. These credits do not count toward graduation. See catalog section on “Graduation Requirements.”

Select three credits in Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		45
Total Credits		**120-121**

1. By the end of the semester in which they have attempted 60 hours (including transfer, advanced placement, advanced standing, and credit by examination), students must pass the courses (or their

equivalents) listed in item number 1 in graduation requirements section above.

Graduation Requirements

Minimum hours for degree is 120. A minimum cumulative GPA of 2.0 is required for all work applied to the major.

1. To earn a B.S. degree in Wildlife Conservation, a student must pass the following courses, or their equivalents, with a **grade of C - or better**: BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, FREC 2324 Dendrology Laboratory and FIW 2114 Principles of Fish and Wildlife Conservation.

   There are no hidden prerequisites on this check sheet; however, course requirements may change over time, and students should always check for prerequisites for classes they select.
2. Students should consult www.fishwild.vt.edu/experiential_learning.html (http://www.fishwild.vt.edu/experiential_learning.html) for more details on how to fulfill the experiential learning requirement. Note that you will not receive credit for your experiential learning until **all** the documents related to the experience are completed and submitted, in addition to being registered for the experience. Students enrolling in FIW 2974 Independent Study, FIW 3964 Internship Through Directed Field Study, or FIW 4974 Independent Study should use the P/F option; FIW 2994 Undergraduate Research, FIW 4994 Undergraduate Research and XXXX 3954 may be taken P/F or A/F.
3. To remain in good standing, a student must achieve and maintain an overall and in-major cumulative GPA of at least 2.0. Courses used for the in-major GPA computation include all those designated as FIW, FREC, GEOG, NR, and SBIO. To graduate, a student must achieve an overall and in-major cumulative GPA of at least 2.0.
4. In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g., Pathways).
5. If you plan to apply for The Wildlife Society Associate Wildlife Biologist certification, be aware that all courses used in the certification application must be passed with a C- or better beginning with applications submitted in 2023.
6. FIW 2514 Fish and Wildlife Conservation Policy is one option for the Legal Foundation Restricted Elective, under Additional Degree Requirements, and it can also serve as an option for 3 credit hours under Pathways Concept 3 requirements.
7. HORT 3324 Herbaceous Landscape Plants and HORT 3326 Woody Landscape Plants will be opened to WLC students only during the Add/Drop registration period when seats are available.

Foreign Language Requirement

A sequence of two (2) foreign language courses is required for graduation unless two (2) high school units of the same foreign language or six (6) transfer credit hours of foreign language have been earned. These credits do not count toward graduation. See catalog section on “Graduation Requirements.”

1.

Forest Resources and Environmental Conservation

Our Website (http://www.frec.vt.edu)

Environmental Data Science

Environmental Informatics applies data analysis, computational modeling, and information science to study the environment and manage natural resources. Students in the Environmental Informatics major gain expertise in the environment and in the computational and analytical approaches to solve environmental challenges, including geographic information, mathematical and statistical modeling, remote sensing, database management, knowledge integration, and decision making.

Forest Resource Management

Programs of study in Forestry include three options focused on forest management and are accredited by the Society of American Foresters (SAF), the national scientific and educational organization representing the forestry profession in the United States.

Students in the Forest Resources Management Option gain expertise in the biological and social sciences needed to make sound management decisions concerning regeneration, growth, protection, management, and sustainability of forest ecosystems. Graduates pursue careers in the forest industry, public agencies, non-governmental agencies, and private forestry companies.

In the Forest Operations and Business Option, students prepare to take an active role in assuring that the sale, harvest, and conversion of standing timber to products is done in an efficient, economic, safe, and environmentally sound manner. Graduates pursue careers in forest industry, national and state forest services, forestry consulting firms, and the equipment industry.

Students in the Urban Forestry Option gain expertise in the management of forest resources in cities, towns, and other urbanized environments. The program emphasizes interdisciplinary perspectives and students take classes in Horticulture, Landscape Architecture, and Urban Affairs and Planning to customize a curriculum that supports their career goals. Graduates pursue careers in municipal forestry, commercial tree care, utility vegetation management, urban environmental consulting, public agencies, and nonprofit organizations.

Environmental Resource Management

Students in the Environmental Resource Management Major gain expertise in managing environmental resources from a wide variety of environmental perspectives, including forest resources, soils, water, environmental law, policy and planning, and environmental economics. Graduates pursue careers in public agencies, private industry, and firms that deal with forested wetland protection, endangered species, the urban-rural interface, and sustainability.

Environmental Conservation and Society

Programs of study in Environmental Conservation and Society prepare students for a broad array of natural resource careers with an emphasis on social sciences and public communication.

The Recreation and Tourism Management Option prepares students to be the managers, planners, and program administrators who deal with today's complex conservation challenges. Courses in ecological, natural,

and social sciences, planning, tourism, and business management, are combined with a deep understanding of recreation resources. Graduates pursue careers in government and non-government organizations as well as commercial recreation and green businesses.

The Education and Outreach Option offers a balance of natural sciences, social sciences, and the humanities to give students a well-rounded base of knowledge about the natural world. Graduates pursue careers in nature education, environmental interpretation, resource education, and communications, or they may pursue a license for an elementary education career.

Water: Resources, Policy, and Management

The Water: Resources, Policy, and Management degree addresses the protection and development of water resources by providing the interdisciplinary training required to meet water challenges and opportunities now and in the future.

- Environmental Conservation & Society Major (p. 1186)
- Environmental Data Science Major (p. 1189)
- Environmental Resources Management Major (p. 1191)
- Forestry Major (p. 1193)
- Water: Resources, Policy, and Management Major (p. 1195)

University Distinguished Professor: H. E. Burkhart

Courtesy Appointments: D. Robertson, R. J. Harris, R. Jones, P. Miller, and S. M. Salom

Undergraduate Course Descriptions (FREC)

FREC 1004 - Digital Planet (3 credits)
Exploration of innovative geospatial technologies and their impact on the world around us, including how humans interact with the environment and each other. Roles of location-based services, global positioning systems, geographic information systems, remote sensing, virtual globes and web based mapping for environmental applications. Skills and techniques for spatial thinking and environmental decision-making. Ethical implications of the use of geospatial technologies, data, and computational approaches.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 1084

FREC 1044 - Introduction to Environmental Data Science (3 credits)
Application of data science to environmental management. Role of data science, mathematical and statistical modeling, geospatial technology, database management, knowledge integration, and decision science in environmental decision-making. Skills and techniques required to assist scientists and managers with the challenges of collecting, collating, archiving, modeling, analyzing, visualizing, and communicating data in support of natural resource management.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 2004 - Forest Ecosystems (3 credits)
Introduction to forest ecosystem ecology. Global forest cover, types, distribution, and change. Relationships among forest structure, function, and biodiversity. Interactions among rock, soil, water, air, and the organisms that define and inhabit forests around the world. Energy, water, carbon, and nutrient fluxes from leaf to global scales. Connections among forests, society, and global change. Capacity of forests to sustainably provide ecosystem services.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 2114 - Ecology of Appalachian Forests (3 credits)
Introduction to the natural history, tree biology, tree identification, forest ecology, management and forest types of the Appalachian region. Contemporary issues related to forest functions will be discussed including carbon storage, climate change, invasive forest species, wildlife management, fire, biofuels, agroforestry, urban forests, ecosystem restoration, clean water, recreation, and use of renewable resources.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 2124 - Forests, Society & Climate (3 credits)
Role of forest ecosystems on the global carbon cycle, climate, biodiversity and economies. Anthropogenic impacts on forest ecosystems and their ecological function in the face of changing climate. Regional and cultural implications for the state of the forests and deforestation-related policy. Climate-related threats to global forests, including loss of biodiversity, deforestation, forest fires, and invasive species. Sustainable forest management for anticipated future scenarios.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 2134 - Plants and Greenspaces in Urban Communities (3 credits)
Modern concepts of sustainability changing plant use in urban settings. Fundamentals of urban plant systems in the context of urban ecosystem management. Philosophy and critical analysis of sustainability related to green infrastructure, including urban forests, green roofs, urban soils, urban wildlife, urban agriculture, and innovations merging plant and ecosystem functions with building and site engineering. Multi-disciplinary emphasis at site, regional, and global, scales.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HORT 2134

FREC 2214 - Introduction to Land and Field Measurements (3 credits)
Measurement of land and field attributes including geographic position, land distance, direction, area, slope, elevation and boundary attributes. Use and development of maps used in natural resource applications. Use of global positioning systems and geographic information systems in the acquisition and management of land and field measurements. Assessment of vegetation attributes with field plots. Use of computer software to manage and analyze data and present results.
Prerequisite(s): MATH 1025 or MATH 1225 or MATH 1524
Corequisite(s): FREC 2324
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 2254 - Arboriculture Field Skills (1 credit)
Field observation, discussion, and practice of skills employed in the management of urban landscape trees. Hands-on experience with tree pruning, removal, pest control, fertilization, cabling/bracing, lightning protection, and climbing. Emphasis on arborist safety, professional ethics, and best management practices. Guest instruction provided in part by professionals working in the tree care industry.
Instructional Contact Hours: (3 Lab, 1 Crd)

FREC 2314 - Forest Biology and Dendrology (2 credits)
Introduction to the botany, physiology, genetics and silvics of important forest trees of North America.
Prerequisite(s): BIOL 1106
Instructional Contact Hours: (2 Lec, 2 Crd)

FREC 2324 - Dendrology Laboratory (1 credit)
Field identification of trees of North America with particular emphasis on trees native to the Eastern United States.
Instructional Contact Hours: (3 Lab, 1 Crd)

FREC 2414 - Field Experience in Forest Resources and Environmental Conservation (2 credits)
Field exercises to develop skills needed to sustainably manage forest and environmental resources including navigation and mapping, inventory of timber and non-timber resources, soil and water conservation, forest and recreation management, forest operations and timber harvesting. Fee $216.
Instructional Contact Hours: (6 Lab, 2 Crd)

FREC 2514 - Wildland Fire: Ecology and Management (3 credits)
Provide students with basic knowledge on how: fire has an impact on forest environments; the environment and weather influence fire behavior; wildland fires are suppressed; and fire is used as a land and vegetation management tool. The course will also provide students with the knowledge and training to qualify as a basic wildland firefighter (FFT2-Red Card). Extended laboratory sessions will provide practice in fire behavior prediction, prescribed burning techniques, and fire control methodology. COURSE FEE: $110.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 2554 - Leadership for Global Sustainability (3 credits)
Leadership principles and humanities perspectives that help examine and engage global sustainable development challenges such as climate change, food-water-energy nexus, rising middle class, circular economy, and environmental justice. Topics include collaboration, stories, conflict resolution, self-awareness, bias, equity, religion, hubris, globalism, and moral naturalism. Examine trade-offs among economic, environmental, and social dimensions of sustainable development. Integration and application of disciplinary topics including ethics, ecology, evolution, anthropology, economics, religion, aesthetics, and risk management.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: LAR 2554, NR 2554

FREC 2614 - Human-Environment Systems (3 credits)
Social and ecological dynamics of human-environment systems. Effect of complex environmental problems on ecosystems and human well-being. Introduction to systems thinking. History, philosophy, and application of decision making in the field of natural resource management. Pre: Sophomore standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 2784 - Global Forest Sustainability (3 credits)
A socio-economic approach to examining the management and use of the worlds forests, enhance knowledge of global forest resources and products, and understand the roles and relationships of key stakeholders.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SBIO 2784

FREC 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 3044 - Environmental Data Science (3 credits)
Applications of the analysis and modeling of environmental datasets at multiple spatial-temporal scales to study environmental issues of societal importance. Computer programing is used in the acquisition, analysis, visualization, and storage of environmental data. Modeling techniques include regression, classification, and numerical simulation. Ethics and methods of data curation, quality control, analysis, and sharing.
Prerequisite(s): FREC 1044 or CMDA 2014 or CMDA 3654 or CS 3654 or STAT 3654
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 3104 - Principles of Watershed Hydrology (3 credits)
Study of hydrology in watersheds. Qualitative and quantitative principles of physical hydrological processes governing the movement, storage, and transformation of water on the Earths surface as influenced by watershed characteristics, including human modifications. Pre: Junior Standing
Prerequisite(s): MATH 1026 or MATH 1226 or STAT 3005 or STAT 3604 or STAT 3615
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WATR 3104

FREC 3214 - Forest Biometrics (3 credits)
Statistical and mathematical basis for collecting and analyzing data used to make valid inferences and ethical decisions in applications of forest ecosystem science and management. Principles and practices of forest inventory and probability-based sampling. Computational and mathematical tools for analyzing field data. Statistical summarization, estimation, hypothesis testing, and inference from data collected in forest inventories.
Prerequisite(s): FREC 2214 and (MATH 1026 or MATH 1226)
Corequisite(s): FREC 3224
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 3224 - Forest Measurements Field Laboratory (1 credit)
Field practice and computer analysis for collecting and analyzing survey data for use in forest management. Forest inventory and probability-based sampling, stratified sampling, double sampling, regression, and census-based sampling applications. Computer and geospatial tools for analyzing field data. Field assessment of tree and log contents, stand density, and site index. Collection and analysis of growth and yield data.
Prerequisite(s): (FREC 2214 or FOR 2214) and (FREC 2414 or FOR 2414)
Instructional Contact Hours: (3 Lab, 1 Crd)

FREC 3314 - Forest Ecology and Silvics (3 credits)
Environmental factors affecting the establishment, growth, and development of forests; silvical characteristics of trees; forest community structure and function; forest ecosystem analysis. COURSE FEE: $48.
Prerequisite(s): (FREC 2314 or FOR 2314) and (FREC 2214 or FOR 2214)
Instructional Contact Hours: (2 Lec, 4 Lab, 3 Crd)

FREC 3324 - Silviculture Principles and Applications (4 credits)
Theory and practices involved in controlling forest establishment, composition, and growth are developed in a regional context. Formulation of silvicultural systems and the study of reproduction methods, site preparation, intermediate stand manipulations, and reforestation operations.
Prerequisite(s): FREC 3314 or FOR 3314
Instructional Contact Hours: (3 Lec, 4 Lab, 4 Crd)

FREC 3354 - Trees in the Built Environment (3 credits)
Science and practice of tree cultivation, conservation, and management in human-dominated environments along an urban to rural gradient. Holistic study of landscape tree management: planning, planting, inspection, maintenance, removal, and wood waste utilization. Examination of tree responses to urbanization and tree influences on built environments. Emphasis on sustainable, ethical stewardship of landscape trees for the benefit of people and the environment.
Prerequisite(s): (FREC 2314 or BIOL 2304 or HORT 2304) and (FREC 2324 or HORT 3325 or HORT 3326)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HORT 3354

FREC 3364 - Environmental Silviculture (3 credits)
Science and design of sustainable management of forests to meet the needs of a globalized society. Historic and current intercultural and socio-economic factors influencing stakeholder objectives and the shape, value, pattern, composition, structure, and function of forests domestically and abroad. Tools used to design forests and management plans to address global challenges. Design thinking process: gather stakeholder input, brainstorm/analyze ideas, develop potential solutions, test their working hypothesis or prototype in a computer simulation, and iterate/improve toward a sustainable solution.
Prerequisite(s): FREC 2324
Pathway Concept Area(s): 6D Critique & Prac in Design, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 3454 - Trees in the Built Environment Lab (1 credit)
Hands-on experience in the cultivation, conservation, and management of landscape trees in human-dominated environments along the urban to rural gradient. Field exercises in tree inventory, appraisal, disorder diagnosis, planting, pruning, and protection. Emphasis on use of scientific methods and best management practices to ensure tree health, safety, and functionality for the benefit of people and the environment. Methods of communicating technical information and management recommendations for landscape trees through written media.
Corequisite(s): FREC 3354
Instructional Contact Hours: (3 Lab, 1 Crd)

FREC 3524 - Environmental Interpretation (3 credits)
Interpretation theory and techniques as relevant to natural resource management; culturally appropriate program planning and evaluation; role of interpretation in enhancing visitor experiences and promoting stewardship. Pre: Junior standing.
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 3544 - Outdoor Recreation Planning and Management (3 credits)
Planning and management of nature-dependent outdoor recreation. History, philosophy and benefits of nature-dependent outdoor recreation. Environmental and social impacts of recreational uses. Techniques to manage visitor impact. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 3574 - Environmental Education Service Learning (3 credits)
Introduction to key concepts in environmental education and teaching skills through lecture, discussion, service learning, and reflection. Training in internationally recognized environmental education curricula (e.g. Project Learning Tree, Project Wet), in class management and organization skills and in theory relevant to both teaching and learning. Students develop and conduct after school environmental education programs at local elementary schools
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 3714 - Forest Harvesting (3 credits)
Principles and application of forest harvesting. Terminology, phases, function, and the interrelationships of people, money, machines, and environment. COURSE FEE: $60.
Prerequisite(s): FREC 2214 or FOR 2214
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 3724 - Forest Boundaries and Roads (3 credits)
Application of basic land surveying and forest measurement techniques to the location, establishment, and maintenance of forest boundaries and roads. Consideration of stream crossings, best management practices, and costs. Fee $187.
Prerequisite(s): FREC 2214 or FOR 2214
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 3734 - Forest Fiber Supply (3 credits)
Analysis of the southeastern U.S. forest industry fiber supply process with emphasis on the evolution and dynamics of timber procurement systems, strategies, business principles, ethical dilemmas, and professional practices. Field exercises and case studies to ethically appraise timber sales. Analysis of current industrial operations and practices. Discourse-based project resulting in the writing, presenting, and critiquing of procurement plans. Pre: Junior standing. COURSE FEE: $365
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 3754 - Watersheds and Water Quality Monitoring (3 credits)
Delivery of water quality constituents from watersheds to water bodies (streams, lakes, and estuaries). Field monitoring methods to assess watershed drivers and how they affect water quality and aquatic ecosystem condition. Linkages among water quality, watershed characteristics, land use and management, and climate. Design of watershed monitoring programs to guide watershed management for protecting water quality and ecological condition of aquatic systems.
Prerequisite(s): (BIOL 1106 or BIOL 1006) and CHEM 1035 and (FREC 2004 or FOR 2004 or FREC 2114 or FOR 2114 or FREC 3314 or FOR 3314 or BIOL 2804 or ENSC 3604)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WATR 3754

FREC 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 3964 - Internship Through Directed Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course
Repeatability: up to 12 credit hours

FREC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 4004 - Professional Skills in Natural Resources (1 credit)
Elements of professionalism and principles of success across a wide spectrum of natural resources careers. Skills for ethical and professional interaction including effective communication, advancement of diversity and inclusion, and personal responsibility. Career preparation principles including employer outreach, job seeking, resume writing, and interview preparation. Guest speakers from academia, industry, and government. Pre: Senior standing.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: NR 4004

FREC 4014 - Natural Resources Economics (3 credits)
Examination of domestic and international natural resource use, exploitation, and degradation problems, with special focus on use of economics to understand why potential overuse of natural resources exists, and what policy options are available to correct these problems and ensure sustainable natural resource use over time. Water, forests, fisheries, land and exhaustible resources. Permission of instructor may be substituted for the pre-requisite.
Prerequisite(s): ECON 2005 or AAEC 1005
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NR 4014

FREC 4024 - Forest Resources Management and Business (3 credits)
Forest management and business principles, theory, and methods to support sound decision-making in forestry: from the level of the forest to the business organization as a whole. Capital budgeting methods to prescribe forest harvest schedules and perform forest finance analyses. Forest industry structure, trends, and future performance. Strategic management frameworks (e.g. SWOT (Strengths, Weaknesses, Opportunities, and Threats), PIE (Potential, Importance and Ease) and Porter's Five Forces) and the influence of public policy and regulation on forest business strategy. Ethics, sustainability and corporate social responsibility applied to real forest business problems.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4044 - Environmental Data Science Capstone (3 credits)
Apply environmental data science strategies and techniques to natural resources problems. Capstone experience using spatial and/or temporal environmental data. Integrate multiple concepts and strategies to create a practical solution.
Prerequisite(s): FREC 3004 or FREC 3044
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4114 - Information Technologies for Natural Resource Management (3 credits)
An introduction to computer information systems used in natural resources management. Course will introduce students to the theory and applications of database management systems (DBMS) and geographic information systems (GIS). Uses, challenges, and limitations of these technologies in natural resource management applications will be discussed. Students will receive extensive hand-on instruction in the use of current software packages for DBMS and GIS.
Prerequisite(s): FREC 2214 or FOR 2214 or GEOG 2314
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4134 - Forest Carbon Management and Policy (3 credits)
Importance of forests in the global carbon cycle. Measuring, reporting, and verification (MRV) of forest carbon stocks and fluxes. National, regional and international forest carbon markets. Main national and international forest-based carbon policies and programs, such as REDD +. Impacts of forest management practices by landowners and policies on forest carbon stocks. Economic viability of forest carbon projects. Pre: Junior standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4174 - Climate Change and the International Policy Framework (3 credits)
Science, causes and impacts of climate change. Mitigation and adaptation measures to address the causes and impacts of climate change. International climate change policy, with attention to the policy making process, in particular the role of the United Nations Framework Convention on Climate Change and climate negotiations. Science and diplomacy in climate negotiations to achieve successful outcomes. The ethical and social implications of climate change policies.
Pathway Concept Area(s): 1A Discourse Advanced, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 4174, PSCI 4174

FREC 4214 - Forest Photogrammetry and Spatial Data Processing (3 credits)
Films, filters and camera photogeometry; scale; measurement estimation; image processing; flight planning and photo acquisition; geographic information systems; spatial data analysis techniques and applications. Pre: Junior standing.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4244 - Hydroinformatics (3 credits)
Analysis and examination of hydrologic data using basic statistics and computer programming. Calculation and interpretation of flow frequency and duration, hydrologic analysis of geospatial digital terrain data, and implementation and analysis of simple hydrologic models. Advanced methods of temporal and spatial hydrologic data visualization using computer programming.
Prerequisite(s): FREC 3104 or WATR 3104 or FREC 1044
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WATR 4244

FREC 4324 - Genetics of Natural and Managed Populations (3 credits)
Introductory genetics with an emphasis on evolutionary processes relevant to natural and managed populations of both plant and animal species. Traditional and modern genetics, including quantitative and population genetics, molecular evolution, genomics, and biotechnology.
Prerequisite(s): BIOL 1105 and BIOL 1106 and (STAT 3005 or STAT 3615 or FREC 3214 or FOR 3214)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FIW 4324

FREC 4334 - Principles and Practice of Agroforestry (3 credits)
Biological, social, economic, and technical aspects of agroforestry, training and technology transfer techniques, and application of forestry and agriculture principles. Roles of animals and fish, trees, and agricultural crops in agroforestry systems. Community involvement in planning and implementation of agroforestry projects. COURSE FEE: $40.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CSES 4334

FREC 4354 - Forest Soil and Watershed Management (3 credits)
Properties and processes of soil and water in forests. Emphasis on management for the delivery of ecosystem services at local to global scales. Includes analysis and interpretation in field and laboratory.
Prerequisite(s): CSES 3114 or FREC 2004 or GEOS 3614 or ENSC 3134
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4364 - Advanced Silviculture and Forest Vegetation Management (3 credits)
Advanced topics in silviculture with an emphasis on species silvical differences; forest vegetation management and control, herbicides used in forestry, their chemistry, toxicology, application technology; environmental considerations; tree improvement, individual tree growth, and stand dynamics as affected by intermediate silvicultural operations; implications of atmospheric deposition.
Prerequisite(s): FREC 3324 or FOR 3324
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4374 - Forested Wetlands (3 credits)
Classifications, jurisdictional delineation, and management options of forested wetlands. Relationship of hydrology, soils, and vegetation to ecosystem processes, societal values, and management with regard to environmental and legal considerations and best management practices. Emphasis is on forested wetlands in the southern U.S., but national and international wetlands are included. COURSE FEE: $187.
Prerequisite(s): FREC 4354 or CSES 3114 or ENSC 3114 or GEOS 3614 or CSES 3134 or ENSC 3134
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4414 - Advanced Wildland Fire Management (3 credits)
Impacts fire has on forest environments; how the environment influences fire behavior; how computer programs aid fire decision making; and how fire is used as a land and vegetation management tool. Influences of weather on fire behavior. The course will also provide students with the knowledge and training to qualify as an advanced wildland firefighter (Squad Boss) (FFT1 - Red Card) and a Virginia Certified Prescribed Burn Manager.
Prerequisite(s): FREC 2514 or FOR 2514
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4424 - Forest Resources Economics and Management (3 credits)
Application of economics principles and tools to forest decision making from the individual tract to large private and public holdings. Private and public landowner financial incentives and decisions, forest amenities, non-timber forest products, risk, multiple use, management and ownership trends, and sustainability are examined. Prerequisite course or consent of instructor.
Prerequisite(s): FREC 3324 or FOR 3324 or FREC 3364 or FOR 3364
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4434 - Natural Resource Policy (3 credits)
Historical development of U.S. natural resource policy. Application of policy analysis tools to understand the factors driving natural resource policy formation at the federal, state, and local level. Evaluation of the effects of alternative policies on natural resource use and social wellbeing. Overview of existing natural resource policies with applications to forest and timber management, biodiversity, public lands, endangered species, and climate change mitigation and adaptation.
Prerequisite(s): NR 4014 or FREC 4424 or FOR 4424 or ECON 4014 or FREC 4014 or FOR 4014
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4444 - Integrated Forest Management Practicum (3 credits)
Application of accumulated discipline-oriented knowledge and techniques to solve forest resource management problems as a member of a team. Forest resource management and planning, multiple-use concepts to solve forest management problems, design and implement field-based sampling protocol, develop an integrated forest management plan with logical and ethical recommendations based on analysis of sampled data. Pre: Senior standing.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

FREC 4454 - Urban and Community Forestry (3 credits)
Ecological, socioeconomic, and technical aspects of assessing, planning, managing, and conserving urban forests. Examination of historical and contemporary approaches to urban forestry in local, national, and international contexts. Contributions of trees and associated greenspaces to urban sustainability and community well-being. Roles of government, private industry, and community stakeholders in stewarding urban forests. Theory and practice of written and oral communication to effectively exchange ideas and information about urban forests with diverse audiences. Pre: Junior standing.
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4464 - Water Resources Policy and Economics (3 credits)
Economic theory and methods to explain water use decisions. Efficiency, equity, and ethical considerations in U.S. water policy. Analysis of water markets, climate change, and environmental flows from diverse stakeholder perspectives.
Prerequisite(s): AAEC 1005 or ECON 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AAEC 4464, WATR 4464

FREC 4514 - Forest and Tree Pest Management (3 credits)
Identification and ecology of biotic and abiotic influences on forest and landscape tree health. Developing a theoretical and practical understanding for diagnosing and managing pests and stresses of trees in both the forest and landscape setting. Insects and diseases that attack trees.
Prerequisite(s): FREC 3324 or FOR 3324 or HORT 3325 or HORT 3326
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

FREC 4554 - Creating the Ecological City (3 credits)
Multidisciplinary, team oriented, problem-solving approaches to creating cities that foster healthy interconnections between human and ecological systems. Analysis of problems from practical and ethical perspectives in the context of the diverse knowledge bases and values of decision-makers. Formation and utilization of integrated design teams to solve complex urban design and planning problems at a variety of scales. Senior standing.
Prerequisite(s): HORT 2134 or FREC 2134
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 6A Critique & Practice in Arts, 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BSE 4554, HORT 4554, LAR 4554, SPIA 4554

FREC 4714 - Harvesting Systems Evaluation (3 credits)
Principles and techniques for evaluating harvesting machines and systems design, application, productivity, and financial performance.
Prerequisite(s): FREC 3714
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4784 - Wetland Hydrology and Biogeochemistry (3 credits)
Water flows creating wetland hydrologic regime. Hydrologic controls on wetland processes. Linkages between hydrology and biogeochemical cycles. Carbon, nitrogen, phosphorus, and other element cycles within and across wetland boundaries. Field methods to assess hydrologic regime and biogeochemical cycles. Ecosystems services from hydrologic and biogeochemical processes. Applications of wetland hydrology and biogeochemistry in wetland restoration, delineation, and creation.
Instructional Contact Hours: (3 Lec, 3 Crd)

FREC 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

FREC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (WATR)

WATR 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

WATR 2004 - Water, Environment, and Society (3 credits)
Introduction to the hydrologic cycle, water resources, and related environmental issues. Emphasis on ethics and relationships between human needs for and effects upon water including: water quality, water treatment, and wastewater treatment; water for health, energy, and food; water management, laws, economics, and conflict; hydrometeorological hazards and climate change; and potential solutions for these and other critical water issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 2004

WATR 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

WATR 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

WATR 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

WATR 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

WATR 3104 - Principles of Watershed Hydrology (3 credits)
Study of hydrology in watersheds. Qualitative and quantitative principles of physical hydrological processes governing the movement, storage, and transformation of water on the Earths surface as influenced by watershed characteristics, including human modifications. Pre: Junior Standing
Prerequisite(s): MATH 1026 or MATH 1226 or STAT 3005 or STAT 3604 or STAT 3615
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 3104

WATR 3754 - Watersheds and Water Quality Monitoring (3 credits)
Delivery of water quality constituents from watersheds to water bodies (streams, lakes, and estuaries). Field monitoring methods to assess watershed drivers and how they affect water quality and aquatic ecosystem condition. Linkages among water quality, watershed characteristics, land use and management, and climate. Design of watershed monitoring programs to guide watershed management for protecting water quality and ecological condition of aquatic systems.
Prerequisite(s): (BIOL 1106 or BIOL 1006) and CHEM 1035 and FREC 2004 or (FOR 2004 or FREC 2114 or FOR 2114 or FREC 3314 or FOR 3314 or BIOL 2804 or ENSC 3604)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 3754

WATR 4244 - Hydroinformatics (3 credits)
Analysis and examination of hydrologic data using basic statistics and computer programming. Calculation and interpretation of flow frequency and duration, hydrologic analysis of geospatial digital terrain data, and implementation and analysis of simple hydrologic models. Advanced methods of temporal and spatial hydrologic data visualization using computer programming.
Prerequisite(s): FREC 3104 or WATR 3104 or FREC 1044
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 4244

WATR 4464 - Water Resources Policy and Economics (3 credits)
Economic theory and methods to explain water use decisions. Efficiency, equity, and ethical considerations in U.S. water policy. Analysis of water markets, climate change, and environmental flows from diverse stakeholder perspectives.
Prerequisite(s): AAEC 1005 or ECON 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AAEC 4464, FREC 4464

WATR 4614 - Watershed Assessment, Management, and Policy (2 credits)
Multidisciplinary perspectives of assessment, management and policy issues for protecting and improving watershed ecosystems. Topics include: monitoring and modeling approaches for assessment, risk-based watershed assessment geographic information systems for watershed analysis, decision support systems and computerized decision tools for watershed management, policy alternatives for watershed protection, urban watersheds, and current issues in watershed management. Pre: Two 4000 level courses in environmental/natural resource science, management, engineering, and/or policy in BSE, CEE, FOR, FREC, GEOL, LAR, CSES, ENT, BIOL, GEOG, AAEC, UAP or equivalent.
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: ALS 4614

WATR 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

WATR 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

WATR 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

WATR 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Degree Core Requirements		
FREC 2214	Introduction to Land and Field Measurements *	3
FREC 2314	Forest Biology and Dendrology *	2
FREC 2324	Dendrology Laboratory	1
FREC 2614	Human-Environment Systems *	3
FREC/NR 4004	Professional Skills in Natural Resources *	1
FREC/NR 4014	Natural Resources Economics *	3
FREC 4114	Information Technologies for Natural Resource Management *	3
FREC 4434	Natural Resource Policy *	3
Subtotal		19
Major Requirements		
FIW 2114	Principles of Fish and Wildlife Conservation	3
FIW 4464	Human Dimensions of Fisheries and Wildlife *	3
FREC 2004	Forest Ecosystems	3
or FREC 3314	Forest Ecology and Silvics	
FREC 3524	Environmental Interpretation (Pathways Concept 1 - Discourse - Advanced) *	3
FREC 3544	Outdoor Recreation Planning and Management *	3
Subtotal		15
Restricted Electives		
Business Restricted Electives		3
Environmental Education and Outreach Restricted Electives		3
Environmental Science Restricted Electives		6
Human Dimensions Restricted Electives		6
Role of Science in Society Restricted Elective		3
Subtotal		21
Track Areas with Remaining Required Electives		
Students **must** customize their curriculum to complete one of the following three tracks by selecting an additional 9 credits from one of the three sets of restricted electives outlined below (Note: 6 of the 9 credits must be 3000 level or above).		9
Recreation and Tourism Management Track		
Outdoor Recreation Management & Tourism Restricted Electives (9 hours)		
Environmental Education and Outreach Track		
Environmental Education & Outreach Restricted Electives (6 hours)		
Leadership & Sustainability in Natural Resources Restricted Electives (3 hours)		
Leadership and Sustainability Track		
Leadership & Sustainability in Natural Resources Restricted Electives (9 hours)		
Subtotal		9
Pathways to General Education		
Pathways Concept 1 - Discourse		
COMM 1015	Communication Skills	3
or ENGL 1105	First-Year Writing	
COMM 1016	Communication Skills *	3
or ENGL 1106	First-Year Writing	
Completion of FREC 3524 fulfills Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A)		
Pathways Concept 2 - Critical Thinking in the Humanities		
FREC/LAR/NR 2554	Leadership for Global Sustainability	3
Select three credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		3
Pathways Concept 3 - Reasoning in the Social Sciences		
AAEC 1005	Economics of the Food and Fiber System	3
or ECON 2005	Principles of Economics	
Select one of the following:		3

COMM 1014	Introduction to Communication	
GEOG 1004	Introduction to Human Geography	
GEOG/NR 1115	Seeking Sustainability	
PSCI 1014	Introduction to United States Government and Politics	
PSCI/IS 1024	Comp Gov & Politics	
PSYC 1004	Introductory Psychology	
SOC 1004	Introductory Sociology	
SOC 1014	Introduction to Social Anthropology	
Pathways Concept 4 - Reasoning in the Natural Sciences		
BIOL 1105	Principles of Biology	3
BIOL 1106	Principles of Biology	3
Pathways Concept 5 - Quantitative and Computational Thinking		
Select three credits in Pathway 5f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05F)		3
MATH 1025	Elementary Calculus	3
STAT 3604	Statistics for Social Science *	3
or STAT 3615	Biological Statistics	
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
Select three credits in Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Free Electives		
Select free electives to total 120 credits.		14
Total Credits		**120**

Restricted Electives

Code	Title	Credits
Business Restricted Electives		
AAEC 2104	Personal Financial Planning	3
AAEC 3454	Small Business Management and Entrepreneurship *	3
ACIS 1004	Accounting Foundations	3
ACIS 2115	Principles of Accounting *	3
ENGL 4804	Grant Proposals and Reports *	3
FREC 4024	Forest Resources Management and Business *	3
MGT 2064	Foundations of Entrepreneurship	3
MGT 3304	Management Theory and Leadership Practice *	3
MGT 4334	Ethical Leadership and Corporate Social Responsibility *	3
MKTG 3104	Marketing Management *	3
SBIO 2614	Introduction to Forest Products Marketing	3
SBIO 3004	Sustainable Nature-Based Enterprises	3
SBIO 3464	Sustainable Operations Management *	3
Environmental Education & Outreach Restricted Electives		
ALCE 3004	Educational Programs in Agricultural and Life Sciences	3
ALCE 3624	Communicating Ag and Life Sciences in Writing *	3
ALCE 4004	Teaching Adults in Agriculture	2
ALCE 4014	Introduction to Cooperative Extension	3
ALCE 4034	Methods of Planning Education Programs for Agriculture *	3
ALCE 4304	Community Education and Development *	3
ALCE/EDCT 4884	Youth Program Management	3
CMST 3064	Persuasion *	3
HUM/RLCL 3204	Multicultural Communication	3
FREC 3574	Environmental Education Service Learning	3
PR 2044	Principles of Public Relations	3
TA 2024	Introduction to Acting	3
Environmental Science Restricted Electives		
BIOL 2504	General Zoology *	3
BIOL 2704	Evolutionary Biology *	3
BIOL 2804	Ecology *	3
BIOL 4004	Freshwater Ecology *	4
CSES 3114/ GEOS 3614	Soils *	3
ENSC 3134	Soils in the Landscape *	3
ENSC 3604	Fundamentals of Environmental Science *	3
FIW 2314	Wildlife Biology *	3
FIW 2324	Wildlife Field Biology	3
FIW 3514	Fisheries Techniques *	3
FIW 4214	Wildlife Field Techniques *	3
FIW 4314	Conservation of Biological Diversity *	4
FIW 4334	Mammalogy *	4
FIW 4414	Population Dynamics and Estimation *	3
FIW 4424	Ichthyology	4
FIW 4434	Wildlife Habitat Ecology and Management *	3
FIW 4534	Ecology and Management of Wetland Systems *	3
FIW 4614	Fish Ecology *	3
FIW 4624	Marine Ecology	3
FREC 2514	Wildland Fire: Ecology and Management *	3

STS 2154	The Life Sciences and Society	3
STS 2454	Science, Techology, and Environment	3
STS 3104	Science and Technology in Modern Society	3
STS 3334	Energy and Society	3

* Some courses may have prerequisites, corequisites, or other registration restrictions. Please consult the University course catalog for more information.

Satisfactory Progress: By the end of the semester in which the student has attempted 60 hours (including transfer, advanced placement, advanced standing, and credit by examination), "satisfactory progress" towards a B.S. degree in Forest Resources and Environmental Conservation will include the following minimum criteria:

- Having an in-major and overall grade point average of at least 2.0
- Passing at least 24 semester credits that apply to Pathways requirements
- Passing the following courses or their equivalents: BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology and MATH 1025 Elementary Calculus

Graduation Requirements

Environmental Conservation & Society Notes

1. **Minimum credit hours required for graduation is 120.**
2. An in-major and overall GPA of 2.0 is required for graduation.
3. **In-major GPA Computation:** Includes all courses designated as FIW, FREC, GEOG, NR, and SBIO.
4. In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g., Pathways requirements).
5. **Prerequisites:** Some courses must be taken in sequence to satisfy prerequisites. Check prerequisites for each course carefully as these are determined by each department individually. Consult with the University Course Catalog, Timetable of Classes, and your advisor.
6. **Policy on Student Exchanges:** If studying overseas or at another U.S. university, begin planning at least 9 months prior to your departure to allow time to determine what substitutions, if any, will be allowed and to arrange your schedule to ensure that all requirements for graduation will be met.

Acceptable Substitutions

- STAT 3604 Statistics for Social Science or STAT 3615 Biological Statistics: STAT 3005 Statistical Methods
- MATH 1025 Elementary Calculus: MATH 1225 Calculus of a Single Variable

Foreign Language Requirement

Foreign Language Requirement: A sequence of two (2) foreign language courses is required for graduation unless two (2) high school credits of the same foreign language or six (6) transfer credit hours of foreign language have been earned. These credits do not count toward graduation. See catalog section on "Graduation Requirements."

Environmental Data Science Major

Program Curriculum

Code	Title	Credits
Minimum credit hours required for graduation is 120.		
Degree Core Requirements (19 credits)		
FREC 2214	Introduction to Land and Field Measurements	3
FREC 2314	Forest Biology and Dendrology	2
FREC 2324	Dendrology Laboratory	1
FREC 2614	Human-Environment Systems	3
FREC/NR 4004	Professional Skills in Natural Resources	1
FREC/NR 4014	Natural Resources Economics	3
FREC 4114	Information Technologies for Natural Resource Management	3
FREC 4434	Natural Resource Policy	3
Subtotal		19
Environmental Data Science Major Requirements		
Computational Requirements		
BIT 3424	Introduction to Business Analytics Modeling	3
BIT 3514	Systems Analysis	3
BIT 3524	Database Management and Design	3

Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States [1]		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		45-47
Free Electives		
Select additional credit hours to total at least 120		21
Total Credits		**120-123**

[1] Some courses have prerequisite or enrollment restrictions. Consult the undergraduate course catalog or the timetable of classes for more information.

Environmental Data Science Notes

1. **Satisfactory Progress:** By the end of the semester in which the student has attempted 60 hours (including transfer, advanced placement, advanced standing, and credit by examination), "satisfactory progress" towards a B.S. degree in Forest Resources

and Environmental Conservation will include the following minimum criteria:

- Having an in-major and overall grade point average (GPA) of at least 2.0.
- Passing at least 24 semester credits that apply to Pathways for General Education
- Passing the following courses, or their equivalents: BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology and BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory; MATH 1025 Elementary Calculus or MATH 1225 Calculus of a Single Variable.

Graduation Requirements

1. **Degree Requirements:** An in-major and overall GPA of 2.0 is required for graduation.
2. **Minimum hours for degree is 120.**
3. In accordance with university guidelines, courses stratifying degree core requirements may not be double counted to satisfy other areas of a degree (e.g. Pathways requirements).
4. **Policy on Student Exchange:** If studying overseas or at another U.S. university, begin planning at least 9 months prior to your departure to allow time to determine what substitutions, if any, will be allowed and to arrange your schedule to ensure that all requirements for graduation will be met.
5. **In-major GPA Computation:** All degree core and Environmental Data Science major requirements will factor into the in-major GPA.
6. **Curriculum Planning:** Students should plan early with their advisors to determine appropriate sequences for their courses. Some courses must be taken in sequence to satisfy prerequisites.

Acceptable Substitutions

1. STAT 3615 Biological Statistics: STAT 3005 Statistical Methods
2. BIOL 1105 Principles of Biology: CHEM 1035 General Chemistry
3. BIOL 1115 Principles of Biology Laboratory: CHEM 1045 General Chemistry Laboratory

Foreign Language Requirement

Foreign Language Requirement: A sequence of two (2) foreign language courses is required for graduation unless two (2) high school credits of the same foreign language or six (6) transfer credit hours of foreign language have been earned. These credits do not count toward graduation. See catalog section on "Graduation Requirements."

Note: Students do not need to follow this plan exactly. This is an example plan.

First Year		
Fall Semester		**Credits**
COMM 1015 or ENGL 1105	Communication Skills (Pathway 1f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01F)) or First-Year Writing	3
BIOL 1105	Principles of Biology (Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04))	3
BIOL 1115	Principles of Biology Laboratory	1
MATH 1025 or MATH 1225	Elementary Calculus (Pathway 5f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05F)) [1] or Calculus of a Single Variable	3
FREC 1044	Introduction to Environmental Data Science	3
Pathways Core Concept (example: Pathways 2 Course)		3
	Credits	**16**
Spring Semester		
COMM 1016 or ENGL 1106	Communication Skills (Pathway 1f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01F)) or First-Year Writing	3
BIOL 1106	Principles of Biology (Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04))	3
BIOL 1116	Principles of Biology Laboratory	1
MATH 1026 or MATH 1226	Elementary Calculus (Pathway 5f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05F)) or Calculus of a Single Variable	3
CS 1064 or CS 1114 or CS 1044	Introduction to Programming in Python [2] or Introduction to Software Design or Introduction to Programming in C	3
Free Electives		3
	Credits	**16**
Second Year		
Fall Semester		
FREC 2214	Introduction to Land and Field Measurements	3
FREC 2314	Forest Biology and Dendrology	2
FREC 2324	Dendrology Laboratory	1
Pathways Core Concept (example: Pathways 2 Course)		3
Pathways Core Concept (example: Pathways 3 Course)		3
Free Electives		3
	Credits	**15**
Spring Semester		
FREC 2004	Forest Ecosystems	3
FREC 2614	Human-Environment Systems	3
AAEC 1005 or ECON 2005	Economics of the Food and Fiber System (Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)) or Principles of Economics	3
Pathways Core Concept (example: Pathways 7 Course)		3
STAT 3615	Biological Statistics (Pathway 5a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05A))	3
	Credits	**15**
Third Year		
Fall Semester		
FREC 4114	Information Technologies for Natural Resource Management	3
FREC 4004	Professional Skills in Natural Resources	1
BIT 3424	Introduction to Business Analytics Modeling [3]	3
STAT 3616 or MATH 2114 or CS 2064	Biological Statistics or Introduction to Linear Algebra or Intermediate Programming in Python	3
Free Electives		3
	Credits	**13**
Spring Semester		
FREC 3044	Environmental Data Science	3
FREC 4214	Forest Photogrammetry and Spatial Data Processing	3
BIT 3514	Systems Analysis	3
Pathways Core Concept (example: Pathways Concept 6D Course)		3
Free Electives		3
	Credits	**15**

Fourth Year		
Fall Semester		
FREC 4014	Natural Resources Economics	3
Pathways Core Concept (example: Pathways Concept 1A Course)		3
BIT 3524	Database Management and Design	3
Free Electives		3
Free Electives		3
	Credits	**15**
Spring Semester		
FREC 4434	Natural Resource Policy	3
FREC 4044	Environmental Data Science Capstone	3
Students may choose FREC 4244 or FREC 3214 . If student chooses FREC 3214, FREC 3224 must be taken as well.		
FREC 4244 or FREC 3214	Hydroinformatics or Forest Biometrics	3
Pathways Core Concept (example: Pathways Concept 6A Course)		3
Free Electives		3
	Credits	**15**
	Total Credits	**120**

New Footnote

1 Students planning to take MATH 2114 must select MATH 1225.

2 Students planning to take CS 2064 must select CS 1064.

3 EDS students must force-add BIT 3424; consult with advisor about prerequisites and force-add procedure.

Environmental Resources Management Major

Program Curriculum

Code	Title	Credits
Minimum credit hours required for graduation is 120. Prerequisites or enrollment restrictions may apply to some courses. Consult the undergraduate course catalog or the timetable of classes.		
Degree Core Requirements (19 credits)		
FREC 2214	Introduction to Land and Field Measurements [1]	3
FREC 2314	Forest Biology and Dendrology [1]	2
FREC 2324	Dendrology Laboratory	1
FREC 2614	Human-Environment Systems [1]	3
FREC/NR 4004	Professional Skills in Natural Resources	1
FREC/NR 4014	Natural Resources Economics [1]	3
FREC 4114	Information Technologies for Natural Resource Management [1]	3
FREC 4434	Natural Resource Policy [1]	3
Subtotal		19
Major Requirements (39 credits)		
BIOL 1115	Principles of Biology Laboratory [1]	1
BIOL 1116	Principles of Biology Laboratory [1]	1
CHEM 1035	General Chemistry [1]	3
CHEM 1045	General Chemistry Laboratory [1]	1
ENSC 3134	Soils in the Landscape	3

FREC 2004	Forest Ecosystems [1]	3
or FREC 3314	Forest Ecology and Silvics	
FREC 2414	Field Experience in Forest Resources and Environmental Conservation	2
FREC/HORT 3354	Trees in the Built Environment	3
or FREC 4334	Principles and Practice of Agroforestry	
FREC 3364	Environmental Silviculture (Pathways 6 Design)	3
FREC 4214	Forest Photogrammetry and Spatial Data Processing [1]	3
or GEOG 4354	Introduction to Remote Sensing	
FREC 4354	Forest Soil and Watershed Management [1]	3
FREC 4374	Forested Wetlands [1]	3
FREC/AAEC/ WATR 4464	Water Resources Policy and Economics (Pathways 3 and 7) [1]	3
GEOS 1024	Earth Resources, Society, and Environment	3
or GEOS 1004	Earth Science: Our Past, Present, and Future	
GEOS 1124	Earth Resources, Society and Environment Laboratory	1
or GEOS 1104	Introduction to Earth Sciences Laboratory	
Subtotal		39
Restricted Electives (15 to 16 credits - see accompanying lists)		
Global Environmental Issues Restricted Elective		
Select one of the following:		3
AAEC 3204	International Agricultural Development and Trade (Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)) [1]	
FREC 2124	Forests, Society & Climate (Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03) or Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04))	
FREC 4134	Forest Carbon Management and Policy	
FREC/IS/PSCI 4174	Climate Change and the International Policy Framework	
GEOG 3104	Environmental Justice, Resources and Development (Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03))	
GEOG 4204	Geography of Resources [1]	
GEOG/SOC/ UAP 4764	International Development Policy and Planning	
SBIO 2504	Circular Economy Analytics for Sustainable Systems	
UAP/PSCI 3344	Global Environmental Issues: Interdisciplinary Perspectives [1]	
UAP/GEOG/ WGS 4214	Gender, Environment, and International Development [1]	
Law Restricted Elective		
Select one of the following:		3
AAEC 3314	Environmental Law	
AAEC 3604	Agricultural Law	
FIN 3054	Legal and Ethical Environment of Business [1]	
UAP 4344	Law of Critical Environmental Areas	
UAP 4754	Legal Foundations of Planning [1]	
Public Relations Restricted Elective		
Select one of the following:		3
ENGL 4804	Grant Proposals and Reports [1]	

FREC 3524	Environmental Interpretation (Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A))	
HUM/RLCL 3204	Multicultural Communication (Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03))	
PR 2044	Principles of Public Relations	
SPIA 2554	Collaborative Policy-Making and Planning (Pathways Concept 3 - Reasoning in the Social Sciences Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States)	
Urban Environments Restricted Elective		
Select one of the following:		3
FREC/HORT 2134	Plants and Greenspaces in Urban Communities (Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04))	
FREC 4454	Urban and Community Forestry (Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A))	
GEOG 3244	The U.S. City [1]	
UAP 2014		
UAP 3354	Introduction to Environmental Policy and Planning	
UAP 4374	Land Use and Environment: Planning and Policy [1]	
Water Restricted Elective		
Select one of the following:		3-4
BIOL 4004	Freshwater Ecology [1]	
BIOL/ENT 4354	Aquatic Entomology [1]	
FIW 4534	Ecology and Management of Wetland Systems [1]	
FIW 4614	Fish Ecology [1]	
FREC/WATR 3104	Principles of Watershed Hydrology [1,2]	
FREC/WATR 3754	Watersheds and Water Quality Monitoring [1]	
FREC 4784	Wetland Hydrology and Biogeochemistry	
Subtotal		15-16

BIOL 1105	Principles of Biology	3
BIOL 1106	Principles of Biology	3
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1025	Elementary Calculus	3-4
or MATH 1225	Calculus of a Single Variable	
MATH 1026	Elementary Calculus	3-4
or MATH 1226	Calculus of a Single Variable	
STAT 3615	Biological Statistics [1]	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
FREC 3364	Environmental Silviculture [1]	3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
FREC/AAEC/WATR 4464	Water Resources Policy and Economics	3
Subtotal		45-47
Total Credits		**120-123**

[1] Prerequisites or enrollment restrictions may apply to some courses. Some of the listed courses must be taken in sequence to satisfy prerequisites. Be sure to consult the University undergraduate course catalog, timetable of classes, or check with your advisor.

1. **Satisfactory Progress:** By the end of the semester in which the student has attempted 60 hours (including transfer, advanced placement, advanced standing, and credit by examination), "satisfactory progress" towards a B.S. degree in Forest Resources and Environmental Conservation will include the following minimum criteria:
   - Having an in-major and overall grade point average of at least 2.0
   - Passing at least 24 semester credits that apply to Pathways General Education requirements
   - Passing the following courses or their equivalents: BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, and BIOL 1116 Principles of Biology Laboratory; CHEM 1035 General Chemistry and MATH 1026 Elementary Calculus.

Graduation Requirements

Environmental Resource Management Notes

Minimum credit hours required for graduation is 120.

1. **In-major grade point average computation:** Includes all courses designated as FIW, FREC, GEOG, NR, SBIO, GEOS, and WATR.
2. An in-major and overall GPA of at least 2.0 is required for graduation.
3. In accordance with university guidelines, courses satisfying degree core requirements may not be double-counted to satisfy other areas of a degree (e.g., Pathways requirements) .
4. **Policy on Student Exchanges:** If studying overseas or at another U.S. university, begin planning at least 9 months prior to your departure to allow time to determine what substitutions, if any, will be allowed

and to arrange your schedule to ensure that all requirements for graduation will be met.

For students interested in pursuing hydrology positions in the federal government, please note:

US Office of Personnel Management: Hydrology Qualification Standards: Basic Requirements:
Degree: physical or natural science, or engineering that included at least 30 semester hours in any combination of courses in hydrology, the physical sciences, geophysics, chemistry, engineering science, soils, mathematics, aquatic biology, atmospheric science, meteorology, geology, oceanography, or the management or conservation of water resources. The course work must have included at least 6 [credit hours] in calculus (including both differential and integral calculus, e.g., MATH 1025 Elementary Calculus and MATH 1026 Elementary Calculus), and at least 6 [credit hours] in physics (e.g., PHYS 2205 General Physics and PHYS 2206 General Physics).
The Watershed Management minor will facilitate completion of additional water-related coursework that may be beneficial for those seeking federal hydrology positions. For full information, consult your advisor.

Acceptable Substitutions

1. **Acceptable Substitutions:** The following requirements have acceptable substitutions .
   - STAT 3615 Biological Statistics: STAT 3005 Statistical Methods
   - ENSC 3134 Soils in the Landscape : CSES 3114 Soils

Foreign Language Requirement

1. **Foreign Language Requirement:** A sequence of two (2) foreign language courses is required for graduation unless two (2) high school credits of the same foreign language or six (6) transfer credit hours of foreign language have been earned. These credits do not count toward graduation. See catalog section on "Graduation Requirements."

Forestry Major

Code	Title	Credits
Degree Core Requirements		
FREC 2214	Introduction to Land and Field Measurements [1]	3
FREC 2314	Forest Biology and Dendrology [1]	2
FREC 2324	Dendrology Laboratory	1
FREC 2614	Human-Environment Systems [1]	3
FREC/NR 4004	Professional Skills in Natural Resources [1]	1
FREC/NR 4014	Natural Resources Economics [1]	3
FREC 4114	Information Technologies for Natural Resource Management [1]	3
FREC 4434	Natural Resource Policy [1]	3
Subtotal		19
Major Requirements		
ENSC 3134	Soils in the Landscape [1]	3
FIW 2114	Principles of Fish and Wildlife Conservation	3
FREC 2514	Wildland Fire: Ecology and Management [1]	3
FREC 3214	Forest Biometrics (Pathways Concept 5 - Quantitative and Computational Thinking)	3
FREC 3314	Forest Ecology and Silvics [1]	3
FREC 3724	Forest Boundaries and Roads [1]	3
FREC 4214	Forest Photogrammetry and Spatial Data Processing [1]	3
FREC 4514	Forest and Tree Pest Management [1]	3
Subtotal		24
Forestry Track Requirements		
Students must customize their curriculum to complete one of the following forestry major tracks by completing courses listed under their chosen track.		
Forest Resource Management Track		
Forest Operations and Business Track		
Urban and Community Track		
Subtotal		28-34
Free Electives		
Select additional credits to total 120 credits. (Students may need to complete less credit hours depending on choices in track and Pathways requirements.)		7-13
Subtotal		35-47
Pathways to General Education		
Pathways Concept 1 - Discourse		
COMM 1015	Communication Skills	3
or ENGL 1105	First-Year Writing	
COMM 1016	Communication Skills	3
or ENGL 1106	First-Year Writing	
Select one of the following:		3
FREC 3734	Forest Fiber Supply (Forest Resource Management Track, Forest Operations and Business Track) [1]	
FREC 4454	Urban and Community Forestry (Urban and Community Forestry Track) [1]	
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
AAEC 1005	Economics of the Food and Fiber System	3
or ECON 2005	Principles of Economics	
AAEC 1006	Economics of the Food and Fiber System	3
or ECON 2006	Principles of Economics	
Pathways Concept 4 - Reasoning in the Natural Sciences		
BIOL 1105	Principles of Biology	3
BIOL 1106	Principles of Biology	3
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1025	Elementary Calculus	3-4
or MATH 1225	Calculus of a Single Variable	
MATH 1026	Elementary Calculus	3-4
or MATH 1226	Calculus of a Single Variable	
FREC 3214	Forest Biometrics (Pathways Concept 5 - Quantitative and Computational Thinking) [1]	
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
Select one of the following:		3

FREC 4444	Integrated Forest Management Practicum (Forest Resource Mnagement Track, Forest Operations and Business Track)	
FREC 3364	Environmental Silviculture (Urban and Community Forestry Track) [1]	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credit hours in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07) [2]		3
Subtotal		42-44
Total Credits		**120-134**

[1] Prerequisites, corequisites, or other enrollment restrictions may apply to some courses. Consult the undergraduate course catalog or the timetable of classes for more information.

[2] A course taken to satisfy another Pathways concept that is listed with Pathways Concept 7 will satisfy Concept 7 requirements simultaneously.

Forest Resource Management Track

Code	Title	Credits
ACIS 1004	Accounting Foundations	3
or ACIS 2115	Principles of Accounting	
CHEM 1035	General Chemistry [1]	3
FREC 2414	Field Experience in Forest Resources and Environmental Conservation	2
FREC 3224	Forest Measurements Field Laboratory [1]	1
FREC 3324	Silviculture Principles and Applications [1]	4
FREC 3544	Outdoor Recreation Planning and Management [1]	3
or FREC 3354	Trees in the Built Environment	
FREC 3714	Forest Harvesting [1]	3
FREC 3734	Forest Fiber Supply (Pathways Concept 1 - Discourse) [1]	3
FREC 4354	Forest Soil and Watershed Management [1]	3
FREC 4444	Integrated Forest Management Practicum (Pathways 6 Design)	3
Subtotal		28
Free Electives		
Estimated free electives for Forest Resource Management Track [2]		11-13

[1] Prerequisites, corequisites, or other enrollment restrictions may apply to some courses. Consult the undergraduate course catalog or the timetable of classes for more information.

[2] Students complete free electives to reach the minimum 120 credits required for graduation. Free elective estimations are calculated utilizing available overlap between major/track requirements and Pathways requirements.

Forest Operations and Business Track

Code	Title	Credits
ACIS 1004	Accounting Foundations	3
or ACIS 2115	Principles of Accounting	
FREC 2414	Field Experience in Forest Resources and Environmental Conservation	2
FREC 3224	Forest Measurements Field Laboratory [1]	1
FREC 3324	Silviculture Principles and Applications [1]	4
FREC 3714	Forest Harvesting [1]	3
FREC 3734	Forest Fiber Supply (Pathways Concept 1 - Discourse) [1]	3
FREC 4444	Integrated Forest Management Practicum (Pathways Concept 6 - Critique and Practice in Design and the Arts)	3
FREC 4714	Harvesting Systems Evaluation [1]	3
Business Restricted Electives		
Select 12 credits from the following: (substitutions possible with approval)		12
AAEC 2104	Personal Financial Planning	
AAEC 3454	Small Business Management and Entrepreneurship	
AAEC 3504	Marketing Agricultural Products [1]	
AAEC 4424	Ag Financial Management [1]	
ACIS 2116	Principles of Accounting [1]	
ENGL 3764	Technical Writing [1]	
or ENGL 377	Business Writing	
FIN 2114	Investments and Financial Literacy	
FIN 3054	Legal and Ethical Environment of Business [1]	
FIN 3104	Introduction to Finance [1]	
FREC 4024	Forest Resources Management and Business [1]	
MGT 2064	Foundations of Entrepreneurship	
MGT 3304	Management Theory and Leadership Practice	
MKTG 3104	Marketing Management	
REAL 2004	Principles of Real Estate	
REAL 4064	Real Estate Appraisal	
REAL 4754	Real Estate Law [1]	
or AAEC 331	Environmental Law	
SBIO 2614	Introduction to Forest Products Marketing	
Subtotal		34
Free Electives		
Estimated free electives for Forest Operations and Business Track [2]		5-7

[1] Prerequisites, corequisites, or other enrollment restrictions may apply to some courses. Consult the undergraduate course catalog or the timetable of classes for more information.

[2] Students complete free electives to reach the minimum 120 credits required for graduation. Free elective estimations are calculated utilizing available overlap between major/track requirements and Pathways requirements.

Urban and Community Forestry Track

Code	Title	Credits
CHEM 1035	General Chemistry [1]	3
FREC 2254	Arboriculture Field Skills	1
or FREC 3454	Trees in the Built Environment Lab	
FREC 3354	Trees in the Built Environment	3
FREC 3364	Environmental Silviculture (Pathways Concept 6 - Critique and Practice in Design and the Arts) [1]	3
FREC 4454	Urban and Community Forestry (Pathways Concept 1 - Discourse) [1]	3

HORT 3325	Woody Landscape Plants	3
or HORT 3326	Woody Landscape Plants	
Applied Plant and Environmental Sciences Restricted Electives		
Select six credits from the following:		6
ENSC 4244	Ecological Restoration [1]	
ENT 4254	Insect Pest Management	
FREC 4354	Forest Soil and Watershed Management [1]	
HORT/FREC 2134	Plants and Greenspaces in Urban Communities	
LAR 1254	Environment and Natural Systems	
PPWS 2754	Weeds That Shape Our World [1]	
PPWS 4104	Plant Pathology [1]	
PPWS 4264	Pesticide Usage	
PPWS 4604	Biological Invasions [1]	
Policy, Planning, and Public Relations Restricted Electives		
Select six credits from the following:		6
AAEC 3314	Environmental Law	
FREC 3544	Outdoor Recreation Planning and Management [1]	
FREC/BSE/ LAR/HORT/ SPIA 4554	Creating the Ecological City	
GEOG 3244	The U.S. City [1]	
LAR 4034	Evolution of the American Landscape	
PR 2044	Principles of Public Relations	
PSCI/UAP 3344	Global Environmental Issues: Interdisciplinary Perspectives [1]	
PSCI 3424	State and Local Government [1]	
PSCI 3434	Urban Politics [1]	
SPIA/GEOG 2244	Sustainable Urbanization	
SPIA 2554	Collaborative Policy-Making and Planning	
SPIA 4454	Future of Cities	
UAP 2014		
UAP 4344	Law of Critical Environmental Areas	
UAP 4374	Land Use and Environment: Planning and Policy [1]	
Subtotal		28
Free Electives		
Estimated Free Electives for Urban and Community Forestry Track [2]		10-12

[1] Prerequisites, corequisites, or other enrollment restrictions may apply to some courses. Consult the undergraduate course catalog or the timetable of classes for more information.

[2] Students complete free electives to reach the minimum 120 credits required for graduation. Free elective estimations are calculated utilizing available overlap between major/track requirements and Pathways requirements.

1. **Satisfactory Progress:** By the end of the semester in which the student has attempted 60 hours (including transfer, advanced placement, advanced standing, and credit by examination), "satisfactory progress" towards a B.S. degree in Forest Resources and Environmental Conservation will include the following minimum criteria:
   - Having an in-major and overall grade point average of at least 2.0
   - Passing at least 24 semester credits that apply to the Pathways to General Education
   - Passing the following courses, or their equivalents: BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, and MATH 1025 Elementary Calculus

Graduation Requirements

Minimum credit hours required for graduation is 120.

Forestry Notes

1. Policy on Student Exchanges: If studying overseas or at another U.S. university, begin planning at least 9 months prior to your departure to allow time to determine what substitutions, if any, will be allowed and to arrange your schedule to ensure that all requirements for graduation will be met.
2. In-major GPA Computation: Includes all courses designated as FREC.
3. An in-major and overall GPA average of 2.0 is required for graduation.
4. In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g. Pathways to General Education).
5. Prerequisites: Some of the listed courses have prerequisites and some courses must be taken in sequence to satisfy prerequisites. Be sure to consult with the University Catalog or check with your advisor.

Acceptable Substitutions

1. **Acceptable Substitutions:** The following requirements have acceptable substitutions.
   a. ENSC 3134 Soils in the Landscape: CSES 3114 Soils

Foreign Language Requirement

Foreign Language Requirement: A sequence of two (2) foreign language courses is required for graduation unless two (2) high school units of the same foreign language or six (6) transfer credit hours of foreign language have been earned. These credits do not count toward graduation. See catalog section on "Graduation Requirements" .

Water: Resources, Policy, and Management Major

Code	Title	Credits
Degree Core Requirements (20 credits)		
ENSC 3604	Fundamentals of Environmental Science	3
PHYS 2205	General Physics	3
WATR/GEOG 2004	Water, Environment, and Society	3
WATR/FREC 3104	Principles of Watershed Hydrology	3
WATR/FREC 3754	Watersheds and Water Quality Monitoring	3
WATR/FREC/ AAEC 4464	Water Resources Policy and Economics	3
WATR/ALS 4614	Watershed Assessment, Management, and Policy	2
Subtotal		20

Major Requirements (42 credits)		
BIOL 1116	Principles of Biology Laboratory	1
CHEM 1045	General Chemistry Laboratory	1
GEOG 1524	Introduction to Earths Climate	3
GEOG/GEOS 4134	Interdisciplinary Issues and Ethics in Water Resources	3
PHYS 2215	General Physics Laboratory	1
WATR/FREC 4244	Hydroinformatics	3
Water Law and Planning requirement (3 credits - choose 1 course)		
AAEC 3314	Environmental Law	3
or UAP 3354	Introduction to Environmental Policy and Planning	
or UAP 4344	Law of Critical Environmental Areas	
or UAP 4374	Land Use and Environment: Planning and Policy	
Geospatial Technology requirement (3 credits - choose 1 course)		
FREC 4114	Information Technologies for Natural Resource Management	3
or FREC 4214	Forest Photogrammetry and Spatial Data Processing	
or GEOG 2084	Principles of Geographic Information Systems	
or GEOG 4354	Introduction to Remote Sensing	
Water Science and Water Policy Specializations:		
As part of the Major Requirements, students must complete both a Water Science and a Water Policy Specialization. For each section below, complete 12 credits. Choose 9 credits in one specialization area; for the remaining 3 credits, select any approved specialization course. See specialization course list attached.		
Water Science Specialization		
Select 9 credits in one of the three specializations areas below and an additional 3 credits from any Water Science course listed under specializations. (12 credits total)		*12*
I. Aquatic Ecosystems		
II. Hydrology		
III. Water Quality		
Water Policy Specialization		
Select 9 credits in one of the two specializations areas below and an additional 3 credits from any Water Policy course listed under specializations. (12 credits total)		*12*
I. Water Planning, Policy, and Economics		
II. Water, Climate, Energy, and Global Issues		
Restricted Electives		
Select 6 credits from courses listed under Water Science Specializations or Water Policy Specializations or from those listed as Restricted Electives.		6
Select remaining credits of Free Electives		7
Pathways Requirements (45 Pathways credits)		
1. Discourse (9 credits: 6 foundational credits, 3 applied/advanced)		*9*
Select 6 credits in Pathways Concept 1F - Discourse - Foundational		
Select 3 credits in Pathways Concept 1A - Discourse -Applied / Advanced; select one of the following:		
ENGL 2844	Introduction to Professional and Technical Writing	
or ENGL 3764	Technical Writing	
2. Critical Thinking in the Humanities (6 credits)		
Select six credits in Pathways Concept 2 - Critical Thinking in the Humanities		6
3. Reasoning in the Social Sciences (6 credits)		*6*
Select three credits in Pathways Concept 3 - Reasoning in the Social Sciences		
AAEC 1005	Economics of the Food and Fiber System	
or ECON 2005	Principles of Economics	
4. Reasoning in the Natural Sciences (6 credits)		*6*
BIOL 1106	Principles of Biology	
CHEM 1035	General Chemistry	
5. Quantitative and Computational Thinking (9 credits: 6 foundational credits, 3 applied/advanced credits) [1]		*9*
MATH 1025	Elementary Calculus	
or MATH 1225	Calculus of a Single Variable	
MATH 1026	Elementary Calculus	
or MATH 1226	Calculus of a Single Variable	
STAT 3615	Biological Statistics	
6. Critique and Practice in Design and the Arts (6 credits: 3 design & 3 arts, or 6 integrated)		
Select three credits in Pathway 6a and three credits in Pathway 6d		6
7. Critical Analysis of Identity and Equity in the United States (3 credits) - may be double counted with another core outcome or major requirement		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07) *		3
Total Credits		**120**

* May be double-counted with another core outcome or major requirement

Water Science Specialization Courses

Aquatic Ecosystems

Code	Title	Credits
BIOL 4004	Freshwater Ecology	4

UAP 3024	Urban and Regional Analysis	3
UAP 4754	Legal Foundations of Planning	3

- **Satisfactory Progress:** By the end of the semester in which the student has attempted 60 credits (including transfer, advanced placement, advanced standing, and credit by examination), "satisfactory progress" towards a B.S. degree in Water: Resources, Policy, and Management will include the following minimum criteria:
- Having an in-major and overall grade point average of at least 2.0
- Passing at least 24 semester credits that apply to Pathways Requirements
- Passing the following courses, or their equivalents: BIOL 1106 Principles of Biology, BIOL 1116 Principles of Biology Laboratory; CHEM 1035 General Chemistry, CHEM 1045 General Chemistry Laboratory; and MATH 1026 Elementary Calculus

Graduation Requirements

Minimum credits required for graduation is 120.

1. **Many of the courses have prerequisites, corequisites, or other registration restrictions. Please see the University Course Catalog for more information.**
2. **GPA for Graduation:** An in-major and overall GPA of 2.0 is required for graduation.
3. In accordance with university guidelines, courses satisfying degree core requirements may not be double counted to satisfy other areas of a degree (e.g., Pathways Requirements).
4. **American Institute of Hydrology - Educational Criteria:** This is an option for students interested in pursuing a Professional Hydrology certification with the American Institute of Hydrology after completing their B.S. and five years of experience. See American Institute of Hydrology Professional Hydrology Certification Application Process for specific requirements and for basic education requirements.

US Office of Personnel Management: Hydrology Qualification Standards:
Basic Requirements:
Degree: physical or natural science, or engineering that included at least 30 semester hours in any combination of courses in hydrology, the physical sciences, geophysics, chemistry, engineering science, soils, mathematics, aquatic biology, atmospheric science, meteorology, geology, oceanography, or the management or conservation of water resources. The course work must have included at least 6 semester hours in calculus (including both differential and integral calculus, e.g., MATH 1025 Elementary Calculus and MATH 1026 Elementary Calculus), and at least 6 semester hours in physics (e.g., PHYS 2205 General Physics and PHYS 2206 General Physics).

Notes:

1. Certain courses provide experiential learning opportunities as a significant component of the course (e.g., field labs, certifications, real-world data, computer programming, etc.). Courses with significant field components include ENT/BIOL/FIW 4484 Freshwater Biomonitoring, FREC 4374 Forested Wetlands, BSE 4224 Field Methods in Hydrology, CSES 3124 Soils Laboratory/GEOS 3624 Soils Laboratory. A course with a significant programming component is GEOG 4254 R Programming for Geospatial Applications. Courses with available certification: ENSC 4414 Monitoring and Analysis of the Environment (Optional 40-hour Hazardous Materials (HAZMAT) training available)."
2. **In-Major GPA Computation:** Degree core requirements and major requirements (with the exception of PHYS 2205 and Lab major requirements) count toward in-major GPA. This includes courses in the water science specialization and water policy specialization. For restricted electives and free electives, any course taken from either a water science specialization or a water policy specialization counts toward the in-major GPA.
3. **Policy on Student Exchanges:** If studying overseas or at another U.S. university, begin planning at least 9 months prior to your departure to allow time to determine what substitutions, if any, will be allowed and to arrange your schedule to ensure that all requirements for graduation will be met.

Acceptable Substitutions

Acceptable Substitutions: The following requirements have acceptable substitutions.

- PHYS 2205 General Physics/PHYS 2215 General Physics Laboratory: PHYS 2305 Foundations of Physics
- CHEM 1035 General Chemistry/CHEM 1045 General Chemistry Laboratory: CHEM 1055 General Chemistry for Chemistry Majors
- STAT 3615 Biological Statistics /STAT 3005 Statistical Methods

Foreign Language Requirement

Foreign Language Requirement: Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six (6) semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Geography

Our Website (http://www.geography.vt.edu)

Geography Degree Program

Geography offers a unique perspective on many of today's most important issues--from globalization, international development, and

culture change to environmental problems, population growth, and climate change. Its theories and methods provide analytical techniques applicable to a wide range of questions significant to a broad spectrum of occupations. The geography major provides a balance between an education focusing on contemporary social, political, economic, and environmental issues and training in advanced computer-based techniques.

Human geography is concerned with the spatial dimensions of human existence, the economy, politics, and culture as well as the relationshsips between humans and their environments.

Physical geographers study patterns of climate, landforms, vegetation, soils, water, and natural hazards and particularly the processes that produce those patterns, including human-environment interactions.

Geospatial science involves Geographic Information Systems (GIS), Global Positioning Systems (GPS), web services, and remote sensing. These technologies have led to significant advances in the ways in which geographic information is collected, mapped, analyzed, and integrated in database and decision-making systems. All students are exposed to these technologies as they are integral to working in the field today regardless of specialization and topic of interest.

Training in geography provides valuable, marketable skills that are in high demand in business, government, and education. Geography majors obtain employment in such diverse fields as geographic information systems, satellite imagery analysis, planning, transportation, market analysis, health care analysis, cartography (map making), land and water management, recreation, and environmental conservation. Our students and graduates have worked with county, state, and federal agencies, privte firms, non-profit organizations, and international organizations. Employment opportunities are especially strong for students obtaining advanced training in geospatial computer techniques, which are used by both human and physical geographers.

Geography Major Degree Requirements

The department offers courses in human geography, physical geography, and geospatial information science. In addition to fulfilling the requirements of the Pathways to General Education curriculum, geography majors must also complete 45 hours in geography and related disciplines. All must take GEOG 1004 Introduction to Human Geography, GEOG 1014 World Regions, GEOG 1084 Digital Planet, GEOG 1104 Introduction to Physical Geography, GEOG 2084 Principles of Geographic Information Systems, GEOG 2314 Maps and Mapping, GEOG 3314 Cartography and either STAT 3604 Statistics for Social Science or STAT 3615 Biological Statistics. Majors must also complete a field experience of at least 3 credit hours from GEOG 2964 Field Study, GEOG 2994 Undergraduate Research, GEOG 3954 Study Abroad, GEOG 4964 Field Study, or GEOG 4994 Undergraduate Research. Additionally, students must complete 18 credits of geography major courses and 3 credits from a cognate elective area. Students are directed to see the department's academic advisor and consult checksheets to confirm requirement for their graduation year. The Geography major leads to the B.A. in Geography degree.

The graduation requirements in effect during the academic year of admission to Virginia Tech apply. Requirements for graduation are listed on checksheets. Students must satisfactorily complete all requirements and university obligations for degree completion. The university reserves the right to modify requirements in a degree program.

Please visit the University Registrar's website at https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html for degree requirements.

Meteorology Degree Program

Meteorology is a science that analyzes conditions in the atmosphere and the impacts of weather and climate on the surface of the Earth. Importantly, meteorologists use specialized training to predict and forecast weather conditions and the potential ways humans may be affected by weather and climate, and then communicate that information to decision-makers and the general public.

Our meteorology program integrates geospatial science and climate science into the meteorology core coursework, which allows our graduates to work in the exciting nexus between the atmosphere and the ground beneath it. Today's meteorologists access a wide range of careers in society ranging from forecasting and reporting for multi-media, aiding industry in assessing severe weather impacts on business infrastructure and supply chains, blogging and software development, research, and forecasting for military or federal careers. Our students and graduates have worked with the National Weather Service (Blacksburg office and others), National Severe Storms Laboratory, the Weather Channel, as on-air television meteorologists, as officers with military appointments, and with government and private agencies.eorology degree and provides full credentials to work for the federal government as certified meteorologist.

Degree Requirements

As part of fulfilling the requirements of the Pathways to General Education, meteorology majors must MATH 1225 Calculus of a Single Variable and MATH 1226 Calculus of a Single Variable in addition to PHYS 2205 General Physics/PHYS 2215 General Physics Laboratory and PHYS 2206 General Physics/PHYS 2216 General Physics Laboratory or PHYS 2305 Foundations of Physics and PHYS 2306 Foundations of Physics. Meteorology majors must also complete 76 hours in geography/meteorology and related disciplines. All must take GEOG 1004 Introduction to Human Geography, GEOG 1014 World Regions, GEOG 1084 Digital Planet, GEOG 1104 Introduction to Physical Geography, GEOG 1504 Survey of Meteorology, GEOG 1514 Introduction to Meteorology, GEOG 2084 Principles of Geographic Information Systems, GEOG 2314 Maps and Mapping, GEOG 2505 Weather Analysis I, GEOG 2506 Weather Analysis II, GEOG 3314 Cartography, GEOG 3504 Severe Weather, GEOG 4084 Modeling with Geographic Information Systems, GEOG 4354 Introduction to Remote Sensing, and GEOG 4554 Remote Sensing of Atmosphere. All students must also -complete MATH 1114 or MATH 2114 Introduction to Linear Algebra, MATH 2214 Introduction to Differential Equations and STAT 3604 Statistics for Social Science or STAT 3615 Biological Statistics. Furthermore, all students are required to complete a field experience of at least 3 credit hours from MTRG 2964 Field Study, MTRG 3524 Meteorology Field Methods, MTRG 3954 Study Abroad, MTRG 4584 Topics in Applied Meteorology, or MTRG 4994 Undergraduate Research. Students must take three courses of restricted electives. Students are directed to see the department's academic advisor and consult checksheets to confirm requirements for their graduation year. The Meteorology major leads to the B.S. in Meteorology degree and provides full credentials to work for the federal government as a certified meteorologist.

Minors Offered

The following minors are offered:

- Geography Minor
- Geographic Information Science Minor
- Meteorology Minor
- Pathways to Sustainability Minor (transdisciplinary, includes courses in other departments)

Checksheets with program requirements can be found on the Office of the University Registrar's website at https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html

- Geography Major (p. 1206)
- Meteorology Major (p. 1208)

Head: T.W. Crawford
Professors: A.W. Ellis, L.W. Carstensen, K.N. Kolivras, and L.M. Resler
Associate Professors: T.D. Baird, L. Juran, L. M. Kennedy, R.D. Oliver, T. Pingel, and Y. Shao
Assistant Professors: A. Bukvic, Y., E. Galappaththi, J. Kim, C. Ramseyer, S. Zick
Collegiate Assistant Professor: S. Rijal
Instructors: J. D. Boyer, D. F. Carroll, S. Scales, and K. Stiles
Undergraduate Academic Advisor: J. Burger
Professor Emeritus: J.B. Campbell

Undergraduate Course Descriptions (GEOG)

GEOG 1004 - Introduction to Human Geography (3 credits)
Introduction to geography as a social science. Development of a conceptual framework for studying and evaluating human-environment relationships. Through examination of selected regional and global issues and through exploring basic concepts like regions, place, location, human-environment interaction, movement, and accessibility, students will discover how power is spatially expressed and explore how culture shapes the production of space and vice versa. Students will also discover and describe how ethical issues manifest spatially.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 1014 - World Regions (3 credits)
Human and physical patterns and characteristics of major regions of the world including political systems, religions, economies, and physical settings. Concepts and perspectives of geography as a social science; linkages and interdependence of nations and regions; analysis of media coverage of events or global issues; engagement with current and historical global affairs.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 1024 - Survey of Geography (1 credit)
Foundations of geography and subdisciplines. Career pathways for geography-interested students in various workforce sectors and sub-disciplinary specialization areas, including physical geography, GIScience, and human geography. Introduction to campus academic and geography-related career resources to enhance the undergraduate experience. Professional goal reflection and development.
Instructional Contact Hours: (1 Lec, 1 Crd)

GEOG 1084 - Digital Planet (3 credits)
Exploration of innovative geospatial technologies and their impact on the world around us, including how humans interact with the environment and each other. Roles of location-based services, global positioning systems, geographic information systems, remote sensing, virtual globes and web based mapping for environmental applications. Skills and techniques for spatial thinking and environmental decision-making. Ethical implications of the use of geospatial technologies, data, and computational approaches.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 1004

GEOG 1104 - Introduction to Physical Geography (3 credits)
Integrated study of major subsystems of the natural environment: the nature, distribution, and interrelationships of landforms, climate and vegetation.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 1115 - Seeking Sustainability (3 credits)
1115: Strategies to promote sustainability through the identification, description, and analysis of the dominant interconnections within and between environmental, social, and economic systems across local to global scales. 1116: Perceptions of, conditions of, and strategies to analyze processes of change within complex systems, and promote sustainability across local to global scales.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NR 1115

GEOG 1116 - Seeking Sustainability (3 credits)
Prerequisite(s): GEOG 1115 or NR 1115
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NR 1116

GEOG 1504 - Survey of Meteorology (1 credit)
An introductory look into the world of meteorology, including the role of forecasters, broadcast meteorologists, current research, and the prediction and response to significant storm events.
Instructional Contact Hours: (1 Lec, 1 Crd)

GEOG 1514 - Introduction to Meteorology (3 credits)
Foundational properties and processes of Earth's atmosphere. Governing radiative and thermodynamic atmospheric equations. Extratropical weather systems, thunderstorms, hurricanes, and tornadoes. Cultural and societal impacts of extreme weather and climate change. Using meteorological and atmospheric data to construct weather forecasts.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 1524 - Introduction to Earths Climate (3 credits)
An introduction to Earths climate system, including the physical mechanisms responsible for the global climate as well as its spatial and temporal variation; composition and structure of the atmosphere, radiation budget and temperature, precipitation and hydrologic budget, atmosphere and oceanic circulation, weather systems, paleoclimate, future climate; synergistic human-climate relationships, including global warming, climate change.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 2004 - Water, Environment, and Society (3 credits)
Introduction to the hydrologic cycle, water resources, and related environmental issues. Emphasis on ethics and relationships between human needs for and effects upon water including: water quality, water treatment, and wastewater treatment; water for health, energy, and food; water management, laws, economics, and conflict; hydrometeorological hazards and climate change; and potential solutions for these and other critical water issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: WATR 2004

GEOG 2014 - Health and Place: Introduction to Health Geography (3 credits)
A survey of the field of health and medical geography. A study of the underlying interconnected processes at global to local scales from ecological and social perspectives that explain geographic patterns related to health, disease, and access to healthcare. Analysis of spatial patterns depicted on maps and connection to explanatory processes related to environmental exposures, demographic change, and the intersection of power, culture, and identity. Development of health-related written and oral content for broad audiences. Assessment and critique of presentation of scientific findings in popular media.
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2034 - Geography of Global Conflict (3 credits)
Geographical dimensions of global conflicts, international management of conflicts, conflicts of differences, historical, ideological, failed states and resources will be examined. Background to conflicts, current status of conflicts, different points of view in conflict. Topics in the course will change as the geography of global conflict changes.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2034, PSCI 2034

GEOG 2054 - Introduction to World Politics (3 credits)
An introduction to the prevalent methods and theories in the study of world politics. Topics include: historical context of contemporary world politics, global actors and power relations, conflict and conflict resolution, international law, and contemporary global issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2054, PSCI 2054

GEOG 2064 - The Global Economy and World Politics (3 credits)
Introduction to theories and methods in the study of global political economy. Topics include: historical origins, comparative advantage, the factor endowment trade theory, the gold standard, economic nationalism, the Great Depression, the Bretton Woods System, Keynesianism, the Nixon shocks, international organizations, monetary governance, the Great Recession, poverty and underdevelopment, and contemporary challenges of income inequality within and among economies.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2064, PSCI 2064

GEOG 2074 - COVID-19: Global Pandemic, Local Impacts (3 credits)
Examination and analysis of COVID-19's diffusion through the population at multiple spatial scales, from global to individual, using theories and methods of social science and medical geography. Critical study of the pandemic as a biological and social phenomenon, place within its cultural, historical, economic, political, and geographic contexts. Development of persuasive logical arguments on COVID-related topics through analyzing country, US state, and local level impacts of the COVID pandemic. Critical analysis of responses to the COVID pandemic. Synthesis of interconnected variables that contribute to differential impacts of COVID on different population groups. Identification of factors that may contribute to future pandemics.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2084 - Principles of Geographic Information Systems (3 credits)
Principles and diverse applications of Geographic Information Systems, geographic coordinate systems, Cartesian map projections, spatial data sources, GIS databases, map representations, and illustrated spatial applications of GIS. Requires regular use of computer systems for geographic data analysis.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2104 - Introduction to Environmental Security (3 credits)
Environmental security concepts, issues, and terminology. Study of emerging issues at the nexus of environmental and climate change and security risks, including homeland, human, national, energy, food, and water securities. Overview of climate-driven conflicts, displacement and migration, and geopolitical instability. Policy and programmatic solutions. Assessment of case studies using methods such as strategy analysis, scenario development, and simulations.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2114 - Introduction to Coastal Regions (3 credits)
Introduction to coastal geomorphology (landforms and processes), climate drivers (sea level rise and storms surge), and natural systems that shape coastal regions. Study of human systems including population growth, built environment, and social vulnerability. Overview of coastal zone management and policy. Discussion of the future of coastlines shaped by complexity, emerging challenges, uncertainty, adaptation, and resilience.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2134 - Geography of the Global Economy (3 credits)
Geographical dimensions of the global economy since World War II. Globalization and the emergence of a new international division of labor. The relative decline of the United States and the growth of Japan, East Asia and the European Union. Changing geographies of foreign direct investment location. Places and regions in geo-economic discourse. Population and resources issues in the early twenty-first century.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2134, PSCI 2134

GEOG 2224 - Geography of Europe (3 credits)
Europe: as an idea, as a place, as a space, and as a political entity. Basic knowledge of Europe's historical physical environments, political geography, population distribution, varied cultures, and economic development. Cultural variations and their implications on settlement patterns, political divisions, and economic patterns and processes.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 2224, PSCI 2224

GEOG 2244 - Sustainable Urbanization (3 credits)
Process of urbanization and theories and approaches of urban development. Debates on the meanings of sustainable urbanization and development in cities and how they are measured. Urban sustainability initiatives in the context of urban political economies, land-use practices, urban inequality and diversity, urban nature, and urban policy and politics. Programs and policies designed to enhance sustainable urbanization. Comparative approach and global perspective. Fee $30.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SPIA 2244

GEOG 2314 - Maps and Mapping (3 credits)
Introduction to maps. Fundamentals of reading, analysis, and interpretation of hard copy and digital maps, as they are required to illuminate spatial problems. Influences of maps on attitudes toward and images of the geographic environment.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2505 - Weather Analysis I (3 credits)
Introduction to the operational tools and processes in weather forecasting. Surface data and upper-air sounding analysis, forces producing and directing wind flow, jetstreams, weather chart analysis, and atmospheric moisture including clouds and precipitation.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2506 - Weather Analysis II (3 credits)
Introduction to the operational tools and processes in weather forecasting. Numerical forecast modeling and current operational models, ensemble forecasting and model output statistics, structureand dynamics of fronts and mid-latitude cyclones, development of thunderstorms and tornadoes, and the use of Doppler radar and satellite imagery in short-term forecasting.
Prerequisite(s): GEOG 2505
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2784 - Geography of Tea (3 credits)
Physical and human geographic overview of tea. Biogeography, history, economics, and ceremonial practices of the worlds tea producing regions. Analysis of terroir and processing through tasting exercises and sensory evaluation. Pre: Sophomore standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 3034 - The CIA: Its Capabilities in Todays Geo-Political World (3 credits)
Role of the discipline of geography in the origins, procedures, and history of CIA. Role of the CIA in providing national intelligence at both strategic and operational levels. Origins and changes to the CIA since WWII. Capabilities to support both policy-makers and national security entities. Case studies illustrating the CIAs operations in different regions of the world.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3034, PSCI 3034

GEOG 3104 - Environmental Problems, Population, and Development (3 credits)
Environmental problems in their social, spatial, and global contexts. Impacts of globalization, neoliberalism, and population growth on the environment. Examination of effects of developed and developing countries on the environment. Focus on conceptualizing development, population dynamics, environmental justice, factory farming, energy and renewable energy, global health, disasters, and intercultural and global awareness.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3214 - Africa Together (3 credits)
Strategies to identify, discuss and apply theories of stereotyping, empathy, and scarcity in the context of contemporary Africa. Application of theories to compare and analyze examples of social networks, music, disease, and violence in Africa and the U.S. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3224 - Geography of Appalachia (3 credits)
Appalachia as a region: physical environment, development of internal settlement, cultural, and economic patterns. Human adaptations to environmental change, traditions, and connections to and from external regions.
Prerequisite(s): GEOG 1004 or GEOG 1104 or GEOG 1014 or APS 1704 or HUM 1704
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3234 - Geography of Virginia (3 credits)
Virginia as a region: its physical environment, settlement, cultural, economic, and political patterns. Human adaptation to environmental change, human modification of environments and linkages to external regions. Climate, Biogeography and Water, and Environmental Hazards related to Natural Resources. Pre: 3 credit hours of Geography.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3244 - The U.S. City (3 credits)
The economic, political, and social forces driving urbanization in the United States. The American city in historical context with particular emphasis on the rise of manufacturing, deindustrialization, and suburbanization. Case studies from the manufacturing and sunbelt regions to illuminate key constructs from urban and human geography. Border examples of comparative urbanization from the U.S. -Mexican border, the Caribbean, and Canada.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3254 - Geography of East Asia (3 credits)
A geographical analysis of several modern states in East Asia, specifically China, Japan and the Koreas. Economic, political, and cultural change since the end of World War II. Globalization and the emergence of the China as a demographic and economic giant.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3274 - Polar Environments (3 credits)
Introduction to polar regions emphasizing interdisciplinary concepts, a systems approach, and communication of polar science to non-scientific audiences. Developing and defending arguments on the global significance and geopolitics of polar regions. Feedbacks among biophysical and human processes and resources. Strategies to deliver effective oral presentations, and to defend arguments in writing and group debates on topics including multiculturalism, human-environmental interactions, and climate change impacts in polar regions. Foster understanding of indigenous worldviews using native narratives. Pre: Sophomore standing.
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3304 - Geomorphology (3 credits)
Examines the variety of landforms that exist at the earths surface. Detailed investigation of major processes operating at the earths surface including: tectonic, weathering, fluvial, coastal, eolian, and glacial processes. Field excursion.
Prerequisite(s): GEOG 1104 or GEOS 1004 or GEOS 2104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CSES 3304, GEOS 3304

GEOG 3314 - Cartography (3 credits)
Science and art of cartography including the conceptual framework of the cartographic method. Development of the skills necessary to create maps to be used in the analysis of spatial phenomena. Emphasis on thematic and ethical cartography.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOG 3404 - Mountain Geography (3 credits)
Physical characteristics of mountains, such as steep slopes, climatic extremes, and sharp environmental gradients, and their influences on the ways in which people, animals, and plants interact. Physical processes that operate in high-relief environments, including consideration of climate, geomorphology and biogeography. Influence of physical processes in mountain environments on human culture and activities. Cultural significance of mountains. Mountains as a resource. Land use and human-land interactions in mountains. Course is intended for students with an interest in what makes mountains unique and inspiring landscape elements.
Prerequisite(s): GEOG 1104
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3464 - Appalachian Communities (3 credits)
The concept of community in Appalachia using an interdisciplinary approach and experiential learning. Interrelationships among geographically, culturally, and socially constituted communities, public policy, and human development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AHRM 3464, APS 3464, HD 3464, HUM 3464, SOC 3464, UAP 3464

GEOG 3504 - Severe Weather (3 credits)
An introduction into mesoscale environments favoring the development of severe thunderstorms and tornadoes, the analysis of moisture, instability and shear parameters associated with severe weather events. Thunderstorm life-cycles, analysis of thermodynamic diagrams, role of wind shear and associated convective mode, hail production and forecasting, tornadogenesis and research.
Prerequisite(s): GEOG 2505
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3515 - Dynamic Meteorology (3 credits)
Examination of the physics that govern motion of Earths atmosphere. General atmospheric concepts, atmospheric principles of thermodynamics, hydrostatics, and stability. 3516: Examination of the physics that govern motion of Earths atmosphere. Principles of fluid dynamics, specifically the physics governing horizontal motion, corresponding vertical motions, and synoptic scale systems, as represented in various coordinate systems.
Prerequisite(s): GEOG 2506 and MATH 2214 and (PHYS 2206 and PHYS 2216 or PHYS 2306)
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3516 - Dynamic Meteorology (3 credits)
3515: Examination of the physics that govern motion of Earths atmosphere. General atmospheric concepts, atmospheric principles of thermodynamics, hydrostatics, and stability. 3516: Examination of the physics that govern motion of Earths atmosphere. Principles of fluid dynamics, specifically the physics governing horizontal motion, corresponding vertical motions, and synoptic scale systems, as represented in various coordinate systems.
Prerequisite(s): GEOG 3515
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 3844 - European Geopolitics (3 credits)
Impact of Geography on European politics and economics. Significance of territorial, identity, networking and environmental geopolitics. Theoretical debates in the fields of political and population geography. Current culture and demographic challenges and geopolitical disputes within Europe and particularly between the European Union (EU) and its neighboring world regions.
Prerequisite(s): GEOG 2224 or IS 2224 or PSCI 2224
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3844, PSCI 3844

GEOG 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

GEOG 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course
Repeatability: up to 18 credit hours

GEOG 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 4044 - Biogeography (3 credits)
A survey of the field of biogeography. A study of the factors influencing the distribution of plants and animals approached from ecological, historical, and cultural perspectives. Human influence on biotic patterns, such as crop domestication, habitat alteration, species introductions and extinctions, management issues, and environmental change, is a primary focus.
Prerequisite(s): GEOG 1104 or BIOL 2804
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4054 - Geography of Wine (3 credits)
Analysis of physical and cultural forces that shape the production, consumption, and great variety of wine in the world. Wine as a complex commodity is examined through its economic, social, political, and ideological impacts in different parts of the world throughout history. Particular emphasis will be focused on place as an agent in defining the product.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4074 - Medical Geography of Infectious Diseases (3 credits)
Examination of geographic patterns of infectious diseases and underlying explanatory processes at spatial scales ranging from global to local. Interactions between natural and social environments and their contributions to infectious disease burdens. Human health impacts of climate variability and change. Application of theories such as landscape epidemiology and methods in medical geography and the social sciences to understanding disease emergence events and pandemics. Examination of role of environmental change and human migration on disease diffusion patterns. Analysis of major factors related to HIV/AIDS epidemic that explain the disease's spatial and spatio-temporal pattern in different social and cultural settings. Pre: Junior standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4084 - Modeling with Geographic Information Systems (3 credits)
Use of automated systems for geographic data collection, digitization, storage, display, modeling and analysis. Basic data flow in GIS modeling applications. Development of proficiency in the use of current GIS software. Senior Standing.
Prerequisite(s): GEOG 2084
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)
Course Crosslist: GEOS 4084

GEOG 4094 - Generative AI Applications in Social Science (3 credits)
Apply key concepts in generative AI to social science research across multiple disciplines, including geography, urban studies and planning, environmental studies, education, writing, sociology, psychology, political science, and economics. Analyze quantitative and qualitative data by utilizing various generative AI tools, such as ChatGPT and Dall-E. Integrate the geographic information system (GIS) with generative AI tools. Evaluate the impacts of generative AI on society in terms of ethical concerns, geographic and sociodemographic biases, and responsible uses. Criticize existing generative AI tools. Develop public and educational policies to guide the responsible use of generative AI for social science research. Pre: Junior Standing
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4134 - Interdisciplinary Issues and Ethics in Water Resources (3 credits)
Analysis of issues and ethics related to water resources, water as a hazard upon human (infrastructure, economy) and ecological (rivers, groundwater) systems, water and vector borne disease, climate change, dams, and eutrophication. Development of proficiency in demonstrating the multidimensionality of water resources. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOS 4134

GEOG 4164 - Qualitative Methods & Ethics in Geography (3 credits)
Overview of qualitative research methods in the context of human geography. Theories, practices, and interpretations surrounding human geography methods. Debates surrounding the use of a range of qualitative methods. Critical analysis of academic writing. Data collection, analysis and interpretation methods. Epistemological underpinnings of qualitative methodological choices. Ethical considerations related to human subject research. Visual, graphic, and oral communication skills. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4184 - Health Applications of Geospatial Techniques (3 credits)
Investigation of theoretical foundations and practical uses of geospatial techniques in the analysis of human health data. Emphasis on description of spatial data and measurement of clustering of diseases and health concerns. Quantification of exposure to pathogens and environmental factors that impact human health to explain clusters. Analysis of health disparities and their impact on health. Acquisition and analysis of health data, interpretation of findings, and presentation of results in independent analysis. Development of policies to promote population health.
Prerequisite(s): GEOG 2084
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4204 - Geography of Resources (3 credits)
Physical and cultural systems that influence the spatial distribution of resources and resource use. Emphasis on historical and current contexts of natural resources use and perspectives in the United States, with consideration of worldwide distributions of resources. Environmental cognition and perception, water, public lands, conservation and preservation, food and hunger, human population, and alternative energy. Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4214 - Gender, Environment, and International Development (3 credits)
Key concepts and critiques related to the intersection of gender, environment, and international development. Development institutions and organizations with relationship to gender and environment. Theoretical and applied perspectives on eco-feminism; bio-diversity; climate change; feminist political ecology; agriculture and natural resources; participatory methods and empowerment. Case studies from Africa, Asia, and Latin America. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: UAP 4214, WGS 4214

GEOG 4224 - Tracking Environmental Change (3 credits)
Multidisciplinary approaches to documenting and understanding past environmental change. Methods used to unravel the physical and human drivers of historical and longer-term changes in climate, vegetation, and fire patterns. Application of environmental change data and insights to improve land and conservation management under changing climates. Pre: Junior standing
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4254 - R Programming for Geospatial Applications (3 credits)
Geospatial data analytics using R programming language. Batch-processing capability for analyzing large vector and raster geospatial data including remote sensing imagery and GIS layers. Using R scripts, algorithms, and functions to implement spatial analysis and spatial-temporal modeling. Bridging open source GIS/remote sensing and Machine learning. Linux system and high-performance computing environment.
Prerequisite(s): GEOG 4084
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4284 - Human Dimensions of Coastal Social-Ecological Systems (3 credits)
Coastal change and multiple stressors. Social-ecological systems. Concepts of resilience, vulnerability and adaptation to climate change. The tragedy of the coastal commons. Adaptive management, co-management, adaptive co-management. Non-Western knowledge systems, Indigenous and local knowledge. Food security, blue food systems, food system transformations. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4304 - Geospatial Analysis of Mobility (3 credits)
Apply key concepts in human mobility and travel behavior theories to real-world scenarios. Analyze emerging issues in mobility and its impacts on society, encompassing topics such as ride-hailing services, autonomous vehicles, AI, and smart city technologies, and evaluate their implications for future urban development. Evaluate and implement R- and Python-based geospatial analysis tools to address contemporary mobility issues. Synthesize and analyze big geospatial and human mobility data. Propose innovative policy and urban planning recommendations.
Prerequisite(s): GEOG 2084
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4314 - Spatial Analysis in Geographic Information Systems (3 credits)
Theory and application of Geographic Information Systems, with special emphasis on analytical operations, database design, cartographic modeling, and raster GIS. Spatial data handling and analysis to facilitate decision-making through the communication of geographically referenced data.
Prerequisite(s): GEOG 2084
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOG 4324 - Algotrithms in Geographic Information Systems (4 credits)
Computational methods in automated mapping and map analysis. Visual Basic programming and algorithm design for spatial display and analysis under both raster and vector data models. Requires regular use of the departmental microcomputer and UNIX workstation laboratory.
Prerequisite(s): GEOG 4084 and CS 1064
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

GEOG 4334 - Geospatial Information Technology for Land Change Modeling (3 credits)
Analysis of the spatio-temporal patterns of Land Use and Land Cover Change (LULCC) as observed in satellite images. Tropical deforestation, urbanization, and agricultural intensification. Rates and patterns of LULCC linked to biophysical and socio-economic drivers. Impacts of land change with respect to local climate, biodiversity, water yield and quality, and ecosystem services.
Prerequisite(s): GEOG 4084 or GEOS 4084
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4354 - Introduction to Remote Sensing (3 credits)
Theory and methods of remote sensing. Practical exercises in interpretation of aerial photography, satellite, radar, and thermal infrared imagery. Digital analysis, image classification, and evaluation. Applications in earth sciences, hydrology, plant sciences, and land use studies.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: GEOS 4354

GEOG 4374 - Remote Sensing and Phenology (3 credits)
Analysis of spatial and temporal patterns of the vegetated land surface as observed by satellite images. Application of satellite image time series to derivation of land surface phenology, and analysis of the appearance and development of phenology in the USA and worldwide. Methods of monitoring of phenology with satellite imagery. Causes of spatio-temporal changes of phenological events. Effects of global climate change.
Prerequisite(s): GEOG 4354
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4394 - Introduction to Web Mapping (3 credits)
Application of web mapping technologies to geographic data collection, storage, analysis, and display. History and context, spatial data infrastructures, hardware and software architectures, open geospatial consortium standards, mapping APIs, virtual globes, user-centric design, web cartography. Group and individual projects.
Prerequisite(s): GEOG 2084
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4404 - Geovisualization (3 credits)
Advanced topics in digital and dynamic map production, emphasizing concepts in advanced cartographic design, information visualization, and human-computer interaction. Topics include cartograms, computer aided design, animation, lidar and photogrammetric point cloud visualization, Web Geographic Information Systems, terrain visualization, and virtual geographic environments.
Prerequisite(s): GEOG 2084 and GEOG 3314
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4414 - Climate Change and Societal Impacts (3 credits)
Impacts of climate change on different societies. Concepts of adaptation, vulnerability, and resilience. Notions of complexity, uncertainty, and thresholds related to climate change outcomes. Case study analysis of communities affected by climate change. Understanding future and assessing climate vulnerability across various spatiotemporal scales. Scenario planning, foresight analysis, and interactive digital tools. Pre: Sophomore standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4444 - Practicing Sustainability (3 credits)
Practicum in sustainability. Synthesize and integrate knowledge from undergraduate career and apply to real world problems of sustainability. Topics and projects selected from opportunities to examine specific local and regional sustainability issues on the VT campus, in the New River Valley and the Commonwealth at large. Pre: Senior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NR 4444

GEOG 4504 - Synoptic Meteorology (3 credits)
Examination of large-scale (1000-5000km) weather systems using both analytical and operational analysis. Topics include thermal structure of atmosphere & resulting circulation, frontal analysis, lifting mechanisms, barotropic/baroclinic systems, and mid-latitude cyclones. Weather pattern influences of the jetstreams and oscillation of large pressure systems including El Nino/La Nina and the North Atlantic Oscillation.
Prerequisite(s): GEOG 3504 and MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4514 - Tropical Meteorology (3 credits)
Tropical weather and climate topics: remote sensing and observations; tropical climatology, including regional and large-scale circulations, monsoons, and the El Nino/Southern Oscillation; tropical convection, including the clouds in the subtropics, deep convection in the equatorial region, and tropical cloud clusters and thunderstorms; and tropical cyclones, including their structure, intensity, lifecycle, and formation.
Prerequisite(s): GEOG 2506 and GEOG 3504
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4524 - Physical Meteorology (3 credits)
Study of the physics associated with cloud and precipitation development, the emission, absorption, and transmission of solar and terrestrial radiation, meteorological acoustics, and atmospheric electricity.
Prerequisite(s): GEOG 3515
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4534 - Numerical Weather Prediction (3 credits)
Scientific basis of numerical weather prediction, including data assimilation, numerical integration, model initialization, physical parameterizations, ensemble methods, and model verification. Overview of numerical errors and their effects on predictability. Current operational forecasting models and the role of models in weather forecasting. Application of knowledge to running a high-resolution numerical weather forecast in a high-performance computing environment.
Prerequisite(s): GEOG 3515 and GEOG 4504
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4554 - Remote Sensing of Atmosphere (1 credit)
Remote sensing technologies used in monitoring weather. Evaluation of Doppler radar products, including base reflectivity, base velocity, storm-relative velocity, and vertically integrated liquid imagery. Could observation through infrared and visible satellite imagery; remote weather station design, set-up and data retrieval.
Prerequisite(s): GEOG 4354
Instructional Contact Hours: (1 Lec, 1 Crd)

GEOG 4574 - Climate Data Analysis and Programming (3 credits)
Elements of 1-dimensional and high-dimensional climate data storage and formatting. Manipulate and query atmospheric reanalysis, global climate model, and gridded observation datasets. Implement efficient research workflows through the development of computer scripts to statistically analyze climate data.
Prerequisite(s): GEOG 2505
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOG 4764 - International Development Policy and Planning (3 credits)
Examination of major development theories and contemporary issues and characteristics of low-income societies (industrialization, urbanization, migration, rural poverty, hunger, foreign trade, and debt) that establish contexts for development planning and policy-making. Junior standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SOC 4764, UAP 4764

GEOG 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOG 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Undergraduate Course Descriptions (MTRG)

MTRG 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MTRG 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MTRG 3524 - Meteorology Field Methods (3 credits)
A field methods course in meteorology. On-location observation and analysis of temperature, wind fields, pressure, and dewpoint. In-field experiences with radar and satellite data, numerical model output and portable weather stations. On-location sites and corresponding curriculum may include severe storm analysis in the Great Plains, mountain weather in the White Mountains (NH) or Rocky Mountains (CO), and costal storms along the Atlantic or Gulf of Mexico coastlines. May be repeated for credit, with permission and different content, for a maximum of 9 hours.
Prerequisite(s): GEOG 2506 and GEOG 3504
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

MTRG 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

MTRG 4584 - Topics in Applied Meteorology (1-3 credits)
Contemporary and emerging theory and praxis in meteorology. Variable topics such as operational weather forecasting situations and scenarios. Identifying common meterological problems and developing pragmatic approaches for solutions. Repeatable with different content for a maximum of six credit hours.
Prerequisite(s): GEOG 1514
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 6 credit hours

MTRG 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MTRG 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MTRG 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MTRG 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Geography Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
GEOG 1004	Introduction to Human Geography	3
GEOG 1014	World Regions	3

GEOG 1084/ FREC 1004	Digital Planet	3
GEOG 1104	Introduction to Environmental Geography	3
GEOG 2084	Principles of Geographic Information Systems	3
GEOG 2314	Maps and Mapping	3
GEOG Field Experience [1]		*3*
Select one of the following:		
XXXX 3954	Study Abroad	
GEOG 4964	Field Study	
GEOG 4994	Undergraduate Research	
Subtotal		21
Major Requirements		
GEOG 3314	Cartography	3
Select 18 credits from the following:		18
GEOG/NR 1115	Seeking Sustainability	
GEOG/NR 1116	Seeking Sustainability	
GEOG 1514	Introduction to Meteorology	
GEOG 1524	Introduction to Earths Climate	
GEOG/WATR 2004	Water, Environment, and Society	
GEOG 2014	Health and Place: Introduction to Health Geography	
GEOG 2034	Geography of Global Conflict	
GEOG 2054	Introduction to World Politics	
GEOG/PSCI/IS 2064	The Global Economy and World Politics	
GEOG 2104	Introduction to Environmental Security	
GEOG 2114	Introduction to Coastal Regions	
GEOG 2244	Sustainable Urbanization	
GEOG 2505	Weather Analysis I	
GEOG 2784	Geography of Tea	
GEOG 3034	The CIA: Its Capabilities in Todays Geo-Political World	
GEOG 3104	Environmental Justice, Resources and Development	
GEOG 3224	Geography of Appalachia	
GEOG 3234	Geography of Virginia	
GEOG 3244	The U.S. City	
GEOG 3254	Geography of East Asia	
GEOG 3274	Polar Environments	
GEOG 3304	Geomorphology	
GEOG 3404	Mountain Geography	
GEOG/AHRM/ APS/HD/ HUM/SOC/ UAP 3464	Appalachian Communities	
GEOG 4044	Biogeography	
GEOG 4054	Geography of Wine	
GEOG 4074	Medical Geography of Infectious Diseases	
GEOG 4084	Modeling with Geographic Information Systems	
GEOG 4134	Interdisciplinary Issues and Ethics in Water Resources	
GEOG 4204	Geography of Resources	
GEOG 4214	Gender, Environment, and International Development	
GEOG 4224	Tracking Environmental Change	
GEOG 4354	Introduction to Remote Sensing	
GEOG 4414	Climate Change and Societal Impacts	
GEOG 4764	International Development Policy and Planning	
Subtotal		21
Cognate Elective		
Select one of the following:		3
FREC 2114	Ecology of Appalachian Forests	
FREC 2124	Forests, Society & Climate	
FREC/HORT 2134	Plants and Greenspaces in Urban Communities	
FREC/NR/LAR 2554	Leadership for Global Sustainability	
FREC 3044	Environmental Data Science	
FREC/PSCI/IS 4174	Climate Change and the International Policy Framework	
GEOS 1034	Earths Natural Hazards	
GEOS 3014	Environmental Geosciences	
GEOS 3034	Oceanography	
SBIO/FREC 2784	Global Forest Sustainability	
SBIO 3004	Sustainable Nature-Based Enterprises	
SBIO 3324	Green Building Systems	
SOC 1014	Introduction to Social Anthropology	
SOC/HIST/ STS 2604	Introduction to Data in Social Context	
SOC 3204	Social Research Methods	
STAT 3616	Biological Statistics	
Subtotal		3
Free Electives		
Select credits to total 120 credit hours		28
Subtotal		28
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing	3
or COMM 1015	Communication Skills	
ENGL 1106	First-Year Writing	3
or COMM 1016	Communication Skills	
Select three credits in Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A)		3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six credits in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
Select six credits of lecture in Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04)		6
Select two credits of lab in Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04)		2

Pathways Concept 5 - Quantitative and Computational Thinking		
Pathway 5f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05F) (GEOG majors may not use GEOG 1084 in this area)		6-8
Select two of the following:		
CS 1014	Introduction to Computational Thinking	
MATH 1014	Precalculus with Transcendental Functions	
MATH 1025	Elementary Calculus	
MATH 1026	Elementary Calculus	
MATH 1225	Calculus of a Single Variable	
MATH 1226	Calculus of a Single Variable	
STAT 3604	Statistics for Social Science	3
or STAT 3615	Biological Statistics	
Pathways Concept 6 - Critique and Practice in Design and the Arts		
GEOG 3314	Cartography	3
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		47-49
Total Credits		**120-122**

By the end of the semester in which the student has attempted 60 hours (including transfer, advanced placement, advanced standing, and credit by examination), "satisfactory progress" towards a B.A. or B.S. degree in the College of Natural Resources and Environment will include the following minimum criteria: having an in-major and overall grade point average of at least 2.0 and passing at least 24 semester credits that apply to the Pathways to General Education.

Graduation Requirements

1. **Geography Field Experience** must be relevant to major and approved by the Department and College.
2. **Prerequisites**: Some of the listed courses have prerequisites and enrollment restrictions. Some courses must be taken in sequence to satisfy prerequisites. Be sure to consult with the University Catalog, Timetable of Classes, or check with your advisor.
3. **In-major GPA Computation:** Includes all courses designated as GEOG, an in-major and overall GPA average of 2.0 is required for graduation.
4. **Meteorology Double Major:** Geography students planning to double major in Meteorology must complete 15 additional credits: at least 12 hours of GEOG coursework that is not being used to complete either major; and two distinct (3 credits each) field experiences that apply to each major.
5. **Pathways to General Education:** Courses used to satisfy Pathways requirements cannot be double counted to also satisfy degree core requirements. However, Pathways courses may be double counted to satisfy other program area credit hour requirements.

Foreign Language Requirement

A sequence of two (2) foreign language courses is required for graduation unless two (2) high school units of the same foreign language or six (6) transfer credit hours of foreign language have been earned. These credits do not count toward graduation. See catalog section on "Graduation Requirements."

Subtotal		34
Total Credits		**120**

1. **Prerequisites or enrollment restrictions** may apply to some courses.
2. **In-major GPA Computation:** Includes all courses designated as GEOG/MTRG, an in-major and overall GPA average of 2.0 Is required for graduation.
3. **Geography Double Major:** Meteorology students planning to double major In Geography must complete 15 additional credits: at least 12 hours of GEOG course work that Is not being used to complete either major; and two distinct (3 credits each) field experiences that apply to each major.
4. Students **interested in graduate school or NWS/NOAA employmen**t should consider these courses.
5. **Pathways General Education:** Courses used to satisfy Pathways General Education requirements cannot be double counted to also satisfy degree core requirements. However, Pathways courses may be double counted to satisfy other program area credit hour requirements.
6. **PHYS 2306 restriction**: MATH 1226 is a required co-requisite for PHYS 2306. Students must be enrolled in both courses through Virginia Tech. MATH 1226 transfer credit enrollment will be accepted only as a prerequisite for PHYS 2306, not a corequisite.

By the end of the semester in which the student has attempted 60 hours (including transfer, advanced placement, advanced standing, and credit by examination), "satisfactory progress" towards a B.S. degree In the College of Natural Resources and Environment will Include the following minimum criteria: having an In-major and overall grade point average of at least 2.0 and passing at least 24 semester credits that apply to the Pathways to General Education, and students must have completed 15 hours in Geography/Meteorology.

Graduation Requirements

In-major GPA Computation: Includes all courses designated as GEOG/MTRG, an in-major and overall GPA average of 2.0 Is required for graduation.

Required minimum hours in major: 76 hours

Required minimum hours for the degree: 120 hours

Foreign Language Requirement

A sequence of two (2) foreign language courses Is required for graduation unless two (2) high school units of the same foreign language or six (6) transfer credit hours of foreign language have been earned. These credits do not count toward graduation. See catalog section on "Graduation Requirements."

Sustainable Biomaterials

Our Website (http://www.sbio.vt.edu)

Packaging Systems and Design

Learn how sustainable packaging is used to eliminate waste and pollution in the environment, how packaging design enhances products, and how smart materials are used in food and drug packaging to enhance safety and quality.

Sustainable Biomaterials

Apply the STEM disciplines to natural renewable materials to help us develop our sustainable future. Learn how biomaterials can be made and utilized in ways to produce better performing materials with less environmental impact. Study options include sustainable residential structures, creating sustainable society, biomaterials science, and forest products business.

Sustainable Biomaterials Minor and Packaging Science Minor

Minors are offered for students interested in obtaining knowledge and skills in the wood science field to supplement their primary major field of study.

- Packaging Systems and Design Major (p. 1215)
- Sustainable Biomaterials Major (p. 1216)

Head: C-H. M. Huang
Professors: B.H. Bond, U.K. Buehlmann, R.J. Bush, K.J. Edgar, C.E. Frazier, A.L. Hammett, C-H. M. Huang, D.E. Kline, J.R. Loferski, H.J. Quesada, R.L. Smith, P.M. Winistorfer, and A. Zink-Sharp
Associate Professors: D.P. Hindman, L. Horvath, Y. Kim and M. Roman
Assistant Professors: J.D. Russell
Professor Emeritus: F.M. Lamb, W.G. Glasser, M.S. White

Undergraduate Course Descriptions (SBIO)

SBIO 1004 - Explorations in Sustainable Biomaterials (1 credit)
Topics and related career paths in Sustainable Biomaterials. Resources promoting academic success, personal improvement, and professional development. Problem solving, inquiry, teamwork, and oral, written, and visual communication applied to sustainable biomaterials issues.
Instructional Contact Hours: (1 Lec, 1 Crd)

SBIO 1014 - Introduction to Packaging Systems and Design (1 credit)
Information and skills necessary to succeed in the Packaging Systems and Design program; use of the library resources and use of intellectual property of others; laboratory reports, presentation skills, safe laboratory practices, and resume and packaging career portfolio.
Instructional Contact Hours: (1 Lec, 1 Crd)

SBIO 1024 - Systems Thinking in a Bioeconomy (3 credits)
Fundamental principles of a systems-thinking approach in evaluating complex systems related to a bioeconomy, which includes continued use and reuse of materials, chemical, and energy derived from natural materials within both industrial and natural environments. Systems mindset and frameworks, methodologies, and tools to contribute to discussions on solving complex problems integrating interconnected social, economic, and environmental factors while considering ethics. Case study-based approach to analyze and assess the impacts of conventional and alternative solutions to real-world challenges.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 1114 - A Sustainable Future through Circular Economy (3 credits)
Concepts, principles, and frameworks to understand sustainable production and consumption systems. Critical exploration of the six "R's": Reduce, Reuse, Repair, Refurbish, Remanufacture, and Recycle. Circular economy models for technical and bio-based materials to enable sustainable design. Special emphasis on systems-thinking methods for evaluating alternative/circular system design for sustainable biomaterials. Elements of sustainable biomaterial products and business models that optimize material efficiency and value-retention. Current initiatives by industry and governments to implement sustainable production and consumption practices and policies around the world.
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 1234 - Introduction to Wood, Design and Craftmanship (3 credits)
Wood as a material. Introduction to laboratory techniques, wood processing, machining and woodworking, moisture interactions, species characteristics, microscopic techniques, measuring material properties, characteristics of forest products industry, career opportunities.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SBIO 2004 - Computer-Aided Design in Packaging (3 credits)
Principles of Computer-Aided Design (CAD) in the packaging industry. Basics of virtual primary package development, computer-aided design of the secondary package, computer-aided optimization of truck loading and palletization. Development of a comprehensive packaging system in a virtual environment.
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 2104 - Principles of Packaging (3 credits)
History of packaging, structure of packaging industry, careers in packaging, packaging functions, materials and material properties, prototyping and manufacturing methods, packaging forms and types, distribution packaging, printing and decorating, packaging laws and regulations, sustainability issues, packaging design process.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 2124 - Structure and Properties of Sustainable Biomaterials (3 credits)
Macroscopic and microscopic structure and chemical composition of wood and other biomaterials such as grasses, bamboo, and bagasse. Relationships between anatomical structure and physical/mechanical behavior. Microscopic identification of commercially important biomaterials. Preparation and analysis of microscope slides and scanning electron micrographs.
Prerequisite(s): BIOL 1105 and CHEM 1035
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 2154 - Packaging and Culture (3 credits)
Explore packaging as a fundamental component of human culture. Survey the historical evolution of packaging as material culture and its influence across various domains using fundamental concepts such as cultural diffusion, functionalism, and systems thinking. Topics including the pivotal role of packaging in the transition to agriculture, significance in early legal systems, establishment of weights and measures, contributions to the development of global trade networks, and implications for food security, social institutions, and international conflicts. Identify interconnections in raw material access and cultural factors that influence packaging design, economic systems, trade and world views. Relationship between packaging and human health, equity, and the environment. Historical lessons will be used to analyze contemporary issues and emerging trends to forecast their potential societal impacts.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 2214 - Design Fundamentals for Packaging (3 credits)
Introduction to the foundation of packaging design, visual elements, design principles, and Adobe Illustrator. Basic studio workshop with focuses on packaging design processes, two-dimensional graphic work, and package design projects. Aesthetic judgment and critical thinking skills through practice in packaging design projects and critique. Design Lab/Studio. Course FEE $46.
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

SBIO 2224 - Materials and Manufacturing Technology: from Nature to Innovation (3 credits)
Properties and characteristics of biomaterials (mechanical, chemical, thermal, etc.) that influence their production, application, value stream, and sustainability. Case-based approach to assessment and evaluation of basic manufacturing processes and the biomaterials used to make products. Perspectives on how manufacturing infrastructures and economies evolved based on the discovery of materials, from pre-industrial biological and nature-based systems to advanced technical materials used today. Manufacturing technology trends and how they are shaping economic, societal, and environmental impacts in biomaterials and related manufacturing technologies and packaging innovation.
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 2314 - Building Information Modeling for Wood-Based Construction (3 credits)
Building information modeling (BIM), computer-aided design (CAD) and the role of BIM and CAD in wood construction. Use of BIM and CAD to improve construction efficiency. Study of REVIT use including building layout, family editor, detailing, schedules, material lists and 3-dimensional rendering. Discussion of construction documentation and plan reading. BIM methods and tools in the design and detailing of residential light-frame, mass timber, and historic buildings.
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 2504 - Circular Economy Analytics for Sustainable Systems (3 credits)
Concepts, principles, and framework to understand systems level interactions in linear (cradle-to-grave) and circular (cradle-to-cradle) processes. Problem solving application and practice utilizing computational tools and data analytics. Special emphasis on quantifying and evaluating life-cycle circularity of common products and processes used to meet societys demand. Evaluation of case study results towards the planning of more circular business models in a complex global economy. Risks and ethical issues associated with decision making and policy based on results from computational models. Pre: Precalculus with Transcendental Functions (3 credits)
Prerequisite(s): MATH 1014 or MATH 1025 or MATH 1225 or MATH 1524 or MATH 1535 or MATH 1525
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 2514 - Introduction to Sustainability and Industrial Ecology (3 credits)
Explore fundamental sustainability concepts and industrial ecology principles, navigate the intricate interactions between natural and industrial environments. Discover how nature-based design and innovation inform industrial practices in food, water, transportation, and energy systems and contribute to more sustainable futures. Apply methodologies like Material Flow Analysis, Life Cycle Analysis, and handprint analysis to create decision-making tools for broadening positive impacts. Use data collection, analytics, and accounting techniques to assess conventional and nature-based industrial system performance. Develop innovative solutions to real-world sustainable challenges such as climate resilience, sustained food production, and improved well-being.
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 2614 - Introduction to Forest Products Marketing (3 credits)
Study of marketing systems and methods used by North American primary and secondary forest product industries. Emphasis on wood product industries. Marketing of hardwood lumber, softwood lumber, panels, composites, furniture, and paper products. Role of North American industries and markets in world trade of forest products.
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 2784 - Global Forest Sustainability (3 credits)
A socio-economic approach to examining the management and use of the worlds forests, enhance knowledge of global forest resources and products, and understand the roles and relationships of key stakeholders.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: FREC 2784

SBIO 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SBIO 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SBIO 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SBIO 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

SBIO 3004 - Sustainable Nature-Based Enterprises (3 credits)
Planning for green and sustainability values for profit and non-profit enterprises that produce and market nature-based products and services (e.g., wood products, wildlife, fish, ecotourism). Understanding current green business environments to foster natural resource-based enterprises.
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 3005 - Sustainable Packaging Design and Innovation (3 credits)
3005: Principles of sustainability, laboratory packaging evaluation including testing procedures, simulation of physical hazards. Professional communications including laboratory reports and oral presentations. Development of comprehensive packaging evaluation plans. Evaluation of existing packaging systems and improving them from the sustainability perspective. 3006: Application of project management to the packing development process. Apply lean management principles to packing design process. Design of sustainable packaging solutions through industry sponsored projects.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 3006 - Sustainable Packaging Design and Innovation (3 credits)
3005: Principles of sustainability, laboratory packaging evaluation including testing procedures, simulation of physical hazards. Professional communications including laboratory reports and oral presentations. Development of comprehensive packaging evaluation plans. Evaluation of existing packaging systems and improving them from the sustainability perspective. 3006: Application of project management to the packing development process. Apply lean management principles to packing design process. Design of sustainable packaging solutions through industry sponsored projects.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 3014 - Life Cycle Assessment Field Course (1 credit)
Cultivate hands-on experience in defining the scope and system boundaries of life cycle assessment (LCA) to collect data for computational LCA work. Apply the step-by-step LCA methodology to real-world problems to develop a streamlined LCA impact assessment and interpret the results in simple language for discussions with stakeholders. Use feedback from stakeholder discussions to discover how to improve the LCA assessment process. Each class will concentrate on specific types of LCA applications, namely Social LCA, Economic LCA (e.g., Life Cycle Costing), or Environmental LCA (e.g., water or carbon footprinting). Students will have an opportunity to apply their LCA work across selected sectors such as manufacturing, transportation, agricultural and/or forestry, and energy. This course may be repeated two times with different content for a maximum of 3 credit hours.
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

SBIO 3104 - Packaging Design Applications (3 credits)
Design structure of packaging with Adobe Photoshop, Adobe Illustrator, and Esko. Lab course adapting typography, illustration, and photography to create packaging prototypes. Structural integrity and display ethics through practice in packaging design projects and research. Identify the product target market. Design/Lab Studio. Course FEE $78.
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

SBIO 3124 - Paper and Paperboard Packaging (3 credits)
Paper and paperboard properties and types. Types and performance of flexible paper packaging, sacks, and wraps. Folding carton design, properties of corrugated fiberboard. Corrugated fiberboard container design and performance. Packaging regulations and hazards of the distribution environment. Printing, labeling and automatic identification methods.
Prerequisite(s): SBIO 2104
Corequisite(s): SBIO 2004
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 3224 - Packaging Distribution Systems (3 credits)
Unit load and parcel supply chains. Principles of operation and design of warehouse distribution and fulfillment centers. Principles of operation and design of shipping and distribution systems. The relation between packaging design, pallet design, and unit load design and the operation of industrial consumer goods supply chain.
Prerequisite(s): SBIO 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 3244 - Packaging Machinery and Production Systems (3 credits)
Selection of machinery systems to form, fill and seal packaging operations for multiple package and material categories; analysis of the effect of packaging design and material selection on production efficiency and manufacturing capacity; statistical process control for packaging systems; packaging line design.
Prerequisite(s): SBIO 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 3264 - Packaging Supply Chain (3 credits)
Supply chain strategies for packaging. Principles for planning and control of inventory, emphasis on dependent demand and material requirement planning for packaging materials in consumer-packaged goods companies; analysis and management of packaging components procurement, and supply contracts in a globalized environment; financial aspects of logistics and supply chain operations; logistics for returnable packaging containers.
Prerequisite(s): SBIO 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 3284 - Packaging Polymers and Production (3 credits)
Introduction to synthetic, natural and sustainable polymer science and engineering as applied to packaging systems. Morphology, rheology, physical and thermal properties, processing methods, and polymerization of traditional, natural and sustainable packaging polymers. Detailed study of relationships among materials, processing, and structural properties through hands-on experience. Both traditional and advanced industrial mass production technology, and global regulation and environmental impact of packaging articles.
Prerequisite(s): SBIO 2104
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

SBIO 3314 - Mechanics of Sustainable Biomaterials and Packaging (4 credits)
Mechanical properties of sustainable biomaterials and packaging materials including concepts of stress, strain, Poissons ratio, orthotropic properties, tension, compression, bending and effects of moisture on mechanical properties. Current issues related to sustainable biomaterial and packaging material use in industry. Standard methods of evaluating important mechanical properties of solid wood, composites, packaging, paperboard and fiber.
Prerequisite(s): PHYS 2205 or PHYS 2305
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

SBIO 3324 - Green Building Systems (3 credits)
Definition of green buildings with specific focus on wood frame single family housing and appropriate green building systems. Site specification, resource efficiency, water efficiency, indoor environmental quality, homeowner education and global impact. Certification in various green building systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 3334 - Survey of Non-timber Forest Products (3 credits)
In depth study of non-timber forest products of NTFP throughout Appalachia with overseas example - their heritage, uses and markets, economic development opportunities, and sustainable management. Emphasis will be placed on utilization and management issues. Students will gain skills necessary to assess and plan for NTFP business opportunities.
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 3434 - Chemistry and Conversion of Sustainable Biomaterials (3 credits)
Chemical composition of plant matter. Chemistry and biosynthesis of plant components. Cellulosic biofuel technology. Industrial conversion of woody biomass: pulping, bleaching, papermaking. Industrial conversion of cellulose by chemical processes.
Prerequisite(s): CHEM 1036
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 3444 - Sustainable Biomaterials and Bioenergy (3 credits)
Introduction to the structure and properties of natural composites, biobased polymers, and naturally-derived chemicals for materials and energy applications. Chemistry of biomass deconstruction. Industrial applications of biobased polymers, monomers, and chemicals.
Prerequisite(s): (CHEM 2514 or CHEM 2535) and (CHEM 3615 or CHEM 4615)
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 3445 - Entrepreneurial Wood Design and Innovation (3 credits)
Concept to market business project applied to design and innovation of wood products. Product design based on consumer need and sustainable use of natural resources. Writing a business plan including, product innovation, resource sustainability, marketing, strategic planning, production planning, technology utilized, packaging and distribution to final market.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 3446 - Entrepreneurial Wood Design and Innovation (3 credits)
Students run teams and experiential learning to organize and deploy the project according to a business plan, measure key performance areas, and manage the quality of the product and process value streams necessary to sustain a profitable business.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 3454 - Society, Sustainability Biomaterials and Energy (3 credits)
Sustainability, raw materials and energy needs of society. Use of sustainable biomaterials to meet societys needs and reduce impact on the environment. Methods to evaluate and certify the sustainability of materials and consumer goods. Carbon sequestration and the use biomass for energy.
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 3464 - Sustainable Operations Management (3 credits)
Sustainable business management models of renewable-based materials organizations. Application of strategy deployment tools to sustainable bio business strategies. Analysis of financial statements of bio businesses using ratio analysis. Implementation of models and tools to analyze production systems based on cycle time, throughput, and inventory (factory dynamics). Simulation and optimization of manufacturing systems using probability function models. Statistical quality control charts for discrete and continuous variables.
Prerequisite(s): STAT 2004 or STAT 3615 or STAT 3005 or STAT 3604
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 3524 - Manufacture of Sustainable Biomaterials for Structures (3 credits)
Principles of manufacturing sustainable biomaterials into primary and secondary products used in construction of buildings, houses and other structures; product demand and environmental impact; raw material quality and volume estimation; industry standards; manufacturing processes; and quality control methods.
Prerequisite(s): SBIO 2124
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 3554 - Sustainable Biomaterials Enterprises (3 credits)
Processes and techniques in manufacturing sustainable biomaterial-based products. Contemporary manufacturing, industrial engineering, and business practices in enterprises. Problem solving, operations management, and effective leadership in discrete products manufacturing and sustainable biomaterials production practices.
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

SBIO 3964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course
Repeatability: up to 12 credit hours

SBIO 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SBIO 3994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

SBIO 4004 - Senior Seminar in Forest Products Business (2 credits)
Integrated application of principles of management, manufacturing, and marketing as applied to wood-based and related industries. Case analysis, business planning and strategic decision making. Senior standing required.
Prerequisite(s): SBIO 3634
Instructional Contact Hours: (2 Lec, 2 Crd)

SBIO 4024 - Packaging Design for Global Distribution (3 credits)
Understanding, identification, and measurement of hazards in physical distribution including sea, air, and various land transportation, storage methods, and use of sanitation methods. Knowledge, analysis, and selection of sustainable protective packaging materials. Design and analysis of packaging protection against such hazards as shock, vibration compression, and climate. Laboratory testing of shock, vibration and compression, and performance testing of packaging and components. Packaging design in global context.
Prerequisite(s): SBIO 3224
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 4054 - Packaging Systems Design Practicum (3 credits)
Integrated application of principles of packaging design and manufacturing. Design briefs, package development process, structural requirements, manufacturing and distribution plans, target markets and positioning. Senior Standing required.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 4154 - Computer Application Systems in Forest Products (3 credits)
Computer control systems with applications in the forest products industry. Survey of systems for gathering, inputting, conditioning, and managing information. Hardware and software systems for computer control applications. Use of information technologies to integrate control subject to raw material, quality, and market fluctuations. Forest products case studies in data acquisition, data analysis, database management production planning, process control, inventory control, and systems specification. Junior standing is required.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 4164 - Sustainability Performance and Assessments (3 credits)
Data analytics, metrics, and tools essential for navigating sustainability standards, current policies, regulations, and reporting requirements, and their applications in sustainable investment. Explore innovations in sustainable investment strategies, emphasizing the integration of sustainability concepts and industrial ecology principles into business frameworks. Case studies approach to illustrate both successful and unsuccessful sustainability strategies across diverse contexts, such as energy sector, manufacturing, among other, providing insights into practical applications and outcomes.
Prerequisite(s): SBIO 2514
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 4214 - Food and Health Care Packaging (3 credits)
Designed for both current and advanced food and health care packaging. Covering the types of materials and their properties, fabrication, functions, distribution and packaging life cycle for food and health care packaging systems and design. Reviewing recent trends in food and health care packaging systems; sustainable food packaging, medical device packaging, aseptic packaging, package/product interactions, smart active packaging, handling of packages, and modified atmospheric packaging. Exploration to global food and health care packaging standards and compliance, safety issues, and environmental considerations.
Prerequisite(s): SBIO 3124 and SBIO 3284
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

SBIO 4224 - Industrial Packaging Systems (3 credits)
Principles of pallet design including material selection, pallet repair methods and recycling, properties and selection of pallet fasteners. Principles of industrial packaging systems including handheld containers, bulk bins, drums, pails, bags, intermediate bulk containers, flexible intermediate bulk containers. Principles of unit load design including unit load interactions and application of load stabilizers. Principles of reusable packaging systems, shipping laws and regulations.
Prerequisite(s): SBIO 4024 and SBIO 3224
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 4254 - Advanced Manufacturing with Sustainable Biomaterials (3 credits)
Modeling and visualization concepts in computer-aided design (CAD) that facilitate advanced manufacturing technologies. Advanced manufacturing tools such as computer-aided manufacturing (CAM) and computer-aided engineering (CAE) used to study the function, cost, and quality that may result from modeled product concepts. Interactions of model specifications and the materials and manufacturing methods utilized on production results. Data analytics to evaluate tradeoffs in the quality, cost, and sustainability of products utilizing sustainable biomaterials compared to other common materials utilized in manufacturing.
Prerequisite(s): SBIO 2004 and SBIO 3314
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 4314 - Design of Wood Structures (3 credits)
Analysis and design of wood structures comprised of solid wood and/or composite wood products. Evaluation of mechanical properties of wood materials. Design of individual tension, compression and bending members, and wood-steel dowel connections. Lateral loading design of diaphragms and shearwalls.
Prerequisite(s): SBIO 3314 or CEE 3404
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CEM 4314

SBIO 4384 - Biorefinery Science (3 credits)
Biomass utilization as an industrial resource. Biorefinery processes such as cultivation, harvesting, separation, and biomass processing into industrial products compared to the petroleum refinery. Routes to the production of bioenergy, biochemicals, and biofuels. Resource availability and energy consumption, environmental implications of a biorefinery system, public policy influence on development of biorefineries.
Prerequisite(s): SBIO 3434
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 4424 - Polysaccharide Chemistry (3 credits)
Structure, properties, and applications of natural polysaccharides. Natural sources and methods of isolation. Synthetic chemistry and important polysaccharide derivatives. Relation of structure and properties to performance in critical applications including pharmaceuticals, coatings, plastics, rheology control, and films. Conversion by chemical and biochemical methods of polysaccharide biomass to fuels and materials.
Prerequisite(s): CHEM 2536 or CHEM 2566
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CHEM 4424

SBIO 4444 - Plant Polymers & Biocomposites (3 credits)
Evolution of vascular plants and plant polymers in the context of materials science and biocomposites. Anatomical, physical, and mechanical properties of wood, bamboo, and hemp. Polymer science, plant polymer science, surface chemistry, and adhesion science for biocomposites made from wood, bamboo, and hemp. Contemporary adhesives and resins for biocomposites manufacture.
Prerequisite(s): CHEM 2514 or CHEM 2536
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 4514 - Wood Products Industry Studies (1 credit)
Field studies of the processing systems and product manufacturing procedures of various wood products industries.
Prerequisite(s): SBIO 3114
Instructional Contact Hours: (3 Lab, 1 Crd)

SBIO 4624 - Wood Industry Production Operations Management (3 credits)
Study of the operation of wood products organizations. Problems facing these organizations and current management practices used to address these problems. Investigation of the design and implementation of wood industry management improvement efforts. How organizations and groups design, implement, and evaluate improvements efforts. The application of techniques to production planning, financial management, inventory management, quality, human resources management, technology, performance measures, and assessment. Includes case studies of wood products manufacturing companies.
Prerequisite(s): SBIO 3544
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

SBIO 4634 - Forest Products Business Management (3 credits)
This course will describe the allocation of resources within a forest products business. Students will determine how to allocate natural, human and financial resources to maximize profitability within the organization. How allocation decisions affect all stakeholders of the organization will be demonstrated and this allocations impact upon strategic planning will be discussed. The course will also show the impact of the external business environment on management decisions.
Prerequisite(s): SBIO 1234 and SBIO 2614 and SBIO 3114
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 4714 - Performance of Sustainable Biomaterials in Buildings (3 credits)
The use of manufactured sustainable biomaterials in the construction of buildings; interactions of building code requirements, sustainable biomaterials and bio-composite materials as components within houses; durability, deterioration, controlling moisture infiltration, preservatives and proper selection of materials, historic wood buildings, effectiveness and efficiency of sustainable biomaterial building systems; serviceability issues in buildings with sustainable biomaterials.
Prerequisite(s): SBIO 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

SBIO 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SBIO 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SBIO 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SBIO 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Packaging Systems and Design Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
SBIO 1114	A Sustainable Future through Circular Economy	3
SBIO 2004	Computer-Aided Design in Packaging	3
SBIO 2104	Principles of Packaging	3
SBIO 3124	Paper and Paperboard Packaging	3
SBIO 3224	Packaging Distribution Systems	3
SBIO 3284	Packaging Polymers and Production	3
SBIO 3314	Mechanics of Sustainable Biomaterials and Packaging	4
SBIO 4024	Packaging Design for Global Distribution	3
SBIO 4054	Packaging Systems Design Practicum	3
SBIO 4214	Food and Health Care Packaging	3
SBIO 4224	Industrial Packaging Systems	3
CHEM 2514	Survey of Organic Chemistry	3
Subtotal		37
Business		
Select one of the following:		3
MKTG 3104	Marketing Management	
SBIO 2614	Introduction to Forest Products Marketing	
SBIO 3464	Sustainable Operations Management	
Subtotal		3
Chemical and Physical Sciences		
BIOL 1115	Principles of Biology Laboratory	1
PHYS 2205	General Physics	3
CHEM 1036	General Chemistry	3
Subtotal		7
Restricted Packaging Electives		
Select two of the following:		6
SBIO 2214	Design Fundamentals for Packaging	
SBIO 3104	Packaging Design Applications	
SBIO 3244	Packaging Machinery and Production Systems	
Packaging Experiential Learning		
Select one of the following:		3
SBIO 3005	Sustainable Packaging Design and Innovation

Satisfactory Progress

By the end of the semester in which the student has attempted 60 hours (including transfer, advanced placement, advanced standing, and credit by examination), "satisfactory progress" towards a B.S. degree in the College of Natural Resources and Environment will include the following minimum criteria:

- Having a grade point average of at least 2.0
- Passing at least 24 semester credits that apply towards the Pathways General Education
- Passing the required 1000-level courses in Biology, Chemistry, English, and Math

Graduation Requirements

In-major GPA Computation

Includes all courses designated SBIO. The acceptable minimum is 2.0.

Sequencing

Courses should be taken in a sequence that ensures that any prerequisite or corequisite requirements are met. Free elective courses may also have prerequisite requirements. Students should plan ahead and ensure that they have completed prerequisites or are enrolled in corequisite courses.

Foreign Language Requirement

Two years of one language in high school or complete an 1105-1106 foreign language (e.g. FR, GR, SPAN) grouping or equivalent.

Sustainable Biomaterials Major

Program Curriculum

Minimum credit hours required for graduation is 120.

Code	Title	Credits

College of Science

Our Website (http://www.science.vt.edu)

Overview

The College of Science at Virginia Tech provides students with interdisciplinary training in analytical skills, a comprehensive foundation in the tools of science and the scientific method, and rigorous education in any of a wide variety of scientific fields. Outstanding faculty members conduct research and teach courses in fourteen disciplines leading to baccalaureate and advanced degrees. Coursework from the College of Science further provides a foundation of knowledge in a number of fundamental and advanced subjects for students in all Colleges across the campus. The College of Science also offers academic advising and appropriate preparatory coursework for students interested in pre-medicine, pre-dentistry, pre-veterinary medicine, and patent or intellectual property law.

The college supports research centers in areas such as biomedical and public health sciences, applied mathematics, macromolecular science, and many other critical technologies and applied sciences that interface with other Colleges at the University. Allied disciplines emphasize the study of behavioral science as well as economic and strategic decision

making. The College is committed to providing research opportunities for interested students at all levels.

General Requirements for Graduation

A student in the College of Science must complete at least 120 hours for an undergraduate degree as well as satisfying the following requirements:

- achieve a minimum overall Grade Point Average (GPA) established for their degree by the major department for all hours attempted
- achieve a minimum in-major GPA established for their major by the department for all hours attempted in all work applied to the major
- complete all other requirements established for their degree by the major department
- complete all college and General Education (Pathways General Education) requirements

No course required for the major/minor may be elected to be taken on a pass/fail (P/F) basis (i.e., pass/fail may be used for free electives only). This excludes courses that are offered P/F only.

College Core Curriculum

A description of the General Education Requirements (Pathways General Education) may be found in the Academics chapter of this catalog or on the Pathways General Education website (www.pathways.prov.vt.edu (http://www.pathways.prov.vt.edu)).

Foreign Language

Students must complete the second year (level II) of a single foreign language [including Sign Language (ESL)] in a secondary school. This requirement may also be fulfilled by successful completion of one of the following:

- Satisfactorily complete 1106 for any foreign language offered including any prerequisites
- Satisfactorily complete an accelerated course which combines 1105 and 1106 of a foreign language
- Students who have not completed two (2) units of a single foreign language in high school must satisfactorily complete 1106 or an accelerated course which combines 1105 and 1106 of a foreign language. These hours are in addition to the 120 hours required for graduation, so these hours will not count towards graduation.
- Credit by examination for a foreign or classical language. The credit by examination option is available only to students who have gained knowledge of a foreign language without the benefit of formal training. This option is intended to recognize informal, non-academic learning experience. This option is restricted and does not carry credit towards graduation. Requests must be made through the Foreign Language office. See https://clep.collegeboard.org for available tests and procedures.
- Students whose native language is not English may be exempted from the foreign language requirement.

Honors College

The Honors College welcomes highly motivated College of Science students. The mission of the Honors College is to inspire and facilitate an extraordinary education for students of exceptional ability who seek to be active learners and who will apply their knowledge and skills to critical real-world problems.

Currently enrolled Virginia Tech students will receive an invitation to apply to the Honors College at the end of each fall or spring semester, provided they have achieved a 3.40 or better cumulative GPA and have at least four (4) semesters remaining at Virginia Tech before they graduate. More information about honors academic requirements and how to earn an honors diploma is available on the Honors College website: https://www.honorscollege.vt.edu.

Integrated Science Curriculum

Designed for students seeking an in-depth understanding of 21st century science, the Integrated Science Curriculum (ISC) provides a novel, integrated scientific foundation for any degree program in the College of Science. It employs a collaborative, active-learning environment emphasizing teamwork, skill acquisition, independent thought, and creativity. Structurally, ISC is a 30-credit two-year course sequence that covers the fundamentals of college-level chemistry, physics, and biology integrated with each other and with calculus and linear algebra. Teamwork, written and oral presentation, and problem-solving are central components throughout the curriculum. See a full description of the ISC at https://www.ais.science.vt.edu/academics/isc.html.

Dean's List

An undergraduate student who attempts at least 12 credit hours graded on the A-F option and who earns a 3.4 GPA for either spring or fall semester will be included on the online Dean's List for that term. Please note: Students will not appear on the online Dean's List if they are listed in the system as confidential or if they do not have an active permanent address. Questions about omissions from the online list should be directed to the Office of the University Registrar.

Pre-Professional Advising in the College of Science

Career and Professional Development offers advising to all students who are considering graduate or professional school as part of their career planning process. Students are welcome to seek advising for decision-making on whether graduate school is the path to their career goal, how to research school and programs, and reviews resumes and personal statements. Students interested in any health profession requiring graduate or professional school are encouraged to participate in health professions advising https://career.vt.edu/advising/hpa.html. Health professions advising is particularly helpful in advising students interested in nursing, dentistry, optometry, veterinary medicine, allopathic medicine (MD), osteopathic medicine (OD), physical therapy, becoming a physician's assistant/nurse practitioner, etc. Advising for students interested in patent or intellectual property law careers is available in the college advising center.

Phi Beta Kappa

Phi Beta Kappa is the oldest and most prestigious honor society dedicated to recognizing excellence in the liberal arts and sciences. Students in the College of Science who have exhibited outstanding academic ability in eligible coursework may be eligible for selection to Phi Beta Kappa.

Scholarships

A number of scholarships are available for outstanding students enrolled in the College of Science. Descriptions and deadlines are available on the Scholarships and Financial Aid website.

Undergraduate Research

Research opportunities and experiencing the excitement of discovery can play an important part in undergraduate training in science. College of Science departments offer diverse research opportunities in which students may choose to participate. Individuals interested in undergraduate research should contact a faculty member in the department where they wish to conduct research.

Internships, Co-op Opportunities, and Enrichment Programs

Students are encouraged to participate in internship and co-op opportunities to gain relevant work experience prior to graduation. Career advisors in the college advising center as well as departmental career advisors can help students identify opportunities. In some cases, students can receive credit for qualifying work experience. Enrichment studies include field station opportunities, study abroad and summer laboratory experiences outside of the university.

Career Advising

Career advising is available from a number of sources. The centralized Career and Professional Development, located at the Smith Career Center, offers many services to aid with your career journey. Beginning with career and major exploration early in your time on campus, through the process of assisting you in the job search or graduate and professional school application, Career and Professional Development advisors can be a resource for you along the way. Career advisors have resources to guide your every step in the career journey, as well as assisting in gaining valuable experience through internships and other opportunities in your career field(s) of interest. Specialized Health Professions Advisors are also available for those that are choosing to pursue post-graduate education in a Health Profession. For more information, visit www.career.vt.edu (http://www.career.vt.edu). The departments within the College of Science also host panels and information sessions with employers interested in hiring students with degrees from the college. Every major has departmental advisors who specialize in guiding students from their field towards career success.

As part of a service to you, Career and Professional Development offers each student a **free** Handshake account. Students who are seeking any type of career-related experience or employment, including internships, co-ops, career-related summer employment, and permanent positions are eligible to use Handshake. You may upload your resume, search for companies interested in Virginia Tech students, apply for positions, review job fairs, and sign up for on-campus interviews listed in Handshake. Additional information about this resource can be found at https://career.vt.edu/job-search/Handshake.html.

Graduate Programs in Science

College of Science departments offer graduate degrees at both the Master's and Ph.D. levels. Complete information on these programs including descriptions of graduate courses can be found in the Graduate Catalog (https://secure.graduateschool.vt.edu/graduate_catalog/).

Degree Programs

- Biological Sciences Major (p. 1229)
- Biological Sciences Major with Biology Education Option (p. 1232)
- Biological Sciences Major with Biomedical Option (p. 1234)
- Biological Sciences Major with Ecology, Evolution, and Behavior Option (p. 1236)
- Chemistry Major (B.A.) (p. 1249)
- Chemistry Major (B.S.) (p. 1250)
- Clinical Neuroscience Major (p. 1319)
- Cognitive and Behavioral Neuroscience Major (p. 1321)
- Computational and Systems Neuroscience Major (p. 1324)
- Computational Modeling and Data Analytics Major (p. 1258)
- Computational Modeling and Data Analytics Major with Biological Sciences Option (p. 1259)
- Computational Modeling and Data Analytics Major with Cryptography and Cybersecurity Option (p. 1261)
- Computational Modeling and Data Analytics Major with Economics Option (p. 1262)
- Computational Modeling and Data Analytics Major with Geosciences Option (p. 1263)
- Computational Modeling and Data Analytics Major with Physics Option (p. 1265)
- Economics Major (p. 1271)
- Economics Major with Business Option (p. 1272)
- Economics Major with Managerial Economics and Data Science Option (p. 1274)
- Economics Major with Policy and Regulation Option (p. 1276)
- Experimental Neuroscience Major (p. 1326)
- Geosciences Major with Earth Science Education Option (p. 1284)
- Geosciences Major with Environmental and Engineering Geoscience Option (p. 1285)
- Geosciences Major with Geobiology & Paleobiology Option (p. 1287)
- Geosciences Major with Geochemistry Option (p. 1288)
- Geosciences Major with Geology Option (p. 1291)
- Geosciences Major with Geophysics Option (p. 1292)
- Mathematics Major (p. 1301)
- Mathematics Major with Applied and Discrete Mathematics Option (p. 1303)
- Mathematics Major with Applied Computational Mathematics Option (p. 1305)
- Mathematics Major with Mathematics Education (Master's Track) Option (p. 1307)
- Medicinal Chemistry Major (p. 1252)
- Microbiology Major (p. 1239)
- Microbiology Major with Biomedical Option (p. 1241)
- Nanomedicine Major (p. 1311)
- Nanoscience Major (p. 1313)
- Physics Major (p. 1335)
- Physics Major (p. 1337)
- Physics Major with Physics Education Option (p. 1338)
- Physics Major with Pre-Health Option (p. 1340)
- Physics Major with Pre-Law Option (p. 1342)
- Polymer Chemistry Major (p. 1254)
- Psychology Major (p. 1347)
- Statistics Majors with Statistical Data Science Option (p. 1354)

- Statistics Majors with Statistical Methods and Theory Option (p. 1356)
- Systems Biology Major (p. 1360)

Dean: Kevin Pitts
Associate Dean for Research: John Morris
Associate Dean for Faculty Affairs and Graduate Studies: Patricia Hammer
Associate Dean for Undergraduate Programs: Michel Pleimling
Assistant Dean for Outreach and Student Engagement: Victoria Corbin
Assistant Dean for Research in the National Capital Region: Laura Freeman
Assistant Dean for Inclusion and Diversity: Estrella Johnson
Assistant Dean for Finance: Will Walton
Assistant Dean for Advancement: Michael Walsh

COS 1004 - Explore Science Seminar (2 credits)
Overview of the college and its degrees as well as the various career opportunities available to College of Science graduates. Introduction to University resources that aid in strategic academic and career planning. Intended for first-year Explore Science majors in the College of Science.
Instructional Contact Hours: (2 Lec, 2 Crd)

COS 1015 - Successful Starts in Science: Curie and Da Vinci Living Learning Communities (1 credit)
First year experience course for students living in the Curie or Da Vinci Living Learning Communities at Virginia Tech. Provides resources and fundamental skills to enhance learning experiences and support academic success in the sciences. Engages students with professional and academic development activities both in the classroom and within a science-themed residence hall. Uses a learn by doing approach to blending technical know-how with leadership, ethical, interpersonal and professional skills fundamental to the practice of science. Requires teamwork to envision, design, and implement research projects while using innovative discipline-specific technology. Provides first-year students with support through a weekly peer mentoring program. 1015: Emphasis on scientific inquiry, curriculum planning, career planning in the sciences, skills to promote academic success, awareness of academic and career resources and opportunities. 1016: Emphasis on collaborative problem-solving skills using innovative discipline-specific technology, critical thinking; Integration of ideas and experiences to encourage life-long learning through service work related to their academic/ career interests.
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 1016 - Successful Starts in Science: Curie and Da Vinci Living Learning Communities (1 credit)
First year experience course for students living in the Curie or Da Vinci Living Learning Communities at Virginia Tech. Provides resources and fundamental skills to enhance learning experiences adn support academic success in the sciences. Engages students with professional and academic development activities both in the classroom and within a science-themed residence hall. Uses a learn by doing approach to blending technical know-how with leadership, ethical, interpersonal and professional skills fundamental to the practice of science. Requires teamwork to envision, design, and implement research projects while using innovative discipline-specific technology. Provides first-year students with support through a weekly peer mentoring program. 1015: Emphasis on scientific inquiry, curriculum planning, career planning in the sciences, skills to promote academic success, awarenenss of academic and career resources and opportunities. 1016: Emphasis on collaborative problem- solving skills using innovative discipline-specific technology, critical thinking; Integration of ideas and experiences to encourage life-long learning through service work related to their academic/career interests.
Prerequisite(s): COS 1015
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 2015 - Professional Leadership in Science: Curie and Da Vinci LLC Leadership Course (1 credit)
Leadership and professional development course for sophomore science majors in the Curie and Da Vinci Living Learning Communities (LLCs). Applied experience in fundamental leadership and project management skills associated with practice of science, gained through service learning within the LLC. 2015: Academic peer mentoring, application and development of leadership and communication skills; application and development of project planning, organizational and collaboration skills; emphasis on written communication skills. 2016: Application of team mentoring and project management skills, including project planning and coordination, leadership strategies, collaboration, communication, conflict resolution, understanding group dynamics and the importance of diversity, and facilitating group discussion on scientific problem solving; emphasis on verbal communication skills.
Prerequisite(s): COS 1016
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 2016 - Professional Leadership in Science: Curie and Da Vinci LLC Leadership Course (1 credit)
Prerequisite(s): COS 2015
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 2164 - Introduction to Scieneering (1 credit)
Seminar-based course providing a survey of current interdisciplinary science and engineering research problems; introduction to interdisciplinary thinking and communication; issues related to interdisciplinary research teams.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: ENGR 2164

COS 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 3015 - Applications of Leadership in the Orion Science Living Learning Community (1 credit)
Applications of science leadership for sophomore through senior students in the Orion Science Living Learning Community (LLC). Students learn leadership skills while mentoring and designing activities to help younger students develop skills needed to succeed in college and future science careers. 3015: Recognize the needs of first- and second-year college students: help students find their own solutions; cooperatively plan and run activities that help first- and second-year college students develop professional skills and meet learning objectives; practice communication and motivation skills; model professional and ethical conduct; assess self as a learner and a leader. 3016: Coach teams and manage projects: help first- and second-year college students to apply their existing knowledge to a new project; identify problem-solving strategies and propose solutions; facilitate teamwork; communicate scientific information to the public in writing and orally; articulate the relationship between service to others and effective leadership.
Prerequisite(s): COS 1016 or COS 2016
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 3016 - Applications of Leadership in the Orion Science Living Learning Community (1 credit)
Applications of science leadership for sophomore through senior students in the Orion Science Living Learning Community (LLC). Students learn leadership skills while mentoring and designing activities to help younger students develop skills needed to succeed in college and future science careers. 3015: Recognize the needs of first- and second-year college students: help students find their own solutions; cooperatively plan and run activities that help first- and second-year college students develop professional skills and meet learning objectives; practice communication and motivation skills; model professional and ethical conduct; assess self as a learner and a leader. 3016: Coach teams and manage projects: help first- and second-year college students to apply their existing knowledge to a new project; identify problem-solving strategies and propose solutions; facilitate teamwork; communicate scientific information to the public in writing and orally; articulate the relationship between service to others and effective leadership.
Prerequisite(s): COS 3015
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 4015 - Supervision in Science: Orion Living Learning Community (1 credit)
Supervision in Science is a course for junior through senior students in the Orion Living Learning Community (LLC). Students learn more advanced management and supervisory skills while working closely with Orion LLC faculty and staff to build on previously learned mentorship, leadership, and lesson/event planning skills to help younger students develop skills needed for success in college and future science careers. 4015: Recognize the needs and manage activities of first, second, and third year college students: assess self as a peer supervisor; develop an individual development plan (IDP) for peer supervisors with Orion LLC Directors; model professional and ethical conduct; effectively and positively motivate teams of first, second, and third year students to meet learning objectives and develop professional skills; help first, second, and third year college students effectively and professionally communicate needs. 4016: Apply supervisory skills to managing and coaching student teams toward completion of program activities and projects: reassess and revise individual development plan (IDP) for peer supervisory role with Orion LLC Directors; help second and third year college students effectively motivate and guide first year students toward the completion of a group research project; help younger students communicate scientific information to the public orally and in writing; facilitate conflict resolution; promote professional and timely communication for second and third year college students; articulate the role of supervision as an aspiring science professional.
Prerequisite(s): COS 3016
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 4016 - Supervision in Science: Orion Living Learning Community (1 credit)
Supervision in Science is a course for junior through senior students in the Orion Living Learning Community (LLC). Students learn more advanced management and supervisory skills while working closely with Orion LLC faculty and staff to build on previously learned mentorship, leadership, and lesson/event planning skills to help younger students develop skills needed for success in college and future science careers. 4015: Recognize the needs and manage activities of first, second, and third year college students: assess self as a peer supervisor; develop an individual development plan (IDP) for peer supervisors with Orion LLC Directors; model professional and ethical conduct; effectively and positively motivate teams of first, second, and third year students to meet learning objectives and develop professional skills; help first, second, and third year college students effectively and professionally communicate needs. 4016: Apply supervisory skills to managing and coaching student teams toward completion of program activities and projects: reassess and revise individual development plan (IDP) for peer supervisory role with Orion LLC Directors; help second and third year college students effectively motivate and guide first year students toward the completion of a group research project; help younger students communicate scientific information to the public orally and in writing; facilitate conflict resolution; promote professional and timely communication for second and third year college students; articulate the role of supervision as an aspiring science professional.
Prerequisite(s): COS 4015
Instructional Contact Hours: (1 Lec, 1 Crd)

COS 4064 - Scieneering Capstone (3 credits)
A capstone experience centered around an open-ended, faculty-advised senior project involving the design of a process, material, or technique for solving an interdisciplinary problem. Pre: Enrollment in Interdisciplinary Engineering and Science Minor.
Prerequisite(s): ENGR 2464 or BIOL 2124
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGR 4064

COS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

COS 4984 - Special Study (1-19 credits)

Instructional Contact Hours: Variable credit course

COS 5984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Biological Sciences

Our Website (http://www.biol.vt.edu)

Overview

The Department of Biological Sciences offers two B.S. degree paths: the B.S. in Biological Sciences and the B.S. in Microbiology.

The B.S. in Biological Sciences program provides majors with a broad education in the study of life. This curriculum exposes students to the fundamentals of the discipline: genetics, cell and molecular biology, evolutionary biology, and ecology. In addition, Biological Sciences majors may take advantage of elective courses on topics such as macromolecular structure, pathogenic bacteriology, cancer biology, infectious disease ecology, human genetics, and global change ecology. Students may choose to complete an option in one of the following three areas: Biomedical; Ecology, Evolution, and Behavior (EEB); or Biology Education.

The B.S. in Microbiology program provides majors with a more focused education in the biology and roles of microscopic life forms present in our environments. The laboratory-intensive curriculum provides knowledge in the genetics and physiology common to all microbes and allows students to explore specific interests with a broad range of advanced electives such as pathogenic bacteriology, immunology, environmental microbiology, food microbiology, virology, microbial forensics, and bioinformatics.

Modern biology increasingly relies on knowledge, skills, and perspectives associated with other scientific fields, particularly chemistry, mathematics, physics and statistics. Success in biological sciences-associated careers requires students to master the fundamentals of these cognate fields and to be able to apply these skill sets.

As a scientific discipline, biology is more than simple knowledge about living organisms. By integrating education and research, our majors are training to be leaders in their field who practice innovative and interdisciplinary approaches in biological research. By participating in undergraduate research during the academic year, our students are discovering through hands-on experience what it means to Invent the Future. Our majors are strongly encouraged to explore internships and research opportunities on campus and elsewhere during the summer.

The majority of our graduates continue on to advanced studies in the health professions or in various branches of the biological sciences. Graduates pursue professional degrees in medicine, dentistry, veterinary medicine, pharmacy, and nursing, or M.S. or Ph.D. degrees in ecology, environmental biology, microbiology, botany, zoology, cell biology, molecular biology, and biomedical sciences. Students interested in entering the workforce are provided the core background for opportunities in biotechnology, food science, bioinformatics, bio-business, and health-related industries.

Preparation for Advanced Study

Graduate Study

Students who satisfactorily complete the undergraduate curriculum in biological sciences or microbiology may pursue advanced studies leading to the M.S. or Ph.D. in various branches of the biological sciences. Those interested in teaching science are prepared to pursue the M.A.Ed.

Preparation for Medicine

The training afforded by the first three years (approximately 96 hours) meets the pre-medical training requirements of medical colleges that accept students with only three years of undergraduate work. It is strongly recommended, however, that all students complete a B.S. before entering medical school.

Preparation for Dentistry

Dental colleges require a minimum of three years of college training for admission, but it is generally advisable for students to complete the B.S. before entering dental school.

Preparation for Allied Health Professions

Schools of Allied Health Professions, such as nursing, pharmacy, medical technology, physical therapy, etc., require two or more years of college work for admission. Specific requirements are available from Career and Professional Development or the Biological Sciences Department.

Preparation for Veterinary Medicine

Veterinary schools require a minimum of three years of college training for admission. Few students who meet only the minimum entrance requirements are accepted by veterinary schools.

Minor Requirements

The requirements to earn a minor in Biology can be found on its checksheet by visiting the University Registrar website at https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html.

- Biological Sciences Major (p. 1229)
- Biological Sciences Major with Biology Education Option (p. 1232)
- Biological Sciences Major with Biomedical Option (p. 1234)
- Biological Sciences Major with Ecology, Evolution, and Behavior Option (p. 1236)
- Microbiology Major (p. 1239)
- Microbiology Major with Biomedical Option (p. 1241)

Head: Robert S. Cohen
Harold H. Bailey Endowed Chair: J. R. Walters[6]

Professors: J. Barrett, L. K. Belden, C. Carey, D. Cimini, C. Finkielstein, M. J. Friedlander, D. Hawley[3,7], A. LaMantia, I. Lazar, L. Li[6], S. B. Melville, I. T. Moore[3], D. L. Popham, B. Scharf, J. Sible[7,10], A. M. Stevens[3,7], D. Tholl, Q. Thomas, B. S. J. Winkel[10], and Z. Yang
Associate Professors: F. Aylward, B. Brown, D. Capelluto, J. Chen, V. Corbin, S. Hauf, E. R. Hotchkiss, S. Kojima, K. Langwig, J. W. McGlothlin, M. C. Mims, F. Schubot, K. Sewall, J. Smyth, J. C. Uyeda, R. A. Walker[3,7], and S. R. Whitehead
Assistant Professors: J. Allen, D. Cortes Estrada, J. Draghi, V. Gómez-Bahamón, A. D. Gray, J. Hoyt, B. Hsu, A. Igwe, S. R. Johnstone, H. Lam, R. Márquez, J. Moss, J. Pfleger, A. Suvorov, and J. Vargas-Muniz
Assistant Professor of Practice: J. G. Tokuhisa
Senior Instructors: J. Evans[1], E. P. Hogan, M. V. Lipscomb[3], M. S. Rosenzweig[3,4], and R. W. Seyler
Advanced Instructors: M. M. Emori[4], S. M. Voshell, J. I. Watkinson, and B. D. Wills
Instructor: K. A. Bretz
Curator of the Massey Herbarium: J. S. Metzgar

Footnotes:

1 Award for Excellence in Undergraduate Advising
2 Academy of Teaching Excellence inductee
3 Wine Award recipient
4 Sporn Award recipient
5 Alumni Award for Extension Excellence
6 Alumni Award for Research Excellence
7 Alumni Award for Teaching Excellence
8 Academy of Faculty Service
9 Commonwealth of Virginia Outstanding Faculty Award
10 Diggs Teaching Scholar Awards

Undergraduate Course Descriptions (BIOL)

BIOL 1004 - Biology Orientation Seminar (1 credit)
An introduction to academic and career planning for majors in Biology and students who may be considering Biology as a major.
Instructional Contact Hours: (1 Lec, 1 Crd)

BIOL 1014 - Introduction to Biology (3 credits)
Introductory biology for non-life science majors. Topics covered include the hierarchy of living systems, cell structure, physiology, and reproduction, Mendelian genetics, molecular genetics, evolution, microbial diversity, plant anatomy and physiology, animal anatomy and physiology, and ecological systems. Ethical aspects of current research in these areas. Partially duplicates 1005, 1006, 1105, 1106.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1024 - Cancer: Causes, Treatments, Costs (3 credits)
Introduction to risk factors and biological mechanisms associated with cancer. Current approaches to cancer prevention, diagnosis, and treatment. Personal, socioeconomic, and global aspects of cancer.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1034 - Biology of Sex (3 credits)
Sexual reproduction in living organisms from a scientific perspective including morphology, physiology, behavior, development and evolution. Biological basis and ethical considerations of human societal issues including contraception, homosexuality, and gender/sex.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1054 - Human Biology: Concepts and Current Issues (3 credits)
Survey of human biology, including physiology, genetics, evolution, and ecology. Focus on homeostasis, including factors and choices that disrupt homeostasis and health. Examination of technological advances and ethical issues associated with the biology of humans. Personal and societal choices that impact human ecology.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1064 - Plants and Civilization (3 credits)
Survey of basic plant biology. Critical roles of plants as food, drugs, textiles, other products. Examination of the global, historical, and cultural links between plants and humans. Discussion of current topics, including biotechnology, global change, biodiversity loss, nutrition and drug addiction.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1074 - How Animals Think (3 credits)
Overview of scientific research on animal cognition and behavior from perspectives in biology, psychology, and neuroscience. Study and application of scientific approaches to the study of animal cognition and behavior in the context of personal, political, and societal decision making. Considers the influence of animal cognition and animal ethics on decisions about human-animal interactions at a personal and societal scale ranging from decisions about food supply to conservation. Provides the framework to evaluate animal personality, emotion, consciousness, and rights. Addresses how cultural, social and political views influence scientific research on animal cognition. Consideration of bidirectional effects of human-animal interactions on One Health and animal welfare.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1105 - Principles of Biology (3 credits)
Introduction to the science of biology. 1105: living systems; biological molecules; cell structure, function, and reproduction; cellular energetics and metabolism; expression and inheritance of genetic information; evolution; ethical implications of research and discovery in these areas. 1106: animal and plant anatomy and physiology, ecology, and animal behavior; ethical implications of research and discovery in these areas. (1105 duplicates 1005, 1014; 1106 duplicates 1006, 1014. Credit for 1014 will be disallowed if 1105 or 1106 are taken after earning credit for 1014)
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1106 - Principles of Biology (3 credits)
Introduction to the science of biology. 1105: living systems; biological molecules; cell structure, function, and reproduction; cellular energetics and metabolism; expression and inheritance of genetic information; evolution; ethical implications of research and discovery in these areas. 1106: animal and plant anatomy and physiology, ecology, and animal behavior; ethical implications of research and discovery in these areas. (1105 duplicates 1005, 1014; 1106 duplicates 1006, 1014. Credit for 1014 will be disallowed if 1105 or 1106 are taken after earning credit for 1014).
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 1115 - Principles of Biology Laboratory (1 credit)
Emphasizes biological principles through investigative exercises and collaborative learning. 1115: cell chemistry, physiology and reproduction and genetics; 1116: plant and animal form and function, and ecology. Primarily for students majoring in the life sciences. (Duplicates 1015 1016, 1125, 1126).
Corequisite(s): BIOL 1105
Instructional Contact Hours: (3 Lab, 1 Crd)

BIOL 1116 - Principles of Biology Laboratory (1 credit)
Emphasizes biological principles through investigative exercises and collaborative learning. 1115: cell chemistry, physiology and reproduction and genetics; 1116: plant and animal form and function, and ecology. Primarily for students majoring in the life sciences.
Corequisite(s): BIOL 1106
Instructional Contact Hours: (3 Lab, 1 Crd)

BIOL 1135 - Phage Hunters (2 credits)
Isolation, identification, and characterization of bacteriophages from environmental sources. 1135: Bacteriophage DNA purification, genomic analysis, imaging, and sequencing. 1136: Bioinformatic characterization and annotation of sequenced bacteriophage genomes, comparative genomic analysis, submission of bacteriophage sequence data to public databases.
Instructional Contact Hours: (6 Lab, 2 Crd)

BIOL 1136 - Phage Hunters (2 credits)
Isolation, identification, and characterization of bacteriophages from environmental sources. 1135: Bacteriophage DNA purification, genomic analysis, imaging, and sequencing. 1136: Bioinformatic characterization and annotation of sequenced bacteriophage genomes, comparative genomic analysis, submission of bacteriophage sequence data to public databases.
Prerequisite(s): BIOL 1135
Instructional Contact Hours: (6 Lab, 2 Crd)

BIOL 1214 - Careers in Medicine (1 credit)
For students considering a career in health care. Investigation of various health care professions, including requirements for additional education and the professional and personal expectations characteristic of these professions. Introduction to biomedical ethics and health policy. Options for financing professional school. How to become a competitive applicant.
Instructional Contact Hours: (1 Lec, 1 Crd)

BIOL 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 2004 - Genetics (3 credits)
Mendelian transmission, chromosome behavior and organization, gene and chromosome mutation, genetic properties of nucleic acids, gene expression and development, DNA technology.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106 and (CHEM 1036 or CHEM 1056 or CHEM 1056H or CHEM 1016 or ISC 2105)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 2124 - Cell and Molecular Biology for Engineers (2 credits)
Composition, structure and function of cells; fundamentals of gene expressions, cell physiology, cellular movement and reproduction; stem cells and tissue formation; synthetic biology and applied cell and molecular biology. Not for Biological Sciences majors.
Prerequisite(s): ENGR 2164 or COS 2164
Instructional Contact Hours: (2 Lec, 2 Crd)

BIOL 2134 - Cell Function and Differentiation (3 credits)
Fundamental mechanisms essential for cell function. Methods used to study cells. Cellular structure and physiology, energy production, cell survival and reproduction. Cell interactions and communication, stem cells, cell differentiation, tissue formation.
Prerequisite(s): BIOL 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 2304 - Plant Biology (3 credits)
Introductory botany. Form, growth, function, reproduction, and ecological adaptations of major groups of plants.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HORT 2304

BIOL 2404 - Biotechnology in A Global Society (3 credits)
Introduction to the world-wide impact of biotechnology and molecular biology, including applications to plants, animals, and microorganisms. Explores basic concepts of genetic engineering, scientific and ethical issues, and public concerns related to biotechnology. Topics include: environmental release of genetically engineering organisms, bioremediation, safety of genetically engineered food products, transgenic plants and animals, gene therapy, and genetic screening.
Prerequisite(s): (BIOL 1005 and BIOL 1006) or (BIOL 1105 and BIOL 1106) or (BIOL 1205H and BIOL 1206H) and CHEM 1015 and CHEM 1016
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALS 2404

BIOL 2504 - General Zoology (3 credits)
Morphology, features, adaptations, and ecology of major animal groups, emphasizing major patterns of evolutionary change.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 2604 - General Microbiology (3 credits)
Microbial structure, function, metabolism, genetics and ecology. The role of microorganisms in host/parasite relationships will be emphasized.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106 and (CHEM 1036 or CHEM 1056 or CHEM 1056H or ISC 2105)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 2614 - General Microbiology Laboratory (1-2 credits)
Introduction to microbiological techniques and procedures. Aseptic technique and safe handling. Culture, characterization, and identification of microorganisms.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106 and (CHEM 1036 or CHEM 1056 or CHEM 1056H or ISC 2105)
Corequisite(s): BIOL 2604
Instructional Contact Hours: (2-4 Lab, 1-2 Crd)

BIOL 2704 - Evolutionary Biology (3 credits)
Evolutionary mechanisms, systematic principles, and theories of the origin and evolution of life.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 2804 - Ecology (3 credits)
Fundamental interaction of organisms with the biotic and abiotic components of ecosystems. Topics will include: physical environment and organismic interactions, concepts of population ecology and community ecology, ecosystems interactions, and environmental problems.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

BIOL 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 2984D - Special Study (1-19 credits)
Pathway Concept Area(s): 4 Reasoning in Natural Sci.
Instructional Contact Hours: Variable credit course

BIOL 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 3014 - Insect Biology (2 credits)
Insect biology provides an introduction to the science of entomology. The course covers the diversity of insects, their biology and behavior, the importance of insects and insect control programs in agriculture, and the effects that insects have had on human history and culture. Laboratory (3024) is optional.
Prerequisite(s): (BIOL 1005 and BIOL 1006) or (BIOL 1105 and BIOL 1106) or (BIOL 1205H and BIOL 1206H)
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: ENT 3014

BIOL 3024 - Insect Biology Laboratory (2 credits)
Taxonomy and ecology of insects commonly encountered. Identification of all orders and many common families. Ecological attributes of each taxon, including food, habitat, life cycle, and behavior. An insect collection is required.
Prerequisite(s): (BIOL 1005 and BIOL 1006) or (BIOL 1105 and BIOL 1106) or (BIOL 1205H and BIOL 1206H)
Corequisite(s): BIOL 3014
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)
Course Crosslist: ENT 3024

BIOL 3104 - Cell and Molecular Biology Laboratory (1 credit)
Introduction to methods used to study prokaryotic and eukaryotic cells. Recombinant DNA, protein expression and purification, the polymerase chain reaction, bioinformatics, and microscopy.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lab, 1 Crd)

BIOL 3134 - Human Genetics (3 credits)
Principles of genetic analysis in humans with emphasis on genetic diseases of humans; methods of karyotyping human chromosomes; methods of pedigree and genetic analysis of humans; principles, techniques, and analysis of twin studies in humans; techniques used to identify and characterize normal and abnormal chromosomes; principles and methods of DNA fingerprint analysis of humans.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 3204 - Plant Taxonomy (3 credits)
Systematic survey of vascular plants, emphasizing identification, terminology, classification, evolutionary relationships.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BIOL 3254 - Medical and Veterinary Entomology (3 credits)
An introduction to the roles of insects and other arthropods in the direct causation of disease in humans and animals, and as vectors in the transmission of disease organisms. The epidemiology and replication cycles of vector-borne pathogens with major medical and veterinary importance will be examined. Information will be provided on the biology and behavior of disease vectors and external parasites, and on the annoying and venomous pests of humans and animals. Mechanisms of control will be discussed
Prerequisite(s): (BIOL 1005 and BIOL 1006) or (BIOL 1105 or (BIOL 1205H and BIOL 1206H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENT 3254

BIOL 3264 - Medical and Veterinary Entomology Laboratory (1 credit)
Taxonomy and anatomy of insects and arthropods of medical and veterinary importance. Examination of feeding behavior and ecology. Emphasis on the mechanism of injury or pathogen transmission by each group.
Prerequisite(s): (BIOL 1105 and BIOL 1106) or (BIOL 1005 and BIOL 1006) or (BIOL 1205H and BIOL 1206H)
Corequisite(s): BIOL 3254
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: ENT 3264

BIOL 3404 - Introductory Animal Physiology (3 credits)
A comparative systems level approach to the physiology of animals, emphasizing vertebrates: metabolic, temperature, osmotic, and ionic regulation; function of respiratory, circulatory, digestive, muscle, nervous, and locomotory systems; endocrine regulation and biological rhythms. Must have prerequisites or instructors permission.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 3454 - Introductory Parasitology (4 credits)
Ecology, taxonomy, morphology, life cycles, pathogenesis, and host-parasite relationships of parasitic eukaryotes.
Prerequisite(s): (BIOL 1105 or ISC 2105) and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BIOL 3514 - Introduction to Histology (3 credits)
Overview of tissue structure and function in the human body; microscopic examination of tissue sections; organization of tissues in different organ systems; histopathology of tissues and organs.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BIOL 3604 - Food Microbiology (4 credits)
Role of microorganisms in foodborne illness, food quality, spoilage, and preservation. Control of microorganisms in foods. Methods to enumerate, identify, and characterize microorganisms in foods.
Prerequisite(s): BIOL 2604 and BIOL 2614
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: FST 3604

BIOL 3764 - Careers in Microbiology (3 credits)
Contemporary research topics in microbiology, methods of research data analysis, the research publication process, research presentation and interview skills, career paths for microbiology graduates, preparation for graduate school, preparation for entry into the job market.
Prerequisite(s): BIOL 2604
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 3774 - Molecular Biology (3 credits)
Advanced study of the molecular biology of prokaryotic and eukaryotic cells, including mechanisms of gene expression and regulation, relative merits of experimental model systems, and practical applications in agriculture and medicine.
Prerequisite(s): BIOL 2134 or ALS 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 3804 - Principles of Biology Teaching Assistant (2 credits)
For undergraduate teaching assistants (UTAs) facilitating BIOL 1105 or 1106 class sections that utilize active-learning pedagogies and require facilitation of in-class learning activities. Content and practice of teaching strategies and professionalism in the classroom. Supervision by departmental faculty or staff. Selection by Principles of Biology instructional team. May be repeated four times with different content for a maximum of eight credits. Junior Standing, overall minimum GPA of 3.0.
Prerequisite(s): BIOL 1105 and BIOL 1106
Instructional Contact Hours: (6 Lab, 2 Crd)
Repeatability: up to 8 credit hours

BIOL 3814 - Careers In Biological Sciences (1 credit)
Exploration of career opportunities in the biological sciences, including employment and further education. Professional development activities, including resumes, career fairs, networking, preparation for interviews, ethics, and assessment and comparison of job offers. Does not count for Biological Sciences or Microbiology elective credit. Pre: junior standing
Instructional Contact Hours: (1 Lec, 1 Crd)

BIOL 3954 - Study Abroad (1-6 credits)
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)

BIOL 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 4004 - Freshwater Ecology (4 credits)
Interactions of physical, chemical, and biological properties of freshwater ecosystems.
Prerequisite(s): BIOL 2804 or BIOL 2804H
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BIOL 4014 - Environmental Toxicology (2 credits)
Discussion of ecotoxicological and philosophical issues in the development of standards for control of toxic chemicals in freshwater, including site-specific examples, application of current control methods, recovery of damaged ecosystems, and government regulations.
Prerequisite(s): BIOL 2804
Instructional Contact Hours: (2 Lec, 2 Crd)

BIOL 4104 - Developmental Biology (3 credits)
Morphological, physiological, and molecular events in embryological and developmental systems, including regulation at the level of transcription, translation, and enzyme or hormone activation.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4114 - Global Change Ecology (3 credits)
Effects of human alteration of climate, landscapes and biogeochemical cycling on ecological structure and functioning at the global scale. Influence of global changes on ecosystem processes and biodiversity with paleo- and contemporary examples. Current and future potential feedbacks between biological systems and the global environment.
Prerequisite(s): (BIOL 2704 or BIOL 2704H) and BIOL 2804
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4134 - Evolutionary Genetics (3 credits)
Genetic variation, Hardy-Weinberg equilibrium, agents of change in gene frequencies, molecular evolution, mechanisms of speciation. Comparison of theoretical models with natural and laboratory populations.
Prerequisite(s): BIOL 2004 and (BIOL 2704 or BIOL 2704H)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4164 - Environmental Microbiology (3 credits)
Ecology, physiology, and diversity of soil and aquatic microorganisms; incorporates the significance of these topics within the context of environmental applications such as bioremediation, wastewater treatment, control of plant- pathogens in agriculture, and pollution abatement in natural systems. The laboratory portion of the course will stress methodology development, isolation and characterization of microorganisms from natural and engineered systems, and examination of the roles of microorganisms in biogeochemical cycling.
Prerequisite(s): BIOL 2604
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: ENSC 4164

BIOL 4204 - Advanced Principles of Biology Teaching Assistant (3 credits)
For experienced Principles of Biology Undergraduate Teaching Assistants (UTAs) facilitating instruction of BIOL 1105 or 1106 class sections that utilize active-learning strategies. Collaboratively plan, present, and run activities to train first-time UTAs in the skills needed to support student success in the Principles of Biology classroom. Prepare first-time UTAs to guide active learning exercises, facilitate student teamwork, communicate scientific information, respond to student questions, provide feedback on student activities, and promote student engagement. Model professional and ethical conduct. Enrollment requires approval of Principles of Biology instructional team. May be repeated three times with different content for a maximum of nine credits. Pre: Senior standing.
Prerequisite(s): BIOL 3804
Instructional Contact Hours: (9 Lab, 3 Crd)
Repeatability: up to 9 credit hours

BIOL 4314 - Plant Ecology (4 credits)
Introduction to ecology of terrestrial plants including major plant functional types, ecophysiological aspects of functional types, molecular plant ecology, behavior of populations, responses of plant communities to disturbance, and vegetation analysis. Laboratory covers methods for measuring and analyzing natural vegetation, and setting up field and greenhouse experiments.
Prerequisite(s): (BIOL 2304 or BIOL 2804 or FOR 3314) or HORT 2304
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BIOL 4334 - Chemical Ecology (3 credits)
Chemical interactions between organisms with emphasis on the plant biosphere. Fundamental concepts, theories, and general methodology of chemical ecology: mechanisms of chemically- mediated interactions; and engineering of natural chemical defenses in sustainable agriculture.
Prerequisite(s): (BIOL 2304 or BIOL 2804 or FOR 2314 or BCHM 4115) and CHEM 1035
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4354 - Aquatic Entomology (4 credits)
Biology and taxonomy of insects and other macroinvertebrates most commonly encountered in freshwater environments. Selected aspects of biology, such as habitat, feeding, locomotion, and life history. Identification of individual taxa, mostly at family and genus level. Significance of these organisms in aquatic ecology, pollution monitoring, and natural resource management.
Prerequisite(s): (BIOL 1005 and BIOL 1006) and (BIOL 1015 and BIOL 1016) or (BIOL 1105 and BIOL 1106 and BIOL 1115 and BIOL 1116)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: ENT 4354

BIOL 4404 - Ornithology (4 credits)
Biology of birds, including functional anatomy, systematics, evolutionary history, behavior, and ecology. Laboratory on systematics, anatomy, and field experience in the areas of behavior and ecology.
Prerequisite(s): BIOL 2804
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BIOL 4454 - Invertebrate Zoology (4 credits)
Identification, morphology, evolutionary relationships, and natural history of free-living invertebrates, excluding insects.
Prerequisite(s): BIOL 2504
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

BIOL 4474 - Ethology (3 credits)
An evolutionary and ecological approach to animal behavior, drawing on behavioral genetics, endocrinology, neurophysiology, and behavioral ecology to explain how and why the behavior of an organism is adapted to its environment.
Prerequisite(s): BIOL 2504
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4484 - Freshwater Biomonitoring (4 credits)
Concepts and practices of using macroinvertebrates and fish to monitor the environmental health of freshwater ecosystems. Effects of different types of pollution and environmental stress on assemblages of organisms and underlying ecological principles. Role of biological studies in environmental regulation. Study design, field and laboratory methods, data analysis and interpretation, verbal and written presentation of results.
Prerequisite(s): (BIOL 2804) and (BIOL 4004 or BIOL 4354 or ENT 4354 or FIW 4424 or FIW 4614)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Course Crosslist: ENT 4484, FIW 4484

BIOL 4554 - Neurochemical Regulation (3 credits)
Neurochemical transmission within the vertebrate brain will be examined. Emphasis will be placed on the chemical coding underlying the control of various behaviors and how these systems can be modified by various drugs or diet.
Prerequisite(s): (ALS 2304 or BIOL 3404) and CHEM 2535
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALS 4554

BIOL 4564 - Infectious Disease Ecology (3 credits)
Principles of infectious disease dynamics from ecological and evolutionary perspectives. Examines a variety of wildlife hosts and disease-causing agents (bacteria, viruses, and parasites) using the framework of agent-host- environment interactions. Selective coverage of specific host and pathogen models to illustrate underlying principles of wildlife disease emergence, maintenance, and spread, as well as connections between wildlife and human health.
Prerequisite(s): (BIOL 2704 or BIOL 2704H) and (BIOL 2804 or BIOL 2804H)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4574 - Social Behavior of Birds and Mammals (3 credits)
This course examines origins, influences and implications of social behavior in a variety of avian and mammalian species. Emphasis is placed on understanding group organization and dynamics in inter and intra-species situations. Experimental data from several disciplines (e.g., genetics, physiology, biochemistry) are reviewed to demonstrate their associations with behavioral adaptive mechanisms. Avian and mammalian species living in wild, zoo, agricultural companion and laboratory settings are discussed.
Prerequisite(s): BIOL 1106 and ALS 3104 or BIOL 2004
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALS 4574

BIOL 4594 - Ecology, Evolution, and Behavior Senior Seminar (3 credits)
Review and discussion of contemporary research areas and global challenges addressed in publications in ecology, evolution, and behavior, the research process, methods for communicating science to professional and non-professional audiences, professional development for careers in ecology, evolution, and behavior, diversity and equity in the sciences.
Prerequisite(s): BIOL 2704 and BIOL 2804
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4624 - Microbial Genetics (3 credits)
Molecular genetics of bacteria and their associated plasmids and phages.
Prerequisite(s): BIOL 2004 and (BIOL 2604 or BIOL 2604H)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4634 - Microbial Physiology (3 credits)
The study of the structure, function and metabolic activities of prokaryotic microorganisms. Topics covered included cell composition and growth, metabolic unity and diversity, patterns of regulation, transport mechanisms, environmental sensing and response and cellular differentiation processes. (BIOL 4624 is recommended, but not required.)
Prerequisite(s): BIOL 2134 and (BIOL 2604 or BIOL 2604H) and BIOL 2614
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4644 - Microbial Molecular Genetics and Physiology Laboratory (3 credits)
Introduction to classical and molecular methods used for the study of bacterial genetics and physiology. Laboratory exercises cover analysis of patterns of gene regulation; assay of enzymatic activities; mutagenesis followed by selection, screening, and physiological characterization of mutant strains; genome database utilization; and large scale fermentation.
Prerequisite(s): BIOL 2134 and (BIOL 2604 or BIOL 2604H) and BIOL 2614
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

BIOL 4664 - Virology (3 credits)
Classification, structure, pathogenesis, host response, and replication strategies of viruses of bacteria, plants, and animals, stressing mechanisms elucidated by molecular biological techniques.
Prerequisite(s): BIOL 2134 and (BIOL 2604 or BIOL 2604H) and BIOL 2614
Instructional Contact Hours: (2 Lec, 1 Lab, 3 Crd)

BIOL 4674 - Pathogenic Bacteriology (3 credits)
Characteristics of bacteria that cause human disease, nature of infectious processes, virulence factors, epidemiology, resistance, immunization.
Prerequisite(s): BIOL 2134 and (BIOL 2604 or BIOL 2604H) and BIOL 2614
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4684 - Microbiomes (3 credits)
Landmark and current research on human microbiomes. Factors that influence the gut microbiome, and the role of the gut microbiome in disease. Other microbiomes of the human body. Bacteriophages and the ecology of microbiomes. Application of technologies to engineer microbiomes.
Prerequisite(s): BIOL 2004 and BIOL 2604 and (BCHM 3114 or BCHM 4115)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4704 - Immunology (3 credits)
Immunochemistry of antigens and antibodies, serological reactions, chemistry of complement, control of immunity, immune response of an intact animal.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4714 - Immunology Laboratory (1 credit)
Serological and immunobiological techniques used to interpret the consequences of an immune response.
Prerequisite(s): BIOL 2134
Corequisite(s): BIOL 4704
Instructional Contact Hours: (3 Lab, 1 Crd)

BIOL 4724 - Pathogenic Bacteriology Lab (2 credits)
Microbiological techniques used to identify and characterize bacteria that cause infectious disease.
Prerequisite(s): BIOL 2134 and (BIOL 2604 or BIOL 2604H) and BIOL 2614
Corequisite(s): BIOL 4674
Instructional Contact Hours: (4 Lab, 2 Crd)

BIOL 4734 - Inflammation Biology (3 credits)
Cellular and molecular pathways controlling human responses to inflammatory challenges. Regulation of immune cells during inflammation. Interaction of host cells and tissues with environmental risk factors that cause inflammation. Pathogenesis of inflammatory diseases including cardiovascular diseases, diabetes, multi-organ failure, aging, neurological diseases and sepsis. Therapeutic intervention of inflammatory diseases.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4774 - Molecular Biology Lab (3 credits)
An introduction to recombinant DNA methods, including restriction endonuclease digestion, gel electrophoresis, cloning, Southern blotting, polymerase chain reaction, sequencing and analysis of reporter gene expression in transgenic organisms. BIOL 3774 may be taken as a corequisite with 4774.
Prerequisite(s): BIOL 3774
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)

BIOL 4804 - Prokaryotic Diversity (3 credits)
The study of the vast array of physiological, morphological, and behavioral properties of prokaryotes. Topics include: modern prokaryotic classification, prokaryotic diversity, relationship and importance to cell and molecular biology and biochemistry, application and use in industry and agriculture, and to the maintenance of the biosphere. Must have pre-requisites or consent of the instructor.
Prerequisite(s): (BIOL 2604 or BIOL 2604H) and BIOL 2614 and (BIOL 3124 or BIOL 4634 or BCHM 3114)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4824 - Bioinformatics Methods (3 credits)
Application of bioinformatics methods in biological research. Methods to access bioinformatics data. Theory and methods for analysis of DNA sequences, and analysis of complex data sets including whole genome sequences and gene expression data. Use of standard bioinformatics software and databases.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BIOL 4834 - Practical Analysis of Protein Structure and Function (3 credits)
Application of biophysical and biomechanical methods to characterization of protein structure and function, macromolecular interactions and conformational changes. Strategies, experimental design, practical considerations, troubleshooting, data analysis.
Prerequisite(s): BIOL 2134 and (CHEM 2536 or CHEM 2566) and (PHYS 2206 or PHYS 2306)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BIOL 4844 - Proteomics and Biological Mass Spectrometry (3 credits)
Introduction to mass spectrometry (MS) instrumentation and advanced proteomic methods for systems biology applications. Peptide mass fingerprinting, tandem MS, quantitation, phospho/glyco proteomics, and bioinformatics tools for evaluation and interpretation of mass spectrometry data.
Prerequisite(s): BIOL 2134 and CHEM 2535 and PHYS 2205
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4854 - Cytogenetics (3 credits)
Structure and function of eukaryotic chromosomes, with emphasis on (i) use of model systems to study specific chromosome substructures or functions; (ii) techniques used to identify and classify both normal and aberrant chromosomes; and (iii) diseases caused by defective chromosome structure and/or function.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4864 - Clinical Biology (3 credits)
Biological basis, development and symptoms of selected human diseases. Pharmacological approaches to treating disease. Review and interpretation of clinical cases. Approaches to working with patients: the interview, physical examination and clinical history. Use of diagnostic tests and treatments. Clinical trials of potential therapeutic interventions.
Prerequisite(s): BIOL 2134 and (BCHM 3114 or BCHM 4115)
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4874 - Cancer Biology (3 credits)
The molecular and cellular basis of cancer, including viral and cellular oncogenes, tumor suppression mechanics, cellular immortality, genomic integrity, angiogenesis, metastasis, and traditional and developing therapies.
Prerequisite(s): BIOL 2134
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4884 - Cell Biology (3 credits)
Advanced study of the inner workings of eukaryotic cells, including membrane structure and function, protein secretion, the cytoskeleton, cell cycle control and intercellular communication.
Prerequisite(s): BIOL 3774 or BCHM 4116
Instructional Contact Hours: (3 Lec, 3 Crd)

BIOL 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

BIOL 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BIOL 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

BIOL 29844 - Special Study (1-18 credits)
Pathway Concept Area(s): 4 Reasoning in Natural Sci.
Instructional Contact Hours: (1-18 Lec, 1-18 Crd)

Elective Courses		
Select 22 credits of Biological Sciences electives.		22
a. Select **at least one** of the following:		
BIOL 2304	Plant Biology [#]	
BIOL 2504	General Zoology [#]	
BIOL 2604	General Microbiology [#]	
b. Select **at least three** linked or inclusive laboratory courses from the list below (two must be BIOL or cross listed courses). Note: courses used to complete this requirement also count as Biological Sciences elective credits (section c).		
Linked Lab Courses [3]		
BIOL 2604 & BIOL 2614	General Microbiology and General Microbiology Laboratory [#]	
BIOL 3014 & BIOL 3024	Insect Biology and Insect Biology Laboratory [#]	
BIOL 3254 & BIOL 3264	Medical and Veterinary Entomology and Medical and Veterinary Entomology Laboratory [#]	
BIOL 4624 & BIOL 4644	Microbial Genetics and Microbial Molecular Genetics and Physiology Laboratory [#]	
BIOL 4674 & BIOL 4724	Pathogenic Bacteriology and Pathogenic Bacteriology Lab [#]	
BIOL 4704 & BIOL 4714	Immunology and Immunology Laboratory [#]	
CSES 3114 & CSES 3124	Soils and Soils Laboratory [#]	
NEUR 2025 & NEUR 2035	Introduction to Neuroscience and Neuroscience Laboratory [#]	
PSYC 4064 & PSYC 4264	Physiological Psychology and Laboratory in Physiological Psychology [#]	
Inclusive Lab Courses [3]		
BIOL 1135	Phage Hunters	
BIOL 1136	Phage Hunters [#]	
BIOL 3104	Cell and Molecular Biology Laboratory [#]	
BIOL 3114	[#]	
BIOL 3204	Plant Taxonomy [#]	
BIOL 3454	Introductory Parasitology [#]	
BIOL 3514	Introduction to Histology [#]	
BIOL 3604	Food Microbiology [#]	
BIOL 4004	Freshwater Ecology [#]	
BIOL 4164	Environmental Microbiology [#]	
BIOL 4314	Plant Ecology [#]

Notes

[1] Students must earn a grade of "C" or better in BIOL 1105, 1106, 1115, 1116, CHEM 1035, CHEM 1036, or the equivalent. Only two attempts, including course withdrawals with grade of "W", are allowed for each course.

[2] BIOL 1004 is required but will not be used to calculate in-major GPA.

[3] A combined maximum of 4 credits of BIOL 4974 and/or BIOL 4994 taken A-F can be used toward Biological Sciences elective credit.

^ Course has major restriction: students may ask FiW to be added if seats are available.

[#] Some courses listed on this checksheet may have prerequisites; please consult the University Course Catalog or check with your advisor.

Cross listed Courses on this Checksheet

- NEUR/APSC 2025-2026: Introduction to Neuroscience
- BIOL/HORT 2304: Plant Biology
- ALS/BIOL 2404: Biotechnology in a Global Society
- ENT/BIOL 3014: Insect Biology
- ENT/BIOL 3024: Insect Biology Laboratory
- CSES/ENSC/GEOS 3114: Soils
- CSES 3124 / ENSC 3124 / GEOS 3624: Soils Laboratory
- ENT/BIOL 3254: Med & Vet Entomology
- ENT/BIOL 3264: Med & Vet Entomology Lab
- FST/BIOL 3604: Food Microbiology
- ENSC/BIOL 4164: Environmental Microbiology
- ENT/BIOL 4354: Aquatic Entomology
- ENT/FiW/BIOL 4484: Freshwater Biomonitoring
- ALS/BIOL 4554: Neurochemical Regulation
- ALS/BIOL 4574: Soc Behavior Birds & Mammals

1. Students must earn a grade of "C" or better in BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, CHEM 1035 General Chemistry, CHEM 1036 General Chemistry or equivalent upon attempting 45 credit hours (including transfer credit, advance placement or IB credit, advance standing credit, credit by examination, courses taken P/F, and courses completed with a grade of "W"). Only two attempts are allowed for each course.
2. Students must achieve an overall GPA of 2.0 and in-major GPA of 2.2 upon attempting 45 credit hours (including transfer credit, advanced placement or IB credit, advance standing credit, credit by examination, courses taken P/F, and courses completed with a grade of "W").
3. All BIOL courses (except BIOL 1004 Biology Orientation Seminar, BIOL 1214 Careers in Medicine, and BIOL 3814 Careers In Biological Sciences), any course taken to fulfill Biological Sciences elective credit, and all required CHEM, MATH, PHYS, and STAT courses will be used to calculate in-major GPA.

Graduation Requirements

Students must have an in-major and overall GPA of 2.0 to graduate.

All BIOL courses (except BIOL 1004 Biology Orientation Seminar, BIOL 1214 Careers in Medicine, and BIOL 3814 Careers In Biological Sciences), any course taken to fulfill Biological Sciences elective credit, and all required CHEM, MATH, PHYS and STAT courses will be used to calculate in-major GPA.

BIOL majors who also are enrolled in the Microbiology major (no option) may count a maximum of 9 credits from the following courses toward the 22 required Biological Sciences elective credits: BIOL 3104, BIOL 3774, BIOL 3454, BIOL 3604, BIOL 4164, BIOL 4624, BIOL 4634, BIOL 4644, BIOL 4664, BIOL 4674, BIOL 4704, BIOL 4714, BIOL 4734, BIOL 4804, BIOL 4824, BIOL 4994, BCHM 3114, PPWS 4114, and FST 4634.

BIOL majors who also are enrolled in the Microbiology Biomedical option may count a maximum of 9 credits from the following courses toward the 22 required Biological Sciences elective credits: BIOL 3104, BIOL 3774, BIOL 3454, BIOL 3604, BIOL 4624, BIOL 4634, BIOL 4644, BIOL 4664, BIOL 4674, BIOL 4704, BIOL 4714, BIOL 4734, BIOL 4994, and BCHM 3114.

Foreign Language Requirement

College of Science Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Notes

[1] Students must earn a grade of "C" or better in BIOL 1105, 1106, 1115, 1116, CHEM 1035, CHEM 1036, or the equivalent. Only two attempts, including course withdrawals with grade of "W", are allowed for each course.

[2] A combined maximum of 4 credits of BIOL 4974 and/or BIOL 4994 Undergraduate Research taken as A-F can be used toward Option elective credit.

[3] BIOL 1004 Biology Orientation Seminar is required but will not count as major elective credit or be used to calculate in-major GPA.

[#] Some courses listed on this checksheet may have prerequisites, please consult the University Course Catalog, or check with your advisor.

Cross-listed Courses on this Checksheet

- BIOL/HORT 2304: Plant Biology
- ALS/BIOL 2404: Biotechnology in a Global Society
- ENT/BIOL 3014: Insect Biology
- ENT/BIOL 3024: Insect Biology Laboratory
- ENT/BIOL 3254: Med & Vet Entomology
- ENT/BIOL 3264: Med & Vet Entomology Lab
- FST/BIOL 3604: Food Microbiology
- ENSC/BIOL 4164: Environmental Microbiology
- ENT/BIOL 4354: Aquatic Entomology
- ENT/FiW/BIOL 4484: Freshwater Biomonitoring
- ALS/BIOL 4554: Neurochemical Regulation
- ALS/BIOL 4574: Soc Behav Birds & Mammals

1. Students must earn a grade of "C" or better in BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, CHEM 1035 General Chemistry, CHEM 1036 General Chemistry or equivalent upon attempting 45 credit hours (including transfer credit, advance placement or IB credit, advance standing credit, credit by examination, courses taken P/F, and courses completed with a grade of "W"). Only two attempts are allowed for each course.
2. Students must achieve an overall GPA of 2.0 and in-major GPA of 2.2 upon attempting 45 credit hours (including transfer credit, advanced placement or IB credit, advance standing credit, credit by examination, courses taken P/F, and courses completed with a grade of "W").
3. All BIOL courses (except BIOL 1004 Biology Orientation Seminar, BIOL 1214 Careers in Medicine, BIOL 3814 Careers In Biological Sciences), any course taken to fulfill Biological Sciences elective credit, and all required CHEM, MATH, PHYS, and STAT courses will be used to calculate in-major GPA.

Graduation Requirements

Students must have an in-major and overall GPA of 2.0 to graduate.

All BIOL courses (except BIOL 1004 Biology Orientation Seminar, BIOL 1214 Careers in Medicine, and BIOL 3814 Careers In Biological Sciences), any course taken to fulfill Biology Science Education Option elective credit, and all required CHEM, MATH, PHYS and STAT courses will be used to calculate in-major GPA.

Students must earn a grade of "C" or better in BIOL 1105, BIOL 1106, BIOL 1115, BIOL 1116, CHEM 1035, CHEM 1036, or the equivalent. Only two attempts, including course withdrawals with grade of "W", are allowed for each course.

Foreign Language Requirement

College of Science Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Total Credits		**120-127**

1 Students must earn a grade of "C" or better in BIOL 1105, BIOL 1106, BIOL 1115, BIOL 1116, CHEM 1035, CHEM 1036, or the equivalent. Only two attempts, including course withdrawals with grade of "W", are allowed for each course.

2 BIOL 1004 is required but will not be used to calculate in-major GPA.

3 Biomedical Option students also enrolled in the Microbiology major (no option) may count a maximum of three of the following courses as Biomedical Option electives: BIOL 3774, BIOL 3454, BIOL 4664 Virology, BIOL 4674, BIOL 4704, BIOL 4734, BIOL 4824, BCHM 3114. Biomedical Option students also enrolled in the Microbiology Biomedical Option may count a maximum of two of the following courses as Biomedical Option electives: BIOL 3774, BIOL 3454, BIOL 4664, BIOL 4674, BIOL 4704, BIOL 4734, BCHM 3114.

4 A given elective course will count toward **only one** Biomedical Option Elective section.

[5] A 3-credit BIOL 4994 experience taken for grade of A-F may count **EITHER** toward Biomedical elective section 1 OR 2.

[6] A course listed as both a Biomedical Option Elective (either section 1, 2 or 3) and listed in the laboratory section (4) may count toward both that Biomedical Option Elective section and the laboratory course requirement.

Some courses listed on this checksheet may have prerequisites, please consult the University Course Catalog, or check with your advisor.

Cross listed Courses on this Checksheet

- ALS/BIOL 4554: Neurochemical Regulation
- ENT/BIOL 3254: Med & Vet Entomology
- ENT/BIOL 3264: Med & Vet Entomology Lab

1. Students must earn a grade of "C" or better in BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, CHEM 1035 General Chemistry, CHEM 1036 General Chemistry or equivalent upon attempting 45 credit hours (including transfer credit, advance placement or IB credit, advance standing credit, credit by examination, courses taken P/F, and courses completed with a grade of "W"). Only two attempts are allowed for each course.
2. Students must achieve an overall GPA of 2.0 and in-major GPA of 2.2 upon attempting 45 credit hours (including transfer credit, advanced placement or IB credit, advance standing credit, credit by examination, courses taken P/F, and courses completed with a grade of "W").
3. All BIOL courses (except BIOL 1004 Biology Orientation Seminar, BIOL 1214 Careers in Medicine, BIOL 3814 Careers In Biological Sciences), any course taken to fulfill Biological Sciences elective credit, and all required CHEM, MATH, PHYS, and STAT courses will be used to calculate in-major GPA.

Graduation Requirements

Students must have an in-major and overall GPA of 2.0 to graduate.

All BIOL courses (except BIOL 1004 Biology Orientation Seminar, BIOL 1214 Careers in Medicine, and BIOL 3814 Careers In Biological Sciences), any course taken to fulfill Biomedical Option elective credit, and all required CHEM, MATH, PHYS and STAT courses will be used to calculate in-major GPA.

Cross-listed Courses on this Checksheet

- ALS/BIOL 4554: Neurochemical Regulation
- BIO/HORT 2304: Plant Biology
- ENSC/BIOL 4164: Environmental Microbiology
- CSES 3114 / GEOS 3614: Soils
- CSES 3124 / GEOS 3624: Soils Laboratory
- ENT/BIOL 3014: Insect Biology
- ENT/BIOL 3024: Insect Biology Laboratory
- ENT/BIOL 3254: Med and Vet Entomology
- ENT/BIOL 3264: Med and Vet Ent Lab
- ENT/BIOL 4354: Aquatic Entomology
- ENT/FIW/BIOL 4484: Freshwater Biomonitoring

1. Students must earn a grade of "C" or better in BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, CHEM 1035 General Chemistry, CHEM 1036 General Chemistry or equivalent upon attempting 45 credit hours (including transfer credit, advance placement or IB credit, advance standing credit, credit by examination, courses taken P/F, and courses completed with a grade of "W"). Only two attempts are allowed for each course.
2. Students must achieve an overall GPA of 2.0 and in-major GPA of 2.2 after attempting 45 credit hours (including transfer credit, advanced placement or IB credit, advance standing credit, credit by examination, courses taken P/F, and courses completed with a grade of "W").
3. All BIOL courses (except BIOL 1004 Biology Orientation Seminar, BIOL 1214 Careers in Medicine, and BIOL 3814 Careers In Biological Sciences), any course taken to fulfill Biological Sciences elective credit, and all required CHEM, MATH, PHYS, and STAT courses will be used to calculate in-major GPA.

Graduation Requirements

Students must have an in-major and overall GPA of 2.0 to graduate.

All BIOL courses (except BIOL 1004 Biology Orientation Seminar, BIOL 1214 Careers in Medicine, BIOL 3814 Careers In Biological Sciences), any course taken to fulfill EEB Option elective credit, and all required CHEM, MATH, PHYS and STAT courses will be used to calculate in-major GPA.

Acceptable Substitutions

BIOL 1004 Biology Orientation Seminar: Any university-approved First-Year Experience (FYE) course

BIOL 2704 Evolutionary Biology: BIOL 2704H

BIOL 2804 Ecology: BIOL 2804H

BIOL 4474 Ethology: PSYC 2074 Animal Behavior

CHEM 1035 General Chemistry-CHEM 1036 General Chemistry: CHEM 1055 General Chemistry for Chemistry Majors -CHEM 1056 General Chemistry for Chemistry Majors

CHEM 1045 General Chemistry Laboratory-CHEM 1046 General Chemistry Laboratory: CHEM 1065 General Chemistry for Chemistry Majors Lab-CHEM 1066 General Chemistry for Chemistry Majors Lab

CHEM 2535 Organic Chemistry-CHEM 2536 Organic Chemistry: CHEM 2565 Principles of Organic Chemistry-CHEM 2566 Principles of Organic Chemistry

CHEM 2545 Organic Chemistry Laboratory-CHEM 2546 Organic Chemistry Laboratory: CHEM 2555 Organic Synthesis and Techniques Lab-CHEM 2556 Organic Synthesis and Techniques Lab

PHYS 2205 General Physics, PHYS 2215 General Physics Laboratory: PHYS 2305 Foundations of Physics

PHYS 2206 General Physics, PHYS 2216 General Physics Laboratory: PHYS 2306 Foundations of Physics

MATH 1025 Elementary Calculus: MATH 1225 Calculus of a Single Variable

MATH 1026 Elementary Calculus: MATH 1226 Calculus of a Single Variable

STAT 3615 Biological Statistics: STAT 3005 Statistical Methods or STAT 3604 Statistics for Social Science

Foreign Language Requirement

College of Science Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully

complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Notes

[1] Students must earn a grade of "C" or better in BIOL 1105, 1106, 1115, 1116, 2604, 2614, CHEM 1035, CHEM 1036, or the equivalent. Only two attempts, including course withdrawals with grade of "W", are allowed for each course.

[2] To count, students must complete two semesters of BIOL 4994 for a combined total of at least 4 credits.

[3] BIOL 1004 is required but will not count as major elective credit or be used to calculate in-major GPA.

[#] Some courses listed on this checksheet may have prerequisites; please consult the University Course Catalog or check with your advisor.

Cross listed Courses on this Checksheet

- ENSC/BIOL 4164: Environmental Microbiology
- ENT/BIOL 3254: Med & Vet Entomology
- ENT/BIOL 3264: Med & Vet Entomology Lab
- FST/BIOL 3604: Food Microbiology

1. Students must earn a grade of "C" or better in BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, CHEM 1035 General Chemistry, CHEM 1036 General Chemistry or equivalent upon attempting 45 credit hours (including transfer credit, advance placement or IB credit, advance standing credit, credit by examination, courses taken P/F, and courses completed with a grade of "W"). Only two attempts are allowed for each course.
2. Students must achieve an overall GPA of 2.0 and in-major GPA of 2.2 upon attempting 45 credit hours (including transfer credit, advanced placement or IB credit, advance standing credit, credit by examination, courses taken P/F, and courses completed with a grade of "W").
3. All BIOL, MATH, and STAT courses, and all courses taken to fulfill Degree Core, Major, and Elective course requirements (except BIOL 1004 Biology Orientation Seminar, BIOL 1214 Careers in Medicine, and BIOL 3814 Careers In Biological Sciences) will be used to calculate in-major GPA.

Graduation Requirements

Students must have an in-major and overall GPA of 2.0 to graduate.

All BIOL, MATH, and STAT courses, and all courses taken to fulfill Degree Core, Major, and Elective course requirements (except BIOL 1004 Biology Orientation Seminar, BIOL 1214 Careers in Medicine, and BIOL 3814 Careers In Biological Sciences) will be used to calculate in-major GPA.

MICB students who are also enrolled as a BIOL (no option) student may count a maximum of 9 credits from the following courses toward the 22 required Biological Sciences elective credits: BIOL 3104, 3774, 3454, 3604, 4164, 4624, 4634, 4644, 4664, 4674, 4704, 4714, 4734, 4804, 4824, 4994, BCHM 3114, PPWS 4114, and FST 4634.

MICB students who are also enrolled as a Biomedical (BIOM) Option student may count a maximum of 3 courses from the following courses as Biomedical Option electives: BIOL 3774, 3454, 4664, 4674, 4704, 4734, 4824, BCHM 3114.

Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Chemistry

Our Website (http://www.chem.vt.edu)

Overview

The Chemistry Department offers four undergraduate programs: the B.S. in Chemistry, the B.S. in Medicinal Chemistry, the B.S. in Polymer Chemistry, and the B.A. in Chemistry. The B.S. in Chemistry curriculum

provides the breadth and depth to give graduates a wide choice of career options, including further graduate studies. The Chemistry Department is accredited by the American Chemical Society's Committee on Professional Training and the B.S. Chemistry degree meets the guidelines for an ACS-certified degree. The B.S. in Medicinal Chemistry prepares students for enrollment in health professional schools or for careers in the pharmaceutical industry. The B.S. in Polymer Chemistry has a concentration in the area of polymer and material sciences. The B.A. program has fewer required chemistry courses, allowing students to design a chemistry program with more electives to meet a wider set of career goals. The B.A. is often chosen by students who wish to pursue a double major or to take other courses to prepare for professional school, law, or business. Any of the degrees are suitable to prepare for high school teaching. The Chemistry Department supports and encourages all chemistry majors to pursue undergraduate research sometime during their degree program.

Graduate Program

The Department offers M.S. and Ph.D. degrees with specializations in many areas of chemistry. (See the Graduate Catalog for further information.)

Minor Requirements

The requirements to earn a minor in Chemistry can be found on the specific checksheet by visiting the University Registrar website at http://registrar.vt.edu/graduation-multi-brief/index1.html (https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html).

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the General Education (Pathways to General Education) (see "Academics (p. 9)") and toward the degree.

Satisfactory progress requirements toward the B.A. and B.S. in Chemistry, the B.S. in Medicinal Chemistry, and the B.S. in Polymer Chemistry can be found on the major checksheet by visiting the University Registrar website at http://registrar.vt.edu/graduation-multi-brief/index1.html.

- Chemistry Major (B.S.) (p. 1250)
- Medicinal Chemistry Major (p. 1252)
- Polymer Chemistry Major (p. 1254)

Chair: A. J. Morris
Associate Chair: J. B. Matson
University Distinguished Professor: T. D. Crawford
Ethyl Corporation Chaired Professor: T. D. Crawford
Professors: D. Troya[7], H. C. Dorn, A. R. Esker, F. A. Etzkorn L. A. Madsen, J. B Matson, J. S. Merola[3,7], R. B. Moore, A. J. Morris, J. R. Morris, W. L. Santos, J. M. Tanko, and E. F. Valeev
Associate Professors: P. A. Deck, F. Lin, G. G. Liu, G. L. Long[3], N. Mayhall, B. M. Tissue, and G. T. Yee[7]
Assistant Professors: A. Figg, E. C. Gentry, D. Iovan, A. Lowell, E. Mevers, L. Quan, M. Schulz, V. V. Welborn, and J. C. Worch
Research Associate Professor: C. Slebodnick
Senior Instructors: S. M. Arachchige, M. A. Berg, M. B. Bump and J. E. Eddleton[3,4]
Advanced Instructor: V. K. Long
Instructors: A. Geller, N. J. McAlpine, K. Neidigh, E. B. Orler, C. Santos, A. Wagner, and C. Wall[4]
Assistant Professor of Practice: T. R. Saarinen
Director of Graduate Programs: A. R. Esker
Graduate Program Coordinator: J. Huynh
Director of Undergraduate Programs: P. A. Deck
Undergraduate Program Coordinator: A. Kokkinakos
Director of General Chemistry: S. M. Arachchige

Undergraduate Course Descriptions (CHEM)

CHEM 1004 - First Year Experience in Chemistry (1 credit)
Orientation to the Chemistry Department and to the discipline of chemistry for chemistry majors and for individuals considering CHEM as a major, including transfer students. Resources for success, both generally as a college student and specifically as a chemistry major. Opportunities for mentoring, individual research and community involvement across the university and within the Chemistry Department. Exploration of career pathways for chemistry majors. Interconnections among professional practice, disciplinary progress, accepted standards for ethical use of information, principles of diversity and inclusion, and individual or personal value systems. Scientific communication, professional networking, and chemistry in the public eye.
Instructional Contact Hours: (1 Lec, 1 Crd)

CHEM 1014 - Calculations in Chemistry (3 credits)
Mathematical problem solving skills required for success in general chemistry. Manipulation of symbolic algebraic formulas. Dimensional analysis and narrative mathematical exercises. Application of problem solving techniques to chemical processes and reactions. Generation and interpretation of graphs using computer software. Elementary features of atoms, molecules, and the periodic table of the elements. Molar quantities, chemical nomenclature, reaction stoichiometry, and introductory solution chemistry.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 1015 - Chemistry in Context (3 credits)
Survey of chemistry across areas of specialization for students enrolled in curricula other than science and engineering. History and fundamental concepts and theories of chemistry, including the consequences of changes in parameters on chemical systems. Impact of chemistry in the context of areas of public concern and policy, including best practices for sustainability, rational decision-making, ethical use of scientific information, product and process stewardship. Chemistry as a basis for decision-making in the context of individual values and beliefs, and the roles of values and beliefs in the progress of chemistry as a human endeavor. The foregoing to be based on the concepts of chemistry as follows: 1015: Periodicity and atomic structure; nuclear chemistry; chemical bonding and reactivity; organic chemistry, polymer chemistry, and medicinal chemistry. 1016: Chemical stoichiometry including conservation of matter and energy; acid-base and oxidation-reduction chemistry of solutions; stoichiometry and thermodynamics, agricultural and environmental chemistry, chemistry of household and personal care products
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 1016 - Chemistry in Context (3 credits)
Survey of chemistry across areas of specialization for students enrolled in curricula other than science and engineering. History and fundamental concepts and theories of chemistry, including the consequences of changes in parameters on chemical systems. Impact of chemistry in the context of areas of public concern and policy, including best practices for sustainability, rational decision-making, ethical use of scientific information, product and process stewardship. Chemistry as a basis for decision-making in the context of individual values and beliefs, and the roles of values and beliefs in the progress of chemistry as a human endeavor. The foregoing to be based on the concepts of chemistry as follows: 1015: Periodicity and atomic structure; nuclear chemistry; chemical bonding and reactivity; organic chemistry, polymer chemistry, and medicinal chemistry. 1016: Chemical stoichiometry including conservation of matter and energy; acid-base and oxidation-reduction chemistry of solutions; stoichiometry and thermodynamics, agricultural and environmental chemistry, chemistry of household and personal care products
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 1025 - Introduction to Chemistry Laboratory (1 credit)
Virtual laboratory exercises and reading and writing assignments designed to accompany 1015 and 1016, as applicable. Illustrates and elaborates on principles addressed in lecture, including history and fundamental concepts, theories, contexts, with an emphasis on sustainability issues and ethical consequences of decision- making in chemistry. Students will identify foundational concepts in chemistry, enumerate parameters likely to influence the outcome of an experiment, analyze the ways that values and beliefs influence progress in the discipline and communicate chemical concepts to a lay audience.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 1026 - Introduction to Chemistry Laboratory (1 credit)
Virtual laboratory exercises and reading and writing assignments designed to accompany 1015 and 1016, as applicable. Illustrates and elaborates on principles addressed in lecture, including history and fundamental concepts, theories, contexts, with an emphasis on sustainability issues and ethical consequences of decision- making in chemistry. Students will identify foundational concepts in chemistry, enumerate parameters likely to influence the outcome of an experiment, analyze the ways that values and beliefs influence progress in the discipline and communicate chemical concepts to a lay audience.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 1034 - General Chemistry Recitation (1 credit)
A companion course for students needing supplemental help with mathematical and problem-solving skills required for CHEM 1035 General Chemistry. Manipulation of algebraic formulas. Application of problem-solving techniques to chemical processes and reactions. Quantitative methods applied to unit conversions, reaction yields, energy of reactions, and gas properties. Examination of atomic structure, periodicity, and molecular bonding. May not count towards degree requirements; consult advisor. Pass/Fail only.
Corequisite(s): CHEM 1035
Instructional Contact Hours: (1 Lec, 1 Crd)

CHEM 1035 - General Chemistry (3 credits)
First chemistry course for students in science curricula. Applications of reasoning in the natural sciences using chemical laws in an applied context and in the student's own discipline. Overview of the universal aspects of chemistry and of application of chemistry to address global challenges. 1035: Problem-solving, elements and periodic table, stoichiometry of chemical reactions, gas phase of matter, energy flow and chemical change, atomic structure, and theories of chemical bonding. 1036: Properties of the three states of matter alone and in mixtures, kinetics, aqueous equilibrium, thermodynamics, electrochemistry. (Duplicates 1015-1016.) Students may bypass prerequisites for 1035 through testing alternatives listed in the Registrar's Timetable.
Prerequisite(s): CHEM 1014 or MATH 1014 or MATH 1025 or MATH 1536 or MATH 1225 or MATH 1214 or MATH 1524
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 1036 - General Chemistry (3 credits)
First chemistry course for students in science curricula. Applications of reasoning in the natural sciences using chemical laws in an applied context and in the student's own discipline. Overview of the universal aspects of chemistry and of application of chemistry to address global challenges. 1035: Problem-solving, elements and periodic table, stoichiometry of chemical reactions, gas phase of matter, energy flow and chemical change, atomic structure, and theories of chemical bonding. 1036: Properties of the three states of matter alone and in mixtures, kinetics, aqueous equilibrium, thermodynamics, electrochemistry. (Duplicates 1015-1016.) Students may bypass prerequisites for 1035 through testing alternatives listed in the Registrar's Timetable.
Prerequisite(s): CHEM 1035 or CHEM 1055 or CHEM 1055H
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 1045 - General Chemistry Laboratory (1 credit)
Hands-on, real-world activities that illustrate and elaborate on concepts taught in general chemistry lecture (1035-1036), including acids and bases, heat capacity, ideal gases, states of matter, concentration, mixtures, energy flow and spontaneity in processes, equilibrium, kinetics, colligative properties, and electrochemistry. Use of instrumentation to analyze water and soil contaminants, biofuel mixtures, nanoparticles, and polymer properties. Laboratory safety, chemical hygiene, hazard mitigation, waste management, and the influence of procedure on experimental outcomes. Global challenges, including recycling and sustainable energy sources, water resource management, global warming, and environmentally friendly reagents in chemical contexts. Use of computers in data analysis, collaboration, and report-writing.
Prerequisite(s): CHEM 1014 or MATH 1014 or MATH 1025 or MATH 1536 or MATH 1225 or MATH 1214 or MATH 1524
Corequisite(s): CHEM 1035
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 1046 - General Chemistry Laboratory (1 credit)
Hands-on, real-world activities that illustrate and elaborate on concepts taught in general chemistry lecture (1035-1036), including acids and bases, heat capacity, ideal gases, states of matter, concentration, mixtures, energy flow and spontaneity in processes, equilibrium, kinetics, colligative properties, and electrochemistry. Use of instrumentation to analyze water and soil contaminants, biofuel mixtures, nanoparticles, and polymer properties. Laboratory safety, chemical hygiene, hazard mitigation, waste management, and the influence of procedure on experimental outcomes. Global challenges, including recycling and sustainable energy sources, water resource management, global warming, and environmentally friendly reagents in chemical contexts. Use of computers in data analysis, collaboration, and report-writing.
Prerequisite(s): CHEM 1045 or CHEM 1065
Corequisite(s): CHEM 1036
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 1055 - General Chemistry for Chemistry Majors (4 credits)
In depth treatment of chemical bonding, thermodynamics, chemical equilibrium, reaction kinetics, descriptive chemistry of the elements, acid-base chemistry, chemistry of gases, liquids and solids, and other topics. This class is restricted to chemistry and biochemistry majors. Other students may request consent of instructor.
Prerequisite(s): CHEM 1014 or MATH 1014 or MATH 1025 or MATH 1536 or MATH 1225 or MATH 1214
Instructional Contact Hours: (4 Lec, 4 Crd)

CHEM 1056 - General Chemistry for Chemistry Majors (4 credits)
In depth treatment of chemical bonding, thermodynamics, chemical equilibrium, reaction kinetics, descriptive chemistry of the elements, acid-base chemistry, chemistry of gases, liquids and solids, and other topics. This class is restricted to chemistry and biochemistry majors. Other students may request consent of instructor.
Prerequisite(s): CHEM 1055 or CHEM 1055H
Instructional Contact Hours: (4 Lec, 4 Crd)

CHEM 1065 - General Chemistry for Chemistry Majors Lab (1 credit)
Accompanies 1055-1056. Selected experiments illustrate principles taught in lecture. This class is restricted to chemistry and biochemistry majors. Other students may request consent of instructor.
Prerequisite(s): CHEM 1014 or MATH 1014 or MATH 1025 or MATH 1536 or MATH 1225 or MATH 1214
Corequisite(s): 1055 or 1055H.
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 1066 - General Chemistry for Chemistry Majors Lab (1 credit)
Accompanies 1055-1056. Selected experiments illustrate principles taught in lecture. This class is restricted to chemistry and biochemistry majors. Other students may request consent of instructor.
Prerequisite(s): CHEM 1065
Corequisite(s): 1056 or 1056H.
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 2114 - Analytical Chemistry (3 credits)
A first course in analytical chemistry. Topics covered include volumetric and gravimetric analysis, and elementary spectroscopy.
Prerequisite(s): CHEM 1036 or CHEM 1056 or CHEM 1056H
Corequisite(s): CHEM 2124
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2124 - Analytical Chemistry Laboratory Techniques and Practice (1 credit)
Practical introduction to wet methods of quantitative chemical analysis based on fundamental chemical principles. Prior credit for OR concurrent registration of 2114 lecture is required for 2124 lab.
Prerequisite(s): CHEM 1046 or CHEM 1066
Corequisite(s): CHEM 2114
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 2154 - Analytical Chemistry for Chemistry Majors (4 credits)
A one-semester course in analytical chemistry emphasizing the principles of equilibrium with examples from acid-base, complexation, solubility, and redox chemistry. The course also introduces the principles of spectroscopic, electrochemical, and chromatographic instrumentation.
Prerequisite(s): CHEM 1036 or CHEM 1056 or CHEM 1056H or ISC 1106
Corequisite(s): CHEM 2164
Instructional Contact Hours: (4 Lec, 4 Crd)

CHEM 2164 - Analytical Chemistry for Chemistry Majors Lab (1 credit)
A one-semester laboratory course in analytical chemistry that provides practical training in wet chemical methods, atomic and molecular spectroscopy, electrochemistry, and separations.
Prerequisite(s): CHEM 1046 or CHEM 1066 or ISC 1116
Corequisite(s): CHEM 2154
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 2424 - Descriptive Inorganic Chemistry (3 credits)
Application of fundamental principles in a systematic study of bonding and reactivity of the elements and their compounds.
Prerequisite(s): CHEM 1036 or CHEM 1056 or CHEM 1056H
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2514 - Survey of Organic Chemistry (3 credits)
Short course in fundamentals of organic chemistry with emphasis on nomenclature, isomerism, and properties of organic compounds. Compounds of importance to biology and biochemistry stressed. (Prior credit for 2535 precludes credit for this course.) One year of Chemistry required.
Prerequisite(s): (CHEM 1035 or CHEM 1055 or CHEM 1055H) and (CHEM 1036 or CHEM 1056 or CHEM 1056H)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2535 - Organic Chemistry (3 credits)
Structure, stereochemistry, reactions, and synthesis of organic compounds.
Prerequisite(s): CHEM 1036 or CHEM 1056 or CHEM 1056H or ISC 1106 or ISC 1106H
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2536 - Organic Chemistry (3 credits)
Structure, stereochemistry, reactions, and synthesis of organic compounds. Pre: One year of chemistry, including lab.
Prerequisite(s): CHEM 2535 or (CHEM 2565 or CHEM 2565H)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2545 - Organic Chemistry Laboratory (1 credit)
The laboratory accompanies lectures in organic chemistry 2535 and 2536.
Prerequisite(s): CHEM 1046 or CHEM 1065 or ISC 1116
Corequisite(s): CHEM 2535, CHEM 2565
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 2546 - Organic Chemistry Laboratory (1 credit)
The laboratory accompanies lectures in organic chemistry 2535 and 2536.
Prerequisite(s): CHEM 2545
Corequisite(s): CHEM 2536
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 2555 - Organic Synthesis and Techniques Lab (2 credits)
Synthesis and characterization of organic compounds using modern laboratory techniques.
Prerequisite(s): CHEM 1045 or CHEM 1065
Corequisite(s): CHEM 2565
Instructional Contact Hours: (6 Lab, 2 Crd)

CHEM 2556 - Organic Synthesis and Techniques Lab (2 credits)
Synthesis and characterization of organic compounds using modern laboratory techniques.
Prerequisite(s): CHEM 2555
Corequisite(s): CHEM 2566
Instructional Contact Hours: (6 Lab, 2 Crd)

CHEM 2564 - Problem-Solving in Organic Chemistry (1 credit)
Writing organic reaction mechanisms; rationalizing and predicting organic reaction outcomes; selecting reagents for organic reactions; designing syntheses of several elementary steps; visualizing molecular stereochemistry.
Corequisite(s): CHEM 2565
Instructional Contact Hours: (1 Lec, 1 Crd)

CHEM 2565 - Principles of Organic Chemistry (3 credits)
Organic chemistry for chemistry majors. Structure and reactions of organic compounds, with emphasis on fundamental principles, theories, synthesis, and reaction mechanisms. The subject matter partially duplicates that of 2535-2536; no credit will be given for the duplicated courses.
Prerequisite(s): CHEM 1035 or CHEM 1055 or CHEM 1035H or CHEM 1055H
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2566 - Principles of Organic Chemistry (3 credits)
Organic chemistry for chemistry majors. Structure and reactions of organic compounds, with emphasis on fundamental principles, theories, synthesis, and reaction mechanisms. The subject matter partially duplicates that of 2535-2536; no credit will be given for the duplicated courses.
Prerequisite(s): CHEM 2565
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

CHEM 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 3004 - Bridge to the Future (1 credit)
Exploration and development of post-baccalaureate career options, including non-traditional options, for chemistry students. Opportunities in the government, private and academic sectors. Career planning. Managing application processes for graduate school, professional school, and employment. Development of materials (resumes, cover letters, portfolios, and personal statements) needed for applications. Fellowships and scholarships for graduate study. Opportunities for career-relevant experience before graduation. Integrity in career development. Open to majors in Chemistry, Medicinal Chemistry, and Polymer Chemistry.
Instructional Contact Hours: (1 Lec, 1 Crd)

CHEM 3054 - Postconsumer Materials (3 credits)
Chemistry and global impacts of postconsumer materials including trash, biodegradable, recyclable, and reusable materials. Waste management of metals, ceramics, and polymers in the context of their chemical properties. Reliability and accuracy of information sources on postconsumer materials. Complex contemporary issues involving disposal and repurposing of postconsumer materials including health impacts, energy, cost, water quality, return value, and environmental and cultural considerations.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 3615 - Physical Chemistry (3 credits)
Principles of thermodynamics, kinetics, and quantum mechanics applied to chemical equilibria, reactivity, and structure. Partly duplicates 4615, cannot receive credit for both 3615 and 4615.
Prerequisite(s): (CHEM 1035 or CHEM 1055 or CHEM 1055H) and (CHEM 1036 or CHEM 1056 or CHEM 1056H) and (MATH 2204 or MATH 2204H or MATH 2224)
Corequisite(s): PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 3616 - Physical Chemistry (3 credits)
Principles of thermodynamics, kinetics, and quantum mechanics applied to chemical equilibria, reactivity, and structure. Partly duplicates 4616, cannot receive credit for both 3616 and 4616.
Prerequisite(s): MATH 2214 and (CHEM 3615 or CHEM 3615H)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 3625 - Physical Chemistry Laboratory (1 credit)
Laboratory study of selected physico-chemical principles and methods. Data acquisition, data analysis, and report writing are stressed.
Prerequisite(s): CHEM 3615 or CHEM 3615H or CHEM 4615 or CHE 2164
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 3626 - Physical Chemistry Laboratory (1 credit)
Laboratory study of selected physico-chemical principles and methods. Data acquisition, data analysis, and report writing are stressed. I
Prerequisite(s): (CHEM 3616 or CHEM 3616H or CHEM 4616) and CHEM 3625 and CHEM 4014
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 3684 - Quantum Software I (2 credits)
Organization of quantum information (assemblies of bits) for quantum-computing applications in chemistry, physics, biology, and computer science. Numerical methods for quantum software, emphasizing spin lattices and simulations such as quantum games. Best practices for programming, including techniques for quantum-coding (in Python or Julia), structuring a software product for quantum-computational science use, version control, and cloud-based documentation and code-sharing (via Github). Classical/quantum translation.
Prerequisite(s): MATH 2114 or MATH 2114H or MATH 3144
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: PHYS 3684

CHEM 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

CHEM 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 4014 - Survey of Chemical Literature (1 credit)
Use of the chemical literature as an aid to professional activities. Pre: Junior Major Standing.
Instructional Contact Hours: (1 Lec, 1 Crd)

CHEM 4034 - Capstone Laboratory for BA Chemistry Majors (2 credits)
A senior-level laboratory course that integrates previous laboratory and lecture experiences to illustrate the interconnectedness of the curriculum leading to the BA in Chemistry. Modern experimental methods and instrumentation, including chromatographic separations, nuclear magnetic resonance, infrared spectrometry, and mass spectrometry. Independent experimental design and execution of an experimental synthetic reaction in chemistry, including scaling, selection of reagents and solvents, and development of a procedure for completing the reaction, isolating the product, and characterizing it for structure and bulk purity. Best practices in lab safety, chemical hygiene, note-keeping, and professional report-writing. Principles of green chemistry. Pre: Senior standing.
Prerequisite(s): CHEM 2164 and (CHEM 2546 or CHEM 2566)
Instructional Contact Hours: (6 Lab, 2 Crd)

CHEM 4074 - Laboratory in Polymer Science (2 credits)
Experimental techniques used in the synthesis of various linear polymers, copolymers, and crosslinked networks. Determination of polymer molecular weights and molecular weight distribution. Methods used in the thermal, mechanical, and morphological characterization of polymeric systems.
Prerequisite(s): CHEM 4534 and CHEM 3625 and (CHEM 3615 or CHE 2164)
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)
Course Crosslist: MSE 4544

CHEM 4114 - Instrumental Analysis (3 credits)
Principles of instrumental methods including data analysis, phase equilibrium, spectroscopy, and electrochemistry. Applications of modern instrumentation to chemical analyses using chromatography, electrophoresis, atomic and molecular spectroscopy, potentiometry, and voltammetry. Note: Graduate students will not be expected to take the corequisite lab 4124.
Prerequisite(s): CHEM 2154
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4124 - Instrumental Analysis Laboratory (1 credit)
Hands-on experience with modern instrumental methods of analysis. Experiments use spectroscopy, electrochemistry, and separations.
Prerequisite(s): CHEM 4114
Instructional Contact Hours: (3 Lab, 1 Crd)

CHEM 4404 - Physical Inorganic Chemistry (3 credits)
A study of spectroscopic, bonding, and structural properties of inorganic compounds.
Prerequisite(s): (CHEM 3616 or CHEM 3616H) and CHEM 2424
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4414 - Inorganic Chemistry Lab (2 credits)
Synthesis and characterization of inorganic compounds using modern laboratory techniques.
Prerequisite(s): CHEM 2424 and (CHEM 3616 or CHEM 3616H) and CHEM 4404
Corequisite(s): CHEM 3616, CHEM 4424
Instructional Contact Hours: (6 Lab, 2 Crd)

CHEM 4424 - Polysaccharide Chemistry (3 credits)
Structure, properties, and applications of natural polysaccharides. Natural sources and methods of isolation. Synthetic chemistry and important polysaccharide derivatives. Relation of structure and properties to performance in critical applications including pharmaceuticals, coatings, plastics, rheology control, and films. Conversion by chemical and biochemical methods of polysaccharide biomass to fuels and materials.
Prerequisite(s): CHEM 2536 or CHEM 2566
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: SBIO 4424

CHEM 4434 - Organometallic Chemistry (3 credits)
Synthesis, structure, properties, and reactivity patterns of main-group and transitionmetal organometallic compounds. Applications of organometallic compounds in chemical synthesis and catalysis.
Prerequisite(s): CHEM 2424 and CHEM 2565 and CHEM 2566 and CHEM 4404
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4444 - Bioinorganic Chemistry (3 credits)
Principles underpinning the study of metal ions in biological systems. Review of basic coordination chemistry. Evolution of the distribution of metal ions in biology. Uptake of metal ions from the environment into living organisms. Regulation of metal ion concentrations in cells. Central functions of metal ions in biological systems including modulation of structure, electron transfer reactions, substrate binding and activation, and selective transfer of atoms and groups. Roles of biopolymers in the binding, regulation, and function of metal ions. Physical methods of analysis relevant to bioinorganic chemical research questions. Senior standing.
Prerequisite(s): (CHEM 2566 or BCHM 4115) and BIOL 1105 and BIOL 1106
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4514 - Green Chemistry (3 credits)
Sustainability, waste prevention, conservation of energy resources, avoidance of toxins, pollutants, and hazards in chemical processes and products. Life-cycle analysis applied to case studies involving process development and product stewardship. Applications in chemical industry, process and product design, and public policy.
Prerequisite(s): CHEM 2536 or CHEM 2566
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4524 - Identification of Organic Compounds (3 credits)
Structure determination of organic compounds by spectroscopic methods. Interpretation of 1H and 13C nuclear magnetic resonance (NMR) spectra including two-dimensional (2D) spectra. Mass spectrometric (MS) techniques including tandem MS. Selection and application of minor organic-analytical techniques for structure elucidation. Formatting of spectroscopic data for publication. Course credit will not be awarded for both CHEM 4524 and CHEM 5524G.
Prerequisite(s): (CHEM 2536 or CHEM 2566) and (CHEM 3616 or CHEM 4616)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4534 - Organic Chemistry of Polymers (3 credits)
Structure, synthesis, and basic characteristics of the major classes of polymerization reactions including step-growth (condensation) and chain growth (addition), free radical, and ionic mechanisms.
Prerequisite(s): CHEM 2536 or CHEM 2566
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4544 - Medicinal Chemistry Capstone Laboratory (2 credits)
Laboratory experience tracing a standard pathway that potential drug targets follow in many medicinal chemistry laboratories. Synthesis of potential drug compounds and verification of their purity and structural identity primarily using mass spectrometry and nuclear magnetic resonance (NMR) spectroscopy. Optimization of conditions for a biochemical assay and verification of its reproducibility. Use of an optimized assay to measure the potency of potential drug compounds to achieve a desired biochemical effect. Application of structure-activity relationships to propose new chemical structures that might show further improvements in potency. Best practices in laboratory safety, chemical hygiene, note-keeping, and professional report-writing. Senior standing.
Prerequisite(s): CHEM 4584 and BIOL 1105 and BIOL 1106
Instructional Contact Hours: (6 Lab, 2 Crd)

CHEM 4554 - Drug Chemistry (3 credits)
Structure, synthesis, and physiological effects of major classes of pharmaceutical agents including CNS depressants and stimulants, analgesics, anesthetics, cardiovascular agents, chemotherapeutic drugs, and oral contraceptives.
Prerequisite(s): CHEM 2536 or CHEM 2566
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4584 - Bioorganic Chemistry (3 credits)
The organic chemistry underlying the structure and properties of amino acids, peptides, and nucleic acids. Mechanisms of enzyme catalysis and coenzyme-mediated reactions. Mechanisms and thermodynamics of catabolism and anabolism of fats, carbohydrates, and proteins, and of other key biological reactions. Principles of solid-phase synthesis applied to peptides and nucleic acids. Biosynthesis of lipids, sugars, and terpenoids.
Prerequisite(s): CHEM 2536 or CHEM 2566
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4615 - Physical Chemistry for the Life Sciences (3 credits)
Principles of thermodynamics, chemical kinetics, and chemical bonding for students in the life sciences. 4615: Laws and applications of thermodynamics. 4616: Chemical kinetics and chemical bonding including spectroscopy. Partly duplicates 3615, cannot receive credit for 3615 and 4615.
Prerequisite(s): ISC 2106H or (CHEM 1036 or CHEM 1056 or CHEM 1056H) and (MATH 1026 or MATH 1226)
Corequisite(s): PHYS 2206 or PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4616 - Physical Chemistry for the Life Sciences (3 credits)
Principles of thermodynamics, chemical kinetics, and chemical bonding for students in the life sciences. 4615: Laws and applications of thermodynamics. 4616: Chemical kinetics and chemical bonding including spectroscopy. Partly duplicates 3616, cannot receive credit for both 3616 and 4616.
Prerequisite(s): ISC 2106H or (CHEM 1036 or CHEM 1056 or CHEM 1056H) and (MATH 1026 or MATH 1226) and (PHYS 2206 or PHYS 2306)
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4624 - Materials Chemistry in Energy Sciences (3 credits)
Fundamental principles of solid-state materials chemistry in energy sciences. Thermodynamics and kinetics of electron and ion transport in solid materials. Application of electrochemical and photochemical principles to batteries, fuel cells, solar cells, and other energy devices. Analytical tools and characterization methods for elucidating mechanisms within electrochemical and photoelectrochemical cells, with an emphasis on using electrochemical principles to evaluate battery chemistry. Solid-liquid interfacial mechanisms in energy devices. Critical analysis of relevant primary literature. Formulation of hypotheses and experimental design for improving device performance. Pre: Senior standing.
Prerequisite(s): CHEM 3615 or CHEM 4615
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4634 - Polymer and Surface Chemistry (3 credits)
Physical chemical fundamentals of polymers and surfaces including adhesives and sealants.
Prerequisite(s): CHEM 3615 or CHEM 4615
Instructional Contact Hours: (3 Lec, 3 Crd)

CHEM 4684 - Quantum Software II (1 credit)
Modern software collaboration techniques and tools including collaborative code repositories and cloud-based documentation. Application of structure and version control to software and documentation. Developing code with industry-standard quantum-software modules. Hands-on scientific coding for quantum problems. Project management skills including proposal development and technical presentation delivery.
Prerequisite(s): CHEM 3684 or PHYS 3684
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: PHYS 4684

CHEM 4734 - Environmental Soil Chemistry (3 credits)
Chemistry of inorganic and organic soil components with emphasis on environmental significance of soil solution-solid phase equilibria, sorption phenomena, ion exchange processes, reaction kinetics, redox reactions, and acidity and salinity processes.
Prerequisite(s): CSES 3114 or ENSC 3114 or GEOS 3614 and CSES 3124 or ENSC 3124 or GEOS 3624 and CHEM 2514 or CHEM 2535 and CHEM 2114 and (MATH 1026 or MATH 1226)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENSC 4734

CHEM 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

CHEM 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CHEM 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Chemistry Major (B.A.)

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
CHEM 1004	First Year Experience in Chemistry	1
CHEM 1055	General Chemistry for Chemistry Majors [1,2]	4
CHEM 1056	General Chemistry for Chemistry Majors [1,2]	4
CHEM 1065	General Chemistry for Chemistry Majors Lab [1,3]	1
CHEM 1066	General Chemistry for Chemistry Majors Lab [1,3]	1
CHEM 2565	Principles of Organic Chemistry [1,4]	3
CHEM 2566	Principles of Organic Chemistry [1,4]	3

Subtotal		47
Total Credits		**120**

1 A course with prerequisites or co-requisites.

2 *General Chemistry Lecture Substitutions*. A student who earned credit for CHEM 1035 with a grade of"B" or better prior to joining the major in Chemistry may substitute CHEM 1035 for CHEM 1055. A student who earned credit for CHEM 1036 with a grade of "B" or better prior to joining the major in Chemistry may substitute CHEM 1036 for CHEM 1056.

3 *General Chemistry Lab Substitutions*. A student who earned credit for CHEM 1045 prior to joining the major in Chemistry may substitute CHEM 1045 for CHEM 1065. A student who earned credit for CHEM 1046 prior to joining the major in Chemistry may substitute CHEM 1046 for CHEM 1066.

4 *Organic Chemistry Substitutions*. Lecture: A student who earned credit for CHEM 2535 with a grade of "B" or better prior to joining the major in Chemistry may substitute CHEM 2535 for CHEM 2565. A student who is substituting CHEM 2535 for CHEM 2565 may also substitute one additional credit of free elective for the one credit CHEM 2564, since CHEM 2564 is meant as a companion course to CHEM 2565. A student who earned credit for CHEM 2536 with a grade of "B" or better prior to joining the major in Chemistry may substitute CHEM 2536 for CHEM CHEM 2566. Lab: CHEM 2555 may be substituted for CHEM 2545. CHEM 2556 may be substituted for CHEM 2546.

5 MATH 1025–MATH 1026, PHYS 2205–PHYS 2206 and PHYS 2215–PHYS 2216 are also required of all Chemistry Majors

within the B.A. Degree Program in Chemistry. They are listed in the Pathways to General Education section.

6 CHEM 3615 may be substituted for CHEM 4615.

7 CHEM 3616 may be substituted for CHEM 4616.

8 Three (3) credits of CHEM 4994 may be substituted for CHEM 4034.

9 Excluding CHEM 3054 Postconsumer Materials

10 SBIO 3444 or CHEM 4424 (SBIO 4424) may substitute for the Restricted Elective.

11 A chemistry major (BA) may count at most three (3) credits of CHEM 4994 toward the total credits for Restricted Electives. A biochemistry or chemical engineering student should not double-count coursework required for that major towards the chemistry (BA) upper-level total credits for Restricted Electives.

12 PSYC 1004 and SOC 1004 are recommended for students contemplating careers in health sciences.

13 PHYS 2305 (MATH 1225 prerequisite) may be substituted for PHYS 2205 and PHYS 2215

14 PHYS 2306 (MATH 1226 prerequisite) may be substituted for PHYS 2206 and PHYS 2216

15 MATH 1225 may be substituted for MATH 1025.

16 MATH 1226 (MATH 1225 prerequisite) may be substituted for MATH 1026.

17 Students majoring in Chemistry within the B.A. Degree in Chemistry must select either STAT 3005 or STAT 3615.

Satisfactory Progress Towards Degree

Upon having attempted 72 credits, student must have completed

Code	Title	Credits
CHEM 1055	General Chemistry for Chemistry Majors	4
CHEM 1056	General Chemistry for Chemistry Majors	4
CHEM 1065	General Chemistry for Chemistry Majors Lab	1
CHEM 1066	General Chemistry for Chemistry Majors Lab	1
CHEM 1004	First Year Experience in Chemistry	1
CHEM 2565	Principles of Organic Chemistry	3
CHEM 2566	Principles of Organic Chemistry	3
CHEM 2545	Organic Chemistry Laboratory	1
CHEM 2546	Organic Chemistry Laboratory	1
PHYS 2205	General Physics	3
PHYS 2206	General Physics	3
PHYS 2215	General Physics Laboratory	1
PHYS 2216	General Physics Laboratory	1
MATH 1025	Elementary Calculus	3
MATH 1026	Elementary Calculus	3

Chemistry majors must maintain an in-major GPA of 2.0. If a chemistry major fails to meet this requirement for one academic term the student will be placed on Policy 91 (Satisfactory Progress Towards Degree) probation. Failure to meet the standard for two consecutive semesters will result in a Policy 91 suspension.

Graduation Requirements

Graduation Requirements

Graduation requires completion of a minimum of 120 credit hours with a GPA of 2.0 or greater for all hours attempted. In addition, students must have an in-major GPA of 2.0 or greater counting all required chemistry courses and chemistry electives. The in-major CHEM GPA excludes CHEM 1015, CHEM 1016, CHEM 1025, CHEM 1026, CHEM 1004, CHEM 1014. No more than 6 hours of CHEM 2974, CHEM 4974, and CHEM 4994 will be included in a student's in-major GPA.

Minimum Grade Requirement

- A Chemistry major who earned a grade lower than "C" in CHEM 1055 may repeat this course and earn the required grade ("C" or better), or they may take CHEM 1035 and earn a grade of "B" or better.
- A Chemistry major who earned a grade lower than "C" in CHEM 1056 may repeat this course and earn the required grade ("C" or better), or they may take CHEM 1036 and earn a grade of "B" or better
- A Chemistry major who earned a grade lower than "C" in CHEM 2565 may repeat this course and earn the required grade ("C" or better), or they may take CHEM 2535 and earn a "B" or better.

Acceptable Substitutions

All allowed substitutions were encoded in the footnotes of the Program Requirements.

Foreign Language Requirements

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduates. Please consult the Undergraduate Catalog for details.

Chemistry Major (B.S.)

Subtotal		49
Total Credits		**120**

1 Course has prerequisites. Consult the catalog.

2 *General Chemistry Lecture Substitutions*. A student who earned credit for CHEM 1035 with a grade of"B" or better prior to joining the major in Chemistry may substitute CHEM 1035 for CHEM 1055. A student who earned credit for CHEM 1036 with a grade of "B" or better prior to joining the major in Chemistry may substitute CHEM 1036 for CHEM 1056.

3 *General Chemistry Lab Substitutions*. A student who earned credit for CHEM 1045 prior to joining the major in Chemistry may substitute CHEM 1045 for CHEM 1065. A student who earned credit for CHEM 1046 prior to joining the major in Chemistry may substitute CHEM 1046 for CHEM 1066.

4 *Organic Chemistry Lecture Substitutions*. A student who earned credit for CHEM 2535 with a grade of "B" or better prior to joining the major in Chemistry may substitute CHEM 2535 for CHEM 2565. A student who is substituting CHEM 2535 for CHEM 2565 may also substitute one additional credit of free elective for the one credit CHEM 2564, since CHEM 2564 is meant as a companion course to CHEM 2565. A student who earned credit for CHEM 2536 with a grade of "B" or better prior to joining the major in Chemistry may substitute CHEM 2536 for CHEM CHEM 2566.

5 *Organic Chemistry Lab Substitutions.* A student who earned credit for CHEM 2545 prior to joining the major in Chemistry may substitute CHEM 2545 for CHEM 2555. To compensate for differences in content (mostly with respect to training on specific instrumentation), the substitution requires the student to enroll in one credit of CHEM 4994 with a project that uses the same types of instrumentation (such as IR and NMR). A student who earned credit for CHEM 2546 prior to joining the major in Chemistry may substitute CHEM CHEM 2546 for CHEM 2556. To compensate for differences in content (mostly with respect to training on specific instrumentation), the substitution requires the student to enroll in one credit of CHEM 4994 with a project that uses the same types of instrumentation (such as IR and NMR).

6 Credit for CHE 2164 Chemical Engineering Thermodynamics may be substituted for CHEM 3615.

7 Three credits of CHEM 4994 Undergraduate Research may substitute for the Restricted Elective.

8 PSYC 1004 and SOC 1004 are recommended for students pursuing health-science professions.

9 STAT 4604 may be substituted for (STAT 3005 or STAT 3615).

1 A course with prerequisites or co-requisites.

2 Prior credit for CHEM 1045 General Chemistry Laboratory may be substituted for CHEM 1065 General Chemistry for Chemistry Majors Lab.

3 Prior credit for CHEM 1046 General Chemistry Laboratory may be substituted for CHEM 1066 General Chemistry for Chemistry Majors Lab.

4 If a student has taken CHEM 2535 Organic Chemistry prior to adding a degree in chemistry, a minimum grade of "B" (3.0) or better is required to substitute CHEM 2535 Organic Chemistry as CHEM 2565 Principles of Organic Chemistry. If a student has taken CHEM 2536 Organic Chemistry prior to adding a degree in chemistry, a minimum grade of "B" (3.0) or better is required to substitute CHEM 2536 Organic Chemistry as CHEM 2566 Principles of Organic Chemistry.

5 Since CHEM 2545 Organic Chemistry Laboratory-CHEM 2546 Organic Chemistry Laboratory does not satisfy the prerequisite for CHEM 2556 Organic Synthesis and Techniques Lab (due to training on specific instrumentation), if a student adds a CHEM BS degree after completing CHEM 2545 Organic Chemistry Laboratory-CHEM 2546 Organic Chemistry Laboratory, two or more credits of CHEM 4994 Undergraduate Research may substitute for CHEM 2556 Organic Synthesis and Techniques Lab to meet the requirement.

6 MATH 1225 Calculus of a Single Variable–MATH 1226 Calculus of a Single Variable[1] and PHYS 2305 Foundations of Physics–PHYS 2306 Foundations of Physics[1] are also required of all Chemistry Majors within the B.S. Degree Program in Chemistry. These courses are listed in the Pathways to General Education section.

7 STAT 4604 Statistical Methods for Engineers may be substituted for (STAT 3005 Statistical Methods or STAT 3615 Biological Statistics).

8 Credit for CHEM 2164 Analytical Chemistry for Chemistry Majors Lab may be substituted for CHEM 3615 Physical Chemistry

9 PSYC 1004 Introductory Psychology and SOC 1004 Introductory Sociology are recommended for students contemplating careers in health sciences.

10 Students majoring in Chemistry within the B.S. Degree in Chemistry must select either STAT 3005 Statistical Methods[1] or STAT 3615 Biological Statistics[1].

Prerequisites

This checksheet has no hidden prerequisites, although some of the courses listed are prerequisites for other courses. Please see your advisor or consult the Undergraduate Course Catalog for more information. Please note that Chemistry majors are expected to be “calculus-ready” upon the start of their curriculum.

Graduation Requirements

Upon having attempted 72 credits, student must have completed

Code	Title	Credits
CHEM 1055	General Chemistry for Chemistry Majors	4
CHEM 1056	General Chemistry for Chemistry Majors	4
CHEM 1065	General Chemistry for Chemistry Majors Lab	1
CHEM 1066	General Chemistry for Chemistry Majors Lab	1
CHEM 1004	First Year Experience in Chemistry	1
CHEM 2565	Principles of Organic Chemistry	3
CHEM 2566	Principles of Organic Chemistry	3
CHEM 2555	Organic Synthesis and Techniques Lab	2
CHEM 2556	Organic Synthesis and Techniques Lab	2
PHYS 2305	Foundations of Physics	4
PHYS 2306	Foundations of Physics	4
MATH 1225	Calculus of a Single Variable	4
MATH 1226	Calculus of a Single Variable	4

Chemistry majors must maintain an in-major GPA of 2.0. If a chemistry major fails to meet this requirement for one academic term the student will be placed on Policy 91 (Satisfactory Progress Towards Degree) probation. Failure to meet the standard for two consecutive semesters will result in a Policy 91 suspension.

Graduation Requirements

Graduation Requirements

Graduation requires completion of a minimum of 120 credit hours with a GPA of 2.0 or greater for all hours attempted. In addition, students must have an in-major GPA of 2.0 or greater counting all required chemistry courses and chemistry electives. The in-major CHEM GPA excludes CHEM 1015, CHEM 1016, CHEM 1025, CHEM 1026, CHEM 1014, and CHEM 1004). No more than 6 hours of CHEM 2974, CHEM 4974, and CHEM 4994 will be included in a student's in-major GPA.

Minimum Grade Requirements

- A Chemistry major who earned a grade lower than "C" in CHEM 1055 must either repeat this course and earn the minimum grade ("C" or better) **or** take CHEM 1035 and earn a “B” or better.
- A Chemistry major who earned a grade lower than "C" in CHEM 1056 must either repeat this course and earn the minimum grade ("C" or better) **or** take CHEM 1036 and earn a “B” or better.
- A Chemistry major who earned a grade lower than "C" in CHEM 2565 must either repeat this course and earn the minimum grade ("C" or better) **or** take CHEM 2535 and earn a “B” or better.

Acceptable Substitutions

All substitutions have been encoded as footnotes in the Program Requirements section.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduates. Please consult the Undergraduate Catalog for details.

Medicinal chemistry majors must maintain an in-major GPA of 2.0. If a medicinal chemistry major fails to meet this requirement for one academic term the student will be placed on Policy 91 (Satisfactory Progress Towards Degree) probation. Failure to meet the standard for two consecutive semesters will result in a Policy 91 suspension.

Graduation Requirements

Graduation Requirements

Graduation requires completion of a minimum of 120 credit hours with a GPA of 2.0 or greater for all hours attempted. In addition, students must have an in-major GPA of 2.0 or greater counting all required chemistry courses and chemistry electives. The in-major CHEM GPA excludes CHEM 1015, CHEM 1016, CHEM 1025, CHEM 1026, CHEM 1004, and CHEM 1014. No more than 6 hours of CHEM 2974, CHEM 4974, and CHEM 4994 will be included in a student's in-major GPA.

Minimum Grade Requirements

A Medicinal Chemistry major who earned a grade lower than "C" in CHEM 1055 may repeat this course and earn the required grade ("C" or better), or they may take CHEM 1035 and earn a "B" or better.

A Medicinal Chemistry major who earned a grade lower than "C" in CHEM 1056 may repeat this course and earn the required grade ("C" or better), or they may take CHEM 1036 and earn a "B" or better.

A Medicinal Chemistry major who earned a grade lower than "C" in CHEM 2565 may repeat this course and earn the required grade ("C" or better), or they may take CHEM 2535 and earn a "B" or better.

Acceptable Substitutions

Substitutions have been encoded into the Program Requirements as footnotes.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduates. Please consult the Undergraduate Catalog for details.

Polymer Chemistry Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
CHEM 1004	First Year Experience in Chemistry	1
CHEM 1055	General Chemistry for Chemistry Majors [1,2]	4
CHEM 1056	General Chemistry for Chemistry Majors [1,3]	4
CHEM 1065	General Chemistry for Chemistry Majors Lab [1,3]	1
CHEM 1066	General Chemistry for Chemistry Majors Lab [1,2,3]	1
CHEM 2565	Principles of Organic Chemistry [1,4]	3
CHEM 2566	Principles of Organic Chemistry [1,4]	3
CHEM 2154	Analytical Chemistry for Chemistry Majors [1]	4
CHEM 2164	Analytical Chemistry for Chemistry Majors Lab [1]	1
Subtotal		22
Additional Course Requirements		
CHEM 2555	Organic Synthesis and Techniques Lab [1,5]	2
CHEM 2556	Organic Synthesis and Techniques Lab [1,5]	2
CHEM 2564	Problem-Solving in Organic Chemistry	1
CHEM 3004	Bridge to the Future	1
CHEM 4014	Survey of Chemical Literature [1]	1
Subtotal		7
Major Requirements		
MATH 2204	Introduction to Multivariable Calculus [1]	3
CHEM 3615	Physical Chemistry [1,6]	3
CHEM 3625	Physical Chemistry Laboratory [1]	1
CHEM 4534	Organic Chemistry of Polymers [1]	3
CHEM 4074/ MSE 4544	Laboratory in Polymer Science [1]	2
Subtotal		12
Restricted Electives [7]		
Select three of the following:		9
CHEM 4424	Polysaccharide Chemistry [1]	
CHEM 4524	Identification of Organic Compounds [1]	
CHEM 4624	Materials Chemistry in Energy Sciences	
CHEM 4634	Polymer and Surface Chemistry [1]	
CHE 4104	Process Materials [1]	
CHE 4214	Introduction to Polymer Materials	
CHE 4224	Introduction to Polymer Processing	
PHYS 4564	Polymer Physics [1]	
Subtotal		9
Free Electives		
Select 21 credits of free electives		21
Subtotal		21
Pathways to General Education		
Pathways Concept 1 - Discourse		
Select six credits in Pathway 1f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01F) (foundational writing or speaking courses) and three credits in Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A) (advanced or applied writing or speaking courses)		9
Pathways Concept 2 - Critical Thinking in the Humanities		

Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six credits in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
PHYS 2305	Foundations of Physics [1]	4
PHYS 2306	Foundations of Physics [1]	4
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225 & MATH 1226	Calculus of a Single Variable and Calculus of a Single Variable (5F) [1]	8
STAT 3005 or STAT 3615	Statistical Methods (5A) [1,8] Biological Statistics	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
6 credits = 3 in design + 3 in arts, or 6 in integrated design and arts		6
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		49
Total Credits		**120**

1. Course has prerequisites. Please consult the course catalog for details.
2. *General Chemistry Lecture Substitutions*. A student who earned credit for CHEM 1035 with a grade of "B" or better prior to joining the major in Chemistry may substitute CHEM 1035 for CHEM 1055. A student who earned credit for CHEM 1036 with a grade of "B" or better prior to joining the major in Chemistry may substitute CHEM 1036 for CHEM 1056.
3. *General Chemistry Lab Substitutions*. A student who earned credit for CHEM 1045 prior to joining the major in Chemistry may substitute CHEM 1045 for CHEM 1065. A student who earned credit for CHEM 1046 prior to joining the major in Chemistry may substitute CHEM 1046 for CHEM 1066.
4. *Organic Chemistry Lecture Substitutions*. A student who earned credit for CHEM 2535 with a grade of "B" or better prior to joining the major in Chemistry may substitute CHEM 2535 for CHEM 2565. A student who is substituting CHEM 2535 for CHEM 2565 may also substitute one additional credit of free elective for the one credit CHEM 2564, since CHEM 2564 is meant as a companion course to CHEM 2565. A student who earned credit for CHEM 2536 with a grade of "B" or better prior to joining the major in Chemistry may substitute CHEM 2536 for CHEM 2566.
5. *Organic Chemistry Lab Substitutions.* A student who earned credit for CHEM 2545 prior to joining the major in Chemistry may substitute CHEM 2545 for CHEM 2555. To compensate for differences in content (mostly with respect to training on specific instrumentation), the substitution requires the student to enroll in one credit of CHEM 4994 with a project that uses the same types of instrumentation (such as IR and NMR). A student who earned credit for CHEM 2546 prior to joining the major in Chemistry may substitute CHEM 2546 for CHEM 2556. To compensate for differences in content (mostly with respect to training on specific instrumentation), the substitution requires the student to enroll in one credit of CHEM 4994 with a project that uses the same types of instrumentation (such as IR and NMR).
6. Credit for CHE 2164 Chemical Engineering Thermodynamics may be substituted for CHEM 3615.
7. Unlike the Major in Chemistry, credits for CHEM 4994 may NOT be counted toward the nine credits of Restricted Electives.
8. STAT 4604 may be substituted for (STAT 3005 or STAT 3615).

Upon having attempted 72 credits, student must have completed

Code	Title	Credits
CHEM 1055	General Chemistry for Chemistry Majors	4
CHEM 1056	General Chemistry for Chemistry Majors	4
CHEM 1065	General Chemistry for Chemistry Majors Lab	1
CHEM 1066	General Chemistry for Chemistry Majors Lab	1
CHEM 1004	First Year Experience in Chemistry	1
CHEM 2565	Principles of Organic Chemistry	3
CHEM 2566	Principles of Organic Chemistry	3
CHEM 2555	Organic Synthesis and Techniques Lab	2
CHEM 2556	Organic Synthesis and Techniques Lab	2
PHYS 2305	Foundations of Physics	4
PHYS 2306	Foundations of Physics	4
MATH 1225	Calculus of a Single Variable	4
MATH 1226	Calculus of a Single Variable	4

Polymer chemistry majors must maintain an in-major GPA of 2.0. If a polymer chemistry major fails to meet this requirement for one academic term the student will be placed on Policy 91 (Satisfactory Progress Towards Degree) probation. Failure to meet the standard for two consecutive semesters will result in a Policy 91 suspension.

Graduation Requirements

Graduation Requirements

Graduation requires completion of a minimum of 120 credit hours with a GPA of 2.0 or greater for all hours attempted. In addition, students must have an in-major GPA of 2.0 or greater counting all required chemistry courses and chemistry electives. The in-major CHEM GPA excludes CHEM 1015, CHEM 1016, CHEM 1025, CHEM 1026, CHEM 1004, and CHEM 1014 . No more than 6 hours of CHEM 2974, CHEM 4974, and CHEM 4994 will be included in a student's in-major GPA.

Minimum Grade Requirements

- A Polymer Chemistry major who earned a grade lower than "C" in CHEM 1055 may repeat this course and earn the required grade ("C" or better), or they may take CHEM 1035 and earn a "B" or better.
- A Polymer Chemistry major who earned a grade lower than "C" in CHEM 1056 may repeat this course and earn the required grade ("C" or better), or they may take CHEM 1036 and earn a "B" or better.
- A Polymer Chemistry major who earned a grade lower than "C" in CHEM 2565 may repeat this course and earn the required grade ("C" or better), or they may take CHEM 2535 and earn a "B" or better.

Acceptable Substitutions

Substitutions have been encoded into the Program Requirements as footnotes.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduates. Please consult the Undergraduate Catalog for details.

Computational Modeling and Data Analytics

Our Website (https://data.science.vt.edu/programs/cmda.html)

Overview

The Computational Modeling and Data Analytics (CMDA) program is a collaborative effort of the departments of Mathematics, Statistics, and Computer Science. It resides in the College of Science's Academy of Data Science. CMDA courses teach the range of emerging concepts and techniques from mathematics and statistics, with a decidedly computational approach, that are most in demand by a data-driven world. The curriculum prepares students as quantitative scientists ready to engage data and modeling problems wherever they may occur. CMDA is Virginia Tech's Big Data degree.

In addition to the standard degree option, CMDA offers specialized options in: Biological Sciences, Cryptography & Cybersecurity, Economics, Geosciences, and Physics. After graduation, CMDA majors can deploy their skills across many domains, from climate science to sports analytics, from financial modeling to cybersecurity. Diverse job opportunities abound.

During senior year, CMDA majors undertake a major Capstone Project (CMDA 4864), collaborating with a team of students to tackle an open-ended modeling or analytics challenge from a client in industry, government, academia, or the non-profit sector.

Each Spring the CMDA program awards approximately $50,000 in Hamlett Scholarships, primarily to continuing students. Majors are also eligible to apply for CMDA Undergraduate Research Grants, awarded for Fall, Spring, and Summer research.

Bachelor of Science in Computational Modeling and Data Analytics

Please direct advising inquires to cmda-advising@vt.edu.

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the General Education (Curriculum for Liberal Education or Pathways to General Education) (see "Academic Policies (p. 9)") and toward the degree.

Satisfactory progress requirements toward the B.S. in Computational Modeling and Data Analytics can be found on the major checksheet by visiting the University Registrar website at https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html.

Computer Literacy

Most CMDA courses involve the use of statistical and/or mathematical software, typically including (but not limited to) Python, R, C, Java, and MATLAB. Previous experience with these languages is not expected; students will learn the necessary tools throughout the CMDA curriculum.

- Computational Modeling and Data Analytics Major (p. 1258)
- Computational Modeling and Data Analytics Major with Biological Sciences Option (p. 1259)
- Computational Modeling and Data Analytics Major with Cryptography and Cybersecurity Option (p. 1261)
- Computational Modeling and Data Analytics Major with Economics Option (p. 1262)
- Computational Modeling and Data Analytics Major with Geosciences Option (p. 1263)
- Computational Modeling and Data Analytics Major with Physics Option (p. 1265)

Division Leader: M. Embree
Program Manager: H. Caldwell
Undergraduate Advisor: J.S. Whitehead
Principle Faculty: N. Abaid, C. Beattie, P. Cazeaux, L. Childs, J. Datta, E. de Sturler, X. Deng, F. Faltin, R. Gramacy, S. Gugercin, A. Habibnia, P. Haskell, D. Higdon, L. House, L. Johnson, I. Kim, S. Leman, C. Lucero, D. Lucero, M. Liu, G. Matthews, S. Merkes, A. Miedlar, J. P. Morgan, C. North, A. Patterson, L. Pillonen, M. Pleimling, N. Ramakrishnan, C. Ribbens, J. Rudi, E. Smith, E. Ufferman, T. Warburton, J. Wilson, X. Xing, and L. Zeitsman

Undergraduate Course Descriptions (CMDA)

CMDA 1634 - Discovering Computational Modeling and Data Analytics (3 credits)
An introduction to the practice and profession of Computational Modeling and Data Analytics. Acquaints students with foundational computational tools, solving problems with modeling and data, visualization, ethical considerations in data science, professional opportunities in the field, and advising resources at Virginia Tech.
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 2005 - Integrated Quantitative Sciences (6 credits)
2005: Integrated topics from quantitative sciences that prepare students for advanced computational modeling and data analytics courses. Topics include: probability and statistics, infinite series, multivariate calculus, linear algebra. 2006: Intermediate linear algebra, regression, differential equations, and model validation.
Prerequisite(s): MATH 1226
Corequisite(s): MATH 2114 or MATH 2114H or MATH 2405H
Instructional Contact Hours: (6 Lec, 6 Crd)

CMDA 2006 - Integrated Quantitative Sciences (6 credits)
2005: Integrated topics from quantitative sciences that prepare students for advanced computational modeling and data analytics courses. Topics include: probability and statistics, infinite series, multivariate calculus, linear algebra. 2006: Intermediate linear algebra, regression, differential equations, and model validation.
Prerequisite(s): CMDA 2005 and (MATH 2114 or MATH 2114H or MATH 2405H)
Instructional Contact Hours: (6 Lec, 6 Crd)

CMDA 2014 - Data Matter (3 credits)
This course develops fundamental analytical and programming skills to complete the “analytic pipeline”, including specifying research questions, selecting/collecting data ethically and responsibly, processing and summarizing datasets, and stating findings, while considering all assumptions made. Students will identify vulnerabilities in analyses, including sources of bias and ethical implications. Some programming skills recommended, but not required. Some prior use of data recommended, but not required.
Prerequisite(s): MATH 1014
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 2984E - Special Study (1-19 credits)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv.
Instructional Contact Hours: Variable credit course

CMDA 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 3274 - Introduction Sports Analytics (3 credits)
Introduction to sports analytics, sources of sports analytics data and data collection methods, visualization techniques, game performance statistics, inferential statistics and predictive modeling techniques for sports data. Role and applications of data analytics in the sports industry.
Prerequisite(s): CMDA 2006 or STAT 3006
Corequisite(s): CMDA 3654 or CS 3654 or STAT 3654.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STAT 3274

CMDA 3605 - Mathematical Modeling: Methods and Tools (3 credits)
3605: Mathematical modeling with ordinary differential equations and difference equations. Numerical solution and analysis of ordinary differential equations and difference equations. Stochastic modeling, and numerical solution of stochastic differential equations. 3606: Concepts and techniques from numerical linear algebra, including iterative methods for solving linear systems and least squares problems, and numerical approaches for solving eigenvalue problems. Ill-posed inverse problems such as parameter estimation, and numerical methods for computing solutions to inverse problems. Numerical optimization. Emphasis on large-scale problems.
Prerequisite(s): (CS 1114 or CS 1064 or MATH 1454) and (MATH 2114 or MATH 2114H or MATH 2405H) and (MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005) and (MATH 2214 or MATH 2214H or MATH 2406H or CMDA 2006)
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 3606 - Mathematical Modeling: Methods and Tools (3 credits)
3605: Mathematical modeling with ordinary differential equations and difference equations. Numerical solution and analysis of ordinary differential equations and differencee equations. Stochastic modeling and numerical solution of stochastic differential equations. 3606: Concepts and techniques from numerical linear algebra, including iterative methods for solving linear systems and least squares problems, and numerical approaches for solving eigenvalue problems. III-posed inverse problems such as parameter estimation, and numerical methods for computing solutions to inverse problems. Numerical optimization. Emphasis on large-scale problems.
Prerequisite(s): CMDA 3605
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 3634 - Computer Science Foundations for Computational Modeling & Data Analytics (3 credits)
Survey of computer science concepts and tools that enable computational science and data analytics. Data structure design and implementation. Analysis of data structure and algorithm performance. Introduction to high-performance computer architectures and parallel computation. Basic operating systems concepts that influence the performance of large-scale computational modeling and data analytics. Software development and software tools for computational modeling. Not for CS major credit.
Prerequisite(s): CS 2114
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 3634

CMDA 3654 - Introductory Data Analytics and Visualization (3 credits)
Basic principles and techniques in data analytics; methods for the collection of, storing, accessing, and manipulating standard-size and large datasets; data visualization; and identifying sources of bias.
Prerequisite(s): (CS 1114 or CS 1044 or CS 1054 or CS 1064) and (MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005) and (STAT 3006 or STAT 4105 or STAT 4705 or STAT 4714 or CMDA 2006)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 3654, STAT 3654

CMDA 4274 - Sports Analytics Statistical Research (3 credits)
Statistical analysis of sports data. Game performance statistics and expected scores. Analysis of player performance, player tracking, team performance, and sports betting. Bayesian methods and prediction models applied to sports data. Decision-making. Assessing sports analytics research and literature.
Prerequisite(s): (STAT 4214 and STAT 4444) or (CMDA 4654 or CS 4654 or STAT 4654) or (STAT 3274 or CMDA 3274)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STAT 4274

CMDA 4314 - Big Data Economics (3 credits)
Applied econometrics dealing with big data. Theoretical, computational, and statistical underpinnings of big data analysis. The use of econometric models and deep machine learning algorithms to analyze the high-dimensional data sets. Implications in research focusing on economic questions that arise from rapid changes in data availability and computational technology. Materials are hands-on tutorials that come with Python codes and real-world data sets.
Prerequisite(s): ECON 3254 or ECON 4304 or CMDA 3654 or STAT 3006
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 4314

CMDA 4604 - Intermediate Topics in Mathematical Modeling (3 credits)
Introduction to partial differential equations, including modeling and classification of partial differential equations. Finite difference and finite elements methods for the numerical solution of partial differential equations including function approximation, interpolation, and quadrature. Numerical solution of nonlinear systems of equations. Uncertainty quantification, prediction.
Prerequisite(s): CMDA 3606
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 4634 - Scalable Computing for Computational Modeling and Data Analytics (3 credits)
A focused study of concepts and tools that accelerate computational and data science at scale. Design, analysis, optimization, and modeling of application-driven algorithms suitable for state-of-the-art scalable computing platforms. Software development and engineering for scalable computational science.
Prerequisite(s): (CMDA 3634 or CS 3634 or CS 4234) and (CMDA 3654 or CS 3654 or STAT 3654) and (CMDA 3605 or CS 3414 or MATH 3414 or MATH 4445)
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 4654 - Intermediate Data Analytics and Machine Learning (3 credits)
A technical analytics course. Covers supervised and unsupervised learning strategies, including regression, generalized linear models, regularization, dimension reduction methods, tree-based methods for classification, and clustering. Upper-level analytical methods shown in practice: e.g., advanced naive Bayes and neural networks.
Prerequisite(s): (STAT 3654 or CMDA 3654 or CS 3654) and (CMDA 2006 or STAT 3104 or STAT 4106 or STAT 4706) and (MATH 2114 or MATH 2114H or MATH 2405H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 4654, STAT 4654

CMDA 4664 - Computational Intensive Stochastic Modeling (3 credits)
Stochastic modeling methods with an emphasis in computing are taught. Select concepts from the classical and Bayesian paradigms are explored to provide multiple perspectives for how to learn from complex, datasets. There is particular focus on nested, spatial, and time series models.
Prerequisite(s): (STAT 4106 or CMDA 3605) and (CS 1114 or CS 1064 or STAT 2005)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: STAT 4664

CMDA 4864 - Computational Modeling and Data Analytics Capstone Project (3 credits)
Capstone research project for Computational Modeling and Data Analytics majors. Cultivates skills including reviewing the literature, creative problem solving, teamwork, critical thinking, and oral, written, and visual communications. Quantitative and computational thinking, informed throughout by ethical reasoning.
Prerequisite(s): CMDA 3605 and CMDA 3634 or CS 3634 and CMDA 3654 or CS 3654 or STAT 3654
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

CMDA 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

CMDA 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Total Credits		**120**

* Courses will be used for computing the “in major” GPA.

† MATH 2204, MATH 2214, STAT 3005, STAT 3006 & STAT 3104 will substitute for CMDA 2005 & CMDA 2006.

‡ CS 1114 will substitute for (CS 1064 and CS 2064).

\# Any approved First Year Experience (FYE) Course at Virginia Tech will satisfy this requirement.

^ To fulfill the Pathways Concept 4: Reasoning in the Natural Sciences requirements, only BIOL, CHEM, GEOS, ISC, NEUR, PHYS, and PSYC courses approved for Pathways Concept 4 may be selected.

Three conditions are required for continuation in the major:

1. Upon having attempted 72 total credit hours (including transfer, AP, advanced standing, credit by examination, course withdrawal) majors must have completed the following courses with grades of **C—** or better in a maximum of two attempts (including attempts that were withdrawn): MATH 1225; MATH 1226; MATH 2114; (CMDA 2005 and CMDA 2006) or (STAT 3005, STAT 3006, STAT 3104; MATH 2204, MATH 2214).

2. Upon having attempted 72 total credit hours (including transfer, AP, advanced standing, credit by examination, course withdrawal) majors must have completed the following courses with grades of **C** or better in a maximum of two attempts (including attempts that were withdrawn): (CS 1064 and CS 2064) or CS 1114; CS 2114.

3. Upon having attempted 12 credits of courses designated as counting for the in-major GPA (not including credits from withdrawn courses), students must maintain an in-major GPA of 2.0 or better.

Graduation Requirements

120 credit hours are required for graduation. These credits must include the courses required for the major (see above sections). To graduate, a student must have at least a 2.0 in-major GPA and overall GPA. If 120 credit hours are reached and a student does not meet the GPA requirement, the student must take additional in-major courses to raise the in-major GPA to a 2.0.

Prerequisites

Some courses have prerequisites. Students are required to double check course prerequisites and equivalents. Please see your advisor or consult the Undergraduate Course Catalog for more information.

Foreign Language Requirements

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Computational Modeling and Data Analytics Major with Biological Sciences Option

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
CMDA 3605	Mathematical Modeling: Methods and Tools *	3
CMDA 3606	Mathematical Modeling: Methods and Tools *	3

CMDA/CS 3634	Computer Science Foundations for Computational Modeling & Data Analytics *	3
CMDA/CS/STAT 3654	Introductory Data Analytics and Visualization *	3
CMDA/CS/STAT 4654	Intermediate Data Analytics and Machine Learning *	3
MATH 2114	Introduction to Linear Algebra *	3
Subtotal		18
Major Requirements		
CMDA 1634	Discovering Computational Modeling and Data Analytics *#	3
CMDA 2005	Integrated Quantitative Sciences *†	6
CMDA 2006	Integrated Quantitative Sciences *†	6
CS 1064	Introduction to Programming in Python *‡	3
CS 2064	Intermediate Programming in Python *‡	3
CS 2114	Software Design and Data Structures *	3
Subtotal		24
Option Required Courses		
BIOL 1105	Principles of Biology	3
BIOL 1115	Principles of Biology Laboratory	1
BIOL 1106	Principles of Biology	3
BIOL 1116	Principles of Biology Laboratory	1
Select two of the following:		6
BIOL 2004	Genetics *	
BIOL 2134	Cell Function and Differentiation *	
BIOL 2604	General Microbiology *	
BIOL 2704	Evolutionary Biology *	
BIOL 2804	Ecology *	
Subtotal		14
BIOL/SYSB Elective Courses		
Select two of the following:		6-8
BIOL 4004	Freshwater Ecology *	
BIOL 4114	Global Change Ecology *	
BIOL 4134	Evolutionary Genetics *	
BIOL 4564	Infectious Disease Ecology *	
BIOL 4624	Microbial Genetics *	
BIOL 4664	Virology *	
BIOL 4874	Cancer Biology *	
SYSB 3035	Genomics and Bioinformatics *	
SYSB 3036	Genomics and Bioinformatics *	
SYSB 3115	Network Dynamics and Cell Physiology *	
SYSB 3116	Network Dynamics and Cell Physiology *	
Subtotal		6-8
CMDA Elective Courses		
Select one of the following:		3
CMDA/STAT 4664	Computational Intensive Stochastic Modeling *	
CS 3824	Introduction to Computational Biology and Bioinformatics *	
FREC 3044	Environmental Data Science *	
MATH 4454	Applied Mathematical Modeling *	
STAT 4364	Introduction to Statistical Genomics *	
Subtotal		3

Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		47
Total Credits		**120-122**

* Courses will be used for computing the "in major" GPA.

† MATH 2204, MATH 2214, STAT 3005, STAT 3006 & STAT 3104 will substitute for CMDA 2005 & CMDA 2006.

‡ CS 1114 will substitute for (CS 1064 and CS 2064).

\# Any approved First Year Experience (FYE) course at Virginia Tech will satisfy this requirement.

Three conditions are required for continuation in the major:

1. Upon having attempted 72 total credit hours (including transfer, AP, advanced standing, credit by examination, course withdrawal) majors must have completed the following courses with grades of **C—** or better in a maximum of two attempts (including attempts that were withdrawn): MATH 1225; MATH 1226; MATH 2114; (CMDA 2005 and CMDA 2006) or (STAT 3005, STAT 3006, STAT 3104; MATH 2204, MATH 2214).
2. Upon having attempted 72 total credit hours (including transfer, AP, advanced standing, credit by examination, course withdrawal) majors must have completed the following courses with grades of **C** or

better in a maximum of two attempts (including attempts that were withdrawn): (CS 1064 and CS 2064) or CS 1114; CS 2114.

3. Upon having attempted 12 credits of courses designated as counting for the in-major GPA (not including credits from withdrawn courses), students must maintain an in-major GPA of 2.0 or better.

Graduation Requirements

120 credit hours are required for graduation. These credits must include the courses required for the major (see above sections). To graduate, a student must have at least a 2.0 in-major GPA and overall GPA. If 120 credit hours are reached and a student does not meet the GPA requirement, the student must take additional in-major courses to raise the in-major GPA to a 2.0.

Prerequisites

Some courses have prerequisites. Students are required to double check course prerequisites and equivalents. Please see your advisor or consult the Undergraduate Course Catalog (https://catalog.vt.edu) for more information.

Foreign Language Requirements

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Course Catalog (https://catalog.vt.edu) for details.

Select three credits in Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		49
Total Credits		**120**

* Courses will be used for computing the "in major" GPA.
† MATH 2204, MATH 2214, STAT 3005, STAT 3006 & STAT 3104 will substitute for CMDA 2005 & CMDA 2006.
‡ CS 1114 will substitute for (CS 1064 and CS 2064).
\# Any approved First Year Experience (FYE) course at Virginia Tech will satisfy this requirement.

Three conditions are required for continuation in the major:

1. Upon having attempted 72 total credit hours (including transfer, AP, advanced standing, credit by examination, course withdrawal) majors must have completed the following courses with grades of **C—** or better in a maximum of two attempts (including attempts that were withdrawn): MATH 1225; MATH 1226; MATH 2114; (CMDA 2005 and CMDA 2006) or (STAT 3005, STAT 3006, STAT 3104; MATH 2204, MATH 2214).
2. Upon having attempted 72 total credit hours (including transfer, AP, advanced standing, credit by examination, course withdrawal) majors must have completed the following courses with grades of **C** or better in a maximum of two attempts (including attempts that were withdrawn): (CS 1064 and CS 2064) or CS 1114; CS 2114.

3. Upon having attempted 12 credits of courses designated as counting for the in-major GPA (not including credits from withdrawn courses), students must maintain an in-major GPA of 2.0 or better.

Graduation Requirements

120 credit hours are required for graduation. These credits must include the courses required for the major (see above sections). To graduate, a student must have at least a 2.0 in-major GPA and overall GPA. If 120 credit hours are reached and a student does not meet the GPA requirement, the student must take additional in-major courses to raise the in-major GPA to a 2.0.

Prerequisites

Some courses have prerequisites. Students are required to double check course prerequisites and equivalents. Please see your advisor or consult the Undergraduate Course Catalog (https://catalog.vt.edu) for more information.

Foreign Language Requirements

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog (https://catalog.vt.edu) for details.

Economics

Our Website (http://www.econ.vt.edu)

Overview

Economics is a social science that studies how people make decisions in order to pursue their goals in the best possible way and how this affects aggregate social outcomes. It studies how individuals, families, groups, markets behave as well as other types of formal and informal institutions and the interactions between them. Economists use mathematical modeling, data techniques and experimental methods to understand the causal underpinnings of behavior. Economic analysis is directed at a wide range of economy-wide problems including inflation and unemployment, monetary policy and interest rates and taxation decisions. Regulatory and antitrust problems, race relations and their history, environmental problems like greenhouse gas emission abatement, education and health policies are key policy questions tackled by economists. Statistical and econometric modeling, forecasting, big data techniques and using experiments for causal inference form an important part of the economist's toolkit. Individual decision-making, what drives cooperative behavior and altruism, managerial decision-making pricing and advertising behaviors of firms, voting and elections, strategic reasoning and several different types of logical paradoxes associated with human behavior fall within the purview of economics. Finally, economics also studies why some nations are richer than others, what drives sustainable development, international trade flows and the causes and consequences of globalization.

The Department of Economics at Virginia Tech not only has strengths in the core of areas of economics like microeconomics, macroeconomics and econometrics but also in new and emerging areas like Neuroeconomics, Decision Theory, Behavioral Economics and Big Data. Students can choose a variety of courses on topics like Development Economics, Health Economics, Economics of Gender and Race, Economic History of Race Relations, Game Theory, Economics of China and the Middle East, and the Application of R and Python to economics issues. Students opt for the regular degree in Economics or pursue a degree in Economics with the Business option. The Department strongly believes in providing all majors and minors individualized attention.

Specialization in economics prepares a person for a wide variety of careers that emphasize the methods and consequences of analytical decision-making in business and government and a broad understanding of the operation of the economy. Research shows that students with economics training perform better in cognitive tests. Economics prepares students for a variety of private sector jobs that require analytical skills including positions in consulting, marketing, data analytics, business analytics and finance. They are routinely employed in the federal, state, and local governments as well as in the non-profit sector and international organizations. Undergraduate education in economics also provides an excellent background for further study in law, political science, urban planning, and business administration.

Business Option

Science majors can declare a Business option which is designed to provide students an opportunity to explore introductory courses in traditional business subjects. It should be noted that this option is not a degree in the College of Business.

Managerial Economics and Data Science Option

This option is tailored toward students interested in careers in data science and consulting. This option provides students an opportunity to complete advanced courses in Math, Statistics, and Computer Science.

Policy and Regulation Option

This option is tailored toward students who are interested in careers in policy, non-profits, government agencies, and professional graduate degrees in law and public policy. This option provides students an opportunity to complete additional courses in Political Science, Urban Affairs and Planning, Philosophy, and Natural Resources.

Minor Requirements

The requirements to earn a minor in economics can be found on its checksheet by visiting the University Registrar website at http://registrar.vt.edu/graduation-multi-brief/index1.html.

5-Year B.A. / M.A.

The department offers a 5-year combined bachelor's and master's degree for students with a GPA of at least 3.5. See the undergraduate advisor for details.

Honors Degree

The department also offers an honors degree. See the undergraduate advisor for details.

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the General Education (Curriculum for Liberal Education) (see "Academics (p. 9)") and toward the degree.

- Economics Major (p. 1271)
- Economics Major with Business Option (p. 1272)
- Economics Major with Managerial Economics and Data Science Option (p. 1274)
- Economics Major with Policy and Regulation Option (p. 1276)

Chair: Sudipta Sarangi
Professors: R. Ashley, S. Ball, N. Bose, S. Ge, H. Haller, D. Salehi-Isfahani, S. Sarangi, A. Spanos, and T. N. Tideman
Associate Professors: E. Bahel, R. Cothren, A. Dominiak, X. Lin, A. Smith, K. Tsang, and J. Wooten
Assistant Professors: S. Barrera, A. Habibnia, M. Kovach, S. Luo, M. Miller, P. Tantihkarnchana, and B. Zhou
Professor Emeritus: A. Kats
Instructors: G. Gebremariam, M. Liu, and Z. Yang
Undergraduate Advising/Career Advisor: E. Perdue (231-7726)

Undergraduate Course Descriptions (ECON)

ECON 1004 - First Year Experience Seminar (1 credit)
The course focuses on supporting first-year students and first-semester transfer students to build relationships with faculty, upper class mentors, and each other to prepare them to enter a more significantly diverse and interdisciplinary dependent community. The course also focuses on building skills for students to create personal, academic, and career goals. The course also focuses on resume building opportunities for internships, research experiences, and graduate school.
Instructional Contact Hours: (1 Lec, 1 Crd)

ECON 1104 - Economics of Gender (3 credits)
Economic approach to the causes and consequences of male/female gender differences in economic outcomes. Tools in microeconomic analysis and empirical work. Woman, family choices and labor markets. Gender gap in earnings. Employment and wage policies related to women.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 1204 - Economics of Race (3 credits)
Causes and consequences of racial disparities in economic outcomes including education, health, housing, entrepreneurship, and earnings. Tools in microeconomics and statistics as applied to the study of racial issues. Historical and institutional contexts of racial problems. Change in racial gaps across generations. Impact of public policies to address racial discrimination in labor markets. Does not count toward ECON major.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 1214 - Economic History of Diversity and Inclusion (3 credits)
Economic analysis of topics concerning diversity and inclusion. Emphasis on Virginia and surrounding states. Introduction to the basic principles of economic analysis and economic history, with a special emphasis on models of institutional change, economic growth, discrimination, inequality, migration, and indigenous economic systems. Impact of institutions, environment, and technological change on labor markets, asset markets, and standard of living. Consideration of the role of data in understanding diversity and related ethical issues.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PPE 1214

ECON 2005 - Principles of Economics (3 credits)
2005: Introduction to microeconomics. The economic approach to decision-making. Model of supply and demand. Elasticities. Consumer behavior. Firm behavior under varying industry structures. Sources and consequences of market failure. Costs and benefits of international trade. The role of government in the economy. Economic, ethical, and social ramifications of issues such as pollution, missing information, and income inequality. 2006: Introduction to macroeconomics. The measurement of economic activity. Macroeconomic problems (such as unemployment and inflation). The monetary system. Effects and limitations of monetary and fiscal policies. International economics. Social and ethical issues related to macroeconomic policy.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 2006 - Principles of Economics (3 credits)
2005: Introduction to microeconomics. The economic approach to decision-making. Model of supply and demand. Elasticities. Consumer behavior. Firm behavior under varying industry structures. Sources and consequences of market failure. Costs and benefits of international trade. The role of government in the economy. Economic, ethical, and social ramifications of issues such as pollution, missing information, and income inequality. 2006: Introduction to macroeconomics. The measurement of economic activity. Macroeconomic problems (such as unemployment and inflation). The monetary system. Effects and limitations of monetary and fiscal policies. International economics. Social and ethical issues related to macroeconomic policy.
Prerequisite(s): ECON 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 2025H - Honors Principles of Economics (3 credits)
2025H: Microeconomics. Consumer behavior and demand, firm behavior and supply, price determination and market equilibrium under varying industry structure. Applications to labor and financial markets. 2026H: Macroeconomics. Measuring aggregate economic activity, macroeconomic problems (such as unemployment and inflation), the monetary system, effects and limitations of monetary and fiscal policies.
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 2026H - Honors Principles of Economics (3 credits)
2025H: Microeconomics. Consumer behavior and demand, firm behavior and supply, price determination and market equilibrium under varying industry structure. Applications to labor and financial markets. 2026H: Macroeconomics. Measuring aggregate economics activity, macroeconomic problems (such as unemployment and inflation), the monetary systems, effects and limitations of monetary and fiscal policies.
Prerequisite(s): ECON 2025H
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

ECON 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 3004 - Contemporary Economic Issues (3 credits)
The economic analysis of current issues and problems. This course may be repeated with different topic.
Prerequisite(s): (ECON 2005 or ECON 2025H) and (ECON 2006 or ECON 2026H)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3024 - Economic Justice (3 credits)
This course explores how different assumptions regarding the basis of claims for access to economic resources lead to different outcomes. Students will explore a variety of theories and examine their own beliefs about economic justice.
Prerequisite(s): (ECON 2005 or ECON 2025H) and (ECON 2006 or ECON 2026H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PPE 3024

ECON 3034 - Economics of Poverty and Discrimination (3 credits)
Poverty and inequality in the United States and around the world. Sources of poverty. Antipoverty policies. Definition, empirical evidence, and causes of discrimination. Emphasis on ethical human behavior and policy analysis.
Prerequisite(s): ECON 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3054 - Introduction to Forecasting (3 credits)
Provides an introduction to data-driven forecasting, with applications in economics and in other disciplines - e.g., political science and climatology. Specification, estimation, and validation of time-series regression models; ethical issues arising in model specification and estimation. Forecasting theory and evaluation.
Prerequisite(s): STAT 3005 or BIT 2405
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3104 - Microeconomic Theory (3 credits)
Theories of demand, production, perfectly and imperfectly competitive price determination, and general market equilibrium. Analytic applications.
Prerequisite(s): ECON 2005 and (MATH 1225 and MATH 1226) or ECON 2005 and (MATH 1025 and MATH 1026)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3134 - Choice and Behavior (3 credits)
Theories of rational choice, utility, and revealed preference. Intertemporal decision problems and choice under uncertainty with applications to insurance and investments. Behavioral regularities and evidence of violations of rational choice theory. Behavioral models that accommodate this behavior. Applications of behavioral models to economic problems, ethical questions, policy, and organization design. Pre: Sophomore standing.
Prerequisite(s): ECON 2005 or BDS 2005
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BDS 3134

ECON 3144 - Economics of Regulation (3 credits)
Economics of regulation with a focus on U.S. laws and institutions. Market structures, mergers, antitrust laws, and anticompetitive behavior, including collusion and monopolization. Economic regulation of price, entry, and output. Incentive regulation and alternatives to regulation. Valuing life and other nonmonetary benefits. Regulation of health, safety, and the environment.
Prerequisite(s): ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3154 - Managerial Economics (3 credits)
Applications of economic concepts and models to practical issues. Demand analysis, the law of demand, and different approaches to analyzing consumer behavior (elasticity, consumer surplus, and utility theory). Supply analysis, producer behavior, and theories of firms (diminishing returns, price takers and price searchers). Pricing strategies including segmentation, two-part tariffs, collusion, and predatory pricing. Market imperfections and extensions including signaling, adverse selection, network externalities, and the economics of time. Empirical analysis: formulating economic questions, finding and analyzing relevant data, and presenting findings to non-specialists.
Prerequisite(s): ECON 2006 or BDS 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3204 - Macroeconomic Theory (3 credits)
Theories of the determination of the level of aggregate economy-wide activity. Employment, the price level, aggregate national income, and the interest rate. The roles of money and expectations.
Prerequisite(s): (ECON 2006 or ECON 2026H) and (ECON 3104 or ECON 2025H) and (MATH 1226 or MATH 1526 or MATH 1026)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3214 - Money and Banking (3 credits)
Money and credit. The U.S. monetary system. Monetary theory, monetary policy and economic stabilization.
Prerequisite(s): (ECON 2005 or ECON 2025H) and ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3254 - Analysis of Economic Data (3 credits)
Sources of economic data. Application of spreadsheet and/or statistical software to analysis of economic relationships using graphical and regression techniques. Emphasis is on economic applications rather than statistical theory.
Prerequisite(s): STAT 3005 or STAT 3604 or STAT 3615 or STAT 4604 or STAT 4705 or STAT 4714 or CMDA 2006 or BIT 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3314 - Middle East Economics (3 credits)
Introduction to the economies of the Middle East and North Africa. Application of economic analysis to economic history and modern economic growth of the region. Historical role of a strong state and Islam in shaping the institutions of private property in Middle Eastern societies. The market for oil and the integration of the region into the global economy. The modern economy of the Middle East with focus on human capital development, inequality, and the role of women.
Prerequisite(s): ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 3884 - Topics in Philosophy, Politics, and Economics (3 credits)
Topics-based course in philosophy, politics, and economics (PPE). Discussion of important topics and thinkers in PPE with historical and practical relevance. Focus on interdisciplinary analysis and methods. Topics include: limits of markets; well-being theory, science, and policy; socioeconomic justice; economic and political institutions; and global poverty. May be repeated 1 time with different content for a maximum of six credits hours. Pre: 3 credit hours in PPE, PHIL, PSCI, or ECON.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours
Course Crosslist: PHIL 3884, PPE 3884, PSCI 3884

ECON 3914 - European Economics (3 credits)
Microeconomics, macroeconomics and economic policies of the European Union. EU economic law, institutions, decision-making, and budgeting. Historic and current influences on regional economic development. Monetary and fiscal policies. Economic research methods, analysis, and reporting.
Prerequisite(s): ECON 2006
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: IS 3914, PSCI 3914

ECON 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 4014 - Environmental Economics (3 credits)
Economic dimensions and aspects of programs designed to impose quality controls upon the environment. Special emphasis on problems of controlling air and water pollution.
Prerequisite(s): ECON 2005 or ECON 2025H
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4044 - Public Economics (3 credits)
Economic rationale of the public sector. Proper size and functions of government. Market failure, Cost-benefit analysis, public goods provision. Pricing of public enterprise services.
Prerequisite(s): ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4054 - Public Finance (3 credits)
The structure and incidence of taxation in the U.S. Effects of taxes on incentives and economic efficiency. Tax Policy.
Prerequisite(s): ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4074 - Labor Economics (3 credits)
Human capital theory, labor supply and demand, discrimination, effects of labor unions and collective bargaining, wage differentials, income distribution.
Prerequisite(s): (ECON 2005 or ECON 2025H) and (ECON 3254 or ECON 4304)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4084 - Industry Structure (3 credits)
The structure and performance of American industry. Dimensions and measures of market structure. Factors affecting market structure. The relationship between structure and performance. Purpose and effects of antitrust policy, regulation, and other public policies toward industry.
Prerequisite(s): ECON 3104 or ECON 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4124 - Growth and Development (3 credits)
Theories of economic growth. Policies to foster growth, and their consequences.
Prerequisite(s): ECON 2006 and (ECON 2025H or ECON 3104)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4135 - International Economics (3 credits)
4135 International Trade: Factor mobility and commercial policy (tariffs, quotas, export licensing). 4136 International Finance: Liquidity, exchange rates, comparative international living standards, foreign aid.
Prerequisite(s): ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AAEC 4135

ECON 4136 - International Economics (3 credits)
4135 International Trade: Factor mobility and commercial policy (tariffs, quotas, export licensing). 4136 International Finance: Liquidity, exchange rates, comparative international living standards, foreign aid.
Prerequisite(s): ECON 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4144 - Economics of China (3 credits)
Evolution of the Chinese economy since 1949. Exposition of alternative economic systems, the commune, incentive problems, and state owned enterprises. Analysis of recent reforms and their effects on economic efficiency; and key issues of economic transition related to Russia and other East European countries.
Prerequisite(s): ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4214 - Economics of Health Care (3 credits)
Effects of medical care on health; cost and production of medical care; demand for medical care and its financing; structure of the health care industry; reorganization for efficiency.
Prerequisite(s): ECON 2005 or ECON 2025H
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4304 - Introduction to Econometric Methods (3 credits)
An introduction to econometric modeling techniques, including regression methods. Particular emphasis on the special problems posed by economic data.
Prerequisite(s): ECON 3254 or STAT 3005 or STAT 4604 or STAT 4705 or STAT 4714 or CMDA 2006
Corequisite(s): ECON 3104, ECON 3204
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4314 - Big Data Economics (3 credits)
Applied econometrics dealing with big data. Theoretical, computational, and statistical underpinnings of big data analysis. The use of econometric models and deep machine learning algorithms to analyze the high-dimensional data sets. Implications in research focusing on economic questions that arise from rapid changes in data availability and computational technology. Materials are hands-on tutorials that come with Python codes and real-world data sets.
Prerequisite(s): ECON 3254 or ECON 4304 or CMDA 3654 or STAT 3006
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 4314

ECON 4404 - Economics of Organizations (3 credits)
Economic theories of organization, with specific attention to their internal structure, and to design of incentive systems. Application to mergers, to the relationship between stockholders and managers, etc. Students with one year of economics, calculus and major in some other social science, by permission of the instructor.
Prerequisite(s): ECON 3104 or ECON 3154
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4424 - The Theory of Games and Economic Behavior (3 credits)
Introduction to games and solution concepts, such as prisoners dilemma, noncooperative equilibrium and Nashs bargaining solution. These concepts are applied in analyzing economic problems including bargaining problems, oligopoly and agency.
Prerequisite(s): ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4434 - Experimental Economics (3 credits)
This is a course in the use of laboratory methods to study behavior in economics and the social sciences. Students will study state-of-the-art methodology in experimental economics, including experimental design, laboratory technique, financial incentives, and analysis of data. Students will participate in, design, and conduct experiments in bargaining, auctions, asset markets, public goods and commons situations, and risky decision-making.
Prerequisite(s): ECON 3104 and (BIT 2406 or MSCI 2406 or STAT 2004 or STAT 3005)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4454 - Neuroeconomics (3 credits)
Neural processes related to reward, learning, reflection, delay of gratification, and social interaction. Clinical uses of neuroeconomics research techniques. Implications of neuroeconomics in economics, policy, law and business.
Prerequisite(s): NEUR 2026 or ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: NEUR 4454, PSYC 4454

ECON 4514 - Applied Analysis of Banking and Financial Markets (3 credits)
Analysis of economic data with focus on understanding of decision-making in financial markets. Behavior of and optimal outcomes for individuals (consumption, savings, and investment), financial institutions (lending, borrowing, and risk management), regulators, and policy makers. Statistical tools and inference using recent data sets.
Prerequisite(s): ECON 3254 or ECON 4304
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4614 - R Programming in Economics (3 credits)
Using R to combine economic theory and data. Focus on general R programming fundamentals related to data science techniques and economic data (gathering, standardizing and cleaning, analysis, and visualization). Hands-on experience with a variety of data, data sources, and techniques within R. Flaws and limitations of data. Direct application with individual project combining economic theory and data using R.
Prerequisite(s): ECON 2005 and (ECON 3254 or ECON 4304)
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4754 - Internship (1-3 credits)
Qualified students are placed in an industry or government position under the combined supervision of a faculty member and a responsible supervisor in the employing agency. Satisfactory evaluation from employer, detailed reports on the internship experience and a specific project will be required of each intern. Pre: Junior standing, QCA of 2.50 or better and consent.
Prerequisite(s): (ECON 2005 or ECON 2025H) and (ECON 2006 or ECON 2026H)
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 3 credit hours

ECON 4864 - Developing Behavioral Science Policies and Interventions (3 credits)
Senior-level capstone course to apply theories and models from behavioral decision science to real world problems on topics from education, organizations, health, crime, environment, and volunteerism. Utilize behavioral science theories, data and analytical frameworks from research papers to define and analyze problems or unintended consequences resulting from individual decision-making. Emphasis on identifying specific problems, formulating behavioral policies or interventions to improve performance, and designing experiments and randomized controlled trials to test their effectiveness.
Prerequisite(s): BDS 3134 or ECON 3134
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BDS 4864

ECON 4894 - Law and Economics (3 credits)
Analysis of the economic effects of legal rules, with emphasis on the law of property, contract, liability, and land use.
Prerequisite(s): ECON 2005
Instructional Contact Hours: (3 Lec, 3 Crd)

ECON 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

ECON 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

ECON 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Economics Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
Courses in Degree Core Requirements must be completed with a grade of C- or better.		
ECON 2005 & ECON 2006	Principles of Economics and Principles of Economics (C-)	6
ECON 3104 & ECON 3204	Microeconomic Theory and Macroeconomic Theory (C-)	6
ECON 3254	Applied Econometrics (C-)	3
MATH 1226	Calculus of a Single Variable (C-)	4
STAT 3005	Statistical Methods (C-)	3

Total Credits		120

1. ECON 2005 Principles of Economics and ECON 2006 Principles of Economics cannot be used to satisfy this requirement since they are included in the Economics Common Degree Core Requirement.
2. To fulfill the Pathways Concept 4: Reasoning in the the Natural Sciences requirements, only approved BIOL, CHEM, GEOS, ISC, NEUR, PHYS, and PSYC Pathways Concept 4 courses may be selected.
3. MATH 1225 Calculus of a Single Variable and MATH 1226 Calculus of a Single Variable must be completed with a minimum grade of C- in each to satisfy the pre-req for ECON 3104 Microeconomic Theory. MATH 1025 Elementary Calculus and MATH 1026 Elementary Calculus must be completed with a minimum grade of B- in each to satisfy the pre-req for ECON 3104 Microeconomic Theory. MATH 1226 Calculus of a Single Variable cannot be used to satisfy this requirement since it is included in the Economics Common Degree Core Requirements. MATH 1026 Elementary Calculus cannot be used to satisfy this requirement when used as a substitute for MATH 1226 Calculus of a Single Variable.

[4] STAT 3005 Statistical Methods cannot be used to satisfy this requirement since it is included in the Economics Common Degree Core Requirement. STAT 3604 Statistics for Social Science, STAT 3615 Biological Statistics, STAT 4706 Probability and Statistics for Engineers, and BIT 2406 Introduction to Business Statistics, Analytics, and Modeling cannot be used to satisfy this requirement if they are used as a substitute for STAT 3005 Statistical Methods.

Progress Toward Degree (Policy 91)

In order to remain in the Economics Major, students must meet the following requirements:

1. Upon having attempted 72 semester hours (including transfer, advanced placement, advanced standing, credit by examination, course withdrawal), students must have completed
   - ECON 2005 Principles of Economics (Micro) with a C- or better
   - ECON 2006 Principles of Economics (Macro) with a C- or better
   - ECON 3104 Microeconomic Theory with a C- or better
2. Upon having attempted 96 semester hours, students must have an In-Major grade point average of 2.000 or above and must have completed the above courses plus:
   - ECON 3204 Macroeconomic Theory with a C- or better
   - STAT 3005 Statistical Methods all with a C- or better
3. Students may not repeat any ECON course more than once, including late course withdrawals.
4. Students must register for at least three 3 credit ECON course during each academic year unless they have completed all ECON courses required for graduation.
5. Students may not repeat more than 3 ECON courses in the major.

A student who does not make satisfactory progress toward degree will be required to change their major out of Economics.

Graduation Requirements

Overall and In-Major GPA

Students must have a 2.0 overall GPA and 2.0 in-major GPA to graduate. Only ECON courses count toward the in-major GPA.

Free Electives

A free elective is any course a student takes toward the completion of the required minimum of 120 credit hours that does not complete a degree requirement. Students will complete a minimum number of free elective credit hours between 39-41 credit hours.

Total Hours Required

A minimum of 120 semester hours are required for graduation.

Acceptable Substitutions

STAT 3604 Statistics for Social Science, STAT 3615 Biological Statistics, STAT 4706 Probability and Statistics for Engineers, BIT 2406 Introduction to Business Statistics, Analytics, and Modeling with at least C sub for STAT 3005 Statistical Methods.

MATH 1225 Calculus of a Single Variable with AP or TR credit satisfies the minimum grade of C- or better for MATH 1225 Calculus of a Single Variable and will be substituted.

MATH 1226 Calculus of a Single Variable with AP or TR credit satisfies the minimum grade of C- or better for MATH 1226 Calculus of a Single Variable.

MATH 1025 Elementary Calculus with AP credit or a grade of B- or better can be substituted for MATH 1225 Calculus of a Single Variable.

MATH 1026 Elementary Calculus with AP credit of a grade of B- or better can be substituted for MATH 1226 Calculus of a Single Variable.

All ECON 4984, Special Studies, can be used for Option Required Courses Electives. Students may complete more than one course identified as a ECON 4984 Course ECON 4984 Not Found but cannot receive credit for the same ECON 4984 Course ECON 4984 Not Found more than once.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

6. ECON 1104 Economics of Gender or ECON 1204 Economics of Race can be used for degree requirement.

Progress Toward Degree (Policy 91)

In order to remain in the Economics Major, students must meet the following requirements:

1. Upon having attempted 72 semester hours (including transfer, advanced placement, advanced standing, credit by examination, course withdrawal), students must have completed
   - ECON 2005 Principles of Economics (Micro) with a C- or better
   - ECON 2006 Principles of Economics (Macro) with a C- or better
   - ECON 3104 Microeconomic Theory with a C- or better
2. Upon having attempted 96 semester hours, students must have an In-Major grade point average of 2.0 or above and must have completed the above courses plus:
   - ECON 3204 Macroeconomic Theory with a C- or better
   - STAT 3005 Statistical Methods with a C- or better.
3. Students may not repeat any ECON course more than once, including late course withdrawals.

4. Students must register for at least three 3 credit ECON course during each academic year unless they have completed all ECON courses required for graduation.
5. Students may not repeat more than 3 ECON courses in the major.

A student who does not make satisfactory progress toward degree will be required to change their major out of Economics.

Graduation Requirements

Overall and In-Major GPA

Students must have a 2.0 overall GPA and 2.0 in-major GPA to graduate. Only ECON courses count toward the in-major GPA.

Free Electives

A free elective is any course a student takes toward the completion of the required minimum of 120 credit hours that does not complete a degree requirement. Students will complete a minimum number of free elective credit hours between 22-24 credit hours.

Total Hours Required

A minimum of 120 semester hours are required for graduation.

Note

Students who pursue the Economics – Business Option are not eligible to pursue a minor in business.

Acceptable Substitutions

1. STAT 3604 Statistics for Social Science, STAT 3615 Biological Statistics, STAT 4706 Probability and Statistics for Engineers BIT 2406 Introduction to Business Statistics, Analytics, and Modeling with at least a C substitute for STAT 3005 Statistical Methods.
2. MATH 1225 Calculus of a Single Variable with AP or TR credit satisfies the minimum grade of C- or better for MATH 1225 Calculus of a Single Variable and will be substituted.
3. MATH 1226 Calculus of a Single Variable with AP or TR credit satisfies the minimum grade of C- or better for MATH 1226 Calculus of a Single Variable and will be substituted.
4. MATH 1025 Elementary Calculus with AP credit or a grade of B- or better can be substituted for MATH 1225 Calculus of a Single Variable.
5. MATH 1026 Elementary Calculus with AP credit or a grade of B- or better can be substituted for MATH 1226 Calculus of a Single Variable.
6. MGT 3404 Principles of Management for MGT 3304 Management Theory and Leadership Practice

Foreign Language Requirements

Foreign Language

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

6. ECON 1104 Economics of Gender or ECON 1204 Economics of Race can be used for degree requirement.

Progress Toward Degree (Policy 91)

In order to remain in the Economics Major, students must meet the following requirements:

1. Upon having attempted 72 semester hours (including transfer, advanced placement, advanced standing, credit by examination, course withdrawal), students must have completed
   - ECON 2005 Principles of Economics (Micro) with a C- or better
   - ECON 2006 Principles of Economics (Macro) with a C- or better
   - ECON 3104 Microeconomic Theory with a C- or better
2. Upon having attempted 96 semester hours, students must have an In-Major grade point average of 2.0 or above and must have completed the above courses plus:
   - ECON 3204 Macroeconomic Theory with a C- or better
   - STAT 3005 Statistical Methods with a C- or better
3. Students may not repeat any ECON course more than once, including late course withdrawals.
4. Students must register for at least three 3 credit ECON course during each academic year unless they have completed all ECON courses required for graduation.
5. Students may not repeat more than 3 ECON courses in the major.

A student who does not make satisfactory progress toward degree will be required to change their major out of Economics.

Graduation Requirements

Overall and In-Major GPA

Students must have a 2.0 overall GPA and 2.0 in-major GPA to graduate. Only ECON courses count toward the in-major GPA.

Free Electives

A free elective is any course a student takes toward the completion of the required minimum of 120 credit hours that does not complete a degree

requirement.Students will complete a minimum number of free elective credit hours between 22-24 credit hours.

Total Hours Required

A minimum of 120 semester hours are required for graduation.

Acceptable Substitutions

1. STAT 3604 Statistics for Social Science , STAT 3615 Biological Statistics, STAT 4706 Probability and Statistics for Engineers, BIT 2406 Introduction to Business Statistics, Analytics, and Modeling with at least a C substitute for STAT 3005 Statistical Methods
2. MATH 1225 Calculus of a Single Variable with AP or TR credit satisfies the minimum grade of C- or better for MATH 1225 Calculus of a Single Variable and will be substituted.
3. MATH 1226 Calculus of a Single Variable with AP or TR credit satisfies the minimum grade of C- or better for MATH 1226 Calculus of a Single Variable and will be substituted.
4. MATH 1025 Elementary Calculus with AP credit or a grade of B- or better can be substituted for MATH 1225 Calculus of a Single Variable.
5. MATH 1026 Elementary Calculus with AP credit or a grade of B- or better can be substituted for MATH 1226 Calculus of a Single Variable.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Select number of Free Electives sufficient to achieve 120 total credit hours		
Subtotal		21
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105 & ENGL 1106	First-Year Writing and First-Year Writing (1F)	6
Select three credits in Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A)		3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six credits in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03) [2]		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
Select six credits in Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04) [3]		6
Pathways Concept 5 - Quantitative and Computational Thinking [4]		*10*
MATH 1225	Calculus of a Single Variable [4]	
Select three credits in Pathway 5f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05F) [4]		
Select three credits in Pathway 5a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05A) [5]		
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)		3
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07) [6]		3
Subtotal		46
Total Credits		**120**

1. ECON 3004 Contemporary Economic Issues, ECON 4964 Field Study, ECON 4974 Independent Study, ECON 4974H Independent Study, and ECON 4984 Special Study may be used as one of the required courses with approval from the department prior to the start of the semester in which the course is completed.
2. ECON 2005 Principles of Economics and ECON 2006 Principles of Economics cannot be used to satisfy this requirement since they are included in the Economics Common Degree Core Requirement. ECON 1104 Economics of Gender or ECON 1204 Economics of Race can be used as one of two courses for three of six credits needed.
3. To fulfill the Pathways Concept 4: Reasoning in the the Natural Sciences requirements, only approved BIOL, CHEM, GEOS, ISC, NEUR, PHYS, and PSYC Pathways Concept 4 courses may be selected.
4. MATH 1225 Calculus of a Single Variable - MATH 1226 Calculus of a Single Variable must be completed with a minimum grade of C- in each to satisfy the pre-req for ECON 3104 Microeconomic Theory. MATH 1025 Elementary Calculus- MATH 1026 Elementary Calculus must be completed with a minimum grade of B- in each to satisfy the pre-req for ECON 3104 Microeconomic Theory. MATH 1226 Calculus of a Single Variable cannot be used to satisfy this requirement since it is included in the Economics Common Degree Core Requirements. MATH 1026 Elementary Calculus cannot be used to satisfy this requirement when used as a substitute for MATH 1226 Calculus of a Single Variable.
5. STAT 3005 Statistical Methods cannot be used to satisfy this requirement since it is included in the Economics Common Degree Core Requirement. STAT 3604 Statistics for Social Science, STAT 3615 Biological Statistics, STAT 4706 Probability and Statistics for Engineers, and BIT 2406 Introduction to Business Statistics, Analytics, and Modeling cannot be used to satisfy this requirement if they are used as a substitute for STAT 3005 Statistical Methods.
6. ECON 1104 Economics of Gender or ECON 1204 Economics of Race can be used for degree requirement.

Progress Toward Degree (Policy 91)

In order to remain in the Economics Major, students must meet the following requirements:

1. Upon having attempted 72 semester hours (including transfer, advanced placement, advanced standing, credit by examination, course withdrawal), students must have completed
   - ECON 2005 Principles of Economics (Micro) with a C- or better
   - ECON 2006 Principles of Economics (Macro) with a C- or better
   - ECON 3104 Microeconomic Theory with a C- or better
2. Upon having attempted 96 semester hours, students must have an In-Major grade point average of 2.0 or above and must have completed the above courses plus:
   - ECON 3204 Macroeconomic Theory with a C- or better
   - STAT 3005 Statistical Methods with a C- or better
3. Students may not repeat any ECON course more than once, including late course withdrawals.
4. Students must register for at least three 3 credit ECON course during each academic year unless they have completed all ECON courses required for graduation.
5. Students may not repeat more than 3 ECON courses in the major.

A student who does not make satisfactory progress toward degree will be required to change their major out of Economics.

Graduation Requirements

Overall and In-Major GPA

Students must have a 2.0 overall GPA and 2.0 in-major GPA to graduate. Only ECON courses count toward the in-major GPA.

Free Electives

A free elective is any course a student takes toward the completion of the required minimum of 120 credit hours that does not complete a

degree requirement. Students will complete a minimum number of 21 free elective credit hours.

Total Hours Required

A minimum of 120 semester hours are required for graduation.

Acceptable Substitutions

STAT 3604 Statistics for Social Science , STAT 3615 Biological Statistics , STAT 4706 Probability and Statistics for Engineers , BIT 2406 Introduction to Business Statistics, Analytics, and Modeling with at least a C sub for STAT 3005 Statistical Methods .

MATH 1225 Calculus of a Single Variable with AP or TR credit satisfies the minimum grade of C- or better for MATH 1225 Calculus of a Single Variable and will be substituted.

MATH 1226 Calculus of a Single Variable with AP or TR credit satisfies the minimum grade of C- or better for MATH 1226 Calculus of a Single Variable and will be substituted.

MATH 1025 Elementary Calculus with AP credit or a grade of B- or better can be substituted for MATH 1225 Calculus of a Single Variable .

MATH 1026 Elementary Calculus with AP credit or a grade of B- or better can be substituted for MATH 1226 Calculus of a Single Variable .

Foreign Language Requirement

Foreign Language

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Geosciences

Our Website (http://www.geos.vt.edu)

Overview

Geosciences offer exciting opportunities for students with an interest in applying a diverse range of science skills to understand the earth's properties and dynamic processes. This is a highly interdisciplinary program that applies physics, chemistry, biology, computational techniques, and mathematics to understand and manage all aspects of Earth and the environment. Geoscientists work everywhere in the world under almost any condition as they search for earth resources, address environmental risks and natural hazards, and supervise technical and business enterprises. For more information about exciting careers in Geosciences consult **www.agiweb.org/careers.html**. The extensive scientific and quantitative skills of geoscientists, along with their broad field experience, allow them to pursue careers in many related fields ranging from material science to technical management and scientific reporting.

Virginia Tech's internationally recognized Geosciences faculty has developed six challenging options, described below, that lead to a B.S. in Geosciences. Coursework emphasizes the acquisition and processing of field data beginning with a special course in field methods taken in the spring of the first year. The geology option requires, and the other options recommend, that the student participate in a six-week field camp. The B.S. in Geosciences provides pre-professional preparation that will allow students to continue their education in post graduate programs in science, law, and business.

Earth systems and processes are enormously complicated and require a broad range of intellectual skills to decipher and manage. Geoscientists must possess strong quantitative skills and a solid understanding of physics, chemistry, and biology. They must be able to read maps, identify rocks, minerals, and fossils as well as visualize earth structures in three dimensions. They must have strong communication skills, both written and verbal. Learning to use these skills in an integrated way is a challenging and rewarding experience.

Geology Option

The Geology option offers a detailed coverage of the broad range of classic disciplines within the geosciences. This option emphasizes the study of minerals, rocks and fossils, and teaches the student how to understand the processes and history of the earth based on the occurrences and relationships of these materials at or near the Earth's surface.

Geochemistry Option

The Geochemistry option is designed for those students who have special interest in the fundamental chemical aspects of the Earth and its materials with applications to a broad range of geochemical and environmental problems.

Geophysics Option

The Geophysics option offers students the opportunity to specialize in the branch of the geosciences that investigates physical earth processes such as earthquakes and that images the interior of the earth through surface-based physical measurements.

Earth Science Education Option

The Earth Science Education option provides students with a broad Earth Science curriculum that meets the content goals for secondary earth science teaching. Certification for Earth Science teaching is not provided in the program. Information about teaching certification in Virginia can be obtained from the School of Education.

Environmental and Engineering Geosciences Option

The Environmental and Engineering Geosciences option is designed for students with interests in applying geosciences to solve problems related to human interaction with the natural environment and to apply geologic principles to engineering issues.

Geobiology and Paleobiology Option

The Geobiology and Paleobiology option is designed for students interested in studying the interactions between life and its environment in the modern Earth and ancient past (geobiology) and in reconstructing the biology and relationships of extinct life (paleobiology).

Minor in Geosciences

The requirements to earn a minor in Geosciences can be found on its checksheet by visiting the University Registrar website at http://registrar.vt.edu/graduation-multi-brief/index1.html.

Graduate Program

The department offers M.S. and Ph.D. degrees in geosciences with specializations in many sub-disciplines. (See the Graduate Catalog (https://catalog.vt.edu/graduate/) for further information.)

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the General Education (Curriculum for Liberal Education) (see "Academics (p. 9)") and toward the degree.

Satisfactory progress requirements toward the B.S. in Geosciences with any of the available options can be found on the specific major checksheet by visiting the University Registrar website at http://registrar.vt.edu/graduation-multi-brief/index1.html.

- Geosciences Major with Earth Science Education Option (p. 1284)
- Geosciences Major with Environmental and Engineering Geoscience Option (p. 1285)
- Geosciences Major with Geobiology & Paleobiology Option (p. 1287)
- Geosciences Major with Geochemistry Option (p. 1288)
- Geosciences Major with Geology Option (p. 1291)
- Geosciences Major with Geophysics Option (p. 1292)

Head: W.S. Holbrook
University Distinguished Professors: R.J. Bodnar, P.M. Dove, G.V. Gibbs (Emeritus), and M.F. Hochella Jr. (Emeritus)
National Academy of Science: P.M. Dove
Professors: R.J. Bodnar, P.M. Dove, W.S. Holbrook, J.A. Hole, S.D. King, R.D. Law, N.L. Ross, M.E. Schreiber, J.A. Spotila, R. Weiss, and S. Xiao
Associate Professors: M.J. Caddick, B.C. Gill, F.M. Michel, S.J. Nesbitt, R.M. Pollyea, B.W. Romans, M. Shirzaei, D.S. Stamps, and Y. Zhou
Assistant Professors: G. Allen, M. Duncan, C. Dura, M.R. Stocker, S. Werth, and M. Willis
Research Professor: M.C. Chapman
Research Scientists: S. Bemis, R. Reid
Collegiate Associate Professor: J.A. Chermak
Senior Instructor: N.E. Johnson
Instructor: L.R. Neser
Adjunct Faculty: P. Prince, K. Weber, and W. Schmachtenberg
Affiliated Faculty: M. Murayama and S. Singerling

Undergraduate Course Descriptions (GEOS)

GEOS 1004 - Earth Science: Our Past, Present, and Future (3 credits)
Introduction to Earth science, including the fundamental concepts of geology in the modern context of humans interacting with the Earth. Formation and evolution of the Earth (history, plate tectonics, the rock cycle, geologic time), internal Earth dynamics (earthquakes, volcanoes, mitigating natural hazards), Earth materials (minerals and rocks, energy and mineral resources), surface processes (Earth system science, hydrologic cycle, global geochemical cycles, oceans and atmosphere, climate, erosion and landscapes), Earth sustainability (resources, environmental change), evaluating geological information and products of research, the scientific approach to problem solving, and the ethical issues associated with geoscience and the environment.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 1014 - Evolution of the Earth-Life System (3 credits)
Introduction to the interaction of the Earths processes that shape our planet and its biosphere through time. Application of modern geoscientific inquiry; biological, chemical and physical interactions that are part of the Earth system; distribution of life on Earth (i.e., biogeography); diversity of life over time; the differentiation between science and pseudoscience; ethical issues around human activities and their impact on the Earth-Life system.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 1024 - Earth Resources, Society, and Environment (3 credits)
Introduction to the Earths resources including their nature, formation, occurrence, extraction, distribution, consumption, and waste management and disposal using an integrated cradle to grave analysis. Population, the Earths metallic and non-metallic resources, rare earth elements, non-renewable and renewable energy and water. Social, environmental, economic and political impacts resource production and consumption have had historically, currently, and that are predicted into the future including current and future sources of energy in the United States and internationally. Sustainability, water abundance and quality, fracking, climate change, ocean acidification, and ozone depletion.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 1034 - Earths Natural Hazards (3 credits)
Fundamentals of Earth processes that drive natural hazards, including earthquakes, volcanoes, tsunamis, hurricanes, tornadoes, floods, climate change and impacts with space objects; impacts of human activities on the Earth; defining and analyzing hazards and risks through testing hypotheses on geologic data; ethical issues arising from hazard mitigation; analysis of uncertainties of scientific information.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 1054 - Age of Dinosaurs (3 credits)
Introduction to dinosaur paleontology, including fundamental geological and biological concepts, with focus on how modern paleontologists ask interdisciplinary questions to examine the fossil record. Use of dinosaurs to explore: process and impact of scientific method; geologic processes, geologic time, global change, ecosystems, biogeography; anatomy, evolution, biodiversity, phylogenetic relationships; and media portrayal of extinct animals.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 1064 - Climate History: Past, Present, and Future (3 credits)
Introduction to the fundamental components of Earths climate system. Changes of Earths climate at different time scales. Climate change induced by plate tectonics, variations in Earths orbit and transition to and from ice ages. Historical and future changes of Earths climate. Climate models as tools to interpret climate data. Impacts of climate change. Climate ethics and policies.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 1104 - Introduction to Earth Sciences Laboratory (1 credit)
Introduction to Earth sciences laboratory, including identification of minerals and rocks, topographic and geologic maps, structural geology, geology impacting humans and humans impacting geology, environmental and social impacts.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lab, 1 Crd)

GEOS 1124 - Earth Resources, Society and Environment Laboratory (1 credit)
Laboratory course on Earths resources including their nature, importance, occurrence, extraction, and environmental, social, and political impacts of consumption. Earths resources include metal ores, non-metallic resources which includes surface and ground water and non-renewable (e.g., fossil fuels) and renewable energy (e.g., hydroelectric). Sustainability, water quality and quantity, climate change, and ocean acidification related to resource extraction and consumption.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lab, 1 Crd)

GEOS 2004 - Geosciences Career and Professional Development (3 credits)
Introduction to career and professional development in the geosciences, including investigating career options, searching for internships and jobs, discussing topics of ethics, diversity and inclusion, evaluating information resources, collaborating in research groups, and developing skills in technical communication. Restricted to geoscience majors.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 2014 - Mission to the Planets (3 credits)
The events and processes that shaped the terrestrial planets; the scientific method (i.e., observations, techniques, and theories) that supports our understanding of these events and processes; the role of science, politics, and engineering and how these impact planetary science missions; ethical issues associated with planetary research; manned and unmanned exploration and how they have shaped our understanding of the planets.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 2024 - Earth's Dynamic Systems (6 credits)
Overview of the geosciences, emphasizing processes operating within and on the Earth now and over the last 4.55 billion years. Earth's systems, cycles and material. Earth's formation, the physical Earth, and plate tectonics. Earth's record, including the fossil record, evolution, origin and diversity of life, and biogeography. History of the Earth-Life system, including key events throughout time. Time and length scales. Climate change and extinction. Field trips required. Restricted to geoscience majors (5H, 3L, 6C), partial duplication of GEOS 1004.
Instructional Contact Hours: (5 Lec, 3 Lab, 6 Crd)

GEOS 2104 - Elements of Geology (3 credits)
Structure of the earth, properties of minerals and rocks, and geologic processes that act on the surface and in the interior of the earth, and integrated geologic systems of importance in engineering and regional planning. For students in engineering and physical sciences. Geology 2104 duplicates material in Geology 1004 and both may not be taken for credit.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 2444 - Geoscience Field Observations (3 credits)
Study of geological processes in the field. Integration of field observations with datasets into conceptual geological interpretations and models. Identification of rock type, lithology and structure in outcrop.
Prerequisite(s): GEOS 1004 or GEOS 2024 or GEOS 2104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

GEOS 2984 - Special Study (1-10 credits)
Instructional Contact Hours: (1-10 Lec, 1-10 Crd)

GEOS 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 3014 - Environmental Geosciences (3 credits)
The roles of geology and geophysics in defining and monitoring the natural environment, with special application to interactions between humans and the geologic environment. Both descriptive treatment and quantitative concepts related to environmental processes involving the solid earth and earths surface, with emphasis on geologic hazards (e.g., earthquakes, volcanoes, landslides and slope failures, flooding, groundwater problems, mineral and rock dusts).
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 3024 - Computational Methods in the Geosciences (3 credits)
Development of computational skills aimed at extracting pertinent trends and significance of a wide variety and quantity of highly heterogeneous geoscience data; application of analytical, statistical and signal processing methods for analyzing time-series, spatial and satellite imagery data; tools for producing publication quality maps, graphs, charts, and other visual aids.
Prerequisite(s): MATH 1225 or MATH 1025
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 3034 - Oceanography (3 credits)
Descriptive and quantitative treatment of the geological, physical, chemical and biological processes that occur in, or are influenced by, the oceans. The history of oceanic exploration and discovery is addressed.
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 3044 - Geosciences Outreach (2 credits)
Service-learning through teaching. Identification and development of geoscience outreach activities based on national and state science education standards. Assessment methods for evaluating the effectiveness of outreach activities. Techniques for effective instructional design and communication of geoscience concepts to enrich the general publics awareness of the geosciences.
Prerequisite(s): GEOS 2024 or (GEOS 1004 and GEOS 1014) or (GEOS 2104 and GEOS 1014)
Instructional Contact Hours: (2 Lec, 2 Crd)

GEOS 3104 - Elementary Geophysics (3 credits)
Acquisition and interpretation of exploration geophysical data. Seismic reflection and refraction methods, gravity and magnetic fields, geoelectrical methods, and geophysical well logging.
Prerequisite(s): (GEOS 1004 or GEOS 2024 or GEOS 2104) and (MATH 1026 or MATH 1226) and (PHYS 2205 or PHYS 2305)
Corequisite(s): PHYS 2206 or PHYS 2306
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 3204 - Sedimentology-Stratigraphy (3 credits)
Study of sedimentary basins in a plate-tectonic framework, mechanisms of basin formation, three-dimensional geometry of basin fill, and controls on basin fill. Siliciclastic and carbonate-evaporate rocks as examples of basin fill are discussed in lectures and studied in the lab and in the field. Applied aspects of the course include a discussion of geometries of sedimentary aquifers and reservoirs.
Prerequisite(s): GEOS 1004 or GEOS 2024 or GEOS 2104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 3304 - Geomorphology (3 credits)
Examines the variety of landforms that exist at the earths surface. Detailed investigation of major processes operating at the earths surface including: tectonic, weathering, fluvial, coastal, eolian, and glacial processes. Field excursion.
Prerequisite(s): GEOG 1104 or GEOS 1004 or GEOS 2104 or GEOS 2024
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CSES 3304, GEOG 3304

GEOS 3404 - Elements of Structural Geology (3 credits)
Introduction to basic geological structures, evolution of microfabrics, development of faults, folds and foliations, stereographic analysis of geological structures, thrust fault geometries, balancing of geological cross-sections, and introduction to the concepts of stress and strain.
Prerequisite(s): GEOS 1004 or GEOS 2024 or GEOS 2104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 3504 - Mineralogy (3 credits)
Principles of modern mineralogy, crystal chemistry, and crystallography, with emphasis on mineral atomic structure and physical property relationships, mineralogy in the context of geology, geochemistry, environmental science and geophysics, phase equilibria, mineral associations, and mineral identification, and industrial applications of minerals. There are three required field trips during the semester.
Prerequisite(s): CHEM 1035 or CHEM 1055 or (ISC 1106 and ISC 1116)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: MSE 3104

GEOS 3604 - Paleontology (3 credits)
Paleontological principles and techniques and their application to the evolution of life, the ecological structure of ancient biological communities, the interpretation of ancient depositional environments, and the history of the earth.
Prerequisite(s): (GEOS 1004 and GEOS 1014) or GEOS 2024
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 3614 - Soils (3 credits)
Characterization of soils as a natural resource emphasizing their physical, chemical, mineralogical, and biological properties in relation to nutrient availability, fertilization, plant growth, land-use management, waste application, soil and water quality, and food production. For CSES, ENSC, and related plant- and earth-science majors. Partially duplicates CSES/ENSC 3134.
Prerequisite(s): CHEM 1036
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CSES 3114

GEOS 3624 - Soils Laboratory (1 credit)
Parent materials, morphology, physical, chemical, and biological properties of soils and related soil management and land use practices will be studied in field and lab. Partially duplicates CSES/ENSC 3134.
Corequisite(s): GEOS 3614
Instructional Contact Hours: (3 Lab, 1 Crd)
Course Crosslist: CSES 3124

GEOS 3634 - Natural History Collections and Curation (3 credits)
Introduction to museums and natural history collections, with a focus on hands-on curation of specimens to learn standard archival practices and principles. Exploration of campus collections such as the Museum of Geosciences, Massey Herbarium, and Cheatham Vertebrate Collection with particular focus on: specimen acquisition and accessioning; specimen preparation, preservation, and identification; collection labeling, organization, and storage; collection management databases; metadata; emergency response plans; and the role of museums over time for outreach and interpretation. Application of knowledge through final project.
Prerequisite(s): GEOS 2024 or (GEOS 1004 and GEOS 1014) or (GEOS 2104 and GEOS 1014) or (BIOL 1105 and BIOL 1106)
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 3644 - Paleontological Laboratory Techniques (2 credits)
Laboratory techniques for extracting and preserving paleontological data. Tracing the process a fossil goes through from the field until it is permanently curated. Supervised hands-on experience in an active paleontological laboratory. Independent paleontology information preservation projects. Topics include: philosophy of fossil preparation, mechanical and chemical preparation, conservation and lab materials, digital data and virtual preparation, molding and casting, 3D printing, and collaboration with other museums.
Prerequisite(s): GEOS 1014 or GEOS 1054 or GEOS 2024
Instructional Contact Hours: (2 Lec, 2 Crd)

GEOS 3704 - Igneous and Metamorphic Rocks (3 credits)
Study of characteristics and mechanisms of igneous intrusion at depth in the crust, volcanic phenomena on the surface, and textural and mineralogical modification of rocks at elevated temperatures and pressures of crustal metamorphism. Tectonic aspects of igneous and metamorphic rocks will be stressed.
Prerequisite(s): GEOS 1004 or GEOS 2104 or GEOS 2024
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

GEOS 3954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 4024 - Senior Seminar (3 credits)
Integration and solution of significant geoscience research problems and case studies by analysis and integration of information across a wide spectrum of geoscience sub-disciplines. Techniques for effective oral and written communication of technical information to experts and non-experts. Independent and team research projects. Analysis of ethics associated with societally-relevant geosciences issues. Ethics and professionalism in geosciences.
Prerequisite(s): GEOS 2004 and GEOS 2024 and GEOS 2444 and GEOS 3204 and GEOS 3404 and GEOS 3504
Pathway Concept Area(s): 1A Discourse Advanced, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 4084 - Modeling with Geographic Information Systems (3 credits)
Use of automated systems for geographic data collection, digitization, storage, display, modeling and analysis. Basic data flow in GIS modeling applications. Development of proficiency in the use of current GIS software. Senior Standing.
Prerequisite(s): GEOG 2084
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)
Course Crosslist: GEOG 4084

GEOS 4124 - Seismic Stratigraphy (3 credits)
Overview of seismic data acquisition and processing methods, seismic wavelets, static and dynamic corrections, and seismic velocities; seismic reflection data interpretation; seismic reflection responses Seismic mapping; seismic stratigraphy and seismic lithology. Consent required.
Prerequisite(s): GEOS 3104 and GEOS 3204
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4134 - Interdisciplinary Issues and Ethics in Water Resources (3 credits)
Analysis of issues and ethics related to water resources, water as a hazard upon human (infrastructure, economy) and ecological (rivers, groundwater) systems, water and vector borne disease, climate change, dams, and eutrophication. Development of proficiency in demonstrating the multidimensionality of water resources. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: GEOG 4134

GEOS 4154 - Earthquake Seismology (3 credits)
Seismicity and its causes in the context of plate tectonics; determination of earthquake location, size and focal parameters; seismogram interpretation; seismometry; hazard potential; use of earthquakes in determining earth structure.
Prerequisite(s): MATH 2204 or MATH 2204H and MATH 2214 and PHYS 2305 and GEOS 3104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4164 - Potential Field Methods in Exploration Geophysics (4 credits)
Theory and application to engineering, environmental, and resource exploration. Gravity, magnetics, electrical resistivity, self potential, induced polarization, ground-penetrating radar, magnetotellurics, electromagnetic induction.
Prerequisite(s): (MATH 2204 or MATH 2204H) and MATH 2214 and PHYS 2306 and GEOS 3104
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

GEOS 4174 - Exploration Seismology (4 credits)
Theory and application of seismic methods to engineering, environmental and resource exploration: reflection seismics, refraction seismics, and tomography. Data acquisition, digital filtering, data corrections, imaging, interpretation, and forward modeling.
Prerequisite(s): MATH 2204 or MATH 2204H and MATH 2214 and PHYS 2305 and GEOS 3104
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

GEOS 4184 - Geodesy in the Earth Sciences (3 credits)
Study of measurement of Earth 's geometric shape, orientation in space, the gravity field, and how these properties change over time. Geodetic methods of measurement (i.e., GNSS, InSAR, TLS, gravity). Reference frames, geodetic applications, and geodetic advances.
Prerequisite(s): GEOS 1004 or GEOS 1024 or GEOS 1034 or GEOS 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 4234 - Vertebrate Evolution (4 credits)
Characterization of the evolution of vertebrates from the fossil record to now. Tracing anatomical features in humans to their origin of different vertebrate groups. Chronicling vertebrate diversification events through extinctions, changes in climate in the last 600 million years, biogeography, and phylogenetic methods. Evidence of evolution through fossils and dissection.
Prerequisite(s): GEOS 1014 or BIOL 2704 or GEOS 2024
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

GEOS 4244 - Morphology of the Vertebrates (4 credits)
Identification of skeletal osteological elements of major groups of vertebrates, including aspects of skeletal functional morphology and homology, with emphasis on extant taxa. Skeletal systems of model and non-model organisms such as fish, amphibians, reptiles, birds, and mammals; specimen care and data management; modern skeletal collection practices.
Prerequisite(s): (GEOS 1014 or GEOS 2024 or GEOS 1054) or (BIOL 1105 and BIOL 1106)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

GEOS 4254 - Integrative Earth System History (3 credits)
Study of Earth system evolution, with a focus on critical transitions that shaped the history of the Earth, and the integration and interaction of the atmosphere, hydrosphere, biosphere, and geosphere. Principles of system science, box models, atmospheric and oceanographic processes, microbial processes, isotopic tracers, elemental cycles, and critical transitions in Earth history, including the origin of life, changes in atmospheric composition, climatic events and mass extinctions.
Prerequisite(s): GEOS 2024 or (GEOS 1004 and GEOS 1014) or (GEOS 2104 and GEOS 1014)
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 4264 - Sedimentary Basins (3 credits)
Formation, evolution, and characterization of regions of the Earths surface that experience long-lived subsidence and sediment accumulation. Integration of concepts and skills from: stratigraphy, surface processes, tectonics, structural geology, burial/thermal history, geo/thermochronology, and geodynamics; content is relevant to fields such as paleontology, (paleo)climatology, and subsurface resource management. Use of programming/statistical software packages.
Prerequisite(s): GEOS 3204
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4314 - Coastal Hazards (3 credits)
Study of past, current, and future drivers of coastal change and hazards. Integration of concepts and skills from: climatic, isostatic, and tectonic processes that drive sea-level change; geologic (e.g., coastal stratigraphy, microfossils) and instrumental (e.g., tide gauges, satellite altimetry) coastal change reconstructions, models, measurements, and projections. Coastal earthquake, tsunami, hurricane, and storm-surge hazards. Approaches and challenges of communicating coastal hazards to the public. Coastal hazards and public policy.
Prerequisite(s): GEOS 1004 or GEOS 2024 or GEOS 2104
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 4354 - Introduction to Remote Sensing (3 credits)
Theory and methods of remote sensing. Practical exercises in interpretation of aerial photography, satellite, radar and thermal infrared imagery. Digital analysis, image classification and evaluation. Applications in earth sciences, hydrology, plant sciences, and land use studies.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: GEOG 4354

GEOS 4404 - Advanced Structural Geology (3 credits)
Basic principles of rock behavior under applied, non-hydrostatic stress (experimental and tectonic) and analysis of the geometrical patterns produced. Alternate years.
Prerequisite(s): GEOS 3404
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4614 - Stable Isotope Biogeochemistry (3 credits)
Introduction to the fundamental processes that drive the sorting of carbon, nitrogen, oxygen, hydrogen, and sulfur stable isotopes in modern and past marine and terrestrial systems. Application of stable isotopes to address research questions in a variety of disciplines, including geology, paleobiology, ecology, and environmental sciences. Collect, prepare, analyze, and interpret stable isotope data.
Prerequisite(s): CHEM 1035 or CHEM 1055 or CHEM 1055H
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 4624 - Mineral Deposits (3 credits)
Introduction to the range and variety of metallic and non-metallic economic mineral deposits. Classification of the petrologic and tectonic settings of mineral deposits. Source, transport and depositional mechanisms of mineral deposit formation. Laboratory emphasizes identification of ore minerals, gangue minerals, common host rocks, wall-rock alteration and mineral zoning. Course requirement of 3 hours of GEOS at the 3000-level or above, may be satisfied by taking prerequisite prior to or concurrent with course.
Prerequisite(s): GEOS 1004 or GEOS 2104 or GEOS 2024
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4634 - Environmental Geochemistry (3 credits)
Application of quantitative methods of thermodynamic and physicochemical analysis to the study of the distribution and movement of chemical elements in surface and near-surface geological environments. Emphasis on practical approaches to environmental geochemistry.
Prerequisite(s): (MATH 1225 or MATH 1025) and (CHEM 1035 or CHEM 1055) or (ISC 1106 and ISC 1116)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4714 - Volcanoes and Volcanic Processes (3 credits)
Study of characteristics and mechanisms of volcanic phenomena, including magma dynamics, origin and chemistry of lavas, physics of eruptions, and characteristics of volcanic products, particularly pyroclastic deposits. Includes focus on volcanism as a general planetary process, on terrestrial tectonic settings of volcanism and on volcanic hazards.
Prerequisite(s): GEOS 1004 or GEOS 2024 or GEOS 2104
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4804 - Groundwater Hydrology (3 credits)
Physical principles of groundwater flow, including application of analytical solutions to real-world problems. Well hydraulics. Geologic controls on groundwater flow.
Prerequisite(s): (MATH 1226 or MATH 1026) and (PHYS 2205 or PHYS 2305)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

GEOS 4824 - Engineering Geology (3 credits)
Application of geological, geochemical, and hyrdogeological principles to engineering problems; relating rock and soil forming processes to engineering properties of geological materials; physical and chemical weathering processes and relationships with engineering properties of soil and rock; effective stress theory and geologic hazards; methods and data types for environmental applications and engineering works; geologic hazards and human-land interactions; professionalism and ethics in the practice of engineering geology.
Prerequisite(s): (GEOS 1004 or GEOS 2024 or GEOS 2104) and (PHYS 2305 or PHYS 2205) and (CHEM 1035 or CHEM 1015) and (MATH 1225 or MATH 1025)
Instructional Contact Hours: (3 Lec, 3 Crd)

GEOS 4924 - Tectonics (4 credits)
Overview of modern plate tectonic theory and history. Physical processes driving present-day plate tectonic deformation including continental rifts, rifted margins, continental transforms, strike-slip faults, subduction zones and orogenic belts. Plate kinematic concepts and information about the Earth's structure. Application of scientific method, data analysis, and computational modeling.
Prerequisite(s): (MATH 1025 or MATH 1225) and (PHYS 2205 or PHYS 2305)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

GEOS 4944 - Study Abroad Topics in Geosciences (1-3 credits)
Study of geoscience topics in a global environment. Cross#cultural perspectives on scientific inquiry and knowledge in the geosciences. Application to topics of societal relevance. Field experiences in places of geologic, societal and cultural interest. Specific topics may vary from semester to semester. May be repeated with different content for a maximum of 9 credit hours.
Prerequisite(s): GEOS 2024 or GEOS 2104 or (GEOS 1004 and GEOS 1104)
Instructional Contact Hours: (1-3 Lec, 1-3 Crd)
Repeatability: up to 9 credit hours

GEOS 4954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

GEOS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

GEOS 4994 - Undergraduate Research (1-19 credits)
May be repeated for a maximum of 4 credits.
Instructional Contact Hours: Variable credit course
Repeatability: up to 4 credit hours

GEOS 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Geosciences Major with Earth Science Education Option

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
GEOS 2004	Geosciences Career and Professional Development	3
GEOS 2024	Earth's Dynamic Systems	6
GEOS 2444	Geoscience Field Observations	2
GEOS 3204	Sedimentology-Stratigraphy	3
GEOS 3404	Elements of Structural Geology	3
GEOS 3504/ MSE 3104	Mineralogy	3
Subtotal		20
Major Requirements		
GEOS 4024	Senior Seminar [1]	3
GEOG 2084	Principles of Geographic Information Systems	3
CHEM 1035	General Chemistry [1]	3
CHEM 1045	General Chemistry Laboratory [1]	1
STAT 3005	Statistical Methods [1]	3
or STAT 3615	Biological Statistics	
Select one of the following:		3
GEOS 3024	Computational Methods in the Geosciences	
CS 1044	Introduction to Programming in C	
CS 1064	Introduction to Programming in Python	
Subtotal		16
Option Required Courses		
Select one of the following:		10-12
Sequence 1		
MATH 1025	Elementary Calculus [3]	
MATH 1026	Elementary Calculus [3]	
PHYS 2205 & PHYS 2215	General Physics and General Physics Laboratory [3]	
Sequence 2 (preferred)		
MATH 1225	Calculus of a Single Variable [3]	
MATH 1226	Calculus of a Single Variable [3]	
PHYS 2305	Foundations of Physics [3]	
Subtotal		10-12
BIOL 1105 & BIOL 1115	Principles of Biology and Principles of Biology Laboratory [3]	4
GEOG 1514	Introduction to Meteorology	3
EDEP 2444	Motivating Yourself and Others [3]	3
or HD 1004	Childhood and Adolescence	
or PSYC 1004	Introductory Psychology	
EDCI 3024	Issues of Schooling in the United States [3]	3
PHYS 1055	Introduction to Astronomy [3]	3
or GEOS 2014	Mission to the Planets	
GEOS 1024	Earth Resources, Society, and Environment [3]	3
or GEOS 1064	Climate History: Past, Present, and Future	
GEOS 3034	Oceanography	3
GEOS 3014	Environmental Geosciences	3
GEOS 3044	Geosciences Outreach	2
Subtotal		27
Select one of the following:		4
CHEM 1036 & CHEM 1046	General Chemistry and General Chemistry Laboratory [3]	
BIOL 1106 & BIOL 1116	Principles of Biology and Principles of Biology Laboratory [3]	
PHYS 2206 & PHYS 2216	General Physics and General Physics Laboratory [3]	
or PHYS 230	Foundations of Physics	
Subtotal		4
Elective Courses		
GEOS 3XXX-4XXX	Geosciences Elective [2]	14-15
Subtotal		14-15
Free Electives		
Complete remaining credit hours needed to satisfy degree 120 credit hour requirement (Students may need to complete less credit hours in this category depending on choices in categories above)		11
Subtotal		11
Pathways to General Education [4]		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
Pathways Concept 1 - Discourse (Advanced) completed by major/option requirements		
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Pathways Concept 3 - Reasoning in the Social Sciences completed by major/option requirements		
Pathways Concept 4 - Reasoning in the Natural Sciences		
Pathways Concept 4 - Reasoning in the Natural Sciences completed by major/option requirements		
Pathways Concept 5 - Quantitative and Computational Thinking		
Pathways Concept 5 - Quantitative and Computational Thinking (Foundation) completed by major/option requirements		
Pathways Concept 5 - Quantitative and Computational Thinking (Advanced) completed by major/option requirements		
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3

Select three credits in Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)	3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States	
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States completed by major/option requirements	
Subtotal	18
Total Credits	**120-123**

Footnotes

[1] Credits may double-count for Major Requirements and Pathways.
[2] See University Course Catalog for prerequisites.
[3] Credits may double-count for Option Requirements and Pathways.
[4] If requirements completed as outlined, **27 credit hours of Pathways will be satisfied** by major/option requirements. Pathways requirements and approved courses are available online: https://www.pathways.prov.vt.edu/.

Satisfactory Progress Toward Degree (Policy 91)

1. By 45 hours attempted at Virginia Tech, students must have completed the following courses:
   - GEOS 2004
   - GEOS 2024 (or GEOS 1004 and GEOS 1104 and GEOS 1014 or GEOS 2104 and GEOS 1014)
   - GEOS 2444
   - GEOS 3504
   - MATH 1025 or MATH 1225
   - CHEM 1035
   - CHEM 1045
2. By 60 hours attempted at Virginia Tech, students must have completed the following courses:
   - PHYS 2205 and PHYS 2215 or PHYS 2305
3. Students must achieve an overall GPA of 2.0 and an in-major GPA of 2.5 upon attempting 15 GEOS credit hours (including transfer credit, courses completed with a grade of "W", advanced placement or IB credit)

Graduation Requirements

Graduation requires completion of a minimum of 120 credit hours with a GPA of 2.0 or greater for all hours attempted. In addition, students must have an in-major GPA of 2.5 or greater. The in-major GPA is calculated from all GEOS courses.

Prerequisites

There are no hidden prerequisites, although some of the courses listed are prerequisites for other courses. Even when listed, prerequisites are subject to change. Please consult University Catalog for current information.

Acceptable Substitutions

- GEOS 1004, and GEOS 1104, and GEOS 1014 for GEOS 2024
- GEOS 2104 and GEOS 1014 for GEOS 2024
- CHEM 1055 or CHEM 1055H for CHEM 1035
- CHEM 1065 for CHEM 1045
- COMM 1015 for ENGL 1105
- COMM 1016 for ENGL 1106

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

1.

Geosciences Major with Environmental and Engineering Geoscience Option

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
GEOS 2004	Geosciences Career and Professional Development	3

Total Credits	**120-126**

[1] Credits may double-count for Major Requirements and Pathways.
[2] Credits may double-count for Option Requirements and Pathways.
[3] If requirements completed as outlined, **18 credit hours of Pathways will be satisfied** by major/option requirements. Pathways requirements and approved courses are available online: https://www.pathways.prov.vt.edu/

Satisfactory Progress Toward Degree (Policy 91)

1. By 45 hours attempted at Virginia Tech, students must have completed the following courses:
   - GEOS 2004 Geosciences Career and Professional Development
   - GEOS 2024 Earth's Dynamic Systems (or GEOS 1004 Earth Science: Our Past, Present, and Future and GEOS 1104 Introduction to Earth Sciences Laboratoryand GEOS 1014 Evolution of the Earth-Life System)(or GEOS 2104 Elements of Geology, GEOS 1014 Evolution of the Earth-Life System)
   - GEOS 2444 Geoscience Field Observations
   - GEOS 3504 Mineralogy
   - MATH 1025 Elementary Calculus or MATH 1225 Calculus of a Single Variable
   - CHEM 1035 General Chemistry
   - CHEM 1045 General Chemistry Laboratory
2. By 60 hours attempted at Virginia Tech, students must have completed the following courses:
   - PHYS 2205 General Physics and PHYS 2215 General Physics Laboratory or PHYS 2305 Foundations of Physics
3. Students must achieve an overall GPA of 2.0 and an in-major GPA of 2.5 upon attempting 15 GEOS credit hours (including transfer credit, courses completed with a grade of "W", advanced placement or IB credit)

Graduation Requirements

Graduation requires completion of a minimum of 120 credit hours with a GPA of 2.0 or greater for all hours attempted. In addition, students must have an in-major GPA of 2.5 or greater. The in-major GPA is calculated from all GEOS courses.

Prerequisites

Except when noted, all prerequisites are listed on the checksheet. There are no hidden prerequisites, although some of the courses listed are prerequisites for other courses. Even when listed, prerequisites are subject to change. Please consult University Course Catalog for current information.

Acceptable Substitutions

- GEOS 1004 Earth Science: Our Past, Present, and Future and GEOS 1104 Introduction to Earth Sciences Laboratory and GEOS 1014 Evolution of the Earth-Life System for GEOS 2024 Earth's Dynamic Systems
- GEOS 2104 Elements of Geology and GEOS 1014 Evolution of the Earth-Life System for GEOS 2024 Earth's Dynamic Systems
- GEOS 4974 Independent Study for GEOS 4994 Undergraduate Research
- CHEM 1055 General Chemistry for Chemistry Majors or CHEM 1055H for CHEM 1035 General Chemistry
- CHEM 1065 General Chemistry for Chemistry Majors Lab for CHEM 1045 General Chemistry Laboratory
- COMM 1015 Communication Skills for ENGL 1105 First-Year Writing
- COMM 1016 Communication Skills for ENGL 1106 First-Year Writing

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Geosciences Major with Geochemistry Option

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
GEOS 2004	Geosciences Career and Professional Development	3
GEOS 2024	Earth's Dynamic Systems	6
GEOS 2444	Geoscience Field Observations	3
GEOS 3204	Sedimentology-Stratigraphy	3

2. See University Course Catalog for prerequisites.
3. Credits may double-count for Option Requirements and Pathways.
4. Maximum of 3 credits of GEOS 4994 Undergraduate Research can be applied.
5. If requirements completed as outlined, **18 credit hours of Pathways will be satisfied** by major/option requirements. Pathways requirements and approved courses are available online: https://www.pathways.prov.vt.edu/

Satisfactory Progress Toward Degree (Policy 91)

1. By 45 hours attempted at Virginia Tech, students must have completed the following courses:
   - GEOS 2004 Geosciences Career and Professional Development
   - GEOS 2024 Earth's Dynamic Systems (or GEOS 1004 Earth Science: Our Past, Present, and Future and GEOS 1104 Introduction to Earth Sciences Laboratory and GEOS 1014

Evolution of the Earth-Life System) (or GEOS 2104 Elements of Geology and GEOS 1014 Evolution of the Earth-Life System)
- GEOS 2444 Geoscience Field Observations
- GEOS 3504 Mineralogy
- MATH 1025 Elementary Calculus or MATH 1225 Calculus of a Single Variable
- CHEM 1035 General Chemistry
- CHEM 1045 General Chemistry Laboratory

2. By 60 hours attempted at Virginia Tech, students must have completed the following courses:
   - PHYS 2205 General Physics and PHYS 2215 General Physics Laboratory, or PHYS 2305 Foundations of Physics
3. Students must achieve an overall GPA of 2.0 and an in-major GPA of 2.5 upon attempting 15 GEOS credit hours (including transfer credit, courses completed with a grade of "W", advanced placement or IB credit)

Graduation Requirements

Graduation requires completion of a minimum of 120 credit hours with a GPA of 2.0 or greater for all hours attempted. In addition, students must have an in-major GPA of 2.5 or greater. The in-major GPA is calculated from all GEOS courses.

Prerequisites

Except when noted, all prerequisites are listed on the checksheet. There are no hidden prerequisites, although some of the courses listed are prerequisites for other courses. Even when listed, prerequisites are subject to change. Please consult University Course Catalog for current information.

Acceptable Substitutions

- GEOS 1004 Earth Science: Our Past, Present, and Future and GEOS 1104 Introduction to Earth Sciences Laboratory and GEOS 1014 Evolution of the Earth-Life System for GEOS 2024 Earth's Dynamic Systems
- GEOS 2104 Elements of Geology and GEOS 1014 Evolution of the Earth-Life System for GEOS 2024 Earth's Dynamic Systems
- GEOS 4974 Independent Study for GEOS 4994 Undergraduate Research
- CHEM 1055 General Chemistry for Chemistry Majors or CHEM 1055H for CHEM 1035 General Chemistry
- CHEM 1065 General Chemistry for Chemistry Majors Lab for CHEM 1045 General Chemistry Laboratory
- COMM 1015 Communication Skills for ENGL 1105 First-Year Writing
- COMM 1016 Communication Skills for ENGL 1106 First-Year Writing

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

- MATH 2214H Introduction to Differential Equations for MATH 2214 Introduction to Differential Equations
- MATH 2204H Introduction to Multivariable Calculus for MATH 2204 Introduction to Multivariable Calculus

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

1.

Mathematics

Our Website (http://www.math.vt.edu)

Overview

Mathematics is essential to a clear and complete understanding of virtually all phenomena. Its precision, depth, and generality support the development of critical thinking and problem-solving skills. The study of mathematics provides the ability to describe applied problems quantitatively and to analyze these problems in a precise and logical manner. This is a principal reason behind the strong demand for mathematicians in government and industry. Essentially all complex problems, whether physical, social, or economic, are solved by designing a mathematical model, analyzing the model, and determining computational algorithms for an efficient and accurate approximation of a solution. Each of these phases is mathematical in nature. For example, if a problem deviates from a standard form, a mathematician should be able to adjust the usual mathematical treatment of the problem to accommodate the deviation. In this case mathematical training provides a practical preparation for a career in today's changing world. Moreover, it is especially valuable because it is an education that equips one to continue to adapt to new situations.

Mathematicians typically are employed as applied mathematicians in their specialty areas. Our recent mathematics graduates have been divided among government and industry, graduate school, and teaching. There are four different paths or degree options that a student may follow towards a B.S. in Mathematics:

1. the Traditional Option;
2. the Applied Computational Mathematics Option (ACM);
3. the Applied Discrete Mathematics Option (ADM); and
4. the Mathematics Education Option (MSTR).

The Traditional Option, as its name implies, yields a broad and flexible background in mathematics, while the other three options are more specialized. The ACM option is designed for students who want to have an applied mathematics career in an area closely associated with physics, some form of engineering, etc. The Traditional and ACM options require students to work with their advisor to create a plan of study for an Interdisciplinary Application of Mathematics. This plan consists of courses in an applied area of the student's choosing that will support their post-graduation goals. The ADM option is designed for students primarily interested in areas of applied mathematics closely associated with computer science. The Mathematics Education Option is designed for students who want to be certified to teach secondary mathematics.

The ADM Option is designed for students who want to have an applied mathematics career in an area closely associated with computer science. The Education Option is designed for students who want to teach high-school or middle-school mathematics. The ADM and Math Ed options have the Interdisciplinary Application of Mathematics and associated required courses already determined -- computer science courses for ADM and teaching-focused courses for Math Ed. More details and specific requirements can be found in the Program Curriculum of each degree option.

Though each of the degree options has different graduation requirements, and each is intended to support various post-graduation goals, all four degree options yield the same degree -- a B.S. in Mathematics. The first two years of coursework are nearly identical among the degree options, making it easy to change degree options early in your undergraduate mathematical career. It is critical that you discuss your mathematical interests and post-graduation goals with your advisor early and often in order to determine the degree option that will be best suited for you. If you are interested in graduate study, seek advice early and often about the degree option, coursework, and research experience(s) that provide the best preparation for graduate work in your mathematical area of interest.

Scholarships

In a typical year the Math Department awards more than $60,000 to 30+ students with the majority going to continuing students. Undergraduate students will be emailed with specific steps to follow in order to be considered for a Math Department awarded scholarship.

Mathematical Contests, Competitions, and Activities

The Mathematics Department firmly believes that mathematics is not only useful and beautiful, but also fun. The department sponsors student chapters of MAA (Mathematical Association of America), SIAM (Society for Industrial and Applied Mathematics), Pi Mu Epsilon (the national mathematics honorary society), and AWM (Association for Women in Mathematics). As well as social activities, these groups sponsor speakers to talk on how mathematics is used in their work. Each fall, Virginia Tech also sponsors the Virginia Tech Regional Mathematics Contest. In addition, students (not all of whom are mathematics majors) may receive organized preparation and compete in the nationwide William Lowell Putnam Competition and the international Mathematical Contest in Modeling. Matecharlas provides students with the opportunity for informal discussions about 1000-level MATH courses with instructors fluent in Spanish. More information about these student chapters and activities can be found on our undergraduate website in the section titled Opportunities for VT Math Students: math.vt.edu/undergrad-math (https://math.vt.edu/undergrad-math.html)

Undergraduate Research

The Mathematics Department at Virginia Tech emphasizes and features activity in undergraduate research. Numerous institutions, including the National Science Foundation, the American Mathematical Society, and the Society for Industrial & Applied Mathematics, also emphasize the importance of developing research opportunities for undergraduates. Undergraduate research experiences serve to prepare students for life after the B.S. degree, both in the industrial world and in graduate school.

There are several ways to participate in mathematics undergraduate research. Some students participate in projects with stipend support, some earn course credit as MATH 4994, and others participate purely for the experience. Undergraduate research projects are typically directed by faculty members. The Mathematics Department hosts a competition each spring, where undergraduates can present their research and the top presenter wins the Layman Prize. To find an undergrad research project to participate in, students are encouraged to reach out to any faculty member about potential research interests and/or to reach out to our faculty members who serve as the coordinators of our undergraduate research program. More information, including contact information for the Math Department Undergraduate Research Coordinators, research competitions and prizes, forms, and more can be found at: https://math.vt.edu/undergrad-math/undergraduate-research.html.

Honors Sections of Math Courses

Several academic departments in the College of Science, including the Mathematics Department, offer special Honors sections of their courses. More information is available at math.vt.edu/honors (http://www.math.vt.edu/honors/). In addition to special sections of some courses, the Honors Office sponsors a colloquia series each semester. The colloquia explore special topics not in the University

Curriculum. Details about the Honors College can be found at http://www.honorscollege.vt.edu.

Math Credit from College-Level Exams

Students can earn credit for math courses through college-level exams such as AP, IB, CLEP, Cambridge, etc. The most common credit earned through college-level exams is MATH 1225 Calculus of a Single Variable and possibly also MATH 1226 Calculus of a Single Variable. More information can be found at: https://www.registrar.vt.edu/Transferable-Credit.html

Senior Awards

In each of the four degree options, one student is selected each year as the Outstanding Senior. An overall Outstanding Senior is also selected. All awardees are recognized at an awards reception in the spring semester. The College of Science has awards for one Outstanding Senior and one Outstanding Researcher among all students in the college, and the Math Department puts forward a nominee for each of these awards.

Accelerated Undergraduate/Graduate Degree Program in Mathematics

The Accelerated Undergraduate/Graduate Degree Program is intended to allow undergraduate students who are prepared to take graduate courses to complete M.S. requirements one year after completing B.S. requirements.. The principal feature of the program is that it allows the students to use 12 credits of graduate work simultaneously toward the completion of their bachelor's degree and a program of study leading to a master's degree. It is this ability to complete the final year of undergraduate work with the same courses that comprise much of the first year of graduate work that makes it possible to finish both degrees in five years. For more information, students should contact the Math Department Graduate Program Director and consult: https://www.math.vt.edu/content/dam/math_vt_edu/documents/accel-u-g-degree.pdf

Students in the Math Education degree option may apply to an optional fifth year to earn an M.A.Ed. in Curriculum & Instruction with a specialization in Mathematics Education in the Virginia Tech School of Education. The 5-year program is designed to satisfy Virginia's licensure requirements for teaching mathematics in secondary schools.

The department also offers a Ph.D. program.

Advising and Resources

Math Department academic advisors are also faculty members who can discuss details of course and career advice throughout your undergraduate career, in addition to many other aspects of undergraduate educational life. Advising information and resources can be found at: math.vt.edu/advising (https://math.vt.edu/undergrad-math/advising.html).

In addition to your assigned academic advisor, the Mathematics Department has designated Career Advisors. The Career Advisors will work with your academic advisor to provide information that will aid you in planning a career-oriented program. Information about career opportunities and career fairs will be sent to students periodically. In addition, you can explore the career resources and information posted on the Math Department's Career Advising website: math.vt.edu/careers (http://www.math.vt.edu/careers/).

Further information on the Mathematics Program can be found at www.math.vt.edu (http://www.math.vt.edu).

Minor in Mathematics

Requirements

At least 26 credits comprised of: MATH 1225 Calculus of a Single Variable, MATH 1226 Calculus of a Single Variable, MATH 2204 Introduction to Multivariable Calculus, MATH 2114 Introduction to Linear Algebra, MATH 2214 Introduction to Differential Equations and 9 hours of approved mathematics courses numbered 3000 or higher. See Math Minor requirements for details, exceptions, and allowed substitutions. Students are required to have 2.0 in-minor GPA and all courses used for the math minor must be taken in A-F grade mode. To graduate with a Virginia Tech undergraduate degree, a minimum of 25% of total credits for majors and minors must be taken at Virginia Tech. This means at least 7 credits for the math minor must be taken at Virginia Tech.

- Mathematics Major (p. 1301)
- Mathematics Major with Applied and Discrete Mathematics Option (p. 1303)
- Mathematics Major with Applied Computational Mathematics Option (p. 1305)
- Mathematics Major with Mathematics Education (Master's Track) Option (p. 1307)

Chair: Sarah Reznikoff
Director for Undergraduate Programs: N. Loehr
Graduate Director: A. Norton
Class of 1950 Professor in Mathematics: S. Gugercin
John K. Costain Faculty Chair and Professor: T. Warburton
Hatcher Professor of Mathematics: J. A. Burns
Professors: S. Adjerid, D. Appelo, C. A. Beattie, J. Borggaard, Y. Cheng, S. Ciupe, E. de Sturler, A. Elgart, M. Embree, P. E. Haskell, T. L. Herdman, T. Iliescu, T. Lin, N. Loehr, G. Matthews, A. Miedlar, C. Mihalcea, , A. Norton, M. Shimozono, S. Sun, S. T. Warburton, M. Wawro, and P. Yue
Associate Professors: N. Abaid, L. Childs, H. Liu, D. Orr, E. Palsson, P. Wapperom, P. Yue, and L. Zietsman
Assistant Professors: G. Camliyurt, P. Cazeaux, A. Deuchert, D. Douglas, I. Fracas, E. Johnson, J. LeGrow, H. Leo, H. Lopez Valdez, J. Madrid Padilla, E. Martin, T. Morrison, M. Pasha, M. Robert, J. Rudi, A. Sarah, O. Saucedo, W. Sun, S. Werner, and Y. Yang
Collegiate Associate Professors: R. Arnold
Collegiate Assistant Professors: E. Ufferman and J. Wilson
Visiting Assistant Professors: G. Alam, A. Biswas, K. Flanagan, P. Manoharan, S. Pantic, K. Saglam, and R. Steiner, and T. Topcu
Patricia Ann Caldwell Post-Doctoral Fellow and Visiting Assistant Professor: I. Huq-Kuruvilla and R. Singh
Senior Instructors: D. Agud, T. A. Bourdon, J. Clemons, H. Hart, J. Hurdus, N. Robbins, and J. Schmale.
Advanced Instructors: S. Barreto, M. Chung, S. Hammer, E. Jasso Hernandez, K. Karcher, C. Letona, M. Ouliaei-Nia, S. Silber, J. Thompson, and K. Zachrich
Instructors: H. Abobaker, T. Asfaw, S. Aslan, T. Balkew, J. Burleson, D. Callie, R. Carracedo Rodriguez, P. Caruso, S. Cvitanov, F. Elsrrawi, J. England, J. Evans, H. Farhat, G. Fowler, N. Garcia Hilares, P. Jones, T. Juste, K. Kasebian, D. Kim, M. Mahmood, N. Malik, B. Nguyen, C. Nicolas, K. Perera, S. Pidaparthi, I. Quinlan, E. F. Rabby, K. Robinson, Rappold, G. Seebohm, R. Sharpe, J. St.Clair, J. Truman, D. Valvo, J. Wells, and C. Withrow
Presidential Postdoctoral Associate: E. Camps Moreno

Postdoctoral Associates: J. Antonides, E. Camps, K. Castellano, L. LeJeune, H. Jiuhua, P. Mlimarć, J. Reyes, W. Santos, P. Soto, P. Tsai, and F. Yan
Senior Research Associate: S. Meng
Lecturers: V. Kairamkonda, W. Reilly, A. Sibol, and E. Widdowson
Career Advisors: E. de Sturler and J. Wilson
Scholarship Chair: L. Childs

Undergraduate Course Descriptions (MATH)

MATH 1004 - Discovering Mathematics I (1 credit)
Introduction to the scope and applicability of mathematics and its many sub-disciplines. Introduction to the process of thinking, learning, and writing as a mathematician through topics such as logic systems, recreational mathematics, LaTeX programming, history, ethics, open problems, and research in mathematics. Also includes advising topics such as planning a Virginia Tech course of study. P/F only. Math majors.
Instructional Contact Hours: (1 Lec, 1 Crd)

MATH 1014 - Precalculus with Transcendental Functions (3 credits)
Precalculus college algebra, basic functions (algebraic, exponential, logarithmic, and trigonometric), conic sections, graphing techniques, basic probability. Usage of mathematical models, analytical calculations, and graphical or numerical representations of data to analyze problems from multiple disciplines that address intercultural and global challenges in areas such as chemistry, environmental science, the life sciences, finance, and statistics. Use of spreadsheet software. Two units of high school algebra and one of plane geometry are required.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1025 - Elementary Calculus (3 credits)
Quantitative and computational thinking to address relevant global issues. Unified calculus course covering techniques and applications of differential and integral calculus for functions of one variable. Constitutes the standard first-year mathematics courses for the life sciences. 1025: Differential calculus, graphing, applications for the life sciences, use of spreadsheet software. Assumes 2 units of high school algebra, 1 unit of geometry, 1/2 unit of trigonometry and precalculus. 1026: Integral calculus, numerical techniques, elementary differential equations, applications for the life sciences, use of spreadsheet and scientific software. A student can earn credit for at most one of 1025 and 1225. A student can earn credit for at most one of 1026 and 1226.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1026 - Elementary Calculus (3 credits)
Quantitative and computational thinking to address relevant global issues. Unified calculus course covering techniques and applications of differential and integral calculus for functions of one variable. Constitutes the standard first-year mathematics courses for the life sciences. 1025: Differential calculus, graphing, applications for the life sciences, use of spreadsheet software. Assumes 2 units of high school algebra, 1 unit of geometry, 1/2 unit of trigonometry and precalculus. 1026: Integral calculus, numerical techniques, elementary differential equations, applications for the life sciences, use of spreadsheet and scientific software. A student can earn credit for at most one of 1025 and 1225. A student can earn credit for at most one of 1026 and 1226.
Prerequisite(s): MATH 1025 or MATH 1225
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1044 - Discovering Mathematics II (2 credits)
Introduction to the scope and applicability of mathematics and its many sub-disciplines. Introduction to the process of thinking, learning, and writing as a mathematician through topics in pure and applied mathematics and a brief experience with mathematical research. Also includes advising topics such as planning a Virginia Tech course of study. Math majors.
Instructional Contact Hours: (2 Lec, 2 Crd)

MATH 1214 - Preparation for Calculus (3 credits)
Linear equations, polynomials, relations and functions, rational functions, quadratic equations, radicals and functions with rational exponents, exponentials, logarithms, trigonometric functions, trigonometric identities. Designed as preparation for MATH 1225: Calculus of a Single Variable.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1225 - Calculus of a Single Variable (4 credits)
1225-1226: CALCULUS OF A SINGLE VARIABLE Quantitative and computational thinking to address relevant intercultural and global issues. Unified calculus course covering techniques of differential and integral calculus for functions of one variable. Constitutes the standard first-year mathematics courses for science and engineering. 1225: limits, continuity, differentiation, transcendental functions, applications of differentiation, introduction to integration. Assumes 2 units of high school algebra, 1 unit of geometry, 1/2 unit each of trigonometry and precalculus, and placement by Math Dept. 1226: techniques and applications of integration, trapezoidal and Simpson's rules, improper integrals, sequences and series, power series, parametric curves and polar coordinates, software-based techniques. A student can earn credit for at most one of 1025 and 1225. A student can earn credit for at most one of 1525 and 1225. A student can earn credit for at most one of 1026 and 1226. Pre: Grade of at least C- in 1225 for 1226.
Prerequisite(s): MATH 1214
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (4 Lec, 4 Crd)

MATH 1226 - Calculus of a Single Variable (4 credits)
1225-1226: CALCULUS OF A SINGLE VARIABLE Quantitative and computational thinking to address relevant intercultural and global issues. Unified calculus course covering techniques of differential and integral calculus for functions of one variable. Constitutes the standard first-year mathematics courses for science and engineering. 1225: limits, continuity, differentiation, transcendental functions, applications of differentiation, introduction to integration. Assumes 2 units of high school algebra, 1 unit of geometry, 1/2 unit each of trigonometry and precalculus, and placement by Math Dept. 1226: techniques and applications of integration, trapezoidal and Simpson's rules, improper integrals, sequences and series, power series, parametric curves and polar coordinates, software-based techniques. A student can earn credit for at most one of 1025 and 1225. A student can earn credit for at most one of 1525 and 1225. A student can earn credit for at most one of 1026 and 1226. Pre: Grade of at least C- in 1225 for 1226.
Prerequisite(s): MATH 1225
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (4 Lec, 4 Crd)

MATH 1454 - Introduction to Programming for Mathematical Problem-Solving (3 credits)
Introduction to programming for mathematical problem solving. Programming software interfaces. Logic and conditional computations. Iterative computations and recursion. Data arrays. Compartmentalized computations using functions. Data visualization. Data input/output. Programming applications such as Monte Carlo simulation, random walks, computational geometry, and graph theory.
Corequisite(s): MATH 1225
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1524 - Business Calculus (4 credits)
Differential calculus techniques for functions of one and two variables. Emphasis on graphs, rates of change, and optimization of linear, quadratic, exponential, and logistic functions. Terminology and applications for business, including spreadsheet software. Mathematical models of real-world business problems, including discrete and continuous models, that address intercultural and global challenges in such areas as finance, marketing, and accounting. Assumes 2 units of high school algebra and 1 unit of geometry.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (4 Lec, 4 Crd)

MATH 1535 - Geometry and Mathematics of Design (3 credits)
A standard first-year mathematics sequence for architecture majors. Mathematical models of real-world problems, including discrete and continuous models, that address relevant global challenges in such areas as urban planning, building construction, and home design. 1535: Euclidean geometry, trigonometry, sequences and the golden ratio, graph theory, tilings, polygons and polyhedra, applications for 2- and 3-dimensional design and construction, use of geometric software. 1536: vectors in the plane and space, descriptive and projective geometry, differential and integral calculus, applications for 2- and 3-dimensional design and construction, including areas, volumes, centroids, and optimization. Assumes 2 unites of high school algebra and 1 unit of high school geometry.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1536 - Geometry and Mathematics of Design (3 credits)
A standard first-year mathematics sequence for architecture majors. Mathematical models of real-world problems, including discrete and continuous models, that address relevant global challenges in such areas as urban planning, building construction, and home design. 1535: Euclidean geometry, trigonometry, sequences and the golden ratio, graph theory, tilings, polygons and polyhedra, applications for 2- and 3-dimensional design and construction, use of geometric software. 1536: vectors in the plane and space, descriptive and projective geometry, differential and integral calculus, applications for 2- and 3-dimensional design and construction, including areas, volumes, centroids, and optimization. Assumes 2 unites of high school algebra and 1 unit of high school geometry.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1614 - Numbers and Operations for Teachers (3 credits)
Study of the nature and structure of numbers for prospective elementary and middle school teachers; number theory, number systems, operations and algebraic thinking, problem solving, and mathematical modeling. 1614 may not be taken by math majors for credit.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1624 - Geometry for Teachers (3 credits)
Study of key geometry concepts for prospective elementary and middle school teachers; multiple perspectives including transformational, coordinate, Euclidean and analytical geometry; geometric modeling; geometric and spatial reasoning. 1624 may not be taken by math majors for credit.
Prerequisite(s): MATH 1614
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 2114 - Introduction to Linear Algebra (3 credits)
Vector and matrix algebra systems of linear equations, linear equations, linear independence, bases, orthonormal bases, rank, linear transformations, diagonalization, implementation with contemporary software. Math 1226 or a grade of at least B in VT MATH 1225. A student can earn credit for at most one of 2114 and 2405H.
Prerequisite(s): MATH 1225 or MATH 1226 or
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2114H - Introduction to Linear Algebra (3 credits)
Vector and matrix algebra systems of linear equations, linear equations, linear independence, bases, orthonormal bases, rank, linear transformations, diagonalization, implementation with contemporary software. Math 1226 or a grade of at least B in VT MATH 1225. A student can earn credit for at most one of 2114H and 2405H.
Prerequisite(s): MATH 1225 or MATH 1226 or
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2204 - Introduction to Multivariable Calculus (3 credits)
Calculus for functions for several variables. Planes and surfaces, continuity, differentiation, chain rule, extreme values, Lagrange multipliers, double and triple integrals and applications, software-based techniques. A student can earn credit for at most one of 2204 and 2406H. A student can earn credit for at most one of 2024 and 2204. A student can earn credit for at most one of 2204 and CMDA 2005.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2204H - Introduction to Multivariable Calculus (3 credits)
Calculus for functions of several variables. Planes and surfaces, continuity, differentiation, chain rule, extreme values, Lagrange multipliers, double and triple integrals and applications, software-based techniques. A student can earn credit for at most one of 2204H and 2406H. A student can earn credit for at most one of 2024 and 2204H. A student can earn credit for at most one of 2204H and CMDA 2005.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2214 - Introduction to Differential Equations (3 credits)
Unified course in ordinary differential equations. First-order equations, second-and-higher-order constant coefficient linear equations, systems of first-order linear equations, and numerical methods. Mathematical models describing motion and cooling, predator-prey population models, SIR-models, mechanical vibrations, electric circuits, rates of chemical reactions, radioactive decay. Quantitative and computational thinking to address relevant intercultural and global issues. A student can earn credit for at most one of 2214 and 2406H. A student can earn credit for at most one of 2214 and CMDA 2006.
Prerequisite(s): (MATH 1114 or MATH 2114 or MATH 2114H or MATH 2405H or ISC 2105) and MATH 1226
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2214H - Introduction to Differential Equations (3 credits)
Unified course in ordinary differential equations. First-order equations, second-and-higher-order constant coefficient linear equations, systems of first-order linear equations, and numerical methods. Mathematical models describing motion and cooling, predator-prey population models, SIR-models, mechanical vibrations, electric circuits, rates of chemical reactions, radioactive decay. Quantitative and computational thinking to address relevant intercultural and global issues. A student can earn credit for at most one of 2214H and 2406H. A student can earn credit for at most one of 2214H and CMDA 2006
Prerequisite(s): (MATH 1114 or MATH 2114 or MATH 2114H or MATH 2405H or ISC 2105) and MATH 1226
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2405H - Mathematics in a Computational Context (5 credits)
Unified course covering topics from linear algebra, differential equations, and calculus for functions of several variables. Comprises the standard second year mathematics courses for science and engineering. 2405H: Vector and matrix algebra, systems of linear equations, linear independence, bases, orthonormal bases, rank, linear transformations and diagonalization. Ordinary linear homogeneous differential equations, implementation with contemporary software. 2406H: Ordinary nonhomogeneous differential equations, calculus for functions of several variables, planes and surfaces, continuity, differentiation, chain rule, extreme values, Lagrange multipliers, double and triple integrals and applications, with software-based techniques. A student can earn credit for at most one of 2114, 2114H, and 2405H. A student can earn credit for at most one of 2204, 2204H, and 2406H. A student can earn credit for at most one of 2214, 2214H, and 2406H.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (5 Lec, 5 Crd)

MATH 2406H - Mathematics in a Computational Context (5 credits)
Unified course covering topics from linear algebra, differential equations, and calculus for functions of several variables. Comprises the standard second year mathematics courses for science and engineering. 2405H: Vector and matrix algebra, systems of linear equations, linear independence, bases, orthonormal bases, rank, linear transformations and diagonalization. Ordinary linear homogeneous differential equations, implementation with contemporary software. 2406H: Ordinary nonhomogeneous differential equations, calculus for functions of several variables, planes and surfaces, continuity, differentiation, chain rule, extreme values, Lagrange multipliers, double and triple integrals and applications, with software-based techniques. A student can earn credit for at most one of 2114, 2114H, and 2405H. A student can earn credit for at most one of 2204, 2204H, and 2406H. A student can earn credit for at most one of 2214, 2214H, and 2406H.
Prerequisite(s): MATH 2405H
Instructional Contact Hours: (5 Lec, 5 Crd)

MATH 2534 - Introduction to Discrete Mathematics (3 credits)
Emphasis on topics relevant to computer science. Topics include logic, propositional calculus, set theory, relations, functions, mathematical induction, elementary number theory and Boolean algebra. Does not carry credit for mathematics majors, but may be used as though it were a 3000-level elective course for the mathematics minor. Two units of high school algebra, one unit of geometry, one-half unit each of trigonometry and precalculus mathematics required. 2534 may not be taken by math majors for credit without special permission. A student can earn credit for at most one of 2534 and 3034.
Prerequisite(s): CS 1114 or ECE 1574 or ECE 1004 or CS 2064
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 2644 - Mathematics Tutoring (1 credit)
Introduction to professional, culturally respectful mathematics tutoring. Development of listening and questioning skills, assessment of students' mathematical difficulties. Exploration of teaching and learning processes, effectively utilizing technology, and adjusting instruction to diversity in students' mathematical reasoning. Concurrent mathematics tutoring experience required. May be repeated twice with different leadership expectations for a maximum of 3 credits.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

MATH 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

MATH 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 2984H - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 3034 - Introduction to Proofs (3 credits)
Practice in writing mathematical proofs. Exercises from set theory, number theory, and functions. Propositional logic, set operations, equivalence relations, methods of proof, mathematical induction, the division algorithm and images and pre-images of sets. A student can earn credit for at most one of 2534 and 3034.
Prerequisite(s): MATH 2114 or MATH 2114H or MATH 2405H
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 3124 - Modern Algebra (3 credits)
Introduction to abstract algebraic structures (groups, rings, and fields) and structure-preserving maps (homomorphisms) for these structures. Proof-intensive course illustrating the rigorous development of a mathematical theory from initial axioms.
Prerequisite(s): MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 3134 - Applied Combinatorics and Graph Theory (3 credits)
Emphasis on concepts related to computational theory and formal languages. Includes topics in graph theory such as paths, circuits, and trees. Topics from combinatorics such as permutations, generating functions, and recurrence relations.
Prerequisite(s): MATH 1226 and (MATH 2534 or MATH 3034)
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 3144 - Linear Algebra I (3 credits)
Introductory course in linear algebra. Abstract vector spaces, linear transformations, algorithms for solving systems of linear equations, matrix analysis. This course involves mathematical proofs.
Prerequisite(s): (MATH 3034 or MATH 2534) and (MATH 2114 or MATH 2114H or MATH 2405H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 3214 - Calculus of Several Variables (3 credits)
Fundamental calculus of functions of two or more variables. Implicit function theorem, Taylor expansion, line integrals, Greens theorem, surface integrals.
Prerequisite(s): MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 3224 - Advanced Calculus (3 credits)
Theory of limits, continuity, differentiation, integration, series. 3224 duplicates 4525.
Prerequisite(s): (MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005) and MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 3414 - Numerical Methods (3 credits)
Computational methods for numerical solution of non-linear equations, differential equations, approximations, iterations, methods of least squares, and other topics. A grade of C or better required in CS prerequisite 1044 or 1705. A student can earn credit for at most one of 3414 and 4404.
Prerequisite(s): (CS 1044 or CS 1705 or CS 1114 or CS 1124) and MATH 2406H or (CMDA 2005 and CMDA 2006) or (MATH 2214 or MATH 2214H) and (MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CS 3414

MATH 3574 - Applied Complex Variables (1 credit)
Arithmetic of complex numbers. Geometry of the complex plane. Geometry of exponentiation and roots. Complex exponential, trigonometric and hyperbolic functions. Continuity and differentiability. Analytic and harmonic functions.
Prerequisite(s): MATH 2204 or MATH 2204H
Instructional Contact Hours: (1 Lec, 1 Crd)

MATH 4044 - History of Mathematics (3 credits)
Historical development of mathematics from antiquity to modern times. Senior standing in mathematics or mathematics education required.
Prerequisite(s): MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4124 - Introduction to Abstract Algebra (3 credits)
An introduction to the theory of groups and rings. Topics include normal subgroups, permutation groups, Sylows Theorem, Abelian groups, Integral Domains, Ideals, and Polynomial Rings.
Prerequisite(s): MATH 3124
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4134 - Number Theory (3 credits)
Introduction to elementary number theory. Topics covered may include divisibility, greatest common divisors, unique prime factorization, congruences, Fermat's Little Theorem, Chinese Remainder Theorem, multiplicative number-theoretic functions, Diophantine equations, primitive roots, and the Quadratic Reciprocity Law.
Prerequisite(s): MATH 3034 or MATH 3134
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4144 - Linear Algebra II (3 credits)
Second course in linear algebra. Similarity invariants, Jordan canonical form, inner product spaces, self-adjoint operators, selected applications.
Prerequisite(s): MATH 3144
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4175 - Cryptography (3 credits)
4175: Introduction to classical and modern symmetric-key cryptography; alphabetic ciphers, block ciphers and stream ciphers; background in modular arithmetic and probability; perfect secrecy; linear and differential cryptanalysis; Advanced Encryption Standard; hashing. 4176: Introduction to modern public-key cryptography and cryptanalysis; RSA algorithm, ElGamal algorithm, Diffie-Hellman algorithm; digital signatures; background in group theory and number theory; algorithms for primality testing, factoring, and discrete logarithms; elliptic curves.
Prerequisite(s): MATH 3034 or MATH 3124 or MATH 3134 or MATH 3144 or MATH 3224 or MATH 4134 or CMDA 3605
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4176 - Cryptography (3 credits)
4175: Introduction to classical and modern symmetric-key cryptography; alphabetic ciphers, block ciphers and stream ciphers; background in modular arithmetic and probability; perfect secrecy; linear and differential cryptanalysis; Advanced Encryption Standard; hashing. 4176: Introduction to modern public-key cryptography and cryptanalysis; RSA algorithm, ElGamal algorithm, Diffie-Hellman algorithm; digital signatures; background in group theory and number theory; algorithms for primality testing, factoring, and discrete logarithms; elliptic curves.
Prerequisite(s): MATH 4175 or CMDA 3606 or MATH 3034 or MATH 3134 or MATH 3144
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4225 - Elementary Real Analysis (3 credits)
Real number system, point set theory, limits, continuity, differentiation, integration, infinite series, sequences and series of functions.
Prerequisite(s): MATH 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4226 - Elementary Real Analysis (3 credits)
Real number system, point set theory, limits, continuity, differentiation, integration, infinite series, sequences and series of functions.
Prerequisite(s): MATH 4225
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4234 - Elementary Complex Analysis (3 credits)
Analytic functions, complex integration, series representation of analytic functions, residues, conformal mapping, applications
Prerequisite(s): MATH 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4245 - Intermediate Differential Equations (3 credits)
Solution techniques, linear systems, the matrix exponential, existence theorems, stability, non-linear systems, eigenvalue problems.
Prerequisite(s): MATH 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4254 - Chaos and Dynamical Systems (3 credits)
Survey of basic concepts in chaotic dynamical systems. Includes material on bifurcation theory, conjugacy, stability, and symbolic dynamics.
Prerequisite(s): MATH 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4324 - Elementary Topology (3 credits)
Basic concepts of topological spaces, continuous functions, connected spaces, compact spaces, and metric spaces.
Prerequisite(s): MATH 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4334 - College Geometry (3 credits)
Transformational approach to Euclidean geometry including an in-depth study of isometries and their application to symmetry, geometric constructions, congruence, coordinate geometry, and non-Euclidean geometries.
Prerequisite(s): MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4404 - Applied Numerical Methods (3 credits)
Interpolation and approximation, numerical integration, solution of equations, matrices and eigenvalues, systems of equations, approximate solution of ordinary and partial differential equations. Applications to physical problems. A student can earn credit for at most one of 3414 and 4404.
Prerequisite(s): MATH 4564 and (ESM 2074 or AOE 2074)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AOE 4404

MATH 4414 - Issues in Scientific Computing (3 credits)
Theory and techniques of modern computational mathematics, computing environments, computational linear algebra, optimization, approximation, parameter identification, finite difference and finite element methods and symbolic computation. Project-oriented course; modeling and analysis of physical systems using state-of-the-art software and packaged subroutines.
Prerequisite(s): (MATH 2214 or MATH 2214H or MATH 2406H or CMDA 2006) and MATH 3214 and (CS 1114 or MATH 1454)
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)
Course Crosslist: CS 4414

MATH 4425 - Fourier Series and Partial Differential Equations (3 credits)
Separation of variables for heat, wave, and potential equations. Fourier expressions. Application to boundary value problems. Bessel functions. Integral transforms and problems on unbounded domains.
Prerequisite(s): MATH 2406H or CMDA 2006 or MATH 2214 or MATH 2214H and MATH 3224
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4426 - Fourier Series and Partial Differential Equations (3 credits)
Separation of variables for heat, wave, and potential equations. Fourier expressions. Application to boundary value problems. Bessel functions. Integral transforms and problems on unbounded domains.
Prerequisite(s): MATH 4425
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4445 - Introduction to Numerical Analysis (3 credits)
4445: Vector spaces and review of linear algebra, direct and iterative solutions of linear systems of equations, numerical solutions to the algebraic eigenvalue problem, solutions of general non-linear equations and systems of equations. 4446: Interpolation and approximation, numerical integration and differentiation, numerical solutions of ordinary differential equations. Computer programming skills required.
Prerequisite(s): MATH 2406H or (CMDA 2005 and CMDA 2006) or (MATH 2214 or MATH 2214H) and (MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4446 - Introduction to Numerical Analysis (3 credits)
4445: Vector spaces and review of linear algebra, direct and iterative solutions of linear systems of equations, numerical solutions to the algebraic eigenvalue problem, solutions of general non-linear equations and systems of equations. 4446: Interpolation and approximation, numerical integration and differentiation, numerical solutions of ordinary differential equations. Computer programming skills required.
Prerequisite(s): MATH 2406H or (CMDA 2005 and CMDA 2006) or (MATH 2214 or MATH 2214H) and (MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4454 - Applied Mathematical Modeling (3 credits)
Analysis of classical and modern applications of mathematics in the physical, biological and social sciences. Emphasis on problem formulating, modeling, solving, simulating, and analyzing results. Programming language required.
Prerequisite(s): MATH 3214
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4564 - Operational Methods for Engineers (3 credits)
Laplace transformations, Fourier series, partial differential equations and separation of variables, boundary value problems, and Sturm-Liouville theory.
Prerequisite(s): (MATH 2214 or MATH 2214H) or MATH 2406H or CMDA 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4574 - Vector and Complex Analysis for Engineers (3 credits)
Vector Analysis: Greens theorem, potential theory, divergence, and Stokes theorem. Complex Analysis: Analyticity, complex integration, Taylor series, residues, conformal mapping, applications. 4574 may not be taken by math majors for credit.
Prerequisite(s): MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4625 - Mathematics for Secondary Teachers (3 credits)
Course activities will emphasize the curricular themes of problem solving, reasoning and proof, communication, connections, and representation. 4625: Topics in discrete mathematics and algebra from a secondary teaching perspective. 4626: Topics in trigonometry, geometry, measurement, statistics, and probability from a secondary teaching perspective.
Prerequisite(s): MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4626 - Mathematics for Secondary Teachers (3 credits)
Course activities will emphasize the curricular themes of problem solving, reasoning and proof, communication, connections, and representation. 4625: Topics in discrete methematics and algebra from a secondary teaching perspective. 4626: Topics in trigonometry, geometry, measurement, statistics, and probability from a secondary teaching perspective.
Prerequisite(s): MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4644 - Secondary School Mathematics With Technology (3 credits)
Use and impact of technology in secondary mathematics curriculum. Various technologies including graphing calculators, calculator based laboratory and probes (CBLs), computer algebra systems, spreadsheets, dynamic geometry software and the Internet will be used to explore secondary mathematical concepts from an advanced viewpoint.
Prerequisite(s): MATH 3034
Instructional Contact Hours: (3 Lec, 3 Crd)

MATH 4664 - Senior Math Education Seminar (2 credits)
A review of basic principles and problem-solving techniques in the eleven topics covered by the Praxis II (Mathematics Content Knowledge) examination. Passing the Praxis II examination prior to student teaching is a state requirement for all students seeking secondary licensure. Passing Praxis I required.
Prerequisite(s): MATH 3124
Instructional Contact Hours: (2 Lec, 2 Crd)

MATH 4754 - Internship (1-19 credits)
May be repeated for a maximum of 12 credits.
Instructional Contact Hours: Variable credit course
Repeatability: up to 12 credit hours

MATH 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

MATH 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

MATH 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Mathematics Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
Linear Algebra, Proofs, Proof-Based Calculus		
MATH 2114	Introduction to Linear Algebra	3
MATH 3034	Introduction to Proofs	3

OPTION 6		**6**
MATH 5454	Graph Theory	
MATH 5464	Combinatorics	

Footnotes

[1] ***Remaining Multi-D Calculus:*** Course selected for Remaining Multi-D Calculus must be unused from Multi-D Calculus section of the Degree Core above. In other words:

- if MATH 3214 is not selected in the Degree Core, select MATH 3214
- if MATH 2214 is not selected in the Degree Core, select MATH 2214
- if MATH 2204 is not selected in the Degree Core, select MATH 2204

[2] ***4000-Level Math Electives:*** Select six credits of 4000-level MATH subject to the restrictions below:

- At most one of the following is allowed:
  - MATH 4044 History of Mathematics
  - MATH 4334 College Geometry
- If MATH 4425 Fourier Series and Partial Differential Equations is taken as part of a 4000-Level Math Sequence/Cluster, then MATH 4564 Operational Methods for Engineers is not allowed as a 4000-Level Math Elective.
- If MATH 4564 Operational Methods for Engineers is taken as part of a 4000-Level Math Sequence/Cluster, then MATH 4425 Fourier Series and Partial Differential Equations is not allowed as a 4000-Level Math Elective.
- If neither MATH 4425 Fourier Series and Partial Differential Equations nor MATH 4564 Operational Methods for Engineers is taken as part of a 4000-Level Math Sequence/Cluster, then at most one of the following is allowed as a 4000-Level Math Elective:
  - MATH 4425 Fourier Series and Partial Differential Equations
  - MATH 4564 Operational Methods for Engineers
- The following CANNOT be used:
  - MATH 4574 Vector and Complex Analysis for Engineers
  - MATH 4625 Mathematics for Secondary Teachers
  - MATH 4626 Mathematics for Secondary Teachers
  - MATH 4644 Secondary School Mathematics With Technology
  - MATH 4664 Senior Math Education Seminar
- Math Undergraduate Policy & Curriculum Committee approval required to use any of the following. Consult your advisor.

- MATH 4974 Independent Study
- MATH 4984 Special Study
- MATH 4994 Undergraduate Research

[3] ***Math-Related Courses:*** See Undergraduate Handbook for Mathematics Majors (https://math.vt.edu/content/dam/math_vt_edu/documents/MathMajorHandbook.pdf) for details.

[4] ***Free Electives:*** MATH 1004 Discovering Mathematics I (1 credit) and MATH 1044 Discovering Mathematics II (2 credits) are strongly recommended free electives for first-year math majors.

[5] ***Computer Programming:*** Courses marked with this footnote are restricted to students in major(s) outside of mathematics, and are generally taken by students who are majoring in math and another major.

Satisfactory Progress to Degree

Satisfactory progress toward the B.S. in Mathematics requires:

1. **Must Take Math:** Within the previous two semesters, the student must satisfy one of the following:
   a. earn a C- or better in at least one of MATH 1225 Calculus of a Single Variable, MATH 1226 Calculus of a Single Variable, MATH 2204 Introduction to Multivariable Calculus, MATH 2214 Introduction to Differential Equations, MATH 3034 Introduction to Proofs
   b. earn a C or better in MATH 2114 Introduction to Linear Algebra
   c. pass a MATH course at the 3000-level or higher that is used in the in-major GPA calculation
2. **In-Major GPA:** Upon having attempted 45 credits (including all types of transfer credit, credit by exam, and course withdrawal), students must have an in-major GPA of 2.0 or above.
3. **Two-Attempt Policy:** Students must earn the following grades within two attempts at the following courses, including attempts ending in course withdrawal:
   a. C- or better: MATH 1225 Calculus of a Single Variable, MATH 1226 Calculus of a Single Variable, MATH 2204 Introduction to Multivariable Calculus, MATH 2214 Introduction to Differential Equations, MATH 3034 Introduction to Proofs
   b. C or better: MATH 2114 Introduction to Linear Algebra

Graduation Requirements

Minimum Credits Required For Graduation

120 Credits

Minimum GPA Required For Graduation

Students are required to have a 2.0 overall GPA and a 2.0 in-major GPA for graduation. In-major GPA for this option is computed using all MATH courses *with the exception of* MATH 1014 Precalculus with Transcendental Functions, MATH 1025 Elementary Calculus, MATH 1026 Elementary Calculus, MATH 1214 Preparation for Calculus, MATH 1454 Introduction to Programming for Mathematical Problem-Solving, MATH 1524 Business Calculus, MATH 1535 Geometry and Mathematics of Design, MATH 1536 Geometry and Mathematics of Design, MATH 1614 Numbers and Operations for Teachers, MATH 1624 Geometry for Teachers, MATH 2534 Introduction to Discrete Mathematics, MATH 2644 Mathematics Tutoring, MATH 3574 Applied Complex Variables, MATH 3624 , MATH 4574 Vector and Complex Analysis for Engineers, MATH 4625 Mathematics for Secondary Teachers, MATH 4626 Mathematics for Secondary Teachers, MATH 4644 Secondary School Mathematics With Technology, and MATH 4664 Senior Math Education Seminar.

Outcomes Assessment

Each student is required to participate in the department's Outcomes Assessment procedures as determined by each year's Undergraduate Policy & Curriculum Committee and approved by the Chair.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra.
2. MATH 2405H Mathematics in a Computational Context **and** MATH 2406H Mathematics in a Computational Context (both courses must be taken) may be substituted for MATH 2114 Introduction to Linear Algebra and MATH 2204 Introduction to Multivariable Calculus and MATH 2214 Introduction to Differential Equations.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

  - MATH 4664 Senior Math Education Seminar
- Math Undergraduate Policy & Curriculum Committee approval required to use any of the following. Consult your advisor.
  - MATH 4974 Independent Study
  - MATH 4984 Special Study
  - MATH 4994 Undergraduate Research

[5] ***Free Electives:*** MATH 1004 Discovering Mathematics I (1 credit) and MATH 1044 Discovering Mathematics II (2 credits) are strongly recommended free electives for first-year math majors.

[6] ***Computer Programming:*** Courses marked with this footnote are restricted to students in major(s) outside of mathematics, and are generally taken by students who are majoring in math and another major.

Satisfactory Progress to Degree

Satisfactory progress toward the B.S. in Mathematics requires:

1. **Must Take Math:** Within the previous two semesters, the student must satisfy one of the following:
   a. earn a C- or better in at least one of MATH 1225 Calculus of a Single Variable, MATH 1226 Calculus of a Single Variable, MATH 2204 Introduction to Multivariable Calculus, MATH 2214 Introduction to Differential Equations, MATH 3034 Introduction to Proofs
   b. earn a C or better in MATH 2114 Introduction to Linear Algebra
   c. pass a MATH course at the 3000-level or higher that is used in the in-major GPA calculation
2. **In-Major GPA:** Upon having attempted 45 credits (including all types of transfer credit, credit by exam, and course withdrawal), students must have an in-major GPA of 2.0 or above.
3. **Two-Attempt Policy:** Students must earn the following grades within two attempts at the following courses, including attempts ending in course withdrawal:
   a. C- or better: MATH 1225 Calculus of a Single Variable, MATH 1226 Calculus of a Single Variable, MATH 2204 Introduction to Multivariable Calculus, MATH 2214 Introduction to Differential Equations, MATH 3034 Introduction to Proofs
   b. C or better: MATH 2114 Introduction to Linear Algebra

Graduation Requirements

Minimum Credits Required For Graduation

120 Credits

Minimum GPA Required For Graduation

Students are required to have a 2.0 overall GPA and a 2.0 in-major GPA for graduation. In-major GPA for this option is computed using all MATH courses *with the exception of* MATH 1014 Precalculus with Transcendental Functions, MATH 1025 Elementary Calculus, MATH 1026 Elementary Calculus, MATH 1214 Preparation for Calculus, MATH 1454 Introduction to Programming for Mathematical Problem-Solving, MATH 1524 Business Calculus, MATH 1535 Geometry and Mathematics of Design, MATH 1536 Geometry and Mathematics of Design, MATH 1614 Numbers and Operations for Teachers, MATH 1624 Geometry for Teachers, MATH 2534 Introduction to Discrete Mathematics, MATH 2644 Mathematics Tutoring, MATH 3574 Applied Complex Variables, MATH 3624 , MATH 4574 Vector and Complex Analysis for Engineers, MATH 4625 Mathematics for Secondary Teachers, MATH 4626 Mathematics for Secondary Teachers, MATH 4644 Secondary School Mathematics With Technology, and MATH 4664 Senior Math Education Seminar.

Outcomes Assessment

Each student is required to participate in the department's Outcomes Assessment procedures as determined by each year's Undergraduate Program Committee and approved by the Chair.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra.
2. MATH 2405H Mathematics in a Computational Context and MATH 2406H Mathematics in a Computational Context (both courses must be taken) may be substituted for MATH 2114 Introduction to Linear Algebra and MATH 2204 Introduction to Multivariable Calculus and MATH 2214 Introduction to Differential Equations.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Mathematics Major with Applied Computational Mathematics Option

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
Linear Algebra, Proofs, Proof-Based Calculus		
MATH 2114	Introduction to Linear Algebra	3
MATH 3034	Introduction to Proofs	3
MATH 3144	Linear Algebra I	3
MATH 3224	Advanced Calculus	3
Multi-D Calculus		
Select two of the following:		6
MATH 2204	Introduction to Multivariable Calculus	
MATH 2214	Introduction to Differential Equations	

MATH 3214	Calculus of Several Variables	
Computer Programming		
Select one course from the **Table of Programming Courses** below		3
Subtotal		21
Option Required Courses		
Remaining Multi-D Calculus [1]		
MATH 3214	Calculus of Several Variables	3
or MATH 2204	Introduction to Multivariable Calculus	
or MATH 2214	Introduction to Differential Equations	
Numerical Analysis, Mathematical Modeling, and Scientific Computing		
MATH 4425	Fourier Series and Partial Differential Equations	3
MATH 4426	Fourier Series and Partial Differential Equations	3
or CMDA 4604	Intermediate Topics in Mathematical Modeling	
MATH 4445	Introduction to Numerical Analysis	3
MATH 4446	Introduction to Numerical Analysis	3
MATH 4414	Issues in Scientific Computing [2]	3
or MATH 4454	Applied Mathematical Modeling	
Subtotal		18
Restricted Electives		
4000-Level Math Electives [3]		
MATH 4XXX & MATH 4XXX	Select six credits of 4000-level MATH numbered between 4044 and 4454 **subject to restrictions and exceptions** in the footnote below	6
Applied Area Courses [4]		
Create a 12-credit course plan. Must be approved by Math ACM Option Chair.		12
Subtotal		18
Free Electives [5]		
Select sufficient credits to achieve the 120 credit graduation requirement		16
Subtotal		16
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
Select three credits in Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A)		3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six credits in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
Select six credits from BIOL, CHEM, GEOS, ISC, NEUR, PHYS, and PSYC courses approved for Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04)		6
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225	Calculus of a Single Variable (5F)	4
MATH 1226	Calculus of a Single Variable (5F)	4
MATH 2214	Introduction to Differential Equations (5A)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
Select three credits in Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07) . The course selected in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07) may double-count with one other Pathway Concept if the selected course is also in another Pathway Concept.		3
Subtotal		47
Total Credits		**120**

Table of Programming Courses

Code	Title	Credits
MATH 1454	Introduction to Programming for Mathematical Problem-Solving	
CS 1044	Introduction to Programming in C	
CS 1054	Introduction to Programming in Java	
CS 1064	Introduction to Programming in Python	
CS 1114	Introduction to Software Design	
ECE 2514	Computational Engineering [6]	
ME 2004	Engineering Analysis Using Numerical Methods [6]	

Footnotes

1 ***Remaining Multi-D Calculus:*** Course selected for Remaining Multi-D Calculus must be unused from Multi-D Calculus section of the Degree Core above. In other words:

- if MATH 3214 is not selected in the Degree Core, select MATH 3214
- if MATH 2214 is not selected in the Degree Core, select MATH 2214
- if MATH 2204 is not selected in the Degree Core, select MATH 2204

2 ***Numerical Analysis, Mathematical Modeling, and Scientific Computing:*** Check prerequisites for MATH 4414 and MATH 4454 carefully. MATH 4414 is usually taught in the fall while MATH 4454 is usually taught in the spring. Any programming course will suffice as the programming prerequisite for MATH 4454.

3 ***4000-Level Math Electives:*** Select six credits of 4000-level MATH numbered between 4044 and 4454 subject to the following restrictions and exceptions:

- MATH 3124 Modern Algebra can also be used to as a 4000-Level Math Elective
- At most one of the following is allowed:
  - MATH 4044 History of Mathematics
  - MATH 4334 College Geometry
- Math Undergraduate Policy & Curriculum Committee approval required to use any of the following. Consult your advisor.
  - MATH 4974 Independent Study
  - MATH 4984 Special Study
  - MATH 4994 Undergraduate Research

[4] ***Applied Area Courses:*** See Undergraduate Handbook for Mathematics Majors (https://math.vt.edu/content/dam/math_vt_edu/documents/MathMajorHandbook.pdf) for details.

[5] ***Free Electives:*** MATH 1004 Discovering Mathematics I (1 credit) and MATH 1044 Discovering Mathematics II (2 credits) are strongly recommended free electives for first-year math majors.

[6] ***Computer Programming:*** Courses marked with this footnote are restricted to students in major(s) outside of mathematics, and are generally taken by students who are majoring in math and another major.

Satisfactory Progress to Degree

Satisfactory progress toward the B.S. in Mathematics requires that:

1. **Must Take Math:** Within the previous two semesters, the student must satisfy one of the following:
   a. earn a C- or better in at least one of MATH 1225 Calculus of a Single Variable, MATH 1226 Calculus of a Single Variable, MATH 2204 Introduction to Multivariable Calculus, MATH 2214 Introduction to Differential Equations, MATH 3034 Introduction to Proofs
   b. earn a C or better in MATH 2114 Introduction to Linear Algebra
   c. pass a MATH course at the 3000-level or higher that is used in the in-major GPA calculation
2. **In-Major GPA:** Upon having attempted 45 credits (including all types of transfer credit, credit by exam, and course withdrawal), students must have an in-major GPA of 2.0 or above.
3. **Two-Attempt Policy:** Students must earn the following grades within two attempts at the following courses, including attempts ending in course withdrawal:
   a. C- or better: MATH 1225 Calculus of a Single Variable, MATH 1226 Calculus of a Single Variable, MATH 2204 Introduction to Multivariable Calculus, MATH 2214 Introduction to Differential Equations, MATH 3034 Introduction to Proofs
   b. C or better: MATH 2114 Introduction to Linear Algebra

Graduation Requirements

Minimum Credits Required for Graduation

120 Credits

Minimum GPA Required for Graduation

Students are required to have a 2.0 overall GPA and a 2.0 in-major GPA for graduation. Footnotes

[1] MATH 2644 Mathematics Tutoring can be repeated for credit up to three times (for three total credits).

[2] ***Education:*** To enroll in 5000-level EDCI and EDEP courses, students must be in their senior year with a 3.0 or better GPA.

[3] ***3000 or 4000-Level Math Elective:*** Select three credits of 3000 or 4000-level MATH subject to the following restrictions:

- If MATH 2204 is not selected in the Degree Core, select MATH 2204
- If MATH 2214 is not selected in the Degree Core, select MATH 2214
- Otherwise, select any 3000-level or 4000-level MATH course that is not used to meet other course-specific degree requirements.
- Math Undergraduate Policy & Curriculum Committee approval required to use any of the following. Consult your advisor.
  - MATH 4974 Independent Study
  - MATH 4984 Special Study
  - MATH 4994 Undergraduate Research

[4] ***Free Electives:*** MATH 1004 Discovering Mathematics I (1 credit) and MATH 1044 Discovering Mathematics II (2 credits) are strongly recommended free electives for first-year math majors.

[5] ***Computer Programming:*** Courses marked with this footnote are restricted to students in major(s) outside of mathematics, and are generally taken by students who are majoring in math and another major.

Satisfactory Progress to Degree

Satisfactory progress toward the B.S. in Mathematics requires:

1. **Must Take Math:** Within the previous two semesters, the student must satisfy one of the following:
   a. earn a C- or better in at least one of MATH 1225 Calculus of a Single Variable, MATH 1226 Calculus of a Single Variable, MATH 2204 Introduction to Multivariable

Calculus, MATH 2214 Introduction to Differential Equations, MATH 3034 Introduction to Proofs

b. earn a C or better in MATH 2114 Introduction to Linear Algebra
c. pass a MATH course at the 3000-level or higher that is used in the in-major GPA calculation

2. **In-Major GPA:** Upon having attempted 45 credits (including all types of transfer credit, credit by exam, and course withdrawal), students must have an in-major GPA of 2.0 or above.
3. **Two-Attempt Policy:** Students must earn the following grades within two attempts at the following courses, including attempts ending in course withdrawal:
   a. C- or better: MATH 1225 Calculus of a Single Variable, MATH 1226 Calculus of a Single Variable, MATH 2204 Introduction to Multivariable Calculus, MATH 2214 Introduction to Differential Equations, MATH 3034 Introduction to Proofs
   b. C or better: MATH 2114 Introduction to Linear Algebra

Graduation Requirements

Minimum Credits Required For Graduation

120 Credits

Minimum GPA Required For Graduation

Students are required to have a 2.0 overall GPA and a 2.0 in-major GPA for graduation. In-major GPA for this option is computed using all MATH courses *with the exception of* MATH 1014 Precalculus with Transcendental Functions, MATH 1025 Elementary Calculus, MATH 1026 Elementary Calculus, MATH 1214 Preparation for Calculus, MATH 1454 Introduction to Programming for Mathematical Problem-Solving, MATH 1524 Business Calculus, MATH 1535 Geometry and Mathematics of Design, MATH 1536 Geometry and Mathematics of Design, MATH 1614 Numbers and Operations for Teachers, MATH 1624 Geometry for Teachers, MATH 2534 Introduction to Discrete Mathematics, MATH 2644 Mathematics Tutoring, MATH 3574 Applied Complex Variables, MATH 3624 , and MATH 4574 Vector and Complex Analysis for Engineers.

Outcomes Assessment

Each student is required to participate in the department's Outcomes Assessment procedures as determined by each year's Undergraduate Program Committee and approved by the Chair.

Acceptable Substitutions

1. MATH 2405H Mathematics in a Computational Context may be substituted for MATH 2114 Introduction to Linear Algebra.
2. MATH 2405H Mathematics in a Computational Context **and** MATH 2406H Mathematics in a Computational Context (both courses must be taken) may be substituted for MATH 2114 Introduction to Linear Algebra and MATH 2204 Introduction to Multivariable Calculus and MATH 2214 Introduction to Differential Equations.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credit hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Nanoscience

Our Website (https://www.ais.science.vt.edu/academics/Nanoscience.html)

Overview

The Nanoscience (NANO) program is a joint effort of the departments of Biological Sciences, Chemistry, Geosciences, and Physics. It resides in, and is organized as a division of, the College of Science's Academy of Integrated Science.

Nanoscience, the fundamental study of materials and structures whose size is on the nanometer scale, lies at the very foundation of our world. A nanometer is simply a billionth of a meter, and a typical atom is about 1/10th of a nanometer in size. At this length scale, atoms and molecules follow the laws of quantum physics, and the processes of life (for example, DNA and proteins are naturally-occurring nanoscale materials) and the properties of materials emerge from them. Due to a combination of profound theoretical insights, advances in scientific instrumentation, and massive computing power, we are now capable of imaging and steering single atoms with unprecedented precision, opening a window toward a world in which materials, chemical compounds, devices, and even small organisms can be built atom by atom and molecule by molecule, tailored toward desired properties and applications. At present, we are only at the dawn of this nanoscience revolution.

Nanoscience courses prepare undergraduates for productive, exciting careers in emerging nanoscale industries. Degree recipients from this program will be ready to contribute to and lead cutting-edge corporate research and development in some of the most important and profitable industries in the world, including information technology, communications, drug development, imaging, and environmental technology.

Bachelor of Science in Nanoscience

Nanoscience Majors

- Nanoscience B.S. Nanoscience (NANO)
- Nanoscience B.S. Nanoscience (NMED)

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the General Education (Curriculum for Liberal Education or Pathways to General Education) (see "Academic Policies (p. 9)") and toward the degree.

Satisfactory progress requirements toward the B.S. in Nanoscience can be found on the major checksheet by visiting the University Registrar website at https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html.

Minor in Nanoscience

Please visit the University Registrar website at https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html for requirements toward a minor in Nanoscience.

- Nanomedicine Major (p. 1311)
- Nanoscience Major (p. 1313)

Division Leader: F. M. Michel
Program Manager: C. Conley
Principle Faculty: D. Capelluto, H. Dorn, S. Emori, A. Esker, C. Finkielstein, R. Heflin, M. Hull, G. Khodaparast, G. Liu, B. Magill, J. Matson, A. Morris, V. Nguyen, K. Park, H. Robinson, and C. Tian

Undergraduate Course Descriptions (NANO)

NANO 1015 - Introduction to Nanoscience (3 credits)
Introduction to the interdisciplinary field of nanoscience with perspectives from biology, geoscience, computational science, chemistry, and physics. 1015: Historical perspectives; public perception; economic impact, nanoscience in biology and environment; quantum physics principles; characterization tools; mathematical modeling. 1016: Nanofabrication methods; nanoparticle synthesis and characterization; self-assembly; applications in medicine, electronics, and energy; sustainability. Pre: 1015 for 1016
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 1016 - Introduction to Nanoscience (3 credits)
Introduction to the intersdisciplinary field of nanoscience with perspectives from biology, geoscience, computational sceince, chemistry, and physics. 1015: Historical perspectives; public perception; economic impact, nanoscience in biology and environment; quantum physics principles; characterization tools; mathematical modeling. 1016: Nanofabrication methods; nanoparticle synthesis and characterization; self-assembly; applications in medicine, electronics, and energy; sustainability. Pre: 1015 for 1016.
Prerequisite(s): NANO 1015
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 2024 - Quantum Physics of Nanostructures (4 credits)
Introduction to the quantum physics which governs the properties of matter at the nanoscale. Specific topics include: Quantization, wave-particle duality, and Schrodinger equation, with applications to the hydrogen atom, periodic crystals, and nanostructures; electron spin, spintronics, and quantum statistical physics.
Prerequisite(s): NANO 1016 and MATH 1226 and (PHYS 2306 or ISC 2105)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

NANO 2114 - Nanoscience Research Seminar (1 credit)
Readings and discussion of current research areas of nanoscience and nanotechnology including nanofabrication, scanning probe techniques, functional nanomaterials, molecular engineering, bionanotechnology and nanomedicine. Presentations by guest nanoscience faculty on their research activities.
Prerequisite(s): NANO 1016
Instructional Contact Hours: (1 Lec, 1 Crd)

NANO 2324 - Quantum Physics for Nanomedicine (3 credits)
Introduction to quantum physics with a focus on nanomedicine related topics. Principles of quantization, wave-particle duality, Pauli exclusion principle, and the Schrödinger equation, with applications to the hydrogen atom, regular crystals, and nanostructures. Implications for nanomedicine of quantum dots, surface plasmon resonance, nanoscale sensing, and targeted drug delivery using nanoparticles.
Prerequisite(s): NANO 1016 and (PHYS 2206 or PHYS 2306 or ISC 2105)
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 2814 - NanoCareers (1 credit)
Exploration of career opportunities in nanoscience and nanomedicine, including employment, graduate education, and health professions. Professional development activities, including resume assembly, career fairs, mentorship and networking, elevator pitch, entrepreneurship, and financial literacy. Pre: Sophomore standing.
Instructional Contact Hours: (1 Lec, 1 Crd)

NANO 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 3015 - Nanoscale Synthesis, Fabrication, and Characterization (4 credits)
Tools for synthesis, fabrication and characterization of nanomaterials and nanostructures including organic and polymer synthesis, self-assembly, and top-down fabrication as well as methods for identifying their structure and electronic, optical, and thermal properties. 3015: Multiphase macromolecules; electron and scanning probe microscopies; fullerenes, graphene, and nanotubes; optical and electron spectroscopies, thermal analysis; quantum dots and metallic nanoparticles. 3016: Nucleic acid self-assembly; polyelectrolyte complexes; dynamic light scattering and zeta potential; electrostatic self-assembly; self-assembled monolayers; photolithography; electron and ion beam lithography; microcontact printing and nanoimprint lithography.
Prerequisite(s): CHEM 2514 or CHEM 2535 or CHEM 2565
Corequisite(s): 2024 or 2324 or PHYS 3324.
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

NANO 3016 - Nanoscale Synthesis, Fabrication, and Characterization (4 credits)
Tools for synthesis, fabrication and characterization of nanomaterials and nanostructures including organic and polymer synthesis, self-assembly, and top-down fabrication as well as methods for identifying their structure and electronic, optical, and thermal properties. 3015: Multiphase macromolecules; electron and scanning probe microscopies; fullerenes, graphene, and nanotubes; optical and electron spectroscopies, thermal analysis; quantum dots and metallic nanoparticles. 3016: Nucleic acid self-assembly; polyelectrolyte complexes; dynamic light scattering and zeta potential; electrostatic self-assembly; self-assembled monolayers; photolithography; electron and ion beam lithography; microcontact printing and nanoimprint lithography.
Prerequisite(s): NANO 3015 and (CHEM 2514 or CHEM 2536 or CHEM 2566)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

NANO 3114 - Professional Dissemination of Nanoscience Research (1 credit)
Technical skills for dissemination of nanoscience research. Effective use of the nanoscience and nanotechnology literature, use of technologies that support collaborative oral and written communication. Key elements of effective journal publications and conference presentations.
Prerequisite(s): NANO 2114
Instructional Contact Hours: (1 Lec, 1 Crd)

NANO 3124 - Nanoscience and the Environment (3 credits)
Introduction to the connections between nanoscience, nanotechnology, and the environment. Overview of environmental science, why environmental issues are relevant to industry/business/research, naturally-occurring nanomaterials and their roles on Earth, and what is currently known about how manufactured and incidental nanomaterials interact with the atmosphere, hydrosphere, pedosphere, and biosphere.
Prerequisite(s): NANO 1016 and (BIOL 2124 or BIOL 2134 or NEUR 3044) and (CHEM 1036 or CHEM 1056 or ISC 2106H)
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 4124 - Advanced Nanomaterials and Devices (3 credits)
Overview of types of nanomaterials such as nanoparticles, quantum dots, fullerenes, carbon nanotubes, nanowires, graphene, and ultra-thin films. Special nanocomposite materials. Electronic, optical, magnetic, and transport properties of nanomaterials. Interactions between nanomaterials and substrates or interfaces. Applications of nanomaterials for electronics, magnetic storage, and energy-efficient devices.
Prerequisite(s): NANO 3016 and MATH 2214 and (NANO 2024 or PHYS 3324)
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 4314 - Nanomedicine (4 credits)
Medical use of nanomaterials including basic, translational, and clinical research. Nanomedical approaches to drug delivery. Diagnostic sensors. Use of nanomedical tools over conventional techniques to treat diseases/disorders. Technical issues associated with medical applications. Bioavailability of nanotherapies. Use of quantum dots for imaging. Ethical concerns and economic benefits associated with nanomedicine.
Prerequisite(s): NANO 3016 and (BIOL 2104 or BIOL 2124)
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

NANO 4324 - Introduction to Nanomedicine (3 credits)
Overview of fundamental biocompatible technologies under development at the nanoscale level and their application in the biomedical field.
Use of various forms and compositions of nanomaterials for potential applications in diagnosis, delivery, imaging, and treatment of human diseases. Focus on synthesis, characterization, and specific applications of nanomaterial as well as on nanotheranostics. Pharmacokinetic distribution of drug-embedded nanocarriers and their pharmacodynamics in biological systems. Nanoscale properties of materials for medical imaging. Classification of nanobiosensors used in clinical settings.
Prerequisite(s): NANO 3015 and (BIOL 2124 or BIOL 2134 or NEUR 3044)
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 4334 - Advanced Nanomedicine (3 credits)
Medical use of nanomaterials in translational medicine and clinical research. Nanomedical approaches to targeted delivery and local imaging. Diagnostic sensors. Use of nanomedical tools over conventional techniques to diagnose and treat human diseases/disorders. Bioavailability and biocompatibility of nanotherapeutics. Ethical concerns and economic benefits associated with developing and implementing nanomedical approaches in the clinic. Use of nanotechnological advances for surgical procedures. Use of nanoparticles composites for nanodentistry and in nanodermatology. Safety protocols for the use of nanotechnology in clinical treatment.
Prerequisite(s): NANO 4324
Instructional Contact Hours: (3 Lec, 3 Crd)

NANO 4354 - Advanced Nanomedicine Laboratory (1 credit)
Use of nanotechnology to study cellular and molecular processes relevant to human diseases. Manipulation of nucleic acids. Use of various nanoparticle materials to study nucleic acids uptake by cells. Use of fluorescence and confocal imaging to identify homotypic and heterotypic cellular interactions. Purification of cells from biological fluids. Concepts in dielectrophoresis and microfluidic devices. Students must be certified to work with blood-borne pathogens from the Environmental Health and Safety department.
Prerequisite(s): NANO 4324
Corequisite(s): NANO 4334
Instructional Contact Hours: (3 Lab, 1 Crd)

NANO 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NANO 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Subtotal		47
Total Credits		**120**

1 ***Fall/Spring Course Offerings:*** Please consult with your advisor to ensure the courses are offered in the semester you intend to take them.

2 ***In Major GPA:*** Courses will be used for computing the "in major" GPA.

3 **Prerequisites:** Some courses on this checksheet have pre-/co-requisites. Students are required to double check course pre-/co-requisites and equivalents. Please see your advisor or consult the Undergraduate Course Catalog for more information.

4 ***Undergraduate Research:*** All 8 credits are not taken in one semester. They are often split among different semesters

Upon having attempted 72 credit hours, the student will have completed -NANO 1015 Introduction to Nanoscience: From Atoms to Applications **AND** NANO 1016 Introduction to Nanoscience **AND** MATH 1025 Elementary Calculus **AND** MATH 1026 Elementary Calculus **AND** CHEM 1035 General Chemistry **AND** CHEM 1036 General Chemistry **AND** CHEM 1045 General Chemistry Laboratory **AND** CHEM 1046 General Chemistry Laboratory **AND** PHYS 2205 General Physics **AND** PHYS 2206 General Physics **AND** PHYS 2215 General Physics Laboratory **AND** PHYS 2216 General Physics Laboratory **AND** BIOL 1105 Principles of Biology **AND** BIOL 1106 Principles of Biology **AND** BIOL 1115 Principles of Biology Laboratory **AND** BIOL 1116 Principles of Biology Laboratory

Graduation Requirements

120 credit hours are required for graduation. These credits must include the courses required for the major. To graduate, a student must have at least a 2.0 in major GPA and overall GPA.

Acceptable Substitutions

- BCHM 3114 Biochemistry for Biotechnology and the Life Sciences may be substituted by taking BCHM 4115 General Biochemistry
- BIOL 2134 Cell Function and Differentiation may be substituted by taking NEUR 3044 Cellular and Molecular Neuroscience
- SYSB 3035 Genomics and Bioinformatics may be substituted by taking BIOL 4824 Bioinformatics Methods
- CHEM 1035 General Chemistry **AND** CHEM 1036 General Chemistry may be substituted by taking CHEM 1055 General Chemistry for Chemistry Majors **AND** CHEM 1056 General Chemistry for Chemistry Majors
- CHEM 1045 General Chemistry Laboratory **AND** CHEM 1046 General Chemistry Laboratory may be substituted by taking CHEM 1065 General Chemistry for Chemistry Majors Lab **AND** CHEM 1066 General Chemistry for Chemistry Majors Lab
- CHEM 2535 Organic Chemistry **AND** CHEM 2536 Organic Chemistry may be substituted by taking CHEM 2565 Principles of Organic Chemistry **AND** CHEM 2566 Principles of Organic Chemistry
- CHEM 2545 Organic Chemistry Laboratory **AND** CHEM 2546 Organic Chemistry Laboratory may be substituted by taking CHEM 2555 Organic Synthesis and Techniques Lab **AND** CHEM 2556 Organic Synthesis and Techniques Lab
- MATH 1025 Elementary Calculus **AND** MATH 1026 Elementary Calculus may be substituted by taking MATH 1225 Calculus of a Single Variable **AND** MATH 1226 Calculus of a Single Variable
- NANO 2024 Quantum Physics of Nanostructures may be substituted by taking PHYS 3324 Modern Physics **OR** NANO 2324 Quantum Physics for Nanomedicine
- NANO 3016 Nanoscale Synthesis, Fabrication, and Characterization may be substituted by taking NANO 4334 Advanced Nanomedicine **AND** NANO 4354 Advanced Nanomedicine Laboratory
- NEUR 3044 Cellular and Molecular Neuroscience may be substituted for BIOL 2134 Cell Function and Differentiation.
- PHYS 2205 General Physics **AND** PHYS 2215 General Physics Laboratory may be substituted by taking PHYS 2305 Foundations of Physics
- PHYS 2206 General Physics **AND** PHYS 2216 General Physics Laboratory may be substituted by taking PHYS 2306 Foundations of Physics
- BIOL 1105 Principles of Biology **AND** BIOL 1115 Principles of Biology Laboratory **AND** BIOL 1116 Principles of Biology Laboratory **AND** CHEM 1035 General Chemistry **AND** CHEM 1036 General Chemistry **AND** CHEM 1045 General Chemistry Laboratory **AND** CHEM 1046 General Chemistry Laboratory **AND** MATH 1025 Elementary Calculus **AND** MATH 1026 Elementary Calculus **AND** PHYS 2205 General Physics **AND** PHYS 2206 General Physics **AND** PHYS 2215 General Physics Laboratory **AND** PHYS 2216 General Physics Laboratory may be substituted by taking ISC 1105 Integrated Science I **AND** ISC 1106 Integrated Science I **AND** ISC 1115 Integrated Science Laboratory I **AND** ISC 1116 Integrated Science Laboratory I **AND** ISC 2105 Integrated Science II **AND** ISC 2106 Integrated Science II **AND** ISC 2115 Integrated Science Laboratory II **AND** ISC 2116 Integrated Science Laboratory II

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Neuroscience

Our Website (http://www.neuroscience.vt.edu)

Overview

Embark on a journey into the brain with the Neuroscience undergraduate program at Virginia Tech. This program, designed for ambitious students, offers dynamic majors: Clinical Neuroscience, Cognitive and Behavioral Neuroscience, Computational and Systems Neuroscience, and Experimental Neuroscience. Whether you aspire to become a physician, researcher, or industry innovator, our curriculum ensures you are prepared. Many of our students follow a pre-med track, gaining a robust foundation that paves the way for medical school and beyond. With a comprehensive education that spans the fundamentals of brain functioning, research, healthcare, and numerous other fields, you'll be equipped to tackle the complexities of the human brain and nervous system.

Our interdisciplinary approach integrates knowledge from biology, psychology, computer science, and more, fostering a holistic understanding of neuroscience. As part of our Computational Neuroscience major, you'll also delve into artificial intelligence, gaining skills to leverage AI in understanding neural processes and developing

innovative solutions. Beyond academics, we emphasize professional development, ensuring you acquire essential problem-solving and critical thinking skills. With global perspectives and study abroad opportunities, you'll be prepared to apply your knowledge in diverse, real-world contexts. Join us to synthesize and apply knowledge in innovative ways, preparing you for a future where you can make a significant impact in your chosen field.

Neuroscience Majors

- Neuroscience B.S. Clinical Neuroscience (CNEU)
- Neuroscience B.S. Cognitive and Behavioral Neuroscience (CBNU)
- Neuroscience B.S. Computational and Systems Neuroscience (CSNU)
- Neuroscience B.S. Experimental Neuroscience (EXPN)

Transfer students should contact the department early, preferably one full semester prior to entrance. This procedure will allow a thorough evaluation of transfer credits and correct placement.

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward Pathway to General Education (see "Academics (p. 9)") and toward the degree.

Satisfactory progress requirements toward the B.S. in Neuroscience can be found on the major checksheet by visiting the University Registrar website at http://registrar.vt.edu/graduation-multi-brief/index1.html.

- Clinical Neuroscience Major (p. 1319)
- Cognitive and Behavioral Neuroscience Major (p. 1321)
- Computational and Systems Neuroscience Major (p. 1324)
- Experimental Neuroscience Major (p. 1326)

Director: M. Olsen
Professor: M. Olsen, M. Cline, E. Gilbert
Associate Professor: S. Clinton, K. Phillips, S. Vijayan, A. Pickrell, L. Ni, M. Weston, T. Jarome, K. Sewall
Assistant Professor: S. Agrawal, M. Buczynski, D. English, A. Gregus, M. Howe, G. Hodes, S. Macias, C. Thompson, J. Rainville, A. Shah, W. Legon, J. Basso, M. van der Heijden
Affiliated Faculty: L. Apfel, S. Ball, M. A. Bell, L. Bergamasco, A.S. Bertke, D. Bevan, W. Bickel, R. Blieszner, G. Cao, P. Carlier, A. Cate, J. Chappell, P. Chiu, , B. Corl, B. Costa, R. Davalos, S. DeLuca, M. Denbow, N. Dervisis, R. Diana, A.G. DiFeliceantonio, H. Dorn, , S. Farris, X. Feng, C. Finkielstein, C. Frank, J. Fraser, M. Friedlander, B. Friedman, D. Good, R. Gourdie, D. Harrison, G. Howes, R. Jensen, X. Jia, B. Johnson, J. Jones, B. S. Jortner, D. Kelly, B. King-Casas, B. Klein, S. Kojima, S. Laconte, Y. W. Lee, L. Li, C. Logan, E. Marvin,, T. Milam, R. Montague, I. Moore, A. Morozov, K. Mukherjee, N. Nanthakumar, M. Orr, R. Panneton, B. Patel, J. Phillips, J. Prickett, S. Ramey, K. Roberto, C. Rogers, J. Rossmeisl Jr., W. Santos, A. Scarpa, Z. Sheng, G. Simonds, D. J. Slade, A. Smith, M. Theus, P. VandeVord, S. Verbridge, E. Weaver, M. Witcher, C. Wyatt, D. Xie, B. Xu, and D. Zallen
Instructors: Z. Fu, D. McDaniel, and K. Unroe
Undergraduate Advisors: C. Cook, H. Tucker, and E. Vedder

Undergraduate Course Descriptions (NEUR)

NEUR 1004 - Neuroscience Orientation Seminar (2 credits)
Introduction to the field of neuroscience. Exposure to areas of practice and research, opportunities for education and training, and employment in the field. Academic and career planning for neuroscience majors. Discussion of university resources to promote student success.
Instructional Contact Hours: (2 Lec, 2 Crd)

NEUR 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 2014H - Honors Fundamentals of Neuroscience (3 credits)
Fundamental concepts in neuroscience including nervous system organization, signaling within neurons and across synapses, sensory and motor systems, emotion, memory, and language. Major neurological disorders and animal models used in neuroscience. Restricted to non-neuroscience majors in the Honors College.
Prerequisite(s): BIOL 1105
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2025 - Introduction to Neuroscience (3 credits)
Introduction to the fundamental principles of neuroscience. 2025: Structure and function of the nervous system. Cellular and molecular basis of neuronal signaling including electrical properties of neurons, synaptic transmission, and integration. Neurotransmitter systems and molecular signaling. Neural development and synaptic plasticity. 2026: Systems-level overview of the central nervous system. Sensory systems including olfaction, temperature, and pain. Retinal control of vision. Vestibular system and hearing. Motor systems and control of movement. Circuits related to stress, learning and behavior.
Prerequisite(s): BIOL 1005 or BIOL 1105 or ISC 1106H
Corequisite(s): NEUR 2035
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2026 - Introduction to Neuroscience (3 credits)
Introduction to the fundamental principles of neuroscience. 2025: Structure and function of the nervous system. Cellular and molecular basis of neuronal signaling including electrical properties of neurons, synaptic transmission, and integration. Neurotransmitter systems and molecular signaling. Neural development and synaptic plasticity. 2026: Systems-level overview of the central nervous system. Sensory systems including olfaction, temperature, and pain. Retinal control of vision. Vestibular system and hearing. Motor systems and control of movement. Circuits related to stress, learning and behavior.
Prerequisite(s): NEUR 2025
Corequisite(s): NEUR 2036
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2035 - Neuroscience Laboratory (1 credit)
Organization and function of the nervous system. 2035: neuroanatomy, microscopy, intracellular stimulation, extracellular recording, electrophysiology, neurotransmitters, and neuroplasticity. 2036: receptive field, sensation and perception, motor system, simple neural circuitry, neuroendocrine and higher level cognitive processes.
Corequisite(s): NEUR 2025
Instructional Contact Hours: (3 Lab, 1 Crd)

NEUR 2036 - Neuroscience Laboratory (1 credit)
Organization and function of the nervous system. 2035: neuranatomy, microscopy, intercellular stimulation, extraceullular recording, nerve stimulation, electrophysiology, neurotransmitters, and neuroplasticity. 2036: receptive field, sensation and perception, motor system, simple neural circuitry, neuroendocrine and higher level cognitive processes.
Prerequisite(s): NEUR 2035
Corequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lab, 1 Crd)

NEUR 2364 - Mind Altering Substances from Nature (3 credits)
Neurobiological effects of psychoactive chemicals from nature. Neurotoxic effects and dangers of psychoactive plants and fungi. Therapeutic applications of mind-altering substances in neurological disease. Experimental uses of mind-altering chemicals in neuroscience research. Cultural history, legal standing, regulatory oversight, and contemporary use portrayals of mind-altering substances from nature in medicine and society. Neurobiological effects of psychoactive plant chemicals.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2464 - Neuroscience and Society (3 credits)
Social, ethical, and legal issues faced by human societies from the perspective of neuroscience. Broader questions about how neuroscience informs education, medicine, law, and public health. Research in neuroscience as it relates to issues of mental health, poverty, stress, and politics.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2554 - Experimental Neuroscience (3 credits)
Introduction to the conceptual framework of contemporary experimental methods and practices in neuroscience research. Exploration of experimental techniques including electrophysiology, advanced imaging, immunohistochemistry, transgenic animal models, and behavioral assays. Includes face-to-face interaction with various research faculty to explore research methods in practice and discuss current research and expertise.
Prerequisite(s): NEUR 2025 and NEUR 2035
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2594 - Exploring Clinical Neuroscience (3 credits)
Exploration of careers in clinical neuroscience. Introduction to neuroanatomy, clinical presentation of neurological diseases, application of neuroscientific research to clinical practice, and clinical treatments. Ethical challenges in clinical practice. Burnout and resilience.
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 3034 - Global Perspectives Pre-Departure (2 credits)
Preparation for Global Perspectives in Neuroscience and Medicine summer study abroad program. Travel preparations and financial planning. Academic overview and preparation. Risk management and travel etiquette. Introduction to global perspectives of neurological diseases. Restricted to students accepted into Global Perspectives in Neuroscience and Medicine summer study abroad program.
Instructional Contact Hours: (2 Lec, 2 Crd)

NEUR 3044 - Cellular and Molecular Neuroscience (3 credits)
Fundamental principles of cellular and molecular neuroscience. Methods to study neurochemisty and neurobiology, theoretical and practical issues of relating cellular/molecular structures and functions to higher-level nervous system functioning, and current understanding of cellular/molecular bases of nervous system disorders.
Prerequisite(s): NEUR 2025 and (CHEM 1036 or ISC 2105)
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3054 - Brain-Body Interactions in Health and Disease (3 credits)
Role of brain-body interactions in influencing an organism's health. Biological mechanisms involved in bidirectional communication between the brain, endocrine system, immune system, and digestive system. Gut microbiome and gut-brain axis in health and disease. Disease states linked to disturbed communication between brain and body, including diabetes, depression, autism, and Alzheimer's disease.
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3074 - Evolutionary Neuroscience (3 credits)
Role of evolution and natural selection in shaping genetic, molecular, and cellular components of brain within invertebrates and vertebrates through modern humans. Evolution of molecules and cells in the brain. Comparing brain structure and function between invertebrates and vertebrates, including evolution of animal and human cognition and behavior. Adaptations of brain structure and function necessary for human cognition, emotion, language, and intelligence.
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3084 - Cognitive Neuroscience (3 credits)
Concepts in cognitive neuroscience. Methods available to study brain and nervous system function, theoretical and practical issues of relating mental functions to biological brain functions. Overview of current understanding of the neural bases of various mental functions (e.g., memory, attention, emotion, decision making).
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3144 - Mechanisms of Learning and Memory (3 credits)
Foundation of social interactions in human and non-human: ability to learn and memorize locations, situations, individuals, facts and tasks forms. Cellular and molecular mechanism underlying learning and memory and model systems. Approaches to these processes along with diseases presenting with learning and memory deficits in humans.
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3234 - The Artificial Brain (3 credits)
Introduction to brain-machine interactions and computer models of neural systems. Exploration of brain-computer interface applications, biophysically-based computational models of the brain, and computer neural networks in the context of artificial intelligence. Emphasis on the capabilities and limitations of neural networks and how they inform our understanding of the human brain. Discussion of societal impact and ethical considerations.
Prerequisite(s): NEUR 2026 and (MATH 1026 or MATH 1226)
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3554 - Neuroscience Research and Practical Experience (3 credits)
Integration of the interdisciplinary fields of neuroscience: includes the conceptual frameworks and theories of neuroscience spanning molecules to behavior, the methods available to study nervous system structure and function from molecules to behavior, theoretical and practical issues of linking these lower-levels structures and processes to higher-level neurological and psychological functions, and the latest applications and technologies for translating neuroscience into more effective interventions and treatments. Practical experience includes literature review research and writing, data analysis and interpretation, written and oral presentation, and site-specific training.
Prerequisite(s): NEUR 2026 and NEUR 2554
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3594 - Neurobiology of Psychiatric Disorders (3 credits)
Neurobiological and clinical aspects of psychiatry. Overview of disorders such as depression, anxiety, schizophrenia, addiction, and obsessive-compulsive disorder. Neurobiology of emotional behavior. Clinical perspectives of psychiatric treatment, interventional psychiatry, and cross-disciplinary approaches to psychiatry. Underlying pathophysiology of a variety of psychiatric disorders. Neuropharmacology of commonly used psychiatric medications. Ethical issues related to psychiatric care.
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3604 - Neurobiochemistry (3 credits)
The biochemical mechanisms of the nervous system, with a focus on the human brain. Bioenergetics and nutrient metabolism in the central nervous system. Synthesis, function, and metabolism of neurotransmitters and neuropeptides, membrane chemistry, structure and function of neurotransmitter receptors and transporters, ion channels and pumps, secretory pathway and intracellular signaling pathways. The biochemistry of neuroactive drugs and toxins.
Prerequisite(s): NEUR 2025
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3774 - Neuroendocrinology (3 credits)
Comprehensive survey of the interrelationships between human neural and endocrine systems. Regulatory mechanisms for neural control of hormone secretions, peripheral hormone action on physiological processes, and hormonal influences on behavior.
Prerequisite(s): NEUR 2025
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3844 - Computational Neuroscience and Neural Engineering (3 credits)
Introduction to computational and systems neuroscience. Data analysis and signal processing techniques for neural data. Neural modeling to include mean field models, Hodgkin-Huxley models, integrate and fire models. Neural engineering and brain machine interface (BMI) applications.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BMES 3844

NEUR 3900 - Bridge Experience (0 credits)
Application of academic knowledge and skills to in a work-based experience aligned with post-graduation goals using research-based learning processes. Satisfactory completion of work-based experience often in the form of internship, undergraduate research, co-op, or study abroad; self-evaluation; reflection; and showcase of learning. Pre: Departmental approval of 3900 plan.
Instructional Contact Hours: (0 Crd)

NEUR 3914 - Neuroscience of Drug Addiction (3 credits)
History of addiction as a chronic, relapsing brain disease. Neurocircuitry and molecular basis of the brain affected by common drugs of abuse. Overview of the use, abuse, liability, and psychotherapeutic effects of drugs on humans. Common classes of drug abuse: alcohol, sedatives, tobacco/ nicotine, opiods, cannabinoids, psychostimulants, psychedelics, steroids, anti-anxiety, antidepressants, and antipsychotics. Animal models in drug addiction studies. Current and future pharmacotherapeutics for drug addiction treatment and ethical considerations of treatments.
Prerequisite(s): NEUR 2025 and NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3944 - War and the Brain (3 credits)
Neurological and psychological factors associated with military and war. Neuroscientific basis of decision making, mental resilience, and cognitive enhancement. Etiology and treatment of brain injuries sustained during war including post-traumatic stress disorder, traumatic brain injury, and chemical warfare. Neurotechnological advances that shape soldiers and warfare. Ethical considerations of militarization of neuroscience.
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 4034 - Diseases of the Nervous System (3 credits)
Common brain and Central Nervous System (CNS) disorders ranging from trauma to autism. Genetic, molecules and cellular changes in disease. Therapeutic implications and development of novel drugs. Challenges in drug discovery and implementation of personalized medicine. Ethical issues regarding genetic findings.
Prerequisite(s): NEUR 2026 and NEUR 3044
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4044 - Neuroscience Senior Seminar (3 credits)
Integration of methods and results from cutting-edge interdisciplinary neuroscience research; theoretical and practical issues when linking molecular/cellular structures and processes to higher-level neurological and psychological functions. May be repeated twice with different content for a maximum of 9 credits.
Prerequisite(s): NEUR 3044 or NEUR 3084
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 9 credit hours

NEUR 4054 - Developmental Neuroscience (3 credits)
Genetic, molecular, and cellular processes underlying brain development and neural circuit formation, including neural induction, cell differentiation, cell fate determination, axon guidance, neuronal migration, synapse formation, and cell death. Neurodevelopment processes in vertebrate and invertebrate animal models. Molecular and cellular underpinnings of neurodevelopmental disorders.
Prerequisite(s): NEUR 3044
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4064 - Neuropharmacology (3 credits)
Role of drugs affecting function of the brain, spinal cord, and peripheral nerves. Principles of pharmacology and biological mechanisms involved in pharmacokinetics (drug absorption, distribution, metabolism, elimination, and toxicity). Neurotransmission in peripheral and central nervous systems. Major classes of drugs affecting the nervous system (antidepressants, anxiolytics, antipsychotics, anticonvulsants, sedatives/hypnotics, analgesics, general and local anesthetics) and their mechanisms of action. Evaluate scientific findings of drug pharmacodynamics for major drug classes used to treat diseases of the nervous system.
Prerequisite(s): NEUR 2026
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4244 - Neural Control of Movement (3 credits)
Neuroscience of motor control and related disorders. How the neural system sub-components involved in motor control mediate motor reflexes, motor learning, central pattern generation, and motor control of speech and language. Sensorimotor physiology, proprioceptive system, exercise physiology. Neuro-rehabilitative technology and disruption of motor control by injury or disease.
Prerequisite(s): NEUR 3044 or NEUR 3084
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4314 - Genetics in Neuroscience (3 credits)
Concepts of classical, modern genetics and epigenetics as it relates to neuroscience. Practical applications including genome-wide association (GWAS), next-generation sequencing, epigenetics, genome editing and screening methods. Use of model organisms in neurogenetic disorders research. Relationship of genetics and its influences on theoretical and practical issues in neurological and neurodevelopmental disorders. Personalized medicine in neurodevelopmental and neurogenetic disorders.
Prerequisite(s): NEUR 3044
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4364 - Neuroscience of Language and Communication Disorders (3 credits)
Concepts of language as distinctive human behavior and central to social life. Neural underpinnings of humans ability to speak and understand language. Neurologic processing of language comprehension and production in healthy and language-impaired individuals. Auditory and visual word recognition, reading, understanding speech, representation of word meaning, language production, and bilingualism. Neuroethology of communication and neurological disorders of communication: dyslexia, stuttering, and aphasia. Theoretical issues in language processing and converging evidence from different techniques and animal models addressing these issues.
Prerequisite(s): NEUR 3044 or NEUR 3084
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4454 - Neuroeconomics (3 credits)
Neural processes related to reward, learning, reflection, delay of gratification, and social interaction. Clinical uses of neuroeconomics research techniques. Implications of neuroeconomics in economics, policy, law and business.
Prerequisite(s): NEUR 2026 or ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 4454, PSYC 4454

NEUR 4514 - Neuroimmunology in Health and Disease (3 credits)
Immune system and its role in neurological health and psychiatric and neurological disorders. Details of cell type, functions and signaling of the peripheral and central immune system and sympathetic nervous system. Cross-talk between the brain and immune system across the blood brain barrier and circumventricular organs. Neurobiological basis and treatment options for autoimmune diseases. Role of immune system in psychiatric illness.
Prerequisite(s): NEUR 3044
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4594 - Clinical Neuroscience in Practice (3 credits)
Clinical approaches to diagnose and treat neurological disorders. Diseases include stroke, trauma, brain tumors, psychiatric illnesses, and epilepsy. Clinical experience includes diagnostic procedures, radiological techniques, and surgical procedures in operating room. Patient rounding, follow-up, and outcomes. Medical emergencies and appropriate professional responses. Ethical issues regarding health care, disparity, life and death decisions. Medical profession exploration.
Prerequisite(s): NEUR 4034
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4814 - Nutritional Neuroscience (3 credits)
Concepts in nutritional aspects of neuroscience. Energy metabolism in central nervous system and brain regulating ingestive behavior. Communication with peripheral organs, regulation of whole body energy homeostasis, brain physiology and pathology on molecular and cellular level. Role of appetite neurocircuitry in formulation of practical solutions to societal problems such as nutrition, eating disorders, and obesity.
Prerequisite(s): NEUR 2026 or ALS 2304
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ALS 4814

NEUR 4914 - Drug Development in Neuroscience (3 credits)
Current approaches and pitfalls for developing therapeutics for treating disorders of the central nervous system (CNS). Theoretical issues and practical applications targeting identification, high-throughput screening, pharmacokinetics and pharmacodynamics, preclinical testing, clinical trials, and the FDA approval process. Ethical implications for drug development and testing.
Prerequisite(s): NEUR 3044 or NEUR 3914
Instructional Contact Hours: (3 Lec, 3 Crd)

NEUR 4964 - Field Work (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

NEUR 4994 - Undergraduate Research (1-19 credits)
$30 fee
Instructional Contact Hours: Variable credit course

NEUR 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Total Credits		**120**

1 **Grade Requirements:** Students must earn a grade of "C-" or better in all core neuroscience coursework (CHEM 1035 General Chemistry, CHEM 1036 General Chemistry, NEUR 1004 Neuroscience Orientation Seminar, NEUR 2025 Introduction to Neuroscience, NEUR 2026 Introduction to Neuroscience, NEUR 2035 Neuroscience Laboratory, NEUR 2036 Neuroscience Laboratory, NEUR 4044 Neuroscience Senior Seminar, PSYC 1004 Introductory Psychology) or the equivalent coursework. Students must also earn a "C-" or better in BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, MATH 1025 Elementary Calculus, and MATH 1026 Elementary Calculus. Only two attempts, including course withdrawals with a grade of "W," are allowed for each core neuroscience course, BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, MATH 1025 Elementary Calculus, and MATH 1026 Elementary Calculus.

2 **Prerequisites:** This check sheet contains courses that have at least one prerequisite that may not be included as part of this degree. Please see your advisor or consult the Undergraduate Course Catalog for more information.

3 Because PSYC 1004 Introductory Psychology is in the "Core" requirements, it *may not* double count as a concept 3 course.

4 Courses may not double count with the credits chosen for any other CNEU requirement.

5 If NEUR 4994 Undergraduate Research is selected, research must total 3 credits.

Grade Requirements and Progress Toward Degree Policy

Students must earn a grade of C- or better in the following neuroscience courses within 3 attempts: BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, CHEM 1035 General Chemistry, CHEM 1036 General Chemistry, MATH 1025 Elementary Calculus or MATH 1225 Calculus of a Single Variable, MATH 1026 Elementary Calculus or MATH 1226 Calculus of a Single Variable, NEUR 1004 Neuroscience Orientation Seminar, NEUR 2025 Introduction to Neuroscience, NEUR 2026 Introduction to Neuroscience, NEUR 2035 Neuroscience Laboratory, NEUR 2036 Neuroscience Laboratory, NEUR 4044 Neuroscience Senior Seminar, PSYC 1004 Introductory Psychology.

NEUR 1004 can be satisfied with any First-Year Experience course taken at Virginia Tech.
If you have transferred in any of the courses listed above with a C or better, or have equivalent AP/IB/CLEP credit, you have met the minimum grade requirement.

A withdrawal (W) counts as an attempt.

If these requirements are not met, you will be asked to leave the School of Neuroscience.

Graduation Requirements

Graduation Requirements

Student must complete a minimum of 120 credit hours with an overall GPA of 2.0 and a minimum in-major GPA of 2.0. For purposes of GPA computation, courses IN-MAJOR will include Core requirements, Major requirements, Restricted Electives, BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, and MATH 1025 Elementary Calculus-MATH 1026 Elementary Calculus.

Double Majors/Minors

The School of Neuroscience offers majors in Cognitive and Behavioral Neuroscience, Clinical Neuroscience, Computational and Systems Neuroscience, and Experimental Neuroscience. Courses for these majors

overlap slightly. Therefore, students may not pursue multiple majors within the School.

Prerequisites

This check sheet contains courses that have at least one prerequisite that may not be included as part of this degree. Please see your advisor or consult the Undergraduate Course Catalog for more information.

Terminology

Pathways Requirements: Pathways to General Education is defined by the university as "A vibrant, flexible, and innovative general education program that provides a coherent and meaningful learning experience and allows students to integrate the learning for use throughout their lifetimes."

Core Neuroscience Requirements: Core neuroscience requirements are those requirements that must be fulfilled by all students in the School of Neuroscience, regardless of major.

Major Requirements: Major requirements are those requirements that are unique to the CNEU major and do not apply across all School of Neuroscience majors.

Restricted Elective: Restricted elective courses provide students the autonomy to select 9 or more credits of coursework within an approved list to count towards the students' degree requirements. These courses expand on the depth and breadth of the CNEU major.

Free Elective: Free elective credits may consist of any credit-bearing Virginia Tech coursework to ensure that students reach the 120 credits required by the university to earn a bachelor's degree. Coursework that does not apply elsewhere towards the degree will apply here (this includes non-duplicative coursework for double majors, minors, or AP coursework that does not count elsewhere towards the degree).

Foreign Language Requirement

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Total Credits	**120**

1 **Grade Requirements:** Students must earn a grade of "C-" or better in all core neuroscience coursework (CHEM 1035 General Chemistry, CHEM 1036 General Chemistry, NEUR 1004 Neuroscience Orientation Seminar, NEUR 2025 Introduction to Neuroscience, NEUR 2026 Introduction to Neuroscience, NEUR 2035 Neuroscience Laboratory, NEUR 2036 Neuroscience Laboratory, NEUR 4044 Neuroscience Senior Seminar, PSYC 1004 Introductory Psychology) or the equivalent coursework. Students must also earn a "C-" or better in BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, MATH 1225 Calculus of a Single Variable, and MATH 1226 Calculus of a Single Variable. Only two attempts, including course withdrawals with a grade of "W," are allowed for each core neuroscience course, BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, MATH 1025 Elementary Calculus, and MATH 1026 Elementary Calculus.

2 **Prerequisites:** This check sheet contains courses that have at least one prerequisite that may not be included as part of this degree. Please see your advisor or consult the Undergraduate Course Catalog for more information.

3 Because PSYC 1004 Introductory Psychology is in the "Core" requirements, it *may not* double count as a concept 3 course.

4 Courses may not double count with the credits chosen for any other CBNU requirement.

5 If NEUR 4994 Undergraduate Research is selected, research must total to 3 credits.

Grade Requirements and Progress Toward Degree Policy

Students must earn a grade of C- or better in the following neuroscience courses within 3 attempts: BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, CHEM 1035 General Chemistry, CHEM 1036 General Chemistry, MATH 1025 Elementary Calculus or MATH 1225 Calculus of a Single Variable, MATH 1026 Elementary Calculus or MATH 1226 Calculus of a Single Variable, NEUR 1004 Neuroscience Orientation Seminar, NEUR 2025 Introduction to Neuroscience, NEUR 2026 Introduction to Neuroscience, NEUR 2035 Neuroscience Laboratory, NEUR 2036 Neuroscience Laboratory, NEUR 4044 Neuroscience Senior Seminar, PSYC 1004 Introductory Psychology.

NEUR 1004 can be satisfied with any First-Year Experience course taken at Virginia Tech.
If you have transferred in any of the courses listed above with a C or better, or have equivalent AP/IB/CLEP credit, you have met the minimum grade requirement.

A withdrawal (W) counts as an attempt.

If these requirements are not met, you will be asked to leave the School of Neuroscience.

Graduation Requirements

Graduation Requirements

Student must complete a minimum of 120 credit hours with an overall GPA of 2.0 and a minimum in-major GPA of 2.0. For purposes of GPA computation, courses IN-MAJOR will include Core requirements, Major requirements, Restricted Electives, BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, and MATH 1025 Elementary Calculus-MATH 1026 Elementary Calculus.

Double Majors/Minors

The School of Neuroscience offers majors in Cognitive and Behavioral Neuroscience, Clinical Neuroscience, Computational and Systems Neuroscience, and Experimental Neuroscience. Courses for these majors overlap slightly. Therefore, students may not pursue multiple majors within the School.

Prerequisites

This check sheet contains courses that have at least one prerequisite that may not be included as part of this degree. Please see your advisor or consult the Undergraduate Course Catalog for more information.

Terminology

Pathways Requirements: Pathways to General Education is defined by the university as "A vibrant, flexible, and innovative general education program that provides a coherent and meaningful learning experience and allows students to integrate the learning for use throughout their lifetimes."

Core Neuroscience Requirements: Core neuroscience requirements are those requirements that must be fulfilled by all students in the School of Neuroscience, regardless of major.

Major Requirements: Major requirements are those requirements that are unique to the CBNU major and do not apply across all School of Neuroscience majors.

Restricted Elective: Restricted elective courses provide students the autonomy to select 12 or more credits of coursework within an approved list to count towards the students' degree requirements. These courses expand on the depth and breadth of the CBNU major.

Free Elective: Free elective credits may consist of any credit-bearing Virginia Tech coursework to ensure that students reach the 120 credits required by the university to earn a bachelor's degree. Coursework that does not apply elsewhere towards the degree will apply here (this includes non-duplicative coursework for double majors, minors, or AP coursework that does not count elsewhere towards the degree).

Foreign Language Requirement

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Subtotal		45
Total Credits		**120**

1 **Grade Requirements:** Students must earn a grade of "C-" or better in all core neuroscience coursework (CHEM 1035 General Chemistry, CHEM 1036 General Chemistry, NEUR 1004 Neuroscience Orientation Seminar, NEUR 2025 Introduction to Neuroscience, NEUR 2026 Introduction to Neuroscience, NEUR 2035 Neuroscience Laboratory, NEUR 2036 Neuroscience Laboratory, NEUR 4044 Neuroscience Senior Seminar, PSYC 1004 Introductory Psychology) or the equivalent coursework. Students must also earn a "C-" or better in BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, MATH 1025 Elementary Calculus, and MATH 1026 Elementary Calculus.

2 **Prerequisites:** This check sheet contains courses that have at least one prerequisite that may not be included as part of this degree. Please see your advisor or consult the Undergraduate Course Catalog for more information.

3 Because PSYC 1004 Introductory Psychology is in the "Core" requirements, it *may not* double count as a concept 3 course.

4 Courses may not double count with the credits chosen for any other EXPN requirement.

5 If NEUR 4994 Undergraduate Research is selected, it must total 3 credit hours.

Grade Requirements and Progress Toward Degree Policy

Students must earn a grade of C- or better in the following neuroscience courses within 3 attempts: BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, CHEM 1035 General Chemistry, CHEM 1036 General Chemistry, MATH 1025 Elementary Calculus or MATH 1225 Calculus of a Single Variable, MATH 1026 Elementary Calculus or MATH 1226 Calculus of a Single Variable, NEUR 1004 Neuroscience Orientation Seminar, NEUR 2025 Introduction to Neuroscience, NEUR 2026 Introduction to Neuroscience, NEUR 2035 Neuroscience Laboratory, NEUR 2036 Neuroscience Laboratory, NEUR 4044 Neuroscience Senior Seminar, PSYC 1004 Introductory Psychology.

NEUR 1004 can be satisfied with any First-Year Experience course taken at Virginia Tech.

If you have transferred in any of the courses listed above with a C or better, or have equivalent AP/IB/CLEP credit, you have met the minimum grade requirement.

A withdrawal (W) counts as an attempt.

If these requirements are not met, you will be asked to leave the School of Neuroscience.

Graduation Requirements

Graduation Requirements

Student must complete a minimum of 120 credit hours with an overall GPA of 2.0 and a minimum in-major GPA of 2.0. For purposes of GPA computation, courses **in-major** will include Core requirements, Major requirements, Restricted Electives, BIOL 1105 Principles of Biology, BIOL 1106 Principles of Biology, BIOL 1115 Principles of Biology Laboratory, BIOL 1116 Principles of Biology Laboratory, and MATH 1025 Elementary Calculus-MATH 1026 Elementary Calculus.

Double Majors/Minors

The School of Neuroscience offers majors in Cognitive and Behavioral Neuroscience, Clinical Neuroscience, Computational and Systems Neuroscience, and Experimental Neuroscience. Courses for these majors overlap slightly. Therefore, students may not pursue multiple majors within the School.

Prerequisites

This check sheet contains courses that have at least one prerequisite that may not be included as part of this degree. Please see your advisor or consult the Undergraduate Course Catalog for more information.

Terminology

Pathways Requirements: Pathways to General Education is defined by the university as "A vibrant, flexible, and innovative general education program that provides a coherent and meaningful learning experience and allows students to integrate the learning for use throughout their lifetimes."

Core Neuroscience Requirements: Core neuroscience requirements are those requirements that must be fulfilled by all students in the School of Neuroscience, regardless of major.

Major Requirements: Major requirements are those requirements that are unique to the EXPN major and do not apply across all School of Neuroscience majors.

Restricted Elective: Restricted elective courses provide students the autonomy to select 12 or more credits of coursework within an approved list to count towards the students' degree requirements. These courses expand on the depth and breadth of the EXPN major.

Free Elective: Free elective credits may consist of any credit-bearing Virginia Tech coursework to ensure that students reach the 120 credits required by the university to earn a bachelor's degree. Coursework that does not apply elsewhere towards the degree will apply here (this includes non-duplicative coursework for double majors, minors, or AP coursework that does not count elsewhere towards the degree).

Foreign Language Requirement

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Physics

Our Website (http://www.phys.vt.edu)

Overview

The physics curriculum is designed to provide a broad foundation in the physical sciences, as well as specialized training in classical and modern physics, and it may lead to either a B.S. or a B.A. An honors student may also qualify for a five-year program leading to both the B.S. and M.S. Experimental opportunities are available in such fields as fundamental particle physics, nuclear physics, condensed matter physics, biophysics, and astronomy. Students are encouraged to participate with faculty members in undergraduate research projects.

Multiple emphases in the physics curriculum permit students to give special attention to those aspects of the discipline they prefer and enable them either to pursue a traditional course of study as preparation for joining the technical staffs of industries or government laboratories, or for graduate studies in physics or astronomy (B.S.); or to pursue an interdisciplinary course of study with a strong background in physics (B.A.).

A handbook that includes sample curricula for emphases in astrophysics, biophysics, chemistry, computer science, education, electrical engineering, finance, geophysics, materials science, mathematics, physics education, pre-health, and pre-law is available from the department on request.

Majors

- Physics B.S. (Outstanding students may also elect to complete the requirements for a B.S. "in honors". A description of this honors program in physics is included in the handbook indicated above.)
- Physics B.A.
- Physics B.A. Physics Education Option
- Physics B.A. Pre-Health Option
- Physics B.A. Pre-Law Option

The department also offers the M.S. and Ph.D. in physics (see the Graduate Catalog).

Transfer students should contact the department early, preferably one full semester prior to entrance. This procedure will allow a thorough evaluation of transfer credits and correct placement.

The department participates in the Cooperative Education Program in which a student may alternate through two successive years a semester of study with a semester of professional employment in his/her discipline; these two years normally replace the student's sophomore year. Additional information on the program is included in the "Academics (p. 9)" section in this catalog and in the handbook indicated above.

Minors

A student may obtain a minor in physics or astronomy or biophysics, by registering with the department and successfully completing the approved minor requirements in effect at the time of graduation. Please visit the University Registrar website at http://registrar.vt.edu/graduation-multi-brief/index1.html for minor requirements.

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the Pathways to General Education (see "Academics") and toward the degree.

Satisfactory progress requirements toward the B.S. and B.A. in Physics can be found on the major checksheet by visiting the University Registrar website at http://registrar.vt.edu/graduation-multi-brief/index1.html.

2 Regular appointment with Materials Science & Engineering and Electrical & Computer Engineering
3 Regular appointment with Computer Science
4 Regular appointment with Mechanical Engineering

Undergraduate Course Descriptions (PHYS)

PHYS 1055 - Introduction to Astronomy (3 credits)
Survey course of astronomy topics ranging from the solar system to the universe, with Application of evidence-based reasoning, critical thinking, and use of theoretical models and observations. 1055 has a focus on the solar system: apparent sky motions, telescopes, matter and radiation, properties of the planets, structure and evolution of the solar system, cultural and intercultural aspects that influenced the understanding of the solar system, climate change as a Global challenge. 1056 has a focus on the universe: stars, star formation, stellar evolution, organization of the Milky Way Galaxy, galaxies, quasars, structure and evolution of the universe, cosmological models, cultural and intercultural aspects of the development of astronomical thought, life in the universe.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 1056 - Introduction to Astronomy (3 credits)
Survey course of astronomy topics ranging from the solar system to the universe, with Application of evidence-based reasoning, critical thinking, and use of theoretical models and observations. 1055 has a focus on the solar system: apparent sky motions, telescopes, matter and radiation, properties of the planets, structure and evolution of the solar system, cultural and intercultural aspects that influenced the understanding of the solar system, climate change as a Global challenge. 1056 has a focus on the universe: stars, star formation, stellar evolution, organization of the Milky Way Galaxy, galaxies, quasars, structure and evolution of the universe, cosmological models, cultural and intercultural aspects of the development of astronomical thought, life in the universe.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 1155 - Astronomy Laboratory (1 credit)
Simulation of apparent sky motions; observations of planets, stars, and nebulae with quantitative analysis; long term observations of sky changes; analysis of images; laboratory experiments of astrophysical relevance.
Corequisite(s): PHYS 1055
Instructional Contact Hours: (3 Lab, 1 Crd)

PHYS 1156 - Astronomy Laboratory (1 credit)
Simulation of apparent sky motions; observations of planets, stars, and nebulae with quantitative analysis; long term observations of sky changes; analysis of images; laboratory experiments of astrophysical relevance.
Prerequisite(s): PHYS 1155
Corequisite(s): PHYS 1056
Instructional Contact Hours: (3 Lab, 1 Crd)

PHYS 2074 - Highlights of Contemporary Physics (3 credits)
Conceptual overview of modern scientific thinking in physics, with application of critical reasoning and quantitative and conceptual problem solving based on fundamental physics principles. Presentation of the key ideas and philosophical aspects of the most important developments in modern physics, such as quantum mechanics, relativity, particle physics, cosmology. Discussion of their impact on our understanding of the universe, our position in it, intercultural aspects, and the relevance of physics for technical challenges requiring global awareness.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 2205 - General Physics (3 credits)
General physics course sequence for students in curricula other than physical sciences, mathematics, or engineering, who have not studied calculus. Applications of reasoning in the natural sciences using physical laws in a real-world context and in the students own discipline. Overview of intercultural and universal aspects of physics, and of human benefits of physics to address global challenges. 2205: mechanics, wave phenomena, fluids. 2206: optics, thermodynamics, electromagnetism, relativity, topics in nuclear and modern physics.
Prerequisite(s): MATH 1025 or MATH 1026 or MATH 1225 or MATH 1524
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 2206 - General Physics (3 credits)
General physics course sequence for students in curricula other than physical sciences, mathematics, or engineering, who have not studied calculus. Applications of reasoning in the natural sciences using physical laws in a real-world context and in the students own discipline. Overview of intercultural and universal aspects of physics, and of human benefits of physics to address global challenges. 2205: mechanics, wave phenomena, fluids. 2206: optics, thermodynamics, electromagnetism, relativity, topics in nuclear and modern physics.
Prerequisite(s): (PHYS 2305 or PHYS 2205) and (MATH 1025 or MATH 1026 or MATH 1225 or MATH 1524)
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 2215 - General Physics Laboratory (1 credit)
Laboratory experiments dealing with basic laws and techniques of physics; designed to illustrate topics covered in PHYS 2205-2206. Applications of reasoning in the natural sciences using physics experiments in a real-world and interdisciplinary context. Ethical responsibilities and issues in a laboratory setting. 2215: analysis of experimental errors, formatting for presenting graphical data, analyzing and describing and prioritizing experimental design features, communicating concepts orally and in writing, concepts of force, momentum, conservation of energy, wave and interference phenomena. 2216: analysis of experimental errors, communicating concepts orally and in writing, concepts of geometrical optics, optical instruments, heat and phase transitions, electricity and electrical energy storage, magnetic fields and magnetic induction, atomic spectra.
Corequisite(s): PHYS 2205
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

PHYS 2216 - General Physics Laboratory (1 credit)
Laboratory experiments dealing with basic laws and techniques of physics; designed to illustrate topics covered in PHYS 2205-2206. Applications of reasoning in the natural sciences using physics experiments in a real-world and interdisciplinary context. Ethical responsibilities and issues in a laboratory setting. 2215: analysis of experimental errors, formatting for presenting graphical data, analyzing and describing and prioritizing experimental design features, communicating concepts orally and in writing, concepts of force, momentum, conservation of energy, wave and interference phenomena. 2216: analysis of experimental errors, communicating concepts orally and in writing, concepts of geometrical optics, optical instruments, heat and phase transitions, electricity and electrical energy storage, magnetic fields and magnetic induction, atomic spectra.
Prerequisite(s): PHYS 2215 or PHYS 2305
Corequisite(s): PHYS 2206
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lab, 1 Crd)

PHYS 2254 - Hello Quantum World! (3 credits)
Introduction to the concepts of quantum mechanics and quantum computing using a pictorial approach. Quantum bits, quantum superposition, quantum gate operations, quantum entanglement, and quantum measurements represented pictorially. Demonstration of quantum circuits and quantum algorithms. Use of cloud quantum processors with drag-and-drop interfaces. Quantum teleportation, no-cloning theorem, quantum key distribution. Use of the pictorial formalism to define the concept of vectors.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 2305 - Foundations of Physics (4 credits)
Introductory sequence for students in physical sciences, mathematics, and engineering. Overview of intercultural contributions to physics and universal aspects of physics, and of human benefits of physics to address world-wide challenges. 2305: classical mechanics of translational and rotational motion, Newtonian gravitation, and thermal physics. 2306: oscillations, waves, electricity, magnetism, and optics.
Prerequisite(s): MATH 1225
Corequisite(s): MATH 1226
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

PHYS 2306 - Foundations of Physics (4 credits)
Introductory sequence for students in physical sciences, mathematics, and engineering. Overview of intercultural contributions to physics and universal aspects of physics, and of human benefits of physics to address world-wide challenges. 2305: classical mechanics of translational and rotational motion, Newtonian gravitation, and thermal physics. 2306: oscillations, waves, electricity, magnetism, and optics.
Prerequisite(s): MATH 1226 and PHYS 2305
Corequisite(s): 2325 or (MATH 1206 or MATH 1206H or MATH 1226) for 2305.
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

PHYS 2324 - Thermal Physics Module (1 credit)
Introduction to thermal physics; solids, liquids, and gases; moles, temperature, ideal gas law; work, heat, first law of thermodynamics, ideal gas processes; molecular speeds, pressure; heat engines, refrigerators, the second law of thermodynamics. Intended for transfer students whose introductory physics courses did not include thermal physics. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

PHYS 2325 - Seminar for Physics Majors (1 credit)
Introduction to the field of physics and to the Physics Department. Overview of modern physics topics such as special relativity, quantum mechanics, condensed matter, nuclear, and particle physics. Presentation of research activities in the department. Also provides more in-depth discussion of and math preparation for topics in 2305-2306. For physics majors.
Corequisite(s): PHYS 2305
Instructional Contact Hours: (1 Lec, 1 Crd)

PHYS 2326 - Seminar for Physics Majors (1 credit)
Introduction to the field of physics and the Physics Department. Overview of modern physics topics such as special relativity, quantum mechanics, condensed matter, nuclear, and particle physics. Presentation of research activities in the department. Also provides more in-depth discussion of and math preparation for topics in 2305-2306. For physics majors.
Prerequisite(s): PHYS 2325
Corequisite(s): PHYS 2306
Instructional Contact Hours: (1 Lec, 1 Crd)

PHYS 2334 - Waves and Sound Module (1 credit)
Introduction to mechanical waves and sound; one-dimensional waves, transverse waves, sinusoidal waves; sound waves; waves in two- and three-dimensions; power, intensity; the Doppler Effect; principle of superposition of waves; standing waves, standing waves on a string, standing sound waves; interference of waves, interference in two and three-dimensions. Intended for transfer students whose introductory physics courses did not include the topics of mechanical waves and sound. Pass/Fail only.
Prerequisite(s): PHYS 2305
Instructional Contact Hours: (1 Lec, 1 Crd)

PHYS 2344 - Optics Module (1 credit)
Introduction to ray and wave optics; the ray model for light; reflection and refraction; image formation by mirrors; image formation by lenses; lenses in combinations, optical instruments; the wave model of light; interference of light waves; diffraction of light waves. Intended for transfer students whose introductory physics courses did not include introductory optics. Pass/Fail only.
Corequisite(s): PHYS 2334
Instructional Contact Hours: (1 Lec, 1 Crd)

PHYS 2404 - Physics Outreach (2-19 credits)
Service learning through teaching. An early field experience for physics students who are interested in physics education. Visit local schools and host campus visits to teach K-12 students fundamental physics concepts by performing physics demonstrations and activities. Learn successful communication techniques, lead classroom discussions, and utilize pedagogical content knowledge to effectively organize physics presentations to the general public. Repeatable (no maximum).
Corequisite(s): PHYS 2305
Instructional Contact Hours: (2-19 Lec, 2-19 Crd)

PHYS 2504 - Math Methods in Physics (3 credits)
Applications of mathematical methods to physics. Topics include spatial coordinate systems, linear algebra techniques in coupled motions, series approximations of solutions to physical systems, extremum problems in physics, differential equations in mechanics, integration in two and three spatial dimensions, probability theory in thermal physics.
Prerequisite(s): PHYS 2305
Corequisite(s): 2306, (MATH 2214 or 2214H) and (MATH 2224 or 2204 or 2204H).
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 2964 - Field Study (1-9 credits)
Instructional Contact Hours: (1-19 Lec, 1-9 Crd)

PHYS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

PHYS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 2994H - Undergraduate Research (1-19 credits)
Honors
Instructional Contact Hours: Variable credit course

PHYS 3154 - Observational Astrophysics (2 credits)
Telescopic observations of the moon, planets, stars, interstellar medium, and galaxies; astrophotography; digital imaging. Telescopes; virtual observing techniques and instruments; photographic and digital imaging systems. Astronomical data reduction and interpretation; digital image processing. Prior credit for PHYS 2154 precludes credit for 3154.
Prerequisite(s): PHYS 1156
Instructional Contact Hours: (1 Lec, 3 Lab, 2 Crd)

PHYS 3254 - Enriched Physics Outreach (3 credits)
Design and implementation of physics lesson plans for K-12 students at local schools and campus visits. Creation of inquiry-based, student-centered physics lessons which motivate and educate students of all ages. Development of activities and experiments to engage students in being scientists.
Corequisite(s): PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3314 - Intermediate Laboratory (3 credits)
Characteristics of common instrumentation and basic circuits, methods of producing good practices in data gathering, recording, and analysis.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

PHYS 3324 - Modern Physics (4 credits)
Photons and their interactions with matter, wave-particle duality, Heisenberg uncertainty principle, Schrodingers equation of motion, hydrogenic and multi-electron atoms, Pauli exclusion principle, molecules, solids, nuclei, elementary particles. Includes lab work. MATH 4544 can be substituted for co-requisite MATH 2214 or 2214H. Pre: 2306.
Prerequisite(s): PHYS 2306
Corequisite(s): MATH 2214 or MATH 2214H.
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

PHYS 3355 - Intermediate Mechanics (3 credits)
Formal aspects of classical mechanics and dynamics. Topics include Newtonian, Lagrangian and Hamiltonian theory applied to non-relativistic systems in one, two, and three dimensions, relativistic dynamics, linear algebra applied to coupled many-body motion, small oscillations, and rigid body motion.
Prerequisite(s): (PHYS 2305 and PHYS 2306 and PHYS 2504 and MATH 2204 and MATH 2214) or (PHYS 2305 and PHYS 2306 and PHYS 2504 and MATH 2204 and MATH 2214H) or (PHYS 2305 and PHYS 2306 and PHYS 2504 and MATH 2204H and MATH 2214) or (PHYS 2305 and PHYS 2306 and PHYS 2504 and MATH 2204H and MATH 2214H) or (PHYS 2305 and PHYS 2306 and PHYS 2504 and MATH 2406H)
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3356 - Intermediate Mechanics (3 credits)
Formal aspects of classical mechanics and dynamics. Topics include Newtonian, Lagrangian and Hamiltonian theory applied to non-relativistic systems in one, two, and three dimensions, relativistic dynamics, linear algrbra applied to coupled many-body motion, small oscillations, and rigid body motion.
Prerequisite(s): PHYS 3355
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3405 - Intermediate Electricity and Magnetism (3 credits)
Electrostatics, multipoles, Laplaces equation, and dielectric media. Magnetostatics, magnetic media, and electromagnetic induction. Maxwells equations, electromagnetic energy, waves, and radiation. Must meet pre-requisites and have a grade of C or better in each of 2305-2306 sequence.
Prerequisite(s): (MATH 2214 or MATH 2214H) and PHYS 2305 and PHYS 2306 and PHYS 2504
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3406 - Intermediate Electricity and Magnetism (3 credits)
Electrostatics, multipoles, Laplaces equation, and dielectric media. Magnetostatics, magnetic media, and electromagnetic induction. Maxwells equations, electromagnetic energy, waves, and radiation. Must meet pre-requisites and have a grade of C or better in each of 2305-2306 sequence.
Prerequisite(s): PHYS 3405
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3655 - Introduction to Astrophysics (3 credits)
Application of elementary physical laws to determine dimensions, masses, luminosities, structures, and evolution of astronomical objects and the universe as a whole. Emphasis is on quantitative derivation.
Prerequisite(s): PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3656 - Introduction to Astrophysics (3 credits)
Application of elementary physical laws to determine dimensions, masses, luminosities, structures, and evolution of astronomical objects and the universe as a whole. Emphasis is on quantitative derivation.
Prerequisite(s): PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 3684 - Quantum Software I (2 credits)
Organization of quantum information (assemblies of bits) for quantum-computing applications in chemistry, physics, biology, and computer science. Numerical methods for quantum software, emphasizing spin lattices and simulations such as quantum games. Best practices for programming, including techniques for quantum-coding (in Python or Julia), structuring a software product for quantum-computational science use, version control, and cloud-based documentation and code-sharing (via Github). Classical/quantum translation.
Prerequisite(s): MATH 2114 or MATH 2114H or MATH 3144
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: CHEM 3684

PHYS 3704 - Thermal Physics (3 credits)
Introduction to the concepts, formalism, and applications of classical and quantum statistical mechanics, including thermodynamics.
Prerequisite(s): PHYS 2306 and PHYS 3324
Corequisite(s): 2504, (MATH 2214 or 2214H).
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4224 - Physics Teaching and Learning (2 credits)
Seminar course on how people learn and understand key concepts in physics to encourage more effective teaching strategies. Discussions of readings in physics, physics education research, and cognitive science. Recognition of common student preconceptions of physics concepts and identification of strategies which help to elicit conceptual change. Field work teaching precollege or college students. For students interested in teaching and learning physics, graduate teaching assistants, and undergraduate learning assistants.
Prerequisite(s): PHYS 2306
Instructional Contact Hours: (2 Lec, 2 Crd)

PHYS 4254 - Quantum Information Technologies (3 credits)
Quantum computing and other quantum information technologies. Differences between bit and qubit. Quantum logic gates, concept of entanglement, quantum teleportation, quantum cryptography and key distribution, quantum computing algorithms, including Deutsch-Jozsa algorithm, Grovers search algorithm, Shors factoring algorithm. Basics of public-key cryptosystems and number theory as needed to present Shors algorithm. Errors in a quantum computer and quantum error correction.
Prerequisite(s): MATH 2114 or MATH 2114H
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4264 - Quantum Optics and Qubit Processors (3 credits)
Quantum optics and quantum bit (qubit) platforms for quantum technology applications. Qubit as physical system, quantum unitary evolution as quantum gate, quantum control using electromagnetic fields, Rabi oscillations, adiabatic theorem, density matrix, Liouville-von Neumann equation, decay and decoherence (T1 and T2), spin echo, Ramsey interferometry, coherent population trapping, entanglement, dynamical maps, electromagnetic field quantization, Jaynes-Cummings Hamiltonian, spontaneous emission, solid-state qubit platforms (spin qubits, superconducting qubits), atomic qubit platforms (trapped ions), color-centers in solids.
Prerequisite(s): PHYS 4455
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4315 - Modern Experimental Physics (2 credits)
Representative apparatus, techniques, and phenomena of contemporary research. Includes electrical measurements, computers, thermometry, vacuum deposition, machine shop, nuclear spectra, experimentation related to major developments of modern physics.
Prerequisite(s): PHYS 3314
Instructional Contact Hours: (6 Lab, 2 Crd)

PHYS 4316 - Modern Experimental Physics (2 credits)
Representative apparatus, techniques, and phenomena of contemporary research. Includes electrical measurements, computers, thermometry, vacuum deposition, machine shop, nuclear spectra, experimentation related to major developments of modern physics.
Prerequisite(s): PHYS 3314 and PHYS 4315
Instructional Contact Hours: (6 Lab, 2 Crd)

PHYS 4455 - Introduction to Quantum Mechanics (3 credits)
Experimental bases; postulates; conservation theorems and symmetry; one-dimensional and two-dimensional problems; angular momentum and problems in three dimensions; matrix mechanics and spin; applications to atomic and molecular physics; perturbation theory; scattering.
Prerequisite(s): PHYS 3355
Corequisite(s): PHYS 3406
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4456 - Introduction to Quantum Mechanics (3 credits)
Experimental bases; postulates; conservation theorems and symmetry; one-dimensional and two-dimensional problems; angular momentum and problems in three dimensions; matrix mechanics and spin; applications to atomic and molecular physics; perturbation theory; scattering.
Prerequisite(s): PHYS 4455
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4504 - Introduction to Nuclear and Particle Physics (3 credits)
Structure and properties of atomic nuclei and elementary particles, theoretical interpretations based on elementary quantum mechanics. Symmetries; various nuclear models; interactions at small distances; classification of elementary particles. Consent required.
Corequisite(s): PHYS 4456
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4514 - Introduction to Nuclear Physics (3 credits)
Nuclear properties and nuclear interactions. Nuclear reactions and radioactive decays, including alpha, beta and gamma decays. Theoretical models of the nucleus and their interpretations. Experimental methods in nuclear physics. Applications, including nuclear power production.
Prerequisite(s): PHYS 3324
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4524 - Intro Particle Physics (3 credits)
Relativistic kinematics. Particle interaction amplitudes and cross sections. Particle types including quarks, hadrons, leptons and bosons. Experimental methods in particle physics. Symmetries. The quark model. Weak interactions and electroweak unification. Particle physics beyond the Standard Model.
Prerequisite(s): PHYS 3324
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4534 - Quantitative Analysis of Physics Experiments (3 credits)
Statistical analysis of physics experiments. Probabilistic elements in experiments. Data analysis frameworks in physics subfields. Maximum likelihood estimation and Bayesian techniques. Physical principles and nuisance parameters. Analysis strategies and computational methods. Graphical data representation.
Prerequisite(s): PHYS 2504 and PHYS 3324 and CS 1064
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4554 - Introduction to Solid State Physics (3 credits)
Basic concepts of solid state physics including crystal structure, lattice vibrations, electron states, energy bands, semiconductors, metals. Consent required.
Corequisite(s): PHYS 4456
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4564 - Polymer Physics (3 credits)
Introduction to the field of polymer physics. Statistical descriptions of polymers based on Brownian motion and random walk models. Conformations and single chains. Thermodynamics of polymer mixtures, solutions, and melts. Properties of polymer networks. Polymer dynamics in both melt and solution states.
Prerequisite(s): PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4574 - Nanotechnology (3 credits)
Introduction to methods of controlling matter on the nanometer length scale and the applications thereof. Nanolithography, self-assembly, and scanned probe microscopy; nanomaterials including fullerenes, carbon nanotubes, and quantum dots; nanoscale and molecular electronics; nanoelectromechanical systems; nanoscale optoelectronics; and nanobiotechnology.
Prerequisite(s): PHYS 2205 and PHYS 2206 or PHYS 2305 and PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4614 - Optics (3 credits)
Fundamentals of the ray, wave and quantum models of light, and topics in modern optics with contemporary applications.
Prerequisite(s): PHYS 2306 and (MATH 2214 or MATH 2214H) and (MATH 2224 or MATH 2204 or MATH 2204H)
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4624 - Optics Laboratory (1 credit)
Laboratory experiments dealing with ray and wave optical phenomena designed to illustrate and complement the principles covered in OPTICS PHYS 4614. Physics majors are required to take 4624 concurrently with the lecture course 4614.
Corequisite(s): PHYS 4614
Instructional Contact Hours: (3 Lab, 1 Crd)

PHYS 4634 - Modern Classical Physics (3 credits)
Geometric formulation of classical physics. Applications in relativity, optics, elasticity, fluid mechanics, plasma physics. Real-world examples from fundamental, experimental, and applied physics. Quantum roots of and quantum techniques in classical physics. Geometrical connections between classical mechanics, optics, and quantum physics. Problems in and connections between elasticity, fluid dynamics, magnetohydrodynamics, and plasma physics.
Prerequisite(s): PHYS 3355 and PHYS 3405
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4654 - Modern Cosmology (3 credits)
Survey of our current understanding of the origin, evolution, and fate of the Universe. Observational evidence behind the idea of the hot Big Bang, including the linear velocity-distance law, the existence of the cosmic microwave background, and the arguments for dark matter. Physics of a dynamic, expanding Universe via the Friedman-Lemaitre- Robertson-Walker metric. Physical principles to determine the conditions in the early Universe, introducing the idea of inflation. Mechanisms driving the origin and evolution of galaxies and large-scale structures.
Prerequisite(s): PHYS 3656
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4664 - Astroparticle Physics (3 credits)
Observations of high-energy photons, cosmic rays, and neutrinos. Energy-loss interactions in astrophysical environments. Propagation of cosmic particles and ultra-high energy cosmic rays. Origins of cosmic rays. Astrophysical neutrinos and neutrino oscillations. Stellar evolution and evolution into supernova explosions. Mechanisms of astrophysical particle acceleration. Multi-messenger astronomy.
Prerequisite(s): PHYS 3655 or PHYS 3656
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4674 - Introduction to General Relativity (3 credits)
Introduction to methods and applications of Einsteins general theory of relativity. Space and time and gravity in Newtonian physics; special theory of relativity, gravity as geometry of curved space-time; black holes; cosmology; Einsteins gravitational field equations; gravitational waves and relativistic stars.
Prerequisite(s): (MATH 2214 or MATH 2214H or MATH 2514) and PHYS 3355
Corequisite(s): PHYS 3406
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4684 - Quantum Software II (1 credit)
Modern software collaboration techniques and tools including collaborative code repositories and cloud-based documentation. Application of structure and version control to software and documentation. Developing code with industry-standard quantum-software modules. Hands-on scientific coding for quantum problems. Project management skills including proposal development and technical presentation delivery.
Prerequisite(s): CHEM 3684 or PHYS 3684
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: CHEM 4684

PHYS 4714 - Introduction to Biophysics (3 credits)
Selected topics from the general area of biomechanics, bioelectricity, radiation biophysics, molecular biophysics, and thermodynamics and transport in biological systems. Emphasis on the physical aspects of biological phenomena and biophysical measurement techniques and instrumentation.
Prerequisite(s): PHYS 2206 or PHYS 2306 or ISC 2106H
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4724 - Soft Matter Physics (3 credits)
Physical characteristics of various soft matter systems including liquids, liquid crystals, polymers, colloids, surfactants, granular materials, and biological soft materials. Van der Waals and electrostatic interactions in the context of soft matter. Descriptions of soft matter phases, phase diagrams, phase separation, and phase transitions. Theories of self-assembly and self-organization. Problems in and connections between elasticity, viscoelasticity, and mechanics of fluids including capillarity and wetting. Model of random walk and its applications to colloidal systems. Applications of variational methods in soft matter. Computer simulation methods in soft matter.
Prerequisite(s): PHYS 2306
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4755 - Introduction to Computational Physics (3 credits)
Survey of computational methods in physics. 4755: Applications in physics of curve fitting, numerical calculus, ordinary and partial differential equations, numerical methods for matrices, spectral analysis, and N-body systems. 4756: Investigation of physical systems using Molecular Dynamics simulations, Monte Carlo simulations, genetic algorithm and numerical renormalization. Introduction to advanced techniques, as for example density matrix renormalization group method, matrix product state approach, smoothed particle hydrodynamics, and density functional theory.
Prerequisite(s): PHYS 2306 and CS 1044 or CS 1054 or CS 1064 or CS 1114 or ECE 1574 or AOE 2074 or ESM 2074
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4756 - Introduction to Computational Physics (3 credits)
Survey of computational methods in physics. 4755: Applications in physics of curve fitting, numerical calculus, ordinary and partial differential equations, numerical methods for matrices, spectral analysis, and N-boyd systems. 4756: Investigation of physical systems using Molecular Dynamics simulations, Monte Carlo simulations, genetic algorithm and numerical renormalization. Introduction to advanced techniques, as for example density matrix renormalization group method, matrix product state approach, smoothed particle hydrodynamics, and density functional theory.
Prerequisite(s): PHYS 4455 and PHYS 4755
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4774 - Intro to Physics of Galaxies (3 credits)
Survey of our current observational and theoretical understanding of the formation and evolution of galaxies. Observational review of galaxy sizes and compositions, including the origin of the Hubble sequence. Physical description of a galaxy via distribution functions and stellar orbits. Time evolution of the distribution function. The Schwarzschild method for determining orbits. The physics of active galaxies.
Prerequisite(s): PHYS 3656
Instructional Contact Hours: (3 Lec, 3 Crd)

PHYS 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

PHYS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHYS 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

1. Indicates a course with prerequisites or corequisites.
2. MATH 1225 Calculus of a Single Variable-MATH 1226 Calculus of a Single Variable[1] and MATH 2214 Introduction to Differential Equations[1] or MATH 2214H Introduction to Differential Equations[1] and PHYS 2305 Foundations of Physics-PHYS 2306 Foundations of Physics[1] are also required of all Physics Majors within the B.A. Degree Program in Physics. They are listed in Pathways to General Education Requirements.
3. The following course sequence is required of all students majoring in Physics within the B.A. Degree in Physics.

A student will be certified as making satisfactory progress toward the B.A. degree in Physics by satisfying the university's academic eligibility requirements, as well as the following requirements:

- Upon having attempted 60 credit hours, the student will have completed Concept 1 requirements, the Mathematics requirements as well as PHYS 2305 Foundations of Physics-PHYS 2306 Foundations of Physics, PHYS 2325 Seminar for Physics Majors-PHYS 2326Seminar for Physics Majors, PHYS 2504 Math Methods in Physics, and PHYS 3324 Modern Physics.
- Upon having attempted 45 credit hours, the student must have 2.0 overall and in-major GPAs. All PHYS courses attempted are used in the calculation of the in-major GPA. Non-PHYS courses used as Accepted Substitutions are not used in the calculation of the in-major GPA.
- Upon having attempted 72 credit hours, the student will have completed the foreign language requirement by the close of the academic year (spring semester). [College of Science requirement]
- Upon having attempted 96 credit hours, the student will have completed all credits for the Pathways to General Education.

Graduation Requirements

Outcomes Assessment

Each student is required to participate in the department's Outcomes Assessment procedures as determined by each year's Undergraduate Program Committee and approved by the Department Chair.

Minimum Hours and GPA Required for Graduation

A minimum of 120 credit hours must be completed for graduation. A minimum overall and in-major GPA of 2.0 is required for graduation. All PHYS courses attempted are used in the calculation of the in-major GPA. Non-PHYS courses used as Accepted Substitutions are not used in the calculation of the in-major GPA.

Prerequisites and Corequisites

Courses in this program have prerequisites or corequisites. Please check with your advisor or consult the Undergraduate Course Catalog.

Acceptable Substitutions

- PHYS 3355 Intermediate Mechanics may be substituted with AOE 3154 Astromechanics, **or** ESM 3124 Dynamics II- Analytical and 3-D Motion
- PHYS 3405 Intermediate Electricity and Magnetism may be substituted with ECE 3105 Electromagnetic Fields
- PHYS 3314 Intermediate Laboratory may be substituted with AOE 3054 Experimental Methods, **orECE 2214 Physical Electronics** & ECE 2274 Electronic Networks Laboratory I, **or** ESM 3444 Mechanics Laboratory

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credits of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward

the credits required for graduation. Please consult the Undergraduate Course Catalog for details.

A minimum of 120 credit hours must be completed for graduation. A minimum overall and in-major GPA of 2.0 is required for graduation. All physics courses attempted are used in the calculation of the in-major GPA. Non-PHYS courses used as Accepted Substitutions are not used in the calculation of the in-major GPA.

Prerequisites and Corequisites

Courses in this checksheet have prerequisites or corequisites. Please check with your advisor or consult the Undergraduate Course Catalog.

Acceptable Substitutions

- PHYS 3355 Intermediate Mechanics may be substituted with AOE 3154 Astromechanics, **or** ESM 3124 Dynamics II- Analytical and 3-D Motion.
- PHYS 3405 Intermediate Electricity and Magnetism may be substituted with ECE 3105 Electromagnetic Fields.
- PHYS 3406 Intermediate Electricity and Magnetism may be substituted with ECE 3106 Electromagnetic Fields.
- PHYS 3314 Intermediate Laboratory may be substituted with AOE 3054 Experimental Methods, **or** ECE 2214 Physical Electronics & ECE 2274 Electronic Networks Laboratory I, **or** ESM 3444 Mechanics Laboratory.
- PHYS 4316 Modern Experimental Physics may be substituted with PHYS 3154 Observational Astrophysics.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credits of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the credits required for graduation. Please consult the Undergraduate Course Catalog for details.

Physics Major with Physics Education Option

Total Credits		**120**

1. Indicates a course with prerequisites or corequisites.
2. MATH 1225 Calculus of a Single Variable-MATH 1226 Calculus of a Single Variable[1] and MATH 2214 Introduction to Differential Equations[1] or MATH 2214H Introduction to Differential Equations[1] and PHYS 2305 Foundations of Physics-PHYS 2306 Foundations of Physics[1] are also required of all Physics Majors within the B.A. Degree Program in Physics. They are listed in Pathways to General Education Requirements.
3. Exclusive of the choice made in Option Required Courses.
4. 2000-level or higher. These courses may have prerequisites or corequisites
5. The following course sequence is required of all students majoring in Physics within the B.A. Degree in Physics.

A student will be certified as making satisfactory progress toward the B.A. degree in Physics by satisfying the university's academic eligibility requirements, as well as the following requirements:

- Upon having attempted 60 credit hours, the student will have completed Concept 1 requirements, the Mathematics requirements as well as PHYS 2305 Foundations of Physics-PHYS 2306 Foundations of Physics, PHYS 2325 Seminar for Physics Majors-PHYS 2326 Seminar for Physics Majors, PHYS 2504 Math Methods in Physics, and PHYS 3324 Modern Physics.

- Upon having attempted 45 credit hours, the student must have 2.0 overall and in-major GPAs. All PHYS courses attempted are used in the calculation of the in-major GPA. Non-PHYS courses used as Accepted Substitutions are not used in the calculation of the in-major GPA.
- Upon having attempted 72 credit hours, the student will have completed the foreign language requirement by the close of the academic year (spring semester). [College of Science requirement]
- Upon having attempted 96 credit hours, the student will have completed all credits for the Pathways to General Education.

Graduation Requirements

Outcomes Assessment

Each student is required to participate in the department's Outcomes Assessment procedures as determined by each year's Undergraduate Program Committee and approved by the Department Chair.

Minimum Hours and GPA Required for Graduation

A minimum of 120 credit hours must be completed for graduation. A minimum overall and in-major GPA of 2.0 is required for graduation. All PHYS courses attempted are used in the calculation of the in-major GPA. Non-PHYS courses used as Accepted Substitutions are not used in the calculation of the in-major GPA.

Prerequisites and Corequisites

Courses in this checksheet marked with Footnote 1 have prerequisites or corequisites. Please check with your advisor or consult the Undergraduate Course Catalog.

Acceptable Substitutions

- PHYS 3355 Intermediate Mechanics may be substituted with AOE 3154 Astromechanics , **or** ESM 3124 Dynamics II- Analytical and 3-D Motion
- PHYS 3405 Intermediate Electricity and Magnetism may be substituted with ECE 3105 Electromagnetic Fields
- PHYS 3314 Intermediate Laboratory may be substituted with AOE 3054 Experimental Methods , **or** ECE 2214 Physical Electronics & ECE 2274 Electronic Networks Laboratory I , **or** ESM 3444 Mechanics Laboratory

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credits of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the credits required for graduation. Please consult the Undergraduate Course Catalog for details.

A minimum of 120 credit hours must be completed for graduation. A minimum overall and in-major GPA of 2.0 is required for graduation. All PHYS courses attempted are used in the calculation of the in-major GPA. Non-PHYS courses used as Accepted Substitutions are not used in the calculation of the in-major GPA.

Prerequisites and Corequisites

Courses in this major option have prerequisites or corequisites. Please check with your advisor or consult the Undergraduate Course Catalog.

Acceptable Substitutions

- PHYS 3355 Intermediate Mechanics may be substituted with AOE 3154 Astromechanics, **or** ESM 3124 Dynamics II- Analytical and 3-D Motion
- PHYS 3405 Intermediate Electricity and Magnetism may be substituted with ECE 3105 Electromagnetic Fields
- PHYS 3314 Intermediate Laboratory may be substituted with AOE 3054 Experimental Methods, **or** ECE 2274 Electronic Networks Laboratory I, **or** ESM 3444 Mechanics Laboratory

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six credits of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the credits required for graduation. Please consult the Undergraduate Course Catalog for details.

Psychology

Our Website (http://www.psyc.vt.edu)

Overview

The Department of Psychology offers an undergraduate program leading to the B.S. To graduate with a major in psychology, the undergraduate student must complete the Pathways to General Education requirements, plus the following departmental requirements (please see https://support.psyc.vt.edu/undergrads/advising (https://support.psyc.vt.edu/undergrads/advising/) for more specific details): A minimum of 28 hours of psychology including PSYC 1004 Introductory Psychology, PSYC 1094 Principles of Psychological Research, and three 4000-level courses, at least one with laboratory (PSYC 4964 Field Study, PSYC 4974 Independent Study, and PSYC 4994 Undergraduate Research are not counted as 4000-level courses for purposes of this requirement).

Successful completion of one year of introductory science sequence with corequisite labs (courses can come from biological sciences, chemistry, geosciences, or physics).

Successful completion of one course in Exploring Data, and one course in Exploring Human Diversity.

To graduate with a minor in psychology, the undergraduate student must complete 18 hours of psychology including PSYC 1004 Introductory Psychology, PSYC 1094 Principles of Psychological Research, and two courses at the 3000-level or above (PSYC 2964 Field Study and PSYC 4964 Field Study may not be used toward the psychology minor).

To graduate with a minor in psychology, the undergraduate student must complete 18 hours of psychology including one 4000-level course. (PSYC 2964 Field Study and PSYC 4964 Field Study may not be used toward the psychology minor.)

The department sponsors a chapter of Psi Chi, the national psychology honor society, and the Psychology Club. Information about these and other activities is available at the Academic Advising Center Office (109 Williams Hall) in the Department of Psychology.

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the General Education (Curriculum for Liberal Education) (see "Academics (p. 9)") and toward the degree.

Satisfactory progress requirements toward the B.S. in Psychology can be found on the major checksheet by visiting the University Registrar website at https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html.

- Psychology Major (p. 1347)

Chair: Roseanne J. Foti
University Distinguished Professor: T. H. Ollendick
Alumni Distinguished Professor: E. S. Geller
Professors: M. A. Bell, W. K. Bickel, J. W. Finney, R. T. Jones, J. Kim-Spoon, and A. Scarpa
Associate Professors: D. K. Axsom, P. Chiu, R. A. Diana, B. King-Casas, R. J. Foti, B. H. Friedman, D. W. Harrison, N. M. A. Hauenstein, R. K. Pannenton, and J. A. Richey
Assistant Professors: R. Breaux, C. Calderwood, J. I. Hernandez, T-H. Lee, C. McDonnell, and K. Stanton
Clinical Associate Professor: L. D. Cooper
Collegiate Assistant Professor: A. Pittarello
Senior Instructor: K. A. Hoffman

Instructor: V. Diaz
Affiliated Faculty: D. L. Brinberg, Y. Chen, W. D. Crews, E. Feuerbacher, M. Koffarnus, and D. G. Tatar
Undergraduate Professional Advisors: Courtney Glass and Christina Minford (psycadvising@vt.edu)
Career Advisor: Kurt Hoffman (psycadvising@vt.edu)

Undergraduate Course Descriptions (PSYC)

PSYC 1004 - Introductory Psychology (3 credits)
The scientific study of behavior, with a focus on behavioral research methods, analysis, theoretical interpretations, and applications. Survey of brain structures and their functions, sensory mechanisms, developmental processes, classical and operant conditioning, social processes and cultural norms, approaches to psychotherapy, stress and coping, and applications of psychological science.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 1024 - Pathways Through and Beyond the Psychology Major (2 credits)
First Year Experience course introducing students to the psychology major. Discussion of university resources designed to promote student success. Emphasis on career exploration, and finding relevant research and field experiences outside the classroom.
Instructional Contact Hours: (2 Lec, 2 Crd)

PSYC 1094 - Principles of Psychological Research (3 credits)
Philosophical foundation and ethical issues in psychological research. Research design and methodology. Analytic approaches to developing, understanding, interpreting psychological data.
Prerequisite(s): PSYC 1004 or PSYC 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 1524 - Language and the Mind (3 credits)
Examination of what is unique about human language and the evidence that language affects thought. Investigation of how listeners categorize sounds, parse sentences, and access meaning. Examination of what brain damage and speech errors reveal about language in the brain and mind.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 1524

PSYC 2014 - Psychology of Social Interventions (3 credits)
An introduction to the psychological science that underlies behavioral interventions in non-clinical settings. Theories, methods, and applications as they relate to diverse domains such as health, education, prejudice reduction, and the environment. Methodological issues relating to intervention research in psychological science; understanding and limiting possible sources of bias. Relevance and limitations of psychological science for related public policy.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2024 - Psychology Transfer Student Course (1 credit)
First Year Experience course introducing transfer students to the psychology major. Discussion of university resources designed to promote the successful transition from another school to Virginia Tech. Emphasis on career exploration, professional development, and finding relevant research and field experiences outside the classroom.
Instructional Contact Hours: (1 Lec, 1 Crd)

PSYC 2034 - Developmental Psychology (3 credits)
Basic principles of human psychological development from the prenatal period through old age. Interactions between biological and environmental influences on the developing individual. Research methods in developmental science. Cultural influence on parenting practices, identity formation, and attitudes toward the elderly. Survey of recent literature within the areas of perceptual, cognitive, neurobiological, social, and emotional development.
Prerequisite(s): PSYC 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2044 - Psychology of Learning (3 credits)
Survey of fundamental concepts, phenomena, and principles of learning, such as reinforcement/punishment, classical conditioning, and cognitive explanations of retention/forgetting. Traditional learning research, with particular emphasis on methodology and ethical considerations. The behaviorist perspective, and neurobiological and cognitive approaches to understanding learning. The ethical and responsible use of animal models in learning research, and practical applications of learning theory.
Prerequisite(s): PSYC 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2054 - Psychology of Personality (3 credits)
Study of human personality and psychological adjustment: theory and research. Behavioral, cognitive, humanistic, and environmental determinants of personality. Psychological adjustment and personality development.
Prerequisite(s): PSYC 2004 or PSYC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2064 - Introduction to Neuroscience of Behavior (3 credits)
Introduction to biological factors that produce behavior. Neuroanatomy and neurophysiology. The development of the nervous system, and neuroplasticity. Basic neural processes involved in interpreting information, and making decisions. Conducting neuroscience research, and evaluating neuroscience-related claims in the popular media. The ethical and responsible use of nonhuman animal subjects; the ethical application of research findings in neuroscience to current problems such as psychopathy and neurodegenerative disease.
Prerequisite(s): PSYC 1004
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2074 - Animal Behavior (3 credits)
Study of animal behavior: Comparative psychology and ethology, behavioral genetics, evolution of behavior, ecological aspects of behavior, predation, reproduction, and parental care. Some consideration is given to the relevance of animal behavior to human behavior.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2084 - Social Psychology (3 credits)
Introduction to the social behavior of the individual and the group: social perception and forming judgements of others, attitude formation and change, interpersonal attraction, applied psychology. Cultural influences on attitudes toward diversity, prosocial behavior, prejudice, and aggression and conflict. Application of psychological theories and research to address current social problems.
Prerequisite(s): PSYC 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

PSYC 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 3014 - Abnormal Psychology (3 credits)
Survey of various types of psychological disorders and of contrasting theoretical views and representative research on the etiology and prognosis of these disorders. Using the Diagnostic and Statistical Manual (DSM-5) to diagnose psychopathologies accurately. Ethical issues pertaining to clinical practice.
Prerequisite(s): PSYC 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 3024 - Human Behaviors and Natural Environments (3 credits)
Survey of the effects of natural and human-made environments on health and well-being. Historical changes in human-environment relations. Utilizing psychological research methods to investigate the possible impacts of urbanization on human health and well-being. The impacts of culture, region, and socioeconomics on how we utilize our environments, and our ability to change them. Research pertaining to our relationship with nature, use of natural resources, and strategies to encourage behaviors promoting environmental sustainability.
Prerequisite(s): PSYC 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 3034 - Psychological Disorders of Children (3 credits)
An examination of theory, research, and practice as related to the assessment, treatment, and prevention of psychological disorders of children. Special emphasis on the understanding of child behavior disorders from a developmental, clinical-experimental point of view.
Prerequisite(s): (PSYC 2004 or PSYC 1004) and PSYC 3014
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 3054 - Health Psychology (3 credits)
Major theories, strategies, and methods for understanding psychological contributions to health and disease; psychological approaches to the treatment and prevention of disease and unintentional injuries, and health and safety promotion.
Prerequisite(s): PSYC 2004 or PSYC 1004
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 3094 - Advanced Research Methods in Psychological Science (3 credits)
Advanced research and analytical methods. Emphasis on methods for specific research and/or practical questions, critical evaluation of research publications. Extended coverage of design and analysis principles and skills, selection and completion of appropriate statistical tests for given data sets. Student-driven empirical report including literature review, methods, analysis, interpretation, and implications for future research. PSYC majors only.
Prerequisite(s): (PSYC 1094 or PSYC 2094) or STAT 3604 or STAT 3615)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 4014 - History and Systems in Psychology (3 credits)
Overview of modern theories in psychology by consideration of current historical controversies. Traces roots of psychology in natural and social sciences. Considers the diversity of psychological study and the future of psychology. Senior standing in psychology required for undergraduate credit. Graduate standing required for graduate credit.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4024 - Industrial and Organizational Psychology (3 credits)
Overview of psychological theories, research findings, and methods relevant to studying the behavior of individuals in organizations. Topics covered may include prediction of job performance, personnel testing, training and development, and leadership.
Prerequisite(s): PSYC 1004 and (PSYC 1094 or HD 3014 or SOC 3204) and (STAT 2004 or STAT 3005 or STAT 3604 or STAT 3615 or BIT 2405)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4034 - Special Topics in Developmental Psychology (3 credits)
Rotating topics in the development of perceptual, cognitive, and socioemotional functioning throughout the life-span. In-depth, critical evaluation of current research literature and theory within various major age-spans. Developmental research methods, and research ethics. Cross cultural and contextual effects on development. May be repeated with different topics for a maximum of 6 credit hours.
Prerequisite(s): PSYC 1004 and PSYC 2034 and (PSYC 1094 or HD 3014 or SOC 3204)
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

PSYC 4044 - Advanced Learning (3 credits)
Critical analysis of basic paradigms of Pavlovian and Instrumental Conditioning with emphasis on general theories of learning and issues involved in cognition, reinforcement, and memory.
Prerequisite(s): PSYC 1004 and PSYC 2044 and (PSYC 1094 or HD 3014 or SOC 3204)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4054 - Personality Research (3 credits)
Research techniques used in contemporary personality psychology: case histories, correlational methods, experimentation, archival studies, and psychobiography.
Prerequisite(s): PSYC 1004 and PSYC 2054 and (PSYC 1094 or HD 3014 or SOC 3204)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4064 - Physiological Psychology (3 credits)
Presentation of concepts important for the study of neuroscience and behavior with a special emphasis on the classic topics of physiological psychology: brain-behavior relations, sensory integration, physiological correlates of motivation and emotion.
Prerequisite(s): PSYC 1004 and (PSYC 2064 or NEUR 2025) and (PSYC 1094 or HD 3014 or SOC 3204)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4074 - Sensation and Perception (3 credits)
Overview of sensory and perceptual systems and their integration in influencing behavior. Emphasis on sensory receptor characteristics, neural structure, psychophysical data, perceptual phenomena and issues, theories about the human perceptual process.
Prerequisite(s): PSYC 1004 and (PSYC 2064 or NEUR 2025) and (PSYC 1094 or HD 3014 or SOC 3204)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4084 - Advanced Social Psychology (3 credits)
Examines social behavior from four major theoretical orientations: reinforcement, field theory, cognitive, and role theory. Topics may include social learning, social exchange theories, group processes, attitude, and person perception.
Prerequisite(s): PSYC 1004 and (PSYC 1094 or HD 3014 or SOC 3204) and PSYC 2084
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4094 - Theory of Psychological Measurement (3 credits)
Theory of psychological measurement and techniques used to develop and evaluate psychological measures. Coverage of standardization, measurement scales, reliability, validity, score transformations, composite scores, weighted scores, and test construction.
Prerequisite(s): PSYC 1004 and (PSYC 1094 or HD 3014 or SOC 3204) and (STAT 2004 or STAT 3005 or STAT 3604 or STAT 3615 or BIT 2405)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4114 - Cognitive Psychology (3 credits)
An experimentally-oriented survey of human cognitive processes which include attention, memory, and decision making. Role of individual difference variables in each area.
Prerequisite(s): PSYC 1004 and PSYC 2044 and (PSYC 1094 or HD 3014 or SOC 3204)
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4134 - Language Development (3 credits)
Survey of theories, mechanisms, and processes in human language development. Empirical overview of phonology, semantics, syntax, and pragmatics. Developmental trajectories of mono- and multilingual children. Cultural constraints on language. Perception of language and production of language, in typical and atypical subpopulations (e.g., hearing impairment). Junior/Senior Standing.
Prerequisite(s): PSYC 1004 or PSYC 2004
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ENGL 4134

PSYC 4154 - Bilingual Development and Cognition (3 credits)
Survey of the process of language acquisition for children exposed to two languages during their early development. Cognitive development in children growing up in bilingual homes. Exploration of the effects of family factors, social experiences, cultural language norms, and language policies on bilingual children and adults in the current transnational environment of immigration and globalization. The effects of heritage language preservation on cultural identity and issues of equity related to linguistic discrimination in the United States.
Prerequisite(s): PSYC 1004 or PSYC 1524 or ENGL 1524 or ENGL 1504 or HD 1004
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 7 Identity & Equity in U.S., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4184 - The Science of Giving (3 credits)
Overview of the science of giving, altruism, helping, cooperation, and prosocial behaviors and decision making. Exploration of the personality contextual, cognitive, and affective factors that move people to help others in need. Application of psychological and behavioral principles necessary to craft interventions such as nudges to increase giving with emphasis on public policy. Methodological issues related to laboratory and field experiments. Ethical considerations in persuasion and influence.
Prerequisite(s): PSYC 1094 or HD 3014 or SOC 3204
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BDS 4184

PSYC 4194 - Predicting Social Behavior (3 credits)
Overview of the process of predicting human choices, preferences, and actions in social contexts. Applications of measurement theory to data preparation, formatting, and scaling. Implications of psychological biases for data transformation and cleaning. Theory-guided predictor variable selection and development. Applications of machine learning to social settings. Evaluating prediction quality, bias, and generalizability. Developing predictive models in software. Ethical and societal implications of predicting human behavior.
Prerequisite(s): PSYC 1004 and (PSYC 1094 or HD 3014 or SOC 3204) and (STAT 2004 or STAT 3005 or STAT 3604 or STAT 3615 or BIT 2405)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BDS 4194

PSYC 4214 - Cognitive Psychology Laboratory (1 credit)
Design, operation, and analysis of experiments to study human cognitive processes (e.g., attention, memory, and decision-making).
Corequisite(s): PSYC 4114
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4234 - Laboratory in Developmental Psychology (1 credit)
Research design and implementation in the study of perceptual and motor development, language development, cognitive development, and social development.
Prerequisite(s): (PSYC 2004 or PSYC 1004) and PSYC 2034
Corequisite(s): PSYC 4034
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4244 - Laboratory in Advanced Learning (1 credit)
Experimental techniques for studying the development, maintenance, and retention of behavior change in humans and animals. Laboratory exercises in Pavlovian and Instrumental Conditioning, verbal learning and memory.
Corequisite(s): PSYC 4044
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4254 - Personality Research Laboratory (1 credit)
Laboratory course in personality research techniques. Emphasis on experimental, archival, questionnaire, and psychobiographical approaches.
Corequisite(s): PSYC 4054
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4264 - Laboratory in Physiological Psychology (1 credit)
Experimental techniques in the area of physiological psychology including: handling and care of laboratory animals, anesthetic and surgical techniques, and measurement of physiological variables.
Corequisite(s): PSYC 4064
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4274 - Laboratory in Sensation and Perception (1 credit)
Overview of the major experimental techniques and phenomena of sensation and perception. Emphasis on psychophysical methods, signal detection, dark adaptation, perceptual illusions.
Corequisite(s): PSYC 4074
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4284 - Laboratory in Social Psychology (1 credit)
Design, performance, and analysis of experiments in social psychology. Various methodologies used in social research (e.g., laboratory experimentation, field observations) will be studied through actual performance of experiments.
Corequisite(s): PSYC 4084
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4294 - Laboratory in Psychological Measurement (1 credit)
Design and implementation of psychological assessment devices including issues of test construction, reliability, validity, standardizing, and detecting test bias.
Prerequisite(s): (PSYC 2004 or PSYC 1004) and (PSYC 2094 or PSYC 1094) and (STAT 2004 or STAT 3604 or STAT 2405)
Corequisite(s): PSYC 4094
Instructional Contact Hours: (3 Lab, 1 Crd)

PSYC 4354 - Senior Seminar (3 credits)
For Psyc majors. Intended to provide in-depth coverage and discussion of a small set of topics selected by members of the seminar.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4364 - Senior Seminar (3 credits)
For Psyc majors. Intended to provide in-depth coverage and discussion of a small set of topics selected by members of the seminar.
Instructional Contact Hours: (3 Lec, 3 Crd)

PSYC 4454 - Neuroeconomics (3 credits)
Neural processes related to reward, learning, reflection, delay of gratification, and social interaction. Clinical uses of neuroeconomics research techniques. Implications of neuroeconomics, policy, law and business.
Prerequisite(s): NEUR 2026 or ECON 3104
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: ECON 4454, NEUR 4454

PSYC 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

PSYC 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PSYC 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Psychology Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
Introductory Requirements		
PSYC 1004	Introductory Psychology	3
PSYC 1094	Principles of Psychological Research [1]	3
Foundations of Psychology		
Select two of the following:		6
PSYC 2034	Developmental Psychology	
PSYC 2044	Psychology of Learning	
PSYC 2064	Introduction to Neuroscience of Behavior	
PSYC 2084	Social Psychology	
4000-Level Lecture Course with Co-Requisite One-Credit Laboratory		
Select one of the following:		4
Development Lecture/Lab		
PSYC 4034 & PSYC 4234	Special Topics in Developmental Psychology and Laboratory in Developmental Psychology	
Cognition and Learning Lecture/Lab		
PSYC 4044 & PSYC 4244	Advanced Learning and Laboratory in Advanced Learning	
PSYC 4114 & PSYC 4214	Cognitive Psychology and Cognitive Psychology Laboratory	
Biological Lecture/Lab		
PSYC 4064 & PSYC 4264	Physiological Psychology and Laboratory in Physiological Psychology	
PSYC 4074 & PSYC 4274	Sensation and Perception and Laboratory in Sensation and Perception	
Interpersonal Psychology Lecture/Lab		
PSYC 4084 & PSYC 4284	Advanced Social Psychology and Laboratory in Social Psychology	
Industrial/Organizational and Workplace Psychology Lecture Lab		
PSYC 4054 & PSYC 4254	Personality Research and Personality Research Laboratory	
PSYC 4094 & PSYC 4294	Theory of Psychological Measurement and Laboratory in Psychological Measurement	
Psychology Special Topics Senior Seminar		
PSYC 4354/4364	Senior Seminar	3
Subtotal		19
Additional Course Requirements		
Electives within Psychology [2, 3, 4, 5]		
Select three of the following (9 credits, at least 3 credits must be at the 4000 level):		9
Developmental and Focus		

PSYC/ENGL 1524	Language and the Mind
PSYC 2034	Developmental Psychology
PSYC/EDEP 3154	
PSYC 4034	Special Topics in Developmental Psychology
PSYC/ENGL 4134	Language Development
PSYC 4154	Bilingual Development and Cognition
Cognition and Learning Focus	
PSYC 2044	Psychology of Learning
PSYC 3024	Human Behaviors and Natural Environments
PSYC 4044	Advanced Learning
PSYC 4114	Cognitive Psychology
Biological Focus	
PSYC 2064	Introduction to Neuroscience of Behavior
PSYC 2074	Animal Behavior
PSYC 3054	Health Psychology
PSYC 4064	Physiological Psychology
PSYC 4074	Sensation and Perception
PSYC/ECON/NEUR 4454	Neuroeconomics
Interpersonal Focus	
PSYC 2084	Social Psychology
PSYC 4084	Advanced Social Psychology
PSYC 4184	The Science of Giving
PSYC/BDS 4194	Predicting Social Behavior
Industrial/Organizational and Workplace Psychology Focus	
PSYC 2054	Psychology of Personality
PSYC 4024	Industrial and Organizational Psychology
PSYC 4054	Personality Research
PSYC 4094	Theory of Psychological Measurement
Clinical Focus	
PSYC 2014	Psychology of Social Interventions
PSYC 3014	Psychopathology
PSYC 3034	Psychological Disorders of Children
Other Electives	
PSYC 3094	Advanced Research Methods in Psychological Science
PSYC 4014	History and Systems in Psychology
PSYC 2974	Independent Study
PSYC 2994	Undergraduate Research
PSYC 4974	Independent Study
PSYC 4994	Undergraduate Research
First Year Experience	
PSYC 1024	Pathways Through and Beyond the Psychology Major [6] 2
Science Requirement for Psychology	
Beyond Pathways General Education requirements. Select one year of an introductory science sequence with labs, from a sequence or cluster listed below; you must complete a sequence or cluster within the same department. 8	
BIOL 1105 & BIOL 1115 & BIOL 1106 & BIOL 1116	Principles of Biology and Principles of Biology Laboratory and Principles of Biology and Principles of Biology Laboratory
BMSP 2135 & BMSP 2145 & BMSP 2136 & BMSP 2146	Human Anatomy & Physiology and Human Anatomy and Physiology Laboratory and Human Anatomy and Physiology and Human Anatomy and Physiology Laboratory
GEOS 1004 & GEOS 1104 & GEOS 1024 & GEOS 1124	Earth Science: Our Past, Present, and Future and Introduction to Earth Sciences Laboratory and Earth Resources, Society, and Environment and Earth Resources, Society and Environment Laboratory
CHEM 1015 & CHEM 1025 & CHEM 1016 & CHEM 1026	Chemistry in Context and Introduction to Chemistry Laboratory and Chemistry in Context and Introduction to Chemistry Laboratory
CHEM 1035 & CHEM 1045 & CHEM 1036 & CHEM 1046	General Chemistry and General Chemistry Laboratory and General Chemistry and General Chemistry Laboratory
PHYS 1055 & PHYS 1155 & PHYS 1056 & PHYS 1156	Introduction to Astronomy and Astronomy Laboratory and Introduction to Astronomy and Astronomy Laboratory
PHYS 2205 & PHYS 2215 & PHYS 2206 & PHYS 2216	General Physics and General Physics Laboratory and General Physics and General Physics Laboratory
PHYS 2305 & PHYS 2306	Foundations of Physics and Foundations of Physics
Exploring Data [7]	
Select one of the following: 3	
ACIS 1504	Introduction to Business Analytics and Business Intelligence
or BDS 2005	Fundamentals of Behavioral Decision Science
or CS 1014	Introduction to Computational Thinking
or ENGL 203	Analyzing the Sounds of Language
or HD 3024	Community Analytics
or SOC 2104	Quantitative Approaches to Community Research
or SOC 2604	Introduction to Data in Social Context
or PHIL 150	Critical Thinking
or STAT 101	Data in Our Lives
or STAT 200	Introductory Statistics
or STAT 361	Biological Statistics
Exploring Human Diversity	
Select one of the following: 3	
AFST 1714	Introduction to African American Studies
or AFST 1814	Introduction to African Studies
or AFST 2454	Race and Racism
or AFST 2734	The Black Woman in the U.S.
or AINS 1104	Introduction to American Indian Studies
or APS 1704	Introduction to Appalachian Studies
or ECON 1104	Economics of Gender
or EDCI 3024	Issues of Schooling in the United States
or EDCI 3144	Education of Exceptional Learners

or HD 2314	Human Sexuality	
or HD 1134	Introduction to Disabilities Studies	
or PSVP 2044	Peace and Violence	
or RLCL 2204	Race and Gender in Religion and Culture	
or SOC 2004	Social Problems	
or SOC 2024	Sociology of Race and Ethnicity	
or SOC 2034	Diversity and Community Engagement	
or SOC 2514	Asian American Experience	
or SOC 3614	Gender and Work in the U.S.	
or WGS 1824	Introduction to Womens and Gender Studies	
Subtotal		25
Pathways to General Education		
See relevant pages in Psychology Student Handbook for further information		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
Select three credits in Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A)		3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six credits in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
Select six credits in Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04) [8]		6
Pathways Concept 5 - Quantitative and Computational Thinking		
Select 6 credits from the courses listed below:		6
MATH 1014 & MATH 1025	Precalculus with Transcendental Functions and Elementary Calculus (5F)	
MATH 1025 & MATH 1026	Elementary Calculus and Elementary Calculus (5F)	
MATH 1014 & MATH 1524	Precalculus with Transcendental Functions and Business Calculus (5F)	
MATH 1225 & MATH 1026	Calculus of a Single Variable and Elementary Calculus (5F)	
Select one of the following:		3
STAT 3604	Statistics for Social Science [9]	
or STAT 3615	Biological Statistics	
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select three credits in Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
Select three credits in Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		45
Free Electives		
Complete sufficient semester hours of Free Electives to total 120 hours 31 credits of free electives		31
Subtotal		31
Total Credits		**120**

1 PSYC 1094 Principles of Psychological Research: HD 3014 or SOC 3204

2 No course is repeatable, except PSYC 4034, PSYC 2974, PSYC 2994, PSYC 4974, and PSYC 4994.

3 The categorization scheme, placing courses within different foci, is designed simply to help students identify courses of interest; a number of courses could easily fit within 2 or more categories.

4 Some of these courses have prerequisites. Please consult the Course Timetable and Course Catalog.

5 Any courses counting towards the Psychology major requirements must be taken for a letter grade (A-F).

6 PSYC 1024 Pathways Through and Beyond the Psychology Major: Any of the university-approved First Year Experience courses can substitute for PSYC 1024

7 STAT 2004 Introductory Statistics will not count for credit if taken after any Statistics course with a higher number.

8 Only BIOL, CHEM, GEOS, ISC, NEUR, PHYS, and PSYC courses approved for Pathways Concept 4 may be selected to fulfill this requirement.

9 PATHWAYS GENERAL EDUCATION CONCEPT 5 advanced/applied: STAT 3005

The following are to be used to assess satisfactory progress toward a B.S. degree in Psychology:

- Upon having attempted 30 semester hours, students must have completed 12 semester credits that apply to the Pathways to General Education, PSYC 1004 Introductory Psychology and have an overall GPA of 2.00.
- Upon having attempted 72 semester hours, students must have completed 24 semester credits that apply to the Pathways to General Education and have an overall GPA of 2.00. Also, PSYC 1004 Introductory Psychology, PSYC 1094 Principles of Psychological Research, and an additional 3 hr. PSYC course.
- Upon having attempted 96 semester credits, students must have completed all Pathways to General Education Courses and have an overall GPA of 2.00.
- To graduate, students must completed 120 semester hours and have an overall GPA of 2.00.

Graduation Requirements

Prerequisites

Some courses listed on this checksheet have prerequisites; please consult the University Course Catalog or check with your advisor.

In-Major GPA

Students must maintain a minimum in-major GPA of 2.0. All courses taken within the Department of Psychology count toward the in-major GPA.

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign

language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Statistics

Our Website (http://www.stat.vt.edu)

Overview

Statistics courses are offered at both the undergraduate and the graduate levels for students preparing for professions in statistics, for students who need statistical tools to engage in scientific research, and for students who want to acquire knowledge of the important concepts of probability and statistical inference.

Statistics courses for graduate students and programs leading to the M.S. and Ph.D. degrees in statistics are described in the Graduate Catalog (https://catalog.vt.edu/graduate/) and in a special bulletin available from the department.

Bachelor of Science in Statistics

All statistics majors are required to own specified personal computers and software. Consult the department for details.

Internship positions are available in industry and government, offering valuable practical experience. Students participating in such an experience can receive academic credit which will count towards graduation requirements.

Minor in Statistics

Please visit the University Registrar website at http://registrar.vt.edu/graduation-multi-brief/index1.html to view requirements for the minor.

The department reserves the right to withhold credit if a student takes a course, the content of which is partially duplicated in a course already taken (see "Course Duplications" below).

The Statistical Applications and Innovations Group

Associated with the Department, the Statistical Applications and Innovations Group (SAIG) provides assistance for research projects to participating members of the University community and outside organizations. Statistics Department faculty members and students collaborate to design studies, analyze data, and interpret results for Virginia Tech affiliated clients and external clients in business, industry, government, and non-profit organizations. SAIG provides both experiential learning for statistics students and service to the University and beyond. To learn more, visit https://saig.stat.vt.edu/.

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the Pathways to General Education (https://www.pathways.prov.vt.edu/about/concepts.html) and toward the degree.

Satisfactory progress requirements toward the B.S. in Statistics can be found on the major checksheet by visiting the University Registrar website at https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html.

Course Duplications

- No credit will be given for STAT 2004 Introductory Statistics if taken with or after any other statistics course, except STAT 2984 Special Study.
- For non-majors, all of the following are partial duplications: STAT 3005 Statistical Methods, STAT 3604 Statistics for Social Science, STAT 3615 Biological Statistics, STAT 4604 Statistical Methods for Engineers, and STAT 4705 Probability and Statistics for Engineers.
- For majors, STAT 4604 Statistical Methods for Engineers and STAT 4705 Probability and Statistics for Engineers may replace STAT 3005 Statistical Methods if taken before becoming a major.
- All the following are partial duplications: STAT 3006 Statistical Methods, STAT 3616 Biological Statistics, and STAT 4706 Probability and Statistics for Engineers.
- No credit will be given for STAT 3704 Statistics for Engineering Applications if taken after any of the following: STAT 3005 Statistical Methods, STAT 3615 Biological Statistics, STAT 4604 Statistical Methods for Engineers, and STAT 4705 Probability and Statistics for Engineers.
- BIT 2405 Introduction to Business Statistics, Analytics, and Modeling may not be used as a substitute for credit as a statistics course unless the student was officially registered as a Business major at the time BIT 2405 Introduction to Business Statistics, Analytics, and Modeling was taken.

Computer Literacy

Many statistics courses involve the use of statistics software, primarily MINITAB, SAS, JMP or R. Experience with the software is not expected, but students should have familiarity with either the Windows or Macintosh operating system and have access to a computer.

Course Projects

Many of the upper-division courses include a project, generally to be completed in small groups. These projects are designed to give students the kind of insight and experience in realistic statistical practice that cannot be obtained in classroom lectures or short-term homework assignments.

- Statistics Majors with Statistical Data Science Option (p. 1354)
- Statistics Majors with Statistical Methods and Theory Option (p. 1356)

Head: D. Higdon
Professors: P. Du, M. Ferreira, R. Fricker, R. Gramacy, F. Guo, D. Higdon, Y. Hong, I. Hoeschelle, I. Kim, J. Morgan, E. Smith, G. Vining.
Associate Professors: X. Deng, C. Franck, P, L. House, L. Johnson, Leman, G. Terrell, X. Wu, H. Zhu
Professor of Practice: A. Hanlon, J. Van Mullekom, T. Woteki
Associate Professor of Practice: F. Faltin, A. Patterson
Assistant Professors: M. Liu, X. Xing, and J. Datta
Collegiate Associate Professors: A. Driscoll, J. Robertson Evia
Collegiate Assistant Professors: C. Lucero, H. Mahmoud, F. McCarty, Sierra Merkes
Research Professor: L. Freeman
Research Associate Professor: A. Tegge
Instructors: J. Loda, J. Russell, H. Tavera, Z. Zhang

Undergraduate Course Descriptions (STAT)

STAT 1004 - The First Year Experience in Learning from Data (2 credits)
Introduction to the field of statistics and aspects of college life for first year students. Topics included: history of the statistics; key roles of statisticians in field, such as actuarial sciences, pharmaceutical, medical, and bioinformatics industries, governmental agencies, academia; fundamental principles of statistical fields of study and applications; exploring data sets; and aspects of college life for first-year students.
Instructional Contact Hours: (2 Lec, 2 Crd)

STAT 1014 - Data in Our Lives (3 credits)
Develop and practice the process of thinking critically with data in the context of real world problems. Import, manage, summarize, and visualize data using programmable, statistical software. Make data discoveries, make decisions, generate hypotheses, and/or communicate findings in data. Consider laws of probability and personal biases to weigh decisions. Recognize ethical issues and vulnerabilities in analyses when learning from data and extrapolating to large populations.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STAT 2004 - Introductory Statistics (3 credits)
Fundamental concepts and methods of statistics with emphasis on interpretation of statistical arguments and statistical reasoning. Using modern, accessible statistical software and technology, an introduction to design of experiments (including data collection), data analysis, data visualization, correlation and regression, concepts of probability theory, sampling errors, confidence intervals, and hypothesis tests. Include real-world applications to develop problem-solving skills and consider ethical implications within the context of learning from data. No credit will be given for 2004 if taken with or after any other statistics course, except STAT 2984.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 2094 - Basic R for Statistics (1 credit)
Introduction to R/RStudio programming techniques with an emphasis on basic statistical visualizations, descriptive and summary statistics, and elementary inferential statistics. Topics include data types, data structures, importing/exporting, and manipulating datasets, functions, packages, and RMarkdown.
Instructional Contact Hours: (1 Lec, 1 Crd)

STAT 2274 - Basic Python For Statistics (1 credit)
Use of Python code and libraries (SciPy and NumPy) to support basic statistical tasks, create graphical displays, and perform statistical inference and hypothesis tests to evaluate datasets. Use of editors and AI to generate Python code.
Instructional Contact Hours: (1 Lec, 1 Crd)

STAT 2964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STAT 2974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

STAT 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STAT 2984O - Special Study (1-19 credits)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv.
Instructional Contact Hours: Variable credit course

STAT 3005 - Statistical Methods (3 credits)
3005: Basic statistical methodology: exploratory data techniques, estimation, inference, comparative analysis by parametric, nonparametric, and robust procedures. Analysis of variance (one-way), multiple comparisons, and categorical data. Includes real-world examples. Develops problem-solving skills and ethical reasoning within the context of learning from data. 3006: Analysis of variance, simple and multiple, linear and nonlinear regression, analysis of covariance. Use of MINITAB. STAT 3005 duplicates STAT 3615 and STAT 4604, only one may be taken for credit. STAT 3006 duplicates STAT 3616, STAT 4604 and STAT 4706, only one may be taken for credit.
Prerequisite(s): MATH 1225
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 3006 - Statistical Methods (3 credits)
3005: Basic statistical methodology: exploratory data techniques, estimation, inference, comparative analysis by parametric, nonparametric, and robust procedures. Analysis of variance (one-way), multiple comparisons, and categorical data. Includes real-world examples. Develops problem-solving skills and ethical reasoning within the context of learning from data. 3006: Analysis of variance, simple and multiple, linear and nonlinear regression, analysis of covariance. Use of MINITAB. STAT 3005 duplicates STAT 3615 and STAT 4604, only one may be taken for credit. STAT 3006 duplicates STAT 3616, STAT 4604 and STAT 4706, only one may be taken for credit.
Prerequisite(s): STAT 3005 or STAT 4705 or CMDA 2005
Corequisite(s): MATH 1206 or MATH 1226 for 3005.
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 3094 - SAS Programming (3 credits)
Introduction to basic programming techniques: creating DATA and PROC statements, libraries, functions, programming syntax and formats. Other topics include loops, SAS Macros and PROC IML. Emphasis is placed on using these tools for statistical analyses. The pre-requisite may be substituted for an equivalent course.
Prerequisite(s): STAT 3005 or CMDA 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 3104 - Probability and Distributions (3 credits)
Probability theory, including set theoretic and combinatorial concepts; in-depth treatment of discrete random variables and distributions, with some introduction to continuous random variables; introduction to estimation and hypothesis testing.
Prerequisite(s): (MATH 1226 or MATH 1026) and (STAT 3005 or STAT 3615 or STAT 4705 or CMDA 2005)
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 3204 - Data Visualization (3 credits)
Using quantitative and qualitative thinking to develop a working knowledge of data visualization considerations, methods and techniques that lead to: understanding the audience(s); creating ethical data stories; data visualization as a method of storytelling; ethical and appropriate data exploration, manipulation, and cleaning; design considerations; types of visualizations; tools and resources for creating visualizations.
Prerequisite(s): (STAT 1014 or STAT 2004 or STAT 3005 or STAT 3604 or STAT 3615 or STAT 4705 or STAT 4706 or STAT 4714 or CMDA 2005 or CMDA 2014) and (COMM 1016 or ENGL 1105)
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 3274 - Introduction to Sports Analytics Research (3 credits)
Introduction to sports analytics, sources of sports analytics data and data collection methods, visualization techniques, game performance statistics, inferential statistics and predictive modeling techniques for sports data. Role and applications of data analytics in the sports industry.
Prerequisite(s): CMDA 2006 or STAT 3006
Corequisite(s): CMDA 3654 or CS 3654 or STAT 3654.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 3274

STAT 3504 - Nonparametric Statistics (3 credits)
Statistical methodology based on ranks, empirical distributions, and runs. One and two sample tests, ANOVA, correlation, goodness of fit, and rank regression, R-estimates and confidence intervals. Comparisons with classical parametric methods. Emphasis on assumptions and interpretation.
Prerequisite(s): STAT 3006 or STAT 3616 or STAT 4106 or STAT 4604 or STAT 4706 or CMDA 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 3604 - Statistics for Social Science (3 credits)
Statistical methods for nominal, ordinal, and interval levels of measurement. Topics include descriptive statistics, elements of probability, discrete and continuous distributions, one and two sample tests, measures of association. Emphasis on comparison of methods and interpretations at different measurement levels. Includes real-world applications to develop problem-solving skills and ethical reasoning within the context of learning from data.
Prerequisite(s): MATH 1014 or MATH 1025 or MATH 1214 or MATH 1225 or MATH 1524
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 3615 - Biological Statistics (3 credits)
Descriptive and inferential statistics in a biological context with real-world examples. In analytical contexts, develops problem-solving skills and ethical reasoning. 3615: Fundamental principles, one- and two-sample parametric inference, simple linear regression, frequency data. 3616: One- and two-way ANOVA, multiple regression, correlation, nonparametrics, using a computer package. STAT 3615 partially duplicates STAT 3005 and STAT 4604, only one may be taken for credit. STAT 3616 partially duplicates STAT 3006, 4604 and 4706, only one may be taken for credit.
Prerequisite(s): MATH 1225 or MATH 1025 or MATH 1524 or ISC 1105
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 3616 - Biological Statistics (3 credits)
Descriptive and inferential statistics in a biological context with real-world examples. In analytical contexts, develops problem-solving skills and ethical reasoning. 3615: Fundamental principles, one- and two-sample parametric inference, simple linear regression, frequency data. 3616: One- and two-way ANOVA, multiple regression, correlation, nonparametrics, using a computer package. STAT 3615 partially duplicates STAT 3005 and STAT 4604, only one may be taken for credit. STAT 3616 partially duplicates STAT 3006, 4604 and 4706, only one may be taken for credit.
Prerequisite(s): STAT 3615
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 3654 - Introductory Data Analytics and Visualization (3 credits)
Basic principles and techniques in data analytics; methods for the collection of, storing, accessing, and manipulating standard-size and large datasets; data visualization; and identifying sources of bias.
Prerequisite(s): (CS 1114 or CS 1044 or CS 1054 or CS 1064) and (MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005) and (STAT 3006 or STAT 4105 or STAT 4705 or STAT 4714 or CMDA 2006)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 3654, CS 3654

STAT 3704 - Statistics for Engineering Applications (2 credits)
Introduction to statistical methodology with emphasis on engineering experimentation: probability distributions, estimation, hypothesis testing, regression, and analysis of variance. Only one of the courses 3704, 4604, 4705, and 4714 may be taken for credit.
Prerequisite(s): MATH 2224 or MATH 2224H or MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005
Instructional Contact Hours: (2 Lec, 2 Crd)

STAT 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STAT 4004 - Methods of Statistical Computing (3 credits)
Computationally intensive computer methods used in statistical analyses. Statistical univariate and multivariate graphics; resampling methods including bootstrap estimation and hypothesis testing and simulations; classification and regression trees; scatterplot smoothing and splines.
Prerequisite(s): STAT 4105 and STAT 4214
Instructional Contact Hours: (4 Lec, 3 Crd)

STAT 4024 - Communication in Statistical Collaborations (3 credits)
Theory and examples of effective communication in the context of statistical collaborations. Practice developing the communication skills necessary to be effective statisticians using peer feedback and self-reflection. Topics include helping scientists answer their research questions, writing about and presenting statistical concepts to a non-statistical audience, and managing an effective statistical collaboration meeting. Senior standing in the Department of Statistics.
Prerequisite(s): STAT 4214 and STAT 4204
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4094 - Introduction to Programming in R (1 credit)
Introduction to R programming techniques with an emphasis on statistical analyses. Topics include: data objects, loops, importing/exporting datasets, graphics, functions, t-tests, ANOVA, linear regression, nonparametric tests, and logistic regression.
Prerequisite(s): STAT 3615 or STAT 3005
Instructional Contact Hours: (1 Lec, 1 Crd)

STAT 4105 - Theoretical Statistics (3 credits)
4105: Probability theory, counting techniques, conditional probability; random variables, moments; moment generating functions; multivariate distributions; transformations of random variables; order statistics. 4106: Convergence of sequences of random variables; central limit theorem; methods of estimation; hypothesis testing; linear models; analysis of variance. STAT 4105 partially duplicates STAT 4705, STAT 4714, and STAT 4724, only one may be taken for credit.
Prerequisite(s): (MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005) and STAT 3104
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4106 - Theoretical Statistics (3 credits)
4105: Probability theory, counting techniques, conditional probability; random variables, moments; moment generating functions; multivariate distributions; transformations of random variables; order statistics. 4106: Convergence of sequences of random variables; central limit theorem; methods of estimation; hypothesis testing; linear models; analysis of variance. STAT 4105 partially duplicates STAT 4705, STAT 4714, and STAT 4724, only one may be taken for credit.
Prerequisite(s): STAT 4105
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4204 - Experimental Designs (3 credits)
Fundamental principles of designing and analyzing experiments with application to problems in various subject matter areas. Discussion of completely randomized, randomized complete block, and Latin square designs, analysis of covariance, split--plot designs, factorial and fractional designs, incomplete block designs.
Prerequisite(s): STAT 3006 or STAT 3616 or STAT 4106 or STAT 4706 or STAT 5605 or STAT 5615 or CMDA 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4214 - Methods of Regression Analysis (3 credits)
Multiple regression including variable selection procedures; detection and effects of multicollinearity; identification and effects of influential observations; residual analysis; use of transformations. Non-linear regression, the use of indicator variables, and logistic regression. Use of SAS.
Prerequisite(s): STAT 3006 or STAT 3616 or STAT 4106 or STAT 4706 or STAT 5606 or STAT 5616 or CMDA 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4274 - Sports Analytics Statistical Research (3 credits)
Statistical analysis of sports data. Game performance statistics and expected scores. Analysis of player performance, player tracking, team performance, and sports betting. Bayesian methods and prediction models applied to sports data. Decision-making. Assessing sports analytics research and literature.
Prerequisite(s): (STAT 4214 and STAT 4444) or (CMDA 4654 or CS 4654 or STAT 4654) or (STAT 3274 or CMDA 3274)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 4274

STAT 4364 - Introduction to Statistical Genomics (3 credits)
Statistical methods for bioinformatics and genetic studies, with an emphasis on statistical analysis, assumptions, and problem-solving. Topics include: commonly used statistical methods for gene identification, association mapping and other related problems. Focus on statistical tools for gene expression studies and association studies, multiple comparison procedures, likelihood inference and preparation for advanced study in the areas of bioinformatics and statistical genetics.
Prerequisite(s): (MATH 2224 or MATH 2224H or MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005) and (STAT 3104 or STAT 4105 or STAT 4705 or CMDA 2006) and (STAT 3006 or STAT 3616 or STAT 4706 or CMDA 2006)
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4444 - Applied Bayesian Statistics (3 credits)
Introduction to Bayesian methodology with emphasis on applied statistical problems: data displaying, prior distribution elicitation, posterior analysis, models for proportions, means and regression.
Prerequisite(s): (MATH 2224 or MATH 2224H or MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005) and (STAT 3104 or STAT 4105 or STAT 4705 or CMDA 2006) and STAT 3006 or STAT 3616 or STAT 4706
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4504 - Applied Multivariate Analysis (3 credits)
Non-mathematical study of multivariate analysis. Multivariate analogs of univariate test and estimation procedures. Simultaneous inference procedures. Multivariate analysis of variance, repeated measures, inference for dispersion and association parameters, principal components analysis, discriminate analysis, cluster analysis. Use of SAS.
Prerequisite(s): STAT 3006 or STAT 4706 or CMDA 2006 or STAT 3616
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4514 - Introduction to Categorical Data Analysis (3 credits)
Statistical approaches to analyze categorical data. Probability computation and distribution specification, interval estimation and hypothesis testing, formulating and fitting generalized linear models including logistic and Poisson regression, algorithms used for model fitting, variable selection, and classification trees and supervised learning.
Prerequisite(s): STAT 3006 or STAT 3616 or STAT 4106 or STAT 4706
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4524 - Sample Survey Methods (3 credits)
Statistical methods for the design and analysis of survey sampling. Fundamental survey designs. Methods of randomization specific to various survey designs. Estimation of population means, proportions, totals, variances, and mean squared errors. Design of questionnaires and organization of a survey.
Prerequisite(s): STAT 3006 or STAT 3616 or STAT 4106 or STAT 4706 or STAT 5606 or STAT 5616
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4534 - Applied Statistical Time Series Analysis (3 credits)
Applied course in time series analysis methods. Topics include regression analysis, detecting and address autocorrelation, modeling seasonal or cyclical trends, creating stationary time series, smoothing techniques, forecasting and forecast errors, and fitting autoregressive integrated moving average models.
Prerequisite(s): STAT 3006 or STAT 4104 or STAT 4706 or STAT 4714 or STAT 3616 or BIT 2406 or CMDA 2006
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4584 - Advanced Calculus for Statistics (3 credits)
Introduction to those topics in advanced calculus and linear algebra needed by statistics majors. Infinite sequences and series. Orthogonal matrices, projections, quadratic forms. Extrema of functions of several variables. Multiple integrals, including convolution and nonlinear coordinate changes.
Prerequisite(s): (MATH 1114 or MATH 2114 or MATH 2114H or MATH 2405H) and (MATH 1225) and (MATH 1226) and (MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005)
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4604 - Statistical Methods for Engineers (3 credits)
Introduction to statistical methodology with emphasis on engineering applications: probability distributions, estimation, hypothesis testing, regression, analysis of variance, quality control. Only one of the courses 4604, 4705, and 4714 may be taken for credit. STAT 4604 partially duplicates STAT 3005, STAT 3615, STAT 3006, STAT 3616 and STAT 4706. Only one may be taken for credit.
Prerequisite(s): MATH 1226
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4654 - Intermediate Data Analytics and Machine Learning (3 credits)
A technical analytics course. Covers supervised and unsupervised learning strategies, including regression, generalized linear models, regularization, dimension reduction methods, tree-based methods for classification, and clustering. Upper-level analytical methods shown in practice: e.g., advanced naive Bayes and neural networks.
Prerequisite(s): (STAT 3654 or CMDA 3654 or CS 3654) and (CMDA 2006 or STAT 3104 or STAT 4106 or STAT 4706)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 4654, CS 4654

STAT 4664 - Computational Intensive Stochastic Modleing (3 credits)
Stochastic modeling methods with an emphasis in computing are taught. Select concepts from the classical and Bayesian paradigms are explored to provide multiple perspectives for how to learn from complex, datasets. There is particular focus on nested, spatial, and time series models.
Prerequisite(s): (STAT 4106 or CMDA 3605) and (CS 1114 or CS 1064 or STAT 2005)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CMDA 4664

STAT 4705 - Probability and Statistics for Engineers (3 credits)
Basic concepts of probability and statistics with emphasis on engineering applications. 4705: Probability, random variables, sampling distributions, estimation, hypothesis testing, simple linear regression correlation, one-way analysis of variance. 4706: Multiple regression, analysis of variance, factorial and fractional experiments. Only one of the courses 3704, 4604, 4705, 4714, and 4724 may be taken for credit.
Prerequisite(s): MATH 2224 or MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4706 - Probability and Statistics for Engineers (3 credits)
Basic concepts of probability and statistics with emphasis on engineering applications. 4705: Probability, random variables, sampling distributions, estimation, hypothesis testing, simple linear regression correlation, one-way analysis of variance. 4706: Multiple regression, analysis of variance, factorial and fractional experiments. Only one of the courses 3704, 4604, 4705, and 4714 may be taken for credit.
Prerequisite(s): STAT 4705 or STAT 4105 or ISE 2024
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4714 - Probability and Statistics for Electrical Engineers (3 credits)
Introduction to the concepts of probability, random variables, estimation, hypothesis testing, regression, and analysis of variance with emphasis on application in electrical engineering. Only one of the courses 3704, 4604, 4705, 4714 and 4724 may be taken for credit.
Prerequisite(s): MATH 2224 or MATH 2204 or MATH 2204H or MATH 2406H or CMDA 2005
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4744 - Deep Learning (3 credits)
Introduction to deep learning, including algorithms, theoretical motivations, and implementation in practice. Basic neural network architectures and optimizations. Multilayer perceptrons, backpropagation, automatic differentiation, and stochastic gradient descent. Convolutional neural networks, recurrent neural networks and the attention mechanism. Generative models, variational autoencoders, and generative adversarial networks. Reinforcement learning, Q learning and design of simple AI systems. Python programming language. Emphasis on efficient implementation, optimization, and scalability. Creation of deep learning models in the context of different types of real applications such as image classification and language processing.
Prerequisite(s): (STAT 3104 or CMDA 2006) and (STAT 4214 or CMDA 4654 or STAT 4654 or CS 4654)
Instructional Contact Hours: (3 Lec, 3 Crd)

STAT 4804 - Elementary Econometrics (3 credits)
Economic applications of mathematical and statistical techniques: regression, estimators, hypothesis testing, lagged variables, discrete variables, violations of assumptions, simultaneous equations.
Prerequisite(s): AAEC 1005 and (STAT 3615 or STAT 3005 or STAT 3604 or BIT 2405)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: AAEC 4804

STAT 4964 - Field Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STAT 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STAT 4974H - Independent Study (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

STAT 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

STAT 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

STAT 4994H - Undergraduate Research (1-19 credits)
Honors section.
Instructional Contact Hours: Variable credit course

Statistics Majors with Statistical Data Science Option

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
STAT 3006	Statistical Methods	3
STAT 3104	Probability and Distributions	3
STAT 4105	Theoretical Statistics	3
STAT 4106	Theoretical Statistics	3

STAT 4204	Experimental Designs	3
STAT 4214	Methods of Regression Analysis	3
STAT 4444	Applied Bayesian Statistics	3
Subtotal		21
Major Requirements		
STAT/CMDA/CS 3654	Introductory Data Analytics and Visualization	3
STAT 4004	Methods of Statistical Computing	3
STAT 4024	Communication in Statistical Collaborations	3
MATH 2204	Introduction to Multivariable Calculus	3
MATH 2114	Introduction to Linear Algebra	3
*All students completing a B.S. in Statistics must complete STAT 3005 Statistical Methods and MATH 1225-1226. This requirement is included in Pathways Concept 5.		
Select one of the following:		3
CS 1064	Introduction to Programming in Python	
CS 1114	Introduction to Software Design	
Subtotal		18
Option Required Courses		
STAT/CMDA/CS 4654	Intermediate Data Analytics and Machine Learning	3
Select two of the following:		6
CS 1064	Introduction to Programming in Python	
CS 1114	Introduction to Software Design	
CS 2064	Intermediate Programming in Python	
CS 2114	Software Design and Data Structures	
STAT 3094	SAS Programming	
**These courses must be different from the courses completed to meet the computer programming requirements in the Major Requirements.		
Restricted Electives		
Select four of the following (at least **two** must be STAT)		12
STAT 3204	Data Visualization	
STAT/CMDA 3274	Introduction to Sports Analytics Research	
STAT 3504	Nonparametric Statistics	
STAT/CMDA 4274	Sports Analytics Statistical Research	
STAT 4364	Introduction to Statistical Genomics	
STAT 4504	Applied Multivariate Analysis	
STAT 4514	Introduction to Categorical Data Analysis	
STAT 4524	Sample Survey Methods

Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (1F)	3
ENGL 1106	First-Year Writing (1F)	3
ENGL 3764	Technical Writing (1A)	3
Pathways Concept 2 - Critical Thinking in the Humanities		
Select six credits in Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
Select six credits in Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03)		6
Pathways Concept 4 - Reasoning in the Natural Sciences		
Select six credits in Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04)		6
To fulfill the Pathways Concept 4: Reasoning in the Natural Sciences requirements, only BIOL, CHEM, GEOS, ISC, NEUR, PHYS, and PSYC courses approved for Pathways Concept 4 may be selected.		
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1225 & MATH 1226	Calculus of a Single Variable and Calculus of a Single Variable (required of all students majoring in Statistics; 5F)	8
STAT 3005	Statistical Methods (required of all students majoring in Statistics; 5F)	3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Select 6 credits = 3 in design + 3 in arts, or 6 in integrated design and arts)		6
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Select three credits in Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Subtotal		47
Total Credits		**120**

1 For Economic majors or minors, ECON 4304 can substitute for STAT 4804.

2 A maximum of 3 credits from either STAT 4964 (for an internship or other summer experience) or STAT 4994 may count as a Statistics elective with prior approval from the department

[3] An upper-level course that is not offered by the Department of Statistics. Be aware of all prerequisites.
[4] Be aware that priority enrollment is given to BIT majors.

Satisfactory Progress Towards Degree and Minimum Grade Requirements

- Within the first two attempts, including attempts ending in course withdrawal, students must earn a C- or better in all MATH, STAT, or CS designated courses for the degree (or equivalents thereof).
- It is recommended that, upon attempting 72 credit hours, students will have completed STAT 3005 Statistical Methods, MATH 1225 Calculus of a Single Variable, MATH 1226 Calculus of a Single Variable, MATH 2114 Introduction to Linear Algebra, MATH 2204 Introduction to Multivariable Calculus, and CS 1064 Introduction to Programming in Python or CS 1114 Introduction to Software Design.
- Upon having attempted 90 semester credits, students must have an in-major GPA of 2.00 or better.

Graduation Requirements

Virginia Tech requires 120 credit hours to graduate with a GPA of 2.0 or greater for all hours attempted. The 120 credit hours must include all required courses for the statistics major as outlined in this check-sheet. Within the first two attempts, including attempts ending in course withdrawal, students must earn a C- or better in all MATH, STAT, or CS designated courses for the degree (or equivalents thereof). In addition, students must have an in-major GPA of 2.0 or greater. All STAT courses, any course taken to fulfill Statistical Data Science option elective credit, and all required MATH and CS courses will be used to calculate in-major GPA. If 120 credit hours are reached and a student does not meet the GPA requirement, the student must take additional STAT courses to raise the in-major GPA to a 2.0.

Prerequisites

Some courses listed on this checksheet may have prerequisites; please consult the Undergraduate Course Catalog or check with your advisor for more information.

Acceptable Substitutions

Note: CMDA 2005-CMDA 2006 is equivalent to all the following: STAT 3005 **AND** STAT 3006 **AND** STAT 3104 **AND** (MATH 2214 OR MATH 2214H) **AND** (MATH 2204 OR MATH 2204H)

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.Course Substitutions

Systems Biology

Our Website (https://www.ais.science.vt.edu/academics/sysbio.html)

Overview

The Systems Biology program is a joint effort of the departments of Biological Sciences, Physics, Chemistry, Mathematics and Computer Science. The program resides in, and is organized as a division of, the College of Science's Academy of Integrated Science.

A "systems approach" to biology involves the study of the biological, chemical, and physical processes within living organisms as they interact in complex ways to produce life-supporting behaviors. The Virginia Tech program in Systems Biology focuses on the powerful, emerging paradigm of molecular systems biology, i.e., on computational, systems-level approaches that connect the biochemical and genetic properties of individual macromolecules (DNA, RNA, protein, lipids, polysaccharides) with the physiological behavior of living cells and tissues. These levels of biological organization, which comprise the gap between interacting macromolecules and cell physiology, embody an active area of research producing technological and biomedical innovations. The Systems Biology program bridges the molecular/cell divide, training students for employment or graduate education in this burgeoning field.

Satisfactory Progress

University policy requires that students who are making satisfactory progress toward a degree meet minimum criteria toward the General Education (Curriculum for Liberal Education or Pathways to General Education) (see "Academic Policies (p. 9)") and toward the degree.

Satisfactory progress requirements toward the B.S. in Systems Biology can be found on the major checksheet by visiting the University Registrar website at https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html.

Minor in Systems Biology

Please visit the University Registrar's website at https://www.registrar.vt.edu/graduation-multi-brief/checksheets.html for requirements toward a minor in Systems Biology.

- Systems Biology Major (p. 1360)

Division Leader: I. Lazar
Program Manager: C. Conley
Principle Faculty: F. Aylward, A. Banerjee, W. Baumann, A. M. Brown, Y. Cao, J. Chen, L. Childs, M. Chung, D. Cimini, S. Ciupe, S. Hauf, R. Jensen, P. Kraikivski, L. Li, and T.M. Murali

Undergraduate Course Descriptions (SYSB)

SYSB 2024 - Fundamentals of Systems Biology (3 credits)
Introduction to fundamental concepts of systems biology: biological systems, molecular regulatory networks, modeling approaches in systems biology with case studies, high-throughput data generation and bioinformatics data processing.
Prerequisite(s): MATH 1225 and (BIOL 1105 or ISC 1106H) and (CHEM 1036 or CHEM 1056 or CHEM 1056H or ISC 1106H)
Instructional Contact Hours: (3 Lec, 3 Crd)

SYSB 2034 - Mathematical Methods in Systems Biology (3 credits)
Fundamental mathematical methods in systems biology, including differential equations, graph theory, Boolean mathematics, and concepts of probability. Applications of these methods to developing models of biological regulatory networks and dynamical systems. Software tools for Systems Biology.
Prerequisite(s): SYSB 2024 and MATH 1226 and (CS 1064 or CS 1114)
Corequisite(s): MATH 2114, MATH 2114H
Instructional Contact Hours: (3 Lec, 3 Crd)

SYSB 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SYSB 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

SYSB 3035 - Genomics and Bioinformatics (4 credits)
Bioinformatic approaches in omics, namely genomics and transcriptomics. 3035: Genomic architecture and evolution. Gene expression and post-translational regulation. Structure and function of genes and other genetic elements. Experimental techniques for generating genomic and transcriptomic data. 3036: Statistical, evolutionary, and computational models and methods to analyze omics data. Techniques for visualization and biological interpretation of omics data derived from experiments. Application of Python and R to bioinformatics. Case studies and specific applications in molecular biology, including comparative genomics, cancer, and infectious diseases.
Prerequisite(s): BIOL 2004
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

SYSB 3036 - Genomics and Bioinformatics (4 credits)
Bioinformatic approaches in omics, namely genomics and transcriptomics. 3035: Genomic architecture and evolution. Gene expression and post-translational regulation. Structure and function of genes and other genetic elements. Experimental techniques for generating genomic and transcriptomic data. 3036: Statistical, evolutionary, and computational models and methods to analyze omics data. Techniques for visualization and biological interpretation of omics data derived from experiments. Application of Python and R to bioinformatics. Case studies and specific applications in molecular biology, including comparative genomics, cancer, and infectious diseases.
Prerequisite(s): SYSB 3035
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

SYSB 3115 - Network Dynamics and Cell Physiology (4 credits)
In-depth study of how molecular regulatory networks determine the physiological properties of prokaryotic and eukaryotic cells. 3115: Biochemical reaction networks, nonlinear dynamical systems, parameter estimation, bifurcation theory, switches and oscillators, gene regulatory networks, signaling pathways, metabolic networks, neural networks, applications. 3116: Stochastic effects, cell cycle and cancer, spatial effects, motility, development, tissue dynamics, applications.
Prerequisite(s): SYSB 2034
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

SYSB 3116 - Network Dynamics and Cell Physiology (4 credits)
In-depth study of how molecular regulatory networks determine the physiological properties of prokaryotic and eukaryotic cells. 3115: Biochemical reaction networks, nonlinear dynamical systems, parameter estimation, bifurcation theory, switches and oscillators, gene regulatory networks, signaling pathways, metabolic networks, neural networks, applications. 3116: Stochastic effects, cell cycle and cancer, spatial effects, motility, development, tissue dynamics, applications.
Prerequisite(s): SYSB 3115
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

SYSB 4024 - Careers and Professionalism in Systems Biology (2 credits)
Career planning, interviewing skills, and training in written and oral communication in systems biology. Critical evaluation of research, effective communication of scientific results, ethical standards in science, societal trends.
Prerequisite(s): SYSB 3036 and SYSB 3116
Corequisite(s): SYSB 4065
Instructional Contact Hours: (2 Lec, 2 Crd)

SYSB 4065 - Research Experience in Systems Biology (2 credits)
Training and practical experience in the conduct of systems biology research. 4065: Plan a research project, develop a research hypothesis, and perform preliminary testing and analysis. 4066: Execute, refine, complete, and document the projects results.
Prerequisite(s): SYSB 3036 and SYSB 3116
Corequisite(s): SYSB 4135
Instructional Contact Hours: (2 Lec, 2 Crd)

SYSB 4066 - Research Experience in Systems Biology (2 credits)
Training and practical experience in the conduct of systems biology research. 4065: Plan a research project, develop a research hypothesis, and perform preliminary testing and analysis. 4066: Execute, refine, complete, and document the projects results.
Prerequisite(s): SYSB 4065
Corequisite(s): SYSB 4136
Instructional Contact Hours: (2 Lec, 2 Crd)

SYSB 4114 - Applied Models of Gene Regulatory Networks (3 credits)
Dynamic modeling of gene regulatory networks. Gene regulatory networks with oscillatory and switch-like dynamic behavior. Design of synthetic genetic switches and oscillators. Modeling gene regulation controlling cell fate, cell differentiation, cell-to-cell communication, synchronization and developmental processes. Real-world research problems and applications.
Prerequisite(s): SYSB 2034 and SYSB 3116
Instructional Contact Hours: (3 Lec, 3 Crd)

SYSB 4224 - Big Data Analysis Methods in Systems Biology (3 credits)
Big data analysis in systems biology. Emphasis on data storage/retrieval and curation, statistical modeling of gene expression, enrichment analysis, clustering, parameter optimization and estimation in systems biology models, linear and nonlinear classification methods.
Prerequisite(s): (SYSB 2034 or MATH 1226) and (STAT 3005 or STAT 3615)
Instructional Contact Hours: (3 Lec, 3 Crd)

SYSB 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

SYSB 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Subtotal		49
Total Credits		**120**

1 Courses have prerequisites or corequisites. Students are required to double check course prerequisites and equivalents. Please see your advisor or consult the Undergraduate Course Catalog for more information.

2 **In Major GPA**: Courses used to calculate in-major GPA.

3 At least 6 hours must be at the 3000 or 4000 level; at least 3 credit hours must be at least 4000 level.

Upon having completed 72 credit hours (including transfer, AP, advanced standing, credit by examination, course withdrawal) students must have completed the following courses with a grade of C- or better in two or fewer attempts (including attempts that were withdrawn):

BIOL 1105 Principles of Biology, **AND** BIOL 1106 Principles of Biology **AND** BIOL 1115 Principles of Biology Laboratory **AND** BIOL 1116 Principles of Biology Laboratory **AND** BIOL 2004 Genetics **AND** CHEM 1035 General Chemistry **AND** CHEM 1036 General Chemistry **AND** CHEM 1045 General Chemistry Laboratory **AND** CHEM 1046 General Chemistry Laboratory **AND** CHEM 2535 Organic Chemistry **AND** MATH 1225 Calculus of a Single Variable **AND** MATH 1226 Calculus of a Single Variable, PHYS 2205 General Physics **AND** PHYS 2206 General Physics **AND** PHYS 2215 General Physics Laboratory **AND**PHYS 2216 General Physics Laboratory. This also applies to acceptable substitutions.

Graduation Requirements

120 credit hours are required for graduation. These credits must include the courses required for the major (see above section). To graduate, a student must have at least a 2.0 in-major GPA and 2.0 overall GPA. If 120 credit hours are reached and a student does not meet the GPA requirement, the student must take additional in-major courses to raise the in-major GPA to a 2.0.

Acceptable Substitutions

- BIOL 1105 Principles of Biology **AND** BIOL 1115 Principles of Biology Laboratory **AND** BIOL 1116 Principles of Biology Laboratory **AND** CHEM 1035 General Chemistry **AND** CHEM 1036 General Chemistry **AND** CHEM 1045 General Chemistry Laboratory **AND** CHEM 1046 General Chemistry Laboratory **AND** PHYS 2205 General Physics **AND** PHYS 2206 General Physics **AND** PHYS 2215 General Physics Laboratory **AND PHYS 2216 General Physics Laboratory** can be substituted with ISC 1105 Integrated Science I **AND** ISC 1106 Integrated Science I **AND** ISC 1115 Integrated Science Laboratory

I **AND** ISC 1116 Integrated Science Laboratory I **AND** ISC 2105 Integrated Science II **AND** ISC 2106 Integrated Science II **AND** ISC 2115 Integrated Science Laboratory II **AND** ISC 2116 Integrated Science Laboratory II

- CHEM 1035 General Chemistry **AND** CHEM 1036 General Chemistry can be substituted with CHEM 1055 General Chemistry for Chemistry Majors **AND** CHEM 1056 General Chemistry for Chemistry Majors
- CHEM 1045 General Chemistry Laboratory **AND** CHEM 1046 General Chemistry Laboratory c an be substituted with CHEM 1065 General Chemistry for Chemistry Majors Lab **AND** CHEM 1066 General Chemistry for Chemistry Majors Lab
- CHEM 2535 Organic Chemistry can be substituted with CHEM 2565 Principles of Organic Chemistry
- CHEM 2545 Organic Chemistry Laboratory can be substituted with CHEM 2555 Organic Synthesis and Techniques Lab
- CHEM 4615 Physical Chemistry for the Life Sciences **AND** CHEM 4616 Physical Chemistry for the Life Sciences can be substituted with CHEM 3615 Physical Chemistry **AND** CHEM 3616 Physical Chemistry
- CS 1064 Introduction to Programming in Python can be substituted with CS 1114 Introduction to Software Design
- MATH 2114 Introduction to Linear Algebra can be substituted with MATH 2114H Introduction to Linear Algebra
- PHYS 2205 General Physics **AND** PHYS 2206 General Physics **AND** PHYS 2215 General Physics Laboratory **AND** PHYS 2216 General Physics Laboratory can be substituted with PHYS 2305 Foundations of Physics **AND** PHYS 2306 Foundations of Physics

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation. Please consult the Undergraduate Catalog for details.

Honors College

Our Website (http://www.honorscollege.vt.edu)

Our Mission

The Honors College seeks to inspire and facilitate an extraordinary undergraduate education for a diverse student body of exceptional motivation. Utilizing a flexible curricular framework with a strategic array of experiences, opportunities, and facilities, the College pioneers progressive, innovative approaches to undergraduate education that can be scaled up across the university.

Admissions

First-year and transfer applicants indicate their interest in the Honors College on their Coalition application, which prompts further review by the Honors College. Rather than establishing a numerical minimum for GPA and test scores, the Honors College looks holistically at a first-year applicant's overall academic record and experiences. We value quality of engagement (rather than sheer quantity), self-awareness, reflection on involvement, and authenticity.

Transfer students are similarly considered, but they must have a cumulative GPA of 3.40 or better at their previous institution to be eligible for review.

Currently enrolled Virginia Tech students may apply to the Honors College at the end of each fall or spring semester provided they have achieved a 3.40 or better cumulative GPA and have at least four (4) semesters remaining at Virginia Tech before they graduate.

Honors Academic Requirements

Virginia Tech Honors College students must complete all Honors Academic Requirements to earn an Honors Laureate Diploma or complete the Honors Minor. Honors Academic Requirements were updated for students entering the Honors College in Fall 2023 or later. Cohort-specific requirements are below:

For students who entered the Honors College in Fall 2023 or later

Every Honors Laureate Program student or every student pursuing the Honors Minor in Collaborative Discovery must meet four Honors Academic Requirements in total, two of which must be met by the end of two traditional, consecutive semesters in Honors:

1. Complete the Honors Gateway
   a. Entering the Honors College requires completing all modules and assignments in this Canvas course, which serves as both the required virtual orientation course and the Honors College application (for current Virginia Tech students, only).
2. Complete UH 1404 Principles of Collaborative Discovery
   a. All Honors students must complete UH 1404 with a passing grade by the end of their first two semesters in Honors. Students who fail to meet this requirement will be removed from the Honors College.
   b. We strongly recommend that students register for UH 1404 for their first semester in Honors to ensure their spot in the course is secured well before this requirement is due.
3. Meet the GPA Requirement
   a. All Honors students must achieve a 3.4 cumulative GPA by the end of their first two semesters in Honors. After this deadline, Honors does not check GPA again until graduation. Students who fail to meet this requirement will be removed from the Honors College.
4. Satisfy Honors completion requirements
   a. Students should make consistent progress toward the completion of at least 24 honors credits and achieve a final cumulative GPA of 3.4 or better.
   b. The Honors Laureate Diploma (HLD) appears on the Virginia Tech diploma as a special designation and is not a separate document. Visit the Honors Laureate Diploma page (https://honorscollege.vt.edu/Academics/HLD/HLD-2023.html) for more information about the structural credit requirements of the HLD. The Honors Minor in Collaborative Discovery appears on a student's transcript.

For students who entered the Honors College in Spring 2023 or earlier

Every Honors Laureate Program student or every student pursuing the Honors Minor in Transdisciplinary Praxis must meet four Honors Academic Requirements in total, two of which must be met by the end of two traditional, consecutive semesters in Honors:

1. Receive approval on their plan to earn the Honors Laureate Diploma (HLD Plan)

   a. Plan approval happens in the Honors Peer Advising Center. Schedule an appointment here: HPAC (https://honorscollege.vt.edu/Academics/hpac.html).
2. Achieve a 3.6 or better cumulative GPA
   a. A 3.60 or better cumulative GPA from the semester at Virginia Tech immediately previous to entering the Honors College may count toward this requirement.
   b. Students who do not meet requirements #1 and #2 by the end of two traditional, consecutive semesters in Honors will be removed from the Honors College.
3. After meeting #1 and #2, students enter the GPA Flex Period, a time when Honors does not monitor GPA again until graduation. Students should make consistent progress toward 30 total honors credits.
   a. Courses taken for Honors credit must be graded on the A–F scale unless P/F is the only option.
   b. Students who entered the Honors College in Spring 2021 or earlier who never receive Honors Laureate Diploma plan approval and, therefore, never enter the GPA Flex Period are required to continue to maintain a 3.60 or better cumulative GPA after every semester until the planner is approved or upon graduation.
4. To graduate in Honors, students must achieve a 3.3 or better cumulative GPA and complete honors credit requirements.
   a. The Honors Laureate Diploma (HLD) appears on the Virginia Tech diploma as a special designation and is not a separate document. Visit the Honors Laureate Diploma page (https://honorscollege.vt.edu/Academics/HLD/HLD-2023.html) for more information about the structural credit requirements of the HLD. The Honors Minor in Transdisciplinary Praxis appears on a student's transcript.

Honors Minor

The Honors College offers its own, optional academic minor. Students who enter the Honors College in Fall 2023 or later have access to the Honors Minor in Collaborative Discovery. All students in earlier cohorts have access to the original version of the minor: the Honors Minor in Transdisciplinary Praxis.

Pursuing the Honors Minor in Collaborative Discovery will both help you stand out from the crowd and prepare you for "what's next." By completing the Honors Minor, you will:

- Automatically also complete the Honors Laureate Diploma
- Add considerable value beyond your disciplinary education
- Gain a deeper understanding of the productive value of disciplinary differences and harness those differences through transdisciplinary collaboration
- Become an extremely valuable and desirable colleague wherever you may go after graduating

Honors Academic Requirements apply to students whether they pursue the Honors Laureate Diploma or the Honors Minor. For more information about the Minor, visit the Honors Minor page (https://honorscollege.vt.edu/Academics/HonorsCollegeMinor.html) of our website.

Honors Collaborative Discovery Diploma

The Honors Collaborative Discovery Diploma (HCDD) is limited to students in 14 participating programs that span engineering, science, business, design arts, humanities, and policy. Only students in the 2023, 2024, 2025, 2026 graduating classes may receive the HCDD in this four-year pilot program. The Calhoun Honors Discovery Program is at capacity with 140 students. Visit the website for more information: **https://honorscollege.vt.edu/chdp.html**.

The Calhoun Honors Discovery Program (CHDP) combines a structured disciplinary education with an open-ended, collaborative, and transdisciplinary discovery process. Students collaborate with one another across disciplines, as well as work alongside our faculty, industry, and non-profit partners. After four years of learning the process of discovery, innovation, and problem-solving, students will be prepared to face the real world. Under this new learning platform, students will graduate from Virginia Tech with the skills and knowledge needed to lead collaborative sociotechnical innovation and live out our motto Ut Prosim, "That I May Serve."

Honors Advising

The Honors Peer Advising Center enables honors students to meet individually with trained Honors Peer Advisors to talk through processes and resources to answer Honors-related questions. The honors staff also welcomes student appointments and walk-in visits. Each staff member has a distinct specialization with which they can assist students. Furthermore, advising for major national and international scholarships is available through the Honors College for all Virginia Tech students.

Honors Living-Learning Programs

Honors College students have two Honors community options: the Hillcrest Honors living–learning community houses about 100 students in Hillcrest Hall and the Honors Residential Commons houses about 320 students in East Ambler Johnston Hall. Both communities are multigenerational and multidisciplinary, housing first-year students to fifth-year seniors from all seven colleges at Virginia Tech.

Honors students are not required to live in an Honors living–learning program. Many students live off-campus or in other living-learning programs.

Dean: Paul Knox
Associate Dean for Academic Affairs: Paul Heilker[2,4,7]
Associate Dean for Finance and Administration: Lefter Daku
Assistant Dean: Sara Vandyke
Director of Programs and Partnerships: Michelle Kovac
Director of Professional Development, National and International Scholarships: Christina McIntyre
Director of Admissions and Scholarships: Russell Shrader
Technical Director, Calhoun Honors Discovery Program: Neal Henshaw
Honors Laureate Program Coordinator: Mary Helm
Business Office Coordinator: Eni Gosselin
Administrative Assistant: Ashlee Cox
Communications Specialist: Erin Deitzel
Collegiate Associate Professor, College of Liberal Arts and Human Sciences: Anne-Lise Velez
Collegiate Assistant Professor: Rachael Budowle, Michael Kretser
Collegiate Associate Professor: Stephanie Lewis
Professor of Practice: Enric Ruiz-Geli

Undergraduate Course Descriptions (UH)

UH 1404 - Principles of Collaborative Discovery (3 credits)
Introduction to honors education at Virginia Tech. Disciplinarity, interdisciplinarity, multidisciplinarity, and transdisciplinarity. Qualitative and quantitative research methods. "Wicked problems," systems thinking, and collaborative discovery. Problem analysis and iterative thinking. Ethical dimensions of trans-sector activity.
Instructional Contact Hours: (3 Lec, 3 Crd)

UH 1504 - PGS PStudy Abroad Pre-Departure Seminar (2 credits)
Orientation for Presidential Global Scholars (PGS) participants. Introduction to theories of culture and cross-cultural competence. Survey of Swiss culture, history, and politics. Introduction to PGS faculty and research interests. Development of individual research questions; transdisciplinary research on critical issues in U.S. contexts. Critical travel and safety information.
Instructional Contact Hours: (2 Lec, 2 Crd)

UH 1604 - Introduction to Honors Quantitative and Qualitative Research Practices (3 credits)
Introduction to critical practices in undergraduate quantitative and qualitative research for Honors College students, including generating focused research questions, finding scholarly literature, organizing data, conducting ethical research, collaborative research practices, and identifying venues to present research findings.
Instructional Contact Hours: (3 Lec, 3 Crd)

UH 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UH 2124 - Honors Reading Seminar (1 credit)
Reading based sections in which small groups of students practice discussion, debate, and argumentation grounded in a topic or genre of reading of their groups choosing. Honors standing. Variable course content. Repeatable for up to six credits.
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 6 credit hours

UH 2504 - Topics in Discourse and Global Citizenship (3 credits)
Discovery, analysis, creation, and evaluation of written, spoken, and visual presentation of ideas in cross-cultural contexts. Special attention to the relationship of rhetoric to effective participation in academic, professional, and public/civic problem-solving. Course cannot be repeated for credit.
Corequisite(s): UH 2524, UH 2534, UH 2544, UH 2554, UH 4994
Pathway Concept Area(s): 1A Discourse Advanced, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

UH 2514 - Topics in Quantitative/Computational Thinking and Global Citizenship (3 credits)
Application of quantitative/computational thinking in cross-cultural civic/public contexts. Use of quantitative/computational thinking to frame a question and devise a solution related to a civic/public issue. Drawing valid quantitative inferences about civic/public and cross-cultural issues characterized by inherent uncertainty. Evaluating conclusions or decisions about civic/public issues based on quantitative data. Ethical considerations of quantitative/computational thinking in cross-cultural civic/public issues. Course cannot be repeated for credit.
Corequisite(s): UH 4994
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (3 Lec, 3 Crd)

UH 2524 - Topics in Natural Sciences and Global Citizenship (3 credits)
Study of a specific branch of the natural sciences, especially as it intersects with public/civic controversies and problem-solving. Cross-cultural perspectives on the nature, purposes, and processes of scientific inquiry and knowledge. Course cannot be repeated for credit.
Corequisite(s): UH 2504, UH 2534, UH 2544, UH 2554, UH 4994
Pathway Concept Area(s): 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

UH 2544 - Topics in Social Science and Global Citizenship (3 credits)
Study of the behavior and actions of individuals, groups, and institutions within larger social, economic, political, and geographic contexts, especially in cross-cultural settings. Special attention to social beliefs and actions as they influence public/civic controversies and problem-solving. Examination of the influence of value and beliefs on human behavior and social relationships. Course cannot be repeated for credit.
Corequisite(s): UH 2504, UH 2524, UH 2534, UH 2554, UH 4994
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

UH 2554 - Topics in Humanities and Global Citizenship (3 credits)
Analysis and interpretation of texts and other artifacts to understand ideas, values, and identities in cross-cultural contexts. Special attention to the functions of narrative and rhetoric in public/civic controversies and problem- solving. Situating local/regional texts and artifacts in global frameworks. Course cannot be repeated for credit.
Corequisite(s): UH 2504, UH 2524, UH 2534, UH 2544, UH 4994
Pathway Concept Area(s): 2 Critical Thinking Humanities, 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

UH 2604 - Intermediate Honors Quantitative and Qualitative Research Practices (3 credits)
Intermediate study of critical practices in quantitative and qualitative research for Honors College students, including identifying funding opportunities for research, collaborating across disciplines, designing introductory research protocols, managing research projects, and using posters to present research findings.
Instructional Contact Hours: (3 Lec, 3 Crd)

UH 2744 - Foundational Topics in Computing in Technology Innovation for Societal Impa (1 credit)
Foundational study of applications of computational thinking in technology innovation for societal impact. Key components of computing and their interrelation. Uses of computational thinking to frame questions and devise solutions. Implementation of simple computational processes and tools. Construction of computational models to analyze and draw inferences about complex and uncertain phenomena. Evaluation of knowledge based on quantitative data. Impacts of computing and information technology on society. Ethical dimensions of computing for technological and societal innovation. May be repeated 5 times with different content for a maximum of 6 credits.
Pathway Concept Area(s): 5F Quant & Comp Thnk Found., 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 6 credit hours

UH 2754 - Advanced Topics in Computing in Technology Innovation for Societal Impact (1 credit)
Advanced study of applications of computational thinking in technology innovation for societal impact. Uses of computational thinking to frame questions and devise solutions. Application of computational processes and tools. Application and evaluation of computational models to analyze and draw inferences about dynamic and uncertain phenomena. Impacts of computing and information technology on society. Ethical dimensions of computing for technological and societal innovation. May be repeated 2 times with different content for a maximum of 3 credits.
Prerequisite(s): MATH 1225 or MATH 1524 or MATH 1535
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

UH 2764 - Advanced Topics in Engineering in Technology Innovation for Societal Impact (1 credit)
Study of applications of computer and systems engineering in technology innovation for societal impact. Application of computer and systems engineering processes and tools to analyze complex or large-scale phenomena. Application and evaluation of computer and systems engineering approaches to analyze and draw inferences about the feasibility and effectiveness of technological innovations. Impacts of computer and systems engineering on society and the environment. Ethical dimensions of computer and systems engineering for technological and societal innovation. May be repeated 2 times with different content for a maximum of 3 credits.
Prerequisite(s): UH 2744
Pathway Concept Area(s): 5A Quant & Comp Thnk Adv., 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

UH 2814 - Topics in Social Sciences for Technology Innovation for Societal Impact (1 credit)
Threshold concepts in social sciences related to collaborative, transdisciplinary technology innovation for societal impact. Study of key ideas about the behavior of individuals, groups, and institutions related to technology innovation within larger social, economic, political, and geographic contexts. Use of key concepts in the social sciences to examine the ethical dimensions of technological and societal innovation. May be repeated 5 times with different content for a maximum of 6 credits.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 6 credit hours

UH 2824 - Topics in the Arts for Technology Innovation for Societal Impact (1 credit)
Application of threshold concepts in the fine arts to collaborative, transdisciplinary technology innovation for societal impact. Study of key ideas for non-specialists about the formal elements, process, meaning, and value of the fine arts in technology innovation. Use of key concepts in the fine arts to examine the ethical dimensions of technological and societal innovation. May be repeated 2 times with different content for a maximum of 3 credits.
Pathway Concept Area(s): 6A Critique & Practice in Arts, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 3 credit hours

UH 2834 - Topics in Humanities for Technology Innovation for Societal Impact (1 credit)
Threshold concepts in the humanities related to collaborative, transdisciplinary technology innovation for societal impact. Study of key ideas and values related to technology innovation in various spatial, cultural, and temporal contexts. Use of key concepts in the humanities such as historical/cultural context and the nature of the good to examine the ethics of technological and societal innovation. May be repeated 5 times with different content for a maximum of 6 credits.
Pathway Concept Area(s): 2 Critical Thinking Humanities, 10 Ethical Reasoning
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 6 credit hours

UH 2855 - Calhoun Transdisciplinary Fusion Studio (3 credits)
Introduction to transdisciplinary, collaborative design processes to address real-world problems in technology innovation provided by clients from business, government, and nonprofit organizations. 2855: Collaborative problem-setting. Evaluative criteria for technology innovation: feasibility (can it be made?), viability (is it financially sensible?), desirability (do people want it?), and sustainability (can it work long-term?). Introduction to design thinking. Ethical dimensions of collaborative technology innovation for societal impact. 2856: Collaborative problem-solving. Introduction to quantitative and qualitative research methods. Optimization and integration. Design thinking and component prototyping. Ethical dimensions of collaborative technology innovation for societal impact. Design Lab/Studio.
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

UH 2856 - Calhoun Transdisciplinary Fusion Studio (3 credits)
Introduction to transdisciplinary, collaborative design processes to address real-world problems in technology innovation provided by clients from business, government, and nonprofit organizations. 2855: Collaborative problem-setting. Evaluative criteria for technology innovation: feasibility (can it be made?), viability (is it financially sensible?), desirability (do people want it?), and sustainability (can it work long-term?). Introduction to design thinking. Ethical dimensions of collaborative technology innovation for societal impact. 2856: Collaborative problem-solving. Introduction to quantitative and qualitative research methods. Optimization and integration. Design thinking and component prototyping. Ethical dimensions of collaborative technology innovation for societal impact. Design Lab/Studio.
Prerequisite(s): UH 2855
Pathway Concept Area(s): 6D Critique & Prac in Design, 10 Ethical Reasoning
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

UH 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UH 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UH 3204 - Honors Service Learning (3 credits)
A two-part course. Part one: three hours a week working directly with community partners. Part two: a one-hour class to reflect on the service experience and discuss readings and other course materials that place the experiential learning into a theoretical context. Open to all Honors students. Variable course content. Repeatable for up to six credits.
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)
Repeatability: up to 6 credit hours

UH 3504 - Topics in Honors Transdisciplinary Seminars (3 credits)
Exploration of transdisciplinary issues and questions. Analysis of complex topics from multiple points of view. Collaborative discussion and critique. Ethical decision-making across disciplines. Application of knowledge and processes from other disciplines. Variable course content. May be repeated one (1) time with different content for a maximum of 6 credit hours.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

UH 3604 - Designing Protocols for Honors Quantitative and Qualitative Research (3 credits)
Advanced study of critical practices in quantitative and qualitative research for Honors College students, including transdisciplinary project management, refining research protocols based on feasibility of data collection, maintaining research ethics and integrity, planning for data collection, and planning for dissemination of research findings.
Instructional Contact Hours: (3 Lec, 3 Crd)

UH 3614 - Data Collection and Analysis for Honors Quantitative and Qualitative Research (3 credits)
Continuing advanced study of critical practices in quantitative and qualitative research for Honors College students, including working with multiple types of data, collecting, cleaning and managing data, reporting of primary and secondary data, evaluating the work of others, and communicating conclusions to general audiences.
Instructional Contact Hours: (3 Lec, 3 Crd)

UH 3855 - Calhoun Transdisciplinary Design Studio (3 credits)
Intermediate study of transdisciplinary, collaborative design processes to address real-world problems in technology innovation provided by clients from business, government, and nonprofit organizations. 3855: Systems thinking and systems definition; identification and analysis of stakeholders; skills discovery and transdisciplinary team building; rapid prototyping. 3856: Collaborative innovation; customer discovery; evidence-based decision-making; iterative design; troubleshooting. Design Lab/Studio.
Prerequisite(s): UH 2856
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

UH 3856 - Calhoun Transdisciplinary Design Studio (3 credits)
Intermediate study of transdisciplinary, collaborative design processes to address real-world problems in technology innovation provided by clients from business, government, and nonprofit organizations. 3855: Systems thinking and systems definition; identification and analysis of stakeholders; skills discovery and transdisciplinary team building; rapid prototyping. 3856: Collaborative innovation; customer discovery; evidence-based decision-making; iterative design; troubleshooting. Design Lab/Studio.
Prerequisite(s): UH 3855
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

UH 3954 - Study Abroad (1-19 credits)
Honors Section.
Instructional Contact Hours: Variable credit course

UH 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UH 4004 - Honors Tutorial (3 credits)
Small, seminar-style course of one or a few students. Students explore a specific topic that is new to them with a faculty member who provides individual attention and is an expert in that established field. Open to all Honors students. Junior Honors standing. Variable course content. Repeatable for up to six credits.
Instructional Contact Hours: (1 Lec, 6 Lab, 3 Crd)
Repeatability: up to 6 credit hours

UH 4104 - Honors Student Teach Practicum (2 credits)
For Honors students facilitating Honors courses that encourage and require student facilitation or mentorship responsibilities. Student Teaching Assistants and their sections are overseen by honors faculty or staff. Student Teaching Assistants meet weekly with a member of the honors staff in a class designed to prepare them for the facilitation experience and to monitor their progress. Open to all Honors students, subject to Program approval. Sophomore Honors standing required. Variable course content. Repeatable for up to eight credits. P/F only.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)
Repeatability: up to 8 credit hours

UH 4504 - Topics in Honors Discovery and Innovation Studios (3 credits)
Discovery and definition of critical, real-world problems. Transdisciplinary collaboration, design thinking, and experimentation. Reflective evaluation of individual and collective problem-solving efforts. Communication of solutions to diverse stakeholders. Variable course content. Repeatable for up to 12 credits.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 12 credit hours

UH 4514 - Honors SuperStudio (1 credit)
Transdisciplinary collaboration. Identifying and defining public/civic issues. Framing and strategizing transdisciplinary solutions to public/civic problems. Reflecting on transdisciplinary processes. Identifying and reflecting on issues of ethics and equity in public/civic problem solving. May be repeated one time with different content for a maximum of two credit hours.
Corequisite(s): 4504 or enrollment in an approved disciplinary capstone course.
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 2 credit hours

UH 4704 - Honors Studio+ (3 credits)
Transdisciplinary and trans-sector collaboration in technology innovation. Identifying, defining, and setting problems in technology innovation. Applying evaluative criteria for technology innovation — feasibility, viability, desirability, sustainability. Using design thinking to analyze and reflect on creative processes. Identifying, articulating, and reflecting on the ethical dimensions of collaborative technology innovation. Design Lab/Studio (2H, 2L, 3C)
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

UH 4855 - Calhoun Transdisciplinary Capstone Studio (3 credits)
Advanced study of transdisciplinary, collaborative design processes to address real-world problems in technology innovation provided by clients from business, government, and nonprofit organizations. 4855: Systems building; project leadership and management, including resource allocation and scheduling; team management; value propositions; project pitches. 4856: User experience; user testing; systems assessment, including feasibility, viability, desirability, sustainability, optimization, and integration; systems reflection and documentation. Design Lab/Studio.
Prerequisite(s): UH 3856
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

UH 4856 - Calhoun Transdisciplinary Capstone Studio (3 credits)
Advanced study of transdisciplinary, collaborative design processes to address real-world problems in technology innovation provided by clients from business, government, and nonprofit organizations. 4855: Systems building; project leadership and management, including resource allocation and scheduling; team management; value propositions; project pitches. 4856: User experience; user testing; systems assessment, including feasibility, viability, desirability, sustainability, optimization, and integration; systems reflection and documentation. Design Lab/Studio.
Prerequisite(s): UH 4855
Instructional Contact Hours: (2 Lec, 2 Lab, 3 Crd)

UH 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UH 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

UH 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

University Studies and Scholarship Support

Our Website (https://www.universitystudies.vt.edu/)

Phone: 540-231-8440

University Studies

University Studies under Academic Advising Initiatives serves the university community in several ways. The office administers the University Studies program for new undergraduate students who want to explore a variety of degree programs before they commit to one particular major. University Studies is a non-degree granting major for students to explore options before choosing their major. With the guidance of a professional academic advisor, students research the full range of degree programs related to their interests and design programs of study that meet graduation requirements while providing the academic flexibility to pursue whichever degree program they ultimately choose. University Studies serves as both the college and department for University Studies students, providing administrative services, dean's office services, and academic advising until the students enter a specific major.

University Studies advisors along with other professional advisors in Academic Advising Initiatives assists new and current students who intend to change majors due to personal decisions or academic difficulty. This service is called Transitional Advising. Advisors work with students in developing programs of study in pursuit of their new major. Any student can make an appointment with Transitional Advising here: https://student.advising.vt.edu/major-exploration/transitional-advising.html.

Beyond advising, the office also supports students on Pell Grants and certain scholarships to meet financial aid and academic requirements to annually renew their grant or scholarship. This program is called Scholarship Support. Student mentors provide support and assistance by educating students of the grant and scholarship requirements needed to renew each year and how to be academically successful to meet those requirements. Students receiving this scholarship support service also have an academic advisors specific to their major.

More information about University Studies is available here: https://www.universitystudies.vt.edu.

University Studies

University Studies is a major but it is not a degree-granting program. University Studies offers a structured advising program that provides students with the necessary support and strategies to investigate and compare academic disciplines so that they can make informed decisions about the degree programs they will pursue. Students can explore any major available at the university while completing course requirements toward a baccalaureate degree. To ensure that students graduate in a timely manner, University Studies requires all students to enter a specific degree program by the time they have earned 60 credits toward graduation (approximately the end of the sophomore year) or have attempted 72 hours.

Restricted Majors

University Studies students can pursue any major offered at the university; however, students should be aware that some majors are competitive for internal transfer. These programs have established specific criteria and application procedures that students must fulfill in order to be considered for internal transfer into the major. In general, these criteria require students to demonstrate proficiency in designated core courses and, for some programs, introductory major courses before they are eligible to apply. University Studies students enter and graduate from these restricted programs each year; however, since there is no guarantee of acceptance to these programs, students are encouraged to investigate alternative majors even as they prepare to enter a restricted program. More information about restricted majors is located here: https://www.registrar.vt.edu/dates-deadlines/Change_of_Major_Dates.html (https://www.registrar.vt.edu/dates-deadlines/Change_of_Major_Dates.html)

Academic advisors in the University Studies are familiar with internal transfer criteria and procedures for all restricted majors. Advisors will assist students in pursuing these requirements.

Pathways General Education

All undergraduate students at the university, regardless of their majors, are required to fulfill general education course requirements in English, mathematics, science, social science, humanities, etc. There is a standard set of these courses, Pathways to General Education, which all degree programs incorporate in their graduation requirements.

General Education requirements are typically completed in the freshman and sophomore years. Some majors are flexible with regard to which General Education courses can be used to fulfill degree requirements; other majors suggest specific major courses which can count towards specific General Education requirements. Academic advisors assist University Studies students in selecting courses that apply towards as many of the majors a student is considering as possible. Thus, students fulfill degree requirements for graduation while they are exploring majors and are usually able to graduate on time.

Typical First Year Program

Code	Title	Credits
First Semester		
First-Year Writing		
Mathematics		
Natural Science (lab-if required by intended major)		
Social Science		
Humanities/Elective/Major Specific Course		

Second Semester
First-Year Writing
Mathematics
Natural Science (lab-if required by intended major)
Social Science
Humanities/Elective/Major Specific Course

For University Studies students, as for most students at the university, the first year is primarily devoted to fulfilling Pathways to General Education requirements. Of course, University Studies students' programs of study vary depending upon the major or majors they are considering. Specific course selections are determined in individual consultation with an academic advisor.

Graduation Requirements

The requirements to graduate in a specific major are determined by the department and college conferring the degree. In general, students are required to have a minimum 2.0 overall grade-point average and a minimum 2.0 grade-point average in their major in order to graduate. The number of credit hours required for a baccalaureate degree varies from 120 to 156 hours, depending upon a student's major and degree program.

Dean's List

University Studies students who demonstrate academic excellence are named to the Academic Dean's List and are awarded a Dean's List certificate. Students must be enrolled in a minimum of 12 graded hours (A-F) and must achieve a 3.4 GPA or higher in the fall or spring term to qualify.

Pre-Professional Advising

Students who want to enter professional schools but who have not yet chosen an undergraduate major will find that the university offers a variety of degree programs that provide excellent preparation for advanced training in professional fields. Though some professional programs, such as medicine, dentistry, and veterinary medicine, require students to complete a minimum number of credit hours at the undergraduate level in chemistry, biology, mathematics, etc., professional schools do not dictate that students pursue specific undergraduate majors. A student can pursue almost any undergraduate degree and be competitive for admission to a professional program.

Global Education Office (Study Abroad)

Opportunities to study at institutions in other countries are available to all qualified students, regardless of their major. Study abroad offers students a unique opportunity to learn about other cultures and peoples while earning college credit. Students who intend to participate in an overseas study experience should discuss their intentions with their advisor early in their academic career.

Director: L. Thomas

Associate Directors: N. Schwab and D. Trask,

Assistant Directors: A. Silknetter, C. Takacs, and H. Whedbee

Academic Advisor and Student Support Specialists: J. Chatham, J. Daniel, H. Goetz, and J. Johnson

Project Coordinator: L. Perry

Veterinary Medicine

Our Website (http://www.vetmed.vt.edu)

Overview

Founded by the Virginia General Assembly in 1978, the Virginia-Maryland Regional College of Veterinary Medicine is a regional school for the professional training of veterinarians which has been built upon the strong foundations of two of the nation's leading land-grant universities: Virginia Tech in Blacksburg and the University of Maryland at College Park. The College operates three campuses, including the main campus facilities at Virginia Tech, the Virginia Tech Animal Cancer Care and Research Center in Roanoke, VA, the Avrum Gudelsky Veterinary Center at College Park, and the Marion duPont Scott Equine Medical Center in Leesburg.

Graduate Program

The graduate program leads to the M.S. and Ph.D. in biomedical and veterinary sciences. The goal of this program is to enhance the research capabilities of the graduates so that they can conduct independent research and associated societal endeavors aimed at solving biomedical problems related to veterinary medicine. These individuals will be expected to make scientific contributions in academia, research, and animal health administration.

For additional information, contact the Graduate School via e-mail at cvmgrad@vt.edu.

Web: https://bmvs.vetmed.vt.edu/.

Professional Program

The veterinary program offers a four-year, full-time program leading to the Doctor of Veterinary Medicine degree. Our integrated curriculum includes classroom and laboratory instruction in the first two years and early immersion in clinical rotations, followed by more-advanced classroom instruction and additional clinical rotations.

Students desiring admission to the four-year instructional program leading to the D.V.M. degree must show evidence of intellectual ability and achievement, as well as personal preparation for the curriculum and the profession. Because the number of applicants greatly exceeds the number of spaces in entering classes, only those who demonstrate such qualifications to a high degree will be selected. Most entering students will have completed three or more years at an accredited university by the time of matriculation; however, applications will be accepted from students who have completed at least 60 semester hours or 90 quarter hours of university credit by the end of the spring term of the year for which application is being made.

A number of college courses, both science and humanities, are required for application to the veterinary professional program. In addition, other professional skills are essential for success not only within the program, but in life after graduation. These skills include communication, problem-solving and critical thinking.

Since veterinary medicine also is concerned with a variety of social, environmental, and community activities, a broad cultural background is important.

Admissions inquiries should be directed to:

Mrs. Shelby Stegall - Admissions Coordinator

Admissions Office
Virginia-Maryland Regional College of Veterinary Medicine
Virginia Tech
Blacksburg, VA 24061

Public Health Program

Virginia Tech's Public Health Program in the Department of Population Health Sciences is administered by the Virginia-Maryland College of Veterinary Medicine in partnership with the Virginia Tech Carilion School of Medicine and is accredited by the Council on Education for Public Health. The Public Health Program offers both undergraduate and graduate degrees in public health.

Undergraduate programs in public health include the Bachelor of Science in Public Health degree and an undergraduate Minor in Public Health. At the graduate level, programs include the Master of Public Health, which can be pursued as a standalone degree program, combined with another graduate degree program (e.g., DVM, MD, PhD, MS, MA), or pursued as an accelerated undergraduate to MPH degree for exceptional Virginia Tech undergraduate students from any major. Additionally, the program offers an online Graduate Certificate in Public Health.

As a whole, the Public Health Program emphasizes a One Health approach to address local and global public health concerns. The One Health concept recognizes that the health of people is connected to the health of animals and the environment. Recognition of the dynamic interdependence of human, animal, and environmental health promotes interdisciplinary collaboration among medical, veterinary, public health, and other professionals. Students gain the requisite knowledge and skills to examine the human, animal, and environmental factors that contribute to the control and prevention of disease and the promotion, enhancement, and maintenance of health. Additionally, the program is committed to addressing public health challenges and opportunities facing Central Appalachia and other areas in Southwest and Southside Virginia. These regions have a rich cultural tradition, wisdom and significant community assets while at the same time facing high rates of unemployment, poverty and limited access to health care. The program's emphasis on rural health stretches beyond regional communities into other rural areas in Virginia, the nation, and beyond.

For additional information, please contact the Public Health Program at phs@vt.edu or by phone at (540) 231-3945.

Dean: M. Daniel Givens
Interim Associate Dean for Professional Programs: Sunshine Lahmers
Associate Dean for Research and Graduate Studies: S. Ansar Ahmed
Assistant Dean for Administration: April G. Hylton
Associate Dean: Xiaoping Zhu
Professors: M. Borgarelli, V. A. Buechner-Maxwell, S. G. Clark, L.A. Dahlgren, G. B. Daniel, M. F. Ehrich, J. L. Hodgson, L. Hungerford, O. I. Lanz, M.L. Larson, M. S. Leib, M. Lee, D. Lindsay, H.C. McKenzie III, X. J. Meng, U. Pal, D. L. Panciera, K. D. Pelzer, J. P. Pickett, S. Pleasant, K. Redican, J. H. Rossmeisl, M. Seleem, S. A. Smith, D. P. Sponenberg, N. Sriranganathan, W. S. Swecker Jr., N. Tablante, N. A. White II, L, Yuan, X. Zhu and K.L. Zimmerman
Associate Professors: I. C. Allen, O. Balogh, L.E. Bartl, J. Barrett, G. Belov, A. S. Bertke, D. Blodgett, C. Byron, F. Carvallo-Chaigneau, C. Caswell, T. Cecere, B.J. Conner, J. L. Davis, N. G. Dervisis, F. Elnady, L. E. Freeman, J. M. Gohlke, D.C. Grant, P. N. Henao Guerrero, J. Q. He, I. P. Herring, K. Hosig, W. R. Huckle, S. L. Klahn, B. G. Klein, K. Lahmers, S. M. Lahmers, Y. W. Lee, X. Luo, D. Moore, N. Nanthakumar, D. Nelson, Y. A. Pan, J. Patton, P. Pithua, R. Ramierez-Barrios, G. Saunders, W. K. Scarratt, M. Shi, B. J. Smith, M.H. Theus, S. G. Witonsky, H. D. Xie, and Y. Zhang
Associate Professors of Practice: T. Burns, J. Pelzer and V. Ragan
Assistant Professors of Practice: S. Wenzel
Assistant Professors: K. Abbas, I. Athanasiadi, C. Baker, S. H. Barrett, T. Bolton, R. Calder, B. Ciepluch, A. Cohen, N.E. Cook, L. L. Corcoran, V. K. Corrigan, C. Deagle, S. M. DeMonaco, N. Duggal, S. L. Farris, M. Freeman, R. Gaji, M. Ghanem, T. E. LeCuyer, S. McDonald, G. Menicotti, P. D. Morton, D. Nelson, V.V. Paranjape, R. Parker, N. Rancilio, S. Riley, C. Rist, N. Ruktanonchai, Z. Sheng, M. Shi, R.L. Shinn, A. Smith, J. Stewart, S. A. Swanger, J. Tuohy, J.D. Weger, A. Wilkinson and J. Zambriski
Research Professor: K. A. Horn
Research Associate Professor: A.A. Bandara, W. Eyestone, R. L. Shinn
Research Assistant Professors: I. Akhrymuk, R. Dai, J. M. Green, S. Kenney, W. Li, M. R. Prater, C. Reilly, B. Rzigalinski, K. Sunil, E. Viktorova, S. Werre and X. Yang
Research Scientist: N. Evans, W. Li and R. Silverman
Clinical Associate Professors: L.E. Bartl, K. Boes, F Carvallo-Chaigneau, J. Cecere, J. F. Currin, M. Erskine, R.A. Funk, S.L. Klahn, T. LeRoith, M.T. Nappier and K.E. Wilson
Clinical Assistant Professors: M. Norris Adams, S. Barrett, S. Bogers, J. A. Brown, M.K. Byrnes, K. Estell, S.R. Guynn, A. Keebaugh, M. Kelleher, K. Murakami, D. R. Reeder, R. M. Rodriguez Galarza, D.N. Sawyere, M. Shepherd, H. Schramm, H. Tham and F.A. Wilkinson
Clinical Instructors: A.U. Arendse; C. Bowden, M. Brookhart, R. Carpenter, A.C. Figueiredo, M. Greer, E. MacDonald, V. Oakes, E. Schaeffer and L. Trager
Anatomy Instructor: T. Gillian
Adjunct Faculty: R. Anandakrishnan, J. Bahamonde-Azcuy, I. Becvarova, C. Bissett, M. J. Bowen ,C. Broaddus, M. Byrnes, B. Costa, M. V. Crisman, L. Crofton, S. Eubank, R. Gourdie, J. C. Gutierrez Toro, Q. Han, Y. Huang, T. Hrubec, T. Johnson, J. C. Jones, L. Kang, T. M. Kerkering, L. Lee, N. M. Lindstrom, K. MacDonald, R. MacPhail, C. J. McNeill, D.L. McRurer, P. Michalak, J. Moody, S. L. Porter, R. Prater, G. Rajagopalan, S. Rao, C. Reilly, B. Robert, A. Sage, S. Santamaria, K. Scarratt, S. Schwartz, J. Sleeman, S. J. Stahl, M. L. Tilghman, L. Tobias, R. Varghese, J. Walters and J. Weisman

Biomedical Science and Pathobiology (BMSP)

BMSP 2135 - Human Anatomy & Physiology (3 credits)
Structure and function of the human body for students preparing for professions in the health fields. 2135: body plan and organization, homeostasis, cell structure and function, histology, integumentary system, skeletal system, muscular system, nervous system and special senses. 2136: endocrine system, circulatory & cardiovascular system, lymphatic system and immunity, respiratory system, digestive system, metabolism, excretion, reproduction, and development. BMSP 2135-2136 duplicates BIOL 2405-2406; may not receive credit for both.
Prerequisite(s): (BIOL 1005 or BIOL 1006) or (BIOL 1105 or BIOL 1106) or (BIOL 1205H or BIOL 1206H)
Instructional Contact Hours: (3 Lec, 3 Crd)

BMSP 2136 - Human Anatomy and Physiology (3 credits)
Structure and function of the human body for students preparing for professions in the health fields. 2135: body plan and organization, homeostasis, cell structure and function, histology, integumentary system, skeletal system, muscular system, nervous system and special senses. 2136: endocrine system, circulatory & cardiovascular system, lymphatic system and immunity, respiratory system, digestive system, metabolism, excretion, reproduction, and development. BMSP 2135-2136 duplicates BIOL 2405-2406; may not receive credit for both.
Instructional Contact Hours: (3 Lec, 3 Crd)

BMSP 2145 - Human Anatomy and Physiology Laboratory (1 credit)
Laboratory exercises investigating the structure and function of the human body for students preparing for professions in the health fields. 2145: body plan and organization, homeostasis, cell structure and function, histology, integumentary system, skeletal system, muscular system, nervous system and special senses. 2146: endocrine system, circulatory & cardiovascular system, lymphatic system and immunity, respiratory system, digestive system, metabolism, excretion, reproduction, and development. BMSP 2145-2146 duplicates BIOL 2414; may not receive credit for both.
Corequisite(s): BMSP 2135
Instructional Contact Hours: (3 Lab, 1 Crd)

BMSP 2146 - Human Anatomy and Physiology Laboratory (1 credit)
Laboratory exercises investigating the structure and function of the human body for students preparing for professions in the health fields. 2145: body plan and organization, homeostasis, cell structure and function, histology, integumentary system, skeletal system, muscular system, nervous system and special senses. 2146: endocrine system, circulatory & cardiovascular system, lymphatic system and immunity, respiratory system, digestive system, metabolism, excretion, reproduction, and development. BMSP 2145-2146 duplicates BIOL 2414; may not receive credit for both.
Corequisite(s): BMSP 2136
Instructional Contact Hours: (3 Lab, 1 Crd)

BMSP 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMSP 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

Biomedical and Veterinary Science (BMVS)

BMVS 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 4014 - Animal Domestication and Genetic Resources (1 credit)
Considers the process, history, sociology and geography of animal domestication. Includes behavioral, physiologic and morphological changes incurred by domesticated stocks. Examines genetic variability of domestic species, considers breed groups and uniquely adapted breeds. Considers reasons for erosion of genetic variability and mechanisms to counteract such erosion. International in scope. Pre: senior status or enrollment in veterinary professional curriculum.
Instructional Contact Hours: (1 Lec, 1 Crd)

BMVS 4024 - Diseases of Poultry (2 credits)
Biology control and prevention of poultry diseases. Taught alternate years.
Instructional Contact Hours: (2 Lec, 2 Crd)

BMVS 4054 - Laboratory Animal Management (3 credits)
This course involves a study of the principles of laboratory animal science, providing the student with a basic understanding of the laws and regulations governing the care and use of animals, husbandry and surgery of a variety of lab animal species, and variables which can adversely affect animal research. Through formal lectures, discussions, and laboratory sessions, the course is designed to complement graduate studies in biological, biomedical, and life sciences which involve the use of animals in research.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

BMVS 4074 - Pharmacology (3 credits)
A basic course in the science of pharmacology, intended to provide an understanding of the mechanisms of action and physiological systemic effects of major classes of drugs of biological, agricultural, social, and medical importance. Must have prerequisites or equivalent.
Prerequisite(s): CHEM 2514 or CHEM 2535 or ALS 2304 or BIOL 2406
Instructional Contact Hours: (3 Lec, 3 Crd)

BMVS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 4994H - Undergraduate Research (1-19 credits)
Honors section
Instructional Contact Hours: Variable credit course

BMVS 5005 - Emerging Infectious Diseases (1 credit)
Stand-alone, fully on-line, asynchronous distance and distributed learning course, accessible as streaming videos on the internet or on CDs. 5005: The course defines and discriminates amongst numerous factors influencing the emergence of infectious diseases. Selected emerging food-borne, bacterial, viral, zoonotic diseases of animals and humans are described and analyzed. 5006: The course expands the pathology of emerging infectious diseases. Additional viral, parasitic and zoonotic diseases of animals and humans are described and analyzed. Xenotransplantation is also discussed from the perspective of zoonotic diseases. Third year standing in the DVM curriculum, or good standing in a graduate studies program is required.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: VM 9085

BMVS 5014 - Animal Pathology Residency (1-5 credits)
Training in diagnostic pathology through weekly rotations in the necropsy and surgical biopsy service of the teaching hospital. Students will perform necropsies and histopathologic examinations of necropsies and surgical biopsies and write diagnostic reports. The course is taken in weekly intervals of necropsy and/or surgical biopsy, with a credit hour given for each 2-week interval. Variable credit. May be repeated with a maximum of 5 hours. DVM degree required.
Instructional Contact Hours: (15 Lab, 1-5 Crd)
Repeatability: up to 5 credit hours

BMVS 5094 - Grant Writing and Ethics (3 credits)
A framework for writing clear, concise grant proposals in a team-oriented, multidisciplinary approach from concept development through submission to a funding agency. Potential ethical dilemmas that may arise in academic, industrial, or federal research settings will be discussed. PRE: Undergraduate courses in one of the following: organic chemistry (CHEM 2565/2566), cell and molecular biology (BIOL 2104), Concepts of Biochemistry (BCHM 2024), or equivalent. Graduate standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CHEM 5094, FST 5094

BMVS 5114 - Critical Skills in Biomedical Research (3 credits)
This course is intended to reach a broad population of students in biological/biomedical research programs and help them develop critical skills in analytical thinking and scientific communications. The course contents include reviews of past and current conceptual advancement, technology development, and controversial topics, in contemporary biomedical research, including but not limited to molecular & cellular biology, genomics, neurobiology, and cancer. The course also includes in-depth analyses of experimental designs and data interpretations, and important considerations for the appropriateness and limitations of experimental approaches and models. This course may be repeated up to 1 time for a total of 6 credit hours. Pre: Biochemistry, Molecular Biology, or equivalent.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 6 credit hours

BMVS 5124 - Reproductive Pathology (1 credit)
Study of lesions of the reproductive system of domesticated animals. Relationship of these lesions to infertility and examination of the pathogenesis of the lesions and infertility.
Prerequisite(s): ALS 4304
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: VM 8474

BMVS 5174 - Responsible Research Conduct (1 credit)
Scientific integrity and responsible conduct of research as related to studies in life sciences, physical sciences, social sciences, engineering, and humanities. Conflict of interest, human and animal subjects in research, mentor/mentee responsibilities, collaborative research, peer review, research misconduct, responsible authorship and publication, data management, sharing, and ownership, and legal issues in research. Pre: Graduate Standing.
Instructional Contact Hours: (1 Lec, 1 Crd)

BMVS 5194 - Clinical Micropathology (1 credit)
This course presents practical topics in diagnostic pathology. It covers the entire spectrum of disease processes, including the background of clinical, gross anatomic physiologic information required for integration with the microscopic changes observed to arrive at a correct diagnosis. DVM degree and permission of the instructor required.
Instructional Contact Hours: (1 Lec, 1 Crd)

BMVS 5224 - Biomedical Engineering and Human Disease (3 credits)
Comprehensive overview of a variety of human diseases, including neurological disorders, cardiovascular disease, infectious disease, and cancer, designed primarily for graduate students majoring in engineering and other related areas who have a long-term academic and professional goal in the field of biomedical engineering and life sciences. Introduction to state-of-the-art biomedical engineering approaches used for the study of early detection/diagnosis, treatment and prevention of human disease. Graduate standing required.
Prerequisite(s): BMES 5004 or BMVS 4064 or BMES 4064
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: BMES 5024

BMVS 5244 - Veterinary Pharmacology (1-5 credits)
Principles of pharmacodynamics and pharmacokinetics, including interaction of drugs with receptors; absorption, distribution and clearance; drug metabolism and drug interactions. Study of drugs by pharmacological classes, the general mechanisms of action, usefulness and side effects. Pharmaceutical calculations and prescription writing. May be repeated for a maximum of 5 credits. Pre-requisite: Graduate standing required
Instructional Contact Hours: (1-5 Lec, 1-5 Crd)

BMVS 5274 - Systems Pathology (3 credits)
This lecture only course covers the pathology and pathogenesis of specific lesions and diseases of each organ system at the gross and microscopic level. Emphasis is on diagnostic characteristics and interpretation of diseases. Pre: DVM or equivalent.
Instructional Contact Hours: (3 Lec, 3 Crd)

BMVS 5284 - Cellular Pathology (3 credits)
This course presents the mechanisms involved in cellular reaction to injury, inflammation, tissue repair and regeneration, circulatory disturbances (thrombosis, embolism, infarction, hemorrhage, edema, congestion, shock) and neoplasia and other alterations of cell growth. Emphasis will be placed upon disease processes at the cellular and tissue levels.
Instructional Contact Hours: (3 Lec, 3 Crd)

BMVS 5324 - General Neurochemistry (3 credits)
Biochemical mechanisms involved in normal and abnormal nervous system function including discussions of experimental techniques, structural components, neurotransmitters, cerebral blood flow and metabolism, sensory systems, learning, mental disorders, and neuropharmacological agents.
Prerequisite(s): (BCHM 4116 or BCHM 5124) or (BCHM 4116 or BCHM 5124)
Instructional Contact Hours: (3 Lec, 3 Crd)

BMVS 5564 - Introduction to Clinical Research (2 credits)
Design of studies in veterinary related clinical research, planning and implementation of experimental and survey data collection, management and analysis of data, evaluation of analysis and critical evaluation of published information. Instructor approval required.
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: VM 8534

BMVS 5574 - Advanced Poultry Diseases (3 credits)
An advanced course covering diagnosis, etiology, and treatment of poultry diseases. Diseases will be grouped by system affected, their common features detailed, and then unique characteristics of these diseases described.
Instructional Contact Hours: (3 Lec, 3 Crd)

BMVS 5594 - Current Technologies in Biomedical Sciences (1 credit)
Current methodologies and techniques for hypothesis-driven scientific experimentation in biomedical research, including molecular biology approaches, microscopy, animal models, molecular applications, cell culture systems, large-scale omics methodologies, bioinformatics analyses, and clinical studies. Cutting-edge and novel approaches for designing experiments and interpreting the resulting data; review of scientific literature; and important considerations for the appropriateness and limitations of specific methods, approaches, and experimental models. Pre: Graduate standing.
Instructional Contact Hours: (1 Lec, 1 Crd)

BMVS 5624 - Molecular Virology (2 credits)
The principles and mechanisms of virus replication at the molecular level including transcription, translation and posttranslational modifications of virus genes, virus interaction with host, antivirals, vaccines and host defense mechanisms against virus infections. The replication and pathogenesis mechanisms of several important DNA and RNA virus families including biothreat viruses. Graduate standing required.
Instructional Contact Hours: (2 Lec, 2 Crd)

BMVS 5704 - Veterinary Cytopathology (1 credit)
Interpretation of cytopathologic samples. Descriptive reports. Routine to complex case material from animal tissue specimens. Prerequisite: Third year standing in the DVM curriculum.
Instructional Contact Hours: (1 Lec, 1 Crd)

BMVS 5764 - Aquatic Medicine and Fish Health (2 credits)
The etiology, diagnosis, pathology, pathogenesis, chemotherapy, control and management of infectious and non-infectious diseases of aquatic organisms, especially pertaining to cultured food and tropical fish. Hands on experience with water quality evaluation, diagnostic techniques and the identification of common pathogenic organisms. Pre-requisite: Second year standing in the DVM curriculum.
Prerequisite(s): VM 8364 or FIW 4514
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: VM 8494

BMVS 5794 - Clinical Neuropathology (1 credit)
This course uses necropsy tissues of clinical cases to present the mechanisms involved in neurologic disease of animals. Gross, microscopic, and radiologic approaches will be employed. Emphasis will be placed upon the correlation of clinical and pathological findings. May be repeated. Pre: Instructors approval required.
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 4 credit hours

BMVS 5814 - Functional Morphology and Natural History of Reptiles and Birds (1 credit)
Anatomical features will be described that are unique to, or are characteristic of, each major group covered. Adaptation and successful exploitation of habitat. Use of anatomical features and functions. Selected attributes of the groups natural history, members of the group common to the local and extended area, those commonly kept as pets. Pre-requisite: Graduate Standing required.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: VM 8254

BMVS 5894 - Final Examination (3 credits)
Instructional Contact Hours: (3 Lec, 3 Crd)

BMVS 5904 - Project and Report (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 5944 - Seminar in Biomedical and Veterinary Sciences (1 credit)
Presentations by graduate students on current topics in Biomedical and Veterinary Sciences. Topics and responsibility for seminars is rotated among the professional departments of the college. Maximum 4 credits.
Instructional Contact Hours: (1 Lec, 1 Crd)

BMVS 5954 - Study Abroad (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 5974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 5984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 5994 - Research and Thesis (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 6014 - Veterinary Clinical Sciences Residency (0 credits)
Advanced course with training and instruction in veterinary patient management. Supervised practicum in veterinary diagnosis and therapy in a veterinary teaching hospital. Material will include development of knowledge and skills for problem solving, performance of techniques, and effective communication. Regularly scheduled rounds and conferences will supplement daily activities. 0 credit. DVM degree required.
Instructional Contact Hours: (0 Lec, 0 Crd)

BMVS 6064 - Advanced Topics in Veterinary Medicine (1-6 credits)
Students will critically review and actively participate in discussion of current and important historic veterinary and comparative medical literature relevant to students residency specialty. DVM degree is required. May be repeated with different content for a maximum of 12 credit hours.
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)
Repeatability: up to 12 credit hours

BMVS 6074 - Clinical Topic Rounds (1-6 credits)
Practical, advanced training in specialty medicine. Students will participate in critical reviews of cases and current literature applicable to selected cases. Relevant information will include advanced diagnostic and therapeutic techniques applicable to the specialty and species being studied. An in-dept knowledge of the pathophysiology of animal disease processes and clinical problem solving will be developed. Students will be expected to gain an understanding of the general problem area to be studied and critically evaluated current literature and application to the case(s) being studied. DVM degree is required. May be repeated with different content for a maximum of 12 credit hours.
Instructional Contact Hours: (1-6 Lec, 1-6 Crd)
Repeatability: up to 12 credit hours

BMVS 6084 - Veterinary Speciality Clinics (3 credits)
Practical, advanced training in specialty medicine. Students will learn advanced diagnostic and therapeutic techniques applicable to the specialty and species being studied. An in-depth knowledge of the pathophysiology of animal disease processes and clinical problem solving will be developed. Students will be given responsibility for case management with faculty guidance. DVM degree is required. May be repeated for a maximum of 12 credits with different content.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 12 credit hours

BMVS 6094 - Board Certification Topics (1 credit)
Structured preparation for the specialty examinations associated with residency programs and board certification. Topics will vary depending on the particular learning objectives required by the clinical discipline. Pre-requisite: Graduate standing and clinical resident in the Virginia Maryland Regional College of Veterinary Medicine. May be repeated for up to 6 credit hours with different content.
Instructional Contact Hours: (1 Lec, 1 Crd)
Repeatability: up to 6 credit hours

BMVS 6114 - Neurogenesis in the Developing and Diseased Brain (3 credits)
Development, maintenance and injury-induced response of stem cells in the brain. Key epigenetic and signal transduction pathways required for the proper development and adaptive response of stem cells in the neurogenic compartments after brain injury in rodents and larger animal species.
Instructional Contact Hours: (3 Lec, 3 Crd)

BMVS 6534 - Mechanisms of Disease in Veterinary Medicine (3 credits)
Advanced study of topics concerning the pathophysiology, diagnosis, and current therapy of diseases in Veterinary Medicine. Pre: DVM or equivalent, or consent of instructor. May be repeated to a maximum of 18 credits.
Instructional Contact Hours: (3 Lec, 3 Crd)
Repeatability: up to 18 credit hours

BMVS 6714 - Immunology in Health & Disease (3 credits)
Analysis of emerging, cutting edge and paradigm changing concepts of cellular and molecular immunology in human and animal health and disease. Innate immunity, adaptive immunity, developmental immunology, autoimmunity, immunodeficiency, cancer immunology, and transplantation immunology.
Prerequisite(s): BIOL 5734 or BCHM 5124
Instructional Contact Hours: (3 Lec, 3 Crd)

BMVS 6724 - Mol Mech of Path Bacteria (3 credits)
Molecular mechanisms employed by pathogenic bacteria to cause infection. Classical and contemporary methods for studying host-pathogen interactions at the molecular level. Hypothesis-driven scientific experimentation in pathogenic bacteriology.
Prerequisite(s): BIOL 5634 or BIOL 5674
Instructional Contact Hours: (3 Lec, 3 Crd)

BMVS 6984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

BMVS 7994 - Research and Dissertation (1-19 credits)
Instructional Contact Hours: Variable credit course

Population Health Sciences (PHS)

PHS 1004 - Public Health First Year Experience (1 credit)
Introduction to the Department of Population Health Sciences and the Public Health curricula requirements. Introduces students to experiential learning opportunities, undergraduate research, ethical behaviors and career paths within the discipline. Exploration of programs, services and resources to enhance awareness of opportunities and support systems available for student success including academic advising and career planning. Intended for Public Health majors in their first semesters at Virginia Tech, either as incoming freshmen or transfer students.
Instructional Contact Hours: (1 Lec, 1 Crd)

PHS 1514 - Personal Health (3 credits)
Fundamental health content and theory to provide students with constructive health information necessary to meet current and future personal health needs. Special emphasis on wellness and health promotion.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 1984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 2004 - Introduction to Public Health (3 credits)
Examination of how public health core disciplines of epidemiology, health policy and administration, health behavior, and environmental health work together in addressing public health problems. Special emphasis on the history of public health, the public health infrastructure and role of health informatics in public health.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 2974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 2974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 2984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 2994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 2994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 3014 - Introduction to Environmental Health (3 credits)
Overview of environmental health, examining local, national, and international frameworks. Environmental factors that affect human health, including major classes of chemical, biological, and physical exposures from different environmental media (air, water, food, and soil). Special emphasis on toxicology and epidemiology methodologies used at the individual (mechanistic) level and at the population level to determine environmental causes of disease. Find the most appropriate prevention or control measure to minimize adverse health outcomes.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 3044 - Global Health Issues (3 credits)
Students will get an overview of the determinants of health and how health status is measured. Students will also review the burden of disease, who is most affected by different disease burdens, risk factors, and key measures to address the burden of disease in cost-effective, doable, sustainable, and fair ways. Special attention will be paid throughout the course to health systems issues. The course will cover key concepts and frameworks but be practical in orientation. The course will be global in coverage but will focus on low- and middle-income countries, the health of the poor, and health disparities. The course will pay particular attention to the linkages between health and development. Pre: Junior standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 3064 - Public Health Seminar (1 credit)
Current topics in public health research, policy and practice, including biostatistics, epidemiology, health policy, environmental health, social and behavioral medicine, infectious diseases, and public health education. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

PHS 3074 - Public Health Practicum Prep (1 credit)
Preparation for the public health profession and practicum experience. Covers the necessary skills to become a successful public health professional. Students will explore and prepare for the public health practicum course by assessing interests, identifying placement opportunities, and completing necessary placement materials. Communication, ethical considerations, professional skills along with the development of resume/CV, cover letters, interviewing and networking will be covered. P/F only. Pre: Junior Standing.
Instructional Contact Hours: (1 Lec, 1 Crd)

PHS 3534 - Drug Education (3 credits)
Interpretation of multidimensional (social, psychological and physiological) scientific data regarding drugs. The major drug categories will be covered with special emphasis on substance misuse and abuse.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 3634 - Epidemiologic Concepts of Health and Disease (3 credits)
Designed to give students in the health sciences a basic understanding of the modern concepts regarding health and disease as well as skills in organizing epidemiological data, disease investigation and surveillance. Includes a survey of terms, concepts, and principles pertinent to epidemiology. Lifestyles of populations and the relationships between lifestyles and health status are studied.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HNFE 3634

PHS 3654 - Equity in Rural Health (3 credits)
Exploration of the socioeconomic, behavioral, biological, environmental and other factors that impact human health and contribute to health disparities. Introduction to concepts surrounding rural health equity, including: (i) defining rurality; (ii) identifying social determinants of health; (iii) reviewing the history of the US public health systems and policies tasked with improving rural health; (iv) describing critical health disparities impacting rural communities (such as cardiovascular disease, cancer, mental health and substance use disorders), and the drivers of these disparities; and, (v) (v) assessing health of special populations living in rural communities, such as maternal, newborn, adolescent and child health, aging populations, migrant populations, and LGBTQ + populations (vi) discussing the assessment, planning, policies, and interventions which can be implemented to improve the health of rural communities at the population level.
Prerequisite(s): PHS 2004
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 3964 - Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 3984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 4014 - Public Health Program Planning and Evaluation (3 credits)
Fundamental of public health program development, implementation and evaluation. Basic processes, approaches and interventions that identify and address the major health-related needs and concerns of populations. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 4044 - Public Health Policy and Administration (3 credits)
Evolution and analysis of public health policy in the United States. Public health and care systems. Administrative concepts central to public health such as human resources, strategic planning, controlling, directing, leadership and health law. Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 4054 - Concepts in One Health (3 credits)
Dynamic interdependence of human, animal and environmental health; theoretical foundations of One Health; One Health research methods for assessing animal-human linkages; One Health operationalization in human medicine, veterinary medicine and public health; policies and practices related to One Health; and capacity building and public engagement; One Health and traditional Medical Model approaches to health problems. Pre: Junior standing.
Pathway Concept Area(s): 3 Reasoning in Social Sciences, 4 Reasoning in Natural Sci., 11 Intercultural&Global Aware.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 4064 - Modeling Infectious Diseases (3 credits)
Mathematical modeling of infectious diseases; simple epidemic models, risk structure and modeling risk structure, multi-pathogen models, multi-host models, temporal seasonal models, spatial models, stochastic dynamics and modeling for public health policy. Pre: Junior Standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 4074 - Practicum in Public Health (2 credits)
Application of Public health theories, concepts and data in a work setting; comprehensive, structured experience requires student to demonstrate professional competencies and ethical behavior while working closely with a supervisor in a public health practice setting. Pass/Fail Only. Pre: Senior standing.
Prerequisite(s): PHS 3074
Instructional Contact Hours: (2 Lec, 2 Crd)

PHS 4094 - Appalachian Community Research (3 credits)
Undergraduate participatory community research as applied to issues of cultural heritage, sustainability, and identity. Students engage in projects defined by community groups and organizations as being critical to their well-being, continuity, or growth. Emphasis is on developing concepts of civic professionalism and developmental democracy.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: APS 4094, SOC 4094

PHS 4974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 4974H - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 4984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 4994 - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 4994H - Undergraduate Research (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 5004 - Foundations of Public Health (1 credit)
Foundational principles of public health, including history, core functions and essential services. Public health ethics and values. Career opportunities in the public health core disciplines. Biologic determinants of health. Global and One Health frameworks for health and health professionals. Pre: Graduate standing.
Instructional Contact Hours: (1 Lec, 1 Crd)

PHS 5014 - Environmental Health (3 credits)
Exploration of major environmental health concepts and issues, environmental policies and regulations. Topics include world population and pressures on the environment, healthy environment; environmental determinants of public health, including biological, physical and chemical factors; environmental factors affecting disease vectors and their control; air and water quality; waste management; the built environment, work environments and recreational area; food protection and safety; occupational health; tools for environmental evaluation, planning and safety. Pre: Graduate Standing or permission from the instructor.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: VM 7014

PHS 5024 - Epidemiology and Quantitative Methods in Public Health Lab (1 credit)
Statistical skills needed to conduct epidemiologic and public health research including descriptive statistics, bivariate statistics, and regression. Reading and writing code. Manipulate, analyze, and visualize public health data using statistical software. Probability, confidence intervals, and significance. Statistical power. Pre: Graduate standing.
Corequisite(s): PHS 5026
Instructional Contact Hours: (3 Lab, 1 Crd)

PHS 5025 - Epidemiology and Quantitative Methods in Public Health (3 credits)
5025: Investigation and analysis of dynamics and determinants of disease in communities and populations. Philosophy, assessment, and application of public health science, ethics, study design, data analysis, and epidemiologic measures. 5026: Basic ideas, methods, and measures of epidemiology. Statistical knowledge and skills to analyze and interpret data from epidemiologic studies. Introduction to common statistical packages. Evaluation of scientific evidence from literature. Identify and minimize major potential sources of error in epidemiologic studies. Pre: Graduate standing for 5025.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 5026 - Epidemiology and Quantitative Methods in Public Health (3 credits)
5025: Investigation and analysis of dynamics and determinants of disease in communities and populations. Philosophy, assessment, and application of public health science, ethics, study design, data analysis, and epidemiologic measures. 5026: Basic ideas, methods, and measures of epidemiology. Statistical knowledge and skills to analyze and interpret data from epidemiologic studies. Introduction to common statistical packages. Evaluation of scientific evidence from literature. Identify and minimize major potential sources of error in epidemiologic studies. Pre: Graduate standing for 5025.
Prerequisite(s): PHS 5025
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 5034 - Health Behavior and Health Education (3 credits)
This course has two main purposes: (1) to familiarize students with historical, theoretical and methodological aspects of health psychology, and (2) to acquaint health education students with the social, psychological, and cultural determinants of health behaviors which form the underpinnings of health education practice.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 5044 - Public Health Policy and Administration (3 credits)
Multiple dimensions of the health policy-making process including the roles of ethics and evidence. Analyzing health polices for their impact on public health and health equity. Examining the structure and function of health care models nationally and globally. Constitutional basis for public health. Applying principles of planning, organizing, directing, staffing, and budgeting to public health agencies. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HNFE 5694

PHS 5054 - Public Health Leadership and Interprofessionalism (2 credits)
Fundamentals of public health leadership and management using a systems-thinking lens. Decision-making, change management, shared vision, and communication. Strategic planning and public health ethics. Negotiation role-playing. Models of team effectiveness. Team building applied to working on public health and interprofessional teams. Collaborative leadership, personal leadership styles, and self-reflection. Diversity and cultural competency in the public health setting as a leader. Pre: Graduate standing.
Instructional Contact Hours: (2 Lec, 2 Crd)

PHS 5064 - Public Health Program Development and Evaluation (3 credits)
Development and evaluation of public health education and infectious disease programs. Health equity, systems thinking, and cultural responsiveness throughout the program development and evaluation cycle. Assessment of community health needs. Engagement of diverse stakeholders. Effective public health program design. Development of evaluation plans to assess processes, outcomes, and impacts. Relationship between program development, ongoing evaluation, and improvement. Communication of evaluation findings to stakeholders. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: VM 7064

PHS 5204 - Principles of Community Health Education (3 credits)
Public health issues and concepts are analyzed and evaluated in relationship to existing principles of health education.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 5214 - Program Development in Health Education (3 credits)
Theory, trends, and design of community health education programs implemented in communities, health agencies, hospitals, and industry. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HNFE 5684

PHS 5224 - Comp Health Systems (3 credits)
Comprehensive examination of the structure and function of worldwide healthcare and public health systems. National health services with central funding, social insurance programs, decentralized systems, and private insurance systems. Pre-requisite: Graduate Standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 5234 - Methods of Community Health Engagement (3 credits)
This course is designed to present core concepts, models, methods, strategies and challenges in the process of working with communities to improve community-identified population health needs. This course presents an overview of models for community organizing and community capacity building and provides students the opportunity to apply classroom concepts "in the field" through working with community partners and the development and presentation of a group Needs Assessment in collaboration with the community partner. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 5244 - Sexual Health and Human Rights (3 credits)
Sexual and reproductive health from human development, public health, and critical feminist perspectives, with special attention to human rights issues. Sexually transmitted infections; HIV/AIDS; unintended pregnancy; population policies; eugenics; sexual and reproductive rights; positive sexuality, sex education; and health promotion. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HD 5244, WGS 5244

PHS 5254 - Social Epidemiology and Health Inequities (3 credits)
Social determinants of health through the life-course. Relationship of social injustice to public health. Interplay of major social factors such as poverty, race and gender to influence health domestically and globally. Application of social epidemiology to a range of health outcomes. Inform effective solutions to health inequities. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: HD 5254

PHS 5314 - Infectious Disease Epidemiology (3 credits)
Dynamics and determinants of infectious diseases and their assessment on the molecular to population continuum in a systems based approach. Infectious disease transmission mechanisms; population susceptibilities; environmental, social, cultural and economic contributors to infectious disease propagation; detection and surveillance; geographic information systems; epidemiologic study design; and infectious disease modeling. Prerequisite: Graduate Standing required
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: VM 7314

PHS 5324 - Pub Hlth Infect Contrl & Prev (3 credits)
Assessment, policies, and procedures for control and prevention of infectious diseases in communities and populations. Sources, transmission mode, and local community to international dissemination of infectious disease agents; antimicrobial and chemical resistance; vaccine development, safety, and coverage; community and hospital based needs and interventions; and regulatory frameworks. Pre: Graduate Standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: VM 9324

PHS 5334 - Principles of Infectious Diseases (3 credits)
Principles of infectious diseases important for local, national, and global public health. Bacterial, viral, fungal, and parasitic pathogens; mechanisms of disease; host immune response to pathogens. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: VM 9334

PHS 5344 - Neglected and Emerging Infectious Diseases in Public Health (3 credits)
Neglected infectious diseases and their association with marginalized populations and factors including poverty, social and health inequities, water, sanitation and hygiene, and urbanization. Critical factors for emergence/re-emergence of infectious diseases in populations and regions, including geopolitical challenges, zoonotic and vector impacts. Evaluate studies and global responses to neglected and emerging infectious diseases to inform the development of One Health interventions. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: VM 9344

PHS 5704 - Drinking Water & Health (3 credits)
Drinking water contamination and associated health outcomes. Programs to improve safe water access. Viral, bacterial, protozoal, and helminthic pathogens. Heavy metals, pesticides, and other contaminants. Drinking water treatment and supply in rural areas. Study designs for health outcome assessment. Field-based intervention trials. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: CEE 5704

PHS 5714 - Health of the Elderly (3 credits)
The health needs and problems of the elderly, the implications for those working with the elderly, and possible health care delivery systems.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 5724 - Ethical Foundations of Public Health (3 credits)
Methods for ethics decision-making in public health and health policy, exploration of theoretical foundations of ethical public health practice, methods for identifying ethical challenges and ethical dilemmas, skills for managing ethical ambiguity, differences and similarities between professional ethics, research ethics, clinical ethics, and public health ethics, key historical events in public health that led to ethical and policy requirements, decision-making frameworks to analyze public health ethical challenges, current writings in public health ethics literature, well-reasoned written and oral arguments for a course of action to address public health ethics dilemmas. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 5904 - Project and Report (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 5914 - Practicum in Public Health (6 credits)
Public health theories and concepts in a work setting; comprehensive, structures experience requires student to demonstrate professional competencies while working closely with a supervisor in a public health practice setting. Pre-requisite: Graduate Standing and completion of 24 hours of MPH degree coursework.
Instructional Contact Hours: (6 Lec, 6 Crd)

PHS 5924 - Capstone in Public Health (3 credits)
Synthesis of coursework and practicum experience into a final comprehensive product which integrates knowledge and skills acquired in all core classes, specific MPH concentration courses and practicum experience for developing, implementing and evaluating a public health program; tests students ability to effectively analyze a public health problem and develop an intervention toward a solution to the problem. Pre-requisite: Graduate standing; completion of 39 hours of MPH coursework including enrollment in or completion of public health practicum.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 5934 - Public Health Integrative Learning Experience (3 credits)
Culminating experience required for the MPH degree. Integration of program foundational and concentration-specific competencies. Team-based public health educational and professional experience. Addressing a public health challenge. Working with a mentor from an external stakeholder organization. Producing individual high-quality written deliverable. Reflection on the learning experience. Team presentation of project. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)

PHS 5935 - Preparation for Public Health Practice (1 credit)
Preparation for the public health profession. Covers the necessary skills to become a successful public health professional. 5935: Exploration of Public Health Practice Experience (PHPE) placement opportunities. PHPE goals, objectives, and competencies. PHPE products that align with academic and professional goals. PHPE learning contract. Institutional review board (IRB) protocols. Communications and professionalism skills. Academic poster and e-portfolio design. Work/life balance strategies. 5936: Examination of professional preparation for careers in public health. Job search strategies, resume/CV and cover letter writing, interviewing, and networking. Workplace skills, including professional communication, group process, leadership/supervision skills, working with the media, and survey design and data presentation. Personal/professional growth strategies, including salary and benefits negotiation, debt management, and time management. Grant writing. Pre: Graduate standing; 5935 for 5936. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

PHS 5936 - Preparation for Public Health Practice (1 credit)
Preparation for the public health profession. Covers the necessary skills to become a successful public health professional. 5935: Exploration of Public Health Practice Experience (PHPE) placement opportunities. PHPE goals, objectives, and competencies. PHPE products that align with academic and professional goals. PHPE learning contract. Institutional review board (IRB) protocols. Communications and professionalism skills. Academic poster and e-portfolio design. Work/life balance strategies. 5936: Examination of professional preparation for careers in public health. Job search strategies, resume/CV and cover letter writing, interviewing, and networking. Workplace skills, including professional communication, group process, leadership/supervision skills, working with the media, and survey design and data presentation. Personal/professional growth strategies, including salary and benefits negotiation, debt management, and time management. Grant writing. Pre: Graduate standing; 5935 for 5936. Pass/Fail only.
Prerequisite(s): PHS 5935
Instructional Contact Hours: (1 Lec, 1 Crd)

PHS 5964 - Practicum (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 5974 - Independent Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 5984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

PHS 8984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

Professional Program Courses

Professional program courses leading to the D.V.M. degree carry the veterinary medicine (VM) prefix. For updated information on the DVM Curriculum, please see our website at: http://www.vetmed.vt.edu/academics/dvm/dvm-curriculum.asp.

VM 7014 - Environmental Health (3 credits)
Exploration of major environmental health concepts and issues, environmental policies and regulations. Topics include world population and pressures on the environment, healthy environment; environmental determinants of public health, including biological, physical and chemical factors; environmental factors affecting disease vectors and their control; air and water quality; waste management; the built environment, work environments and recreational area; food protection and safety; occupational health; tools for environmental evaluation, planning and safety. Pre: Graduate Standing
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHS 5014

VM 7064 - Public Health Program Development & Evaluation (3 credits)
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHS 5064

VM 7314 - Infectious Disease Epidemiolog (3 credits)
Dynamics and determinants of infectious diseases and their assessment on the molecular to population continuum in a systems based approach. Infectious disease transmission mechanisms; population susceptibilities; environmental, social, cultural, and economic contributions to infectious disease propagation; detection and surveillance; geographic information systems; epidemiologic study design; and infectious disease modeling. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHS 5314

VM 8000 - Small Animal Behavioral Medicine (1 credit)
Behavioral medicine of the dog and cat; ontogeny of behavior, basic obedience and housetraining, aggression, anxiety, compulsive disorders, elimination problems, psychopharmacology. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8004 - The Animal-Human Relationship (2 credits)
Exploration of the animal-human relationship and its impact on animal and human welfare. Five themes; animal cognition; animals in service roles, shelter medicine and management, animal laws, and wildlife-human interface. Communication of health-related topics to other professionals and general public. Pre: 3rd year standing in the DVM program. P/F only. Design Lab Studio
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

VM 8020 - Equine Diagnostic Techniques for Digestive, Nervous and Integumentary System (1 credit)
Diagnostic and therapeutic techniques commonly used in equine practice involving the gastrointestinal, neurological and integumentary systems. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design Lab/Studio (2L,1C)
Corequisite(s): VM 8030, VM 8696
Instructional Contact Hours: (2 Lab, 1 Crd)

VM 8024 - Descriptive Embryology (1 credit)
A brief introduction to the early stages of development in common domestic animals. Covers the period from fertilization of the oocyte to initiation of organogenesis. Also introduces concepts on the mechanisms of development and the teratogenic effects of exogenous factors. Includes an introduction to the phenomenon of multiple pregnancies in different species, and comparative patterns of placentation. This course provides an overview of the cellular events immediately preceding and following fertilization, as well as a synopsis of general developmental features of gastrulation, placentation, and ontogeny of selected body systems. Completion of the course should greatly assist students in understanding various anatomical aspects of the adult animal body, as well as common congenital malformations. Pre: first-year standing in the DVM curriculum.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8030 - Special Topics in Equine Clinical Practice Lab (1 credit)
Clinical techniques for evaluation of the ophthalmological, neurological, odontological and gastro-enteric systems of horses. Techniques for preventive medicine of teeth. Castration and wound management. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design Lab/Studio.
Instructional Contact Hours: (2 Lab, 1 Crd)

VM 8060 - Compassionate End of Life Care (2 credits)
Ethical implications and communication nuances regarding euthanasia of animals. Euthanasia techniques, mechanism of action of drugs, pre-anesthesia sedation and anesthesia protocols, routes of administration of euthanasia drugs and regulatory requirements of controlled substances including those in the American Veterinary Medical Association (AVMA) Guidelines for Euthanasia of Animals. Client bereavement, pet memorialization, after care services and compassion fatigue. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8070 - Fundamentals of Veterinary Diagnostics (2 credits)
Fundamentals of veterinary diagnostic testing. Application of diagnostic reasoning in test selection and result interpretation. Select test methodology in the major diagnostic areas. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8110 - Sensing and Seeing (10 credits)
Neural, ocular and cutaneous structure and function required for locomotion, vision, touch, and hearing. Diagnosis and treatment of common diseases of domestic animals that limit function of sensing and seeing. Normal and abnormal integument of domestic animals. Pass/Fail only. Design Lab/Studio.
Instructional Contact Hours: (8 Lec, 3 Lab, 10 Crd)

VM 8130 - Special Topics in Equine Problem Solving (2 credits)
Application of clinical reasoning skills to diagnose, treat and manage diseases of horses involving the gastrointestinal, nervous, reproductive, ocular and integumentary systems. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8154 - Food Animal Product Safety for Veterinarians (2 credits)
History, development and enforcement of laws and regulations that affect the food animal processing industry and consumers of animal products. Comprehensive approach to microbiological and physical foodborne hazard identification, testing and sampling. Foodborne hazard prevention and control, including Hazard Analysis and Critical Control Points systems. Pre-requisite: Third year standing in DVM curriculum
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8164 - The Normal Animal (10 credits)
Normal individual behavior, social behavior, and management of domestic species. Normal domestic animal body structure and function including skeletal and neuromuscular organization, body cavities and gross and radiographic anatomy of structures within those cavities. Foundational knowledge of cell structure, differentiation and physiology, pharmaceuticals that influence cellular physiology. Clinical Skills required for veterinarians. Pass/Fail Only. Pre: Graduate Standing.
Instructional Contact Hours: (8 Lec, 4 Lab, 10 Crd)

VM 8174 - Dealing with Threats (10 credits)
Bacterial, viral, parasitological, toxicological agents of disease in domestic animals; mechanisms of disease production. Immunological responses to infectious agents and immune-mediated diseases. Pathological and clinic- pathological responses of domestic species to insult. Principles of epidemiological evaluation, diagnosis, treatment, control and prevention of common threats to domestic species. Pass/Fail Only.
Instructional Contact Hours: (8 Lec, 6 Lab, 10 Crd)

VM 8194 - The Next Generation (9 credits)
Anatomy, physiology, pharmacology and medical aspects associated with conception, embryonic and fetal development, gestation, delivery, and lactation, as well as neonatal development, disorders and management. Surgical and medical management of fertility will also be covered, to include hands-on surgical experience performing canine ovariohysterectomy. Pass/Fail only.
Instructional Contact Hours: (7 Lec, 6 Lab, 9 Crd)

VM 8204 - Healthy Populations (7 credits)
Principles of epidemiology, biosecurity, population dynamics preventative health management of populations. One Health, the role of veterinarians in the diagnosis and prevention of zoonotic diseases, food security, food safety, food defense, meat hygiene, antimicrobial usage and prevention of antimicrobial resistance. Surgical and medical management of fertility including canine ovariohysterectomy. Pass/Fail only.
Instructional Contact Hours: (6 Lec, 3 Lab, 7 Crd)

VM 8214 - Small Animal Medicine (3 credits)
Clinical features and pathophysiology of common diseases of the endocrine, gastrointestinal, hepatobiliary, hematologic, urinary, and respiratory systems of dogs and cats. Diagnosis and treatment of these diseases. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (3 Lec, 3 Crd)

VM 8224 - Problem Solving in Public and Corporate Veterinary Practice (2 credits)
Public veterinary practice skills for veterinarians working in public and corporate practice. Communication with the media and stakeholders, methods for group decision-making, and frameworks for problem solving, including SWOT (Strengths, Weaknesses, Opportunities and Threats) Analysis, Risk Analysis, and the PESTLE framework. Government infrastructure and regulations related to infectious disease management in animal populations, emergency management, public health and animal welfare. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8244 - Zoo Mammal Comparative Morphology (1 credit)
Anatomy and physiology of zoo mammals. Functional evolutionary adaptations of morphological features of these mammals. Adaptations for locomotion, alimentation, thermoregulation and reproduction. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8254 - Functional Morphology of Birds (1 credit)
Anatomical features will be described that are unique to, or are characteristic of, each major group covered. Adaption and successful exploitation of habitat. Use of anatomical features and functions. Selected attributes of the groups natural history, members of the group common to the local and extended area, those commonly kept as pets. Pre-requisite: Graduate Standing required.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: BMVS 5814

VM 8264 - Small Animal Nutrition (1 credit)
Practical feeding guidelines for companion animals. Special consideration also given to the relationship of diet to nutrient excesses and deficiencies that result in clinical disorders. Diagnosis, treatment, and prevention of metabolic disorders of companion animals will be discussed.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8294 - Small Animal Surgical Diseases and Techniques (2 credits)
Clinical features, pathophysiology and diagnosis of common small animal surgical diseases. Anatomically relevant structures, techniques, complications, and emergency resuscitation plans for common surgeries. Oncological and reconstructive surgeries. Preoperative, surgical and postoperative care. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design Lab/Studio.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

VM 8360 - Food Animal Clinical Techniques (1 credit)
Techniques for physical examination, handling and restraint of food animals. Common diagnostic techniques including necropsy. Beef quality assurance programs including pharmaceutical and regulatory requirements. Pain relieving procedures. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design Lab/Studio.
Corequisite(s): VM 8615
Instructional Contact Hours: (2 Lab, 1 Crd)

VM 8364 - Veterinarians and Public Policy (2 credits)
Formulation and implementation of veterinary public policy at the international, national, state, professional association, and consumer level. Discussion of the formulation of legislation, regulation, guidance and resolutions. Roles of science, law, politics, economics, societal values, and stakeholder influence in forging veterinary public policy. Moral and ethical dimensions of veterinary public policy making. Focus on the formulation, role and impacts of public policy relative to the practice of private and public veterinary medicine. Pre: Graduate standing. Pass\Fail only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8384 - Food Animal Nutrition (1 credit)
Practical feeding guidelines for food animals. Relationship of diet to nutrient excesses and deficiencies and resulting clinical disorders. Diagnosis, treatment and prevention of metabolic disorders of food animals. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8394 - Equine Nutrition (1 credit)
The course is designed to provide practical feeding guidelines for different classes of horses. The relationship between nutrition and clinical disorders of the horse is explored including their nutritional management. Students will be expected to complete a problem-solving nutrition project during the course.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8464 - Topics in Veterinary Public Health (2 credits)
Contributions of veterinary science to human health and well-being. Water quality and animal agriculture; antimicrobial use in animal populations and the impact on human health; environmental aspects of emerging and zoonotic infectious diseases; zoonoses of global importance; prioritization methods for infectious diseases; food safety, security and defense; socioeconomic impacts of animal disease; Human-Animal interaction/Human-Animal bond. Pass/Fail only. Pre: Graduate standing.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8484 - Food Animal Clinical Pharmacology (1 credit)
Therapeutic principles and their application for drugs in food animals. Drug labeling and extra-label drug use. Application of regulations regarding the Animal Medicinal Drug Use Clarification Act, Veterinary Feed Directive, growth promotants and implants. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8494 - Aquatic Medicine and Fish Health (2 credits)
The etiology, diagnosis, pathology, pathogenesis, chemotherapy, control and management of infectious and non-infectious diseases of aquatic organisms, especially pertaining to cultured food and tropical fish. Hands on experience with water quality evaluation, diagnostic techniques and the identification of common pathogenic organisms. Pre-requisite: Second year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: BMVS 5764

VM 8504 - Developing the Public Veterinary Practitioner (2 credits)
Principles of outbreak investigation, descriptive epidemiology, and disaster management in the control of infectious animal disease outbreaks; risk analysis; literature review methods; design of disease surveillance, prevention and control programs; principles of animal welfare; and global veterinary capacity building. Topics discussed within the context of state and federal government agencies, corporate/industry, and clinical institutions. Emphasis on communication, teamwork and leadership skills. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8524 - Equine Clinical Problem Solving (2 credits)
Equine clinical cases in a problem-oriented format. Causes and diagnoses of common equine clinical problems, diagnoses tests, test result interpretation, therapeutic regimen prescription, treatment monitoring plans. Pre: third-year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8534 - Introduction to Clinical Research (2 credits)
Design of studies in veterinary related clinical and epidemiologic research, planning and implementation of experimental and survey data collection, management and analysis of data, evaluation of analysis and critical evaluation of published information. Pre: second-year standing in DVM curriculum.
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: BMVS 5564

VM 8564 - Breathing and Circulating (10 credits)
Structure, function and dysfunction of the cardiovascular, hemo-lymphatic and respiratory systems including gross, radiographic and microscopic anatomy; pathogenesis, pathophysiology, diagnosis, treatment and prevention of common diseases; general anesthesia of veterinary patients. Pass/Fail only.
Instructional Contact Hours: (9 Lec, 3 Lab, 10 Crd)

VM 8574 - Food Animal Theriogenology (1 credit)
Reproductive management for herds of food animal species including cattle, sheep, goats and pigs. Emphasis on clinical aspects of reproductive management. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design Lab/Studio.
Instructional Contact Hours: (2 Lab, 1 Crd)

VM 8584 - Eating and Eliminating (10 credits)
Gastrointestinal, hepatobiliary, endocrine, renal, urogenital tract disease in domestic animals; congenital, degenerative, drug-induced, allergic, nutritional, neoplastic, immune-mediated, infectious, traumatic, toxic, vascular causes. Oral and abdominal anatomy. Nutrition. Clinical signs, diagnosis, treatment, and prevention of common diseases of domestic species. Pass/Fail only.
Instructional Contact Hours: (9 Lec, 3 Lab, 10 Crd)

VM 8594 - Wildlife Medicine (1 credit)
The course will include discussions on the regulations and ethics covering the rehabilitation and release of native wildlife. Lectures will cover the major infectious diseases, parasites, toxicities, injuries and other problems of wildlife. Common treatments, methods and equipment used to care for and rehabilitate these animals will be discussed. Species covered will include native mammals, wild songbirds, and raptors. Pre: second-year standing in the DVM curriculum.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8604 - Small Animal Emergency Medicine (2 credits)
Topics and techniques for small animal emergency and critical care. Diagnosis and treatment of emergent systemic disease, traumatic injuries, toxicological emergencies and shock. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design Lab/Studio.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

VM 8610 - Food Animal Population Medicine (2 credits)
Concepts of production diseases of food animals at the herd level. Includes diagnostic, therapeutic and preventions strategies. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8615 - Food Animal Medicine and Surgery (3 credits)
8615: This course will provide in-depth information on the common disorders of the major body systems of cattle, sheep, goats and pigs. Clinical signs, diagnostic tests, and treatments for disorders of individual animals will be emphasized. 8616: The course will include treatment of the individual animal and herd problems, preventative aspects of herd problems, and the regulatory and health aspects of herd management. Emphasis is on the production medicine aspects of herd and flock management. Pre: Third-year standing in the DVM curriculum.
Instructional Contact Hours: (3 Lec, 3 Crd)

VM 8664 - Beyond Private Practice: Veterinary Careers and Pathways (1 credit)
Exploration of veterinary career opportunities in federal and state governments; zoological, wildlife, aquatic, and conservation medicine; animal-related industries; academia and research; and emerging opportunities. Focus on pathways and processes used to determine career choice. Emphasizes development of resumes, interviewing and negotiating for public and corporate careers. Pass\Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8665 - Becoming a Veterinary Professional (2 credits)
Introductory professional development for veterinarians, including the principles of oral clinical communication (communication with clients, colleagues and general public), clinical written communication (medical records, case reports, referrals), collaboration (inter and intra professional), reflective practice, intercultural awareness, ethics and law, animal welfare, career development, professionalism, foundational practice management, literature seeking and evidence based medicine, and management of self, team, finance and career. Enrolled in DVM degree. Pre: Graduate standing. P/F only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8666 - Becoming a Veterinary Professional (2 credits)
Further exploration of professional development with an emphasis on more difficult communication topics, revisiting career development, finance, legal and ethical issues at a deeper level. Create a community and social context to provide, identify and facilitate learning from professional role models. Enrolled in a DVM degree. Graduate standing. P/F only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8667 - Becoming a Veterinary Professional (2 credits)
Build a professional identity through exploration of medical errors, team communication skills, communication of diagnostic and treatment plan, outcomes and financial consideration. Professional development through exposure to multiple professional, ethical and cross-cultural scenario and cases. Enrolled in a DVM degree. Graduate standing. P/F only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8670 - Special Topics in Equine Clinical Practice (2 credits)
Current and in-depth information on common diseases of horses including their pathophysiology, diagnosis, treatment, clinical management and control. Advanced topics in neurology, gastroenterology, ophthalmology, urology, oncology, and dermatology. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8680 - Equine Clinical Practice: Breathing, Circulating and Moving (2 credits)
Current and in-depth information on common diseases of horses including their pathophysiology, diagnosis, treatment, clinical management and control. Advanced topics in the musculoskeletal, respiratory and cardiac systems. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8690 - Equine Clinical Practice: Breathing, Circulating and Moving Lab (1 credit)
Development of clinical skills for diagnosis of diseases that affect the equine musculoskeletal, respiratory and cardiac systems. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design Lab/Studio.
Instructional Contact Hours: (2 Lab, 1 Crd)

VM 8696 - Equine Medicine and Surgery (3 credits)
These courses provide in-depth information about diseases affecting horses including pathophysiology of prominent diseases, methods of diagnosis, clinical management, and treatment. 8695: Advanced topics in diseases of the equine cardiopulmonary and musculoskeletal systems. 8696: Advanced topics in the equine nervous, gastrointestinal, dermal, and urinary systems. Pre: Third-year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

VM 8704 - Veterinary Cytopathology (1 credit)
Introduction to cytopathology and sample collection. Microscopic review of cytological samples from common neoplastic, inflammatory and infectious disorders. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8714 - Small Animal Oncology (2 credits)
Study of pathophysiology, diagnosis, staging and management of cancer in small animals. Critical evaluation of the primary veterinary oncology literature. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design Lab/Studio.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

VM 8724 - Equine Diagnostic Techniques for the Musculoskeletal and Respiratory Systems (1 credit)
Diagnostic techniques commonly used in equine practice involving the musculoskeletal and respiratory systems. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design Lab/Studio.
Instructional Contact Hours: (2 Lab, 1 Crd)

VM 8734 - Beef Cattle Medicine and Production (1 credit)
Management and medical conditions affecting production in beef cattle. Common procedures in beef practice. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8744 - Dairy Cattle Medicine and Production (1 credit)
Management and medical conditions affecting production in dairy cattle. Common procedure in dairy practice. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8774 - Food Animal Clinical Reproduction (1 credit)
Techniques for clinical evaluation of the reproductive tract of individual animals in herds of food animals including cattle, sheep, and goats. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design Lab/Studio.
Instructional Contact Hours: (2 Lab, 1 Crd)

VM 8784 - Decision Making in Veterinary Pharmacology (2 credits)
Principles of therapeutic decision making with emphasis on selection of appropriate drug, the risks and benefits of drug treatment, monitoring the course of therapy in an individual patient, and the economic impact of therapeutic decisions including the cost of therapy costs of drug residues and adverse drug reactions. Study of drugs based on therapeutic objectives and the effect of the disease process on pharmacokinetics and pharmacodynamics.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8794 - Equine Podiatry (3 credits)
Anatomy, physiology, and biomechanics of the distal limb of the horse. Diagnosis, including radiology, and treatment of common diseases of the equine digit. Principles and practice of farriery. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 3 Lab, 3 Crd)

VM 8804 - Small Animal Physical Rehabilitation and Complementary Medicine (1 credit)
Physical rehabilitation, conditioning, and complementary therapies in small animals. Therapeutic and conditioning exercises, acupuncture, photobiomodulation, electrical stimulation, therapeutic ultrasound, nutrition and nutraceuticals. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8810 - Care Forward (2 credits)
Principles of wellness in health care professionals. Strategies for self-care, development of personal financial management, and healthy inter-professional and interpersonal relationships. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8814 - The Next Equid (3 credits)
Development of knowledge and skills for diagnosing and managing reproductive tract conditions of the horse including breeding soundness and cycles, pregnancy diagnosis, failure to breed, and parturient emergencies. Neonatal medicine including diagnosis, treatment and management of sick foals, and preventive care. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design Lab/Studio.
Instructional Contact Hours: (1 Lec, 3 Lab, 3 Crd)

VM 8824 - Moving (9 credits)
Structure and function of musculoskeletal systems required for locomotion. Diagnosis and treatment of common diseases of domestic animals that limit function of movement. Pain and pain management. Pass/Fail only. Design/Lab Studio.
Instructional Contact Hours: (7 Lec, 3 Lab, 9 Crd)

VM 8834 - Food Animal Reproduction Techniques (1 credit)
Transrectal palpation skills and ultrasonography in the non-pregnant cow to assess uterus and ovarian structures. Reproductive tract scoring in the heifer, semen handling and AI techniques, and bull breeding soundness examination. Diagnosis of infertility and abortion. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design studio/lab.
Corequisite(s): VM 8574
Instructional Contact Hours: (2 Lab, 1 Crd)

VM 8844 - Applied Veterinary Diagnostics (2 credits)
Case based applications of veterinary diagnostic testing. Interpretation of gross lesions, radiographic images, laboratory data, and ultrasound images relevant to body systems. Clinical and diagnostic reasoning to determine clinically significant abnormalities. Pass/Fail only.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 8864 - Clinical Reptile Medicine (1 credit)
Anatomy, physiology and husbandry of four reptilian groups. Diagnostic tests, hospital care, anesthesia, analgesia, critical care, and surgical treatment of common diseases and injuries of reptiles. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8874 - Ferret Medicine and Surgery (1 credit)
A comprehensive study of domestic ferret from the veterinary perspective. Topics include husbandry/management, common diseases and surgical procedures. The course consists of lectures and laboratories. Pre: third year standing in the DVM curriculum.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8884 - Traditional Chinese Veterinary Medicine (1 credit)
History and fundamental theories of traditional Chinese veterinary medicine (TCVM). Assessment, diagnosis and treatment of disease using these theories. Diagnostic techniques and their interpretation associated with TCVM including the use of meridians. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8894 - Small Animal Ophthalmology and Neurology (1 credit)
Clinical features and pathophysiology of common diseases of the eyes and nervous system of dogs and cats. Diagnosis and treatment of ocular and neurological diseases. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 8914 - Small Animal Dentistry (2 credits)
Normal dental anatomy, diagnosis of common dental/oral diseases of dogs and cats including radiology. Complete oral health assessment and treatment. Techniques for tooth extraction, regional nerve blocks, mandibular fractures, interceptive and restorative dentistry. Pre: 3rd year standing in the DVM program. Pass/Fail only. Design Lab/Studio.
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

VM 8984 - Special Study (1-19 credits)
Instructional Contact Hours: Variable credit course

VM 9004 - Avian Medicine and Surgery (1 credit)
Course is designed to provide students with basic information and skills necessary for the diagnosis and treatment of disorders of avian species with an emphasis on pet birds. Pre: third-year standing in the DVM curriculum.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 9014 - Advanced Diagnostic Imaging (1 credit)
This course is designed to introduce students to the basic principles of and applications for advanced diagnostic imaging in veterinary medicine. Topics will include computed tomography, magnetic resonance imaging, nuclear imaging, linear tomography, fluoroscopy, and ultrasonography. Tours of imaging facilities at the VMRCVM Teaching Hospital and Montgomery Regional Hospital will be available. Pre: third-year standing in the DVM curriculum.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 9024 - Equine Sports Medicine and Rehabilitation (2 credits)
Sports medicine, rehabilitation, and complementary medicine in horses. Examination and diagnosis of performance limiting musculoskeletal injuries and cardiorespiratory conditions in the equine athlete. Therapeutic and rehabilitation treatment options including therapeutic shoeing, soft tissue manual therapies, conditioning exercises, acupuncture, chiropractic, photobiomodulation, electrical stimulation, underwater treadmill and hydrotherapy; regenerative medicine and nutrition including herbal medicines. Regulations regarding use of medications. Pre: 3rd year standing in the DVM program. P/F only. Design Lab Studio
Instructional Contact Hours: (1 Lec, 2 Lab, 2 Crd)

VM 9034 - Advanced Small Animal Surgery (2 credits)
This course concentrates on the study of soft tissues and orthopedic surgical principles and methods that are applicable to small animal practice. Emphasis is placed on the identification of disease conditions treatable by surgical therapy, applicable surgical methods, and expected outcome. Detailed, step-by-step, surgical procedures will be presented prior to student performance in the complementary laboratory in the Advance Small Animal Surgery Laboratory course (VM 9134).
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 9044 - Food Animal Clinical Problem Solving (2 credits)
This course will present food animal clinical cases in a problem oriented format. Although the majority of the problems presented will begin with the individual animal case, emphasis will be placed on control and prevention in the flock or herd. Aspects of outbreak/disease investigation, production medicine, economics, and epidemiology will also be utilized. Pre: third-year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 9064 - Advanced Histopathology (1 credit)
Pathology centering on reaction of organs, tissues and cells at the light microscopic level is presented in a case-based format. Emphasis will be placed on classic tissue and cellular response to injury and will incorporate information and correlate disease mechanisms presented in prerequisite courses. Pre: third-year standing in the DVM curriculum.
Instructional Contact Hours: (3 Lab, 1 Crd)

VM 9074 - Goat and Sheep Medicine (1 credit)
This is an in-depth treatment of health and management as well as diseases of goats and sheep. Production cycles, management concerns, as well as routine preventative care are covered as well as management of traumatic, infectious, and toxic disease problems. Pre: third-year standing in the DVM curriculum.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 9085 - Emerging Infectious Diseases (1 credit)
Stand-alone, fully on-line, asynchronous distance and distributed learning course, accessible as streaming videos on the Internet or on CDs. 9085: The course defines and discriminates amongst numerous factors influencing the emergence of infectious diseases. Selected emerging food-borne, bacterial, viral, zoonotic diseases of animals and humans are described and analyzed. 9086: The course expands the pathology of emerging infectious diseases. Additional viral, parasitic and zoonotic diseases of animals and humans are described and analyzed. Xenotransplantation is also discussed from the perspective of zoonotic diseases. Third year standing in the DVM curriculum, or good standing in a graduate studies program is required.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: BMVS 5005

VM 9094 - Advanced Veterinary Public Health (1 credit)
Consideration of the organization and delivery of Veterinary Public Services at the local, state, national and international levels including zoonoses surveillance, investigation and response to disease outbreaks, biological warfare and terrorism, response to natural emergencies and disasters, and public health policy formulation. Pre: third-year standing in the DVM curriculum.
Instructional Contact Hours: (1 Lec, 1 Crd)
Course Crosslist: BMVS 6564

VM 9104 - Veterinary Practice Business Management (3 credits)
Core business management, marketing and entrepreneurship concepts for veterinary practice. Requirements, risks, rewards and ethical considerations of practice ownership. Assessment, analysis and solutions for business problems including financial, legal and organizational. Business leadership skills. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (3 Lec, 3 Crd)

VM 9124 - Equine Theriogenology II (1 credit)
Advanced equine theriogenology. Reproductive procedures and latest techniques of assisted reproductive technology. Collection of semen/embryos and processing/shipment of each. Surgical management of reproductive disorders will be presented. Prerequisite: Third year standing in the DVM curriculum.
Instructional Contact Hours: (3 Lab, 1 Crd)

VM 9134 - Advanced Small Animal Surgery Laboratory (1 credit)
Principles and skills for entry-level surgery. Applied practice in surgical principles and techniques, including ovariohysterectomy, orthopedic, ophthalmic procedures.
Instructional Contact Hours: (3 Lab, 1 Crd)

VM 9144 - Problem Solving in Small Animal Medicine (2 credits)
Problem solving skills for diagnoses of medical diseases in small animal patients. Problem-oriented case material for diagnoses evaluation and therapeutic options. Pre-requisite: Third-year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 2 Crd)

VM 9174 - Equine Neonatal Medicine (1 credit)
Normal parturient events, disease that affect neonatal foals, and the diagnostic and treatment options currently available to practitioners. Emphasis placed on problem oriented approach through evaluation of case examples. Pre-requisite: Third-year standing in the DVM curriculum.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 9224 - Pocket Pet Medicine (1 credit)
Care and management of companion exotic species including rats, mice, gerbils, hamsters, guinea pigs, chinchillas, rabbits, ferrets, sugar gliders, and hedgehogs. Common clinical problems including major infectious and non-infectious diseases, nutritional problems and trauma. Diagnostic approaches, medical and surgical treatments, including anesthesia and vaccination protocols. Pre: 3rd year standing in the DVM program. Pass/Fail only.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 9244 - International Veterinary Medicine (2 credits)
Overview of international veterinary activities. Understanding of the role of governmental agencies, inter-governmental and non-governmental organizations in international relations, development, relief work, conversation, disease control and prevention, and trade. Understanding of the legal authority of binational agreements and international treaties. Training in intercultural communications, negotiation and conflict resolution. Review of current global issues. Pre: third-year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 2 Crd)
Course Crosslist: BMVS 6594

VM 9254 - Small Animal Theriogenology (1 credit)
This course deals with the normal reproductive function and management in the dog and cat. Diagnosis and management of reproductive diseases are considered. Pre: second-year standing in the DVM curriculum.
Instructional Contact Hours: (1 Lec, 1 Crd)

VM 9264 - Small Animal Community Practice Clerkship (4 credits)
Senior veterinary students will be trained in clinical medicine and surgery in a private veterinary practice setting under the direction of experienced veterinary practitioners. Opportunities will exist to participate in the routine aspects of veterinary practice, to interact with clients and clinic personnel, to improve surgical and diagnostic skills, and to observe and understand business management activities. Fourth year standing in the DVM curriculum required.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9324 - Pub Hlth Infect Contrl & Prev (3 credits)
Assessment, policies, and procedures for control and prevention of infectious diseases in communities and populations. Sources, transmission mode, and local community to international dissemination of infectious disease agents; antimicrobial and chemical resistance; vaccine development, safety, and coverage; community and hospital based needs and interventions; and regulatory frameworks. Pre: Graduate Standing required.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHS 5324

VM 9334 - Principles Infectious Diseases (3 credits)
Principles of infectious diseases important for local, national, and global public health. Bacterial, viral, fungal, and parasitic pathogens; mechanisms of disease; host immune response to pathogens. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHS 5334

VM 9344 - Neglected and Emerging Infectious Diseases in Public Health (3 credits)
Neglected infectious diseases and their association with marginalized populations and factors including poverty, social and health inequities, water, sanitation and hygiene, and urbanization. Critical factors for emergence/re-emergence of infectious diseases in populations and regions, including geopolitical challenges, zoonotic and vector impacts. Evaluate studies and global responses to neglected and emerging infectious diseases to inform the development of One Health interventions. Pre: Graduate standing.
Instructional Contact Hours: (3 Lec, 3 Crd)
Course Crosslist: PHS 5344

VM 9404 - Specialty Medicine Clerkship (4 credits)
In-depth study of cardiology and neurology. Instruction will be case-based in the Veterinary Medical Teaching Hospital. Pre: fourth year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9434 - Small Animal Internal Medicine Clerkship (4 credits)
Care of local area animal sick animals, routine vaccinations and yearly physical examinations, and referral internal medicine cases. Students participate in emergency and intensive care unit services. Students are given primary patient responsibility, allocated time for daily rounds and individual case study. Pre: fourth year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9454 - Veterinary Ophthalmology Clerkship (4 credits)
Diseases of the eye in several species. Examination and treatment of local and referred patients with eye problems. Students will be given primary patient responsibility. May be repeated for a maximum of 8 credits. Pre: fourth year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)
Repeatability: up to 8 credit hours

VM 9504 - Large Animal Clinical Services Clerkship (4 credits)
Principles of large animal medicine and surgery including acquisition of an unbiased medical history, performance of a complete physical examination and knowledge of various diagnostic, therapeutic and surgical procedures performed on large animal patients admitted to the V.M.T.H. Students will work with large animal medical and surgical patients, attend daily ward rounds and have additional time for individual study.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9534 - Production Management Medicine Clerkship (4 credits)
Students will be introduced to clinical problems principally as they involve populations of animals within their production environment. The emphasis will be directed to problem identification, solution, and prevention. Students will handle, examine, and treat animals within their environment. Students will also attempt to determine environmental factors that contribute to the incidence of disease affecting individual animals and populations of animals, and assess how these factors can be most economically altered to prevent recurrence of the problem.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9544 - Equine Medical Center Clerkship (4 credits)
Clinical experience in both equine medicine and surgery by working with the faculty and clinical support staff in the management of horses referred by veterinarians for elective or emergency care. This will include patient admission and discharge responsibilities, pre- and post-operative patient care, routine and intensive medical surgical care. May be repeated for a maximum of 8 credit hours. Pre: fourth year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)
Repeatability: up to 8 credit hours

VM 9604 - Small Ruminant Clerkship (4 credits)
Detailed clinical exercises, discussion sessions, and problem-solving exercises concerning the biology, management diseases, and therapeutics of sheep, goats, llamas, and alpacas. Pre: fourth year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9614 - Small Animal Surgery Clerkship (4 credits)
Supervised clinical experience in diagnostics, pre-operative preparation, surgery and post-operative care of dogs and cats admitted through the Teaching Hospital for surgical problems. Correlative and communicative skills will be stressed. Patient care is a prime concern. Pre: fourth year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9624 - Anesthesiology Clerkship (4 credits)
Clinical experiences in comparative anesthesiology. Prospective and retrospective rounds and case discussions regarding teaching hospital patients. Additional time will be available for individual study. Pre: fourth year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9634 - Radiology Clerkship (4 credits)
Practical training in the production of diagnostic quality radiographs of various body parts of large and small animals with attention given to radiation safety and optimal radiographic positioning and technique; development of skills in radiographic interpretation.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9644 - Small Animal Private Practice Clerkship (4 credits)
Training of senior veterinary students in clinical medicine and surgery in the small animal private practice setting under the direction of experienced veterinary practitioners. Opportunities to participate in the routine of veterinary practice, to interact with clients and clinic personnel, to improve surgical and diagnostic skills, and to observe clinic management. Pre: fourth-year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)
Repeatability: up to 8 credit hours

VM 9714 - Government and Corporate Veterinary Medicine Clerkship (4 credits)
Develop and expand an awareness and understanding of career opportunities in veterinary medicine other than those in private clinical practice.
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)

VM 9724 - Laboratory Services Clerkship (4 credits)
To provide senior veterinary students with experience in the necropsy service of the Veterinary Teaching Hospital by working on actual case material; to give students an overview of laboratory support services of the hospital.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9744 - Morphologic Pathology Elective Clerkship (4 credits)
This course focuses on the details of performing animal necropsies and interpreting the lesions that may be found. Sampling and preparation techniques are considered for the preparation of histopathological specimens. Correlation of laboratory results with gross and histopathological findings is stressed and a final diagnostic report is prepared.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9764 - Independent Study/Research Elective (4 credits)
Provides the opportunity for students considering a career in public practice (Government/Corporate) to obtain in-depth experience in their focus area. Also allows students enrolled in the DVM/MS or DVM/PhD program to pursue research or other objectives in specified areas. Experiences will be tailored to the students area of interest.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9784 - Government and Corporate Veterinary Medicine Elective Clerkship (4 credits)
Develop and expand an awareness and understanding of career opportunities in veterinary medicine other than those in private clinical practice. (This course may be taken three times for a maximum of 12 semester credit hours).
Prerequisite(s): VM 9714
Instructional Contact Hours: (3 Lec, 3 Lab, 4 Crd)
Repeatability: up to 12 credit hours

VM 9794 - Center for Government and Corporate Veterinary Medicine Clerkship (4 credits)
The three-week clerkship provides hands-on involvement in the public practice of veterinary medicine, for the purpose of skill building, networking, and understanding/celebrating diversity. CGCVM faculty serve as mentors, structure opportunities, and provide debriefing following experiences. Government/corporate veterinarians in the Washington DC Metropolitan region, individually selected to match the career focus of the students, serve as advisors and consultants. Case studies will be used to explore current veterinary issues. Pre: fourth-year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9804 - Food Animal Private Practice Clerkship (4 credits)
Training of senior veterinary students in clinical medicine and surgery in the food animal private practice setting under the direction of experienced veterinary practitioners. Opportunities to participate in the routine of veterinary practice, to interact with clients and clinic personnel, to improve surgical and diagnostic skills, and to observe clinic management. Pre: fourth-year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9814 - Equine Private Practice Clerkship (4 credits)
Training of senior veterinary students in clinical medicine and surgery in the equine private practice setting under the direction of experienced veterinary practitioners. Opportunities to participate in the routine of veterinary practice, to interact with clients and clinic personnel, to improve surgical and diagnostic skills, and to observe clinic management. Pre: fourth-year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9824 - Mixed Species Private Practice Clerkship (4 credits)
Training of senior veterinary students in clinical medicine and surgery in the private practice setting under the direction of experienced veterinary practitioners. Opportunities to participate in the routine of veterinary practice, to interact with clients and clinic personnel, to improve surgical and diagnostic skills, and to observe clinic management. Pre: fourth-year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9834 - Equine Theriogenology Clerkship (4 credits)
Allows the interested student to pursue off-campus training in equine theriogenology beyond that provided in earlier theriogenology courses (VM 8374, 8514, 9124). Students will work on cases involving breeding management and abnormal reproductive function and will become familiar with methods to correct or treat these problems. Pre: fourth-year standing in the DVM curriculum.
Instructional Contact Hours: (2 Lec, 6 Lab, 4 Crd)

VM 9964 - Practicum/ Clerkship (1-19 credits)
Instructional Contact Hours: Variable credit course

Public Health Major

Program Curriculum

Code	Title	Credits
Degree Core Requirements		
HNFE 1004	Foods, Nutrition And Exercise	3
PHS 1514	Personal Health	3
PHS 2004	Introduction to Public Health	3
HNFE 2664	Behavioral Theory in Health Promotion	3
PHS 3014	Introduction to Environmental Health	3
PHS 3074	Public Health Professional and Practicum Prep	1
PHS 3534	Drug Education	3
PHS 3634	Epidemiologic Concepts of Health and Disease	3
SOC 4704	Medical Sociology	3
or PHS 3654	Equity in Rural Health	
PHS 4044	Public Health Policy and Administration	3
PHS 4054	Concepts in One Health	3
PHS 4064	Modeling Infectious Diseases	3
PHS 4074	Practicum in Public Health	2
ADV 2134	Introduction to Health Communication	3
or ADV 4324	Issues in Health Communication

Major Requirements		
PHS 1004	Public Health First Year Experience	1
PHS 4014	Public Health Program Planning and Evaluation	3
Free Electives		**32**
Subtotal		36
Pathways to General Education		
Pathways Concept 1 - Discourse		
ENGL 1105	First-Year Writing (Pathway 1f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01F))	3
ENGL 1106	First-Year Writing (Pathway 1f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01F))	3
Pathway 1a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G01A)		3
Pathways Concept 2 - Critical Thinking in the Humanities		
Pathway 2 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G02)		6
Pathways Concept 3 - Reasoning in the Social Sciences		
PSYC 1004	Introductory Psychology (Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03))	3
SOC 1004	Introductory Sociology (Pathway 3 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G03))	3
Pathways Concept 4 - Reasoning in the Natural Sciences		
BIOL 1105	Principles of Biology (Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04))	3
BIOL 1106	Principles of Biology (Pathway 4 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G04))	3
Pathways Concept 5 - Quantitative and Computational Thinking		
MATH 1014	Precalculus with Transcendental Functions (Pathway 5f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05F))	6
STAT 3604	Statistics for Social Science (Pathway 5a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05A))	3
or STAT 3615	Biological Statistics	
Pathway 5f (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G05F)		3
Pathways Concept 6 - Critique and Practice in Design and the Arts		
Pathway 6a (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06A)		3
Pathway 6d (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G06D)		3
Pathways Concept 7 - Critical Analysis of Identity and Equity in the United States		
Pathway 7 (https://catalog.vt.edu/course-search/?attrs_pathways=attrs_pathways_G07)		3
Total Credits		**120**

Satisfactory Progress Toward Degree

1. After having attempted 36 semester credits (including transfer, advanced placement, and advanced standing) students must have passed at least 12 semester credits of Pathways to General Education.
2. After having attempted 72 semester credits (including transfer, advanced placement and advanced standing) students must have an in major GPA of 2.0 or higher and must have successfully completed PHS 1514, PHS 2004, HNFE 1004, HNFE 2664 and STAT 3604/STAT 3615.
3. After having attempted 96 semester credits (including transfer, advanced placement and advanced standing) students must have an overall GPA of 2.0 or higher and must have successfully completed PHS 3534, PHS 3634, PHS 3014 and PHS 4014.

Graduation Requirements

Students must maintain a minimum of 2.0 cumulative GPA and earn a grade of C- or better in each of the following courses in order to qualify for graduation. The courses listed are used to calculate a students in-major GPA:

Code	Title	Credits
PHS 1514	Personal Health	3
PHS 2004	Introduction to Public Health	3
PHS 3014	Introduction to Environmental Health	3
PHS 3534	Drug Education	3
PHS 3634	Epidemiologic Concepts of Health and Disease	3
PHS 4014	Public Health Program Planning and Evaluation	3
SOC 4704	Medical Sociology	3
or PHS 3654	Equity in Rural Health	
PHS 4044	Public Health Policy and Administration	3
PHS 4054	Concepts in One Health	3
PHS 4064	Modeling Infectious Diseases	3
HNFE 1004	Foods, Nutrition And Exercise	3
HNFE 2664	Behavioral Theory in Health Promotion	3
STAT 3615	Biological Statistics	3
or STAT 3604	Statistics for Social Science	
ADV 2134	Introduction to Health Communication	3
or ADV 4324	Issues in Health Communication	
PHS 1004	Public Health First Year Experience	1

Foreign Language Requirement

Students who did not successfully complete at least two years of a single foreign, classical, or sign language during high school must successfully complete six semester hours of a single foreign, classical, or sign language at the college level. Courses taken to meet this requirement do not count toward the hours required for graduation.
